As this theory is now abandoned by all expositors, it needs no refutation. It is exceedingly ingenious, but without foundation. To represent the book as made up of little else than sublime scenery and fiction, is contrary to the analogy of such Old Testament writings as bear to it the greatest resemblance. Something more is intended than a symbolic description of the triumph of Christianity over Judaism and Paganism. The book contains historic narrative. It exhibits real prophecies, which must have had their accomplishment in distinct events and individuals. It consists of a prophetic poem. Its diction is, with some exceptions, the diction of poetry. It is not made up of a series of disjointed visions; it is regular in its structure and artificial in its arrangement. According to the rules of rhetoric, it nearly approaches an epopee. Those who thoroughly examine it with a view to discover the arrangement and connection of parts will observe unity and artificiality in the disposition of the whole. It bears an analogy to the prophetic writings of the Old Testament, especially to those of Daniel. It is obvious, therefore, that a deep and thorough study of the Old Testament prophets should precede the study of the Apocalypse. If it bear a close resemblance in many of its features to the inspired productions of a former dispensation; if the writer evidently imitated the utterances of Daniel, Ezekiel, and Zechariah; if his language be more Hebraistic than that of the New Testament generally, the interpreter of the book should be previously qualified by a familiar acquaintance with the symbols, imagery, diction, and spirit of the Old Testament poets and prophets.

VI. *The object for which it was originally written.*—The books of the New Testament, like those of the Old, were designed to promote the instruction of God's people in all ages. They were adapted to teach, exhort, and reprove all mankind. They do not belong to the class of ephemeral writings that have long since fulfilled the purpose for which they were originally composed. Their object was not merely a local or partial one. So of the Apocalypse. It is suited to all. 'Blessed is he that readeth, and they that hear the words of this prophecy.' But this general characteristic is perfectly consistent with the fact that it arose out of specific circumstances, and was primarily meant to subserve a definite end. When first written, it was destined to suit the peculiar circumstances of the early Christians. The times were troublous. Persecution had appeared in various forms. The followers of Christ were exposed to severe sufferings for conscience sake. Their enemies were fierce against them. Comparatively few and feeble, the humble disciples of the Lamb seemed doomed to extinction. But the writer of the Apocalypse was prompted to present to them such views as were adapted to encourage them to steadfastness in the faith—to comfort them in the midst of calamity—and to arm them with resolution to endure all the assaults of their foes. Exalted honours, glorious rewards, are set before the Christian soldier who should endure to the end. A crown of victory—the approbation of the Redeemer—everlasting felicity;—these are prepared for the patient believer. In connection with such representations, the final triumph of Christianity and the Messiah's peaceful reign with his saints, form topics on which the writer dwells with emphatic earnestness (See chap. i. 1-3; ii. 1; iii. 22; xxii. 6, 7, 10-17). The suffering Christians of primitive times may have sorrowfully thought that they should never be able to stand the shock of their bitter and bloody assailants, the power and policy of the world being leagued against them—but the statements of the writer all tend to the conclusion that truth should make progress in the earth, and the church, emerging out of all struggles, wax stronger and stronger. If such be the primary and principal aim of the book, it follows that we should not look in it for a history of the kingdoms of the world. To compose a civil history did not comport with the writer's object. The genius of Christ's kingdom is totally different from that of the kingdoms of the world. It advances steadily and silently, independently of, and frequently in opposition to them. Hence the Apocalypse cannot contain a history of the world. It exhibits *a history of the church*, specially of its early struggles with the powers of darkness and the malice of superstition. This last remark leads to another of chief importance to the interpreter of the book before us, viz., that it principally relates to events past, present, and speedily to happen in connection with the Christian religion as viewed from the writer's stand-point. The glances at the past are brief, but references to the circumstances of the church at the time are numerous and diversified, while rapidly coming catastrophes and triumphs are pourtrayed in full and vivid colours. Trials impending over the church, and judgments over her enemies, in the time of the apostle,—these form the burden of the prophecy. This conclusion is fully sustained both by the prologue and epilogue, although, strange to say, it has been overlooked by the majority of expositors. What language can be more explicit than this: 'Blessed is he that readeth, and they that hear the words of this prophecy, *for the time is at hand.*' 'The revelation of Jesus Christ, which God gave unto him, to show unto his servants *things which must shortly come to pass.*' 'He which testifieth these things saith, *Surely I come quickly.* Amen, even so, come Lord Jesus.'

VII. *Its contents.*—The body of the work is contained in chaps. iv.-xxii. 6, and is almost

entirely a series of symbolic representations. To this is prefixed a prologue (i.-iv). A brief epilogue is subjoined (xxii. 6-21). The prologue is of considerable length, embracing separate epistles to the seven churches in Asia Minor. John had lived and laboured for a time in the region where these churches were planted. Probably he was personally known to many of the believers of which they were composed. Now that the other apostles were dispersed or dead, the care of them devolved upon himself. As their spiritual superintendent, he naturally felt the most intense and lively interest in their growing prosperity and steadfastness in the faith. The storm of persecution had fallen upon the apostles and believers at Rome, striking fear into their brethren in the remote provinces of the empire. It is highly probable, from other sources, that the Christians in these regions had been already visited with such trials (see 1st Ep. of Peter). After the prologue or introduction, which is peculiarly fitted to admonish and console amid suffering, we come to the body of the work itself, commencing with the *fourth* chapter. This may be appropriately divided into three parts: (1.) iv.-xi.; (2.) xii.-xix.; (3.) xx.-xxii. 5. The first narrates the fortunes and fate of Christ's followers to the destruction of Jerusalem, when the *coming of the Saviour* took place. Here the triumph of Christianity over Judaism is exhibited, as the conclusion demonstrates. The following particulars are comprised in this portion.

A vision of the divine glory in heaven, analogous to the vision which Isaiah had, as recorded in the 6th chapter of his prophecies. An account of the sealed book, with seven seals, which none but the Lamb could open; and the praises of the Lamb sung by the celestial inhabitants. The opening of the first six seals. Before the opening of the seventh, 44,000 are sealed out of the tribes of the children of Israel, and an innumerable multitude with palms in their hands are seen before the throne. After the opening of the seventh, the catastrophe is delayed by the sounding of seven trumpets, the first six of which cause great plagues and hasten on the judgment. Yet, before the last trumpet sounds, a mighty angel, with a rainbow round his head, appears with an open book in his hand, announcing that the mystery of God should be finished when the seventh angel should begin to sound. On this he gives the book to the seer, commanding him to eat it up, and to prophesy hereafter concerning many people, countries, and kings. After this the interior of the temple, with its Jewish worshippers, is measured by the prophet, while the outer court is excepted and given over to the heathen for the space of forty-two months. But, notwithstanding the long-suffering mercy of God, the Jews continue to persecute the faithful witnesses, so that they are punished by the fall of a tenth part of the holy city in an earthquake. Hence 7000 men perish, and the remainder, affrighted, give glory to God. After this the seventh angel sounds, and the Lord appears, to inflict the final blow on Jerusalem and its inhabitants. The catastrophe takes place; the heavenly choir gives thanks to God for the victory of Christianity; and the temple of God is opened in heaven, so that he is accessible to all, being disclosed to the view of the whole earth as their God, without the intervention of priest or solemnity, as in the abrogated economy. Thus the Jewish ritual is done away; the Jews as a nation of persecutors are destroyed; and free scope is given to the new religion.

This portion, therefore, of the prophetic book depicts the downfall of Jerusalem, and the triumph of Christianity over Judaism. The Son of Man came in fearful majesty to punish the guilty nation, as had been predicted.

We are aware that some deny the existence of a catastrophe in the 11th chapter. Schott says that it is procrastinated, although the reader here expects it. But Grotius long ago saw the point in its true light, and remarked: 'Solet apostolus mala gravia brevibus verbis, sed efficacibus prætervehi, bona eloqui liberaliter.'

The 24th chapter of Matthew, with the corresponding paragraphs of the other two Gospels, treats of the same subject, though in much briefer compass. It may be regarded as the groundwork of chaps. iv.-xi. of the Apocalypse, and should be carefully compared by the interpreter.

The second division, chaps. xii.-xix., depicts the sufferings inflicted on the church by the heathen Roman power, and the triumph of Christianity over this formidable enemy also. Here the writer has special reference to the cruel Nero, as ch. xvii. 10, 11, which can only be consistently interpreted of *him*, demonstrates. This part commences with a description of the Saviour's birth, who is represented as springing from the theocracy or theocratic church, and of Satan's malignity against him. Cast out of heaven by Michael and the good angels, Satan turns his rage upon the followers of Christ on earth. Hitherto there is no account of the Romish persecuting power; and it is an inquiry worthy of attention, why John commences with the birth of the Saviour and Satan's opposition to the early church, thus *reverting* to a period prior to that which had been gone over already. Why does not the seer carry on the series of symbolic predictions from the destruction of the Jewish power? Why does he not commence at the point where, in the preceding chapter, he had left off? The question is not easily answered. It cannot well be doubted that the brief notice of the Saviour's birth, and of Satan's unsuccessful attempt upon heaven and the holy child, is merely introductory to the proper subject. Perhaps John carries the reader back to the origin of Christianity, when Satan was peculiarly active, in order to link his malignant opposition as embodied in the persecuting violence of heathen Rome, to his unceasing attacks upon the truth even from the very birth of Christ. This would serve to keep up in the reader's recollection the memory of Satan's past opposition to religion, and also prepare for a readier apprehension of symbols descriptive of his further malevolence. The second part therefore begins, properly speaking, with the 13th chapter, the 12th being simply preparatory.

A beast rises out of the sea with seven heads and ten horns. To it the dragon gives power. The heathen power of Rome, aided by Satan, makes war upon the saints and overcomes them. Presently another beast appears to assist the former, with two horns, as a lamb, but speaking as a dragon. This latter symbolizes the heathen priests assisting the civil power in its attempts to crush the Saviour's adherents. Then comes the vision of the Lamb and the 144,000 elect on

Mount Sion. Doubtless this vision is introduced at the present place to sustain and elevate the hopes of the struggling Christians during the dominance of this power. Such as had passed triumphant through the fiery trials sing a new song of victory, in the undisturbed possession of everlasting happiness. Three angels are now introduced with proclamations of the speedy downfall of heathenism, and of divine judgments on the persecuting power. The first announces that the everlasting Gospel should be preached; the second, that the great city Rome is fallen. The third speaks of tremendous judgments that should befall those who apostatized to heathenism; while, on the other hand, a voice from heaven proclaims the blessedness of such as die in the Lord. But the final catastrophe is yet delayed: it is not fully come. The Saviour again appears sitting on a white cloud, with a sharp sickle in his hand. Three angels also appear with sickles, and the harvest is reaped. The catastrophe rapidly approaches. Seven angels are seen with seven vials, which are successively poured out on the seat of the beast. The first six are represented as tormenting and weakening the Roman power in different ways, until it should be overthrown. At last the seventh angel discharges his vial of wrath, and heaven resounds with the cry, IT IS DONE, while voices, thunders, lightnings, and a mighty earthquake, conspire to heighten the terror and complete the catastrophe. Rome is divided into three parts; the cities of the heathen fall; the islands flee away, and the mountains sink. Men, tormented, blaspheme God. After this, the destruction of the Romish power is described more particularly. The writer enters into detail. An angel takes the seer to show him more closely the desolation of the church's enemy. The Roman power then reigning is indicated somewhat mysteriously, though in such a way as would be intelligible to the Christians whom John addressed. This power is embodied and personified in Nero, who, though not named, is yet not obscurely designated. He is the beast 'that was, and is not, and yet is.' 'The story that Nero was not really dead, but had retired to the Euphrates, and would return again from thence, appears here more fully delineated by a Christian imagination. He is the monster to whom Satan gave all his power, who returns as Antichrist and the destroyer of Rome, who will force all to worship his image. The Roman empire at that time is set forth as the representative of heathenism, and of ungodly power personified; and in this connection, under the image of the beast with seven heads (the seven emperors which would succeed one another till the appearance of Antichrist), Nero is signified as one of these heads (xiii. 3), which appeared dead, but whose deadly wound was healed, so that to universal astonishment he appeared alive again. Nero, re-appearing after it had been believed that he was dead, is the beast 'which was, and is not, and shall ascend out of the bottomless pit—and yet is' (Rev. xvii. 8), (Neander, *History of the Planting and Training of the Christian Church*, translated by Ryland, vol. ii. p. 58, note). After this, Babylon or the Roman power, is represented as fallen, and the few remaining believers are exhorted to depart out of her. A mighty angel casts a great stone into the sea, an emblem of the ruin of that power. At the catastrophe heaven resounds with praises. The marriage-supper of the Lamb is announced, and the church is permitted to array herself in fine linen. But the destruction is not yet completed. Another act in the great drama remains. A battle is to be fought with the combined powers of the empire. Heaven opens. The conqueror on the white horse appears again, and an angel calls upon the fowls to come and eat the flesh of the Lord's enemies, for the victory is certain. Accordingly, the beast and the false prophet are taken and cast alive into the lake of fire and brimstone. The congregated hosts are slain by the word of the Redeemer. Such is the second great catastrophe, the fall of the persecuting heathen power—the triumph of Christianity over paganism.

The third leading division of the book reaches from ch. xx. to xxii. 6, inclusive. This is the only portion that stretches to a period far remote from the time of the writer. It is added to complete the delineation of Christ's kingdom on earth. Though his main design was accomplished in the preceding chapters, John was reluctant, so to speak, to leave the sublime theme without glancing at distant times, when the triumphs of righteousness should be still more marked and diffusive, when Satan's power should be remarkably restrained, and the last great conflict of heathen and antichristian power with the Redeemer should terminate for ever the church's existence on earth: ushering in the general judgment, the everlasting woe of the wicked, and the glorified state of the righteous. Here the writer's sketches are brief and rapid. But when we consider the place in which they are introduced, the inconceivable nature of the happiness referred to, and the tendency of minds the most Christianized to attach sensuous ideas to figures descriptive of everlasting misery and endless felicity, their brevity is amply justified. A glorious period now commences, but how long after the preceding events is not affirmed. That a considerable interval may be assumed we deduce from the description itself. Satan is bound, or his influences restrained, a thousand years, throughout the seat of the beast. Christianity is spread abroad and prevails in the Roman empire. But after the thousand years are expired, Satan is set free and begins again to practise his deceptions. He incites Gog and Magog to battle. The camp of the saints and the beloved city are invaded by the assembled hosts. But fire from heaven devours the adversaries, while the devil is again taken and cast into the lake of fire. After this (how long is unknown) comes the general resurrection, the last judgment, and the doom of the wicked. For the righteous a new heaven and a new earth are prepared, in which they shall be perfectly free from sin and corruption. With this the visions end, and an epilogue closes up the book.

From the preceding outline it will be seen that the body of the work consists of three leading divisions, in which are pourtrayed the proceedings of God towards the Jews; the rise and progress of the Christian church, till through much struggling it possessed the Roman empire, partly by converting and partly destroying the heathen; the millennium, succeeded by the resurrection and judgment, and the glorious felicity of the saints in the heavenly Jerusalem.

In this summary view of the contents, it has

been found inconvenient to introduce any thing in the way of exposition beyond general remarks and hints. As to diversities of sentiment in regard to the interpretation of different portions, our limits will not admit of their statement, much less an examination of their respective merit.

In opposition to the majority of German writers, as Bleek, Schott, Lücke, Ewald, De Wette, and others, the existence of a catastrophe at the termination of the 11th chapter has been assumed. A primary reason for so doing is the mention of great thunderings (voices) in heaven (xi. 15), which are always the emblems of fearful judgments. Accordingly, in the parallel phrase (x. 3), it is said that seven thunders uttered their voices, denoting the signal and complete blow about to be inflicted on Jerusalem—the destruction consummated in the third and last woe (xi. 14). In like manner, at the destruction of heathen Rome there were 'voices and thunders and lightnings' (xvi. 18). It were useless to recount the different expositions of ch. xvii. 10. We have adopted the only one that appears to be tenable in connection with the surrounding context. Lücke's view is the most plausible, and has therefore gained the assent of Neander, Reuss, and others. Hug's must be regarded as unfortunate.

The position of the Millennium is a matter of great difficulty. Professor Bush contends that it should be regarded as commencing somewhere between A.D. 395 and A.D. 450, and terminating not far from the capture of Constantinople by the Turks, A.D. 1453. Not very dissimilar is the opinion of Hammond, viz., that the period in question reaches from Constantine's edict in favour of Christianity to the planting of Mohammedanism in Greece by Othman. In either case the Millennium is past.

To the hypothesis so ably supported by Bush we hesitate to accede, because the description given in the 20th chapter is *extravagantly* figurative as appropriated to any period of the church's history already past; and also because his interpretation of the *dragon* appears inconsistent with the second verse of the 20th chapter. According to this ingenious writer, the dragon is the *mystic name of Paganism in its leading character of idolatry and despotism combined*, an hypothesis apparently countenanced by the 12th chapter, which the reader is requested to examine. But it will be observed, that in the 20th chapter, the beast and the false prophet are expressly distinguished from the dragon; so that by the *dragon* Satan alone must be meant as distinct from the civil and ecclesiastical power of heathen imperial Rome. The beast had been already cast into the lake before Satan was thrown into the same place, and by the former is obviously meant the civil despotism of Paganism.

In regard to the period described in Rev. xxi., xxii., denoted by the *new heavens and the new earth*, we are quite aware of the opinion maintained by Hammond, Hug, Bush, and others, viz., that it comprises an *earthly* flourishing state of the church. Yet we must freely confess, notwithstanding the very able manner in which it has been advocated by Bush, that there is a degree of unsatisfactoriness about it. The parallelism instituted between John's description and Isaiah liv. 11, 12; lx. 3-11; lxv. 17, 18, 19, 20, is striking, but not demonstrative of that for which it is instituted. The imagery indeed is substantially the same, and probably the New Testament seer imitated Isaiah; but the strain of the former rises far higher than the sublime vision depicted by the ancient prophet.

VIII. *Some errors into which the expounders of the book have fallen.*—It would not be an easy task to enumerate all the mistakes committed by interpreters in the field of prophecy as unfolded in the Apocalypse. We shall cursorily glance at a few in connection with their causes.

1. When the historic basis is abandoned, imagination has ample range for her wildest extravagances. The Apocalyptic visions are based upon time and place—elements that ought never to be neglected by the exegetical inquirer. Thus we are informed that the things must shortly come to pass (i. 1), and that the time is at hand (ver. 3). So also in chap. xxii., it is stated, that the things must shortly be done (ver. 6), while the Saviour affirms, 'Behold, I come quickly' (ver. 7, 20). These notices are significant as to the period to which the visions principally refer; and the coming of Christ, announced to take place within a short time, denotes those remarkable judgments which impended over his enemies. There are also mentioned three cities forming the theatre of the sublime and terrible occurrences described. 1. Sodom, Egypt, designated as the place where our Lord was crucified, and the holy city. This can mean none other place than Jerusalem. 2. Babylon, built on seven hills. This is Rome. 3. The New Jerusalem. The first two are doomed to destruction. They also depict Judaism and heathenism; for when the capitals fell, the empires sank into feebleness and decay. The New Jerusalem, the kingdom of the blessed, succeeds the two former as a kingdom that shall never be moved. There are also historic personages that appear in the book. The seven Roman emperors are mentioned, while Nero in particular is significantly referred to. Now, except the interpreter keep to historic ground, he will assuredly lose himself in endless conjectures, as is exemplified in a remarkable manner by the anonymous author of *Hyponoia* (New York, 1844, 8vo.), who supposes the book to be 'an unveiling of the mysterious truths of Christian doctrine, with an exhibition of certain opposite errors—a revelation made by Jesus Christ of *himself*—an intellectual manifestation.'

2. Others have fallen into grievous error by seeking a detailed history of the church universal in the Revelation. Some even find an epitome of the church's entire history in the Epistles to the Seven Churches; others, in the rest of the book; others again in both. Agreeably to such a scheme, particular events are assigned to particular periods, persons are specified, peoples are characterized, and names assigned with the greatest particularity. The ablest interpreters after this fashion are Vitringa, Mede, and Faber; but the entire plan of proceeding is inconsistent with the writer's original purpose, and leads to endless mazes.

3. It is obvious that we should not look for a circumstance, event, or person, corresponding to every particular in the visions of the seer. 'It is unnecessary to remark,' says Hug, 'that all the particular traits and images in this large work

are by no means significant. Many are introduced only to enliven the representation, or are taken from the prophets and sacred books for the purpose of ornament; and no one who has any judgment in such matters will deny that the work is extraordinarily rich and gorgeous for a production of Western origin' (Fosdick's *Translation*, p. 668).

4. The principle of synchronisms has been largely adopted by interpreters since the times of Mede and Vitringa. For an explanation and defence of such a system, we refer the reader to Mede's *Clavis Apocalyptica* (*Works*, fol. London, 1677, p. 419, sq.), where it is fully drawn out. The method so ingeniously devised by this learned writer has been followed by the great majority of English expositors, especially by Faber in his *Sacred Calendar of Prophecy*. In this way the same events are said to be represented by a succession of different series of symbols, the symbols being varied, but the things intended by them remaining the same. Instead, therefore, of the book being progressive continuously, it is progressive and retrogressive throughout. Such a plan, so unlike that of the other prophetic books of Scripture, is repugnant to the sober sense of every intelligent student of the Divine word. It introduces complication and enigma sufficient to ensure its rejection. Not a hint is given by John of any such method. It was left for the ingenuity of after ages to decipher; and when discovered by the 'father of prophetic interpretation,' as Mede is frequently called, it is difficult to be understood even by the learned reader. There is no good reason for supposing that the series of events symbolized does not progress. The representation is progressive, just as the events recorded by history are progressive.

5. On the designations of time which occur so frequently in the Apocalypse, this is not the place to enlarge. The entire subject is yet unsettled. Those who take a day for a year must prove the correctness and Scriptural basis of such a principle. This is quite necessary after the arguments advanced by Maitland and Stuart to show that a day means no more than a day, and a year a year. We do not suppose that all, or most of the numbers are to be taken arithmetically. The numbers seven and three, especially, recur so often as to suggest the idea of their being employed indefinitely for poetic costume alone. Yet there may be special reasons in the context of particular passages for abiding by the exact numbers stated.*

By far the greater number of works on the Apocalypse are of no value, the authors having failed to perceive the primary purpose of the apostle. We shall only mention a few; to enumerate all would be impossible.

(*a.*) Works on the literature of the book.

(*b.*) Commentaries.

(*a.*) The best book on the literature of the Apocalypse is that of Lücke, published in 1832. It is both copious and excellent. In addition to it may be mentioned the Introductions of Michaelis, Haenlein, Eichhorn, Bertholdt, Hug, Feilmoser, De Wette, Credner, Schott, Guerike; Bleek's *Beiträge zur Kritik der Offenbarung Johannis* (in the *Zeitschrift* of Schleiermacher, De Wette, and Lücke, ii. 252, sq.); Kleuker, *Ueber Ursprung und Zweck der Offenbar. Johannis;* Steudel, *Ueber die richtige Auffassung der Apocalypse* (in Bengel's *N. Archiv*, iv. 2); the Treatises of Kolthoff, Lange, and Dannemann, already referred to; Knittel's *Beiträge zur Kritik über Johannis Offenbarung;* Vogel's *Commentatio de Apoc. Johannis*, pt. i-vii.; Neander's *History of the Planting and Training of the Christian Church;* Olshausen's *Proof of the Genuineness of the Writings of the New Testament* (translated by Fosdick, Andover, 1838); Lardner's *Credibility of the Gospel History*, vols. i. and iii. 4to. edition; Hävernick in the *Evangelische Kirchenzeitung*, and *Lucubrationes* already quoted.

(*b.*) Pareus, Grotius, Vitringa, Eichhorn, Heinrichs, Scholz, Ewald, Tinius, Bossuet, Alcassar, Hentenius, Salmeron, Herrenschneider, Hagen. Of English works Lowman's *Commentary* has been highly esteemed, though his scheme is wrong. Mede's *Clavis* and the *Commentary* attached to it, have had great influence on subsequent writers; Faber's *Sacred Calendar of Prophecy* is able and ingenious, but radically wrong; Sir Isaac Newton's *Observations on the Apocalypse*, and Bishop Newton's *Remarks*, are generally incorrect. Cunninghame has written various treatises illustrative of the Apocalypse, but his lucubrations are dark and doubtful. Woodhouse's *Commentary* is pervaded by commendable diligence and sobriety, though he has greatly deviated from the right mode of interpretation. We specially recommend Hammond and Lee (*Six Sermons on the Study of the Holy Scriptures*, London, 1830, 8vo.), who have perceived the right principle lying at the basis of a correct exposition; to which may be added the Latin Notes of Grotius, and the perspicuous German Commentary of Tinius. The latest and largest work on the Apocalypse that has appeared in England is Elliott's *Horæ Apocalypticæ*, in 3 vols. 8vo., characterised by great research and minute investigation, but proceeding on principles essentially and fundamentally erroneous.

Valuable suggestions in regard to the interpretation may be found in Stuart's *Hints on the Interpretation of Prophecy;* Bush's *Hierophant;* or, *Monthly Journal of Sacred Symbols and Prophecy;* as also in the various Introductions and Treatises mentioned under (*a.*).—S. D.

REVELATIONS, SPURIOUS [Apocrypha]. The Apocalyptic character, which is occupied in describing the future splendour of the Messianic kingdom and its historical relations, presents itself for the first time in the book of Daniel,* which is thus characteristically distinguished from the former prophetical books. In the only prophetical book of the New Testament, the Apocalypse of St. John, this idea is fully developed, and the several apocryphal revelations are mere imitations, more or less happy, of these two canonical books, which furnished ideas to a

* Against the view of Maitland and Stuart, see Birk's *First Elements of Sacred Prophecy*, and Bush's *Hierophant*; compare also an article in the *Eclectic Review for December*, 1844, by the present writer.

* See the able remarks on the age of this book in the *Publication of the Christian Advocate* (W. H. Mill, D.D.) for 1841.

numerous class of writers in the first ages of the Christian church. The principal spurious revelations extant have been published by Fabricius, in his *Cod. Pseudep. V.T.*, and *Cod. Apoc. N. T.*; and their character has been still more critically examined in recent times by Archbishop Laurence (who has added to their number), by Nitzsch, Bleek, and others; and especially by Dr. Lücke, in his *Einleitung in die Offenbarung Johan. und die gesammte apocalyptische Litteratur.* To this interesting work we are in a great measure indebted for much of the information contained in the present article.

We shall first treat of the apocryphal revelations no longer extant, which are the following, viz. :—

1. The Apocalypse of Elias. 2. The Apocalypse of Zephaniah. 3. The Apocalypse of Zechariah. 4. The Apocalypse of Adam. 5. The Apocalypse of Abraham. 6. The Apocalypse of Moses. 7. The Prophecies of Hystaspes. 8. The Apocalypse of Peter. 9. The Apocalypse of Paul. 10. The Apocalypse of Cerinthus. 11. The Apocalypse of Thomas. 12. The Apocalypse of the proto-martyr Stephen.

The first three are referred to by St. Jerome (*Ep. ad Pammach.*), and cited as lost apocryphal books in an ancient MS. of the Scriptures in the Coislinian Collection (ed. Montfaucon, p. 194). The *Apocalypse of Adam*, and that of *Abraham*, are cited by Epiphanius (*Hæres.* xxxi. 8) as gnostic productions. The *Apocalypse of Moses*, mentioned by Syncellus (*Chronog.*) and Cedrenus (*Comp. Hist.*), fragments of which have been published by Fabricius (*ut supra*), is conjectured by Grotius to have been a forgery of one of the ancient Christians.

The *Prophecies of Hystaspes* were in use among the Christians in the second century. This was apparently a pagan production, but is cited by Justin Martyr, in his *Apology*, as agreeing with the Sibylline oracles in predicting the destruction of the world by fire. Clemens Alexandrinus (*Strom.* vi.) and Lactantius (*Instit.* vii. 15) also cite passages from these prophecies, which bear a decidedly Christian character.

The *Apocalypse of Peter* is mentioned by Eusebius (*Hist. Eccles.* iii. 3. 25), and was cited by Clement of Alexandria, in his *Adumbrations*, now lost (Euseb. *l. c.* vi. 14). Some fragments of it have, however, been preserved by Clement, in his *Selections from the lost Prophecies of Theodotus the Gnostic*, and are published in Grabe's *Spicilegium* (vol. i. p. 74, sq.). From these we can barely collect that this Apocalypse contained some melancholy prognostications, which seem to be directed against the Jews, and to refer to the destruction of their city and nation. This work is cited as extant in the ancient fragment of the canon published by Muratori, a document of the second or third century, with this proviso, that 'some of us are unwilling that it be read in the church;' as is perhaps the signification of the ambiguous passage, 'Apocalypsis Johannis et Petri tantum recipimus; quam quidam ex nostris legi in ecclesia nolunt.' Eusebius designates it at one time as 'spurious,' and at another as 'heretical.' From a circumstance mentioned by Sozomen (*Hist. Eccles.* vii. 19), viz., that it was read in some churches in Palestine on all Fridays in the year down to the fifth century, Lücke infers that it was a Jewish-Christian production (of the second century), and of the same family with the *Preaching of Peter*. It is uncertain whether this work is the same that is read by the Copts among what they call the apocryphal books of Peter. There was also a work under the name of the *Apocalypse of Peter by his Disciple Clement*, an account of which was transmitted to Pope Honorius by Jacob, bishop of Acre in the thirteenth century, written in the Saracenic language; but this has been conjectured to be a later work, originating in the time of the Crusades.

In the ancient Latin stichometry in Cotelerius (*Apostolic Fathers*), the Apocalypse of Peter is said to contain 2070 stichs, and that of John 1200. It is cited as an apocryphal book in the *Indiculus Scripturarum* after the *Quæstiones* of Anastasius of Nicæa, together with the Apocalypse of Ezra and that of Paul. There is in the Bodleian Library a MS. of an Arabic *Apocalypse of Peter*, of which Nicoll has furnished an extract in his catalogue, and which may possibly be a translation of the Greek Apocalypse.

The *Apocalypse of St. Paul* is mentioned by Augustine (*Tract.* 98 *in Ev. Joan.*), who asserts that it abounds in fables, and was an invention to which occasion was furnished by 2 Cor. xii. 2-4. This appears from Epiphanius (*Hæres.* xxxviii. 2) to have been an anti-Jewish Gnostic production, and to be identical with the ἀναβατικόν of Paul, used only by the anti-Jewish sect of Gnostics called Cainites. It is said by Sozomen (*Hist. Eccles.* vii. 19) to have been held in great esteem. It was also known to Theophylact and Œcumenius (on 2 Cor. xii. 4), and to Nicephorus in the ninth century (*Can.* 3, 4). Whether this is the same work which Du Pin (*Proleg.* and *Canon*) says is still extant among the Copts is rendered more than doubtful by Fabricius (*Cod. Apoc.* ii. p. 954) and Grabe (*Spicileg.* i. p. 85). The *Revelation of St. Paul*, contained in an Oxford MS., is shown by Grabe (*l. c.*) to be a much later work. Theodosius of Alexandria (Ἐρωτήματα περὶ προσωδιῶν) says that the Apocalypse of St. Paul is not a work of the apostle, but of Paul of Samosata, from whom the Paulicians derived their name. The *Revelation of Paul* is one of the spurious works condemned by Pope Gelasius, together with the Revelations of St. Thomas and St. Stephen.

The *Apocalypse of Cerinthus* is mentioned by Eusebius (*Hist. Eccles.* iii. 28), and by Theodoret (*Fab. Hæret.* ii. 3). Eusebius describes it as a revelation of an earthly and sensual kingdom of Christ, according to the heresy of the Chiliasts.

Of the *Revelations of St. Thomas and St. Stephen*, we know nothing beyond their condemnation by Pope Gelasius, except that Sixtus of Sienna observes that, according to Serapion, they were held in great repute by the Manichees; but in the works of Serapion which we now possess there is no allusion to this. There is, however, an unpublished MS. of Serapion in the Hamburg Library, which is supposed to contain a more complete copy of his work.

We now proceed to treat of the extant spurious Revelations.

The Ascension and the Vision of Isaiah (Ἀναβατικὸν καὶ Ὅρασις Ἡσαΐου), although for a long time lost to the world, was a work well

known to the ancients, as is indicated by the allusions of Justin Martyr, Origen, Tertullian, and Epiphanius. The first of these writers (*Dial. c. Tryph.* ed. Par. p. 349) refers to the account therein contained of the death of Isaiah, who 'was sawn asunder with a wooden saw;' a fact, he adds, 'which was removed by the Jews from the sacred text.' Tertullian also (*De Patientiâ*), among other examples from *Scripture*, refers to the same event; and in the next (the third) century Origen (*Epist. ad African.*), after stating that the Jews were accustomed to remove many things from the knowledge of the people, which they nevertheless preserved in *apocryphal* or secret writings, adduces as an example the death of Isaiah, 'who was *sawn asunder*, as stated in a certain apocryphal writing, which the Jews perhaps corrupted in order to throw discredit on the whole.' In his *Comm. in Matt.* he refers to the same events, observing, that if this apocryphal work is not of sufficient authority to establish the account of the prophet's martyrdom, it should be believed upon the testimony borne to that work by the author of the Epistle to the Hebrews (Heb. xi. 37); in the same manner as the account of the death of Zechariah should be credited upon the testimony borne by our Saviour to a writing not found in the common and published books (*κοίνοις καὶ δεδημευμένοις βιβλίοις*), but probably in an apocryphal work. Origen cites a passage from the apocryphal account of the *martyrdom of Isaiah*, in one of his *Homilies* (ed. De la Rue, vol. iii. p. 108). The *Apostolical Constitutions* also refer to the apocryphal books of Moses, Enoch, Adam, and *Isaiah*, as writings of some antiquity.

The first writer, however, who mentions the *Ascension of Isaiah* by name is Epiphanius, in the fourth century, who observes (*Hæres.* xl.) that the apocryphal *Ascension of Isaiah* was adduced by the Archonites in support of their opinions respecting the seven heavens and their *archons* or ruling angels, as well as by the Egyptian Hieracas and his followers in confirmation of their heretical opinions respecting the Holy Spirit, at the same time citing the passage from the Ἀναβατικόν to which they refer (*Ascens. of Isaiah*, ix. 27, 32-36; xi. 32, 33). Jerome also (*in Esai.* lxiv. 4) expressly names the work, asserting it to be an apocryphal production, originating in a passage in the New Testament (1 Cor. ii. 9). St. Ambrose (*Opp.* i. p. 1124) cites a passage contained in it, but only as a traditionary report, 'plerique ferunt' (*Ascens. Is.* v. 4-8); and the author of the *Imperfect Work on Matt.*, a work of the fifth century, erroneously attributed to St. Chrysostom (Chrysost. *Opp.* hom. l.), evidently cites a passage from the same work (*Ascens.* i. 1, &c.). After this period all trace of the book is lost until the eleventh century, when Euthymius Zigabenus informs us that the Messalian heretics made use of that 'abominable pseudepigraphal work, the *Vision of Isaiah*.' It was also used (most probably in a Latin version) by the *Cathari* in the West (P. Moneta, *Adv. Catharos*, ed. Rich. p. 218). The *Vision of Isaiah* is also named in a catalogue of canonical and apocryphal books in a Paris MS. (No. 1789), after the *Quæst. et Resp.* of Anastasius (Cotelerius, *P. P. Apost.* i. p. 197, 349). Sixtus of Sienna (*Bibl. Sanct.* 1566) states that the *Vision of Isaiah*, as distinct from the *Anavasis* (as he calls it), had been printed at Venice. Referring to this last publication, the late Archbishop Laurence observes that he had hoped to find in some bibliographical work a further notice of it, but that he had searched in vain; concluding at the same time that it must have been a publication extracted from the *Ascension of Isaiah*, or a Latin translation of the *Vision*, as the title of it given by Sixtus was, 'Visio admirabilis Esaiæ prophetæ in raptu mantis, quæ divinæ Trinitatis arcana, et lapsi generis humani redemptionem continet.' Dr. Laurence observes also that the mode of Isaiah's death is further in accordance with a Jewish tradition recorded in the Talmud (Tract *Jebammoth*, iv.); and he supposes that Mohammed may have founded his own journey through seven different heavens on this same apocryphal work. He shows at the same time, by an extract from the *Raboth*, that the same idea of the precise number of *seven* heavens accorded with the Jewish creed.

There appeared now to be little hopes of recovering the lost *Ascension of Isaiah*, when Dr. Laurence (then Regius Professor of Hebrew in the University of Oxford) had the good fortune to purchase from a bookseller in Drury Lane an Ethiopic MS. containing the identical book, together with the canonical book of Isaiah and the fourth (called in the Ethiopic the *first*) book of Esdras. It is entitled the *Ascension of the Prophet Isaiah*, the first five chapters containing the martyrdom, and the six last (for it is divided in the MS. into chapters and verses) the *Ascension* or *Vision* of Isaiah. At the end of the canonical book are the words, 'Here ends the Prophet Isaiah;' after which follows 'The Ascension,' &c., concluding with the words, 'Here ends Isaiah the Prophet, with his Ascension.' Then follows a postscript, from which it appears that it was transcribed for a priest named Aaron, at the cost of a piece of fine cloth, twelve measures long and four broad. The *Ascension of Isaiah* was published by Dr. Laurence at Oxford in 1819, with a new Latin and an English version. This discovery was first applied to the illustration of Scripture by Dr. Gesenius (*Comm. on Isaiah*). Some time afterwards the indefatigable Dr. Angelo Mai (*Nova Collect. Script. Vet. e Vat. Codd.* Rom. 1828) published two Latin fragments as an appendix to his *Sermon. Arian. Fragment. Antiquiss.*, which he conjectured to be portions of some ancient apocryphal writings. Niebuhr, however, perceived them to be fragments of the Ascension and Vision of Isaiah; and Dr. Nitzsch (*Nachweisung zweyer Bruchstücke*, &c., in the *Theolog. Stud. und Kritik.* 1830) was enabled to compare them with the two corresponding portions (ii. 14-iii. 12; vii. 1-19) of the Ethiopic version. Finally, in consequence of the more complete notice of the Venetian edition of the Latin version given by Panzer (*Annal. Typog.* viii. p. 473), Dr. Gieseler had a strict search made for it, which was eventually crowned with success, a copy being discovered in the Library at Munich. This work, the date of whose impression was 1522, contained also the *Gospel of Nicodemus*, and the *Letter of Lentulus to the Roman Senate*. The Latin version contains the *Vision* only, corresponding to the last seven chapters of the Ethiopic version.

The subject of the first part is the martyrdom

of Isaiah, who is here said to have been sawn asunder in consequence of the visions which he related to Hezekiah, in the twenty-sixth year of the reign of that monarch, and which are recorded in the first four chapters. These relate principally to the coming of 'Jesus Christ the Lord' from the seventh heaven; his being changed into the form of a man; the preaching of his twelve apostles; his final rejection and suspension on a tree, in company with the workers of iniquity, on the day before the Sabbath; the spread of the Christian doctrine; the last judgment; and his return to the seventh heaven. Before this, however, the arch-fiend Berial is to descend on earth, in the form of an impious monarch, *the murderer of his mother*, where, after his image is worshipped in every city for three years, seven months, and twenty-seven days, he and his powers are to be dragged into Gehenna.

The second portion of the work gives a prolix account of the prophet's ascent through seven heavens, each more resplendent and more glorious than the other. It contains distinct prophetical allusions to the miraculous birth of Christ of the Virgin Mary at Bethlehem; his crucifixion, resurrection, and ascension; and the worship of 'the Father, his beloved Christ, and the Holy Spirit.' The mode of the prophet's own death is also announced to him. The whole work, observes its learned translator, is 'singularly characterized by simplicity of narration, by occasional sublimity of description, and by richness as well as vigour of imagination.' Dr. Laurence conceives that the writer had no design of imposing upon the world a spurious production of his own as that of the prophet's, but rather of composing a work, avowedly fictitious, but accommodated to the character, and consistent with the prophecies, of him to whom it is ascribed.

As to the *age of this work*, Dr. Laurence supposes, from the obvious reference to Nero, and the period of three years, seven months, and twenty-seven days, and again of three hundred and thirty-two days, after which Berial was to be dragged to Gehenna, that the work was written after the death of Nero (which took place on the 9th June, A.D. 68), but before the close of the year 69. Lücke, however (*Einleitung in die Offenbarung Johan.*), looks upon these numbers as purely arbitrary and apocalyptical, and maintains that the dogmatical character of the work, the allusion to the corruptions of the church, the absence of all reference to the destruction of Jerusalem, and the Chiliastic view, all point to a later period. All that can be considered as certain respecting its date is, that the first portion was extant before the time of Origen, and the whole before Epiphanius. It has been doubted whether the work does not consist of two independent productions, which were afterwards united into one, as in the Ethiopic version; but this is a question impossible to decide in the absence of the original. The Latin fragments discovered by Mai correspond literally with the Ethiopic, while they not only differ from the Venetian edition in single phrases, but the latter contains passages so striking as to induce the supposition that it is derived from a later recension of the original text.

The author was evidently a *Jewish* Christian, as appears from the use made of the Talmudical legend already referred to, as well as by his representing the false accuser of Isaiah as a Samaritan. The work also abounds in Gnostic, Valentinian, and Ophitic notions, such as the account of the seven heavens, and the presiding angels of the first five, the gradual transmutation of Christ until his envelopment in the human form, and finally the docetic conception of his history on earth. All this has induced Lücke (*ut supra*) to consider the whole to be a Gnostic production of the second or third century, of which, however, the martyrdom was first written. Dr. Laurence finds so strong a resemblance between the account of the seven heavens here, and in the Testament of Levi (*Twelve Patriarchs*), that he suspects the latter to 'betray a little plagiarism.' If this learned divine were right in his conjecture respecting the early age of this production, it would doubtless afford an additional testimony (if such were wanting) to the antiquity of the belief in the miraculous conception and the proper deity of Jesus, who is here called the Beloved, the Lord, the Lord God, and the Lord Christ. In respect, however, to another passage, in which the Son and Holy Spirit are represented as worshipping God, the learned prelate truly observes that this takes place only in the character of angels, which they had assumed.

Dr. Lücke observes that the drapery only of the apocalyptic element of this work is Jewish, the internal character being altogether Christian. But in both form and substance there is an evident imitation, if not of the Apocalypse of St. John, at least of the book of Daniel and of the Sibylline oracles. The use of the canonical Apocalypse Lücke (*l. c.* § 16) considers to be undeniable in viii. 45 (comp. Rev. xxii. 8, 9; vii. 21-23; Rev. xix. 10).

Of the ancient Greek poems called the SIBYLLINE ORACLES (written in hexameter verse), there was formerly a considerable number in use, of which but few have descended to our times. Servius, in the fifth century, mentions a hundred books (*sermones*, λόγοι); and Suidas, who lived most probably in the eleventh, speaks of twenty-four books of the Chaldæan sibyls alone. But eight only were known to the moderns, until the recent discoveries of Angelo Mai, who has recovered and published an eleventh, twelfth, thirteenth, and fourteenth book from palimpsests in the Ambrosian and Vatican libraries (*Script. Vet. Nov. Collect.* vol. iii. p. 3). The first eight books have been shown to be the compositions of various writers from the commencement of the second century B.C. to A.D. 500. Of these, the earliest in point of date is supposed to be the *third book*, containing a series of connected predictions written by an Alexandrian Jew in the time of the Maccabees, but containing heathen poems of a still earlier period. The subject is continued by another Alexandrian Jew, who lived about forty years before the Christian era. Notwithstanding the later Christian interpolations by which this document has been disfigured, it forms a valuable collection of Sibylline oracles respecting the Messiah, anterior to the Christian era. It concludes with another addition, written partly in the third century and partly at a still later period. But before this period, the *fourth* and *fifth* books come in, the former of which was

written by a Christian about A.D. 80; the latter consists of several predictions from various authors, principally Egyptians, one of whom was an Alexandrian Jew, who wrote in the middle of the second century; another portion is by a Jew in Asia Minor, about A.D. 20; and certain parts by another Jewish author, about A.D. 70. But the whole book in its present form proceeds most probably from the Jewish Christians residing at Memphis in the commencement of Adrian's reign, who collected the greater portion of the oracles of the first part, and united them to the third and fourth books. At least the whole three books were formed into one collection in the middle of the second century, and ascribed to one and the same sibyl. But at the close of the next century these books were completely separated, and were, together with the subsequent books then written (sixth, seventh, and eighth), each attributed to a distinct prophetess. Of these, the earliest in point of date is the *eighth* book, part of which was composed about A.D. 170-180, and the entire finished at the end of the third century,—when it was united with the others, as we learn from Lactantius. The *seventh book*, separate from its later interpolations, was composed by a Judaizing Christian in the third century. The *sixth book* appears to have been written at the close of this century by a Christian, for he speaks of Christ as the second Adam. That part called the *Acrostics* was constructed in the fourth century from earlier Sibylline verses. Some portions of the *eighth book* were probably written at this period, and introduced at a still later among the Sibylline oracles. The latest of all are the *first and second books*, written by one and the same author, who lived in the West in the middle of the fifth century.

Of this motley group, the chief portions only are of an Apocalyptic character, others being purely epic, or in the form of hymns. The sibyl, as the oracle of God, predicts the destruction of paganism in its wars on both Judaism and Christianity. To this is annexed the Apocalyptic consolation and encouragement to the sufferer and oppressed among God's people. The poetic interest, which is a characteristic of Apocalyptic composition, both Jewish and Christian, is not lost sight of.

There have been three distinct periods traced in respect to the Sibylline Revelations. The first is the Jewish, commencing at the Maccabæan period. This, observes Lücke, 'belongs to the cycle of Daniel's Apocalypse.' The second period is the Jewish Christian, having a special relation to the Antichristian character of the persecuting Nero, with an admixture of Chiliastic elements. The third period is free from Chiliasm, and belongs to the Christian character of the third century, embracing a species of universal history in the Sibylline form, concluding with the end of all things at the final judgment.

It is impossible to deny the resemblance between the Apocalypse of John and the Sibylline poems of the second period. 'Besides the Chiliastic elements and the reference to the return of Nero, it is common to both that the destruction of Rome forms the grand crisis of their predictions, and that letters and cyphers are symbolically employed. But, on the other hand, what a difference! The Sibylline oracles are characterized by a dry, monotonous series of mere predictions, threatenings, and promises; while the Apocalypse of John presents us with an all but dramatic development of the kingdom of God in a living picture. The most important portion for comparison with the Apocalypse is the contemporary first oracle of the fourth book. The later pieces of this kind may have stood in conscious relation with the Apocalypse, but this is incapable of proof' (Lücke, *ut supra*).

The books discovered by Angelo Mai are much of the same character with the former, but have less of the religious element. The eleventh book contains a statement of Jewish, Greek, Macedonian, and Egyptian history from the Deluge to Julius Cæsar. There are some single passages which resemble the third book, but the author was a different person, and was probably a Jew, who lived a short time before the Christian era.

The *twelfth book* resembles the fifth in its commencement, and contains the same series of Roman emperors from Augustus, under whose reign the appearance of Christ is prominently brought forward. This series, which in the third book ended with Hadrian, here proceeds as far as Alexander Severus, passing over Sulpicius Severus. Its Christian origin is beyond question, and it may have been written after the death of Severus, A.D. 222.

The *thirteenth book* narrates, in the Sibylline form, the wars of the Romans in the East to the middle of the third century, probably commencing where the former had ended. It is observable that the author alludes to the mathematical fame of Bostra.

The most prominent feature of the *fourteenth book* is the destruction and rebuilding of the city of Rome, which is provisioned for a whole year in expectation of a long period of adversity; the last prince of the Latin race appears and departs, after whom comes a royal race of long duration. The whole narration points to the period of the migration and downfall of the Western empire. The author doubtless was a Christian of the fifth century.

The book called the TESTAMENTS OF THE TWELVE PATRIARCHS is an ancient Apocryphal work (founded most probably on Gen. xlix. 1, sq.), in which the twelve sons of Jacob are represented as delivering their dying predictions and precepts to their posterity. If we are to credit the authority of a manuscript in the Bodleian library, this work was originally written in Hebrew, and translated into Greek by St. Chrysostom. But Dr. Grabe, who first adduced this testimony, considers it very doubtful. The author of the Latin version (from the Greek) was Robert Grosseteste, Bishop of Lincoln in the thirteenth century, with the assistance of a Greek named Nicholas, Abbot of St. Albans. The bishop's attention was first directed to it by Archdeacon John de Basingstoke, who had seen the work during his studies at Athens. This version, which was first printed from very incorrect copies in 1483, and afterwards in 1532 and 1549, was reprinted in the *Orthodoxographa* of Grynæus, and in the *Bibliotheca Patrum*. A few specimens of the original were printed at various times by Cotelerius (*Not. in Script. Apostol.*), Gale (*Annot. in Jamblich.*), and Wharton (*Auctarium*); but it was reserved for the learned Dr. Grabe to give the entire work in

the original Greek, in 1699, from a Cambridge manuscript on vellum (the identical MS. used by Robert of Lincoln for his translation), a copy of which was made for him by the learned Dr. John Mill, who collated it with a manuscript on paper in the Bodleian, written A.D. 1268, and annexed to it various readings from other manuscripts. Dr. Grabe was the person who first divided the work into chapters or paragraphs, with numbers prefixed. He added some valuable notes, which, with the originals, were republished by Fabricius in his *Cod. Pseudep. V. T.*

This work contains many beautiful passages, and, while its form is that of a pretended prophecy, bears indirect testimony to the facts and books of the New Testament, the nativity, crucifixion, resurrection, ascension, and unblemished character of Jesus, ascribing to him such titles as evidently show that his divinity was fully recognised. The author testifies also to the canonical authority of the Acts of the Apostles and St. Paul's Epistles, and seems especially to allude to the four Gospels. The age of this Apocryphal work is, therefore, of considerable importance in sacred criticism.

Mr. William Whiston, who has given an English translation of this work in his *Authentic Records*, considers it to be a genuine production, and one of the *concealed* (as he interprets the word Apocryphal) books of the Old Testament, maintaining that if this, and the book of Enoch, were not written after the destruction of Jerusalem (which he holds to be a wild notion), they are of necessity genuine and divine. Cave (*Hist. Liter.*) was at first disposed to place the work in the year A.D. 192, but he subsequently regarded it as more probably written near the commencement of the second century. That the work was extant in the time of Origen appears from his observation, 'We find the like sentiment in another little book, called the *Testament of the twelve Patriarchs*, although it is not in the canon,' viz., that by sinners are to be understood the angels of Satan (*Homil. in Jos.* comp. with *Testament. Reuben.*, sect. 3). Jerome also observes that there had been forged revelations of all the patriarchs and prophets. Tertullian has also been supposed to refer to it. It is cited by Procopius of Gaza, about A.D. 520; and in the *Stichometry* of Nicephorus (about A.D. 800) it is said to contain in the Greek 5100, and in the Latin 4800, stichs or verses [VERSE]. Dr. Dodwell, from its Hellenistic character, ascribes it to the first century. The recent investigations of Dr. Nitzsch (*De Testamentis duodecim Patriarcharum*, Wittenb. 1810), however, seem to leave no doubt of its having been the work of a Jewish Christian, about the beginning of the second century. The design of the writer was evidently to convert the twelve tribes to the Christian faith. For this object are introduced the Apocalyptic elements. The time of Christ's appearance is predicted. The Messiah is represented as both priest and king, and with this view characterized as equally sprung from the tribes of Judah and Levi. He is to appear, after many calamities, as the common Saviour of Jews and Gentiles. It also contains revelations purely Christian, as the everlasting reign of Christ, the general resurrection, and the last judgment. The Apocalypse of John is referred to, if not expressly cited; and the Apocalyptical portions have evidently this for their groundwork, together with the book of Daniel, and that of Enoch, which is expressly cited as a work of authority (Levi, 2; Naphthali, 5), and is consequently an earlier production. There was an altered and interpolated English translation of this book, published (as a genuine work of the twelve patriarchs) in Bristol by Richard Day, in 1813.

The FOURTH BOOK OF EZRA (the *first* according to the Ethiopic and Arabic) [ESDRAS] is, from its Apocalyptic character, styled by Nicephorus (*Can.* 3. 4) *the Apocalypse of Ezra* (Ἀποκάλυψις Ἔσδρα). Its original language (according to Lücke) was Greek, although it is at present extant only in a Latin, Ethiopic, and Arabic translation, of which the Latin is the most ancient. The main body of the work, viz., chaps. iii.-xiv., contains a connected revelation, which is partly an open imitation of Daniel, and partly resembles the New Testament Apocalypse. It contains a mixture of Jewish and Christian elements. This work, as has been formerly observed, was known to Clemens Alexandrinus in the second century; and from the indication in the Introduction (ch. iii. 1), 'In the *thirtieth year of the destruction of the city* I was in Babylon,' Lücke conjectures that the author may have written in the thirtieth year after the destruction of Jerusalem, or A.D. 100; and this date is further confirmed by the vision of the eagle (ch. xi.; xii.), which indicates the time of Trajan. He conceives the author to have been evidently a Jew, who lived out of Palestine, probably in Egypt, but that the variation in the several ancient versions of the work prove it to have been interpolated by a Christian hand.

The first two and last two chapters (found only in the Latin, in most MSS. of which they form distinct books, the first two chapters being generally named 2nd and 3rd, and the two last 5th and sometimes 6th Esdras; see Laurence's 1 *Ezra*, pp. 283-287) are the work of a Christian, and are unconnected with the main body of the book. In the two first the author has imitated the canonical Apocalypse, and prefixed this portion as a kind of preface to the work; but there is no internal character which can enable us to form any nearer conjecture as to their date. The author of the last two chapters (xv., xvi.) seems to have lived in the third or fourth century, during the Decian or Diocletian persecutions (chap. xv. 10). Rome, the Apocalyptic Babylon of the author, approaches her downfall (xv. 43, sq.). Several passages of the New Testament are evidently alluded to (comp. 4 Ezra xvi. 29, sq. with Matt. xxiv. 40, 41; xvi. 42—45, with 1 Cor. vii. 29, 30; xv. 8, 9, with Rev. vi. 10). The whole chapter seems, indeed, to be an imitation of Matt. xxiv. (comp. also 4 Ezra i. 30 with Matt. xxiii. 37; ii. 11 with Luke xvi. 9; and ii. 12 with Rev. xxii. 2; also ii. 42 with Rev. xiv. 1-3; and ii. 18 with Rev. xxii. 1, 2).

The ancient romantic fiction, entitled the SHEPHERD OF HERMAS, is not without its Apocalyptic elements. These, however, are confined to book i. 3, 4; but they are destitute of signification or originality [HERMAS].

The Book of Enoch is one of the most curious of the spurious revelations, resembling in its outward form both the book of Daniel and the Apocalypse; but it is uncertain whether this latter work or the book of Enoch was first written [Enoch]. Professor Moses Stuart (*Biblioth. Sacra*, No. 2, p. 363, 1843) is of opinion that the Book of Enoch, the Ascension of Isaiah, the Testaments of the Twelve Patriarchs, many of the Sibylline Oracles, the fourth Book of Ezra, and the Pastor of Hermas, were composed 'nearly at the same time with the Apocalypse of St. John.'

There was an Apocryphal Revelation of St. John extant in the time of Theodosius the Grammarian, the only one of the ancients who mentions it, and who calls it a pseudepigraphal book. It was not known what had become of it, until the identical work was recently published from a Vatican, as well as a Vienna manuscript, by Birch, in his *Auctarium*, under the title of 'The Apocalypse of the Holy Apostle and Evangelist John the Divine.' From the silence of the ancients respecting this work, it could scarcely have been written before the third or fourth century. Lücke has pointed out other internal marks of a later age, as, for instance, the mention of *incense*, which he observes first came into use in the Christian church after the fourth century (although here the author of the spurious book may have taken his idea from Rev. v. 8; viii. 3); also of *images* and *rich crosses*, which were not in use before the 'fourth and fifth centuries.' The name *patriarch*, applied here to a dignitary in the church, belongs to the same age. The time in which Theodosius himself lived is not certainly known, but he cannot be placed earlier than the fifth century, which Lücke conceives to be the most probable age of the work itself. Regarding the object and occasion of the work (which is a rather servile imitation of the genuine Apocalypse), in consequence of the absence of dates and of internal characteristics, there are no certain indications. Birch's text, as well as his manuscripts, abound in errors; but Thilo has collated two Paris manuscripts for his intended edition (see his *Acta Thomæ*, *Prolcg.* p. lxxxiii.). Assemann (*Biblioth. Orient.* tom. iii. pt. i. p. 282) states that there is an Arabic version among the Vatican MSS.—W. W.

REZEPH (רֶצֶף; Sept. Ῥαφέθ), a city which occurs among those subdued by the Assyrians (2 Kings xix. 12; Isa. xxxvii. 12). It is supposed to be the same that Ptolemy mentions under the name of Ῥησώφα, as a city of Palmyrene (*Geog.* v. 15); and this again is possibly the same with the Rasapha which Abulfeda places at nearly a day's journey west of the Euphrates.

REZIN (רְצִין; Sept. Ῥασσών), the last king of Damascene-Syria, slain by Tiglath-pileser (2 Kings xv. 37; xvi. 5-10; Isa. vii. 1; viii. 4-7) [Damascus].

REZON (רְזוֹן, *prince*; Sept. Ῥαζών), an officer of Hadadezer, king of Zobah, who established the independence of Damascus, and made it the seat of the kingdom of Damascene-Syria, so often mentioned in the history of the Hebrew kingdoms (1 Kings xi. 23, 24) [Damascus].

RHEGIUM (Ῥήγιον), a city on the coast of Italy, near its south-western extremity, opposite Messina in Sicily (Acts xxviii. 13). It is now called Reggio, and is the capital of Calabria.

RHODA (Ῥόδη, *i. e. Rose*), a servant maid mentioned in Acts xii. 13.

RHODES (Ῥόδος), an island in the Mediterranean, near the coast of Asia Minor, celebrated from the remotest antiquity as the seat of commerce, navigation, literature, and the arts, but now reduced to a state of abject poverty by the devastations of war and the tyranny and rapacity of its Turkish rulers. It is of a triangular form, about forty-four leagues in circumference, twenty leagues long from north to south, and about six broad. In the centre is a lofty mountain named Artemira, which commands a view of the whole island; of the elevated coast of Carmania on the north; the Archipelago, studded with numerous islands, on the north-west; Mount Ida, veiled in clouds, on the south-west; and the wide expanse of waters that wash the shores of Africa on the south and south-east. It was famed in ancient times, and is still celebrated for its delightful climate, and the fertility of its soil. The gardens are filled with delicious fruit, every gale is scented with the most powerful fragrance wafted from the groves of orange and citron-trees, and the numberless aromatic herbs exhale such a profusion of the richest odours that the whole atmosphere seems impregnated with spicy perfume. It is well watered by the river Candura, and numerous smaller streams and rivulets that spring from the shady sides of Mount Artemira. It contains two cities—Rhodes, the capital, inhabited chiefly by Turks, and a small number of Jews; and the ancient Lindus, now reduced to a hamlet, peopled by Greeks, who are almost all engaged in commerce. Besides these there are five villages occupied by Turks and a small number of Jews; and five towns and forty-one villages, inhabited by Greeks. The whole population was estimated by Savery at 36,500; but Turner, a later traveller, estimates them only at 20,000, of whom 14,000 were Greeks, and 6000 Turks, with a small mixture of Jews residing chiefly in the capital.

The city of Rhodes is famous for its huge brazen statue of Apollo, called Colossus, which stood at the mouth of the harbour, and was so high that ships passed in full sail between its legs. It was the work of Chares of Lindus, the disciple of Lysippus; its height was 126 feet, and twelve years were occupied in its construction. It was thrown down by an earthquake, in the reign of Ptolemy III., Euergetes, king of Egypt, after having stood 56 years. The brass of which it was composed was a load for 900 camels. Its extremities were sustained by sixty pillars of marble, and a winding staircase led up to the top, from whence a view might be obtained of Syria, and the ships proceeding to Egypt, in a large looking-glass suspended to the neck of the statue. There is not a single vestige of this celebrated work of art now remaining.

St. Paul appears to have visited Rhodes while on his journey to Jerusalem, A.D. 58 (Acts xxi. 1).

The Sept. translators place the Rhodians among the children of Javan (Gen. x. 4), and in this they are followed by Eusebius, Jerome, and Isidore; but Bochart maintains that the Rhodians are too modern to have been planted there by any immediate son of Javan, and considers that Moses rather in-

tended the Gauls on the Mediterranean towards the mouth of the Rhone, near Marseilles, where there was a district called Rhodanusia, and a city of the same name. They also render Ezek. xxvii. 15, 'children of the Rhodians,' instead of, as in the Hebrew, 'children of Dedan.' Calmet considers it probable that here they read 'children of Redan or Rodan,' but that in Gen. x. 4, they read 'Dedan,' as in the Hebrew.

The antiquities of Rhodes reach no farther back than the residence of the knights of St. John of Jerusalem. The remains of their fine old fortress, of great size and strength, are still to be seen; the cells of the knights are entire, but the sanctuary has been converted by the Turks into a magazine for military stores.

In modern times Rhodes has been chiefly celebrated as one of the last retreats of this military order, under whom it obtained great celebrity by its heroic resistance to the Turks; but in the time of Solyman the Great a capitulation was agreed upon, and the island was finally surrendered to the Turks, under whom it has since continued.

It is now governed by a Turkish Pacha, who exercises despotic sway, seizes upon the property of the people at his pleasure, and from whose vigilant rapacity scarcely anything can be concealed. Under this iron rule the inhabitants are ground to poverty, and the island is becoming rapidly depopulated (Coronelli, *Isolandi Rodi Geografica;* Clarke's *Travels;* Turner's *Journal;* Schubert's *Reise ins Morgenl.*).—G. M.-B.

RIBLAH (רִבְלָה; Sept. Ῥαβλαάμ), a town on the northern border of Palestine, in the district of Hamath, through which the Babylonians, both in their irruptions and departures, were accustomed to pass (Num. xxxiv. 11; 2 Kings xxiii. 33; xxv. 26; Jer. xxxix. 5; lii. 10). This place is no where mentioned but in the Bible. The Jewish commentators, exchanging the ר for ד, supposed it to denote Daphne or Antioch (Jerome, *Onomast.* s. v. 'Riblatha;' and on Ezek. xlvii.). This city, however, was too far from Hamath to the north boundary of Palestine. It is perhaps represented by the site called Ribleh, which Buckingham found thirty or forty miles south of Hamath on the Orontes (*Arab Tribes,* p. 481).

RIDDLE (חִידָה), literally, 'something intricate or complicated;' αἴνιγμα. Gesenius derives the Hebrew word from the Arabic حال 'to bend off, or tie in knots;' and the immediate etymology usually assigned to the Greek word is αἰνίσσομαι, 'to hint obscurely.' The Hebrew word (Judg. xiv. 12-19) properly means 'a riddle or enigma; 'Sept. πρόβλημα; Vulg. *problema* and *propositio;* where Samson proposes to the thirty young Philistines who attended his nuptials, an enigma, derived from the circumstance of his having lately found a swarm of bees and honey in the skeleton of the lion, which he had killed some months before, when he had come to espouse his wife [Bee]. This riddle or enigma, though unfair in regard to those who accepted the pledge to unravel it, because they were ignorant of the particular fact by the knowledge of which alone it could be explained by them, nevertheless answers to the approved definition of an enigma, as consisting of an artful and abstruse proposition, put in obscure, ambiguous, and even contrary terms, in order to exercise the ingenuity of others in finding out its meaning.

The pleasure of the propounder is derived from perplexing his hearers; and theirs from overcoming the difficulty, which is usually renewed by their proposing another enigma.

This kind of amusement seems to have been resorted to, especially at entertainments, in all ages among different nations; and has even been treated as an art, and reduced to rules. The chief writers on this curious subject are, Nic. Reusner (*Ænigmatograph.*) and F. Menestrier.

The principal rules laid down for the construction of an enigma are the following: that it must be obscure, and the more obscure the better, provided that the description of the thing, however covered and abstract, and in whatever remote or uncommon terms, be really correct; and it is essential that the thing thus described be well known. Sometimes, and especially in a witty enigma, the amusement consists in describing a thing by a set of truisms, which tell their own meaning, but which confound the hearer, through his expectation of some deep and difficult meaning. The *greater enigma* is to be rendered more intricate and knotty by a multitude of words; the *lesser* may consist of only one or two remote words or allusions.

The speech of Lamech to his wives Adah and Zillah (Gen. xiv. 23, 24) is, possibly, an enigmatic mode of communicating some painful intelligence. It is recorded (1 Kings x. 1) that the queen of Sheba came to prove Solomon בחידות; Sept. ἐν αἰνίγμασι; Vulg. *in ænigmatibus.* Josephus relates that Hiram, king of Tyre, tried the skill of Solomon in the same way; and quotes Dius to attest that Solomon sent riddles to Hiram, and that the Tyrian king forfeited much money to Solomon from his inability to answer them, but redeemed it, upon a man of Tyre named Abdemon being found able to solve them (*Antiq.* viii. 5. 3). The description of the Messiah under the name of the Branch, נצר, when considered in regard to the occasion and context, may be considered as a specimen of the lesser enigma (see Lowth upon the passage). 'The number of the beast' (Rev. xiii. 18), may be also considered as an enigma. The other instances in which the Hebrew word is used all exhibit more or less of the enigmatic character. They are as follows, with the Sept. and Vulg. readings:—Num. xii. 8, where it means 'an oracle or vision,' δι' αἰνιγμάτων, *non per ænigmata et figuras* (Moses) *dominum videt;* Ps. xlix. 5, 'a song,' πρόβλημα, *propositio;* lxxviii. 2, 'dark sayings,' προβλήματα, *propositiones;* Prov. i. 6, 'intricate proverbs,' αἰνίγματα, *ænigmata;* Ezra xvii. 2, 'a parable,' διήγημα, Aq.; αἴνιγμα, *ænigma;* Dan. viii. 23, 'artifices;' προβλήματα, *propositiones, ænigmata;* Hab. ii. 6, 'a song,' πρόβλημα, *loquela ænigmatum.* In the Apocrypha we find (Wisd. xlvii. 15) παραβολαῖς αἰνιγμάτων, *ænigmata;* in the New Testament (1 Cor. xiii. 12), ἐν αἰνίγματι, *in ænigmate,* which Bretschneider points out as a quotation of Num. xii. 8, and where αἰνίγματι is opposed to τὸ εἶδος, 'the clear reality.' The word enigma, taken in the extensive meaning of its root, αἶνος, certainly applies to an immense portion of the sacred writings, viz. as a narrative or tale, having an application to present

circumstances; *Odyss.* xiv. 508, a fable, bearing moral instruction; Hes. *Oper.* 202, which nearly approaches to the nature of a parable [PARABLE]; a pointed sentence, saying, or proverb (Theocritus, xiv. 13) [PROVERB; PROPHECY]. According to Lennep, the word *αἴνιγμα*, taken substantively, means '*anything* obscure.' As specimens of the enigmatical style in the Old Testament, Winer points out Prov. xxx. 12-19; Isa. xxi. 12. In the New we may adduce our Lord's discourse with Nicodemus (John iii. 3), and with the Jews (vi. 51, &c.), where the enigmatical style is adopted for the purpose of engaging attention, in an unrivalled manner (Winer, *Bibl. Archäol.*; Stuck, *Antiq. Conviv.* iii. 17).—J. F. D.

RIMMON (רִמּוֹן) is mentioned in numerous places in the Old Testament, and is universally acknowledged to denote the Pomegranate-tree and fruit, being described in the works of the Arabs by the name *rooman*. The pomegranate is a native of Asia; and we may trace it from Syria, through Persia, even to the mountains of Northern India. It is common in Northern Africa, and was early cultivated in Egypt: hence the Israelites in the desert complain (Num. xx. 5), 'It is no place of seed, or of figs, or of vines, or of *pomegranates*.' Being common in Syria and Persia, it must have early attracted the attention of Eastern nations. In the present day it is highly valued, and travellers describe the pomegranate as being delicious throughout Persia. The late Sir A. Burnes states that the famous pomegranates without seeds are grown in gardens under the snowy hills, near the river Cabul. The bright and dark-green foliage of the pomegranate, and its flowers conspicuous for the crimson colour both of the calyx and petals, must have made it an object of desire in gardens; while its large reddish-coloured fruit, filled with numerous seeds, each surrounded with juicy pleasant-tasted pulp, would make it still more valuable as a fruit in warm countries. The pulpy grains of this fruit are sometimes eaten by themselves, sometimes sprinkled with sugar; at other times the juice is pressed out and made into wine, or one of the esteemed sherbets of the East. This seems also to have been the custom in ancient times, for it is said in Canticles, viii. 2, 'I would cause thee to drink of spiced wine of the juice of my pomegranate.' The beauty of the fruit when bursting and displaying the delicate colours of the pulpy grains, seems to be referred to in the following passage of the same book (vi. 7), 'As a piece of pomegranate are thy cheeks (temples) within thy locks;' so also the beauty of the flower-beds when first opening made it an object of attraction (vi. 11), 'I went into the garden of nuts, &c., to see whether the pomegranates budded;' and again in vii. 12. Being valued as a fruit, and admired as a flower, it was to be expected that it should be cultivated in gardens and orchards; and to this several passages refer, as Canticles iv. 13. In other places it is enumerated with the more valued and cultivated trees of the country, such as the vine, the fig-tree, the palm-tree, and the olive, as in Joel i. 12; Hag. xi. 19. The pomegranate is not likely to have been a native of Egypt; it must, however, have been cultivated there at a very early period, as the Israelites, when in the desert, lamented the loss of its fruit. That it was produced in Palestine during the same early ages is evident, from the spies bringing some back when sent into Canaan to see what kind of a land it was; for we are told that they 'came unto the brook of Eshcol, and cut down from thence a branch with one cluster of grapes, &c., and they brought of the pomegranates, and of the figs.'

The pomegranate was well known to the Greeks, being the *ῥοά* of Theophrastus, and of Dioscorides, (i. 151). It was employed as a medicine by Hippocrates, and is mentioned by Homer under the name *side*, supposed to be of Phœnician origin. Its English name is derived from the pomum granatum ('grained apple') of the Romans. Various parts of the plant were employed medicinally, as, for instance, the root, or rather its bark, the flowers which are called *κύτινος* by Dioscorides, and the double flowers *βαλαύστιον*; also the rind of the pericarp, called *malicorium* by the Romans, and *σίδιον* by Dioscorides. Some of the properties which these plants possess, make them useful both as drugs and as medicines. We have hence a combination of useful and ornamental properties, which would make the pomegranate an object sure to command attention; and these, in addition to the showy nature of the flowers, and the roundish form of the fruit, crowned by the protuberant remains of the calyx, would induce its selection as an ornament to be imitated in carved work. Hence we find frequent mention of it as an ornament on the robes of the priests (Exod. xxviii. 33; xxxix. 24); and also in the temple (1 Kings vii. 18, 20, 42; 2 Kings xxv. 17; 2 Chron. iii. 16; iv. 13). It might, therefore, well be adduced by Moses among the desirable objects of the land of promise (Deut. viii. 8): 'a land of wheat, and barley, and vines, and fig-trees, and pomegranates; a land of oil-olive and honey.'—J. F. R.

RIMMON, the name of several places in Palestine, probably distinguished by the presence of pomegranate-trees.

1. A city of the tribe of Simeon, in the south of Palestine (Josh. xv. 32; xix. 7; 1 Chron. iv. 32; Zech. xiv. 10).

2. A town on a high conical chalky rock or peak, north-east of Gibeah and Michmash, near the desert (Judg. xx. 45, 47; xxi. 13). The *Onomasticon* places it fifteen miles north in Jerusalem, which corresponds to the situation of this rock, which is still crowned by a village bearing the name of Rummon: see Robinson's *Palestine*, ii. 113. Some suppose this the Rimmon mentioned in 1 Sam. xiv. 2.

3. A city of Zebulon (Josh. xix. 3; 1 Chron. vi. 62).

4. A station of the Israelites after leaving Sinai (Num. xxxiii. 19).

RIMMON, an idol worshipped by the Syrians (2 Kings v. 18). As this name is found nowhere but in the Bible, and there only in the present text, nothing positive can be affirmed concerning the power it symbolized. If it be referred to the pomegranate, we may suppose that the fruit had become the symbol of some mysterious powers in nature. But many commentators entitled to respect, as Le Clerc, Selden, Vitringa, and Rosenmüller, would rather seek the signification of the word in רמם *ramam*, 'the exalted;' in which case we may take it to have been a name

of eminence applied to the sun, or rather to some idol under which the sun was represented.

RIPHATH (רִיפַת; Sept. Ῥιφάθ; in 1 Chron. Diphath, דִּיפַת), a northern people descended from Gomer (Gen. x. 3). See NATIONS, DISPERSION OF.

RIVER. All the rivers mentioned in Scripture are in this work described under their respective names, except such as are included in the article PALESTINE. The NILE is described under EGYPT; and GIHON and PISON are considered under PARADISE.

It may be desirable to discriminate the words which are applied to different kinds of rivers in Scripture.

1. יְאֹר and יְאוֹר *jeor*, which appears to have been of Egyptian origin, denotes a 'fosse,' or 'river:' (it was expressed by IORO in the dialect of Memphis, and by IERO in that of Thebes, while it appears as IOR in the Rosetta inscription). This name is applied exclusively in Scripture to 'the river of Egypt' (יאר מצרים), excepting in Dan. xii. 5, 6, 7, where it denotes another river. This 'river of Egypt' is undoubtedly the Nile; and is to be distinguished from the 'brook of Egypt,' mentioned below.

2. נָהָר *nahar*, is the word generally used to express any river or perennial stream. It has at this day the same application in Arabic, in which language also, as in Hebrew, it includes canals, as the '*Nahar*awan of Khuzistan; and the Scripture must mean the Euphrates *and its canals*, where it speaks of 'the rivers (*naharoth*) of Babylon' (Ps. cxxxvii. 1).

3. נַחַל, *nachal*, denotes a stream, brook, or torrent, whether perennial or not, but mostly not, as most of the brooks of Palestine are torrents, flowing only in winter [PALESTINE]. See a picturesque allusion to such brooks in Job vi. 15. When the word stands alone it seems to denote a mere winter torrent, a permanent stream being indicated by the addition of the word אֵיתָן, 'perennial,' as in Ps. lxxiv. 15; Deut. xxxi. 4; Amos v. 24. A few brooks are specially designated, as the BROOK OF WILLOWS (Isa. xv. 7), a stream on the east of the Dead Sea, probably the present Wady-el-Ahsy, which descends from the eastern mountains, and enters the eastern end of the Dead Sea; the ARNON (see the word); the JABBOK (which see); the BESOR (*the cold*), a torrent emptying itself into the Mediterranean near Gaza (1 Sam. xxx. 9, 10, 21): the KIDRON, the KISHON (see the two words); and the KANAH, a stream on the borders of Ephraim and Manasseh (Josh. xvi. 18; xvii. 9). 'The BROOK of EGYPT,' mentioned in Num. xxxiv. 5; Josh. xv. 4, 47; 1 Kings viii. 65; 2 Kings xxiv. 7; Isa. xxvii. 12; which is also called simply 'the brook' (Ezek. xlvii. 19; xlviii. 28), and described as on the confines of Palestine and Egypt, is unquestionably the Wady-el-Arish, near the village of that name, which was anciently called Rhinocorura. The 'river' (*jeor*) of Egypt' is, however, the Nile; and it is unfortunate that the two are not so well distinguished in the Authorized Version as in the original.

The word *nachal* (נחל) sometimes occurs in the sense of the Arabic *Wady*, that is, a valley watered by a brook or torrent. Such are the valley of ESHCOL (which see); the valley of GERAR (Gen. xxvi. 17); and as *nachal* signifies both a brook and the valley in which it flows, the same terms may be understood of either, as in the case of the 'brook' Zered in Deut. ii. 13, 14; which is expressed by the same word as the 'valley' of Zered in Num. xxi. 12; and in some cases it is difficult to say which is meant, as in Josh. xv. 7; xix. 14, comp. 11. The valley of SOREK (Judg. xvi. 4), so called probably from its vineyards, Eusebius and Jerome place north of Eleutheropolis, and near to Zorah. The valley of SHITTIM ('acacias') was in Moab, on the borders of Palestine (Joel iv. 18; comp. Num. xxv. 1; Josh. ii. 1; iii. 1; Mic. vi. 5). The valley of ZERED was in the territory of Moab, east of the Dead Sea (Num. xxi. 12; Deut. ii. 13, 14), probably the same with 'the Brook of Willows.'

RIZPAH (רִצְפָּה, *a coal;* Sept. Ῥεσφά), a concubine of Saul, memorable for the touching example of maternal affection which she afforded, in watching the dead bodies of her sons, and driving the birds away from them, when they had been gibbeted by the Gibeonites (2 Sam. iii. 7; xxi. 8, 10, 11).

ROADS. In the East, where travelling is performed mostly on some beast of burden, certain tracks were at a very early period customarily pursued; and that the rather as from remote ages commerce and travelling went on by means of caravans, under a certain discipline, and affording mutual protection in their passage from city to city, and from land to land. Now wherever such a band of men and animals had once passed they would form a track which, especially in countries where it is easy for the traveller to miss his way, subsequent caravans or individuals would naturally follow; and the rather inasmuch as the original route was not taken arbitrarily, but because it led to the first cities in each particular district of country. And thus at a very early period were there marked out on the surface of the globe lines of inter-communication, running from land to land, and in some sort binding distant nations together. These, in the earliest times, lay in the direction of east and west, that being the line on which the trade and the civilization of the earth first ran.

The purposes of war seem, however, to have furnished the first inducement to the formation of made, or artificial roads. War, we know, afforded to the Romans the motive under which they formed their roads; and doubtless they found them not only to facilitate conquest, but also to insure the holding of the lands they had subdued; and the remains of their roads which we have under our own eyes in this island, show us with what skill they laid out a country, and formed lines of communication. To the Romans, chiefly, was Palestine indebted for such roads.

There seem, indeed, to have been roads of some kind in Palestine at an earlier period. Language is employed which supposes the existence of artificial roads. In Isa. xl. 3 are these words, 'Prepare ye the way of the Lord, make straight in the desert a highway for our God. Every valley shall be exalted, and every mountain and hill shall be made low; and the crooked shall be made straight, and the rough places plain.' There cannot be a

more graphic description of the operations and results connected with the formation of a long and important road. That this is the language of prophetic inspiration affords no objection, but rather confirms our view; for poetry, as being an appeal to widely-spread feelings, grounds itself, in such a case as this, on fact; nor could such imagery as we find here have been employed, had artificial roads been unknown in Palestine. Nor is the imagery unusual (comp. Isa. xi. 16; xix. 23; xxxiii. 8; xxxv. 8; xlix. 11; lxii. 10). In 1 Sam. vi. 12 we read, 'The kine went along the highway, lowing as they went, and turned not aside to the right hand or to the left.' In Numbers also (xx. 17), 'We will go by the king's highway,' &c. (xxi. 22; Deut. ii. 27; Lev. xxvi. 22). Whether or not these were roads in the modern acceptation of the term, we know from the law regarding a free, open, and good passage to the cities of refuge (see that article, and Deut. xix. 3, compared with *Mishna*, tit. *Maccoth*), that the minds of the Israelites were early familiarized with the idea: 'Thou shalt prepare thee a way,' &c., 'that every slayer may flee thither.' And, much as we hesitate to differ from so high an authority, we cannot agree with Winer (*Real-wört.* in 'Strasse'), that this last cited passage stands alone; for other passages have been given which, when taken in conjunction with it, seem to prove that to some extent artificial roads were known to the Hebrews in the commencement of their commonwealth. Indeed it is highly probable that the Hebrews had become acquainted with roads during their sojourn in Egypt, where, in the Delta especially, the nature of the country would require roads and highways to be thrown up and maintained. Josephus (*Antiq.* viii. 7. 4) expressly says, 'Solomon did not neglect the care of the ways, but he laid a causeway of black stone (basalt) along the roads that led to Jerusalem, both to render them easy for travellers, and to manifest the grandeur of his riches.' Winer, indeed, remarks that Josephus's roads find no support in the Bible. But although these particular roads may not be mentioned, it does not hence follow that they did not exist; but mention is made, as we have seen, of ways and highways in the Scriptural authorities. To the Romans, however, Palestine was greatly indebted for its roads. On this subject Reland (*Palæstina*) has supplied useful information. In the East generally, and in Palestine in particular, the Romans formed roads, and set up mile-stones, in imitation of what they had done in Italy. These stones bore the names σημεῖα, στήλοι, and κίονες. From the fact of their existing in Palestine, Eusebius, in his *Onomasticon*, frequently uses the terms ἐν ἕκτῳ σημείῳ, and similar phrases. In Reland's time fragments of these mile-stones still remained.

For the merely internal Palestinian roads, Reland may be consulted. He gives a list of them (iii. 2), which will supply the reader with the requisite information, especially if studied under the corrections supplied by recent travellers.

Our remarks will be confined to roads which connected Palestine with other countries, since a notice of the internal roads as well, if at all complete, would require too much space.

The Phœnicians, as a mercantile people, maintained a connection not only with the West, by sea, but also, overland, with the East. They had two great commercial highways. One came out of Arabia Felix, through Petra. The other struck from the northern extremity of the Persian Gulf, through Palestine, to Tyre.

The first road in Palestine which we mention ran from Ptolemais, on the coast of the Mediterranean, to Damascus. This road remains to the present day. Beginning at Ptolemais (Acco), it ran southward to Nazareth, and continuing south and east, passed the plain of Esdraelon on the north; after which, turning north and east, it came to Tiberias, where, running along the Sea of Galilee, it reached Capernaum, and having passed the Jordan somewhat above the last place, it went over a spur of the Anti-Libanus (Jebel Heish), and keeping straight forward east by north, came to Damascus. This road was used for the purposes both of trade and war. In the history of the Crusades it bears the name of Via Maris. It connected Europe with the interior of Asia. Troops coming from Asia over the Euphrates passed along this way into the heart of Palestine. Under the Romans it was a productive source of income. It was on this road, not far from Capernaum, that Jesus saw Matthew sitting 'at the receipt of custom,' and gave him his call to the apostleship.

Another road passed along the Mediterranean coast southward into Egypt. Beginning at Ptolemais, it ran first to Cæsarea, thence to Diospolis, and so on through Ascalon and Gaza down into Egypt. This was also an important line of communication, passing as it did through cities of great importance, running along the coast and extending to Egypt. A glance at the map will show how important it was for trade by land and by sea, as well as for the passage of troops. A branch of this road connected the sea with the metropolis, leading from the same Cæsarea through Diospolis to Jerusalem. Down this branch Paul was sent on his way to Felix (Acts xxiii. 23, 26). The band went through Antipatris, and thence on to Cæsarea.

A third line of road connected Galilee with Judæa, running through the intervening Samaria (Luke xvii. 11; John iv. 4; Joseph. *Antiq.* xx. 6. 1; *Vita*, § 32). The journey took three days. Passing along the plain of Esdraelon the traveller entered Samaria at Ginea (Jenin), and was thence conducted to Samaria (Sebaste), thence to Shechem (Nablous), whence a good day's travel brought him to Jerusalem. This last part of the journey has been described by Maundrell (*Journey*, p. 85, sq.).

In the time of the Romans there was also a road from Jerusalem to the lake Gennesareth, through Shechem and Scythopolis. The same road sent a branch off at Scythopolis, in a westerly direction through Esdraelon to Cæsarea; and another branch across the Jordan to Gadara, on to Damascus, along which line of country there still lies a road, southward of the sea of Galilee, to the same celebrated city.

There were three chief roads running from Jerusalem. One passed in a north-easterly direction over the Mount of Olives, by Bethany, through openings in hills and winding ways on to Jericho, near which the Jordan was passed when travellers took their way to the north, if they wished to pass through Perœa: which was the road the Galilean Jews, in coming to and returning from the festivals in the capital, were accustomed to take, thus

avoiding the unfriendly territory of Samaria; or travellers turned their faces towards the south, if they intended to go towards the Dead Sea. This road was followed by the Israelites when they directed their steps towards Canaan. Through Peræa the Syrian and Assyrian armies made their hostile advances on Israel (2 Kings viii. 28; ix. 14; x. 32, sq.; 1 Chron. v. 26).

A second road led from Jerusalem southward to Hebron, whence travellers went through the wilderness of Judæa to Aila, as the remains of a Roman road still show; or they might take a westerly direction on to Gaza, a way which is still pursued, and is of two days' duration. The ordinary way from Jerusalem to Gaza appears, in the Roman period, to have lain through Eleutheropolis and Ascalon. From Gaza through Rhinocorura and Pelusium was the nearest road down into Egypt from Jerusalem (*Antiq.* xiv. 14. 2). Along this road many thousand prisoners, made by Vespasian in his capture of Jerusalem, were sent to Alexandria in order to be shipped for Rome. Of these two roads from Jerusalem to Gaza, one went westward by Ramlah and Ascalon; the other southward by Hebron. This last road Raumer (*Palästina*, p. 191; see also his *Beiträge*, published after Robinson's work on Palestine, namely, in 1843, correcting or confirming the views given in his *Palästina*, 1838) is of opinion was that which was taken by Philip (Acts viii. 26, sq.), partly because tradition states that the eunuch was baptized in the vicinity of Hebron, and this road from Jerusalem to Hebron runs through the 'desert' Thekoa (Thecua) in the *Onomasticon*. And here he finds the reason of the angel's command to go 'towards the south;' for Hebron lay south of Jerusalem; whereas but for this direction Philip might have gone westward by Ramlah. Robinson, admitting that there is a road from Jerusalem to Hebron, maintains (ii. 640; i. 320) that Philip went by a third road, which led down Wady Musurr to Betogabra (Eleutheropolis), and thinks that he has found at *Tell el-Hasy* the spot where the eunuch received baptism. But, says Raumer (*Beiträge*, p. 41), this road ran in a south-westerly direction, and Philip was commanded to go towards the south, for which purpose he must have gone by Hebron. Raumer then proceeds to confirm his original position. Jerome, in his *Life of Paula*, testifies that a road from Jerusalem to Gaza went through Hebron. Paula travelled from Jerusalem to Bethlehem, which lay south of the city: 'When she reached Bethlehem she quickened the pace of her horse and took the old road which leads to Gaza.' This road conducted to Bethsur (a little north of Hebron), 'where,' says Jerome, 'while he read the Scriptures, the eunuch found the Gospel fountain.' 'This,' adds Raumer, 'is the same Bethsur of which Jerome, in the *Onomasticon*, says, "As you go from Aelia to Hebron, at the twentieth mile-stone, you meet Bethsoron, near which, at the foot of a mountain, is a fountain bubbling out of the soil. The Acts of the Apostles state that the chamberlain of Queen Candace was baptized in it by Philip." From Bethsur Paula proceeded to Hebron. The *Itinerarium Hierosolymitanum* (of the year 333) mentions Bethsur as the place where the baptism was performed.'

Raumer concludes by remarking—'Robinson rightly rejects tradition when it contradicts the Sacred Scriptures, but he must also reject those pretended scientific theories which contradict Holy Writ. Such hypotheses may easily become the groundwork of scientific legends. To fix the baptismal-place of the Chamberlain at Tel el-Hasy, contradicts the Scripture; but Bethsur, which has from the earliest ages been so accounted, agrees with the passage in the Acts of the Apostles.'

There only remains for us to mention what Winer reckons the third of the three great roads which ran from Jerusalem; this third road went to the Mediterranean at Joppa (Jaffa), a way which from the time of the Crusades has been taken by pilgrims proceeding to the Holy City from Egypt and from Europe.

ROAST. [FOOD.]

RODON (ῥόδον), signifying 'rose,' occurs only in the Apocryphal books of Ecclesiasticus and the Book of Wisdom. In the English translation of the Hebrew Scriptures 'rose' occurs also in the Song of Solomon xi. 1, and in Isaiah xxxv. 1; but in neither of these passages is there any proof that the word *Chabbazzeleth* ought to be so rendered. Indeed by many the narcissus is thought to be intended. In the books of the Apocrypha written in Greek, the word ῥόδον may seem to indicate the same plant that it did among the Greeks, namely, the rose. Thus in Ecclesiasticus xxiv. 14, 'I was exalted like a palm tree in Engaddi, and as a *rose plant* in Jericho;' in xxxix. 13, 'and bud forth as a *rose* growing by the brook of the field;' and the high priest's ornaments are compared in l. 8, to 'the flowers of roses in the spring of the year.' But the passage in the Book of Wisdom (xi. 8), 'Let us crown ourselves with roses ere they be withered,' is especially well-suited to the rose. But roses have not been found by travellers in the neighbourhood of Jericho; they cannot be considered exactly as spring flowers; nor do they grow specially by the sides of brooks.

The rose was as highly esteemed among ancient, as it is among modern nations, if we may judge by the frequent references to it in the poets of antiquity. As we know that it continues to be the favourite flower of the Persians, and is much cultivated in Egypt, we might expect more frequent mention of some of its numerous species and varieties in the Jewish writings. This, however, is not the case, and probably arises from its being less common in a wild state in a comparatively dry and warm climate like that of Syria. It is, however, indigenous in some parts. Monro, as quoted by Kitto in the *Physical History of Palestine*, 'found in the valley of Baalbec, a creeping rose of a bright yellow colour in full bloom, about the end of May. About the same time, on advancing towards Rama and Joppa from Jerusalem, the hills are found to be to a considerable extent covered with white and pink roses. The gardens of Rama itself abound in roses of a powerful fragrance.' Mariti, as stated by Rosenmüller, found the greatest quantity of roses in the hamlet of St. John, in the desert of the same name. 'In this place the rose-plants form small forests in the gardens. The

greatest part of the roses reared there are brought to Jerusalem, where rose-water is prepared from them, of which the scent is so very exquisite, that in every part of Lycia, and also in Cyprus, it is in request above all other rose-waters.' Burckhardt was struck with the number of rose-trees which he found among the ruins of Bozra beyond the Jordan. That the rose was cultivated in Damascus is well known. Indeed one species is named *Rosa Damascena* from being supposed to be indigenous there. 'In the gardens of the city roses are still much cultivated. Monro says that in size they are inferior to our damask rose, and less perfect in form; but that their odour and colour are far more rich. The only variety that exists in Damascus is a white rose, which appears to belong to the same species, differing only in colour' (Kitto, *l. c.* p. cclxxxiv.).

470. [Oleander.]

It is possible, however, that the common rose may not be the plant meant in the above passages of Ecclesiasticus, and that the name *rodon* may have been used in a general sense, so as to include some rose-like plants. We have an instance of this, indeed, in the oleander, of which *rhododendron*, or *rose-tree*, was one of the ancient names, and *rhododaphne* another. The former name is now applied to a very different genus of plants, but *laurier-rose*, the French translation of rhododaphne, is still the common name in France of the plant which used to be called *rose bay* in this country, but which is now commonly called *oleander*. Its long and narrow leaves are like some kinds of willows, and in their hue and leathery consistence have some resemblance to the bay tree, while in its rich inflorescence it may most aptly be compared to the rose. The oleander is well-known to be common in the south of Europe, by the sides of rivers and torrents; also in Asia Minor, Syria, and Egypt. The present writer has seen it in similar situations in the north of India, and nothing can be conceived more beautiful than the rivulets at the foot of the mountains, with their banks lined with thickets of oleanders, crowned with large bunches of roseate coloured flowers. Most travellers in Palestine have been struck with the beauty of this plant. Of the neighbourhood of Tripoli, Rauwolf says, 'There also by the river's side are found anthilis marina, &c., and oleander with purple flowers by the inhabitants called defle.' At the foot of Lebanon, again he says, 'in the valley further down towards the water grew also the oleander.' It is mentioned as a conspicuous object in similar situations by Robinson and Smith. Mr. Kitto says, 'Among the plants in flower in April, the oleander flourishes with extraordinary vigour, and in some instances grows to a considerable size by all the waters of Palestine: when the shrub expands its splendid blossoms the effect is truly beautiful. Lord Lindsay speaks with rapture of the glorious appearance which the groves of blooming oleanders make in this season, along the streams and in the lone valleys of Palestine' (*l. c.* p. ccxxxvii.). 'In the month of May,' adds Mr. Kitto (*l. c.* p. ccxliv.), 'oleanders, continuing still in bloom, are as much noticed in this as in the preceding month by travellers. Madox noticed in this month that fine oleanders in full bloom were growing all along the borders of the Lake of Tiberias, mostly in the water. The same observation was made by Monro. The lake is here richly margined with a wide belt of oleanders, growing in such luxuriance as they are never known to do even in the most genial parts of Europe.' Such a plant could hardly escape reference, and therefore we are inclined to think that it is alluded to in the book of Ecclesiasticus by the name ῥόδον. If this should not be considered sufficiently near to rhododaphne and rhododendron, we may state that in Arabic writers on Materia Medica, *rodyon* is given as the Syrian name of the oleander.

The plant commonly called 'Rose of Jericho,' is in no way referred to in the above-quoted passages. Dr. Lindley, in the *Gardener's Chronicle*, ii. 362, has thus described it: 'the *anastatica hierochuntica*, or rose of Jericho of the old herbalists, is not a rose at all, nor has it the smallest resemblance to a rose, nor is it, as it is often described to be, alive as sold in the shops. It is a little grey-leaved annual, very common in Palestine, and of which hundreds may be gathered in full flower in June, by the sides of the road over the Isthmus of Suez. It produces a number of short, stiff, zigzag branches, which spread pretty equally from the top of the root, and, when green and growing, lie almost flat upon the ground, having the flowers and fruit upon their upper side. It is, in fact, a cruciferous plant, nearly related to the common purple sea-rocket, which grows on the coast of England, and has a somewhat similar habit. When the seed-vessels of this plant are ripe, the branches die, and drying up, curve inwards, so as to form a kind of ball, which then separates from the roots, and is blown about on the sands of the desert. In the cavity thus formed by the branches, the seed-vessels are carefully guarded from being so disturbed as to lose their contents. In that condition the winds carry the anastatica from place to place, till at last rain falls, or it reaches a pool of water. The dry hard branches immediately absorb the fluid, become softened, relax, and expand again into the position they occupied when alive; at the same time the seed-

vessels open, and the seeds fall out, when, the place being suitable, they readily germinate, and establish themselves as new plants.' The effects, therefore, are owing to the hygroscopic properties of vegetable texture, which thus form of the anastatica 'hygromètres naturels,' according to D'Arvieux.—J. F. R.

ROE [Antelope; species Tsebi or Dorcas].

ROLL. [Writing.]

ROMAN EMPIRE: the government of the Romans as conducted by the emperors, of whom Augustus was the first. The term may be taken with some latitude of meaning, as representing the Roman state since the Romans came into contact with the Jews before the commencement of the imperial sway. We have not, however, the intention of entering into an account of the rise, progress, and decline of the Roman power, but merely to set forth a few of the more essential facts, speaking a little less briefly of the relations formed and sustained between the Romans and the Jews.

The foundations of Rome lie in an obscurity from which the criticism of Niebuhr has done little more than remove the legendary charm. Three tribes, however, formed the earliest population, namely, the Ramnenses (probably Romanenses, still further abbreviated into Ramnes), the Titienses (shortened into Tities, from Titus Tatius, their head), and the Luceres (probably an Etruscan horde, who migrated to Rome from Solonium, under Lucumo). In order to increase his population, and with a view to that conquest which he afterwards achieved, and which was only a small prelude to the immense dominion subsequently acquired, Romulus opened in Rome an asylum, inviting thereto those who, for whatever cause, fled from the neighbouring cities. To Rome accordingly there flocked the discontented, the guilty, the banished, and the aspiring, freemen and slaves. Thus were laid the foundations of the future mistress of the world, according to the ordinary reckoning, B.C. 753, the number of inhabitants at the first not exceeding, it is supposed, four thousand souls: what it arose to in the period of its greatest extent we have scarcely the means of ascertaining. Gibbon thus speaks:—'The number of subjects who acknowledged the laws of Rome, of citizens, of provincials, and of slaves, cannot now be fixed with such a degree of accuracy as the importance of the object would deserve. We are informed that when the Emperor Claudius exercised the office of censor he took an account of six millions nine hundred and forty-five thousand Roman citizens, who, with the proportion of women and children, must have amounted to about twenty millions of souls. The multitude of subjects of inferior rank was uncertain and fluctuating. But after weighing with attention every circumstance which could influence the balance, it seems probable that there existed in the time of Claudius about twice as many provincials as there were citizens, of either sex and of every age, and that the slaves were at least equal in number to the free inhabitants of the Roman world. The total amount of this imperfect calculation would rise to about one hundred and twenty millions of persons—a degree of population which possibly exceeds that of modern Europe, and forms the most numerous society that has ever been united under the same system of government.'

The government was at first kingly. Romulus, the first monarch, was probably succeeded by six others, during a period of 244 years, till in the year B.C. 509, kingly government was abolished when in the hands of Tarquinius Superbus, in consequence of his arrogant and oppressive despotism. A consular form of government succeeded, which was at the first of an essentially aristocratic character, but was compelled to give way by degrees to popular influence, till men of plebeian origin made their way to the highest offices and first honours in the state, when the government became an oligarchy; then fell into anarchy, from which it was rescued by the strong hand of Octavius Cæsar, who became sole master of the world by defeating Antony at Actium on the 2nd of September, A.U. 723 (B.C. 31), though

471. [Roman Emperor and Empress.]

it was not till the year 725 that the senate named Octavius Imperator, nor till the year 727 that he received the sacred title of Augustus. His empire had for its limit the Euphrates on the east, the cataracts of the Nile, the African deserts, and Mount Atlas on the south, the ocean on the west, and the Danube and the Rhine on the north.

The subjugated countries that lay beyond the limits of Italy were designated by the general name of Provinces. The first provisions necessary on the conquest of a country by the Roman arms were made with a view to secure the acquisition by the victorious general, in virtue of the power and authority (imperium) intrusted to him by the government at home. Accordingly the earliest object of attention was the ordering of the military power, and the procuring of suitable resources for subsisting the troops. These arrangements, however, were made not without a regard to the pacific relations into which the conquerors and the conquered had mutually entered. Acting on the principle that all unnecessary evil was gratuitous folly, the general availed himself of

the aid afforded by existing institutions, and only ventured to give displeasure by establishing new ones in cases where the laws and customs of a country were insufficient for his purposes. The civil government was, however, recognised, modified or remodelled by the conqueror, provisionally, and only until the Roman senate had made its behests known. Ordinarily, however, the general who had conquered the province constituted its government, in virtue of a law or decree of the senate in which the constitution (forma provinciæ) was set forth and established, or the provisional appointments already made were sanctioned and confirmed. In order to complete these structural arrangements, the general received special aid from ten senators, appointed for the purpose, whose counsel he was obliged to make use of. In thus re-forming the legal and social life of a province, the conquerors had the good sense to act in general with prudence and mildness, having regard in their appointments to local peculiarities and existing institutions, so far as the intended adjunction to the Roman power permitted, in order to avoid giving the provincials provocation for opposing their new masters. Under ordinary circumstances the government of the provinces was conducted by authorities sent for the purpose from Rome. Augustus divided the government of the provinces between himself and the senate in such a manner that he assigned to the senate the provinces which were so well secured and obedient that they needed no army to keep them in allegiance to Rome; while he kept under his own hands, in virtue of his imperium proconsulare, those that were more considerable and more difficult to hold. The government of the senatorial provinces lay between the consuls, for whom, after they had completed their consular office, two provinces were appointed; the other provinces were allotted to the prætors. Suetonius adds (*Octav.* 47) that Augustus sometimes made changes in this arrangement. Quæstors, chosen by lot out of those who were named for the year, went with the proconsuls into the provinces of the senate. Into the provinces of the emperor legati, or lieutenants, were sent, with propraetorial power, to act as representatives of their master: they wore the sword as an index of military authority, and had power of life and death over the soldiers—two distinctions which were not granted to the proconsuls, or governors of the senatorial provinces. The imperial lieutenants remained many years in the provinces; until, indeed, it pleased the emperor to recall them. Quæstors were not sent into the imperial provinces, but their place was supplied by 'procuratores,' called at a later period 'rationales,' who were generally taken from the equestrian order: they raised the revenue for the imperial treasury, and discharged the office of paymaster of the army. There was also in the senatorial provinces a procurator, who raised the income intended, not for the treasury, but for the emperor's privy purse: the smaller provinces, like Judæa, which belonged to Syria, were altogether governed by such.

472. [Roman Orator and Youth.]

The proconsuls, proprætors, and proprætorial lieutenants, when about to proceed into their several provinces, received instructions for their guidance from the emperor; and in cases in which these were found insufficient, they were to apply for special directions to the imperial head of the state. A specimen of such application may be found in Pliny's letter to Trajan, with the emperor's rescript, regarding the conduct which was to be observed towards the already numerous and rapidly growing sect of Christians. The administration of justice, so far as it did not belong to the province itself, was in the governor or lieutenants assembled in a conventus; an appeal lay from this court to the proconsul, and from him to Cæsar. Criminal justice was wholly in the hands of the local governor, and extended not only over the provincials, but the Roman citizens as well: in important cases the governors applied for a decision to the emperor. As the Romans carefully abstained from making any changes in religious matters, so in Palestine the judging of crimes against religion was left by them to the high-priest and the Sanhedrim, even so far as condemnation to death; but the execution of the sentence depended on the procurator (Joseph. *Antiq.* xx. 9. 1; Mark xiv. 53, 55, 62-65; John xviii. 31). The Jews, at least during the time covered by the Gospels, enjoyed the free exercise of their religion. They had their synagogues or temples of public worship, where they served God without molestation, streaming thither at their great festivals from all parts of the land, and making what offerings or contributions they pleased. On these points the testimony of Josephus is full and clear. The Roman presidents did indeed depose and set up high-priests as they pleased, but they confined their choice to the sacerdotal race. In these interferences they seem to have been guilty of acts of despotism, for which, as for other abuses of their power, they were liable to be called to account by an appeal of the injured to the Roman emperor, which was not often made in vain (*Antiq.* xviii. 2; 5 and 3; xx. 4, 3 and 4). Dr. Lardner has, in his own minute, accurate, and learned manner, reviewed the civil condition of the Jews during the time before referred to, dividing it into four heads—1. The period from the preaching of John the Baptist to our Saviour's resurrection; 2. Thence to the time of Herod the king, mentioned Acts xii.; 3. The reign of Herod; 4. From the end of this reign to the conclusion of the evangelical history (*Works*, London, 1827, i. 37, sq.).

In regard to the first period he concludes, after a long inquiry, that the Jews practised their own religious rites, worshipped at the Temple and in their synagogues, followed their own customs, and lived very much according to their own laws. They had their high-priests, council or senate, and inflicted lesser punishments; they could apprehend men and bring them before the council; and if a guard of soldiers was needful, could be assisted by them upon asking the governor for them; they could bind men and keep them in custody; the council could summon witnesses, take examinations, and, when they had any capital offenders, carry them before the governor. This governor usually paid a regard to what they offered, and, if they brought evidence of the fact, pronounced sentence according to their laws. He was the proper judge in all capital causes. In the second period the Scriptures do not make it clear that there was any Roman officer in Judæa. In the main the condition of the province was not dissimilar to what it was in the first period. The case of Stephen, who was stoned to death, may seem to be an exception; but it may be considered as the result of offended bigotry and of the outbreak of popular fury. The facts connected with the third period offer no difficulty, and may be found in Acts xii. Every order and act of Herod, here mentioned—his killing James with the sword, imprisoning Peter with intent to bring him forth to the people, commanding the keepers to be put to death—are undeniable proofs of his sovereign authority at this time in Judæa. In the fourth period the main thing is the treatment of Paul in Judæa, so far as there is any appearance of legal procedure. The case was this: a man was in danger of being killed in a popular tumult in Jerusalem; a Roman officer rescues him, takes him into his own hands, and lodges him in a castle; afterwards, that his prisoner might be safer, he removes him to Cæsarea, the residence of the governor, before whom there are divers hearings. There was therefore at the time a Roman governor in Judæa. A Jewish council also appears—one not void of authority. The charge was of a religious nature, yet is it heard before Felix and Festus, whose authority is acknowledged on all sides. Paul appealed to the Roman emperor. The general conclusion is, that if causes of a religious nature did not exclusively belong to the Romans, they had supreme power over the Jews in civil matters. These deductions, made from the Evangelists themselves, Lardner corroborates by an appeal to independent authorities, namely, the opinions of Roman lawyers concerning the power of the governors of provinces; the statements of historians relating to the condition of Judæa in particular; and similar information touching the state of the people in other provinces. Before, however, we speak of the connection in this period between Rome and Judæa, we must go back a little in order to show under what preliminary circumstances Judæa became a part of the great Roman empire. The Romans and Jews first came into political contact about B.C. 161, when Judas Maccabæus, being moved by the great and widely-spread military renown of the Romans, sent an embassy to Rome, and formed with them a treaty offensive and defensive, but with the special view of obtaining help against 'the Grecians,' that is, Demetrius, king of Syria (1 Macc. viii.; Joseph. *Antiq.* xii. 10. 6; Justin, xxxvi. 3). The contests, however, which soon ensued in Syria, for the throne, gave the Jews respite from their neighbours, and even weight in the political scale, so that the treaty was not much called into operation (1 Macc. x. 11). Jonathan renewed and confirmed the connection with the Romans (1 Macc. xii.; Joseph. *Antiq.* xiii. 5. 8); as did Simon, who 'sent Numenius to Rome with a great shield of gold, of a thousand pounds weight, to confirm the league with them' (1 Macc. xiv. 24). A very favourable answer was returned in the name of 'Lucius, consul of the Romans.' The Jews thus attained the honour of being admitted into the rank of friends (*socii*) of the Roman people—a dangerous distinction, but which seems to have had an immediately beneficial influence in restraining the Syrian kings, who at once recognised the high-priest Simon (1 Macc. xiv. 38, sq.; xiv. 16, sq.). John Hyrcanus, the successor of Simon, aided by these influences, was able to maintain himself as an independent prince during the conflicts which continued in Syria, and had occasion only once to appeal to Rome, namely, on occasion of injury inflicted on his country by Antiochus Sidetes: an embassy was dispatched to the senate, the treaty was renewed, and reparation, as well as immunity from future injury, was readily promised (*Antiq.* xiii. 9. 2). The Romans gained a nearer and more decided influence in Judæa through the conflicts for power carried on between Hyrcanus II. and Aristobulus II. Both these rivals sent an embassy to Scaurus, who had been detached by Pompey from the army which he was leading against Tigranes, and had come into Syria. Each of them offered Scaurus 400 talents. The bribe of Aristobulus was accepted, and Scaurus, as the service to be done for the payment, relieved Aristobulus by compelling Aretas, who was in alliance with Hyrcanus, to raise the siege of Jerusalem (*Antiq.* xiv. 2, 3). Shortly after, Pompey himself came to Damascus and marched over Cœle-Syria, where he was met by ambassadors from Hyrcanus and Aristobulus. Pompey heard their rival claims, and the appeal of the Jewish nation against them, which alleged as their crime that they wished to subvert the established form of government, and each to make himself king of the Jews. The Roman chief saw his opportunity, marched to Jerusalem, and captured the city, making Hyrcanus high-priest and prince of the Jews, restricting his territory, and imposing tribute (*Antiq.* xiv. 4. 4.; Flor. iii. 5, 30; Tacit. *Hist.* v. 9). This is the event (B.C. 63) from which the loss of their liberty by the Jews is to be reckoned. Henceforth they formed a part of the province of Syria, under the protection of whose president they were; and from his avarice they had much to endure. The monarchy had passed into a species of aristocracy, which lasted for some time. But though the Jewish people then became subject to the Romans, and from that time forward the rod of Heaven may be said to have hung over the land, they yet enjoyed many privileges, as well as the freedom of their worship, under the mild government of these masters. When Pompey captured Jerusalem, he and some of his officers entered into the Temple, and the most holy places of it, but they took nothing away.

Julius Cæsar, whom political considerations led into the East, confirmed Hyrcanus in the high-

priesthood, and showed himself well-disposed towards the Jews by several decrees, but associated with Hyrcanus Antipater, an Idumæan, who, under the title of procurator of Judæa, was in reality the sole governor (*Antiq.* xiv. 10. 10; xiv. 8. 5). The Jews were anew declared friends of the Roman people, being in reality their subjects. In the year B.C. 40, the Roman senate declared Herod king of the Jews. Archelaus, Herod's son, being banished by Augustus (A.D. 6 or 7), Judæa was put under the immediate government of Rome. Josephus says, 'The dominion of Archelaus being reduced to a province, Coponius, a person of the equestrian order among the Romans, is sent thither, invested by Cæsar with the power of life and death' (*De Bell. Jud.* ii. 8. 1). In his *Antiquities* (xvii. 13. 5) he adds, 'Cyrenius also came into Judæa, it being annexed to the province of Syria.' The procurators, under whom Judæa had now fallen, had their official residence at Cæsarea. When Cyrenius came into Syria he took an account of the substance of the Jews. At first they were unwilling to endure this badge of subjection, but submitted with difficulty (*Antiq.* xviii. 1. 1). From this time, however, they continued tributary to Rome (Lardner, i. 80). In order to enforce the taxes and generally aid the procurator, a body of Roman soldiers (a cohort) was put at his disposal, which had their quarters permanently in the country, their head station being at Cæsarea. In Acts x. 1 mention is made of the Italian band at Cæsarea; which was so termed because composed of Italian soldiers, while the other troops in Syria and Judæa consisted of natives (Schwarz, *De Cohorte Italica*, Altorf, 1720). A portion of the troops was always stationed in Jerusalem at the Passover, in order to aid in preserving the peace: they had their quarters in the citadel Antonia, which commanded the Temple, and so controlled the city (*Antiq.* xix. 9. 2; xx. 4. 3; Acts xxi. 31, sq.; xxii. 24; xxiii. 23). The first procurator entrusted with the government of Judæa was Coponius; he was followed by Marcus Ambivius; then came Annius Rufus, in whose time Augustus died, A.D. 14. The next was Valerius Gratus, who was appointed by Tiberius: he continued in the province eleven years, and was then succeeded by Pontius Pilate, whose government lasted ten years. Lardner is of opinion that Pontius Pilate left Judæa before the Passover, A.D. 36. During the ensuing four or five years it may be questioned whether the Jews had a procurator residing amongst them with power of life and death, as they had from A.D. 7 to A.D. 36 or 37. They were, however, subject to the Romans. Lardner inclines to the opinion that they had no procurator residing among them from the time of Pilate's removal to Agrippa's accession. During this time they were immediately under the government, first of Vitellius, and then of Petronius, presidents of Syria. Hence some degree of license would be assumed by the Jewish authorities; which was manifested in their treatment of the first Christian missionaries, as shown in the stoning of Stephen, and the persecution which immediately broke out. In Acts ix. 31 a different state of things is recorded—'Then had the churches rest throughout all Judæa, and Galilee, and Samaria.' This appears to have arisen from the Jews themselves being in distress. In Alexandria their houses of prayer were all destroyed. In the third year of Caligula, A.D. 39, Petronius was sent into Syria with orders to set up the emperor's statue in the Temple at Jerusalem. This rest of the churches seems to have reached some way into Herod Agrippa's reign. When he ascended the Jewish throne, as we have already intimated, the Jews had a king of their own, but he was a vassal king.

The Romans, during their dominion, introduced into Judæa many of their manners and customs; their money became current; their weights and measures were adopted; their mode of reckoning time was employed. Yet none of these things obtained more than partial prevalence. The Latin language no longer remained unknown, especially among the higher classes. In judicial proceedings and public documents the Latin was used. It must have been extensively spoken in Jerusalem, since (John xix. 20) the title which bore the allegation on which our Lord was ostensibly put to death was written in Latin, as well as in Greek and Hebrew (Val. Max. ii. 2. 2). These three tongues were indeed used, but in what proportion cannot now be ascertained. Many Latinisms are found in the diction of the New Testament, though they may not be so numerous as was once supposed (Olearius, *De Stylo N. T.* p. 368, sq.; Georgi, in the second part of his *Hierocrit. N. T.*, Viterb. 1733; Michaelis, *Einleit. N. T.*, i. 173, sq.; Winer, *Grammatik des Real Sprach.*, ed. Leipzig, 1844, Erst. Abschnitt). The language which our Lord spoke has been much disputed. The Latin (Wernsdorf, *De Christo Latine loquente*), has put in its claim. The Greek has done the same (D. Diodati, *De Christo Græce loquente*, by Dobbin, London, 1843). There can, however, be little doubt that he ordinarily employed the language of the people, which was neither Greek nor Latin, but Aramaic, a dialect of the Hebrew.

Not only in Judæa, but in other provinces of the Roman empire, the Jews enjoyed full freedom of worship, and were excused from military service on the express ground of their religious observances (Joseph. *Antiq.* xiv. 10; xix. 5. 3; Philo, *De Leg.* p. 1036). In Alexandria special favour was shown to the numerous Jews settled there, by their Roman masters.

The right of citizenship is spoken of in Acts xxii. 28, where we find the chief captain declaring, in relation to Paul's claim of being a Roman, 'With a great sum obtained I this freedom' (*πολιτεία, jus civitatis, civitas*). In the preceding twenty-fifth verse we learn that it was unlawful to scourge 'a man that was a Roman, and uncondemned.' These statements are in strict accordance with what we learn from independent sources [CITIZENSHIP] (Sigonius, *De Antiquo Jure Civ. Rom.*, Paris, 1572); found also in Grævii *Thesaurus*, i.; E. Spanheim, *Orbis Rom.*, London, 1703; Cellarii *Dissertatt.* p. 715, sq.; Fabric. *Bibliograph. Antiq.* p. 724, sq.). On the general subject of this article consult Eschenberg's *Classical Manual*, § *Roman Antiquities*, Wiley and Putnam, London, 1844; Ruperti's *Handbuch des Römisch. Alterthümer*, Hanover, 1841—a very accurate and comprehensive manual, in two volumes, 8vo.; Maillott and Martin, *Recherches sur les Costumes, les Mœurs, &c. des Anciens Peuples*. The first volume exhibits in detail the costume, manners, &c. of the Romans down to the last emperors of Constantinople. The engrav-

ings are taken from medals and monuments. Those who wish to study the morals of the Romans will find aid in Ruperti (*ut supra*, 2 Abtheil, p. 258, sq.); see also J. K. Unger, *Sitten und Gebrauche der Römer*, Wien, 1805; see also Arnold's *History of Rome*. Much information may be found by the English reader, on the state of manners in the first centuries after Christ, in the following fictions—Lockhart's *Valerius;* Bulwer's *Pompeii;* Ware's *Palmyra;* and in Milman's *History of Christianity*.—J. R. B.

ROMANS, THE EPISTLE TO THE. This epistle claims our interest more than the other didactic epistles of the Apostle Paul, because it is more systematic, and because it explains especially that truth which became subsequently the principle of the reformation, viz., righteousness through faith. Melanchthon was so fond of this epistle that he made it the subject of constant lectures, and twice copied it out with his own hand, just as Demosthenes copied Thucydides (comp. Strobel's *Litterärgeschichte der loci Theologici des Melanchthon*, p. 13): in these lectures he explained the leading dogmatical and ethical ideas, *i. e.* the *loci Theologici*, which, at a later period, gave rise to the dogmatical work bearing this title.

At the period when the apostle wrote the Epistle to the Romans, he had passed through a life full of experience. About four years after the composition of this letter Paul calls himself Πρεσβύτης, 'the aged' (Philemon, ver. 9). Paul was at this time between fifty and sixty years old. After having spent two years and a half at Ephesus, he planned a journey to Macedonia, Achaia, Jerusalem, and Rome (Acts xix. 21). Having spent about three months in travelling, he arrived at Corinth, where he remained three months (Acts xx. 2); and during this second abode at Corinth he wrote the Epistle to the Romans (comp. 1 Cor. xvi. 1—3, and 2 Cor. ix. with Rom. xv. 25). Paul dispatched this letter by a Corinthian woman, who was just then travelling to Rome (xvi. 1), and sent greetings from an inhabitant of Corinth (xvi. 23; comp. 1 Cor. i. 14).

The data in the life of the apostle depend upon the year in which his conversion took place. Consequently we must have a settled opinion concerning the date of this event before we speak about the date of the Epistle to the Romans. The opinions of the learned fluctuate concerning the date of the conversion: some think that this event took place as early as A.D. 31 or 41; but it is by far more probable that the epistle was written about the year 58 or 59. The congregation of Christians at Rome was formed at a very early period, but its founder is unknown. Paul himself mentions two distinguished teachers at Rome, who were converted earlier than himself. According to Rom. i. 8, the Roman congregation had then attained considerable celebrity, as their faith was spoken of throughout the whole world. From chap. xvi. we learn that there were a considerable number of Christian teachers at Rome; from which we infer that the congregation had existed there for some time; and it is most likely that the Jews at Rome were first converted to Christianity. Under Augustus there were so many Jews at Rome, that this emperor appointed for them quarters beyond the Tiber. These Jews consisted mostly of freedmen, whom Pompey had carried to Rome as slaves: some of the early Christians at Rome followed mercantile pursuits.

At the time when this epistle was written, there were also Gentile Christians in the Roman church; and from passages like xi. 13; xv. 16; i. 7 and 13, we learn that the Gentile Christians were then more numerous than the converted Jews. It is well known that in those times many heathens embraced Judaism (Tacitus, *Annal.* xv. 44; Juvenal, *Sat.* xiv. 96). These converts to Judaism were mostly women. Such proselytes formed at that period the point of coalescence for the conversion of the Gentiles. Among the converts from Judaism to Christianity, there existed in the days of Paul two parties. The congregated apostles had decreed, according to Acts xv., that the converts from paganism were not bound to keep the ritual laws of Moses. There were, however, many converts from Judaism who were disinclined to renounce the authority of the Mosaic law, and appealed erroneously to the authority of James (Gal. ii. 9; comp. Acts xxi. [25]): they claimed also the authority of Peter in their favour. Such converts from Judaism, mentioned in the other epistles, who continued to observe the ritual laws of Moses, were not prevalent in Rome: however, Dr. Baur of Tübingen supposes that this Ebionitic tendency prevailed at that time in all Christian congregations, Rome not excepted. He thinks that the converts from Judaism were then more numerous than the Gentile Christians, and that all were compelled to submit to the Judaizing opinions of the majority (comp. Baur's *Abhandlung über Zweck und Veranlassung des Römerbriefs, in der Tübinger Zeitschrift*, 1836). However, we infer from the passages above quoted, that the Gentile Christians were much more numerous at Rome than the converts from Judaism. Neander has also shown that the Judaizing tendency did not prevail in the Roman church (comp. Neander's *Pflanzung der Christlichen Kirche*, 3rd ed. p. 388). This opinion is confirmed by the circumstance, that, according to ch. xvi., Paul had many friends at Rome. Dr. Baur removes this objection only by declaring ch. xvi. to be spurious. He appeals to ch. xiv. in order to prove that there were Ebionitic Christians at Rome: it appears, however, that the persons mentioned in ch. xiv. were by no means strictly Judaizing zealots, wishing to overrule the Gentile Christians, but, on the contrary, some scrupulous converts from Judaism, upon whom the Gentile Christians looked down contemptuously. There were, indeed, some disagreements between the converts from Judaism and the Gentile Christians in Rome. This is evident from ch. xv. 6—9, and xi. 17, 18: these debates, however, were not of so obstinate a kind as among the Galatians; otherwise the apostle could scarcely have praised the congregation at Rome as he does in ch. i. 8 and 12, and xv. 14. From ch. xvi. 17—20, we infer that the Judaizers had endeavoured to find admittance, but with little success.

The opinions concerning the OCCASION and OBJECT of this letter, differ according to the various suppositions of those who think that the object of the letter was supplied by the occasion, or the supposition that the apostle selected his subject only after an opportunity for writing was offered. In earlier times the latter opinion prevailed, as, for instance, in the writings of Thomas

Aquinas, Luther, Melanchthon, Calvin. In more recent times the other opinion has generally been advocated, as, for instance, by Hug, Eichhorn, and Flatt. Many writers suppose that the debates mentioned in ch. xiv. and xv. called forth this epistle. Hug, therefore, is of opinion that the theme of the whole epistle is the following—JEWS AND GENTILES HAVE EQUAL CLAIM TO THE KINGDOM OF GOD. According to Eichhorn, the Roman Jews being exasperated against the disciples of Paul, endeavoured to demonstrate that Judaism was sufficient for the salvation of mankind; consequently Eichhorn supposes that the polemics of St. Paul were not directed against Judaizing converts to Christianity, as in the Epistle to the Galatians, but rather against Judaism itself. This opinion is also maintained by De Wette (*Einleitung ins Neue Testament*, 4th ed. § 138). According to Credner (*Einleitung*, § 141), the intention of the apostle was to render the Roman congregation favourably disposed before his arrival in the chief metropolis, and he therefore endeavoured to show that the evil reports spread concerning himself by zealously Judaizing Christians were erroneous. This opinion is nearly related to that of Dr. Baur, who supposes that the real object of this letter is mentioned only in ch. ix. to xi. According to Dr. Baur, the Judaizing zealots were displeased that by the instrumentality of Paul such numbers of Gentiles entered the kingdom of God, that the Jews ceased to appear as the Messianic people. Dr. Baur supposes that these Judaizers are more especially refuted in ch. ix. to xi., after it has been shown in the first eight chapters that it was in general incorrect to consider one people better than another, and that all had equal claims to be justified by faith. Against the opinion that the apostle, in writing the Epistle to the Romans, had this particular polemical aim, it has been justly observed by Rückert (in the second ed. of his *Commentar.*), Olshausen, and De Wette, that the apostle himself states that his epistle had a general scope. Paul says in the introduction that he had long entertained the wish of visiting the metropolis, in order to confirm the faith of the church, and to be himself comforted by that faith (ch. i. 12). He adds (i. 16), that he was prevented from preaching in the chief city by external obstacles only. He says that he had written to the Roman Christians in fulfilment of his vocation as apostle to the Gentiles. The journey of Phœbe to Rome seems to have been the external occasion of the epistle: Paul made use of this opportunity by sending the sum and substance of the Christian doctrine in writing, having been prevented from preaching in Rome. Paul had many friends in Rome who communicated with him; consequently he was the more induced to address the Romans, although he manifested some hesitation in doing so (xv. 15). These circumstances exercised some influence as well on the form as upon the contents of the letter; so that, for instance, its contents differ considerably from the Epistle to the Ephesians, although this also has a general scope. The especial bearings of the Epistle to the Romans are particularly manifest in ch. xiii. to xvi.; Paul shows to both Jews and Gentiles the glory of Christianity as being *absolute religion*, and he especially endeavours to confirm the faith of the converts from Judaism (iv.); Paul refers to the circumstance that in Rome the number of Gentile Christians was much greater than that of the converted Jews, and he explains how this was consistent with the counsel of God. He endeavours to re-establish peace between the contending parties; consequently he had to produce many arguments which might be converted into polemics (Polemik) against the Jews; but it does by no means follow that such polemics were the chief aim of the apostle.

CONTENTS OF THE EPISTLE TO THE ROMANS.—It belongs to the characteristic type of St. Paul's teaching to exhibit the Gospel in its historical relation to the human race. In the Epistle to the Romans, also, we find that peculiar character of St. Paul's teaching, which induced Schelling to call St. Paul's doctrine a philosophy of the history of man. The real purpose of the human race is in a sublime manner stated by St. Paul in his speech in Acts xvii. 26, 27; and he shows at the same time how God had, by various historical means, promoted the attainment of his purpose. St. Paul exhibits the Old Testament dispensation under the form of an institution for the education of the whole human race, which should enable men to terminate their spiritual minority, and become truly of age (Gal. iii. 24, and iv. 1-4). In the Epistle to the Romans also, the apostle commences by describing the two great divisions of the human race, viz., those who underwent the preparatory spiritual education of the Jews, and those who did not undergo such a preparatory education. We find a similar division indicated by Christ himself (John x. 16), where he speaks of one flock separated by hurdles. The chief aim of all nations, according to St. Paul, should be the δικαιοσύνη ἐνώπιον τοῦ θεοῦ, *righteousness before the face of God*, or absolute realization of the moral law. According to St. Paul, the heathen also have their νόμος, *law*, as well religious as moral internal revelation (Rom. i. 19, 32; ii. 15). The heathen have, however, not fulfilled that law which they knew, and are in this respect like the Jews, who also disregarded their own law (ii.). Both Jews and Gentiles are transgressors, or by the law separated from the grace and sonship of God (Rom. ii. 12; iii. 20); consequently if blessedness could only be obtained by fulfilling the demands of God, no man could be blessed. God, however, has gratuitously given righteousness and blessedness to all who believe in Christ (iii. 21—31); the Old Testament also recognises the value of religious faith (iv.): thus we freely attain to peace and sonship of God presently, and have before us still greater things, viz., the future development of the kingdom of God (v. 1-11). The human race has gained in Christ much more than it lost in Adam (v. 12, 21). This doctrine by no means encourages sin (vi.): on the contrary, men who are conscious of divine grace fulfil the law much more energetically than they were able to do before having attained to this knowledge, because the law alone is even apt to sharpen the appetite for sin, and leads finally to despair (vii.); but now we fulfil the law by means of that new spirit which is given unto us, and the full development of our salvation is still before us (viii. 1-27). The sufferings of the present time cannot prevent this development, and must rather work for good to them whom God from eternity

has viewed as faithful believers; and nothing can separate such believers from the eternal love of God (viii. 28-39). It causes pain to behold the Israelites themselves shut out from salvation; but they themselves are the cause of this seclusion, because they wanted to attain salvation by their own resources and exertions, by their descent from Abraham, and by their fulfilment of the law: thus, however, the Jews have not obtained that salvation which God has freely offered under the sole condition of faith in Christ (ix.); the Jews have not entered upon the way of faith, therefore the Gentiles were preferred, which was predicted by the prophets. However, the Jewish race, as such, has not been rejected; some of them obtain salvation by a selection made not according to their works, but according to the grace of God. If some of the Jews are left to their own obduracy, even their temporary fall serves the plans of God, viz., the vocation of the Gentiles. After the mass of the Gentiles shall have entered in, the people of Israel also, in their collective capacity, shall be received into the church (xi.).

On the authenticity and integrity of the Epistle to the Romans.—The authenticity of this epistle has never been questioned. The Epistle to the Romans is quoted as early as the first and second century by Clemens Romanus and Polycarp. Its integrity has lately been attacked by Dr. Baur, who pretends that chs. xv. and xvi. are spurious, but only, as we have observed above, because these chapters do not harmonise with his supposition, that the Christian church at Rome consisted of rigid Judaizers. Schmidt and Reiche consider the doxology at the conclusion of ch. xvi. not to be genuine. In this doxology the anacolouthical and unconnected style causes some surprise, and the whole has been deemed to be out of its place (ver. 26 and 27). We, however, observe, in reply to Schmidt and Reiche, that such defects of style may be easily explained from the circumstance, that the apostle hastened to the conclusion, but would be quite inexplicable in additions of a copyist who had time for calm consideration. The same words occur in different passages of the epistle, and it must be granted that such a fluctuation sometimes indicates an interpolation. In the Codex i., in most of the Codices Minusculi, as well as in Chrysostom, the words occur at the conclusion of ch. xiv. In the Codices B.Ċ.Ḋ.E., and in the Syrian translation, this doxology occurs at the conclusion of ch. xvi. In Codex A it occurs in both places; whilst in Codex D**, the words are wanting entirely, and they seem not to fit into either of the two places. If the doxology be put at the conclusion of ch. xiv., Paul seems to promise to those Christians weak in faith, of whom he had spoken, a confirmation of their belief. But it seems unfit (unpassend) in this connection to call the Gospel an eternal mystery, and the doxology seems here to interrupt the connection between chs. xiv. and xv.; and at the conclusion of ch. xvi. it seems to be superfluous, since the blessing had been pronounced already in ver. 24. We, however, say that this latter circumstance need not have prevented the apostle from allowing his animated feelings to burst forth in a doxology, especially at the conclusion of an epistle which treated amply on the mystery of redemption. We find an analogous instance in Ephes. xxiii. 27, where a doxology occurs after the mystery of salvation had been mentioned: we are therefore of opinion that the doxology is rightly placed at the conclusion of ch. xvi., and that it was in some codices erroneously transposed to the conclusion of ch. xiv., because the copyist considered the blessing in xvi. 24 to be the real conclusion of the Epistle. In confirmation of this remark we observe that the same codices in which the doxology occurs in ch. xvi. either omit the blessing altogether, or place it after the doxology.

Interpreters of the Epistle to the Romans.—Chrysostom is the most important among the fathers who attempted to interpret this epistle; he enters deeply, and with psychological acumen, into the thoughts of the apostle, and expounds them with sublime animation. Among the reformers Calvin is distinguished by logical penetration and doctrinal depth. Beza is distinguished by his grammatical and critical knowledge. Since the period of rationalism the interest about this epistle has been revived by the *Commentary* of Tholuck, the first edition of which appeared in 1824. No other book of the New Testament has, since that period, been expounded so frequently and so accurately. From 1824 to 1844, there have been published as many as seventeen learned and critical commentaries on it; and, in addition to these, several practical expositions. In the *Commentar* von Rückert, 2d ed., 1839, 2 vols., we find copious criticisms of the various interpretations, and a clear and pleasing, although not always carefully weighed, exposition.

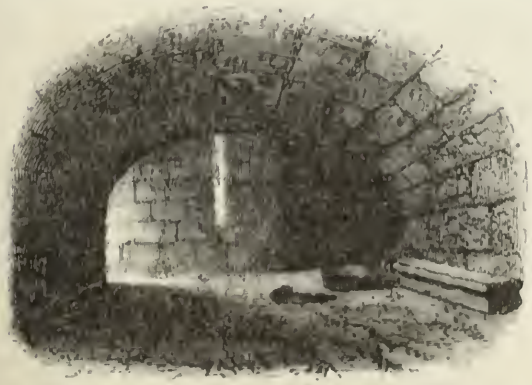
The *Commentar* von Fritzsche, 1836 to 1843, 3 vols., exhibits a careful critique of the text, combined with philological explanation, but the true sense of the apostle has frequently been missed. The *Commentar* of Olshausen, 2nd ed., 1840, generally contains only the author's own exposition, but presents a very pleasing development of the doctrinal contents. De Wette manifests on the whole a correct tact (3rd ed., 1841); however, his book is too comprehensive, so that the contents of the epistle do not make a clear impression. Lately there has been published in French also an interpretation of the Epistle to the Romans, worked out with much diligence and ingenuity, by Hugues Oltramare; the first part contains chs. i. to v. 11, and was published at Geneva, 1843.—A. T.

[The principal English works on the Epistle to the Romans are—Willet, *Hexapla, or a Sixfold Comment on the Epistle to the Romans*, 1611; Taylor's *Paraphrase and Notes on the Epistle to the Romans*, 1747; Jones, *The Epistle to the Romans analyzed, from a development of the circumstances by which it was occasioned*, 1801; Cox, *Horæ Romanæ*, 1824 (translation with notes); Turner, *Notes on the Epistle to the Romans*, New York, 1824 (exegetical, for the use of students); Terrot, *The Epistle of Paul to the Romans*, 1828 (Greek text, paraphrase, notes, and useful prolegomena). Stuart's *Commentary on the Epistle to the Romans*, Andover, U. S., 1832, is undoubtedly the greatest work on this Epistle which has been produced in the English language, and may be regarded as next in importance to the admirable Commentary by the

writer of the above article (Dr. Tholuck), a translation of which, by the Rev. R. Menzies, has been given in the Edinburgh *Biblical Cabinet.*—Ed.]

ROME, the famous capital of the Western World, and the present residence of the Pope, stands on the river Tiber, about fifteen miles from its mouth, in the plain of what is now called the Campagna (*Felix illa Campania*, Pliny, *Hist. Nat.* iii. 6), in lat. 41° 54′ N., long. 12° 28′ E. The country around the city is not a plain, but a sort of undulating table-land, crossed by hills, while it sinks towards the south-west to the marshes of Maremma, which coast the Mediterranean. In ancient geography the country, in the midst of which Rome lay, was termed Latium, which, in the earliest times, comprised within a space of about four geographical square miles the country lying between the Tiber and the Numicius, extending from the Alban Hills to the sea, having for its chief city Laurentum. Here, on the Palatine Hill, was the city of Rome founded by Romulus and Remus, grandsons of Numitor, and sons of Rhea Sylvia, to whom, as the originators of the city, mythology ascribed a divine parentage. The origin of the term Rome is in dispute. Some derive it from the Greek Ῥώμη, 'strength,' considering that this name was given to the place as being a fortress. Cicero (*De Repub.* ii. 7) says the name was taken from that of its founder Romulus. At first the city had three gates, according to a sacred usage. Founded on the Palatine Hill, it was extended, by degrees, so as to take in six other hills, at the foot of which ran deep valleys that, in early times, were in part overflowed with water, while the hill-sides were covered with trees. In the course of the many years during which Rome was acquiring to herself the empire of the world, the city underwent great, numerous, and important changes. Under its first kings it must have presented a very different aspect from what it did after it had been beautified by Tarquin. The destruction of the city by the Gauls (U.C. 365) caused a thorough alteration in it; nor could the troubled times which ensued have been favourable to its being well restored. It was not till riches and artistic skill came into the city on the conquest of Philip of Macedon, and Antiochus of Syria (U.C. 565), that there arose in Rome large handsome stone houses. The capture of Corinth conduced much to the adorning of the city: many fine specimens of art being transferred from thence to the abode of the conquerors. And so, as the power of Rome extended over the world, and her chief citizens went into the colonies to enrich themselves, did the master-pieces of Grecian art flow towards the capital, together with some of the taste and skill to which they owed their birth. Augustus, however, it was, who did most for embellishing the capital of the world, though there may be some sacrifice of truth in the pointed saying, that he found Rome built of brick, and left it marble. Subsequent emperors followed his example, till the place became the greatest repository of architectural, pictorial, and sculptural skill, that the world has ever seen; a result to which even Nero's incendiarism indirectly conduced, as affording an occasion for the city's being rebuilt under the higher scientific influences of the times. The site occupied by modern Rome is not precisely the same as that which was at any period covered by the ancient city: the change of locality being towards the north-west, the city has partially retired from the celebrated hills. About two-thirds of the area within the walls (traced by Aurelian) are now desolate, consisting of ruins, gardens, and fields, with some churches, convents, and other scattered habitations. Originally the city was a square mile in circumference. In the time of Pliny the walls were nearly twenty miles in circuit; now, they are from fourteen to fifteen miles round. Its original gates, three in number, had increased in the time of the elder Pliny to thirty-seven. Modern Rome has sixteen gates, some of which are, however, built up. Thirty-one great roads centered in Rome, which, issuing from the Forum, traversed Italy, ran through the provinces, and were terminated only by the boundary of the empire. As a starting point a gilt pillar (Milliarium Aureum) was set up by Augustus in the middle of the Forum. This curious monument, from which distances were reckoned, was discovered in 1823. Eight principal bridges led over the Tiber; of these three are still relics. The four districts into which Rome was divided in early times, Augustus increased to fourteen. Large open spaces were set apart in the city, called Campi, for assemblies of the people and martial exercises, as well as for games. Of nineteen which are mentioned, the Campus Martius was the principal. It was near the Tiber, whence it was called Tiberinus. The epithet Martius was derived from the plain being consecrated to Mars, the god of war. In the later ages it was surrounded by several magnificent structures, and porticos were erected, under which, in bad weather, the citizens could go through their usual exercises. It was also adorned with statues and arches. The name of Fora was given to places where the people assembled for the transaction of business. The Fora were of two kinds—fora venalia, 'markets;' fora civilia, 'law courts,' &c. Until the time of Julius Cæsar there was but one of the latter kind, termed by way of distinction Forum Romanum, or simply Forum. It lay between the Capitoline and Palatine Hills; it was eight hundred feet wide, and adorned on all sides with porticos, shops, and other edifices, on the erection of which large sums had been expended, and the appearance of which was very imposing, especially as it was much enhanced by numerous statues. In the centre of the Forum was the plain called the Curtian Lake, where Curtius is said to have cast himself into a chasm or gulf, which closed on him, and so he saved his country. On one side were the elevated seats or suggestus, a sort of pulpits from which magistrates and orators addressed the people—usually called Rostra, because adorned with the beaks of ships which had been taken in a sea-fight from the inhabitants of Antium. Near by was the part of the Forum called the Comitium, where were held the assemblies of the people called Comitia Curiata. The celebrated temple, bearing the name of Capitol (of which there remain only a few vestiges), stood on the Capitoline Hill, the highest of the seven: it was square in form, each side extending about two hundred feet, and the ascent to it was by a flight of one hundred steps. It was one of the oldest, largest, and grandest edifices in the city. Founded

by Tarquinius Priscus, it was at several times enlarged and embellished. Its gates were of brass, and it was adorned with costly gildings; whence it is termed 'golden' and 'glittering,' *aurea, fulgens*. It enclosed three structures, the temple of Jupiter Capitolinus in the centre, the temple of Minerva on the right, and the temple of Juno on the left. The Capitol also comprehended some minor temples or chapels, and the Casa Romuli, or cottage of Romulus, covered with straw. Near the ascent to the Capitol was the asylum [CITIES OF REFUGE]. We also mention the Basilicæ, since some of them were afterwards turned to the purposes of Christian worship. They were originally buildings of great splendour, being appropriated to meetings of the senate, and to judicial purposes. Here counsellors received their clients, and bankers transacted their business. The earliest churches, bearing the name of Basilicæ, were erected under Constantine. He gave his own palace on the Cælian Hill as a site for a Christian temple. Next in antiquity was the church of St. Peter, on the Vatican Hill, built A.D. 324, on the site and with the ruins of temples consecrated to Apollo and Mars. It stood about twelve centuries, at the end of which it was superseded by the modern church bearing the same name. The Circi were buildings oblong in shape, used for public games, races, and beast-fights. The Theatra were edifices designed for dramatic exhibitions; the Amphitheatra (double theatres, buildings in an oval form) served for gladiatorial shows and the fighting of wild animals. That which was erected by the Emperor Titus, and of which there still exists a splendid ruin, was called the Coliseum, from a colossal statue of Nero that stood near it. With an excess of luxury, perfumed liquids were con-



473. [Rome.]

veyed in secret tubes round these immense structures, and diffused over the spectators, sometimes from the statues which adorned the interior. In the arena which formed the centre of the amphitheatres, the early Christians often endured martyrdom by being exposed to ravenous beasts.

The connection of the Romans with Palestine caused Jews to settle at Rome in considerable numbers. On one occasion, in the reign of Tiberius, when the Jews were banished from the city by the emperor, for the misconduct of some members of their body, not fewer than four thousand enlisted in the Roman army which was then stationed in Sardinia (Sueton. *Tib.* 36; Joseph. *Antiq.* xviii. 3. 4). These appear to have been emancipated descendants of those Jews whom Pompey had taken prisoners in Judæa, and brought captive to Rome (Philo, *De Leg. ad Cai.*, p. 1014). From Philo also it appears that the Jews in Rome were allowed the free use of their national worship, and generally the observance of their ancestral customs. Then, as now, the Jews lived in a part of the city appropriated to themselves (Joseph. *Antiq.* xiv. 10. 8), where with a zeal for which the nation had been some time distinguished, they applied themselves with success to proselytising (Dion Cass. xxxvii. 17). They appear, however, to have been a restless colony; for when, after their expulsion under Tiberius, numbers had returned to Rome, they were again expelled from the city by Claudius (Suet. *Claud.* 25). The Roman biographer does not give the date of this event, but Orosius (vii. 6) mentions the ninth year of that emperor's reign (A.D. 50). The precise occasion of this expulsion history does not afford us the means of determining. The words of Suetonius are, 'Judæos, impulsore Chresto, assidue tumultuantes, Roma expulit'—'He expelled

from Rome the Jews continually raising disturbances under the impulse of Chrestos.' The cause here assigned for their expulsion is, that they raised disturbances, an allegation which, at first view, does not seem to point to a religious, still less to a Christian, influence. And yet we must remember that the words bear the colouring of the mind of a heathen historian, who might easily be led to regard activity for the diffusion of Christian truth, and the debates to which that activity necessarily led, as a noxious disturbance of the peace of society. The Epicurean view of life could scarcely avoid describing religious agitations by terms ordinarily appropriated to martial pursuits. It must equally be borne in mind that the diffusion of the Gospel in Rome—then the very centre and citadel of idolatry—was no holiday task, but would call forth on the part of the disciples all the fiery energy of the Jewish character, and on the part of the Pagans all the vehemence of passion which ensues from pride, arrogance, and hatred. Had the ordinary name of our Lord been employed by Suetonius, we should, for ourselves, have found little difficulty in understanding the words as intended to be applied to Jewish Christians. But the biographer uses the word Chrestus. The *us* is a mere Latin termination; but what are we to make of the root of the word, Chrest for Christ? Yet the change is in only one vowel, and Chrest might easily be used for Christ, by a Pagan writer. A slight difference in the pronunciation of the word as vocalised by a Roman and a Jew, would easily cause the error. And we know that the Romans often did make the mispronunciation, calling Christ Chrest (Tertull. *Apol.* c. 3; Lactant. *Inst.* iv. 17; Just. Mart. *Apol.* c. 2). The point is important, and we therefore give a few details, the rather that Lardner has, under Claudius (vol. i., 259), left the question undetermined. Now in Tacitus (*Annal.* xv. 44) Jesus is unquestionably called Chrest (quos per flagitia invisos vulgus Christianos appellabat. Auctor nominis ejus Chrestus) in a passage where his followers are termed Christians. Lucian too, in his *Philopatris*, so designates our Lord, playing on the word Χρηστός, which, in Greek, signifies 'good:' these are his words: εἰ τύχοι γε Χρηστὸς καὶ ἐν ἔθνεσι, κ.τ.λ., 'since a Chrest (a good man) is found among the Gentiles also.' And Tertullian (*ut supra*) treats the difference as a case of ignorant

474. [Mamertine Prison.]

mispronunciation: 'Christianus perperàm Chrestianus pronunciatur a vobis, nam nominis certa est notitia penes vos.' The mistake may have been the more readily introduced from the fact that, while Christ was a foreign word, Chrest was customary: lips therefore that had been used to Chrest would rather continue the sound than change the vocalisation. The term Chrest occurs on inscriptions (Heumann, *Sylloge Diss.*, i. 536), and epigrams in which the name appears may be found in Martial (vii. 55; ix. 28). In the same author (xi. 91.) a diminutive from the word, namely Chrestillus, may be found. The word assumed also a feminine form, Chresta, as found in an ancient inscription—

'Hoc, virtus, fatique decus et amabile nomen,
Dote pudicitiæ, celebrata laboribus actis
Vitæ, *Chresta* jacet condita nunc tumulo.

We subjoin a few lines from Martial (vii. 55):

Nulli munera, *Chreste*, si remittis,
Nec nobis dederis, remiserisque,
Credam te satis esse liberalem.

There can therefore be little risk in asserting that Suetonius intended to indicate Jesus Christ by Chrestus; and we have already seen that the terms which he employs to describe the cause of the expulsion, though peculiar, are not irreconcilable with a reference on the part of the writer to Christians. The terms which Suetonius employs are accounted for, though they may not be altogether justified by those passages in the Acts of the Apostles, in which the collision between the Jews who had become Christians, and those who adhered to the national faith, is found to have occasioned serious disturbances (Kuinoel, Acts xviii. 2; Rorsal, *De Christo per errorem in Chrest. Comm.*, Groning. 1717). This interpretation is confirmed by the fact that a Christian church, consisting of Jews, Proselytes, and Pagan Romans, had at an early period been formed in Rome, as is evident from the Epistle of Paul to the Romans; which Christian community must have been in existence a long time when Paul wrote (about A.D. 59) that epistle (see Rom. i. 8-13); and Meyer (*Commentar der Brief an die Römer Einleit.*, § 2) is of opinion that the foundations of the Church in Rome may have been laid even during the lifetime of our Lord. It is also worthy of notice that Luke, in the book of Acts (xviii. 2), when speaking of the decree of Claudius as a banishment of all the Jews from Rome, adverts to the fact as a reason why two Christians, Aquila and Priscilla, whom we know (Rom. xvi. 3) to have been members of the Roman church, had lately come from Italy: these the apostle found on his arrival at Corinth in the year A.D. 51. Both Suetonius and Luke, in mentioning the expulsion of the Jews, seem to have used the official term employed in the decree; the Jews were known to the Roman magistrate; and Christians, as being at first Jewish converts, would be confounded under the general name of Jews; but that the Christians as well as the Jews strictly so called were banished by Claudius appears certain from the book of Acts; and, independently of this evidence, seems very probable, from the other authorities of which mention has been made.

The question, Who founded the church at Rome? is one of some interest as between Catholic and Protestant. The former assigns the honour to Peter, and on this grounds an argument in favour of the claims of the papacy. There is,

however, no sufficient reason for believing that Peter was ever even so much as within the walls of Rome. But we have no intention of entering here on that disputed point, and content ourselves with referring the reader to the most recent work on the subject which has come to our knowledge, in which he will find the argument well and learnedly handled (D. J. Ellendorf, *Ist Petrus in Rom und Bischof der Römischen Kirche gewesen?* Darmstadt, 1843).

Rome, as being their tyrannical mistress, was an object of special hatred to the Jews, who therefore denominated her by the name of Babylon—the state in whose dominions they had endured a long and heavy servitude (Schöttgen, *Hor. Heb.* i. p. 1125; Eisenmenger, *Entdeckt Judenth.* i. 1800). Accordingly, Rome, under the name of Babylon, is set forth in the Apocalypse (xiv. 8; xvi. 19; xvii. 5; xviii. 2) as the centre and representative of heathenism; while Jerusalem appears as the symbol of Judaism. In ch. xvii. 9 allusion is clearly made to the Septicollis, the seven-hilled city—'seven mountains on which the woman sitteth.' The description of this woman, in whom the profligacy of Rome is vividly personified, may be seen in ch. xvii. of the Revelation. In ch. xiii. Rome is pictured as a huge unnatural beast, whose name or number 'is the number of a man, and his number is χξστ,' not improbably Λατῖνος, Latin, Roman. This beast has been most variously interpreted. The several theories serve scarcely more than to display the ingenuity or the bigotry of their originators, and to destroy each other. Münter (*De occulto Urbis Romæ nomine*, Hafn. 1811,) thinks there is a reference to the secret name of Rome, the disclosure of which, it was thought, would be destructive to the state (Plin. *Hist. Nat.* iii. 9; Macrob. *Sat.* iii. 5; Plutarch, *Quæst. Rom.* c. 61; Serv. *ad Æn.* ii. 293). Pliny's words occur in the midst of a long and picturesque account of Italy. Coming in the course of it to speak of Rome, he says, 'the uttering of whose other name is accounted impious, and when it had been spoken by Valerius Soranus, who immediately suffered the penalty, it was blotted out with a faith no less excellent than beneficial.' He then proceeds to speak of the rites observed on the 1st of January, in connection with this belief, in honour of Diva Angerona, whose image appeared with her mouth bound and sealed up. This mystic name tradition reports to have been Valencia.

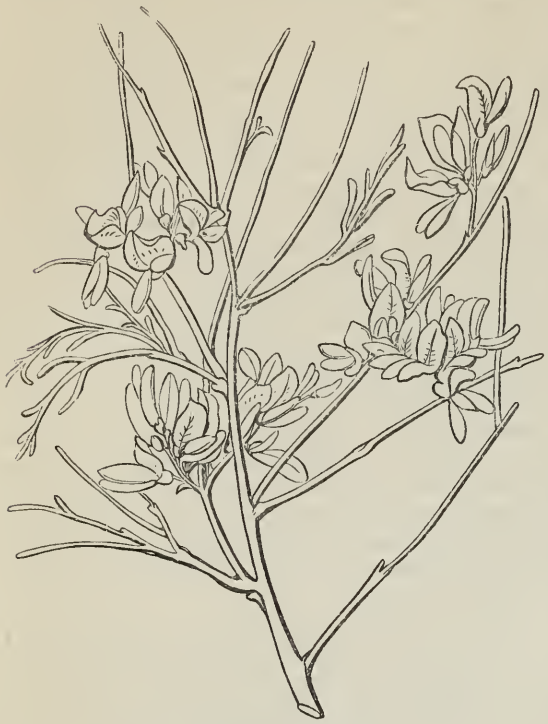
The most recent view of the name of the beast, from the pen of a Christian writer, we find in *Hyponoia, or Thoughts on a Spiritual Understanding of the Apocalypse*, London, 1844. 'The number in question (666) is expressed in Greek by three letters of the alphabet; χ, six hundred; ξ, sixty; στ, six. Let us suppose these letters to be the initials of certain names, as it was common with the ancients in their inscriptions upon coins, medals, monuments, &c., to indicate names of distinguished characters by initial letters, and sometimes by an additional letter, where the initial might be considered insufficient, as C. Caius, Cn. Cneus. The Greek letter χ (ch) is the initial of Χριστός (Christ); the letter ξ is the initial of ξύλον (wood or tree); sometimes figuratively put in the New Testament for the Cross; and in the Revelation applied to the tree of life, the spiritual cross. The last letter ϛ is equivalent to σ and τ, but whether an *s* or an *st*, it is the initial of the word Satanas, Satan, or the adversary. Taking the two first names in the genitive, and the last in the nominative, we have the following appellation, name, or title: Χριστοῦ ξύλου σατανᾶς, "the adversary of the cross of Christ," a character corresponding with that of certain enemies of the truth, described by Paul, Phil. iii. 19.' The spiritual hy ponoia or underthought embodied in this the author thus states: 'Any doctrine tending to represent the intervention of a divine propitiation as unnecessary, or militating with a belief and trust in the vicarious sacrifice of Jesus, as the only hope of salvation, must be an adversary of the cross of Christ; of this character we consider every principle of self-righteousness,' &c. (See Ansald, *De Romana Tutelar. Deor. evocatione*, Brix. 1743; Plin. *Hist. Nat.* iii. 9; Cellar. *Rolit.* i. p. 632, sq.; Mannert. *Geog.* ix. 1. 581, sq.; Sachse, *Versuch ein Hist. Topogr. Beschreib. von Rom*, Hannov. 1812; Hilscher, *De Chresto cujus mention. fecit Suet.*, Lips.; also Ernesti and Wolf, *ad Sueton.*; Eichhorn, *Comm. in Apocal.* p. 104, sq.).

ROOF. [House.]

ROOM. [House.]

ROSE. [Rhodon.]

ROSH (רֹאשׁ and רוֹשׁ) occurs in several places of the Old Testament. The word is thought originally to signify 'poison,' and is therefore supposed to indicate a poisonous plant. But this has not yet been ascertained. Celsius begins his article on *Rosh* by stating that 'Aben Ezra and the Rabbins observe, that the word is written with a *vau* in Deut. xxxii. 32, and with an *aleph* in all the other places, but incorrectly, according to J. Gousset.' It is sometimes translated *gall*, sometimes *bitter* or *bitterness*, but is generally considered to signify some plant. This we may infer from its being frequently mentioned along with *laanah* or 'wormwood,' as in Deut. xxix. 18, 'lest there should be among you a root that beareth *gall* (*rosh*) and *wormwood* (*laanah*); so also in Jer. ix. 15; xxiii. 15; and in Lament. iii. 19, 'Remembering mine affliction and my misery, the *wormwood* and the *gall*.' That it was a berry-bearing plant, has been inferred from Deut. xxxii. 32, 'For their vine is of the vine of Sodom, and their grapes are grapes of gall (*rosh*), their clusters are bitter.' In Jer. viii. 14, 'water of gall' (*rosh*), is mentioned; which may be either the expressed juice of the fruit or of the plant, or a bitter infusion made from it: 'aquæ Rosch dicuntur, quia sunt succus herbæ, quam Rosch appellant.' That it was a plant is very evident from Hosea x. 4, where it is said 'their judgment springeth up as *hemlock* (*rosh*) in the furrows of the field.' Here we observe that *rosh* is translated *hemlock* in the Auth. Vers., as it is also in Amos vi. 12, 'For ye have turned judgment into *gall* (*laanah*, 'wormwood'), and the fruit of righteousness into *hemlock* (*rosh*).'



Though *rosh* is generally acknowledged to indicate some plant, yet a variety of opinions have been entertained respecting its identification: some, as the Auth. Vers. in Hosea x. 4, and Amos vi. 12, consider *cicuta* or *hemlock* to be the plant intended. Tremellius adopts this as the meaning of *rosh* in all the passages, and is

followed by Celsius (*Hierobot.* ii. 49). The *cicuta* of the Romans, the κώνειον of the Greeks, is generally acknowledged to have been what we now call *hemlock*, the *conium maculatum* of botanists. There can be no doubt of its poisonous nature, 'Cicuta venenum est publica Atheniensium pœna invisa' (Pliny, *Hist. Nat.* xxv. 13). There is, however, little or no proof adduced that *rosh* is *hemlock*. Celsius quotes the description of Linnæus in support of its growing in the furrows of fields, 'Frequens per Europam in ruderatis, juxta pagos, urbes, in sepibus, aggeribus, agris.' But it does not appear to be so common in Syria. Celsius, however, adduces Ben Melech, the most learned of Rabbins, as being of opinion that *rosh* was *conium* or *hemlock:* 'Aquæ Rosch, virus; barbare toxicum. Herba est, cujus succum bibendum porrigunt illi, quem interimere volunt.'

But there does not appear any necessity for our considering *rosh* to have been more poisonous than *laanah* or *wormwood*, with which it is associated so frequently as to appear like a proverbial expression (Deut. xxix. 18; Jer. ix. 15; xxiii. 15; Lam. iii. 19; Amos vi. 12). Some have erroneously translated it *wormwood*, from which it is sufficiently distinguished in the above passages. The Sept. translators render it *agrostis*, intending some species of grass. Hence some have concluded that it must be *lolium temulentum*, or *darnel*, the zizanium of the ancients, which is remarkable among grasses for its poisonous and intoxicating properties. It is, however, rather sweetish in taste, and its seeds being intermixed with corn, are sometimes made into bread. It is well known to grow in corn-fields, and would therefore suit the passage of Hosea; but it has not a berry-like fruit, nor would it yield any juice: the infusion in water, however, might be so understood, though it would not be very bitter or disagreeable in taste. Some have in consequence thought that some of the *solaneæ* or *luridæ* of Linnæus might be intended by the word *rosh*. These are remarkable for their narcotic properties, though not particularly bitter; some of them have berried fruits, as the *belladonna*, which, however, is not indigenous in Palestine; but *solanum nigrum*, common nightshade, a small herbaceous plant, is common in fields and road-sides from Europe to India, and is narcotic like the others. The *henbane* is another plant of this family, which is possessed of powerful narcotic properties, and has been used in medicine from early times, both by the Greeks and Asiatics. But no proof appears in favour of any of this tribe, and their sensible properties are not so remarkably disagreeable as to have led to their being employed in what appears to be a proverbial expression. Hiller, in his *Hierophyticon* (ii. 54), adduces the *centaury* as a bitter plant, which corresponds with much of what is required. Two kinds of *centaury*, the larger and smaller, and both conspicuous for their bitterness, were known to the ancients. The latter, the *Erythræa centaurium*, is one of the family of gentians, and still continues to be employed as a medicine on account of its bitter and tonic properties. '*Hoc centaurium* inquit Plin. xxv. c. 6, *nostri* fel terræ *vocant, propter amaritudinem summam*. Ea non radici tantum inest, sed totam inficit plantam: ideo et Germanis *erd-gall* et Hispanis *Hiel de tierra*, et Gallis *fiel de terre* vocitatur.' We may also mention that an old name of this *centaury* was '*Rha* capitatum.' From the extreme bitterness of taste, from growing in fields, and being a native of warm countries, some plant like *centaury*, and of the tribe of gentians, might answer all the passages in which *rosh* is mentioned, with the exception of that (Deut. xxxii. 32) where it is supposed to have a berried fruit. Dr. Harris, quoting Blaney on Jerem. viii. 14, says, 'In Ps. lxix. 21, which is justly considered as a prophecy of our Saviour's sufferings, it is said, "they gave me ראש to eat," which the Sept. have rendered χολήν, *gall*. And accordingly it is recorded in the history, Matt. xxvii. 34, "They gave him vinegar to drink, mingled with gall," ὄξος μετὰ χολῆς. But in the parallel passage (Mark xv. 23) it is said to be "wine mingled with myrrh," a very bitter ingredient. From whence I am induced to think that χολή, and perhaps ראש, may be used as a general name for whatever is exceedingly bitter; and, consequently, when the sense requires, it may be put specially for any bitter herb or plant, the infusion of which may be called מי ראש, "Aquæ Rosch." '—J. F. R.

ROTHEM, written also ROTEM (רֹתֶם), occurs in four passages of the Old Testament, in all of which it is translated *juniper* in the Auth. Vers., though it is now considered very clear that a kind of *broom* is intended. Celsius remarks that the Sept. translators seem to have been unacquainted with the meaning of the word, as in one passage they introduce it in Greek letters as Ραθάμ, &c., in another as meaning *burning charcoal*, and in a third as *roots of woods*. Some who have perceived that some plant was intended, have doubted about the genus, translating it *oak* and *terebinth*, but more frequently *juniper*. The last has been the most generally adopted in modern versions; but travellers in the East have met with a plant or plants, which by the Arabs is called *retem*, *ratam*, *rehtem*, and *retem*, varying a little perhaps in different districts; the variations being probably owing to the modes of spelling adopted by different authors. In the Arabic works on Materia Medica we have the same word رتم *retem*, signifying a kind of broom, and which, according to Celsius, is so named from رتم, *ligando*. The Moors, no doubt, carried the word into Spain, as *retama* is there applied to a species of genista or broom. In Loudon's *Encyclopædia of Plants* it is named *spartium monospermum*, or white single-seeded broom, and is described as a very handsome shrub, remarkable for its numerous snow-white flowers. Osbeck remarks that it grows like willow-bushes along the shores of Spain, as far as the flying sands reach, where scarcely any other plant exists, except the *ononis serpens*, or creeping *restharrow*. The use of this shrub is very great in stopping the sand. The leaves and young branches furnish delicious food for goats. It converts the most barren spot into a fine odoriferous garden by its flowers, which continue a long time. It seems to shelter hogs and goats against the scorching heat of the sun. The twigs are used for tying bundles; and all kinds of herbs

that are brought to market are fastened together with them. Forskal found it in Arabia, and Desfontaines in Barbary, on the sandy coast.

475. [Genista monosperma.]

The Spaniards call it *Retama*, from the Arabic name *Retem*. It is now referred by all botanists to the genus *Genista*, and called *G. monosperma*. It is described by De Candolle as a branching and erect shrub, with slender, wandlike, flexible branches; leaves comparatively few, linear, oblong, pressed to the branches, pubescent; inflorescence in few flowered lateral racemes; petals white, silky, nearly equal to one another; legumes oval, inflated, smooth, membranaceous, one to two seeded. It occurs on the sterile shores of Portugal, Spain, Barbary, and Egypt. It was found by Forskal at Suez, and named by him *Genista Spartium?* with *rætæm* as its Arabic name. Bové also found it at Suez, and again in different parts of Syria. Belon also mentions finding it in several places when travelling in the East. Burckhardt also frequently mentions the shrub *rethem* in the deserts to the south of Palestine, and he thought it to be the same plant as the *Genista rætæm* of Forskal. He states that whole plains are sometimes covered with this shrub, and that such places are favourite places of pasturage, as sheep are remarkably fond of the pods. Lord Lindsay again, while travelling in the middle of the valleys of Mount Sinai, says, 'The *rattam*, a species of broom, bearing a white flower, delicately streaked with purple, afforded me frequent shelter from the sun while in advance of the caravan.' Mr. Kitto on this well observes, 'It is a remarkable, because undesigned, coincidence, that in travelling to the very same Mount of Horeb, the prophet Elijah rested, as did Lord Lindsay, under a *rattam* shrub.' There can be no reasonable doubt, therefore, that the Hebrew *rothem* denotes the same plant as the Arabic *retem*, though it has been rendered *juniper* in the English, and several other translations, as in 1 Kings xix. 4; 'but he (Elijah or Elias) himself went a day's journey into the wilderness, and came and sat down under a *juniper* (*rothem*) tree,' &c.; 'And as he lay and slept under a *juniper* tree,' &c. In the other passages the meaning is not so clear, and therefore different interpretations have been given. Thus, Job (xxx. 4) says of the half-famished people who despised him, 'who cut up mallows by the bushes, and *juniper* (*rothem*) roots for their food.' Though the broom root may perhaps be more suitable for diet than the *juniper*, yet they are both too bitter and medicinal to be considered or used as nutritious, and, therefore, some say, that 'when we read that *rotem* roots were their food, we are to suppose a great deal more than the words express, namely, that their hunger was so violent, as not to refrain even from these roots,' which were neither refreshing nor nourishing. Ursinus supposes, that instead of the roots of this broom, we are to understand a plant which grows upon these roots, as well as upon some other plants, and which is well known by the English name of *broom-rape*, the *orobanche* of botanists. These are sometimes eaten. Thus Dioscorides (ii. 136) observes that the *orobanche*, which grows from the roots of broom, was sometimes eaten raw, or boiled like asparagus. Celsius again suggests an amendment in the sentence, and thinks that we should understand it to mean that the broom roots were required for *fuel*, and not for *food*, as the Hebrew words signifying *fuel* and *food*, though very similar to each other, are very different in their derivation: 'Diversæ igitur sunt voces *Lachmam*, panis eorum, et *Lachmam*, ad calefaciendum se, scriptione licet et literis atque punctis exacte conveniant;' and this sense is confirmed by some of the Talmudical writers, as R. Levi Ben Gerson, who commenting on this passage says: 'ut significet, ad calefaciendum se; quia opus habebant, quo calefierent, quod versarentur in locis frigidis, sine ullo perfugio.' The broom is the only fuel procurable in many of these desert situations, as mentioned by several travellers. Thus Thevenot, 'Puis nous nous reposâmes en un lieu où il y avoit un peu de genêts, car ils ne nous faisoient point reposer, qu'en des lieux où il y eut de quoi brûler, tant pour se chauffer, que pour faire cuire le cabvè et leur mafrouca.' In Ps. cxx. 4, David observes that the calumnies of his enemies were 'like arrows of the mighty, with coals of juniper' (*rothem*). The broom, being, no doubt, very commonly used as fuel in a country where it is abundant, and other plants scarce, might redily suggest itself in a comparison; but it is also described as sparkling, burning and crackling more vehemently than other wood.—J. F. R.

RUBY. The word rendered 'ruby' in the Authorized Version (Job xxviii. 18; Prov. iii. 15; viii. 11; xx. 15; xxxi. 10; Lam. iv. 7) is פנינים *peninim*, which appears rather to indicate 'pearls.' The ruby is, however, generally supposed to be represented by the word כדכד *kad-kod*, which occurs in Ezek. xxvii. 6, and Isa. liv. 12, where the Authorized Version renders it 'agate.' An Arabic word of similar sound (*kadskadsat*) signifies 'vivid redness;' and as the Hebrew word may be derived from a root of like signification, it is inferred that it denotes the Oriental ruby, which is distinguished for its vivid red colour, and was regarded as the most valuable of

precious stones next after the diamond. This mode of identification, however, seems rather precarious. The Greek translator of Ezek. xxvii. 16, does not appear to have known what it meant, for he preserves the original word; and although the translator of Isa. liv. 12 has *jasper* (ἴασπις), he is not regarded as any authority in such matters, when he stands alone. The ruby was doubtless known to the Hebrews; but it is by no means certain that *kad-kod* was its name. Some have supposed that the word אקדח *ekdach*, which from its etymology should signify a sparkling flaming gem, is to be regarded as a species of ruby. It occurs only in Isa. liv. 12; hence the Septuagint makes it a carbuncle, as does the Authorized Version.

RUFUS (Ῥοῦφος). A person of this name was one of the sons of Simon the Cyrenian, who was compelled to bear the cross of Christ (Mark xv. 21): he is supposed to be the same with the Rufus to whom Paul, in writing to the Romans, sends his greeting in the remarkable words, 'Salute Rufus, chosen in the Lord, and his mother and mine' (Rom. xvi. 13). The name is Roman; but the man was probably of Hebrew origin. He is said to have been one of the seventy disciples, and eventually to have had charge of the church at Thebes.

RUSH. [Agmon.]

RUTH (רוּת; Sept. Ῥούθ), a Moabitish woman, brought, under peculiar circumstances, into intimate relation with the stock of Israel, and whose history is given in one of the books of the sacred canon which bears her name. The narrative that brings her into the range of inspired story is constructed with idyllic simplicity and pathos, and forms a pleasant relief to the sombre and repulsive shades of the picture which the reader has just been contemplating in the later annals of the Judges. It is the domestic history of a family compelled, by the urgency of a famine, to abandon the land of Canaan, and seek an asylum in the territories of Moab.* Elimelech, the head of the emigrating household, dies in the land of his sojourn, where his two surviving sons 'took them wives of the women of Moab; the name of the one was Orpah, and the name of the other Ruth.' On the death of the sons, the widowed parent, resolving to return to her country and kindred, the filial affection of the daughters-in-law is put to a severe test, and Ruth determines at all hazards to accompany Naomi. She accordingly arrives at Bethlehem with her mother, where, in the extremity of want, she goes to glean after the reapers in the harvest-field of Boaz, a wealthy kinsman of her deceased father-in-law, Elimelech. Attracted by her appearance, and informed of her exemplary conduct towards her mother-in-law, Boaz bade her return from day to day, and directed his servants to give her a courteous welcome. An omen so propitious could not but be regarded as a special encouragement to both, and Naomi therefore counselled Ruth to seek an opportunity for intimating to Boaz the claim she had upon him as the nearest kinsman of her deceased husband. A stratagem, which in other circumstances would have been of very doubtful propriety, was adopted for compassing this object; and though Boaz entertained the proposal favourably, yet he replied that there was another person more nearly related to the family than himself, whose title must first be disposed of. Without delay he applied himself to ascertain whether the kinsman in question was inclined to assert his right—a right which extended to a purchase of the ransom (at the Jubilee) of Elimelech's estate. Finding him indisposed to the measure, he obtained from him a release, ratified according to the legal forms of the time, and then proceeded himself to redeem the patrimony of Elimelech, and espoused the widow of his son, in order 'to raise up the name of the dead upon his inheritance.' From this union sprang David, the illustrious king of Israel, whose line the writer traces up, in conclusion, through Boaz, to Pharez, son of Judah.

The Book of Ruth is inserted in the Canon, according to the English arrangement, between the book of Judges and the books of Samuel, as a sequel to the former and an introduction to the latter. Among the ancient Jews it was added to the book of Judges, because they supposed that the transactions which it relates happened in the time of the judges of Israel (Judg. i. 1). Several of the ancient fathers, moreover, make but one book of Judges and Ruth. But the modern Jews commonly place in their bibles, after the Pentateuch, the five Megilloth—1. The Song of Solomon; 2. Ruth; 3. The Lamentations of Jeremiah; 4. Ecclesiastes; 5. Esther. Sometimes Ruth is placed the first of these, sometimes the second, and sometimes the fifth.

The true date and authorship of the book are alike unknown, though the current of authority is in favour of Samuel as the writer. That it was written at a time considerably remote from the events it records, would appear from the passage in ch. iv. 7, which explains a custom referred to as having been 'the manner *in former time* in Israel, concerning redeeming and concerning changing' (comp. Deut. xxv. 9). That it was written, also, at least as late as the establishment of David's house upon the throne, appears from the concluding verse—'And Obed begat Jesse, and Jesse begat David.' The expression, moreover (ch. i. 1), 'when the judges ruled,' marking the period of the occurrence of the events, indicates, no doubt, that in the writer's days kings had already begun to reign. Add to this what critics have considered as certain Chaldaisms with which the language is interspersed, denoting its composition at a period considerably later than

* The period to which this famine is to be referred is a greatly disputed point among commentators. The opinion of Usher, which assigns it to the age of Gideon, and which is a mean between the dates fixed upon by others, carries with it the greatest probability. The oppression of the Midianites, mentioned in Judg. vi. 3-6, which was productive of a famine, and from which Gideon was instrumental in delivering his people, wasted the land and destroyed its increase, 'till thou come unto Gaza;' and this embraced the region in which Judah and Bethlehem were situated. The territory of Judah was also adjacent to Moab, and a removal thither was easy and natural. The scourge of Midian endured, moreover, for seven years; and at the expiration of ten years after the deliverance by Gideon was fully consummated, Naomi re-emigrated to her native land. All the circumstances combined favour, mainly, the hypothesis of Usher.

that of the events themselves. Thus Eichhorn finds a Chaldaism or Syriasm in the use of א for ה in מרא, though the same form occurs elsewhere. He adverts also to the existence of a superfluous *Yod* in ישמתי and ירדתי (iii. 3), and שכבתי (ver. 4). As, however, the language is in other respects, in the main, pure, these few Chaldaisms may have arisen from a slight error of the copyists, and therefore can scarcely be alleged as having any special bearing on the era of the document. The same remark is to be made of certain idiomatic phrases and forms of expression which occur elsewhere only in the books of Samuel and of Kings, as—'The Lord do so to me, and more also' (Ruth i. 17; comp. 1 Sam. iii. 17; xiv. 44; xx. 23: 2 Sam. iii. 9, 35; xix. 13; 1 Kings ii. 23; xix. 2; xx. 10; 2 Kings vi. 31); 'I have discovered to your ear,' for 'I have told you' (Ruth iv. 4; comp. 1 Sam. xx. 2; 2 Sam. vii. 27).

The canonical authority of Ruth has never been questioned, a sufficient confirmation of it being found in the fact that Ruth, the Moabitess, comes into the genealogy of the Saviour, as distinctly given by the Evangelist (Matt. i. 6). The principal difficulty in regard to the book arises, however, from this very genealogy, in which it is stated that Boaz, who was the husband of Ruth, and the great-grandfather of David, was the son of Salmon by Rachab. Now, if by Rachab we suppose to be meant, as is usually understood, Rahab the harlot, who protected the spies, it is not easy to conceive that only three persons—Boaz, Obed, and Jesse, should have intervened between her and David, a period of near 400 years. But the solution of Usher is not improbable, that the ancestors of David, as persons of pre-eminent piety, were favoured with extraordinary longevity. Or it may be that the sacred writers have mentioned in the genealogy only such names as were distinguished and known among the Jews.

The leading scope of the book has been variously understood by different commentators. Umbreit (*Ueber Geist und Zweck des Buches Ruths*, in *Theol. Stud. und Krit.* for 1834, p. 308) thinks it was written with the specific moral design of showing how even a stranger, and that of the hated Moabitish stock, might be sufficiently noble to become the mother of the great king David, because she placed her reliance on the God of Israel. Bertholdt regards the history as a pure fiction, designed to recommend the duty of a man to marry his kinswoman; while Eichhorn conceives that it was composed mainly *in honour of the house of David*, though it does not conceal the poverty of the family. The more probable design we think to be to pre-intimate, by the recorded adoption of a Gentile woman into the family from which Christ was to derive his origin, the final reception of the Gentile nations into the true church, as fellow-heirs of the salvation of the Gospel. The moral lessons which it incidentally teaches are of the most interesting and touching character: that private families are as much the objects of divine regard as the houses of princes; that the present life is a life of calamitous changes; that a devout trust in an overruling Providence will never fail of its reward; and that no condition, however adverse or afflicted, is absolutely hopeless, are truths that were never more strikingly illustrated than in the brief and simple narrative before us.—G. B.

S.

SABBATH. The original word (שַׁבָּת) signifies simply rest, cessation from labour or employment.

The term, however, became appropriated in a specific religious sense, to signify the dedication of a precise portion of time to cessation from worldly labour, and a peculiar consecration by virtue of which a sanctity was ascribed to the portion of time so set apart, just as a similar sacred character was ascribed to consecrated places, things, and persons: the violation of it was analogous to sacrilege.

The character of the institution, as it existed under the Mosaical law, is distinct and manifest; but the subject, as a whole, embraces points on which Christian opinion has been considerably divided. It will be our object briefly to exhibit the different views which have been taken on these points, and to indicate the materials by means of which the subject may be more fully investigated.

Was there any Sabbath before the Law? This is a question which lies at the root of all the differences of opinion which have been entertained. For the affirmative, it is alleged on the authority of Gen. ii. 3, that the Sabbath was instituted by God in commemoration of his resting on the seventh day from the work of creation, and given to our first parents.

This text has indeed usually been regarded as conclusive of the whole question: but those who hold that the institution of the Sabbath originated under the Law, observe that this passage contains no express command, addressed to any parties, nor any specific mention of the nature of such implied solemnization; still less any direct allusion to rest from labour, or to religious worship.

It is also urged, that some of the ablest divines, even of older times, regard the passage (Gen. ii. 3) as proleptical or anticipatory, and referring to the *subsequent* institution recorded in Exodus. They conceive that Moses, in recounting this description of the creation, had for at least one principal object, the introduction of this sanction from the received cosmogony, for the establishment of the Sabbath among the Israelites: and that, as this narrative was composed after the delivery of the law for their special instruction, so this passage was only intended to confirm more forcibly that institution; or that it is to be understood as if Moses had said, 'God rested on the seventh day, which *he has since blessed and sanctified.*'

It is admitted that there is no other direct mention of a Sabbath in the book of Genesis: but there are traces of a period of seven days, which are usually regarded as indicating the presence of a Sabbath. Thus, in Gen. iv. 3, the words rendered 'in process of time,' have been held to signify 'the end of days,' and this supposed to mean a week,—when the offerings of Cain and Abel were made,—and thence the Sabbath. Again, they refer to the periods of seven days, occurring in the history of Noah (Gen. vii. 10; viii. 10); yet the term 'week' is also used in the contract between Jacob and

Laban (Gen. xxix. 27, 28); and Job and his friends observed the term of seven days (Job ii. 13); all of which, it is alleged, goes to prove that the blessing of a Sabbath was not withheld from the primitive world.

The terms in which the appointment of the Sabbath to the Israelites is made before the delivery of the rest of the law (Exod. xvi. 23), have also been supposed to imply that it was not a new institution, as also the use of the word 'remember,' introducing the injunction in the Decalogue. But, on the other side, it is answered that in giving an injunction, the monitory word 'remember' is as commonly used in reference to the *future* recollection of the precept so given, as to anything *past*. That there is nothing extraordinary in the institution of one particular observance of the law before the rest of it was delivered: the same argument would show a previous obligation to observe the Passover or circumcision. That with regard to the reckoning of time by weeks, this does not at all necessarily imply any reference to a Sabbath. And that the employment of any particular mode of reckoning by an *historian*, is no proof that it was used *by the people*, or *in the times* he is describing.

It is powerfully urged by the believers in a primitive Sabbath, that we find from time immemorial the knowledge of a week of seven days among all nations—Egyptians, Arabians, Indians—in a word, all the nations of the East, have in all ages made use of this week of seven days, for which it is difficult to account without admitting that this knowledge was derived from the common ancestors of the human race.

On the other side it is again denied that the reckoning of time by weeks implies any reference to a Sabbath. One of our own contributors, who takes this view, remarks—

'The division of time by weeks, as it is one of the most ancient and universal, so is it one of the most obvious inventions, especially among a rude people, whose calendar required no very nice adjustments. Among all early nations the *lunar* months were the readiest large divisions of time, and though the recurrence of the lunar period in about 29½ days was incompatible with any *exact* subdivision, yet the nearest whole number of days which could be subdivided into shorter periods, would be either 30 or 28; of which the latter would of course be adopted, as admitting of division into 4, corresponding nearly to those striking phenomena, the phases or quarters of the moon. Each of these would palpably correspond to about a week; and in a period of about 5½ lunations, the same phases would return very nearly to the same days of the week. In order to connect the reckoning by weeks with the lunar month, we find that all ancient nations observed some peculiar solemnities to mark the day of the *new moon*. Accordingly, in the Mosaic law the same thing was also enjoined (Num. x. 10; xxviii. 11, &c.), though it is worthy of remark, that while *particular observances* are here enjoined, the idea of celebrating the new moon in *some way* is alluded to as if already familiar to them.

'In other parts of the Bible we find the Sabbaths and new moons continually spoken of in conjunction; as (Isa. i. 13, &c.) the division of time by weeks prevailed all over the East, from the earliest periods, among the Assyrians, Arabs, and Egyptians;—to the latter people Dion Cassius ascribes its invention. It was found among the tribes in the interior of Africa by Oldendorf (Jahn's *Arch. Bibl.*, art. 'Week'). The Peruvians counted their months by the moon, their half-months by the increase and decrease of the moon, and the weeks by quarters, without having any particular names for the week days. Their cosmogony, however, does not include any reference to a six days' creation (Garcilasso de la Vega, *Hist. of the Incas*, in Taylor's *Nat. Hist. of Society*, i. 291). The Peruvians, besides this, have a cycle of *nine* days, the approximate *third* part of a lunation (*ib.* p. 292), clearly showing the common origin of both. Possibly, also, the "nundinæ" of the Romans may have had a similar origin.

'The Mexicans had a period of 5 days (Antonio de Solis, *Conquest of Mexico*, quoted by Norman on 'Yucatan,' p. 185). They had also periods of 13 days; their year was solar, divided into 18 months of 20 days each, and 5 added (Laplace, *Hist. d'Astron.*, p. 65). Some writers, as Acosta and Baron Humboldt, have attributed the origin of the week to the names of the primary planets as known to the ancients. It is certain that the application of the *names* of the planets to the days originated in the *astrological* notion, that each planet in order presided over the hours of the day; this we learn expressly from Dion Cassius (lib. xxvii.). Arranging the planets in the order of their distances from the earth, on the Ptolemaic system, Saturn, Jupiter, Mars, the Sun, Venus, Mercury, the Moon,—then *e. g. Saturn* presided over the 1st hour of Saturday; and assigning each planet to an hour in succession, the 22nd hour will fall to Saturn again, the 23rd to Jupiter, the 24th to Mars; and thus the 1st hour of the next day would fall to the *Sun*, and so on. This mode of designation was adopted by the Greeks and Romans from the East, and is found among the Brahmins (see Useful Knowledge Society's *Life of Galileo*, p. 12; also Laplace, *Précis de l'Hist. de l'Astron.*, p. 16).'

Those who take the view adverse to the existence of a primitive Sabbath, regard it as a circumstance worthy of remark, that in the re-establishment of the human race, after the Flood, we find in Gen. ix. a precise statement of the covenant which God is represented as making with Noah, in which, while several particulars are adverted to, no mention whatever is made of the Sabbath.

The early Christian writers are generally as silent on this subject of a primitive Sabbath as on that of primitive sacrifice [SACRIFICE]. Such examination as we have been able to institute, has disclosed no belief in its existence, while some indications are found of a notion that the Sabbath began with Moses. Thus, Justin Martyr says, that the patriarchs 'were justified before God not keeping the Sabbaths:' and again, 'from Abraham originated circumcision, and from Moses the Sabbath, and sacrifices and offerings,' &c. (*Dial. con. Tryph.*, 236. 261). Irenæus observes, 'Abraham, without circumcision, and without observance of Sabbaths, believed in God,' &c. (iv. 30). And Tertullian expresses himself to the same effect (*Adv. Jud.* ii. 4). While, on the other hand, they regard the institution as wholly peculiar to the Israelites. Justin Martyr, in particular, ex-

presses himself pointedly to the effect that 'it was given to them on account of their lawlessness (ἀνομίαν) and hardness of heart' (*Dial. cum Tryph.*, 235).

The Jewish Sabbath.—Under the Mosaic law itself, the case is perfectly free from all doubt or ambiguity. The Sabbath, as consisting in a rigid cessation from every species of labour, was enjoined expressly 'for a perpetual *covenant*,' and as 'a *sign* between God and the *children of Israel* for ever' (Exod. xxxi. 16). And the same idea is repeated in many other passages; all showing both the exclusive announcement and peculiar object and application of the institution to the people of Israel;—as particularly Ezek. xx. 10; Nehem. ix. 13, &c. And this is further manifest in the constant association of this observance with others of the like peculiar and positive nature,—as with reverencing the sanctuary (Lev. xix. 30), keeping the ordinances (Ezek. xlv. 17), solemnizing the new moons (Isa. i. 13; lxvi. 23), and other feasts (Hos. ii. 11). And obviously with the same view it was expressly made one of the primary obligations of proselytes who joined themselves to the Lord, as 'taking hold of the covenant' thereby (Isa. lvi. 6).

The degree of minute strictness with which it was to be observed, is laid down in express literal precepts, as against kindling fire (Exod. xxxv. 4) or preparing food (xvi. 5, 22). A man was put to death for gathering sticks (Num. xv. 32). Buying and selling were also unlawful (Neh. x. 31).

To these a multitude of more precise injunctions were added by the traditions of the Rabbis, such as the prohibition of travelling more than twelve miles, afterwards contracted to one mile, and called a Sabbath day's journey, and not only buying and selling, but any kind of pecuniary transaction, even for charitable purposes, or so much as touching money (see Vitringa, *De Synagogâ*, translated by Bernard, p. 76).

This will be the place also to mention, however briefly, the extension of the idea of a seventh period of rest, in the institution of the *Sabbatical Year*; or the injunction of a *fallow* or cessation of tillage for the land every seventh year. Not only were the labours of agriculture suspended, but even the spontaneous productions of the earth were to be given to the poor, the traveller, and the wild animals (see Lev. xxv. 1-7; Deut. xv. 1-10). This prohibition, however, did not extend to other labours or trades, which were still carried on. There was, however, in this year an extraordinary time devoted to the hearing of the law read through (see Deut. xxxi. 10, 18). As Moses predicted (Lev. xxvi. 34), this institution was afterwards much neglected (2 Chron. xxxvi. 21).

Closely connected with this was the observance of the year following seven Sabbatic years (*i. e.* the fiftieth year) called the year of Jubilee; but of this we have fully treated under the Art. Jubilee.

The Christian Sabbath.—The question as to the continued obligation of the Sabbath under the Christian dispensation, is one on which great difference of opinion has been entertained, not only by Christian churches, but by theologians of the same church.

The Jewish prophets in several places describe in lofty imagery a future condition of glory and prosperity, connected with the reign of the promised Messiah. These predictions are in a great degree conveyed under the *literal* representation of temporal grandeur, to be attained by the Jewish nation, and the restoration of their temple and worship to the highest pitch of splendour, while proselytes should come in from all nations, until the whole world should own its spiritual sway (as Amos ix. 11; Mich. iv. 1; Zech. viii. 20). In the course of these representations reference is made to the observance of Sabbaths (Isa. lvi. 6, 7; lxvi. 23).

In the interpretation of these passages some difference of opinion has prevailed. The Jews themselves have always understood them in their strictly literal sense. Among Christians they have been regarded as *literally* predicting some *future* restoration of the people of Israel, or perhaps as applying in a *first* or *literal* sense to the temporal restitution of the Jews after the captivity (which was to a great degree fulfilled before the coming of Christ), and the extraordinary accession of proselytes from all nations which had at that period taken place, while in *a second or figurative* sense they refer to the final extension of Christ's spiritual kingdom over the whole world.

These passages have been adduced in proof of the continued and permanent obligation of the Sabbath under all circumstances of the church of God; but those who dispute this, call attention to the fact that in these the Sabbath is always coupled with other observances of the Mosaic law; and they allege that if the whole description be taken literally, then by common consistency the Sabbaths must be also taken literally as applying to the Jews and the proselytes to their religion: if figuratively, the Sabbaths must by parity of reason be taken figuratively also, as implying spiritual rest, cessation from sin, and the everlasting rest of the faithful.

The teaching of Christ himself on this subject was of precisely the same kind as on all other points connected with the law. He was addressing exclusively Jews living under that law still in force. He censured the extravagant rigour with which the Pharisees endeavoured to enforce it; he exhorted to a more special observance of its weightier matters, and sought to lead his followers to a higher and more spiritual sense of their obligations; but he in no degree relaxed, modified, or abrogated any portion of the Mosaic code. On the contrary, expressly upheld its authority, enlarging indeed on many precepts, but rescinding none (Matt. v. 17, 18; xxiii. 1. 29; xviii. 17, &c.).

So in regard to the more particular precept of the Sabbath, while he reproved the excessive strictness of the Pharisaical observance—and to this end wrought miracles upon it, and vindicated works of mercy and necessity by reason of the case, and instances from the Old Testament (as in Matt. xii. 1; Luke xiii. 15; John v. 9, &c.) —still he in no way modified or altered the obligation beyond what the very language of the law and the prophets clearly sanctioned. He used indeed the remarkable declaration, 'The Sabbath was made for *the man* (διὰ τὸν ἄνθρωπον), not *the man* (ὁ ἄνθρωπος) for the Sabbath,' which is usually regarded as the most conclusive text in favour of the universal obligation of the Sabbath;

and it must have been so regarded by our translators, seeing that they omit the article. It is commonly understood in the following sense: 'it was made for man, not as he may be a Jew or a Christian, but as man, a creature bound to love, worship, and serve his God and maker, in time and in eternity.' To this it is answered, that we must not overlook the article in the original, where *the* man must mean 'those for whom it was appointed,' without specifying who they were, much less implying *man* in general; that 'the man was not made for it,' as manifestly implies that it was not a duty of an essential and unchangeable nature, such as those for which man *is* especially constituted and ordained — in other words, that it was an institution enjoined by way of *adaptation* to the case of those to whom the precept was given. An intermediate view, which lays no particular stress upon the definite article, is thus expressed in paraphrase by the elder Rosenmüller (*Scholia in Marc.* ii. 27): 'The Sabbath is an institution for the recreation of man; but man was not *therefore* created that he might on the seventh day rest from all anxious labour.' He adds, 'This being the nature of the Sabbath, what follows in verse 28 will hold true, that it is in the power of the Messiah to dispense with its observance.'

In the preaching of the Apostles we find hardly an allusion to the subject. Their ministry was at first addressed solely to the Jews, or to those who were at least proselytes. To these disciples, in the first instance, they neither insisted on the observance of the law, nor on any abrogation of it; though at a later period we find St. Paul, more especially, gradually and cautiously pointing out to them its transitory nature, and that having fulfilled its purpose, it was to cease (*e. g.* Heb. vii. 18). There is nothing to show directly whether the obligation of the Sabbath did or did not share in the general declaration; and the affirmative or negative must be determined by the weight of the arguments in behalf of the preservation of the moral as distinguished from the ceremonial law. It is however clear from several passages in the New Testament, that it continued to be observed as heretofore by these converts, along with the other peculiarities of the law. Our Saviour adds, 'Therefore the Son of Man is Lord even of the Sabbath-day;' which is on all hands agreed to mean that he had power to abrogate it partially or wholly, if he thought fit, and it is admitted that he did not then think fit to exercise it.

With regard to the Gentile converts (who were the more special objects of St. Paul's labours), we find a totally different state of things prevailing. They were taught at first the spiritual religion of the Gospel in all its simplicity. But the narrow zeal of their Jewish brethren very early led them to attempt the enforcement of the additional burden of the law upon these Gentile Christians. The result was the explicit apostolic decree contained in Acts xv. 28. The omission of the Sabbath among the few things which are there enforced upon them, is advanced by those who doubt the abiding obligation of the institution, as a very strong circumstance in their favour; and the freedom of these converts from its obligation is regarded by them as conclusively proved in Col. ii. 16, and clearly implied in Rom. xiv. 6, where the Sabbaths are said to be placed in exactly the same predicament as new moons, distinctions of meats, &c., and all explicitly declared to be shadows. It is also urged that in the discourses of the apostles to the heathen recorded in the Acts, we find not the slightest allusion to any *patriarchal obligations*, of which, if such had existed, it would have been manifestly necessary to have informed their hearers.

These last arguments appear to us to be the strongest of any that have yet been advanced in favour of the view indicated; nor do we see how they can be met but by urging the distinction between the moral and ceremonial law, and the paramount obligation of the former, while the latter is abrogated: for it will then follow, that the whole moral law being of unchangeable obligation, it was not necessary to specify the Sabbath in particular, when the general obligation of the whole was understood. This answer does not, however, meet the argument founded on Col. ii. 16, which is alleged to place the Sabbath under the ceremonial law, if the distinction of the moral and ceremonial divisions of the law be admitted. That text is indeed of the utmost importance to the question; of this the disputants on both sides have been fully aware, and have joined issue upon it. The view of those who are opposed to the sabbatic obligation, has been already given: that of the other side may be expressed in the words of Bishop Horsley (*Sermons*, i. 357). 'From this text, no less a man than the venerable Calvin drew the conclusion, in which he has been rashly followed by other considerable men, that the sanctification of the seventh day is no indispensable duty of the Christian church; that it is one of those carnal ordinances of the Jewish religion which our Lord had blotted out. The truth, however, is, that in the apostolical age, the first day of the week, though it was observed with great reverence, was not called the Sabbath-day, but the Lord's day; that the separation of the Christian church from the Jewish communion might be marked by the name as well as by the day of their weekly festival; and the name of the sabbath-days was appropriated to the Saturdays, and certain days in the Jewish church which were likewise called Sabbaths in the law, because they were observed with no less sanctity. The sabbath-days, therefore, of which St. Paul in this passage speaks, were not the Sundays of the Christians, but the Saturday and other sabbaths of the Jewish calendar. The Judaizing heretics, with whom St. Paul was all his life engaged, were strenuous advocates for the observance of these Jewish festivals in the Christian church; and his (St. Paul's) admonition to the Colossians, is, that they should not be disturbed by the censures of those who reproached them for neglecting to observe these sabbaths with Jewish ceremonies.' To the same effect, see Macknight and Bulkley, on Col. ii. 16.

The difference of opinion, then, is this, that the passage is alleged, on one side, to abrogate altogether the sabbatic observance; while on the other it is contended, that it applies only to that part of it which was involved in the ceremonial law.

The question thus becomes further narrowed to the point, whether it is right or not to transfer to the Lord's day the name, the idea, and many of the obligations of the Jewish Sabbath? The ne-

gative is asserted by two very opposite parties; by the Sabbatarians as a body, and by individuals in different denominations, who take their stand upon the primitive determination of the Sabbath to the seventh day, in commemoration of the creation; and who therefore hold that the Saturday or seventh day must remain, to all time, the day of rest, unless altered by an authority equal to that by which it was established. They deny that the authority for any such alteration is to be found in the New Testament; for they understand the passage above referred to (Col. ii. 16), to apply not to the day, but to the peculiar observances which the Jewish law connected with it (Rupp, *Relig. Denom.* pp. 83-91). The right of thus transferring the idea of the Sabbath to the Lord's day, is also denied by those who believe that the Sabbath was entirely a Mosaical institution, and as such abrogated, along with the whole body of the law, at the death of Christ, which closed the old shadowy dispensation, and opened the realities of the new. It is admitted that Christ himself did not abrogate it, though he asserted his right to do so; for the old dispensation subsisted till his death. But being *then* abrogated, it is denied that it was re-enacted through the Apostles, or that they sanctioned the transfer of the Sabbatic obligations to the Sunday, although the early Christians did, with their approbation, assemble on that day—as the day on which their Lord arose from the dead—for worship, and to partake in the memorials of his love [LORD'S DAY].

In answer to this, it is urged, that the transfer or change *was* made under the authority of the Apostles. It is, indeed, allowed, that there is no express command to that effect; but as it was done in the apostolic age (which, however, the other side does not admit), the consent of the Apostles is to be understood. More cogent is the argument, that the day itself was *not* an essential part of the original enactment, which ordains not necessarily every seventh day, but one day in seven, as holy time. In the primitive ages of man, the creation of the world was the benefaction by which God was principally known, and for which he was chiefly to be worshipped. The Jews, in their religious assemblies, had to commemorate other blessings—the political creation of their nation out of Abraham's family, and their deliverance from Egyptian bondage. Christians have to commemorate, besides the common benefit of the creation, the transcendant blessing of our redemption,—our new creation to the hope of everlasting life, of which our Lord's resurrection on the first day of the week was a sure pledge and evidence. Thus in the progress of ages, the Sabbath acquired new ends, by new manifestations of the divine mercy; and these new ends justify corresponding alterations of the original institution. Horsley, and those who agree with him, allege, that upon our Lord's resurrection, the Sabbath was transferred in memory of that event, the great foundation of the Christian's hope, from the last to the first day of the week. 'The alteration seems to have been made by the authority of the Apostles, and to have taken place the very day in which our Lord arose; for on that day the Apostles were assembled; and on that day sevennight they were assembled again. The celebration of these two first Sundays was honoured by our Lord's presence. It was, perhaps, to set a mark of distinction upon this day in particular, that the intervening week passed off, as it would seem, without any repetition of his first visit to the eleven Apostles. From that time, the Sunday was the constant Sabbath of the primitive church. The Christian, therefore, who devoutly sanctifies one day in seven, although it be on the first day of the week, not the last, as was originally ordained, may rest assured, that he fully satisfies the spirit of the ordinance' (Horsley, i. 334, 335; compare Holden's *Christian Sabbath*, pp. 286, 287).

In justification of the change, it has also been well remarked, that the same portion of time which constituted the seventh day from the creation could not be simultaneously observed in all parts of the earth, and that it is not therefore probable that the original institution expressed more than one day in seven—a seventh day of rest after six days of toil, from whatever point the enumeration might set out or the weekly cycle begin. If more had been intended, it would have been necessary to establish a rule for the reckoning of days themselves, which has been different in different nations; some reckoning from evening to evening, as the Jews do now; others from midnight to midnight, &c. Even if this point were determined, the difference of time produced by difference of latitude and longitude would again throw the whole into disorder; and it is not probable that a law intended to be universal would be fettered with that circumstantial exactness which would render difficult, and sometimes doubtful astronomical calculations necessary in order to its being obeyed according to the intentions of the lawgiver. It is true that this very argument might be adduced on the other side, to prove that the obligations of the Sabbatic observance were originally limited to the Jews. It is not, however, our object, nor would it be possible, to exhaust all the arguments which bear upon the subject. Enough has been produced to indicate the bearings of the question, and at the end of the article materials are furnished for more minute inquiry. It appears to us that great confusion and much injustice have arisen from confounding the different shades of opinion respecting the Sabbath. They might be thus discriminated:—

1. Those who believe that the Sabbath is of binding and sacred obligation, *both* as a primitive institution and as a moral law of the Mosaical code. These may be divided into:

a. Those who contend for the very day of the Mosaical institution.

b. Those who believe the obligation to have been transferred to the *first* day by the Apostles.

2. Those who deny that the Sabbath was a primitive institution, or that its obligation survived the Mosaical dispensation, but who nevertheless hold the observance of the Lord's day as an apostolical institution, deriving none of its authority or obligation from the Mosaical dispensation.

3. Those who both deny the permanent obligation of the Sabbath, and that there is any obligatory authority in the New Testament for the observance of even the Lord's day. These again may be divided into two classes:—

a. Those who hold that, although not of divine obligation, the observance of the first day of the week as a day of rest from toil, and of spiritual

edification, is not only salutary but necessary, and is therefore in accordance with the will of God, and ought as such to be maintained.

b. Those who assert that, not being a matter of positive injunction, it is not necessary or desirable to observe the day at all on religious grounds. But even these generally admit that it is competent for human legislation to enact its observance as a day of rest, and that it then becomes a duty to obey it as the law of the land, seeing that it is *not contrary to* the will of God.

c. A mixed view of the subject, arising out of the two last, seems to be entertained by the Quakers, and by individuals in different denominations; namely, that the authorized institution of Moses respecting a weekly Sabbath, and *the practice* of the first teachers of Christianity, constitute a sufficient recommendation to set apart certain times for the exercise of public worship, even were there no such injunctions as that of Heb. x. 23. Community of dependence and hope dictates the propriety of *united* worship, and worship, to be united, must be performed at intervals previously fixed. But, it is urged, since the Jewish Sabbath is abrogated, and since the assembling together on the first day of the week is mentioned as an existing practice in the New Testament, but not enjoined as a positive obligation, it does not appear why these periods should recur at intervals of seven days any more than of five or ten. Nevertheless, it is added, 'the question whether we are to observe the first day of the week *because it is the first day*, is one point—whether we ought to devote it to religious exercises, *seeing that it is actually set apart for the purpose*, is another. Bearing in mind then that it is right to devote some portion of our time to these exercises, and considering that no objection exists to the day which is actually appropriated, the duty seems very obvious—so to employ it' (Jonathan Dymond, *Essays on the Principles of Morality*, i. 164-172).

This testimony in favour of the observance, from one who utterly denies the religious obligation of setting even one day in seven apart, is not unlike that of Dr. Arnold, who seems to have taken the view of the subject represented in 3, *a*. In a letter to Mr. Justice Coleridge, he says:—

'Although I think that the whole law is done away with, so far as it is the law given in Mount Sinai, yet so far as it is the law of the Spirit, I hold it to be all binding; and believing that our need of a Lord's day is as great as ever it was, and that, therefore, its observance is God's will, and is likely, so far as we see, to be so to the end of time; I should think it most mischievous to weaken the respect paid to it' (*Life and Correspondence*, i. 355).

We have entered into these details concerning the differences of opinion on this important subject—which concerns one-seventh of man's life—for the sake of defining the exact amount of such differences, and of showing that pious men, sincerely seeking the truth of God's word, may on the one hand conscientiously doubt the obligation of a Christian Sabbath without deserving to be stigmatised as Antinomians, scoffers, or profane; and on the other, may uphold it without being regarded as Judaizers and formalists. A very gratifying result which arises from the contemplation of these *differences* as to the nature and extent of the obligation, will be found in the clearer perception of the *agreement* to which they all tend, in favour of the observance itself, as in the highest degree conducive to the health of the mind and the nourishment of the soul (Calvin, *Instit. Christ. Relig.* lib. ii. ch. 8; Brerewood, *Treatise of the Sabbath;* Bp. Prideaux, *Doctrine of the Sabbath;* Abp. Bramhall, *Discourses on the Controversy about the Sabbath;* Bp. White, *Treatise of the Sabbath Day;* Heylin, *History of the Sabbath;* Chandler, *Two Sermons on the Sabbath;* Wotton, *On the Mishna*, i. 205: Warburton, *Divine Legation*, iv. 36, note; Watts' *Perpetuity of the Sabbath;* Kennicott, *Serm. and Dialog. on the Sabbath;* Porteus, *Sermons*, vol. i. serm. 9; Horsley's *Sermons*, u.s.; Paley, *Natural and Political Philosophy*, b. v. c. 7; Holden's *Christian Sabbath;* Burnside, *On the Weekly Sabbath;* Burder's *Law of the Sabbath;* Wardlaw, Wilson, and Agnew, severally, *On the Sabbath; Modern Sabbath Examined*, 1832; Archbishop Whately, *Difficulties of St. Paul*, Essay v. note on Sabbath).*

SABBATH-DAY'S JOURNEY (σαββάτου ὁδός, Acts i. 12), the distance which the Jews were permitted to journey from and return to their places of residence upon the Sabbath-day (Exod. xvi. 29). The Israelites were forbidden to go beyond the encampment (to collect manna) upon the Sabbath-day; which circumstance seems to have given rise to the regulation—which is not distinctly enjoined in the law, although it might be fairly deduced from the principle on which the legislation concerning the Jewish Sabbath was founded—that no regular journey ought to be made on the Sabbath-day (Joseph. *Antiq.* xiii. 8. 4). The intention of the lawgiver in this respect was also indicated by the direction, that beasts should rest on the Sabbath-day (comp. ch. xxiv. 26). The later Jews, as usual, drew a large number of precise and minute regulations from these plain and simple indications. Thus the distance to which a Jew might travel was limited to 2000 cubits beyond the walls of the city or the borders of his residence, because the innermost tents of the Israelites' camp in the wilderness are supposed to have been that distance from the tabernacle (Josh. iii. 4), and because the same distance beyond a city for a Sabbath-day's journey is supposed to be indicated in Num. xxxv. 4, 5 (Lightfoot, *Hor. Heb.* in Luke xxiv. 50; Acts i. 12); Targ. on Ruth, i. 16; Jarchi on Josh. iii. 4; Oecum on Acts i. 12). This also is the distance stated in the Talmud (Tract. *Erubin*), where the mode of measuring is determined, and the few cases are specified in which persons might venture to exceed the distance of 2000 cubits. Some of the Rabbins, however, distinguish a great (2800 cubits), a middling (2000 cubits), and a lesser (1800 cubits) Sabbath-day's journey. Epiphanius (*Haer.* 66 82) estimates the Sabbath-day's journey by the Greek measure of six stades, equal to 750 Roman geographical paces (1000 of which made a Roman mile). In agreement with

* In this article the view of the subject to which prevalent ideas are much opposed has been furnished by a contributor (B. P.); and the arguments which it appeared necessary to insert on the other side have, with his concurrence, been subjoined by the Editor.

this is the statement of Josephus (*Bell. Jud.* v. 2. 3), who makes the Mount of Olives to be about six stades from Jerusalem; and it is the distance between these two places which in Acts i. 12 is given as a Sabbath-day's journey. It is true that Josephus elsewhere determines the same distance as five stades (*Antiq.* xx. 8. 6); but both were probably loose statements rather than measured distances; and both are below the ordinary estimate of 2000 cubits. Taking all circumstances into account, it seems likely that the ordinary Sabbath-day's journey was a somewhat loosely determined distance, seldom more than the whole and seldom less than three-quarters of a geographical mile (Selden, *De Jure Nat. et Gent.* iii. 9; Frischmuth, *Dissert. de Itin. Sabbat.* 1670; Walther, *Dissert. de Itin. Sabbat.*; both in *Thesaurus Theolog. Philog.*, Amsterd. 1720).

SABBATIC YEAR. [Jubilee.]

SABÆANS. [Sheba.]

SACHAPH. [Cuckoo; Gull.]

SACKCLOTH. The Hebrew word for *sack*-cloth, or *sack*-ing, is שַׂק *sak*; in the Sept. and New Testament, σάκκος; and as it has been preserved in most languages (our own included) to denote the same thing, much ingenious speculation has been brought to bear upon it—chiefly as a venerable monument of the primitive language, from which it is supposed to have been derived by all the nations in whose vocabularies it has been found.

The sackcloth mentioned in Scripture was, as it is still in the East, a coarse black cloth, commonly made of hair (Rev. vi. 12), and was used for straining liquids, for sacks, and for mourning garments. In the latter case it was worn instead of the ordinary raiment, or bound upon the loins, or spread under the mourner on the ground (Gen. xxxvii. 34; 1 Kings xxiii. 2; Isa. lviii. 5; Joel i. 8; Jon. iii. 5) [Mourning]. Such garments were also worn by prophets, and by ascetics generally (Isa. xx. 2; Zech. iii. 4; comp. 2 Kings i. 8; Matt. v. 4) [Prophecy].

SACRIFICES. The sacrifices and other offerings required by the Hebrew ritual have been enumerated under Offering; and in this place it is only requisite to offer a few remarks upon the great and much controverted questions—Whether sacrifice was in its origin a human invention, or a divine institution; and whether any of the sacrifices before the law, or under the law, were sacrifices of expiation. Eminent and numerous are the authorities on both sides of these questions; but the balance of theological opinion preponderates greatly for the affirmative in each of them. On the latter point, however, most of those who deny that there was any expiatory sacrifice before the law, admit its existence under the law: and on the first, those who hold that sacrifice was of Divine origin, but became much corrupted, and was restored by the Mosaic law, do not in substance differ much from those who hold it to have been a human invention, formally recognised, and remodelled by the law of Moses.

From the universality of sacrifice, it is obvious that the rite arose either from a common source, or from a common sentiment among nations widely dispersed, and very differently constituted. Remembering that Noah, the common ancestor of the post-diluvian nations, offered sacrifice, we are enabled to trace back the custom through all nations to him; and he doubtless derived it through the antediluvian fathers, from the sacrifices which the first men celebrated, of which we have an example in that of Abel. The question concerning the divine or human origin of sacrifices, therefore, centres upon the conclusions which we may be able to draw from the circumstances and preliminaries of that transaction. Abel brought for sacrifice one of the lambs of his flock, for he was a shepherd; and with his offering God was well pleased: Cain brought of the fruits of the ground, for he was a husbandman; and with his offering God was not well pleased. Now out of this arise the questions—Was this the first animal sacrifice? and if it was, Was it offered by Abel from the spontaneous impulse of his own mind, or by command from God? and if not by divine command, How was it that his offering was more acceptable than his brother's?

That this was not the first sacrifice is held by many to be proved by the fact, that 'unto Adam and his wife the Lord made coats of skin, and clothed them' (Gen. iii. 21); for, it is urged, that as animal food does not appear to have been used before the deluge, it is not easy to understand whence these skins came, probably before any animal had died naturally, unless from beasts offered in sacrifice. And if the first sacrifices had been offered by Adam, the arguments for the divine institution of the rite are of the greater force, seeing that it was less likely to occur spontaneously to Adam than to Abel, who was a keeper of sheep. Further, if the command was given to Adam, and his sons had been trained in observance of the rite, we can the better understand the merit of Abel and the demerit of Cain, without further explanation. Apart from any considerations arising out of the skin-vestures of Adam and his wife, it would seem that if sacrifice was a divine institution, and, especially, if the rite bore a piacular significance, it would have been at once prescribed to Adam, after sin had entered the world, and death by sin, and not have been postponed till his sons had reached manhood.

If animal sacrifice was the invention of Abel, testifying his thanks to God, by offering that which was most valuable to him, the question comes, Where was the offence of Cain, and why was his offering despised? It is suggested that Abel brought the best of his flock, and Cain only the refuse of his produce; or, that Abel believed, and Cain disbelieved, that his offering would be accepted. This latter explanation is thought to be borne out by the allegation of the Apostle (Heb. xi. 4), that it was 'by faith Abel offered to God a more acceptable sacrifice than Cain.' If, however, sacrifice had been divinely commanded, this faith was that manifested in obeying the command; and if it was also piacular, it might be even referred to a belief in the doctrine of atonement for sin, which the rite in that case must have adumbrated.

One of the most recent writers on the subject, the Rev. J. Davison, in his *Inquiry into the Origin and Intent of Primitive Sacrifice*, adduces (on the authority of Spencer and Outram) the consent of the fathers in favour of the human origin of primitive patriarchal sacrifice; and alleges, that the notion of its divine origin is 'a mere modern

figment, excogitated in the presumptively speculative age of innovating Puritanism.' This assertion has been ably, and we think successfully, met by the Rev. G. S. Faber, in his *Treatise on the Origin of Expiatory Sacrifice*. He shows that the only authorities adduced by Outram and Spencer are Justin Martyr, Chrysostom, the author of the work called *Apostolical Constitutions*, and the author of the *Questions and Answers to the Orthodox*, commonly printed with the works of Justin Martyr. Of the early theologians thus adduced, the three last are positive and explicit in their assertion; while the sentiments of Justin Martyr are gathered rather by implication than in consequence of any direct avowal. He says, 'as circumcision commenced from Abraham, so the sabbath, and *sacrifices*, and oblations, and festivals, commenced from Moses;' which clearly intimates that he considered primitive sacrifice as a human invention until made by the law a matter of religious obligation. The great body of the fathers are silent as to the *origin* of sacrifice: but a considerable number of them, cited by Spencer (*De Legib. Heb.* p. 646, sq.), held that sacrifice was admitted into the law through condescension to the weakness of the people, who had been familiarised to it in Egypt, and if not allowed to sacrifice to God, would have been tempted to sacrifice to the idols of their heathen neighbours. The ancient writers who held this opinion are Justin Martyr, Origen, Tertullian, Chrysostom, Theodoret, Cyril of Alexandria, Epiphanius of Salamis, Irenæus, Jerome, Procopius, Eucherius, Anastasius, and the author of the *Apostolical Constitutions*. But out of the entire number, only the four already mentioned allege incidentally the human origin of primitive sacrifice: the rest are silent on this point. Outram indeed (*De Sacrif.* lib. i. cap. 1, § 6, pp. 8, 9) thinks, that in giving this opinion, they *virtually* deny the divine origin of sacrifice. But it is fairly answered, that the assertion, be it right or be it wrong, that sacrifice was introduced into the law from condescension to the Egyptianizing weakness of the people, furnishes no legitimate proof that the persons entertaining this opinion held the mere human origin of primitive patriarchal sacrifice, and affords no ground for alleging the consent of Christian antiquity in favour of that opinion. Such persons could not but have known, that the rite of sacrifice existed anterior to the rise of pagan idolatry: and hence the notion which they entertained leaves the question, as to the *primitive* origin of sacrifice, entirely open, so far as they are concerned. Paganism, whether in Egypt or elsewhere, merely borrowed the rite from pure Patriarchism, which already possessed it: and unless a writer expressly declares such to be his opinion, we are not warranted in concluding that he held the human origin of primitive patriarchal sacrifice, simply because he conceives that a system of sacrificial service had been *immediately* adopted into the law from Paganism out of condescension to the weakness of the people. Besides, some of these very fathers held language with respect to primitive sacrifice, not much in favour of the interpretation which has on this ground been given to their sentiments. Thus, according to Cyril, 'God accepted the sacrifice of Abel and rejected the sacrifice of Cain, because it was fitting that posterity should learn from thence, how they might blamelessly offer unto God his meet and due honour.'

If, then, these authorities be taken as neutral on the question, with the four exceptions already indicated, we shall find whatever authority we ascribe to these more than counterbalanced by the testimony of other ancient witnesses in favour of the divine origin of primitive sacrifice. Philo-Judæus says, 'Abel brought neither the same oblation as Cain, nor in the same manner; but instead of things inanimate, he brought things animate; and instead of later and secondary products, he brought the older and the first: for he offered in sacrifice from the firstlings of his flock, and from their fat, according to the most holy command (κατὰ τὸ ἱερωτατὸν διάταγμα:—*De Sacrif. Abel. et Cain.* Opp. p. 145). Augustine, after expressly referring the origin of sacrifice to the divine command, more distinctly evolves his meaning by saying: 'The prophetic immolation of blood, testifying from the very commencement of the human race the future passion of the Mediator, is a matter of deep antiquity: inasmuch as Abel is found in Holy Scripture to have been the first who offered up this prophetic immolation' (*Cont. Faust. Manich.* Opp. vi. 145). Next we come to Athanasius, who, speaking of the consent of the Old Testament to the fundamental doctrines of the New, says: 'What Moses taught, these things his predecessor Abraham had preserved: and what Abraham had preserved, with those things Enoch and Noah were well acquainted; for *they made a distinction between the clean and the unclean*, and were acceptable to God. Thus also in like manner Abel bore testimony; for he knew what he had learned from Adam, and *Adam himself taught only what he had previously learned from the Lord* (*Synod. Nicen. contr. Hær. Arian. decret.*, Opp. i. 403). Eusebius of Cæsarea, in a passage too long for quotation, alleges, that animal sacrifice was first of all practised by the ancient lovers of God (the patriarchs), and that not by accident, but through a certain divine contrivance, under which, as taught by the Divine spirit, it became their duty thus to shadow forth the great and venerable victim, really acceptable to God, which was, in time then future, destined to be offered in behalf of the whole human race (*Demonst. Evang.* i. 8. pp. 24, 25).

These testimonies certainly vindicate the opinion of the divine origin of primitive sacrifice from the charge of being a modern innovation, with no voice of antiquity in its favour.

Among the considerations urged in support of the opinion, that sacrifice must have originated in a divine command, it has been suggested as exceedingly doubtful, whether, independently of such a command, and as distinguished from vegetable oblations, animal sacrifice, which involves the practice of slaughtering and burning an innocent victim, could ever, under any aspect, have been adopted as a rite likely to gain the favour of God. Our own course of scriptural education prevents us, perhaps, from being competent judges on this point: but we have means of judging how so singular a rite must strike the minds of thinking men, not in the same degree prepossessed by early associations. The ancient Greek masters of thought not unfrequently expressed their astonishment how, and upon what rational principles, so

strange an institution as that of animal sacrifice could ever have originated; for as to the notion of its being *pleasing* to the Deity, such a thing struck them as a manifest impossibility (Jamblic. *De Vit. Pythag.* pp. 106-118; Porphyr. *De Abstin.* p. 96; Theophrast. et Porphyr. apud Euseb. *Praep. Evang.* pp. 90, 91). Those who do not believe that sacrifices were of divine institution, must dispose of this difficulty by alleging, that, when men had come to slay animals for their own food, they might think it right to slay them to satisfy their gods: and, in fact, Grotius, who held the human origin of sacrifices, and yet believed that animal food was not used before the Deluge, is reduced to the expedient of contending that Abel's offering was not an animal sacrifice, but only the produce—the milk and wool—of his best sheep. This, however, shows that he believed animal sacrifice to have been impossible before the Deluge, without the sanction of a divine command, the existence of which he discredited.

A strong moral argument in favour of the divine institution of sacrifice, somewhat feebly put by Hallet (*Comment. on* Heb. xi. 4, cited by Magee, *On the Atonement*), has been reproduced with increased force by Faber (*Prim. Sacrifice*, p. 183). It amounts to this:—

Sacrifice, when uncommanded by God, is a mere act of gratuitous superstition. Whence, on the principle of St. Paul's reprobation of what he denominates will-worship, it is neither acceptable nor pleasing to God.

But sacrifice, during the patriarchal ages, was accepted by God, and was plainly honoured with his approbation.

Therefore sacrifice, during the patriarchal age, could not have been an act of superstition uncommanded by God.

If, then, such was the character of primitive sacrifice; that is to say, if primitive sacrifice was *not* a mere act of gratuitous superstition uncommanded by God,—it must, in that case, indubitably have been a divine, and not a human institution.

If it be held that any of the ancient sacrifices were expiatory, or piacular, the argument for their divine origin is strengthened; as it is hard to conceive the combination of ideas under which the notion of expiatory sacrifice could be worked out by the human mind. This difficulty is so great, that the ablest advocates of the human origin of primitive animal sacrifice, feel bound also to deny that such sacrifices as then existed were piacular. It is strongly insisted that the doctrine of an atonement by animal sacrifice cannot be deduced from the light of nature, or from the principles of reason. If, therefore, the idea existed, it must either have arisen in the fertile soil of a guessing superstition, or have been divinely appointed. Now we know that God cannot approve of unwarranted and presumptuous superstition: if therefore he can be shown to have received with approbation a species of sacrifice undiscoverable by the light of nature, or from the principles of reason, it follows that it must have been of his own institution.

Here, however, the argument again divaricates. Some are unable to see that piacular sacrifices existed under, or were commanded by, the law of Moses; while others admit this, but deny that animal sacrifice, with an expiatory intent, existed before the law. It appears to us, that the difference of opinion as to the existence of expiatory sacrifice under the law, is more apparent than real, and arises from the different senses in which the term 'expiatory sacrifice' is understood. It will often transpire, that those who deny its existence have an idea of such a sacrifice different from that of the persons whom they think themselves opposing, but from whom they do not, in fact, materially differ. In general, those who do not admit the doctrine of the atonement through the death of Christ, do not see that certain sacrifices of the law were piacular: and on their own premises, they reason justly; for unless expiatory sacrifice prefigured the atonement offered by Jesus Christ, there appears no adequate reason for the existence of expiatory sacrifice as a divine institution, and it is difficult to believe that it could (as piacular) have been a human invention. In fact, apart from the doctrine of the atonement, the subject of expiatory sacrifice ceases to be of any material interest.

The question, of the existence of expiatory sacrifice before the law, is more difficult, and is denied by Outram, Ernesti, Doëderlin, Davison, and many others, who believe that it was revealed under the law; as well as by those who doubt its existence under the Mosaical dispensation. The arguments already stated in favour of the divine institution of primitive sacrifice, go equally to support the existence of piacular sacrifice; the idea of which seems more urgently to have required a divine intimation. Besides, expiatory sacrifice is found to have existed among all nations, in conjunction with eucharistic and impetratory sacrifices; and it lies at the root of the principle on which human sacrifices were offered among the ancient nations. The expiatory view of sacrifice is frequently produced by heathen writers:—

'Cor pro corde, precor, pro fibra sumite fibras;
Hanc animam vobis pro meliore damus.'
Ovid. *Fasti*, vi. 161.

This being the case, it is difficult to believe but that the idea was derived, along with animal sacrifice itself, from the practice of Noah, and preserved among his various descendants. This argument, if valid, would show the primitive origin of piacular sacrifice. Now there can be no doubt that the idea of sacrifice which Noah transmitted to the post-diluvian world, was the same that he had derived from his pious ancestors, and the same that was evinced by the sacrifice of Abel, to which we are, by the course of the argument, again brought back. Now if that sacrifice was expiatory, we have reason to conclude that it was divinely commanded: and the supposition that it was both expiatory and divinely commanded, makes the whole history far more clear and consistent than any other which has been or can be offered. It amounts then to this—that Cain, by bringing an eucharistic offering, when his brother brought one which was expiatory, denied virtually that his sins deserved death, or that he needed the blood of atonement. Some go further, and allege that in the text itself, God actually commanded Cain to offer a piacular sacrifice. The argument does not require this additional circumstance; but it is certainly strengthened by it. When Cain be-

came angry that Abel's offering was regarded with Divine complacency, and his own refused, God said to him, 'Why art thou wroth; and why is thy countenance fallen? If thou doest well, shalt thou not be accepted? and if thou doest not well, *sin lieth at the door*.' Now the word חטאה *chattah*, translated 'sin,' denotes in the law a 'sin-offering;' and the word רבץ translated 'lieth,' is usually applied to the recumbency of a beast. It is therefore proposed to translate the clause, 'a sin-offering coucheth at the door:' which by paraphrase would mean, 'an animal fit for a sin-offering is there, couching at the door, which thou mayest offer in sacrifice, and thereby render to me an offering as acceptable as that which Abel has presented.'

These are the principal considerations which seem suitable to this place, on a subject to the complete investigation of which many large volumes have been devoted. See Outram, *De Sacrificiis;* Sykes, *Essay on the Nature, Origin, and Design of Sacrifices;* Taylor, *Scripture Doctrine of the Atonement*, 1758; Ritchie, *Criticism upon Modern Notions of Sacrifices*, 1761; Magee, *Discourses on Atonement and Sacrifices*; Davison, *Inquiry*, &c., 1825; Faber, *Primitive Sacrifices*, &c., 1827.

SACRIFICE, HUMAN. The offering of human life, as the most precious thing on earth, came in process of time to be practised in most countries of the world. All histories and traditions darken our idea of the earlier ages with human sacrifices. But the period when such prevailed was not the earliest in time, though probably the earliest in civilization. The practice was both a result and a token of barbarism more or less gross. In this, too, the dearest object was primitively selected. Human life is the most precious thing on earth, and of this most precious possession the most precious portion is the life of a child. Children therefore were offered in fire to the false divinities, and in no part of the world with less regard to the claims of natural affection than in the land where, at a later period, the only true God had his peculiar worship and highest honours.

It is under these circumstances a striking fact that the Hebrew religion, even in its most rudimental condition, should be free from the contamination of human sacrifices. The case of Isaac and that of Jephthah's daughter cannot impair the general truth, that the offering of human beings is neither enjoined, allowed, nor practised in the Biblical records. On the contrary, such an offering is strictly prohibited by Moses, as adverse to the will of God, and an abomination of the heathen. 'Thou shalt not let any of thy seed pass through the fire to Moloch: defile not yourselves with any of these things' (Lev. xviii. 21; see also ch. xx. 2; Deut. xii. 31; Ps. cvi. 37; Isa. lxvi. 3; Jer. xxiii. 37). Yet in an age in which, like the present, all manner of novelties are broached, and, in some cases, the greater the paradox broached with the more promptitude, and maintained with the greater earnestness, these very clear positions have been withstood, and human sacrifices have been charged confidently on the Hebrew race. In the year 1842, Chillany, professor at Nürnberg, published a book (*Die Menschenopfer der alten Hebräer*), the object of which was to prove that, as the religion of the ancient Hebrews did not differ essentially from that of the Canaanites, so that Moloch, who had been originally a god common to both, merely in the process of time was softened down and passed into Jehovah, thus becoming the national deity of the people of Israel; so did their altars smoke with human blood, from the time of Abraham down to the fall of both kingdoms of Judah and Israel. In the same year appeared in Germany another work, by Daumer (*Der Feuer und Molochdienst der alten Hebräer*), intended to prove that the worship of Moloch, involving his bloody rites, was the original legal and orthodox worship of the nation of Abraham, Moses, Samuel, and David. To these works a reply was put forth in 1843, by Löwengard (*Jehovah, nicht Moloch, war der Gott der alten Hebräer*), in which he defends the worship of Jehovah from the recent imputations, and strives, by distinguishing between the essential and the unessential, the durable and the temporary, to prepare the way for a reformation of modern Judaism.

We do not think that it requires any deep research or profound learning to ascertain from the Biblical records themselves, that the religion of the Bible is wholly free from the shocking abominations of human sacrifices; and we do not therefore hesitate to urge the fact on the attention of the ordinary reader, as not least considerable among many proofs not only of the superior character, but of the divine origin, of the Hebrew worship. It was in Egypt where the mind of Moses and of the generation with whom he had primarily to do, was chiefly formed, so far as heathen influences were concerned. Here offerings were very numerous. Sacrifices of meat-offerings, libations and incense, were of very early date in the Egyptian temples. Oxen, wild goats, pigs, and particularly geese, were among the animal offerings; besides these there were presented to the gods wine, oil, beer, milk, cakes, grain, ointment, flowers, fruits, vegetables. In these, and in the case of meat, peace and sin offerings (as well as others), there exists a striking resemblance with similar Hebrew observances, which may be found indicated in detail in Wilkinson (*Manners and Customs of the Ancient Egyptians*, v. 358, sq.; see also ii. 378), who, in agreement with Herodotus, maintains, in opposition to Diodorus, that the Egyptians were never accustomed to sacrifice human beings: a decision which has a favourable aspect on our last position, namely, that the religion of the Israelites, even in its earliest days, was unprofaned by human blood. A remarkable instance of disagreement between the observances of the Egyptians and the Jews, in regard to sacrifices, is, that while the Egyptians received the blood of the slaughtered animal into a vase or basin, to be applied in cookery, the eating of blood was most strictly forbidden to the Israelites (Deut. xv. 23).—J. R. B.

SADDUCEES: one of the three sects of Jewish philosophers, of which the Pharisees and the Essenes were the others, who had reached their highest state of prosperity about the commencement of the Christian era.

In every highly developed social system the elements are found to exist which led to the formation of the sect of Sadducees. But these elements were in fuller amplitude and more decided energy among the post-exilian Jews than in most ancient

nations. The peculiar doctrines and practices of the Pharisees naturally begot the Sadduceean system. The first embodied the principle of veneration, which looked on the past with so much regard as to become enamoured of its forms as well as its substance, its ivy as well as its columns, its corruptions no less than its excellences, taking and maintaining the whole with a warm but blind and indiscriminate affection; the second, alienated by the extravagances of the former, were led to seize on the principle of rationalism, and hence to investigate prevalent customs, and weigh received opinions, till at length investigation begot scepticism, and scepticism issued in the positive rejection of many established notions and observances. The principle of the Sadducee is thus obviously an offshoot from the rank growth of conservatism and orthodoxy. Corruption brings reform. And as it is not possible for the same individuals, nor for the same classes of men, to perform the dissimilar acts of conservatism and reformation, so must there be, if Pharisees, Sadducees also in society. It is for the good of men that the latter should come into being, seeing that the principle represented by the former arises, inevitably, in the actual progress of events. True wisdom, however, consists in avoiding the extremes peculiar to both, and aims to make man possessor of all the good which the past can bestow and all the good which the present can produce, uniting in one happy result the benign results of conservatism and improvement, retention of the past and progress in the present.

It would be easy to show how the several particulars which were peculiar to the Sadducee arose out of Pharisaic errors. As, however, we wish to give to this necessarily brief notice an historical character, we shall content ourselves with one instance—the doctrine of tradition. By an excessive veneration of the Mosaic institutions and sacred books, the Pharisees had been led to regard every thing which concerned them as sacred. But if the text and the observance were holy, holy also was that which explained their meaning or unfolded their hidden signification. Hence the exposition of the ancients came to be received with respect equal to that with which the very words of the founders and original writers were regarded. Tradition was engrafted on the vine of Israel. But all exposition is relative to the mind of the expositor. Accordingly various expositions came into being. Every age, every doctor gave a new exposition. Thus a diverse and contradictory, as well as a huge, mass of opinions was formed, which overlaid and hid the law of God. Then a true reverence for that law identified itself with the principle of the Sadducee, and the Pharisee was made to appear as not only the author but the patron and advocate of corruption.

The time when the sect of the Sadducees came into existence, history does not define. From what has been advanced it appears that they were posterior to the Pharisees. And although so soon as the Pharisaic elements began to become excessive, there existed in Judaism itself a sufficient source for Sadduceeism, yet, as a fact, we have no doubt that Grecian philosophy lent its aid to the development of Sadduceeism. Whence we are referred for the rise of the latter to the period when the conquests and the kingdoms which ensued from the expedition of Alexander had diffused a very large portion of Grecian civilization over the soil of the East, and especially over Western Asia.

As little is historically known respecting the author of this sect; there are various statements, but their very variety shows that nothing certain is known. The Rabbins have a story which makes one Zadok, a pupil of Antigonus Jocho, the founder; who, under the instructions of his master, was, in company with one Baithos, a fellow disciple, led to the conclusion that there is no future life, and, of course, no retribution after death (*Pirke Aboth*, i. 3). It has also been said, that the name Sadducee is descriptive—צדקון, 'the just ones,' that is, men who were just to the law, to God as the author of the law and the source of truth, just in their own conceptions and their mode of thinking in contradistinction to the excesses of the Pharisees; just every way in the sense in which our word just is sometimes used—exact, without superfluities, the thing itself apart from accessories, the truth and nothing but the truth. Nor can it be denied that such a view of the sect embodies their peculiar and fundamental principle (Epiphan. *Hæres.* i. 14). A modern critic, Köster (*Studien und Kritiken*, 1837, vol. i. p. 164), deduces the word, as well as the doctrines which it represents, from the Grecian stoics, which is more ingenious than solid.

As may be inferred from what has been advanced, the Sadducees stood in direct opposition to the Pharisees. So they are described by Josephus (*Antiq.* xiii. 10. 6), and so they appear in the New Testament. Hostile, however, as these two sects were, they united for the common purpose of opposing our Lord (Matt. iii. 7; xvi. 1, 6, 11, sq.; xxii. 23, 34; Acts iv. 1; v. 17). In opposing the Pharisees the Sadducees were led to impeach their principal doctrines, and so to deny all the 'traditions of the elders,' holding that the law alone was the written source of religious truth (*Antiq.* xviii. 1. 4). By more than one consideration, however, it might be shown that they are in error who so understand the fact now stated, as if the Sadducees received no other parts of the Jewish canon than the Pentateuch; for in truth they appear to have held the common opinion regarding the sacred books—a fact of some consequence, inasmuch as we thus gain the determination, on the point of the Jewish canon, of the critical scepticism of the day. The Sadducees taught that the soul of man perished together with his body, and that of course there was neither reward nor punishment after death (Joseph. *De Bell. Jud.* ii. 8. 14; comp. Matt. xxii. 23). Indeed they appear to have disowned the moral philosophy which obtrudes the idea of recompense. 'Be not as those slaves'—so runs an injunction derived, it is said, from Zadok himself—'who serve their master on this condition, namely, that they receive a reward; but let the fear of heaven be in you' (*Pirke Aboth*, i. 3, and Rabbi Nathan on the passage). Were they consistent in this view, they may have held high and worthy ideas of duty, its source and its motives; ideas, however, which are obviously more suited for men of cultivation like themselves than for the great bulk of human beings. And in views such as this may probably be found a chief cause why they were far less acceptable with the common people and far less influential in the state than their rivals, the Pha-

risees. The cold self-reliance and self-sufficiency which sits apart in the enjoyment of the satisfactions resulting from its own resources, and aims at nothing beyond its own sphere and nothing higher than its own standard, may possess peculiar attractions for the philosophic few, or for the contemptuous scoffer, but is too alien from ordinary sympathies, and too unkindling and too tranquil to find general acceptance in any condition of society that the world has yet known.

It was a position with the Sadducees, that the Scriptures did not contain the doctrine of a future life. In this opinion they have had many followers in modern times. Yet Jesus himself finds a proof of that doctrine in the Pentateuch (Matt. xxii. 31, 32), and the astonishment which his teaching on the point excited seems to show that it was not an ordinary inference of the Rabbins, but a new doctrine that Jesus then deduced: this makes against the mode of interpretation which would represent this as a sort of *argumentum ad hominem*, a shaft from the quiver of Christ's enemies. That, however, the species of exegesis to which this proof belongs prevailed among the Jews in the time of our Lord there can be no doubt; for from the period of the return from Babylon it had been gaining ground, was very prevalent in the days of Christ, and abounds in the Talmudical writings. Being, however, a kind of exegetical spiritualism, it was disallowed by the Sadducees, who accordingly rejected the doctrines which by its means had been deduced from the sacred writings.

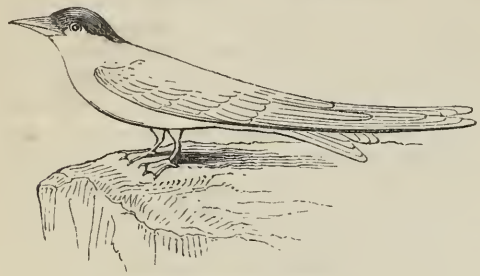
Sadduceeism appears to have been to some extent a logically deduced and systematically formed set of ideas. Making this life the term of our being, and man his own beau ideal, it was naturally led to assert for man all the attributes that he could reasonably claim. Hence it taught the absolute freedom of the human mind. The words of Josephus are emphatic on this point: 'The Pharisees ascribe all to fate and to God, but the Sadducees take away fate entirely, and suppose that God is not concerned in our doing or not doing evil; and they say that to act what is good or what is evil is in man's own choice; and that all things depend on our own selves' (*De Bell. Jud.* ii. 8, 14; *Antiq.* xiii. 5, 9). An inference injurious to them has been deduced from this position, as if they denied divine Providence altogether; but their reception of the canonical books, and their known observance of the usages for divine worship therein prescribed, are incompatible with such a denial. Indeed we have here the same difficulty which has presented itself over and over again ten thousand times to thinking minds, namely, how to unite in harmony the moral freedom of man with the arrangements and behests of the will of Him—

ὅς ἤδη τά τ' ἐοντα, τά τ' ἐσσόμενα, πρό τ' ἐοντα.

As the Sadducees denied a future state, so also they were led to deny the existence of angels and spirits (Acts xxiii. 8); for they appear to have concluded that since there were no human spirits in heaven, there could be no other beings in the invisible state but God. Yet if we allow the force of this deduction, we cannot well understand how, receiving as they did at any rate the five books of Moses, they could bring themselves to disown angel-existences, unless, indeed, it was under the influence of a strong repellant influence which came from the extravagant notions entertained on the point by their antagonists the Pharisees. It must, however, be said that this denial, whencesoever it came, shows how entirely theirs was a system of negatives and of materialism; and being such it could, with all its elevated moral conceptions, do very little for the improvement of individuals and the advancement of society.

A very natural consequence was, that their doctrine held sway over but comparatively few persons, and those mostly men distinguished by wealth or station (*Antiq.* xviii. 1. 4; xiii. 10. 6). They were the freethinkers of the day, and freethinking is ordinarily the attribute only of the cultivated and the fortunate. Least of all men are those of a sceptical turn gregarious. They stand on their own individuality; they enjoy their own independence; they look down on the vulgar crowd with pity, if not with contempt. They may serve quietly to undermine a social system, but they rarely assume the proselyting character which gave Voltaire and Diderot their terrible power for evil. It has been reserved for modern infidelity to be zealous and enthusiastic.

What Josephus says of the repulsiveness of their manners (*De Bell. Jud.* ii. 8. 14) is in keeping with their general principles. A sceptical materialism is generally accompanied by an undue share of self-confidence and self-esteem, which are among the least sociable of human qualities.



The Sadducees, equally with the Pharisees, were not only a religious but a political party. Indeed as long as the Mosaic polity retained an influence, social policy could not be sundered from religion; for religion was everything. Accordingly the Sadducees formed a part of the Jewish parliament, the Sanhedrim (Acts xxiii. 6), and sometimes enjoyed the dignity of supreme power in the high-priesthood. Their possession of power, however, seems to have been owing mainly to their individual personal influence, as men of superior minds or eminent position, since the general current of favour ran adversely to them, and their enemies, the Pharisees, spared no means to keep them and their opinions in the back ground. Accordingly in the Rabbinical writings they are branded with the name of hereties, מינים, (Othon. *Lex. Rabb.* p. 270; see also Trigland, *Syntagma de Tribus Sectis;* Ugolini, *Trihæresium*, in vol. xxii. of his *Thesaurus;* Stäudlin, *Gesch. der Sittenlehre Jesu*, i. 443, sq.—J. R. B.

SAIL. [Ship.]

SAIT. [Zait.]

SALACH (שָׁלָךְ, Lev. xi. 17; Deut. xiv. 17), in common with the usual Greek version καταράκτης, is considered to have reference to darting, rushing, or stooping like a falcon; and accordingly has been variously applied to the eagle, the jerfalcon, the gannet, the great gull, and the cormorant. Of the Hebrew *Salach* nothing is known but that it was an unclean bird. The Greek καταράκτης, associated with the last mentioned, though noticed by several authors, is not referred always to the same genus, some making it a minor gull, others a diver. Cuvier considers Gesner to be right in considering it to denote a gull, and it might certainly be applied with propriety to the black-backed gull, 'Larus marinus,' or to the glaucous, 'Larus glaucus;' but although birds of such powerful

wing and marine *habitat* are spread over a great part of the world, it does not appear that, if known at the extremity of the Mediterranean, they were sufficiently common to have been clearly indicated by either the Hebrew or Greek names, or to have merited being noticed in the Mosaic prohibition. Both the above are in general northern residents, being rarely seen even so low as the Bay of Biscay, and the species now called 'Lestris cataractes' is exclusively Arctic.

476. [Caspian Tern.]

With regard to the cormorant, birds of that genus are no doubt found on the coasts of Palestine, where high cliffs extend to the sea-shore; such, for example, as the 'Phalacrocorax pygmæus;' but all the species dive, and none of them rush flying upon their prey, though that habit has been claimed for them by commentators, who have mixed up the natural history of 'cormorants' with that of the 'sula' or 'gannet,' which really darts from great elevations into the sea, to catch its prey, rising to the surface sometimes nearly half a minute after the plunge, as we ourselves have witnessed. But the gannet (solan goose) rarely comes farther south than the British Channel, and does not appear to have been noticed in the Mediterranean. It is true that several other marine birds of the north frequent the Levant; but none of them can entirely claim Aristotle and Oppian's characters of 'cataractes,' for though the wide throat and rather large head of the dwarf cormorant may be adduced, that bird exceeds in stature the required size of a small hawk; and fishes, it may be repeated, swimming and diving, not by darting down on the wing, and is not sufficiently numerous or important to have required the attention of the sacred legislator. Thus reduced to make a choice where the objections are less, and the probabilities stronger, we conclude the *salach* to have been a species of 'tern,' considered to be identical with the 'Sterna Caspica,' so called because it is found about the Caspian Sea; but it is equally common to the Polar, Baltic, and Black Seas, and if truly the same, is not only abundant for several months in the year on the coast of Palestine, but frequents the lakes and pools far inland; flying across the deserts to the Euphrates, and to the Persian and Red Seas, and proceeding up the Nile. It is the largest of the tern or sea-swallow genus, being about the weight of a pigeon, and near two feet in length, having a large black naped head; powerful, pointed crimson bill; a white and grey body, with forked tail, and wings greatly exceeding the tips of the tail: the feet are very small, weak, and but slightly webbed, so that it swims perhaps only accidentally, but with sufficient power on land to spring up and to rise from level ground. It flies with immense velocity, darting along the surface of the sea to snap at mollusca or small fishes, or wheeling through the air in pursuit of insects; and in calm weather, after rising to a great height, it drops perpendicularly down to near the surface of the water, but never alights except on land; and it is at all times disposed to utter a kind of laughing scream. This tern nestles in high cliffs, sometimes at a very considerable distance from the sea. 'Sterna Nilotica' appears to be the young bird, or one nearly allied.

Thus the species is not likely to have been unknown to the Israelites, even while they were in the desert; and as the black tern, 'Sterna nigricans,' and perhaps the 'Procellaria obscura' of the same locality, may have been confounded with it, their number was more than sufficient to cause them to be noticed in the list of prohibited birds. Still the propriety of the identification of *salach* with the 'great tern' must in some measure rest upon the assumption that the Greek καταράκτης is the same. We figure one that was shot among a flight of these birds, some distance up the river Orontes.—C. H. S.

SALAH (שֶׁלַח, *a shoot;* Sept. and New Test. Σαλά), a son, or grandson, of Arphaxad (Gen. x. 24; xi. 13; Luke iii. 35).

SALAMIS (Σαλαμίς), one of the chief cities of Cyprus on the south-east coast of the island (Acts xiii. 5). It was afterwards called Constantia, and in still later times Famagusta [CYPRUS].

SALATHIEL. [SHEALTIEL.]

SALEM (שָׁלֵם, *peace;* Sept. Σαλήμ), the original name of Jerusalem (Gen. xiv. 18; Heb. vii. 1, 2), and which continued to be used poetically in later times (Ps. lxxvi. 2) [JERUSALEM].

SALIM (Σαλείμ), a place near Ænon, where John baptized (John iii. 23). Jerome places it eight Roman miles from Scythopolis (Bethshan), which is the same distance southward that he and Eusebius assign to Ænon. Nothing is known of this site. Some have been led by the name to conceive that here, and not at Jerusalem, we should seek the Salem of Melchizedek (Gen. xiv. 18) [ÆNON; SALEM].

SALLONIM. [SILLON and THORNS.]

SALMON (שַׂלְמֹן, *clothed;* Sept. and New Test. Σαλμών), the father of Boaz (Ruth iv. 21; Matt. i. 4, 5; Luke iii. 32), elsewhere called Salmah, שַׂלְמָה (Ruth iv. 20; 1 Chron. ii. 11).

SALMONE (Σαλμώνη), a promontory forming the eastern extremity of the island of Crete (Acts xxvii. 7).

SALOME (Σαλώμη), a woman of Galilee, who accompanied Jesus in some of his journeys, and ministered unto him; and was one of those who witnessed his crucifixion and resurrection (Mark xv. 40; xvi. 1). It is gathered, by comparing these texts with Matt. xxvii. 56, that she was the wife of Zebedee, and mother of the apostles James and John.

SALOME was also the name (though not given in Scripture) of that daughter of Herodias, whose dancing before her uncle and father-in-law, Herod Antipas, was instrumental in procuring the decapitation of John the Baptist [HERODIAN FAMILY; JOHN THE BAPTIST].

SALT (מֶלַח) was procured by the Hebrews from two sources; first, from rock-salt, obtained from hills of salt which lie about the southern extremity of the Dead Sea; and secondly, from the waters of that sea, which, overflowing the banks yearly, and being exhaled by the sun and the heat, left behind a deposit of salt both abundant and good. In the same manner the Arabs of the present day procure their supply of salt from the deposits of the Dead Sea, and carry on a considerable trade in that article throughout Syria.

The uses to which salt was anciently applied were not dissimilar to those for which it serves at present; a fact which arises from the circumstance that these uses depend on its essential qualities, and on the constitution and wants of the human frame. It is now known as a physiological fact, that salt is indispensable to our health and vigour. For this reason doubtless the use of it was providentially made agreeable to the palate. Independently of its services to man as an ingredient in his food, salt is employed—1, as a manure, since when used in proper proportions, it enriches the soil; and 2, as an antiseptic, as it preserves flesh meat from corruption. From these qualities severally result the applications of salt, both natural and figurative, of which mention is made in Scripture.

From Job vi. 6 it is clear that salt was used as a condiment with food. Salt was also mixed with fodder for cattle (Isa. xxx. 24), where the marginal reading is preferable, '*savoury* provender.' As offerings, viewed on their earthly side, were a presentation to God of what man found good and pleasant for food, so all meat-offerings were required to be seasoned with salt (Lev. ii. 13; Spencer, *De Legibus Rit.* i. 5. 1). Salt, therefore, became of great importance to Hebrew worshippers; it was sold accordingly in the Temple market, and a large quantity was kept in the Temple itself, in a chamber appropriated to the purpose (Maii *Diss. de Usu Salis Symbol. in rebus Sacris*, Giessen, 1692; Wokenius, *De Salitura oblationum Deo factar.*, 1747; Joseph. *Antiq.* xii. 3. 3; *Middoth*, v. 3; Othon. *Lex. Rabb.* p. 668). Jewish tradition agrees with Ezekiel xliii. 24, in intimating that animal offerings were sprinkled with salt (Joseph. *Antiq.* iii. 9. 1; Philo, ii. 255; Hottinger, *Jur. Heb. Legg.* p. 168); as was certainly the case with the Greeks and Romans (Plin. *Hist. Nat.* xxxi. 44; Ovid, *Fast.* i. 337; Spencer, *De Leg. Rit.* iii. 2. 2; Lukemacher, *Antiq. Græc. Sacr.* p. 350; Hottinger, *De Usu Salis in Cultu Sacro*, Marburg, 1708; Schickeclanz, *De Salis usu in Sacrific.* Servest. 1758). The incense, 'perfume,' was also to have salt as an ingredient (Exod. xxx. 35; marginal reading 'salted'), where it appears to have been symbolical, as well of the divine goodness as of man's gratitude, on the principle that of every bounty vouchsafed of God, it became man to make an acknowledgment in kind.

As salt thus entered into man's food, so, to eat salt with any one, was to partake of his fare, to share his hospitality; and hence, by implication, to enjoy his favour, or to be in his confidence. Hence, also, salt became an emblem of fidelity and of intimate friendship. At the present hour the Arabs regard as their friend him who has eaten salt with them, that is, has partaken of their hospitality (Niebuhr, *Beschr.* p. 18; Rosenmuller, *Morgenl.*, ii. 150); in the same way as, in Greece, those regarded each other as friends even to distant generations, between whom the rites of hospitality had been once exchanged. The domestic sanctity which thus attached itself to salt was much enhanced in influence by its religious applications, so that it became symbolical of the most sacred and binding of obligations. Accordingly 'a covenant of salt' ברית מלח, was accounted a very solemn bond (Num. xviii. 19; 2 Chron. xiii. 5; Lev. ii. 13): a signification to which force would be given by the preservative quality of salt (Bahrdt, *De Fœdere Salis;* Zerbech, *De Fœdere Salis*).

But salt, if used too abundantly, is destructive of vegetation and causes a desert. Hence arose another class of figurative applications. Destroyed cities were sown with salt to intimate that they were devoted to perpetual desolation (Judg. ix. 45); salt became a symbol of barrenness (Deut. xxix. 23; Zeph. ii. 9; Virg. *Georg.* ii. 238); and 'a salt land' (Jer. xvii. 6) signifies a sterile and unproductive district (Job xxxix. 6; Altmann, *Meletem. Philolog. Exeg.* i. 47). By exposure to the influence of the sun and of the atmosphere, salt loses its savoury qualities (Plin. *Hist. Nat.* xxxi. 34; xxxi. 39; Maundrell, *R.* 162); whence the striking and forcible language of our Lord in Matt. v. 13.

We have reserved to the end reference to a singular usage among the Israelites, namely, washing new-born infants in salt water; which was regarded as so essential that those could have hardly any other than an ill fate who were deprived of the rite (Ezek. xvi. 4). The practice obviously arose from a regard to the preserving, the domestic, the moral, and the religious uses to which salt was applied, and of which it became the emblem (Richter, *De Usu Salis apud Priscos Profano et Sacro*, Zettan, 1766).—J. R. B.

SALUTATION. The frequent allusion in Scripture to the customary salutations of the Jews, invests the subject with a higher degree of interest than it might otherwise claim: and it is therefore fortunate that there are few Scriptural topics, which can be better understood by the help of the illustrations derivable from the existing usages of the East.

Most of the expressions used in salutation, and also those which were used in parting, implied, that the person who employed them interceded for the other. Hence the word ברך *barak*, which originally signified 'to bless,' meant also 'to salute,' or 'to welcome,' and 'to bid adieu' (Gen. xlvii. 8-11; 2 Kings iv. 29; x. 13; 1 Chron. xviii. 10).

The forms of salutation that prevailed among the Hebrews, so far as can be collected from Scripture, are the following:—

1. '*Blessed be thou of the Lord*,' or equivalent phrases.

2. *The Lord be with thee.*

3. '*Peace be unto thee*,' or '*upon thee*,' or '*with thee*.' In countries often ravaged, and among people often ruined by war, 'peace' implied every blessing of life; and this phrase had therefore the force of 'Prosperous be thou.' This was the commonest of all salutations (Judg. xix. 20; Ruth ii. 4; 1 Sam. xxv. 6; 2 Sam. xx. 9; Ps. cxxix. 8).

4. '*Live, my lord*' (חוה אדני), was a com-

mon salutation among the Phœnicians, and was also in use among the Hebrews, but was by them only addressed to their kings in the extended form of 'Let the king live for ever!' (1 Kings i. 31); which was also employed in the Babylonian and Persian courts (Dan. ii. 4; iii. 9; v. 10; vi. 7, 22; Neh. ii. 3). This, which in fact is no more than a wish for a prolonged and prosperous life, has a parallel in the customs of most nations, and does not differ from the 'Vivat!' of the Latin; the 'Vive le Roi!' of the French; or our own '—— for ever!'

5. Χαῖρε, χαίρετε, *joy to thee! joy to you!* rendered by *Hail!* an equivalent of the Latin *Ave! Salve!* (Matt. xxvii. 29; xxviii. 9; Mark xv. 18; Luke i. 28; John xix. 3).

The usages involved in these oral salutations, seem not only similar to, but identical with, those still existing among the Arabians. These indeed, as now observed, go upon the authority of religious precepts. But it is known that such enactments of the Koran and its commentaries, merely embody such of the previously and immemorially existing usages as the legislature wished to be retained. Their most common greeting, as among the Jews, is, 'Peace be on you!' to which the reply is, 'On you be peace!' to which is commonly added, 'and the mercy of God, and his blessings!' This salutation is never addressed by a Moslem to one whom he knows to be of another religion; and if he find that he has by mistake thus saluted a person not of the same faith, he generally revokes his salutation: so also he sometimes does if a Moslem refuses to return his salutation, usually saying, 'Peace be on *us*, and on (all) the right worshippers of God!' This seems to us a striking illustration of Luke x. 5, 6; 2 John[3] xi. Various set compliments usually follow this salam; which, when people intend to be polite, are very much extended, and occupy considerable time. Hence they are evaded in crowded streets, and by persons in haste, as was the case, for the same reason doubtless, among the Jews (2 Kings iv. 29; Luke x. 4). Specimens of this conventional intercourse are given by Lane (*Mod. Egyptians*, i. 253), who says, that to give the whole would occupy a dozen of his pages. There are set answers, or a choice of two or three answers, to every question; and it is accounted rude to give any other answer than that which custom prescribes. They are such as those by which the Israelites probably prolonged their intercourse. If one is asked, 'How is your health?' he replies, 'Praise be to God!' and it is only from the tone of his voice that the inquirer can tell whether he is well or ill. When one greets another with the common inquiry, 'Is it well with thee?' (see 2 Kings iv. 26), the answer is, 'God bless thee!' or 'God preserve thee!' An acquaintance on meeting another whom he has not seen for several days, or for a longer period, generally says, after the salam, 'Thou hast made us desolate by thy absence from us;' and is usually answered, 'May God not make us desolate by thy absence!'

The gestures and inflections used in salutation varied with the dignity and station of the person saluted; as is the case with the Orientals at this day. It is usual for the person who gives or returns the salutation, to place at the same time his right hand upon his breast, or to touch his lips, and then his forehead or turban, with the same hand. This latter mode, which is the most respectful, is often performed to a person of superior rank, not only at first, with the salam, but also frequently during a conversation. In some cases the body

477.

is gently inclined, while the right hand is laid upon the left breast. A person of the lower orders, in addressing a superior, does not always give the salam, but shows his respect to high rank by bending down his hand to the ground, and then putting it to his lips and forehead. It is a common custom for a man to kiss the hand of his superior instead of his own (generally on the back only, but sometimes on both back and front), and then to put it to his forehead in order to pay more particular respect. Servants thus evince their respect towards their masters: when residing in the East, our own servants always did this on such little occasions as arose beyond the usage of their ordinary service; as on receiving a present, or on returning fresh from the public baths. The son also thus kisses the hand of his father, and the wife that of her husband. Very often,

478.

however, the superior does not allow this, but only touches the hand extended to take his; whereupon the other puts the hand that has been touched to his own lips and forehead. The custom of kissing the beard is still preserved, and follows the first and preliminary gesture; it usually takes place on meeting after an absence of some duration, and not as an every-day compliment. In this case, the person who gives the kiss lays the right

Montague Stanley A.R.S.A. from a Sketch by Lieut.ᵉ Col.ᴹᶜ Moren

William Forrest

SEBASTE

(ANCIENT CAPITAL OF SAMARIA.)

hand under the beard, and raises it slightly to his lips, or rather supports it while it receives his kiss. This custom strikingly illustrates 2 Sam. xx. 9. In Arabia Petræa, and some other parts, it is more usual for persons to lay the right sides of their cheeks together.

479.

Among the Persians, persons in saluting under the same circumstances, often kiss each other on the lips; but if one of the individuals is of high rank, the kiss is given on the cheek instead of the lips. This seems to illustrate 2 Sam. xx. 9; Gen. xxix. 11, 13; xxxiii. 4; xlviii. 10—12; Exod. iv. 27; xviii. 7.

Another mode of salutation is usual among friends on meeting after a journey. Joining their right hands together, each of them compliments the other upon his safety, and expresses his wishes for his welfare, by repeating, alternately, many times the words *selamat* (meaning 'I congratulate you on your safety'), and *teiyibeen* ('I hope you are well'). In commencing this ceremony, which is often continued for nearly a minute before they proceed to make any particular inquiries, they join their hands in the same manner as is usually practised by us; and at each alternation of the two expressions, change the position of the hands. These circumstances further illustrate such passages as 2 Kings iv. 19; Luke x. 4. Other particulars, more or less connected with this subject, may be seen in ATTITUDES; KISS.

SAMARIA (שֹׁמְרוֹן, *watch-height*; Σαμάρεια), a city, situated near the middle of Palestine, built by Omri, king of Israel, on a mountain or hill of the same name, about B.C. 925. It was the metropolis of the kingdom of Israel, or of the ten tribes. The hill was purchased from the owner, Shemer, from whom the city took its name (1 Kings xvi. 23, 24). The site of the capital was therefore a chosen one; and all travellers agree that it would be difficult to find in the whole land a situation of equal strength, fertility, and beauty combined. 'In all these particulars,' says Dr. Robinson, 'it has greatly the advantage over Jerusalem' (*Bibl. Researches*, iii. 146). Samaria continued to be the capital of Israel for two centuries, till the carrying away of the ten tribes by Shalmaneser, about B.C. 720 (2 Kings xvii. 3, 5). During all this time it was the seat of idolatry, and is often as such denounced by the prophets, sometimes in connection with Jerusalem. It was the seat of a temple of Baal, built by Ahab, and destroyed by Jehu (1 Kings xvi. 32, 33; 2 Kings x. 18-28). It was the scene of many of the acts of the prophets Elijah and Elisha, connected with the various famines of the land, the unexpected plenty of Samaria, and the several deliverances of the city from the Syrians. After the exile of the ten tribes, Samaria appears to have continued, for a time at least, the chief city of the foreigners brought to occupy their place; although Shechem soon became the capital of the Samaritans as a religious sect. John Hyrcanus took the city after a year's siege, and razed it to the ground (Joseph. *Antiq.*, xiii. 10. 3; *De Bell. Jud.*, i. 2. 7). Yet it must soon have revived, as it is not long after mentioned as an inhabited place in the possession of the Jews. Pompey restored it to its former possessors; and it was afterwards rebuilt by Gabinius (Joseph. *Antiq.*, xiii. 5. 4; xiv. 4. 4; xiv. 5. 3). Augustus bestowed Samaria on Herod; who eventually rebuilt the city with great magnificence, and gave it the name of Sebaste (which is the Greek translation of the Latin name or epithet Augustus), in honour of that emperor (*Antiq.*, xv. 7. 3; *De Bell. Jud.*, xv. 7. 7; xv. 8. 5). Here Herod planted a colony of 6000 persons, composed partly of veteran soldiers, and partly of people from the environs; enlarged the circumference of the city; and surrounded it with a strong wall twenty stades in circuit. In the midst of the city—that is to say, upon the summit of the hill—he left a sacred place of a stade and a half, splendidly decorated, and here he erected a temple to Augustus, celebrated for its magnitude and beauty. The whole city was greatly ornamented, and became a strong fortress (Joseph. *Antiq.*, xv. 8. 5; *De Bell. Jud.*, i. 21. 2; Strabo, xvi. 2. 13).

Such was the Samaria of the time of the New Testament, where the Gospel was preached by Philip, and a church was gathered by the apostles (Acts viii. 5, 9, sq.). Nothing is known of Sebaste in the following centuries, except from the coins, of which there are several, extending from Nero to Geta (Eckhel, iii. 440; Mionnet, *Méd. Antiq.*, v. 513). Septimius Severus appears to have established there a Roman colony in the beginning of the third century (Cellarius, *Not. Orb.*, ii. 432). Eusebius scarcely mentions the city as extant; but it is often named by Jerome and other writers of the same and a later age (adduced in Reland's *Palæstina*, pp. 979-981). Samaria was early an episcopal see. Its bishop, Marius, or Marinus, was present at the council of Nice in A.D. 325; and Pelagius, the last of six others whose names are preserved, attended the council of Jerusalem in A.D. 536. The city, along with Nabulus, fell into the power of the Moslems during the siege of Jerusalem; and we hear but little more of it till the time of the Crusades. At what time the city of Herod became desolate, no existing accounts state; but all the notices of the fourth century and later lead to the inference that its destruction had already taken place.

The crusaders established a Latin bishopric at Sebaste; and the title was continued in the Romish church till the fourteenth century (Le Quien, *Oriens Christ.* iii. 1290). Saladin marched through it in A.D. 1184, after his repulse from Kerak (Abulfed. *Annal.* A.H. 580). Benjamin of Tudela describes it as having been 'formerly a very strong city, and situated on the mount,

in a fine country, richly watered, and surrounded by gardens, vineyards, orchards, and olive groves.' He adds that no Jews were living there (*Itiner.* ed. Asher, p. 66). Phocas and Brocardus speak only of the church and tomb of John the Baptist, and of the Greek church and monastery on the summit of the hill. Notices of the place occur in the travellers of the fourteenth, sixteenth, and seventeenth centuries; nor are they all so meagre as Dr. Robinson conceives. That of Morison, for instance, is full and exact (*Voyage du Mont Sinai*, pp. 230-233). Scarcely any traces of the earlier or later Samaria could then be perceived, the materials having been used by the inhabitants for the construction of their own mean dwellings. The then residents were an extremely poor and miserable set of people. In the eighteenth century the place appears to have been left unexplored; but in the present century it has often been visited and described.

480. [Samaria: Church of St. John.]

The Hill of Samaria is an oblong mountain of considerable elevation, and very regular in form, situated in the midst of a broad deep valley, the continuation of that of Nabulus (Shechem), which here expands into a breadth of five or six miles. Beyond this valley, which completely isolates the hill, the mountains rise again on every side, forming a complete wall around the city. They are terraced to the tops, sown in grain, and planted with olives and figs, in the midst of which a number of handsome villages appear to great advantage, their white stone cottages contrasting strikingly with the verdure of the trees. 'The Hill of Samaria' itself is cultivated from its base, the terraced sides and summits being covered with corn and with olive-trees.' About midway up the ascent the hill is surrounded by a narrow terrace of level land, like a belt; below which the roots of the hill spread off more gradually into the valleys. Higher up, too, are the marks of slight terraces, once occupied, perhaps, by the streets of the ancient city. The ascent of the hill is very steep, and the narrow footpath winds among the mountains through substantial cottages of the modern Sebustieh (the Arabic form of Sebaste), which appear to have been constructed to a great extent of ancient materials, very superior in size and quality to anything which could at this day be wrought into an Arab habitation. The first object which attracts the notice of the traveller, and at the same time the most conspicuous ruin of the place, is the church dedicated to John the Baptist, erected on the spot which an old tradition fixed as the place of his burial, if not of his martyrdom. It is said to have been built by the Empress Helena; but the architecture limits its antiquity to the period of the crusades, although a portion of the eastern end seems to have been of earlier date. There is a blending of Greek and Saracenic styles, which is particularly observable in the interior, where there are several pointed arches. Others are round. The columns follow no regular order, while the capitals and ornaments present a motley combination, not to be found in any church erected in or near the age of Constantine. The length of the edifice is 153 feet long inside, besides a porch of 10 feet, and the breadth is 75 feet. The eastern end is rounded in the common Greek style; and resting, as it does, upon a precipitous elevation of nearly 100 feet immediately above the valley, it is a noble and striking monument. Within the enclosure is a common Turkish tomb; and beneath it, at a depth reached by 21 stone steps, is a sepulchre, three or four paces square, where, according to the tradition, John the Baptist was interred after he had been slain by Herod. This tradition existed in the days of Jerome; but there is no earlier trace of it: and if Josephus is correct in stating that John was beheaded in the castle of Machærus, on the east of the Dead Sea (*Antiq.* xviii. 5. 2), his burial in Samaria is very improbable.

On approaching the summit of the hill, the traveller comes suddenly upon an area, once surrounded by limestone columns, of which fifteen are still standing and two prostrate. These columns form two rows, thirty-two paces apart, while less than two paces intervene between the columns. They measure seven feet nine inches in circumference; but there is no trace of the order of their architecture, nor are there any foundations to indicate the nature of the edifice to which they belonged. Some refer them to Herod's temple to Augustus, others to a Greek church which seems to have once occupied the summit of the hill. The descent of the hill on the W.S.W. side brings the traveller to a very remarkable colonnade, which is easily traceable by a great number of columns, erect or prostrate, along the side of the hill for at least one-third of a mile, where it terminates at a heap of ruins, near the eastern extremity of the ancient site. The columns are sixteen feet high, two feet in diameter at the base, and one foot eight inches at the top. The capitals have disappeared; but the shafts retain their polish, and, when not broken, are in good preservation. Eighty-two of these columns are still erect, and the number of those fallen and broken must be much greater. Most of them are of the limestone common to the region; but some are of white marble, and some of granite. The mass of ruins in which this colonnade terminates toward the west is composed of blocks of hewn stone, covering no great area on the slope of the hill, many feet lower

than the summit. Neither the situation nor extent of this pile favours the notion of its having been a palace; nor is it easy to conjecture the design of the edifice. The colonnade, the remains of which now stand solitary and mournful in the midst of ploughed fields, may, however, with little hesitation, be referred to the time of Herod the Great, and must be regarded as belonging to some one of the splendid structures with which he adorned the city. In the deep ravine which bounds the city on the north, there is another colonnade, not visited by Dr. Robinson, but fully described by Dr. Olin (*Travels*, ii. 371-373). The area in which these columns stand is completely shut in by hills, with the exception of an opening on the north-east; and so peculiarly sequestered is the situation, that it is only visible from a few points of the heights of the ancient site, by which it is overshadowed. The columns, of which a large number are entire and several in fragments, are erect, and arranged in a quadrangle, 196 paces in length, and 64 in breadth. They are three paces asunder, which would give 170 columns as the whole number when the colonnade was complete. The columns resemble in size and material those of the colonnade last noticed, and appear to belong to the same age. These also probably formed part of Herod's city, though it is difficult to determine the use to which the colonnade was appropriated. Dr. Olin is possibly right in his conjecture, that this was one of the places of public assembly and amusement which Herod introduced into his dominions (Robinson, *Researches*, iii. 136-149; Olin, *Travels*, ii. 366-374; Buckingham, *Travels in Palestine*, pp. 512-517; Richardson, *Travels*, ii. 409-413; Schubert, *Morgenland*, iii. 156-162; Raumer, *Palästina*, p. 158; Maundrell, *Journey*, pp. 78, 79).

SAMARITANS. In the books of Kings there are brief notices of the origin of the people called Samaritans. The ten tribes which revolted from Rehoboam, son of Solomon, chose Jeroboam for their king. After his elevation to the throne he set up golden calves at Dan and Bethel, lest repeated visits of his subjects to Jerusalem, for the purpose of worshipping the true God, should withdraw their allegiance from himself. Afterwards Samaria, built by Omri, became the metropolis of Israel, and thus the separation between Judah and Israel was rendered complete. The people took the name *Samaritans* from the capital city. In the ninth year of Hosea, Samaria was taken by the Assyrians under Shalmaneser, who carried away the inhabitants into captivity, and introduced colonies into their place from Babylon, Cuthah, Ava, Hamath, and Sepharvaim. These new inhabitants carried along with them their own idolatrous worship; and on being infested with lions, sent to Esarhaddon, king of Assyria. A priest of the tribe of Levi was accordingly dispatched to them, who came and dwelt in Bethel, teaching the people how they should fear the Lord. Thus it appears that the people were a mixed race. The greater part of the Israelites had been carried away captive by the Assyrians, including the rich, the strong, and such as were able to bear arms. But the poor and the feeble had been left. The country had not been so entirely depopulated as to possess no Israelite whatever. The dregs of the populace, particularly those who appeared incapable of active service, were not taken away by the victors. With them, therefore, the heathen colonists became incorporated. But the latter were far more numerous than the former, and had all power in their own hands. The remnant of the Israelites was so inconsiderable and insignificant as not to affect, to any important extent, the opinions of the new inhabitants. As the people were a *mixed* race, their religion also assumed a *mixed* character. In it the worship of idols was associated with that of the true God. But apostacy from Jehovah was not universal. On the return of the Jews from the Babylonish captivity, the Samaritans wished to join them in rebuilding the Temple, saying, 'Let us build with you; for we seek your God, as ye do; and we do sacrifice unto him since the days of Esarhaddon, king of Assur, which brought us up hither' (Ezra iv. 2). But the Jews declined the proffered assistance; and from this time the Samaritans threw every obstacle in their way. Hence arose that inveterate enmity between the two nations which afterwards increased to such a height as to become proverbial. In the reign of Darius Nothus, Manasses, son of the Jewish high-priest, married the daughter of Sanballat the Samaritan governor; and to avoid the necessity of repudiating her, as the law of Moses required, went over to the Samaritans, and became high-priest in the temple which his father-in-law built for him on Mount Gerizim. From this time Samaria became a refuge for all malcontent Jews; and the very name of each people became odious to the other. About the year B.C. 109, John Hyrcanus, high-priest of the Jews, destroyed the city and temple of the Samaritans; but, B.C. 25, Herod rebuilt them at great expense. In their new temple, however, the Samaritans could not be induced to offer sacrifices, but still continued to worship on Gerizim. At the present day they have dwindled down to a few families. Shechem, now called Nabulus, is their place of abode. They still possess a copy of the Mosaic law.

A different account of the origin of this people has been given by Hengstenberg, whom Hävernick and Robinson follow. According to this learned writer, *all* the inhabitants were carried away into Assyria. None were left in the land by the conquerors. Shalmaneser greatly weakened the ten tribes, but did not extinguish the kingdom of Israel, because at his invasion many of the people took refuge in the most inaccessible and retired parts of their country, or fled into Judah. Afterwards they returned by degrees; and when Esarhaddon came against them, they were carried away *entirely*. From the time of Esarhaddon there were none but *heathens* in the land. The Samaritans were wholly of *heathen* origin. Hence they requested the Assyrian king to send them an Israelite priest (*Beiträge zur Einleit. ins alte Testam.* i. 177; ii. 3, &c.). Want of space prevents us from detailing the grounds of this view, or from entering into its refutation. It has been ably combated by Kalkar (in Pelt's *Mitarbeiten* for 1840, *drittes Heft*, p. 24, &c.), to whom the reader is referred. We cannot but reject the novel hypothesis, notwithstanding the ability with which it has been put forward.

With the remnant above referred to a correspondence was formerly maintained by several learned Europeans, but without leading to any im-

portant result. It was commenced by Joseph Scaliger, in 1559; and resumed, after a century, by several learned men in England, in 1675; and by the great Ethiopic scholar, Job Ludolf, in 1684. The illustrious Orientalist, De Sacy, also held correspondence with them. All their letters to England and France, and all that was then known respecting them, he published in a work entitled, *Correspondance des Samaritains*, &c. in *Notices et Extr. des MSS. de la Biblioth. du Roi*, tom. xii.). The best accounts of them given by modern travellers are by Pliny Fisk (*American Missionary Herald* for 1824), who visited them in 1823; and by Robinson and Smith, who visited them in 1838 (see *Biblical Researches and Travels in Palestine*, iii. 113-116).—S. D.

SAMARITAN PENTATEUCH. The Samaritan Pentateuch was mentioned by the fathers Eusebius, Cyril of Alexandria, Procopius of Gaza, Diodorus, Jerome, and others. After it had lain concealed for upwards of a thousand years, its existence began to be doubted. At length Peter Della Valle, in 1616, procured a complete copy, which De Sancy, then French ambassador at Constantinople, sent to the library of the Oratoire at Paris, in 1623. It was first described by Morin, and afterwards printed in the Paris Polyglott. Not long after, Archbishop Ussher procured six copies from the East; and so great was the number in the time of Kennicott, that he collated sixteen for his edition of the Hebrew Bible.

In regard to the *antiquity* of the Samaritan Pentateuch, and the source from which the document came, various opinions have been entertained.

1st. The hypothesis maintained by Ussher was, that the Samaritan Pentateuch was the production of an impostor named Dositheus, the founder of a sect among the Samaritans, and who pretended to be the Messiah. It is thought that he compiled this copy of the Pentateuch from the Hebrew and the Septuagint, adding, expunging, and altering, according to his pleasure. Ussher appeals to Origen and Photius, whose testimony, however, when examined, affords no evidence of the truth of this statement. It is well known that the Alexandrian Samaritans opposed Dositheus, and would not have received such a compilation. Besides, had he corrupted any passages, it is natural to think that he would have perverted those relating to the Messiah, that they might be more easily referred to himself. But places of this nature in the Samaritan copies agree with the Hebrew; and we may be farther assured, that the Jews would not have failed to mention such a fact as a just ground of accusation against the Samaritans.

2ndly. Le Clerc and Poncet imagined, that this copy of the law was made by the Israelitish priest who was sent by the king of Assyria to instruct the new inhabitants in the religion of the country. This is a mere hypothesis, unsupported by historical testimony. It was not necessary for the priest to compose a new system, but to instruct the people out of the Pentateuch as it then existed. When the existing copy was sufficient for his purpose, he would not have undertaken the labour of preparing an entirely new work.

3rdly. It was the opinion of Hottinger, Prideaux, Fitzgerald, and others, that Manasseh transcribed one of Ezra's corrected copies which he took with him from Jerusalem, into the old character to which they were accustomed. In proof of this hypothesis it has been affirmed, that the variations in the Samaritan copy from the Hebrew are such as were occasioned in the transcription by mistaking letters similar in Hebrew, but unlike in the Samaritan. This supposition has been completely set aside by Kopp, in his *Bilder und Schriften der Vorzeit;* and by Hupfeld, in his *Beleuchtung dunkler Stellen*, u. s. w. (*Studien und Kritiken*, 1830), in which it is convincingly shown that the present Hebrew square character had no existence till long after Ezra; and that, so far from owing its origin to Chaldæa and having been introduced by Ezra, it was merely the gradual work of time. When Manasseh fled from Jerusalem, the Samaritan and Hebrew characters must have been substantially the same.

4thly. Others are of opinion that copies of the Pentateuch must have been in the hands of *Israel* from the time of Rehoboam, as well as among *Judah;* that they were preserved by the former equally as by the latter. This hypothesis, first advanced by Morin, has been adopted by Houbigant, Cappellus, Kennicott, Michaelis, Eichhorn, Bauer, Bertholdt, Stuart, and others, and appears to be the true one. The prophets, who frequently inveigh against the Israelites for their idolatry and their crimes, never accuse them of being destitute of the law, or ignorant of its contents. It is wholly improbable, too, that the people, when carried captive into Assyria, took with them *all* the copies of the law. Thus we are brought to the conclusion, that the Samaritan, as well as the Jewish copy, originally flowed from the autograph of Moses. The two constitute, in fact, *different recensions of the same work*, and coalesce in point of antiquity.

If this account of the Samaritan codex be correct, it is easy to perceive the reason why the Samaritans did not receive all the Jewish books previously written. When the schism of the tribes took place, the Pentateuch was commonly circulated, and usually regarded as a sacred national collection, containing all their laws and institutions. Though David's Psalms and some of Solomon's compositions may also have been written at that time; yet the former were chiefly in the hands of the Levites who regulated the Temple music, and were employed in the *public service* of Jehovah; while the latter were doubtless disliked by the ten tribes on account of their author, who lived at Jerusalem, and were rare from the non-transcription of copies. The prophets must have been unwelcome to the Israelites, because they uttered many things against them, affirming that Jehovah could not be worshipped with acceptance in any other place than Jerusalem. This circumstance was sufficient to prevent that people from receiving any of the prophetical writings till Ezra's time, when their hatred to him and his associates was so great, that they would not have admitted any collection of the Scriptures coming through such hands. Whatever other books, besides the Pentateuch, were written in the time of Rehoboam must have been comparatively unknown to the mass of the people. This fact, in connection with political considerations, was sufficient to lead the Israelites to reject most, except those of Moses.

In addition to the Pentateuch, the Samaritans

have the book of Joshua, but it did not always form part of their canon. *Their* Joshua does not appear to be the same as the Old Testament book. On the contrary it must have been composed long after, out of the inspired records of Joshua, Judges, and Samuel, to which have been added fables and Oriental traditions. Such a compilation can have no claim to be regarded as the authentic Jewish writing.

But, it may be asked, what is the reason why this people have not the books of Joshua and Judges, in addition to the Mosaic? The question is of difficult solution. Hengstenberg affirms that the problem is inexplicable on the common hypothesis. If the people were a *mixed* race, he supposes that no rational account can be given why Joshua and Judges should not have been always received by them along with the Pentateuch. These books had been written and were current among the people long before the separation of the tribes. We do not see, however, that Hengstenberg's own view *materially* lessens the difficulty. If the heathen Samaritans received the Pentateuch from the kingdom of the ten tribes, or rather from these tribes in Assyrian captivity, why did they ask for no more than the Pentateuch, or why was it alone sent to them?

For the solution of the question it should be considered, that the priests, or such as were in possession of the sacred books, had been carried away, together with the persons best acquainted with such writings, who may be supposed to have had the great majority of the copies then current. The holy books, too, were not generally circulated among the people, many of whom may have been unable to read them. The lower orders in particular were dependent for their religious information on the prophets and priests; for parents had not fulfilled the Mosaic law in diligently teaching their children. Besides, the same circumstance that led them to reject the subsequent books would *incline* them, at least, to reject Joshua and Judges. There was in the latter too much of the historical, and that closely connected with the succeeding events of Jewish history, all which centred in Jerusalem. Whatever copies, therefore, of these historical books may have been among the remnant, and these could have been but few, were suffered to fall into neglect, so that they became almost unknown when the heathen majority introduced their idolatrous worship. It was far more natural to stop with the Pentateuch when it was deemed necessary to reject *some* Jewish books, than to stop after Judges. In this way their canon, imperfect as it would be, would have the appearance of greater completeness in itself, than if they had arbitrarily and abruptly terminated it after Judges. In addition to these remarks it may be affirmed with Hengstenberg, that the Samaritans could not be contented with the fact that Joshua and Judges contained nothing which *directly* testified against them. Their *patriotic fabrications*, if the phrase be allowable, began with Joshua; and had they admitted the two books, they could have ventured to forge nothing except what they should be able to prove out of them. Hence it was thought more desirable to allow the few copies current among them to go into oblivion in the first instance, while it was afterwards deemed a politic measure not to admit them at all into their canon.

It thus appears that the Samaritan Pentateuch cannot be ascribed to a later period than that of the schism between the tribes. All the arguments adduced by Gesenius (in his *Commentatio de Pentateuchi Samaritani Origine, Indole, et Auctoritate*) are not sufficient to disprove its truth. For opposite and convincing statements we refer to the last edition of Eichhorn's *Introduction to the Old Testament*, and Professor Stuart's review of Gesenius, in the second volume of the *American Biblical Repository*. The name Samaritan was first given to that mixed multitude composed of the heathen introduced by Shalmaneser into the kingdom of Israel, and of the lower classes of the ten tribes which had not been carried away. Whatever *civil* jealousies may have previously existed between them and the Jews, their *religious* animosities were first excited when Ezra and his countrymen, returning from exile, refused to allow their co-operation in building the Temple. Subsequent events, far from allaying their mutual hatred, only raised it to a higher pitch, giving it that permanent, durable form in which it was continued through succeeding centuries.

With respect to the authority and value of the Samaritan Pentateuch, there has been much variety of sentiment. Gesenius, however, has very ably shown that little value should be assigned to the characteristics of its text. He has proved that no critical reliance can be placed on it, and that it is wholly unjustifiable to use it as a source of correcting the Hebrew text. He has divided the various readings it exhibits into different classes, under each of which numerous examples are adduced. By a most minute investigation of particulars he has shown that it cannot be employed in emendation, as Kennicott, Morin, and Bauer supposed. This masterly dissertation has ruined the credit of the Samaritan codex in the critical world. The purity of the Hebrew is not to be corrupted by additions or interpolations from such a document. The original text of the Old Testament cannot be established by any weight attaching to *it*.

The various peculiarities of the Samaritan text have been divided into the following classes:—

1. The first class consists of such readings as exhibit emendations of a merely grammatical nature. Thus in orthography the *matres lectionis* are supplied, the full forms of verbs substituted for the apocopated, the usual forms of the pronouns given instead of the unusual. In *forming* a noun, the paragogic letters *yod* and *vau* affixed to the governing noun are almost always omitted. In *construing* a noun, the Samaritan transcribers make frequent mistakes in relation to gender, by changing nouns of the common gender into the masculine, or into the feminine alone. In the syntax of verbs the infinitive absolute is often altered.

2. The second class consists of glosses received into the text. These glosses furnish explanations of more difficult terms by such as are more intelligible.

3. The third class comprehends those readings in which plain modes of expression are substituted in place of such as appeared difficult or obscure.

4. The fourth class consists of those readings in which the Samaritan copy is corrected or supplied from parallel passages. To this class

belongs Gen. l. 25, where the Samaritan adds *with you*, reading—'Ye shall carry up my bones with you from hence.' The addition is taken from Exod. xiii. 19, and does *not* belong, as Gerard thinks, to the present place.

5. The fifth class consists of larger additions or repetitions respecting things said or done, which are interpolated from parallel places and again recorded in the same terms, so as to make the readings in question.

6. Corrections framed to remove what was offensive in sentiment, or whatever conveyed ideas improbable in the view of the correctors. Thus in the antediluvian genealogies, none is represented by the Samaritan Pentateuch as having begotten his first son *after* he is one hundred and fifty years old. On the contrary, in the postdiluvian genealogies, none is allowed to have begotten a son until after he is fifty years old. In the former case, the Samaritan codex usually takes a hundred years from the genealogies as found in the Hebrew; while in the latter one hundred years are commonly added, at least to all whom the Hebrew copy represents to have children under fifty years of age, except to Nahor. Such changes could not have been accidental. They are manifestly the effect of design. To this class belongs Gen. xxix. 3, 8: 'And thither were all the flocks gathered: and they rolled the stone, &c. And they said, We cannot, until all the flocks be gathered together, and till they roll the stone, &c.' Here the subject of the verb *roll* is understood not expressed — '*the shepherds* rolled.' But because the preceding subject is *all the flocks*, and therefore *they* are apparently said to roll away the stone, and to water, the word העדרים, *flocks*, was altered into הרעים, *shepherds*. The Sept. follows the reading of the Samaritan; and strange to say, Houbigant and Kennicott contend that it is *the true reading*. It is very usual with the Old Testament writers to change the *subject*, and leave the new nominative to be supplied from the context. As an example of this Gesenius (p. 51) adduces Isa. xxxvi. 36.

7. The seventh class consists of those words and *forms* of words in which the pure Hebrew idiom is exchanged for that of the Samaritan. This respects many cases of orthography, and some of the forms belonging to verbs.

8. The eighth class embraces such passages as contain alterations made to produce conformity to the Samaritan theology, worship, or exegesis. Thus, where the Hebrew has a plural verb with *elohim*, the Samaritan has substituted a verb in the singular (Gen. xx. 13; xxxi. 53; xxxv. 7; Exod. xxii. 9), lest there should be an appearance of infringing on the divine unity. So also *voces honestiores* have been put where there was a fancied immodesty. To this head Gesenius has referred the notable passage in Deut. xxvii. 4, where the Samaritans changed Ebal into Gerizim, to favour their own temple built on the latter mountain. Some, indeed, as Whiston and Kennicott, have endeavoured to show that the corruption ought to be charged on the Jews; but they have not been successful in recommending their opinion to general acceptance. Various writers of ability have refuted this notion, especially Verschuir (in the third of his *Dissertationes Philologexeget.* Leovard. et Francq. 1773, 4to), who completely set aside the attempted reasoning of Kennicott. Of all the peculiar readings in the Samaritan Pentateuch, four only are considered by Gesenius as preferable to the Hebrew; these are Gen. iv. 8; xxii. 13; xlix. 14; xiv. 14. Perhaps even these should be reckoned inferior to the corresponding Hebrew readings. We shall notice them individually.

Gen. iv. 8; the Hebrew text, literally translated, reads thus —'And Cain said to Abel his brother; and it came to pass when they were in the field,' &c. Here the Samaritan supplies what appears to be wanting by inserting the words 'let us go into the field,' נלכה השדה. So also the Septuagint, Vulgate, and Syriac versions. Aquila is doubtful. Perhaps, however, this clause was borrowed from 1 Sam. xx. 11. If the verb אמר be put absolutely for דבר, the meaning will be that Cain spoke to his brother Abel, viz. what God had previously said to the former.

Gen. xxii. 13; instead of אחר the Samaritan reads אחד: 'And Abraham lifted up his eyes and looked; and behold *a* ram caught,' &c. instead of 'Behold a ram behind him,' &c. The Samaritan reading is sanctioned by the Septuagint and Syriac, and all the versions except Jerome's, by forty-two manuscripts, and two printed editions. Onkelos, Saadias, and the Persian have both readings together. This use, however, of the numeral adjective for the indefinite article, belongs rather to the later than the earlier Hebrew. In Exod. xxix. 3, the use of אחד is scarcely similar, though quoted as such by Gesenius. On the whole we are inclined, with Noldius and Ravius, to abide by the common reading, notwithstanding the circumstances adduced against it by Gesenius.

Gen. xlix. 14; in this passage the Hebrew has חמר גרם, *the ass of a bone*, i. e. 'a strong ass.' Instead of גרם the Samaritan has גרים; the sense is the same.

Gen. xiv. 14; instead of וירק the Samaritan reads וידק. The meaning of the former is—*he led forth* his trained servants; of the latter, *he surveyed* or *numbered*. The former is equally good as the latter.

The Samaritan codex cannot be put in comparison with the Hebrew. The difference between the two recensions chiefly consists in additions to the Samaritan text. An omission may be made inadvertently, but an insertion evinces design. When, therefore, we usually meet with words and clauses in the Samaritan that are not found in the Hebrew, it is much more probable that they should have been inserted in the one, than purposely omitted in the other. In all cases, perhaps, the Samaritan should be placed below the Hebrew in the value of its readings. Where other authorities concur with the former against the latter, there may be reason for following it; but this does not rest on the ground that it is superior to the Hebrew.

We might also mention, in favour of this estimate of the two codices, the general character of Israel and Judah. The one was far more wicked than the other. Wickedness is usually associated with forgetfulness or corruption of the inspired writings, and inattention to their contents.

But the New Testament writers usually quote from the Sept., which version agrees with the Samaritan, in preference to the Hebrew codex. Does

not this attach a superior value to the Samaritan? In reply to such a question it may be observed, that the New Testament does not coincide with the Samaritan and Septuagint *in opposition to the Hebrew.* There are indeed *two,* or, at the most, *three* instances of this nature; but the variation is so slight in these, that nothing can be built upon it. There is one reading of the Samaritan to which we deem it right to allude, because it is generally preferred to the Hebrew. It is in Exod. xii. 40: 'Now the sojourning of the children of Israel, who dwelt in Egypt, was 430 years.' The Samaritan has 'The sojourning of the children of Israel and of their fathers who dwelt in the land of Canaan and in the land of Egypt was 430 years.' The Hebrews abode 215 years in Egypt; and from the call of Abraham to the exodus was 430 years. This passage presents no real difficulty in the way of chronology, although the Samaritan corrector thought, that, as it stands in the Hebrew codex, it is not true. Yet it is not said that the sojourning of the children of Israel in Egypt was 430 years. It is simply stated that their sojourning continued for that period. The clause '*who dwelt in Egypt,*' is *incidental,* not *essential* to the sentence. The sojourning of the Israelites in various places beginning at the time when Abraham was called of Jehovah, and ending with the departure of his posterity out of Egypt, occupied 430 years. Had the words stood thus, 'the sojourning of the children of Israel who dwelt in Egypt was 430 years *in that country,*' there would have been a chronological difficulty. At present, however, there is none. This example is discussed by Gesenius, under the sixth class.

Thus the Samaritan Pentateuch is not a source of emendation. Other *independent* authorities, provided they be sufficient, may and ought to be taken as means of emendation; but this codex *by itself* cannot be used in correcting the text, nor can it be employed for the same purpose along with versions or quotations manifestly borrowed from it.

The utility of the copy consists in confirming the authenticity of a reading when it agrees with the Hebrew. In such a case there are two independent witnesses.

It also dissipates the rigid notions entertained by the Buxtorfs and others respecting the vowel-points and letters. It proves that the points and accents were not coeval with the *consonants.* Besides the works referred to in the course of this article, the reader may consult the Introductions of Jahn, Eichhorn, Bertholdt, De Wette, and Hävernick; Steudel's treatise in Bengel's *Archiv.* iii. 326, sq.; Mazade, *Sur l'Origine, l'Age, et l'Etat Critique du Pent. Sam.* Genf. 1830, 8vo; Tholuck's *Lit. Anzeig.* for 1833, p. 303, sq.: Lee's *Prolegomena to Baxter's Polyglott;* Professor Stuart, in the *North American Review* for 1826, and *Biblical Repository* for 1832; and Davidson's *Lectures on Biblical Criticism.*

Samaritan Version of the Pentateuch. —The author and date of this version are both unknown. Probably it belongs to the first or second century of the Christian era. It follows the Hebræo-Samaritan text word for word, generally furnishing the same additions and peculiarities as its parent exhibits. To this, however, there are several exceptions. Its agreement with Onkelos is remarkable. Winer and De Wette, however, deny that the translator used Onkelos, because the hatred subsisting between the Jews and Samaritans renders that circumstance impossible; yet it may be questioned whether the national enmity was participated in by every single individual of the Samaritans or of the Jews. To say that it has been interpolated from Onkelos will scarcely account for the peculiar character of the version, although it is probable that it has passed through several hands, and has consequently been altered from its original form. This version has been printed in the Paris and London Polyglotts: more accurately in the latter than in the former, but yet with many imperfections and errors. The Latin version in both is of no utility. (Winer, *De Versionis Pentateuchi Samaritani Indole,* Lips. 1817, 8vo.; Walton's *Prolegomena;* Gesenius, *De Pentat. Samar. Origine, &c.* p. 18; the *Introductions* of Eichhorn, Bertholdt, Hävernick, De Wette; and Davidson's *Lectures on Biblical Criticism.*)

Τὸ Σαμαρείτικον. This name has been given to the fragments of a supposed Greek version of the Samaritan Pentateuch. It is not certain, however, whether they be the remains of an old Greek translation, or glosses made upon the Septuagint by Origen. These fragments have been collected by Morin, Hottinger, and Montfaucon, out of the Greek fathers. It is probable that they are the remains of a real Greek version from the Samaritan, although from their paucity they are of little use. (See the Introductions of Eichhorn, Hävernick, and De Wette; Gesenius, *De Pentat. Samarit., &c.*; and Davidson's *Lectures on Biblical Criticism.*)—S. D.

SAMMINS. [Spices.]

SAMOS (Σάμος), an island in the Ægean Sea, near the coast of Lydia, in Asia Minor, and separated only by a narrow strait from the promontory which terminates in Cape Trogyllium. This strait, in the narrowest part, is not quite a mile in width (Plin. *Hist. Nat.* v. 34; Strabo, xiv. p. 634; comp. Leake's map of Asia Minor). The island is sometimes stated to have been famous for its wines; but, in fact, the wine of Samos was in ill repute. Strabo says expressly that the island was οὐκ εὔοινος: it now, however, ranks high among Levantine wines, and is largely exported, as are also grapes and raisins. The apostle Paul touched at the island in his voyage from Greece to Syria (Acts xx. 15). Samos contained, some years ago, about 60,000 people, inhabiting eighteen large villages, and about twenty small ones. Vathi is the chief town of the island in every respect, except that it is not the residence of the governor, who lives at Colonna, which takes its name from a solitary column (about fifty feet high and six in diameter), a remnant of the ancient temple of Juno, of which some insignificant remains are lying near. For further information, see the travels of Pococke, Clarke, Dallaway, and Turner.

SAMOTHRACE (Σαμοθράκη), an island in the north-east part of the Ægean Sea, above the Hellespont, with a lofty mountain, and a city of the same name. It was anciently called Dardania, Leucania, and also Samos; and to distinguish it from the other Samos, the name of

Thrace was added from its vicinity to that country. Hence Σάμος Θράκης, and by contraction Σαμοθράκη, Samothrace. The island was celebrated for the mysteries of Ceres and Proserpine, and was a sacred asylum (Diod. Sic. iii. 55; v. 47; Ptolem. *Geog.* v. 11; Plin. *Hist. Nat.* iv. 23). Paul touched at this island on his first voyage to Europe (Acts xvi. 11). The island is now called Samandrachi. It is but thinly peopled, and contains only a single village. The mountain is described in the *Missionary Herald* for 1836, p. 246; comp. Richter, *Wallfahrt*, p. 438, sq.

SAMSON (שִׁמְשׁוֹן *Shimshon;* Sept. Σαμψών), the name of the celebrated champion, deliverer, and judge of Israel, equally remarkable for his supernatural bodily prowess, his moral infirmities, and his tragical end. He was the son of Manoah, of the tribe of Dan, and born A.M. 2848, of a mother whose name is no where given in the Scriptures. The circumstances under which his birth was announced by a heavenly messenger gave distinct presage of an extraordinary character, whose endowments were to be of a nature suited to the providential exigencies in which he was raised up. The burden of the oracle to his mother, who had been long barren, was, that the child with which she was pregnant was to be a son, who should be a Nazarite from his birth, upon whose head no razor was to come, and who was to prove a signal deliverer to his people. She was directed, accordingly, to conform her own regimen to the tenor of the Nazarite law, and strictly abstain from wine and all intoxicating liquor, and from every species of impure food [NAZARITE]. According to the 'prophecy going before upon him,' Samson was born in the following year, and his destination to great achievements began to evince itself at a very early age by the illapses of superhuman strength which came from time to time upon him. Those specimens of extraordinary prowess, of which the slaying of the lion at Timnath without weapons was one, were doubtless the result of that special influence of the Most High which is referred to in Judg. xiii. 25:—'And the spirit of the Lord began to move him at times in the camp of Dan, between Zorah and Eshtaol.' The import of the original word (לְפַעֲם) for *moved* is peculiar. As פַּעַם, the radical form, signifies *an anvil*, the metaphor is probably drawn from the *repeated* and somewhat *violent strokes* of a workman with his hammer. It implies, therefore, a peculiar *urgency*, an *impelling influence*, which he could not well resist in himself, nor others in him. But we do not know that this attribute, in its utmost degree, constantly dwelt in him.

As the position of the tribe of Dan, bordering upon the territory of the Philistines, exposed them especially to the predatory incursions of this people, it was plainly the design of heaven to raise up a deliverer in that region where he was most needed. The Philistines, therefore, became very naturally the objects of that retributive course of proceedings in which Samson was to be the principal actor, and upon which he could only enter by seeking some occasion of exciting hostilities that would bring the two peoples into direct collision. Such an occasion was afforded by his meeting with one of the daughters of the Philistines at Timnath, whom he besought his parents to procure for him in marriage, assigning as a reason that she 'pleased him well,' Heb. הִוא יָשְׁרָה בְעֵינָי, *She is right in mine eyes*, where the original for *right* is not an adjective, having the sense of *beautiful*, *engaging*, *attractive*, but a verb, conveying, indeed, the idea of *right*, but of *right relative to an end, purpose, or object;* in other words, of *fitness* or *adaptation* (see Gousset's *Lexicon*, s. v. יָשַׁר; and comp. 2 Sam. xvii. 4; 1 Kings ix. 12: 2 Chron. xii. 30; Num. xxviii. 27). This affords, we believe, the true clue to Samson's meaning, when he says, 'She is right in mine eyes;' *i. e. adapted* to the end which I have in view; she may be *used*, she is *available*, for a purpose entirely ulterior to the immediate connection which I propose. That he entertained a genuine affection for the woman, notwithstanding the *policy* by which he was prompted, we may doubtless admit; but that he intended, at the same time, to make this alliance subservient to the great purpose of delivering his country from oppression, and that in this he was acting under the secret control of Providence, would seem to be clear from the words immediately following, when, in reference to the objection of his parents to such a union, it is said, that they 'knew not that it was of the Lord that he sought an occasion against the Philistines.' It is here worthy of note, that the Hebrew, instead of '*against* the Philistines,' has '*of* or *from* the Philistines,' clearly implying that the occasion sought should be one that *originated* on the side of the Philistines. This occasion he sought under the immediate prompting of the Most High, who saw fit, in this indirect manner, to bring about the accomplishment of his designs of retribution on his enemies. His leading purpose in this seems to have been *to baffle the power of the whole Philistine nation by the prowess of a single individual.* The champion of Israel, therefore, was not appointed so much to be the leader of an army, like the other judges, *as to be an army in himself.* In order then that the contest might be carried on in this way, it was necessary that the entire opposition of the Philistines *should be concentrated, as far as possible, against the person of Samson.* This would array the contending parties in precisely such an attitude as to illustrate most signally the power of God in the overthrow of his enemies. But how could this result be brought about except by means of some *private quarrel* between Samson and the enemy with whom he was to contend? And who shall say that the scheme now projected was not the very best that could have been devised for accomplishing the end which God had in view? To what extent Samson himself foresaw the issue of this transaction, or how far he had a plan *distinctly laid* corresponding with the results that ensued, it is difficult to say. The probability, we think, is, that he had rather a *general strong impression*, wrought by the Spirit of God, than a *definite conception* of the train of events that were to transpire. It was, however, a conviction as to the issue sufficiently powerful to warrant both him and his parents in going forward with the measure. They were, in some way, assured that they were engaged in a proceeding which God would *overrule* to the furtherance of his designs of mercy to his people, and of judgment to their oppressors.

From this point commences that career of achievements and prodigies on the part of this Israelitish Hercules, which rendered him the terror of his enemies and the wonder of all ages. At his wedding-feast, the attendance of a large company of paranymphs, or friends of the bridegroom, convened ostensibly for the purpose of honouring his nuptials, but in reality to keep an insidious watch upon his movements, furnished the occasion of a common Oriental device for enlivening entertainments of this nature. He propounded a riddle, the solution of which referred to his obtaining a quantity of honey from the carcase of a slain lion, and the clandestine manner in which his guests got possession of the clue to the enigma cost thirty Philistines their lives. The next instance of his vindictive cunning was prompted by the ill-treatment which he had received at the hands of his father-in law, who, upon a frivolous pretext, had given away his daughter in marriage to another man, and was executed by securing a multitude of foxes, or rather *jackals* (שועלים *shualim*), and, by tying firebrands to their tails, setting fire to the cornfields of his enemies. The indignation of the Philistines, on discovering the author of the outrage, vented itself upon the family of his father-in-law, who had been the remote occasion of it, in the burning of their house, in which both father and daughter perished. This was a fresh provocation, for which Samson threatened to be revenged; and thereupon falling upon them without ceremony he smote them, as it is said, 'hip and thigh with a great slaughter.' The original, strictly rendered, runs, 'he smote them leg upon thigh'—apparently a proverbial expression, and implying, according to Gesenius, that he cut them to pieces, so that their limbs, their legs and thighs, were scattered and heaped promiscuously together; equivalent to saying that he smote and destroyed them *wholly, entirely*. Mr. Taylor, in his edition of Calmet, recognises in these words an allusion to some kind of *wrestling combat*, in which perhaps the slaughter on this occasion may have commenced.

Having subsequently taken up his residence in the rock Etam, he was thence dislodged by consenting to a pusillanimous arrangement on the part of his own countrymen, by which he agreed to surrender himself in bonds provided *they* would not themselves fall upon him and kill him. He probably gave into this measure from a strong inward assurance that the issue of it would be, to afford him a new occasion of taking vengeance upon his foes. Being brought in this apparently helpless condition to a place called from the event, Lehi, *a jaw*, his preternatural potency suddenly put itself forth, and snapping the cords asunder, and snatching up the jaw-bone of an ass, he dealt so effectually about him, that a thousand men were slain on the spot. That this was altogether the work, not of man, but of God, was soon demonstrated. Wearied with his exertions, the illustrious Danite became faint from thirst, and as there was no water in the place, he prayed that a fountain might be opened. His prayer was heard; God caused a stream to gush from a hollow rock hard by, and Samson in gratitude gave it the name of *En-hakkor*, a word that signifies 'the well of him that prayed,' and which continued to be the designation of the fountain ever after. The rendering in our version—'God clave a hollow place in the jaw'—is unhappy, as the original is לחי *Lehi*, the very term which in the final clause is rendered 'in Lehi.' The place received its name from the circumstance of his having then so effectually wielded the *jaw-bone* (לחי *Lehi*).

The Philistines were from this time held in such contempt by their victor, that he went openly into the city of Gaza, where he seems to have suffered himself weakly to be drawn into the company of a woman of loose character, the yielding to whose enticements exposed him to the most imminent peril. His presence being soon noised abroad, an attempt was made during the night forcibly to detain him, by closing the gates of the city and making them fast; but Samson, apprised of it, rose at midnight, and breaking away bolts, bars, and hinges, departed, carrying the gates upon his shoulders, to the top of a neighbouring hill that *looks toward Hebron* (על פני חברון; Sept. ἐπὶ προσώπου τοῦ Χεβρών, *facing Hebron*). The common rendering 'before Hebron' is less appropriate, as the distance between the two cities is at least twenty miles. The hill lay doubtless somewhere between the cities, and in full view of both. After this his enemies strove to entrap him by guile rather than by violence; and they were too successful in the end. Falling in love with a woman of Sorek, named Delilah, he became so infatuated by his passion, that nothing but his bodily strength could equal his mental weakness. The princes of the Philistines, aware of Samson's infirmity, determined by means of it to get possession, if possible, of his person. For this purpose they propose a tempting bribe to Delilah, and she enters at once into the treacherous compact. She employs all her art and blandishments to worm from him the secret of his prodigious strength. Having for some time amused her with fictions, he at last, in a moment of weakness, disclosed to her the fact that it lay in his hair, which if it were shaved would leave him a mere common man. Not that his strength really lay in his hair, for this in fact had no natural influence upon it one way or the other. His strength arose from his *relation* to God as a Nazarite, and the preservation of his hair unshorn was the *mark* or *sign* of his Nazariteship, and a *pledge* on the part of God of the continuance of his miraculous physical powers. If he lost this sign, the badge of his consecration, he broke his vow, and consequently forfeited the thing signified. God abandoned him, and he was thenceforward no more, in this respect, than an ordinary man. His treacherous paramour seized the first opportunity of putting his declaration to the test. She shaved his head while he lay sleeping in her lap, and at a concerted signal he was instantly arrested by his enemies lying in wait. Bereft of his grand endowment, and forsaken of God, the champion of Israel could now well adopt the words of Solomon;—'I find more bitter than death the woman whose heart is snares and nets, and her hands are bands; whoso pleaseth God shall escape from her; but the sinner shall be taken by her.' Having so long presumptuously played with his ruin, Heaven leaves him to himself, as a punishment for his former guilty indulgence. He is made to reap as he had sown, and is consigned to the hands of his relentless foes.

His punishment was indeed severe, though he amply revenged it, as well as redeemed in a measure his own honour, by the manner in which he met his death. The Philistines having deprived him of sight, at first immured him in a prison, and made him grind at the mill like a slave. As this was an employment which in the East usually devolves on women, to assign it to such a man as Samson was virtually to reduce him to the lowest state of degradation and shame. To grind corn *for others* was, even for a woman, a proverbial term expressive of the most menial and oppressed condition. How much more for the hero of Israel, who seems to have been made grinder-general for the prison-house!

In process of time, while remaining in this confinement, his hair recovered its growth, and with it such a profound repentance seems to have wrought in his heart as virtually re-invested him with the character and the powers he had so culpably lost. Of this fact his enemies were not aware. Still exulting in their possession of the great scourge of their nation, they kept him, like a wild beast, for mockery and insult. On one of these occasions, when an immense multitude, including the princes and nobility of the Philistines, were convened in a large amphitheatre, to celebrate a feast in honour of their god Dagon, who had delivered their adversary into their hands, Samson was ordered to be brought out to be made a laughing-stock to his enemies, a butt for their scoffs, insults, mockeries, and merriment. Secretly determined to use his recovered strength to tremendous effect, he persuaded the boy who guided his steps to conduct him to a spot where he could reach the two pillars upon which the roof of the building rested. Here, after pausing for a short time, while he prefers a brief prayer to Heaven, he grasps the massy pillars, and bowing with resistless force, the whole building rocks and totters, and the roof, encumbered with the weight of the spectators, rushes down, and the whole assembly, including Samson himself, are crushed to pieces in the ruin!

Thus terminated the career of one of the most remarkable personages of all history, whether sacred or profane. The enrolment of his name by an apostolic pen (Heb. xi. 32) in the list of the ancient worthies, 'who had by faith obtained an excellent repute,' warrants us undoubtedly in a favourable estimate of his character on the whole, while at the same time the fidelity of the inspired narrative has perpetuated the record of infirmities which must for ever mar the lustre of his noble deeds. It is not improbable that the lapses with which he was chargeable arose, in a measure, from the very peculiarities of that physical temperament to which his prodigies of strength were owing; but while this consideration may palliate, it cannot excuse the moral delinquencies into which he was betrayed, and of which a just Providence exacted so tremendous a penalty in the circumstances of his degradation and death.

Upon the parallel between the achievements of Samson and those of the Grecian Hercules, and the derivation of the one from the other, we cannot here enter. The Commentary of Adam Clarke presents us with the results of M. De Lavour, an ingenious French writer on this subject, from which it will be seen that the coincidences are extremely striking, and such as would perhaps afford to most minds an additional proof of how much the ancient mythologies were a distorted reflection of the Scripture narrative.—G. B.

SAMUEL (שְׁמוּאֵל; Sept. Σαμουήλ), the last of those extraordinary regents that presided over the Hebrew commonwealth under the title of Judges. The circumstances of his birth were ominous of his future career. His father, Elkanah of Ramathaim-Zophim, of Mount Ephraim, 'had two wives, the name of the one was Hannah, and the name of the other Peninnah; and Peninnah had children, but Hannah had no children.' The usual effect of polygamy was felt in Elkanah's household. The sterility of Hannah brought upon her the taunts and ridicule of her conjugal rival, who 'provoked her sore, to make her fret, because the Lord had shut up her womb' (1 Sam. i. 6). The jealousy of Peninnah was excited also by the superior affection which was shown to Hannah by her husband. 'To Hannah he gave a worthy portion; for he loved Hannah' (i. 5). More especially at the period of the sacred festivals did the childless solitude of Hannah create within her the most poignant regrets, when she saw her husband give portions to all the sons and daughters of Peninnah, who, exulting in maternal pride and fondness, took advantage of these seasons to subject the favourite wife to a natural feminine retaliation. Hannah's life was embittered, 'she wept and did not eat' (i. 7). On one of these occasions, during the annual solemnity at Shiloh, whither Elkanah's family had travelled, 'to worship and to sacrifice,' so keen was the vexation of Hannah, that she left the domestic entertainment, went to the tabernacle, and in the extremity of her anguish implored Jehovah to give her a man-child, accompanying her supplication with a peculiar pledge to dedicate this gift, should it be conferred, to the service of Jehovah; vowing to present the child in entire unreserved consecration to the Lord all the days of his life, and at the same time to bind him to the special obligations and austerities of a Nazarite. In her agony of earnestness her lips moved, but articulated no words, so that Eli, the high priest, who had observed her frantic appearance from his seat by a post of the temple, 'thought she had been drunken,' and sharply rebuked her. Her pathetic explanation removed his suspicion, and he gave her his solemn benediction. Her spirit was lightened, and she 'went her way.' The birth of a son soon fulfilled her hopes, and this child of prayer was named, in memory of the prodigy, SAMUEL, HEARD OF GOD. In consequence of his mother's vow, the boy was from his early years set apart to the service of Jehovah, under the immediate tutelage of Eli. His mother brought him to the house of the Lord in Shiloh, and introducing herself to the pontiff, recalled to his memory the peculiar circumstances in which he had first seen her. So 'Samuel ministered before the Lord, being a child, girded with a linen ephod' (ii. 18).

The degeneracy of the people at this time was extreme. The tribes seem to have administered their affairs as independent republics, the national confederacy was weak and disunited, and the spirit of public patriotic enterprise had been worn out by constant turmoil and invasion. The theocratic influence was also scarcely felt, its

peculiar ministers being withdrawn, and its ordinary manifestations, except in the routine of the Levitical ritual, having ceased; 'the word of the Lord was precious in those days, there was no open vision' (iii. 1). The young devotee, 'the child Samuel,' was selected by Jehovah to renew the deliverance of his oracles. As he reclined in his chamber adjoining the sacred edifice, the Lord, by means adapted to his juvenile capacity, made known to him his first and fearful communication—the doom of Eli's apostate house. Other revelations speedily followed this; the frequency of God's messages to the young prophet established his fame; and the exact fulfilment of them secured his reputation. The oracle of Shiloh became vocal again through the youthful hierophant (iii. 19-21). The fearful fate pronounced on the head and family of the pontificate was soon executed. Eli had indulgently tolerated, or leniently palliated, the rapacity and profligacy of his sons. Through their extortions and impiety 'men abhorred the offering of the Lord,' and Jehovah's wrath was kindled against the sacerdotal transgressors. They became the victims of their own folly; for when the Philistines invaded the land, an unworthy superstition among the Hebrew host clamoured for the ark to be brought into the camp and into the field of battle. Hophni and Phinehas, Eli's sons, indulging this vain and puerile fancy, accompanied the ark as its legal guardians, and fell in the terrible slaughter which ensued. Their father, whose sin seems to have been his easiness of disposition, his passive and quiescent temper, sat on a sacerdotal throne by the wayside, to gather the earliest news of the battle, for his 'heart trembled for the ark of God;' and as a fugitive from the scene of conflict reported to him the sad disaster, dwelling with natural climax on its melancholy particulars—Israel routed and fleeing in panic, Hophni and Phinehas both slain, and the ark of God taken—this last and overpowering intelligence so shocked him, that he fainted and fell from his seat, and in his fall, from the imbecile corpulence of age, 'brake his neck and died' (iv. 18). When the feeble administration of Eli, who had judged Israel forty years, was concluded by his death, Samuel was too young to succeed to the regency, and the actions of this earlier portion of his life are left unrecorded. The ark, which had been captured by the Philistines, soon vindicated its majesty, and after being detained among them seven months, was sent back to Israel. It did not, however, reach Shiloh, in consequence of the fearful judgment of Beth-shemesh (vi. 19), but rested in Kirjath-jearim for no fewer than twenty years (vii. 2). It is not till the expiration of this period that Samuel appears again in the history. Perhaps during the twenty years succeeding Eli's death, his authority was gradually gathering strength, while the office of supreme magistrate may have been vacant, each tribe being governed by its own hereditary phylarch. This long season of national humiliation was to some extent improved. 'All the house of Israel lamented after the Lord,' and Samuel, seizing upon the crisis, issued a public manifesto, exposing the sin of idolatry, urging on the people religious amendment, and promising political deliverance on their reformation. The people obeyed, the oracular mandate was effectual, and the principles of the theocracy again triumphed (vii. 4). The tribes were summoned by the prophet to assemble in Mizpeh, and at this assembly of the Hebrew comitia, Samuel seems to have been elected regent (vii. 6). Some of the judges were raised to political power, as the reward of their military courage and talents, but Samuel was raised to the lofty station of judge, from his prophetic fame, his sagacious dispensation of justice, his real intrepidity, and his success as a restorer of the true religion. His government, founded not on feats of chivalry or actions of dazzling enterprise, which great emergencies only call forth, but resting on more solid qualities, essential to the growth and development of a nation's resources in times of peace, laid the foundation of that prosperity which gradually elevated Israel to the position it occupied in the days of David and his successors.

This mustering of the Hebrews at Mizpeh on the inauguration of Samuel alarmed the Philistines, and their 'lords went up against Israel.' Samuel assumed the functions of the theocratic viceroy, offered a solemn oblation, and implored the immediate protection of Jehovah. He was answered with propitious thunder. A fearful storm burst upon the Philistines, the elements warred against them. 'The Highest gave his voice in the heaven, hailstones and coals of fire.' The old enemies of Israel were signally defeated, and did not recruit their strength again during the administration of the prophet-judge. The grateful victor erected a stone of remembrance, and named it Ebenezer. From an incidental allusion (vii. 14) we learn too, that about this time the Amorites, the Eastern foes of Israel, were also at peace with them—another triumph of a government 'the weapons of whose warfare were not carnal.' The presidency of Samuel appears to have been eminently successful. From the very brief sketch given us of his public life, we infer that the administration of justice occupied no little share of his time and attention. He went from year to year in circuit to Bethel, Gilgal, and Mizpeh, places not very far distant from each other, but chosen perhaps, as Winer suggests, because they were the old scenes of worship (*Real-wört.*, ii. 444).

The dwelling of the prophet was at Ramah, where religious worship was established after the patriarchal model, and where Samuel, like Abraham, built an altar to the Lord. Such procedure was contrary to the letter of the Mosaic statute. But the prophets had power to dispense with ordinary usage (De Wette, *Bib. Dogmat.* § 70; Knobel, *Der Prophetism. d. Heb.* i. 39; Koester, *Der Proph. d. A. & N. T. &c.* p. 52). In this case the reason of Samuel's conduct may be found in the state of the religious economy. The ark yet remained at Kirjath-jearim, where it had been left in terror, and where it lay till David fetched it to Zion. There seems to have been no place of resort for the tribes, the present station of the ark not having been chosen for its convenience as a scene of religious assembly. The shrine at Shiloh, which had been hallowed ever since the settlement in Canaan, had been desolate from the date of the death of Eli and his sons—so desolate as to become in future years a prophetic symbol of divine judgment (Jer. vii. 12-14; xxvi. 6). In such a period of religious anarchy and confusion,

Samuel, a theocratic guardian, might, without any violation of the spirit of the law, superintend the public worship of Jehovah in the vicinity of his habitation (Knobel, *Prophet. der Heb.* ii. 32).

In Samuel's old age two of his sons were appointed by him deputy-judges in Beersheba. These young men possessed not their father's integrity of spirit, but 'turned aside after lucre, took bribes, and perverted judgment' (1 Sam. viii. 3). The advanced years of the venerable ruler himself and his approaching dissolution, the certainty that none of his family could fill his office with advantage to the country, the horror of a period of anarchy which his death might occasion, the necessity of having some one to put an end to tribal jealousies and concentrate the energies of the nation, especially as there appeared to be symptoms of renewed warlike preparations on the part of the Ammonites (xii. 12)—these considerations seem to have led the elders of Israel to adopt the bold step of assembling at Ramah and soliciting Samuel 'to make a king to judge them.' The proposed change from a republican to a regal form of government displeased Samuel for various reasons. Besides its being a departure from the first political institute, and so far an infringement on the rights of the divine head of the theocracy, it was regarded by the regent as a virtual charge against himself, and might appear to him as one of those examples of popular fickleness and ingratitude which the history of every realm exhibits in profusion. Jehovah comforts Samuel in this respect by saying, 'They have not rejected thee, but they have rejected me.' Being warned of God to accede to their request for a king, and yet to remonstrate with the people, and set before the nation the perils and tyranny of a monarchical government (viii. 10), Samuel proceeded to the election of a sovereign. Saul, son of Kish, 'a choice young man and a goodly,' whom he had met unexpectedly, was pointed out to him by Jehovah as the king of Israel, and by the prophet was anointed and saluted as monarch. Samuel again convened the nation at Mizpeh, again with honest zeal condemned their project, but caused the sacred lot to be taken. The lot fell on Saul. The prophet now formally introduced him to the people, who shouted in joyous acclamation, 'God save the king.'

Not content with oral explanations, this last of the republican chiefs not only told the people the manner of the kingdom, 'but wrote it in a book and laid it up before the Lord.' What is here asserted of Samuel may mean, that he extracted from the Pentateuch the recorded provision of Moses for a future monarchy, and added to it such warnings, and counsels, and safeguards as his inspired sagacity might suggest. Saul's first battle being so successful, and the preparations for it displaying no ordinary energy and promptitude of character, his popularity was suddenly advanced, and his throne secured. Taking advantage of the general sensation in favour of Saul, Samuel cited the people to meet again in Gilgal, to renew the kingdom, to ratify the new constitution, and solemnly instal the sovereign (xi. 14). Here the upright judge made a powerful appeal to the assembly in vindication of his government. 'Witness against me before the Lord, and before his anointed; whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith? and I will restore it you.' The whole multitude responded in unanimous approval of his honesty and intrepidity (xii. 3, 4). Then he, still jealous of God's prerogative and the civil rights of his people, briefly narrated their history, showed them how they never wanted chieftains to defend them when they served God, and declared that it was distrust of God's raising up a new leader in a dreaded emergency that excited the outcry for a king. In proof of this charge—a charge which convicted them of great wickedness in the sight of God—he appealed to Jehovah, who answered in a fearful hurricane of thunder and rain. The terrified tribes confessed their guilt, and besought Samuel to intercede for them in his disinterested patriotism.

It is said (vii. 15) that Samuel judged Israel all the days of his life. The assertion may mean that even after Saul's coronation Samuel's power, though formally abdicated, was yet actually felt and exercised in the direction of state affairs (Hävernick, *Einleit. in das A. T.*, § 166). No enterprise could be undertaken without Samuel's concurrence. His was an authority higher than the king's. We find Saul, having mustered his forces, about to march against the Philistines, yet delaying to do so till Samuel consecrated the undertaking. He came not at the time appointed, as Saul thought, and the impatient monarch proceeded to offer sacrifice—a fearful violation of the national law. The prophet arrived as the religious service was concluded, and rebuking Saul for his presumption, distinctly hinted at the short continuance of his kingdom. Again we find Samuel charging Saul with the extirpation of the Amalekites. The royal warrior proceeded on the expedition, but obeyed not the mandate of Jehovah. His apologies, somewhat craftily framed, for his inconsistencies, availed him not with the prophet, and he was by the indignant seer virtually dethroned. He had forfeited his crown by disobedience to God. Yet Samuel mourned for him. His heart seems to have been set on the bold athletic soldier. But now the Lord directed him to make provision for the future government of the country (xvi. 1). To prevent strife and confusion it was necessary, in the circumstances, that the second king should be appointed ere the first sovereign's demise. Samuel went to Bethlehem and set apart the youngest of the sons of Jesse, 'and came to see Saul no more till the day of his death.' Yet Saul and he met once again at Naioth, in Ramah (xix. 24), when the king was pursuing David. As on a former occasion, the spirit of God came upon him as he approached the company of the prophets with Samuel presiding over them, and 'he prophesied and lay down naked all that day and all that night.' A religious excitement seized him, the contagious influence of the music and rhapsody fell upon his nervous, susceptible temperament, and overpowered him. At length Samuel died (xxv. 1), and all Israel mourned for him, and buried him in his house at Ramah. The troubles of Saul increased, and there was none to give him counsel and solace. Jehovah answered him not in the ordinary mode of oracular communication, 'by dreams, Urim, or prophets.' His chafed and melancholy spirit could find no rest, and re-

sorted to the sad expedient of consulting 'a woman that had a familiar spirit' (xxviii. 3-7). The sovereign in disguise entered her dwelling, and he of whom the proverb was repeated, 'Is Saul also among the prophets?' was found in consultation with a sorceress. This is not the place to enter into a discussion of this subject [SAUL]. We follow the inspired narrative, and merely say that Saul strangely wished to see Samuel recalled from the dead, that Samuel himself (שְׁמוּאֵל הוּא) made his appearance suddenly, and, to the great terror of the necromancer, heard the mournful complaint of Saul, and pronounced his speedy death on an ignoble field of loss and massacre (Henderson, *On Divine Inspiration*, p. 165; Hales' *Chronology*, vol. ii. p. 323; Scott, *On the Existence of Evil Spirits*, &c., p. 232).

We have reserved a few topics for discussion, that we might not interrupt the brief narrative. It is almost superfluous to say that the derivation of the prophet's name to which we have referred is preferable to others which have been proposed—such as שֵׁם אֵל, *name of God*; שְׁאוּל מֵאֵל, *asked of God*; or שׂוּם אֵל, *Deus posuit*. The opinion was in former times very current, that Samuel was a priest, nay, some imagine that he succeeded Eli in the pontificate. Many of the fathers inclined to this notion, but Jerome affirms (*Advers. Jovin.*): *Samuel Propheta fuit, Judex fuit, Levita fuit, non Pontifex, ne Sacerdos quidem* (Ortlob, *Samuel Judex et Propheta non Pont. aut Sacerd. Sacrificans; Thesaurus Novus Theol. Philol.* Hasaei et Ikenii, i. 587; Selden, *De Success. ad Pontiff.*, lib. i. c. 14). That Samuel was a Levite is apparent from 1 Chron. vi. 22-28, but there is no evidence of his being a priest. The sacerdotal acts ascribed to him were performed by him as an extraordinary legate of heaven. The American translator of De Wette's *Introduction to the Old Testament* (ii. 21) says he was a priest, though not of Levitical descent, slighting the information of Chronicles, and pronouncing Samuel at the same time to be only a mythical character. Samuel's birth-place was Ramathaim-Zophim; the dual form of the first term, according to some, signifying one of the two Ramahs, to wit, that of the Zophites (Lightfoot, vol. ii. 162, ed. 1832); and the second term (צוֹפִים), according to others, meaning speculatores, *i.e.*, prophets, and denoting, that at this place was a school of the prophets—an hypothesis supported by the Chaldee paraphrast, who renders it, 'Elkanah a man of Ramatha, a disciple of the prophets' (מִתַּלְמִידֵי נְבִיאַיָּא). Others find in the dual form of רָמָתַיִם a reference to the shape of the city, which was built on the sides of two hills; and in the word Zophim, see an allusion to some watch-towers, or places of observation, which the high situation of the city might favour (Clerici *Opera*, ii. 175). Others again affirm that the word צוֹפִים is added because Ramah or Ramatha was inhabited by a clan of Levites of the family of צוּף (Calmet, *sub voce*). Winer asserts (*Realwört.* art. 'Samuel') that the first verse of the book declares Samuel to be an Ephraimite (אֶפְרָתִי). This term, however, if the genealogy in Chronicles remain undisturbed, must signify not an Ephraimite by birth, but by abode, 'domicilii ratione non sanguinis' (Selden, *l. c.*). We find that the Kohathites, to whom Samuel belonged, had their lot in Mount Ephraim (Josh. xxi. 5-20), where הַר אֶפְרַיִם signifies, not the hill of Ephraim, but the hill-country of Ephraim (Gesenius, *Thesaur.* sub voce). The family of Zoph, living in the hill-country of Ephraim, might be termed Ephrathite, while their ancestor's name distinguished their special locality, as Ramathaim-Zophim. The geography of this place has been disputed [RAMAH]. Eusebius and Jerome confound it with Arimathea of the New Testament (*Onomast.* art. *Armatha Sophim*). The Seventy render it Ἀρμαθαὶμ Σωφίμ, Cod. A., or Cod. B. Ἀρμαθαὶμ Σιφά. For an account of the place now and for long called Neby Samwêl, and the impossibility of its being the ancient Ramah, see Robinson's *Palestine*, ii. 141; and for an interesting discussion as to the site of Ramath-Zophim, the latter name being yet retained in the Arabic term Sóbah, the curious reader may consult the same work (ii. 830), or Robinson's *Bibliotheca Saera*, p. 46. The hilly range of Ephraim extended southward into other cantons, while it bore its original name of הַר אֶפְרַיִם; and so the inhabitants of Ramathaim-Zophim might be termed Ephrathites, just as Mahlon and Chilion are called 'Ephrathites of Beth-lehem-judah' (Ruth i. 2).

Specific data are not afforded us for determining the length of either Samuel's life or his administration. Josephus mentions that he was twelve years of age when his first oracle was communicated to him. As the calculation of the duration of Samuel's life and government depends upon the system of Chronology adopted, the reader may turn to the article JUDGES, and to the comparative chronological table which is there given.

Samuel's character presents itself to us as one of uncommon dignity and patriotism. His chief concern was his country's weal. Grotius compares him to Aristides, and Saul to Alcibiades (*Opera Theol.* tom. i. p. 119). To preserve the worship of the one Jehovah, the God of Israel, to guard the liberties and rights of the people, to secure them from hostile invasion and internal disunion, was the grand motive of his life. His patriotism was not a Roman love of conquest or empire. The subjugation of other people was only sought when they disturbed the peace of his country. He was loath indeed to change the form of government, yet he did it with consummate policy. First of all he resorted to the divine mode of appeal to the Omniscient Ruler—a solemn sortilege—and brought Saul so chosen before the people, and pointed him out to them as peerless in his form and aspect. Then, waiting till Saul should distinguish himself by some victorious enterprise, and receiving him fresh from the slaughter of the Ammonites, he again confirmed him in his kingdom, while the national enthusiasm, kindled by his triumph, made him the popular idol. Samuel thus, for the sake of future peace, took means to show that Saul was both chosen of God and yet virtually elected by the people. This procedure, so cautious and so generous, proves how little foundation there is for the remarks which have been made against Samuel by some writers, such as Schiller (*Neue Thalia*, iv. 94), Vatke (*Bibl. Theol.* p. 360), and the in-

famous Wolfenbüttel Fragmentist (p. 200, ed. Schmidt).

The power of Samuel with God, as an intercessor for the people, is compared to that of Moses (Jer. xv. 1; Ps. xcix. 6). He was the first of a series of prophets that continued in an unbroken line till the close of the Old Testament Canon (Acts iii. 24; Augustin. *De Civ. Dei*, l. xvii.). It is in the days of Samuel that mention is first made of the schools of the prophets. It is natural to suppose that he was to some extent their originator. In the prospect of a regal form of government he seems to have made the prophetic office a formal institute in the Jewish nation. These Academies were famous for the cultivation of poetry and music, and from among their members God might select his special servants (Gramberg, *Religions-id.* ii. 264; Vitringa, *Synag. Vet.* i. 2, 7; Werenfels, *Diss. de Scholis Prophetar.*; De Wette, *Comm. ub. d. Psalm.* p. 9). For a different view of the schools see Tholuck's *Literar. Anzeiger*, 1831, i. 38. We are informed (1 Chron. ix. 22) that the allocation of the Levites for the temple-service was made by David and Samuel the seer, *i. e.*, that David followed some plan or suggestion of the deceased prophet. It is stated also (xxvi. 28) that the prophet had made some munificent donations to the tabernacle, which seems to have been erected at Nob, and afterwards at Gibeon, though the ark was in Kirjath-jearim. Lastly (xxix. 29), the acts of David the king are said to be written in the book of Samuel the seer. The high respect in which Samuel was held by the Jewish nation in after ages, may be learned from the eulogy pronounced upon him by the son of Sirach (Eccles. xlvi. 13-20). His fame was not confined to Israel. The remains of Samuel, according to Jerome (*Advers. Vigil.*), were, under the emperor Arcadius, brought with great pomp to Thrace (D'Herbelot, *Bibl. Orient.* pp. 735, 1021; Hottinger, *Histor. Oriental.* i. 3).—J. E.

SAMUEL, BOOKS OF. The two books of Samuel were anciently reckoned as but one among the Jews, ספר שמואל. That they form only one treatise is apparent from their structure. The present division into two books, common in our Hebrew Bibles since the editions of Bomberg, was derived from the Septuagint and Vulgate, in both which versions they are termed the First and Second Books of Kings. Thus Origen (apud Euseb. *Hist. Eccles.* vi. 25), in his famous catalogue of the Hebrew Scriptures, names the books of Samuel—βασιλεῖων πρώτη δευτέρα, παρ' αὐτοῖς ἓν Σαμουήλ, ὁ θεόκλητος; and Jerome thus describes them (*Prolog. Galeatus*), 'tertius sequitur Samuel, quem nos regum primum et secundum dicimus.' None of these titles, ancient or modern, is very felicitous. To call them Books of Samuel is, if we follow the analogy of the phrases, Books of Moses, Book of Isaiah, to assert the prophet to be their author, though a great portion of the events recorded in them happened after his death. The title Books of Kings, or Kingdoms, is by no means an accurate indication of their contents, as they refer only to two monarchs, and the narrative does not even include the death of David. But if they be named after Samuel, as he was a principal agent in the events recorded in them, then the title is only appropriate to a few of the introductory chapters. Jewish opinion is divided on the reason of the Hebrew name. It is affirmed in Baba Bathra (fol. 15, cap. i.), that Samuel wrote the book so called, and also Judges and Ruth; and Abarbanel argues that these compositions are named after Samuel because the events narrated in them may be referred to him, either as a person or as a chief instrument, for Saul and David, being both anointed by the prophet, became 'opus veluti manuum' (*Præf. in lib. Sam.* fol. 74, col. i.) The source of the appellation, βασιλεων or βασιλειων, Regum, is to be found in the historic resemblance of the books of Samuel to those which come after them, and to which they serve as an introduction. On the other hand, it was desirable to have short names for the books of Scripture; and as Samuel was a prophet of such celebrity, and had such influence in changing the form of government under which the son of Kish and the son of Jesse became sovereigns, it was natural to name after him the biographical tracts in which the life and times of these royal chieftains are briefly sketched: especially as they at the same time contain striking descriptions of the miracle of his own birth, the oracles of his youth, and the impressive actions of his long career. The selection of this Jewish name might also be strengthened by the national belief of the authorship of a large portion of the work, founded on the language of 1 Chron. xxix. 29.

Contents.—The contents of the books of Samuel belong to an interesting period of Jewish history. The preceding book of Judges refers to the affairs of the republic as they were administered after the Conquest, when the nation was a congeries of independent cantons, sometimes partially united for a season under an extraordinary dictator. As, however, the mode of government was changed, and remained monarchical till the overthrow of the kingdom, it was of national importance to note the time, method, and means of the alteration. This change happening under the regency of the wisest and best of their sages, his life became a topic of interest. The first book of Samuel gives an account of his birth and early call to the duties of a seer, under Eli's pontificate; describes the low and degraded condition of the people, oppressed by foreign enemies; proceeds to narrate the election of Samuel as judge; his prosperous regency; the degeneracy of his sons; the clamour for a change in the civil constitution; the installation of Saul; his rash and reckless character; his neglect of, or opposition to, the theocratic elements of the government. Then the historian goes on to relate God's choice of David as king; his endurance of long and harassing persecution from the reigning sovereign; the melancholy defeat and death of Saul on the field of Gilboa; the gradual elevation of the man 'according to God's own heart' to universal dominion; his earnest efforts to obey and follow out the principles of the theocracy; his formal establishment of religious worship at Jerusalem, now the capital of the nation; and his series of victories over all the enemies of Judæa that were wont to molest its frontiers. The annalist records David's aberrations from the path of duty; the unnatural rebellion of his son Absalom, and its suppression; his carrying into effect a census of his dominions, and the Di-

vine punishment which this act incurred; and concludes with a few characteristic sketches of his military staff. The second book of Samuel, while it relates the last words of David, yet stops short of his death. As David was the real founder of the monarchy and arranger of the religious economy; the great hero, legislator, and poet of his country; as his dynasty maintained itself on the throne of Judah till the Babylonian invasion; it is not a matter of wonder that the description of his life and government occupies so large a portion of early Jewish history. The books of Samuel thus consist of three interlaced biographies —those of Samuel, Saul, and David.

Age and Authorship.—The attempt to ascertain the authorship of this early history is attended with difficulty. Ancient opinion is in favour of the usual theory, that the first twenty-four chapters were written by Samuel, and the rest by Nathan and Gad. Abarbanel, however, and Grotius, suppose Jeremiah to be the author (Grot. *Præf. in* 1 *Sam.*). The peculiar theory of Jahn is, that the four books of Samuel and Kings were written by the same person, and at a date so recent as the 30th year of the Babylonish captivity. His arguments, however, are more ingenious than solid (*Introduction*, Turner's Translation, § 46). The fact of all the four treatises being named Books of Kings, Jahn insists upon as a proof that they were originally undivided and formed a single work—a mere hypothesis, since the similarity of their contents might easily give rise to this general title, while the more ancient appellation for the first two was *The Books of Samuel.* Jahn also lays great stress on the uniformity of method in all the books. But this uniformity by no means amounts to any proof of identity of authorship. It is nothing more than the same Hebrew historical style. The more minute and distinctive features, so far from being similar, are very different. The books of Samuel and Kings may be contrasted in many of those peculiarities which mark a different writer :—

1. In the books of Kings there occur not a few references to the laws of Moses, while in Samuel not one of these is to be found.

2. The books of Kings repeatedly cite authorities, to which appeal is made, and the reader is directed to the 'Acts of Solomon,' 'the book of the Chronicles of Kings,' or 'Judah.' But in the books of Samuel there is no formal allusion to any such sources of information.

3. The nature of the history in the two works is very different. The *plan* of the books of Samuel is not that of the books of Kings. The books of Samuel are more of a biographical character, and are more limited and personal in their view. They may be compared to such a work as Tytler's Henry VIII., while Kings bears an analogy to such general annals as are found in Hume's history of England.

4. There are in the books of Kings many later forms of language. For a collection of some of these the reader is referred to De Wette (*Einleit. in das A. T.* §. 185, note e). Scarcely any of those more recent or Chaldaic forms occur in Samuel. Some peculiarities of form are noted by De Wette (§. 180), but they are not so numerous or distinctive as to give a general character to the treatise (Hirzel, *De Chaldaismi Bibl. origine*, 1830). Many modes of expression, common in Kings, are absent from Samuel [Kings, Books of].

5. The concluding chapters of the second book of Samuel are in the form of an appendix to the work—a proof of its completeness. The connection between Samuel and Kings is thus interrupted. It appears, then, that Samuel claims a distinct authorship from the Books of Kings. Stähelin, in Tholuck's *Literar. Anz.*, 1838, supposes that the division between the two treatises has not been correctly made, and that the two commencing chapters of 1 Kings belong to Samuel. This he argues on philological grounds, because the terms והכרתי והפלתי (1 Kings i. 38), מלט נפש (i. 12), and פדה נפש (i. 29), are found nowhere in Kings but in the first two chapters, while they occur once and again in Samuel. There is certainly something peculiar in this affinity, though it may be accounted for on the principle, that the author of the pieces or sketches which form the basis of the initial portions of 1 Kings, not only composed those which form the conclusion of Samuel, but also supervised or published the whole work which is now called by the prophet's name.

Thus the books of Samuel have an authorship of their own—an authorship belonging to a very early period. While their tone and style are very different from the later records of Chronicles, they are also dissimilar to the books of Kings. They bear the impress of a hoary age in their language, allusions, and mode of composition. The insertion of odes and snatches of poetry, to enliven and verify the narrative, is common to them with the Pentateuch. The minute sketches and vivid touches with which they abound, prove that their author 'speaks what he knows, and testifies what he has seen.' As if the chapters had been extracted from a diary, some portions are more fully detailed and warmly coloured than others, according as the observer was himself impressed. Many of the incidents, in their artless and natural delineation, would form a fine study for a painter; so truly does De Wette (*Einleit.* § 178) remark, that the book abounds in 'lively pictures of character.'

Besides, it is certainly a striking circumstance, that the books of Samuel do not record David's death, though they give his last words—his last inspired effusion (Hävernick, *Einleit.* §. 167). We should reckon it natural for an author, if he had lived long after David's time and were writing his life, to finish his history with an account of the sovereign's death. Had the books of Samuel and Kings sprung from the same source, then the abrupt conclusion of one portion of the work, containing David's life down to his last days, and yet omitting all notice of his death, might be ascribed to some unknown capricious motive of the author. But we have seen that the two treatises exhibit many traces of a different authorship. What reason, then, can be assigned for the writer of Samuel giving a full detail of David's life, and actions, and government, and yet failing to record his decease? The plain inference is, that the document must have been composed prior to the monarch's death, or at least about that period. If we should find a memoir of George the Third, entering fully into his private and family history, as well as describing his cabinets, councillors,

and parliaments, the revolutions, and wars, and state of feeling under his government, and ending with an account of the appointment of a regent, and a reference to the king's lunacy, our conclusion would be, that the history was composed before the year 1820. A history of David, down to the verge of his dissolution, yet not including that event, must have been written before the monarch 'slept with his fathers.' We are therefore inclined to think that the books, or at least the materials out of which they have been formed, were contemporaneous with the events recorded; that the document out of which the sketch of David's life was compiled, was composed and finished before his death.

Against this opinion as to the early age of the books of Samuel various objections have been brought. The phrase 'unto this day' is often employed in them to denote the continued existence of customs, monuments, and names, whose origin has been described by the annalist (1 Sam. v. 5; vi.18; xxx. 25). This phrase, however, does not always indicate that a long interval of time elapsed between the incident and such a record of its duration. It was a common idiom. Joshua (xxii. 3) uses it of the short time that Reuben, Gad, and the half-tribe of Manasseh, had fought in concert with the other tribes in the subjugation of Canaan. So, again, he (xxiii. 9) employs it to specify the time that intervened between the entrance into Canaan, and his resignation of the command on account of his approaching decease. Matthew, in his Gospel (xxvii. 8, and xxviii. 15), uses it of the period between the death of Christ and the composition of his book. Reference is made in Samuel to the currency of a certain proverb (1 Sam. x. 12), and to the disuse of the term *seer* (1 Sam. ix. 9), but in a manner which by no means implies an authorship long posterior to the time of the actual circumstances. The proverb, 'Is Saul also among the prophets?' was one which for many reasons would obtain rapid and universal circulation: and if no other hypothesis be considered satisfactory, we may suppose that the remark about the term 'seer' becoming obsolete may be the parenthetical insertion of a later hand. Or it may be that in Samuel's days the term נביא came to be technically used in his school of the prophets.

More opposed to our view of the age of these books is the statement made in 1 Sam. xxvii. 6—'Ziklag pertaineth unto the kings of Judah unto this day'—a form of language, according to De Wette (§ 180), which could not have been employed before the separation of the nation into the kingdoms of Judah and Israel. Hävernick remarks, however (§ 169), that Ziklag belonged first to Judah, and then to Simeon, ere it fell into the hands of the Philistines; and the expression denotes not that the city reverted to its former owners, but that it became the property of David, and of David's successors as sovereigns of the territory of Judah. Judah is not used in opposition to the ten tribes; and the writer means to say that Ziklag became a royal possession in consequence of its being a gift to David, and to such as might have regal power over Judah. The names Israel and Judah were used in the way of contrast even in David's time, as De Wette himself admits (1 Sam. xviii. 16; 2 Sam. xxiv. 1; v. 15; xix. 41-43; xx. 2).

It is said in 1 Chron. xxix. 29, 'Now the acts of David the king, first and last, behold, they are written in the book of Samuel the seer, and in the book of Nathan the prophet, and in the book of Gad the seer.' The old opinion as to the authorship of Samuel, to which we have already alluded, was founded on this quotation. The prophets were wont to write a history of their own times. That Samuel did so in reference to the great events of his life, is evident from the statement that he 'wrote the manner of the kingdom in a book, and laid it up before the Lord' (1 Sam. x. 25). The phrase, דברי שמואל, may not refer to our present Samuel, which is not so comprehensive as this collection seems to have been. It does not, like the treatise to which the author of Chronicles refers, include 'the acts of David, first and last.'

The annals which these three seers compiled were those of their own times in succession (Kleinert, *Aechtheit d. Jes.* Pt. I. p. 83); so that there existed a history of contemporary events written by three inspired men. The portion written by Samuel might include his own life, and the greater part of Saul's history, as well as the earlier portion of David's career. Gad was a contemporary of David, and is termed his seer. Probably also he was one of his associates in his various wanderings (1 Sam. xxii. 5). In the latter part of David's reign Nathan was a prominent counsellor, and assisted at the coronation of Solomon. We have therefore prophetic materials for the books of Samuel. Hävernick (§ 161) supposes there was another source of information to which the author of Samuel might resort, namely, the annals of David's reign—a conjecture not altogether unlikely, as may be seen by his reference to 2 Sam. viii. 17, compared with 1 Chron. xxvii. 24. The accounts of David's heroes and their mighty feats, with the estimate of their respective bravery, have the appearance of a contribution by Seruiah, the scribe, or principal secretary of state. We do not affirm that the various chapters of these books may be definitely portioned out among Samuel, Gad, and Nathan, or that they are a composition proceeding immediately from these persons. We hold them to be their production in the sense of primary authorship, though, as we now have them, they bear the marks of being a compilation.

Another evident source from which materials have been brought, is a collection of poetic compositions—some Hebrew anthology. We have, first, the song of Hannah, the mother of Samuel, which is not unlike the hymn of the Virgin recorded by Luke. That song is by no means an anachronism, as has been rashly supposed by some critics, such as Hensler (*Erläuter d. 1 B. Sam.* 12), and the translator of De Wette (ii. 222). The latter considers it entirely inappropriate, and regards its mention of *King* and *Messiah*, as betraying its recent and spurious birth. The Song is one of ardent gratitude to Jehovah. It pourtrays his sovereign dispensations, asserts the character of his government to be, that he 'resisteth the proud, and giveth grace to the humble,' and concludes with a prophetic aspiration, in pious keeping with the spirit of the theocracy, and with the great promise, which it so zealously cherished (Hengstenberg, *Die Authentie des Pentat.* ii. 115). 2 Sam.

i. 18, also contains an extract from the book of Jasher, viz. a composition of the sweet singer of Israel, named 'the Song of the Bow.' Besides, there is the chorus of a poem which was sung on David's return from the slaughter of the Philistine giant (1 Sam. xviii. 7). There are also three hymns of David (2 Sam. vii. 18-29), in which the king offers up his grateful devotions to Jehovah (2 Sam. xxii.); a triumphal ode, found with some alterations in the 18th Psalm and in 1 Sam. xxiii. 1-7, which preserves the last words of the 'anointed of the God of Jacob.' To these may be added the remains of a short elegy on the death of Abner (2 Sam. iii. 33-4). Whether all these effusions, as well as the lament over David and Jonathan, were taken from Jasher, we know not. It may be that they were drawn from this common source, this national collection of the Hebrew muse. At least, some critics, who compare the long hymn found in 2 Sam. xxii., and which forms the eighteenth psalm, and note the variations of the text, are inclined to think that the one has not been copied from the other, but that both have been taken from a very old common source: a conjecture far more natural than the ordinary hypothesis, namely, that David either published a second edition of his poem, or that the *variæ lectiones* are the errors of transcribers. At all events the compiler of the books of Samuel has evidently used as one of his sources some collection of poetry. Such collections often contain the earliest history of a nation, and they seem to have abounded among the susceptible people of the East.

Thus, from such sources, public and acknowledged, has the compiler fetched his materials, in the shape of connected excerpts. The last of the prophetic triumvirate might be the redactor or editor of the work, and we would not date its publication later than the death of Nathan, while the original biographies may have been finished at the period of David's decease. But, after all, certainty on such a subject is not to be attained. We can hope only for an approximation to the truth. Probability is all that we dare assert.

But in opposition to our hypothesis it has been argued, that in these books there are traces of several documents, which have been clumsily and inconsiderately put together, not only by a late, but a blundering compiler. The German critics are fond of a peculiar species of critical chemistry, by which they *disengage* one portion of a book from the surrounding sections. They have applied it to Genesis, to the Pentateuch generally, and to the books of Joshua and Judges. The elaborate theory of Eichhorn on the present subject (*Einleit.*, iii. p. 476), is similar to that which he has developed in his remarks on Chronicles, viz., that the basis of the second book of Samuel was a short life of David, which was augmented by interpolated additions. The first book of Samuel is referred by him to old written sources, but in most parts to tradition, both in the life of Samuel and Saul. Bertholdt (*Einleit.* p. 894) modifies this opinion by affirming that in the first book of Samuel there are three independent documents, chaps. i.-vii., viii.-xvi., xvii.-xxx., containing respectively Samuel's history, Saul's life, and David's early biography; while in reference to the second book of Samuel, he generally admits the conjecture of Eichhorn. Gramberg (*Die Chronik*, vol. ii. p. 80) is in favour of two narratives, named by him A. and B., and Stähelin partially acquiesces in his view. Such theories have nothing else to recommend them but the ingenious industry which framed them. It is said, however, that there are evident vestiges of two different sources being used and intermingled in Samuel; that the narrative is not continuous; especially, that it is made up of duplicate and contradictory statements. Such vestiges are alleged to be the following: in 1 Sam. x. 1, Samuel is said to have anointed Saul, whereas in x. 20-25 the prophet is described as having chosen him by lot. The reason of this twofold act we have already given in our remarks on Samuel in the preceding article. The former was God's private election, the latter his public theocratic designation. Again, it is affirmed that two different accounts are given of the cause why the people demanded a king, the one (1 Sam. viii. 5) being the profligacy of Samuel's sons, and the other (xii. 12-13) a menaced invasion of the Ammonites. Both accounts perfectly harmonize. The nation feared the inroads of the children of Ammon, and they felt that Samuel's sons could not command the respect and obedience of the various tribes. It was necessary to tell the old judge that his sons could not succeed him; for he might have pointed to them as future advisers and governors in the dreaded juncture.

The accounts of Saul's death are also said to differ from each other (1 Sam. xxxi. 2-6, and 2 Sam. i. 2-12). We admit the difference, the first account being the correct one, and the second being merely the invention of the cunning Amalekite, who framed the lie to gain the favour of Saul's great rival, David. It is recorded that twice did David spare Saul's life (1 Sam. xxiv. and xxvi.). The fact of the repetition of a similar deed of generosity can never surely give the narrative a legendary character. The miracle which multiplied the loaves and the fishes was twice wrought by Jesus. The same remark may be made as to the supposed double origin of the proverb, 'Is Saul also among the prophets?' In 1 Sam. x. 11 its real source is given, and in xix. 24 another reason and occasion are assigned for its national currency. Especially has great stress been laid on what are supposed to be different records of David's introduction to Saul, contained in 1 Sam. xvi. 18-22, and in the following chapter. That there is difficulty here cannot be denied, but to transpose the passages, on the supposition that David's encounter with Goliath was prior to his introduction to Saul as musician, will not remove the difficulty. For if Saul became so jealous of David's popularity as he is represented, no one of his domestics would have dared to recommend David to him as one possessed of high endowments, and able to charm away his melancholy. The Vatican MS. of the Sept. omits no less than twenty-five verses in these chapters. Yet the omission does not effect a reconciliation. Some critics, such as Houbigant, Michaelis, Dathe, and Kennicott, regard the entire passage as an interpolation. We are inclined to receive the chapters as they stand. David is first spoken of as introduced to Saul as a minstrel, as becoming a favourite of the sovereign, and being appointed one of his aid-de-camps. Now the fact of this previous introduction is alluded to in the very passage which creates the difficulty; for after, in minute Oriental fashion,

(Ewald, *Komposition der Genes.*, p. 148) David and his genealogy are again brought before the reader, it is said, 'and David went and returned from Saul to feed his father's sheep at Bethlehem.' The only meaning this verse can have, is, that David's attendance at court was not constant, especially as Saul's evil spirit may have left him. The writer who describes the combat with Goliath thus distinctly notices that David had already been introduced to Saul; nay, farther, specific allusion is again made to David's standing at court. 'And it came to pass on the morrow, that the evil spirit from God came upon Saul, and he prophesied in the midst of the house; and David played with his hand, as at other times' (1 Sam. xviii. 10). The phrase, 'as at other times,' must refer to the notices of the former chapter. Yet, after the battle, Saul is represented as being ignorant of the youth, and as inquiring after him. And Abner the general declares that he does not know the youthful hero. Can we imagine any ordinary writer so to stultify himself as this author is supposed to have done, by intimating that David had been with Saul, and yet that Saul did not know him? No inconsistency must have been apparent to the annalist himself. It is therefore very probable that David had left Saul for some time before his engagement with Goliath; that the king's fits of gloomy insanity prevented him from obtaining correct impressions of David's form and person, the period of David's life, when the youth passes into the man, being one which is accompanied with considerable change of appearance. The inquiry of Saul is more about the young warrior's parentage than about himself. It has sometimes struck us that Abner's vehement profession of ignorance is somewhat suspicious: 'As thy soul liveth, O king, I cannot tell;'—a response too solemn for a question so simple. We cannot pursue the investigation farther. We would not in such a passage positively deny all difficulty, like Hävernick (§ 166): we only venture to suggest that no sane author would so far oppose himself in a plain story, as some critics suppose the author of Samuel to have done. Appeal has also been made to David's two visits to Achish, King of Gath: but they happened in circumstances very dissimilar, and cannot by any means be regarded as a duplicate chronicle of the same event.

Lastly, attention is called to 1 Sam. xv. 35, where it is said, that 'Samuel came no more to see Saul again till the day of his death,' as if the statement were contradictory of xix. 24, where Saul met with Samuel, and 'lay naked all day and all night before him.' De Wette's translator before referred to (vol. ii. p. 222) dishonestly affirms that the first verse says, 'Samuel did not see Saul till his death,' that is, he *never* saw him again; whereas the language is, 'Samuel *came* no more to see Saul,' that is, no longer paid him any visit of friendship or ceremony, no longer sought him out to afford him counsel or aid. This declaration cannot surely be opposed to the following portion of the record, which states that Saul accidentally met Samuel; for he pursued David to Ramah, where the prophet dwelt, and so came in contact with his former benefactor. May we not therefore conclude that the compiler has not joined two narratives of opposite natures very loosely together, or overlapped them in various places; but has framed out of authoritative documents a consecutive history, not dwelling on all events with equal interest, but passing slightly over some, and formally detailing others with national relish and delight?

Scope.—The design of these books is not very different from that of the other historical treatises of the Old Testament. The books of Kings are a history of the nation as a theocracy; those of Chronicles have special reference to the form and ministry of the religious worship, as bearing upon its re-establishment after the return from Babylon. Samuel is more biographical, yet the theocratic element of the government is not overlooked. It is distinctly brought to view in the early chapters concerning Eli and his house, and the fortunes of the ark; in the passages which describe the change of the constitution; in the blessing which rested on the house of Obed-Edom; in the curse which fell on the Bethshemites, and Uzzah and Saul, for intrusive interference with holy things. The book shows clearly that God was a jealous God; that obedience to him secured felicity; that the nation sinned in seeking another king; that Saul's special iniquity was his impious oblivion of his station as only Jehovah's vicegerent, for he contemned the prophets and slew the priesthood; and that David owed his prosperity to his careful culture of the sacred principle of the Hebrew administration. This early production contained lessons both for the people and for succeeding monarchs, bearing on it the motto, 'Whatsoever things were written aforetime were written for our learning.'

Relation to Kings and Chronicles.—Samuel is distinctly referred to in Kings, and also quoted. (Compare 1 Sam. ii. 33 with 1 Kings ii. 26; 2 Sam. v. 5 with 1 Kings ii. 11; 2 Sam. vii. 12 with 1 Kings ii. 4, and 1 Chron. xvii. 24, 25). The history in Kings presupposes that contained in Samuel. The opinion of Eichhorn and Bertholdt, that the author of Chronicles did not use our books of Samuel, appears contrary to evident fact, as may be seen by a comparison of the two histories. Even Keil (*Apologetischer Versuch über die Chronik*, p. 206) supposes that the chronicler, Ezra, did not use the memoirs in Samuel and Kings; but Movers (*Kritisch Untersuch. über die Bibl. Chronik*) proves that these books were, among others, the sources which the chronicler drew from in the formation of a large portion of his history.

Credibility.—The authenticity of the history found in the books of Samuel rests on sufficient grounds. Portions of them are quoted in the New Testament (2 Sam. vii. 14, in Heb. i. 5; 1 Sam. xiii. 14, in Acts xiii. 22). References to them occur in other sections of Scripture, especially in the Psalms, to which they often afford historic illustration. It has been argued against them that they contain contradictory statements. The old objections of Hobbes, Spinoza, Simon, and Le Clerc, are well disposed of by Carpzovius, (*Introductio*, p. 215). Some of these supposed contradictions we have already referred to, and for a solution of others, especially of seeming contrariety between the books of Samuel and Chronicles, we refer with satisfaction to Davidson's *Sacred Hermeneutics*, p. 544, &c. Some of the objections of Vatke, in his *Bibl. Theol.*,—cujus mentio est refutatio—are summarily disposed of by Hengstenberg (*Die Authentie des Pentat.*, vol.

ii. p. 115), who usually chastises such adversaries with a whip of scorpions. Discrepancies in numbers, and sometimes in proper names, are the most common; and it is well known that textual errors in numeration are both most frequently and most easily committed. [David; Chronicles; Saul.]

SANBALLAT (סַנְבַלַּט; Sept. Σαναβαλλάτ), a native of Horonaim, beyond the Jordan (Neh. ii. 10), and probably also a Moabitish chief, whom (probably from old national hatred) we find united in council with the Samaritans, and active in attempting to deter the returned exiles from fortifying Jerusalem (Neh. iv. 1, sq.; vi. 1, sq.). Subsequently, during the absence of Nehemiah in Persia, a son of Joiada, the high priest, was married to his daughter (Neh. xiii. 28). Whether Sanballat held any public office as governor over the Moabites, or over the Samaritans, the record does not state. Such a character is usually ascribed to him on the supposed authority of a passage of Josephus, who speaks of a Sanballat, a Cuthean by birth, who was sent by the last Darius as governor of Samaria (*Antiq.* xi. 7. 2). The time assigned to this Sanballat is 120 years later than that of the Sanballat of Nehemiah, and we can only identify the one with the other by supposing that Josephus was mistaken both in the age and nation of the individual whom he mentions. Some admit this conclusion, as Josephus goes on to state how this person gave his daughter in marriage to a son of the high-priest, which high-priest, however, he tells us was Jaddua, in accordance with the date he has given. The son of the high-priest thus married to the daughter of Sanballat was named Manasseh, and is further stated by Josephus to have become the high-priest of the schismatical temple, which his father-in-law established for the Samaritans in Mount Gerizim [Samaritans]. Upon the whole, as the account in Josephus is so circumstantial, it seems probable that, notwithstanding the similarity of name and other circumstances, his Sanballat is not to be understood as the same that obstructed the labours of Nehemiah. It is just possible that the Jewish historian, who does not mention this contemporary of Nehemiah purposely, on account of some similar circumstance, transferred the history and name of Nehemiah's Sanballat to fill up the account of a later personage, of whose name and origin he may have been ignorant. But there is much obscurity and confusion in that part of his work in which he has lost the guidance of the canonical history, and has not acquired that of the books of Maccabees.

SANDAL (נַעַל; Sept. and N. T., ὑπόδημα, σανδάλιον), a covering for the feet, usually denoted by the word translated 'shoe' in the Authorized Version. It was usually a sole of hide, leather, or wood, bound on to the foot by thongs; but it may sometimes denote such shoes and buskins as eventually came into use. Thus the word ὑπόδημα, which literally means 'what is bound under,' *i. e.* the foot, and certainly in the first instance denoted a sandal, came to be also applied to the Roman *calceus*, or shoe covering the whole foot. Josephus (*De Bell. Jud.* vi. 1-8) so uses it of the *caliga*, the thick nailed shoe of the Roman soldiers. This word occurs in the New Testament (Matt. iii. 11; x. 10; Mark i. 7; Luke iii. 16; x. 4; John i. 27; Acts vii. 33; xiii. 25), and is also frequently used by the Sept. as a translation of the Hebrew term; but it appears in most places to denote a sandal. Hence the word rendered 'shoe-latchet' (Gen. xiv. 23, and in most of the texts just cited), means properly a sandal thong.

Ladies of rank appear to have paid great attention to the beauty of their sandals (Cant. vii. 1); though, if the bride in that book was an Egyptian princess, as some suppose, the exclamation, 'How beautiful are thy feet with sandals, O prince's daughter!' may imply admiration of a luxury properly Egyptian, as the ladies of that country were noted for their sumptuous sandals (Wilkinson, *Anc. Egypt.* iii. 364). But this taste was probably general; for, at the present day, the dress slippers of ladies of rank are among the richest articles of their attire, being elaborately embroidered with flowers and other figures wrought in silk, silver, and gold.

It does not seem probable that the sandals of the Hebrews differed much from those used in Egypt, excepting, perhaps, that from the greater roughness of their country, they were usually of more substantial make and materials. The Egyptian sandals varied slightly in form: those worn by the upper classes, and by women, were usually pointed and turned up at the end, like our skates, and many of the Eastern slippers at the

481. [Ancient Egyptian Sandals.]

present day. They were made of a sort of woven or interlaced work of palm-leaves and papyrus-stalks, or other similar materials, and sometimes of leather; and were frequently lined with cloth, on which the figure of a captive was painted; that humiliating position being considered suited to the enemies of their country, whom they hated and despised. It is not likely that the Jews adopted this practice; but the idea which it expressed, of treading their enemies under their feet, was familiar to them (Josh. x. 24.) Those of

the middle classes who were in the habit of wearing sandals, often preferred walking barefooted. Shoes, or low boots, are sometimes found at Thebes; but these are believed by Sir J. G. Wilkinson to have been of late date, and to have belonged to Greeks, since no persons are represented in the paintings as wearing them, except foreigners. They were of leather, generally of a green colour, laced in front by thongs, which passed through small loops on either side, and were principally used, as in Greece and Etruria, by women (Wilkinson, iii. 374-367).

482. [Greek and Roman Sandals.]

In transferring a possession or domain, it was customary to deliver a sandal (Ruth iv. 7), as in our middle ages, a glove. Hence the action of throwing down a shoe upon a region or territory, was a symbol of occupancy. So Ps. lx. 10: 'Upon the land of Edom do I cast my sandal;' *i. e.* I possess, occupy it, claim it as my own. In Ruth, as above, the delivering of a sandal signified that the next of kin transferred to another a sacred obligation; and he was hence called 'sandal-loosed.' A sandal thong (Gen. xiv. 23), or even sandals themselves (Amos ii. 6; viii. 6), are put for anything worthless or of little value; which is perfectly intelligible to those who have witnessed the extemporaneous manner in which a man will shape two pieces of hide, and fasten them with thongs to the soles of his feet—thus fabricating in a few minutes a pair of sandals which would be dear at a penny.

It was undoubtedly the custom to take off the sandals on holy ground, in the act of worship, and in the presence of a superior. Hence the command to take the sandals from the feet under such circumstances (Exod. iii. 5; Josh. v. 15). This is still the well-known custom of the East—an Oriental taking off his shoe in cases in which a European would remove his hat. The shoes of the modern Orientals are, however, made to slip off easily, which was not the case with sandals, that required to be unbound with some trouble. This operation was usually performed by servants; and hence the act of unloosing the sandals of another became a familiar symbol of servitude (Mark i. 7; Luke iii. 16; John i. 27; Acts xiii. 25). So also when a man's sandals had been removed, they were usually left in charge of a servant. In some of the Egyptian paintings servants are represented with their master's sandals on their arm: it thus became another conventional mark of a servile condition, to bear the sandals of another (Matt. iii. 11).

SANHEDRIM, more properly SANHEDRIN (סַנְהֶדְרִין, *συνέδριον*), the supreme judicial council of the Jews, especially for religious affairs. It was also called בית דין, *House of Judgment;* and in the Apocrypha and New Testament the appellations *γερουσία* and *πρεσβυτέριον* seem also to be applied to it (comp. 2 Macc. i. 10; iv. 44; Acts v. 21; xxii. 5; 1 Macc. vii. 33; xii. 35, &c.).

This council consisted of seventy members. Some give the number at seventy-two, but for this there appears no sufficient authority. To this number the high priest was added, 'provided he was a man endowed with wisdom' (אם היה ראוי בחכמה, Maimonid. *Sanhed.* c. 2). Regarding the class of the Jewish people from which these were chosen, there is some uncertainty. Maimonides (*Sanhed.* c. 2) tells us, that this council was composed 'of Priests, Levites, and Israelites, whose rank entitled them to be associated with priests.' Dr. Jost, the learned historian of his nation, simply says: 'the members of the council were chosen from among the people;' and more particularly in another place he remarks: 'these judges consisted of the most eminent priests, and of the scribes of the people, who were chosen for life, but each of whom had to look to his own industry for his support' (*Geschichte der Israeliten seit der Zeit der Makkabäer*, th. i. s. 49; iii. 86). The statement in this latter passage corresponds with the terms used in Matt. ii. 4, where the council convened by Herod, in consequence of what the wise men of the East had told him, is described as composed of 'all the chief priests and scribes of the people;' the former of whom Lightfoot (*Hor. Heb. et Talm.* in loc.) explains as the *clerical*, the latter as the *laical* members of the Sanhedrim. In other passages of the New Testament we meet with the threefold enumeration, *Priests*, *Elders*, and *Scribes* (Matt. xvi. 21; xxvi. 2, 57, &c.); and this is the description which most frequently occurs. By the first are to be understood, not such as had sustained the office of high-priest, but the chief men among the priests; probably the presidents of the twenty-four classes into which the priesthood was divided (1 Chron. xxiv. 6; comp. the use of the phrase שׂרי הכהנים in 2 Chron. xxxvi. 14). By the second, we are probably to understand the select men of the people—the Aldermen,—persons whose rank or standing led to their being raised to this distinction. And by the last are designated those, whether of the Levitical family or not, who gave themselves to the pursuit of learning, especially to the interpretation of Scripture, and of the traditions of the fathers. To this general description we may add what Maimonides lays down as to the qualifications required in those who were eligible to this office. These were—1. that they should possess much and varied learning; 2. that they should be free from every bodily defect, such as lameness, blindness, &c.; 3. that they should be of such age as should afford them experience, and yet not expose them to the feebleness of dotage; 4. that they should not be eunuchs; 5. that they should be fathers; 6. that they should possess the moral qualities

set forth in Exod. xviii. 21; Deut. i. 13-16 (*Sanhed.* c. 2). A number of persons were always in the condition of candidates for admission into this honourable body, from among whom vacancies were supplied as they occurred. The new member was installed by the imposition of hands, the company chaunting the words 'Lo! a hand is upon thee, and the power is given thee of exercising judgment, even in criminal cases' (*Sanhed.* c. 4).

In the council the office of president belonged to the high priest, if he was a member of it; when he was not, it is uncertain whether a substitute was provided, or his place occupied by the person next in rank. He bore the title of נשׂיא, *chief* or *president;* and it was his prerogative to summon the council together, as well as to preside over its deliberations. When he entered the assembly, all the members rose, and remained standing until he requested them to sit. Next in rank to him was the vice-president, who bore the title of אב בית דין, *Father of the House of Judgment;* whose duty it was to supply the place of the president in case he should be prevented by any accidental cause from discharging his duties himself. When the president was present, this officer sat at his right hand. The third grade of rank was that of the חכם, or *sage*, whose business was to give counsel to the assembly, and who was generally selected to his office on account of his sagacity and knowledge of the law; his place was on the left hand of the president. The assembly, when convened, sat in the form of a semi-circle, or half-moon, the president occupying the centre. At each extremity stood a scribe, whose duty it was to record the sentence pronounced by the council. There were certain officers, called שוטרים, whose business seems to have been somewhat analogous to that of our policemen: they were armed with a baton, kept order in the street, and were under the direction of the Sanhedrim.

The meetings of this council were usually held in the morning. Their place of meeting was a hall, close by the great gate of the temple, and leading from the outer court of the women to the holy place; from its pavement of polished stone, it was called לשכת הגזית.* A Talmudic tradition affirms that, forty years before the destruction of Jerusalem, the Sanhedrim were compelled by the Romans to forsake this hall, and hold their meetings in caves on the east side of the hill on which the temple stood; but as the Mischna is silent in regard to this, and as the New Testament history seems incompatible with its truth, we must resolve this tradition into the generalization of some solitary case into a regular practice. In cases of urgency the Sanhedrim might be convened in the house of the high priest (Matt. xxvi. 3).

The functions of the Sanhedrim were, according to the Jewish writers, co-extensive with the civil and religious relations of the people. In their hands, we are told, was placed the supreme authority in all things; they interpreted the law, they appointed sacred rites, they imposed tributes, they decreed war, they judged in capital cases; in short, they engrossed the supreme authority, legislative, executive, and judicial. In this there is no small exaggeration; at least, none of the historical facts which have come down to us confirm this description of the extent of the powers of the Sanhedrim; whilst some of these facts, such as the existence of civil officers armed with appropriate authority, seem directly opposed to it. In the notices of this body, contained in the New Testament, we find nothing which would lead us to infer that their powers extended beyond matters of a religious kind. Questions of blasphemy, of sabbath-breaking, of heresy, are those alone which we find referred to their judicature (comp. Matt. xxvi. 57-65; John v. 11, 18; Matt. xii. 14, sq.; Acts v. 17, sq., &c.). On those guilty of these crimes they could pronounce sentence of death; but, under the Roman government, it was not competent for them to execute this sentence: their power terminated with the pronouncing of a decision, and the transmission of this to the procurator, with whom it rested, to execute it or not as he saw meet (John xviii. 31; Matt. xxvii. 1, 2). Hence the unseemly readiness of this council to call in the aid of the assassin for the purpose of destroying those who were obnoxious to them (Acts v. 33; xxiii. 12-15). The case of Stephen may seem to furnish an objection to this statement; but as his martyrdom occurred at a time when the Roman procurator was absent, and was altogether a tumultuous procedure, it cannot be allowed to stand for more than a casual exception to the general rule. Josephus informs us, that after the death of Festus, and before the arrival of his successor, the high priest Ananus, availing himself of the opportunity thus afforded, summoned a meeting of the Sanhedrim, and condemned James the brother of Jesus, with several others, to suffer death by stoning. This licence, however, was viewed with much displeasure by the new procurator, Albinus, and led to the deposition of Ananus from the office of high priest (*Antiq.* xx. 9. 1, 2).

At what period in the history of the Jews the Sanhedrim arose, is involved in much uncertainty. The Jews, ever prone to invest with the honours of remote antiquity all the institutions of their nation, trace this council to the times of Moses, and find the origin of it in the appointment of a body of elders as the assistants of Moses in the discharge of his judicial functions (Numm. xi. 16, 17). There is no evidence, however, that this was any other than a temporary arrangement for the benefit of Moses; nor do we, in the historical books of the Old Testament, detect any traces whatever of the existence of this council in the times preceding the Babylonish captivity, nor in those immediately succeeding the return of the Jews to their own land. The earliest mention of the existence of this council by Josephus, is in connection with the reign of Hyrcanus II., B.C. 69 (*Antiq.* xiv. 9. 3). It is probable, however, that it existed before this time—that it arose gradually after the cessation of the prophetic office in Judah, in consequence of the felt want of some supreme direction and judicial authority—that the number of its members was fixed so as to correspond with that of the council of elders appointed to assist Moses—

* This must not be confounded with the λιθόστρωτος, where Pilate sat in judgment on Christ, and which was evidently a place in his own dwelling (John xix. 13).

and that it first assumed a formal and influential existence in the later years of the Macedo-Grecian dynasty. This view is confirmed by the allusions made to it in the Apocryphal books (2 Macc. i. 10; iv. 44; xiv. 5; Judith xi. 14, &c.); and perhaps, also, by the circumstance that the use of the name *συνέδριον*, from which the Hebrews formed their word Sanhedrim, indicates a Macedonian origin (comp. Livy, xlv. 32).

The Talmudical writers tell us, that, besides the Sanhedrim properly so called, there was in every town containing not fewer than one hundred and twenty inhabitants, a smaller Sanhedrim (סנהדרין קטנה), consisting of twenty-three members, before which lesser causes were tried, and from the decisions of which an appeal lay to the supreme council. Two such smaller councils are said to have existed at Jerusalem. It is to this class of tribunals that our Lord is supposed to allude, under the term *κρίσις*, in Matt. v. 22. Where the number of inhabitants was under one hundred and twenty, a council of three adjudicated in all civil questions. What brings insuperable doubt upon this tradition is, that Josephus, who must from his position have been intimately acquainted with all the judicial institutions of his nation, not only does not mention these smaller councils, but says, that the court next below the Sanhedrim was composed of seven members. Attempts have been made to reconcile the two accounts, but without success; and it seems now very generally agreed, that the account of Josephus is to be preferred to that of the Mischna; and that, consequently, it is to the tribunal of the seven judges that our Lord applies the term *κρίσις*, in the passage referred to (Tholuck, *Bergpredigt*, in loc., Eng. Transl. vol. i. p. 241; Kuinoel, in loc.).

SAPPHIRA (Σαπφείρη), the wife of Ananias, and his accomplice in the sin for which he died (Acts v. 1-10). Unaware of the judgment which had befallen her husband, she entered the place about three hours after, probably to look for him; and being there interrogated by Peter, repeated and persisted in the 'lie unto the Holy Ghost,' which had destroyed her husband; on which the grieved apostle made known to her his doom, and pronounced her own—'Behold, the feet of those who have buried thy husband are at the door, and shall carry thee out.' On hearing these awful words, she fell dead at his feet. The cool obstinacy of Sapphira in answering as she did the questions which were probably designed to awaken her conscience, deepens the shade of the foul crime common to her and her husband; and has suggested to many the probability that the plot was of her devising, and that, like another Eve, she drew her husband into it. But this is mere conjecture [Ananias].

SAPPHIRE (סַפִּיר; Sept. and N. T. *σάπφειρος*), a precious stone, mentioned in Exod. xxiv. 10; xxviii. 18; Job xxviii. 16; Ezek. xxviii. 13; Rev. xxi. 19. That which we call sapphire is next in hardness and value to the diamond, and is mostly of a blue colour of various shades. But the stone which Pliny describes under the name of sapphire (*Hist. Nat.* xxxvii. 39), in agreement with Theophrastus (*De Lapid.* 23), is manifestly the lapis lazuli. It is opaque, inclines often to the deep blue colour of the violet, and has sometimes pebble-spots of a golden yellow hue. This stone, however, is not sufficiently valuable for Job xxviii. 16; and Pliny says that it is 'inutilis sculpturæ,' which does not apply to the *sapphir* of Exod. xxviii. 18), which was engraved. It seems, therefore, likely that, notwithstanding the classical appropriation of the name to the lapis lazuli, the true sapphire, or rather that which we call such, is the stone mentioned in Scripture. It is often found in collections of ancient gems.

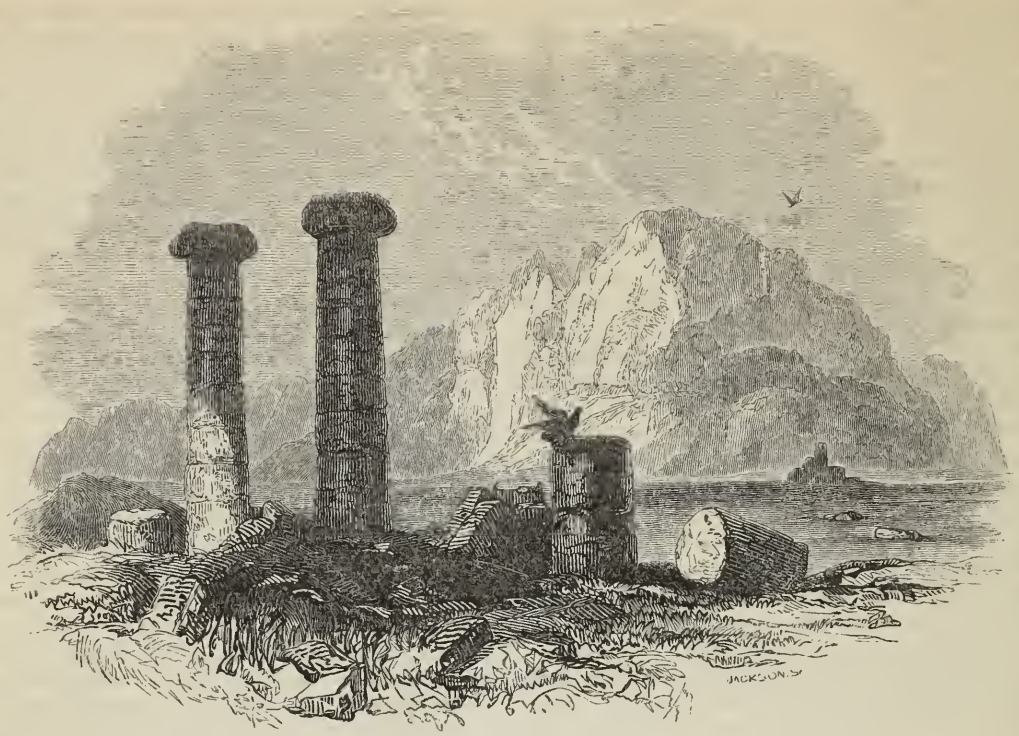
SARABIM. [Thorns.]

SARAH (שָׂרָה, *a princess, a noble lady*, being the fem. of שַׂר *sar*, 'a prince,' 'a nobleman;' Sept. Σάῤῥα), the wife of Abraham, and mother of Isaac. She was at first called שָׂרַי Sarai, the etymology and signification of which are obscure. Ewald (*Gram.* § 324) explains it to mean *contentious, quarrelsome* (from the root שָׂרָה), which is perhaps the most natural sense; and the mere change of the name to one more honourable, may imply that there was something unpleasant in the one previously borne (Gen. xvii. 5, sq.). As Sarah never appears but in connection with some circumstance in which her husband was principally concerned, all the facts of her history have already been given in the article Abraham, and her conduct to Hagar is considered in the article which bears her name. These facts being familiar to the reader, a few supplementary remarks on particular points are alone required in this place.

There are two opinions with respect to the parentage of Sarah. Many interpreters suppose that she was the daughter of Haran, the elder son of Abraham's father Terah (probably by a former wife), and the same person with the Iscah who is named as one of the daughters of Haran (Gen. xi. 29). In this case she was niece of Abraham, although only ten years younger than her husband, and the sister of Milcah and of Lot. The reasons for this conclusion are of much weight. It is certain that Nahor, the surviving brother of Abraham, married Milcah, the other daughter of Haran, and the manner in which Abraham's marriage with Sarah is mentioned, would alone suggest that he took the remaining daughter. 'Abram and Nahor took them wives: the name of Abram's wife was Sarai; and the name of Nahor's wife Milcah, the daughter of Haran, the father of Milcah, and the father of Iscah' (Gen. xi. 29). Here most of the Jewish writers say that Iscah is Sarai; and without supposing this to be the case, it is difficult to understand for what reason it should be so pointedly noted that Haran, who was the father of Milcah, was also the father of Iscah. Besides, if Sarai is not Iscah, no account is given by Moses of her descent; and it can hardly be supposed that he would omit it, as it must have been agreeable to a people so careful of genealogy to know whence they were descended, both by the father and mother's side.

Again, when Terah leaves Ur of the Chaldees, it is said that 'Terah took Abram his son, and Lot his son's son, and Sarai his daughter-in-law, his son Abram's wife; and they went forth,' &c. (Gen. xi. 31); on which Aben Ezra observes that if Sarai had been (as some suppose) the daughter of Terah and sister of Abram, the text would doubtless have run: 'Terah took Abram his son, and Sarai his daughter, the wife of Abram.' The double relationship to Lot which such an alliance would produce, may also help to the better understanding of some points in the connection between Lot and Abraham. Against this view we have to produce the assertion of Abraham himself, that Sarai was his half-sister, 'the daughter of my father, but not the daughter of my mother' (Gen. xx. 12): but this is held by many to mean no more than that Haran her father was his half-brother; for the colloquial usage of the Hebrews in this matter, makes it easy to understand that he might call a niece a sister, and a grand-daughter a daughter. In general discourse 'daughter' comprised any and every female descendant, and 'sister' any and every consanguineous relationship.

That Sarah had great beauty appears from the precautions which Abraham took to guard himself and her from the dangers it was likely to occasion. And that his was not too partial an estimate of her attractions, is evinced by the transactions in Egypt and at Gerar (Gen. xii. 15; xxi. 2). In the former case the commendations which the princes of Pharaoh bestowed upon the charms of the lovely stranger, has been supposed by some to have been owing to the contrast which her fresh Mesopotamian complexion offered to the dusky hue of their own beauties. But so far as climate is concerned, the nearer Syria could offer complexions as fair as hers; and, moreover, a people trained by their habits to admire 'dusky' beauties, were not likely to be inordinately attracted by a fresh complexion.



It is asked whether Sarah was aware of the intended sacrifice of Isaac, the son of her long-deferred hopes. The chronology is uncertain, and does not decide whether this translation occurred before or after her death. She was probably alive; and if so, we may understand from the precautions employed by Abraham, that she was not acquainted with the purpose of the journey to the land of Moriah, and, indeed, that it was the object of these precautions to keep from her knowledge a matter which must so deeply wound her heart. He could have the less difficulty in this, if his faith was such as to enable him to believe that he should bring back in safety the son he was commanded to sacrifice (Heb. xi. 19). As, however, the account of her death immediately follows that of this sacrifice, some of the Jewish writers imagine that the intelligence killed her, and that Abraham found her dead on his return (*Targ. Jonath.*, and Jarchi on Gen. xxiii. 2; *Pirke Eliezer*, c. 52). But there seems no authority for such an inference.

Sarah is so rarely introduced directly to our notice, that it is difficult to estimate her character justly, for want of adequate materials. She is seen only when her presence is indispensable; and then she appears with more of submission, and of simplicity, than of dignity, and manifests an unwise but not unusual promptitude in following her first thoughts, and in proceeding upon the impulse of her first emotions. Upon the whole, Sarah scarcely meets the idea the imagination would like to form of the life-companion of so eminent a person as Abraham. Nevertheless, we cannot fail to observe that she was a most attached and devoted wife. Her husband was the central object of all her thoughts; and he was not forgotten even in her first transports of joy at becoming a mother (Gen. xxi. 7). This is her highest eulogium.

Isaiah is the only prophet who names Sarah (ch. li. 2). St. Paul alludes to her hope of becoming a mother (Rom. iv. 19); and afterwards cites the promise which she received (Rom. ix. 9); and Peter eulogises her submission to her husband (1 Pet. iii. 6).

SARDIS (Σάρδεις), the capital of the ancient kingdom of Lydia, situated at the foot of Mount Tmolus, in a fine plain watered by the river Pactolus (Herod. vii. 31; Xenophon, *Cyrop.* vii. 2-11; Pliny, *Hist. Nat.*; Strabo, xiii. p. 625). It is in N. lat. 38° 30′; E. long. 27° 57′. Sardis was a great and ancient city, and from its wealth and importance was the object of much cupidity and of many sieges. When taken by Cyrus, under Crœsus, its last king, who has become proverbial for his riches, Sardis was one of the most splendid and opulent cities of the East. After their victory over Antiochus it passed to the Romans, under whom it rapidly declined in rank and importance. In the time of Tiberius it was destroyed by an earthquake (Strabo, xii. p. 579), but was rebuilt by order of the emperor (Tacit. *Annal.* ii. 47). The inhabitants of Sardis bore an ill repute among the ancients for their voluptuous habits of life. Hence, perhaps, the point of the phrase in the Apocalyptic message to the city—'Thou hast a few names, *even in Sardis*, which have not defiled their garments' (Rev. iii. 4). The place that Sardis holds in this message, as one of the 'Seven Churches of Asia,' is the source of the peculiar interest with which the Christian reader regards it. From what is said it appears that it had already declined much in real religion, although it still maintained the name and external aspect of a Christian church, 'having a name to live, while it was dead' (Rev. iii. 1).

Successive earthquakes, and the ravages of the Saracens and Turks, have reduced this once flourishing city to a heap of ruins, presenting many remains of its former splendour. The habitations of the living are confined to a few miserable cottages, forming a village called Sart. This, with the ruins, are still found on the true site of Sardis, at the foot of Mount Tmolus, or Bouz-dag, as the Turks call it. The ruins are chiefly those of the theatre, stadium, and of some churches. There are also two remarkable pillars, supposed to have belonged to the temple of Cybele; and, if so, they are among the oldest monuments now existing in the world, the temple having been built only 300 years after that of Solomon. The acropolis seems well to define the site of the city. It is a marked object, being a tall distorted rock of soft sandstone, rent as if by an earthquake. A countless number of sepulchral hillocks, beyond the Hermus, heighten the desolateness of a spot which the multitudes lying there once made busy by their living presence and pursuits. SARDIUS. [Odem.]

SARDONYX. [Yahalom.]

SAREPTA (Σάρεπτα, Luke iv. 26; Hebrew, *Zarephath*, צָרְפַת), a Phœnician town between Tyre and Sidon, mentioned in 1 Kings xvii. 9, 10; Obad. xx. It is the place where Elijah went to dwell, and where he performed the miracle of multiplying the barrel of meal and cruse of oil, and where he raised the widow's son to life. It still subsists as a large village, under the name of Sarafend. The crusaders made Sarepta a Latin bishopric in the archiepiscopate of Sidon, and erected near the port a small chapel over the reputed site of Elijah's miracle (Will. Tyr. xix. 14; Jacob de Vitriacus, ch. 44). It is clear that the Sarepta of the crusaders stood on the sea shore; and, therefore, the present village bearing the same name, which stands upon the adjacent hills, must have been of more recent origin. (See Nau, *Nov. Voyage*, p. 544; Pococke, ii. 85; Robinson, *Bib. Researches*, iii. 413, 414; Raumer, *Palästina*, p. 140).

SARGON, king of Assyria [Assyria].

SARON. [Sharon.]

SATAN. The doctrine of Satan and of Satanic agency is to be made out from revelation, and from reflection in agreement with revelation.

Scripture Names or Titles of Satan.—Besides Satan, he is called the Devil, the Dragon, the Evil One, the Angel of the Bottomless Pit, the Prince of this World, the Prince of the Power of the Air, the God of this World, Apollyon, Abaddon, Belial, Beelzebub. Satan and Devil are the names by which he is oftener distinguished than by any other, the former being applied to him about forty times, and the latter about fifty times.

Satan is the Hebrew word שָׂטָן transferred to the English. It is derived from the verb שָׂטַן, which means 'to lie in wait,' 'to oppose,' 'to be an adversary.' Hence the noun denotes an adversary or opposer. The word in its *generic* sense occurs in 1 Kings xi. 14: 'The Lord raised up an adversary (שָׂטָן) against Solomon,' *i. e.* Hadad the Edomite. In the 23rd verse the word occurs again, applied to Rezan. It is used in the same sense in 1 Sam. xxix. 4, where David is termed an adversary; and in Num. xxii. 22, where the angel 'stood in the way for an adversary (שָׂטָן) to Balaam,' *i. e.* to oppose him when he went with the princes of Moab. See also Ps. cix. 6.

In Zech. iii. 1, 2, the word occurs in its *specific* sense as a proper name: 'And he showed me Joshua the high-priest standing before the angel of the Lord, and Satan (הַשָּׂטָן) standing at his right hand to resist' (לְשִׂטְנוֹ, 'to satanize him'). 'And the Lord said unto Satan (הַשָּׂטָן), The Lord rebuke thee, O Satan.' Here it is manifest, both from the context and the use of the article, that some particular adversary is denoted.

In the 1st and 2nd chapters of Job, the same use of the word with the article occurs several times. The events in which Satan is represented as the agent confirm this view. He was a *distinguished* adversary and tempter. See also 1 Chron. xxi. 1. When we pass from the Old to the New Testament, this doctrine of an invisible evil agent becomes more clear. With the advent of Christ and the opening of the Christian dispensation, the great opposer of that kingdom, the particular adversary and antagonist of the Saviour, would naturally become more active and more known. The antagonism of Satan and his kingdom to Christ and his kingdom runs through the whole of the New Testament, as will appear from the following passages and their contexts: Matt. iv. 10; xii. 26; Mark iv. 15; Luke x. 18; xxii. 3, 31; Acts

xxvi. 18; Rom. xvi. 20; 2 Cor. xi. 14; Rev. ii. 13; xii. 9. Peter is once called Satan, because his spirit and conduct, at a certain time, were so much in opposition to the spirit and intent of Christ, and so much in the same line of direction with the workings of Satan. This is the only application of the word in the New Testament to any but the prince of the apostate angels.

Devil (Διάβολος) is the more frequent term of designation given to Satan in the New Testament. Both Satan and devil are in several instances applied to the same being (Rev. xii. 9), 'That old serpent, the devil and Satan. Christ, in the temptation (Matt. iv.), in his repulse of the tempter, calls him Satan; while the evangelists distinguish him by the term 'devil.' Devil is the translation of διάβολος, from the verb διαβάλλω, 'to thrust through,' 'to carry over,' and, tropically, 'to inform against,' 'to accuse.' He is also called the accuser of the brethren (Rev. xii. 10). The Hebrew term Satan is more generic than the Greek διάβολος. The former expresses his character as an opposer of all good; the latter denotes more particularly the relation which he bears to the saints, as their traducer and accuser. Διάβολος is the uniform translation which the Septuagint gives of the Hebrew שָׂטָן, when used with the article. Farmer says that the term Satan is not appropriated to one particular person or spirit, but signifies an adversary or opponent in general. This is to no purpose, since it is also *applied* to the devil as an adversary in particular. There are four instances in the New Testament in which the word διάβολος is applied to human beings. In three out of the four, it is in the plural number, expressive of quality, and not personality (1 Tim. iii. 11; 2 Tim. iii. 3; Tit. ii. 3). In the fourth instance (John vi. 70), Jesus says to his disciples, 'Have not I chosen you twelve, and one of you is a devil?' (διάβολος). This is the only instance in the New Testament of its application to a human being in the singular number; and here Dr. Campbell thinks it should not be translated 'devil.' The translation is, however, of no consequence, since it is with the use of the original word that this article is concerned. The obvious reasons for this application of διάβολος to Judas, as an exception to the general rule, go to confirm the rule. The rule is that, in the New Testament usage, the word in the singular number denotes *individuality*, and is applied to Satan as a *proper name*. By the exception, it is applied to Judas, from his resemblance to the devil, as an accuser and betrayer of Christ, and from his contributing to aid him in his designs against Christ. With these exceptions, the *usus loquendi* of the New Testament shows ὁ Διάβολος to be a proper name, applied to an extraordinary being, whose influence upon the human race is great and mischievous (Matt. iv. 1-11; Luke viii. 12; John viii. 44; Acts xiii. 10; Ephes. vi. 11; 1 Pet. v. 8; 1 John iii. 8; Rev. xii. 9). The term devil, which is in the New Testament the uniform translation of διάβολος, is also frequently the translation of δαίμων and δαιμόνιον. Between these words and διάβολος the English translators have made no distinction. The former are almost always used in connection with demoniacal possessions, and are applied to the possessing spirits, but never to the prince of those spirits. On the other hand, διάβολος is never applied to the demons, but only to their prince; thus showing that the one is used definitely as a proper name, while the others are used indefinitely as generic terms. The sacred writers made a distinction, which in the English version is lost. In this, our translators followed the German version: *teufel*, like the term devil, being applied to both διάβολος and δαίμων.

Personality of Satan.—We determine the personality of Satan by the same criteria that we use in determining whether Cæsar and Napoleon were real, personal beings, or the personifications of abstract ideas, viz., by the tenor of history concerning them, and the ascription of personal attributes to them. All the forms of personal agency are made use of by the sacred writers in setting forth the character and conduct of Satan. They describe him as having power and dominion, messengers and followers. He tempts and resists; he is held accountable, charged with guilt; is to be judged, and to receive final punishment. On the supposition that it was the object of the sacred writers to teach the proper personality of Satan, they could have found no more express terms than those which they have actually used. And on the supposition that they did not intend to teach such a doctrine, their use of language, incapable of communicating any other idea, is wholly inexplicable. To suppose that all this semblance of a real, veritable, conscious moral agent, is only a trope, a prosopopeia, is to make the inspired penmen guilty of employing a figure in such a way that, by no ascertained laws of language, it could be known that it was a figure,—in such a way that it could not be taken to be a figure, without violence to all the rhetorical rules by which they on other occasions are known to have been guided. A personification, protracted through such a book as the Bible, even should we suppose it to have been written by *one* person—never dropped in the most simple and didactic portions—never explained when the most grave and important truths are to be inculcated, and when men the most ignorant and prone to superstition are to be the readers—a personification extending from Genesis to Revelation,—this is altogether anomalous and inadmissible. But to suppose that the several writers of the different books of the Bible, diverse in their style and intellectual habits, writing under widely differing circumstances, through a period of nearly two thousand years, should each, from Moses to John, fall into the use of the same personification, and follow it, too, in a way so obscure and enigmatical, that not one in a hundred of their readers would escape the error which they did not mean to teach, or apprehend the truth which they wished to set forth,—to suppose this, is to require men to believe that the inspired writers, who ought to have done the least violence to the common laws of language, have really done the most. Such uniformity of inexplicable singularity, on the part of such men as the authors of the several books of the Bible, could be accounted for only on the hypothesis that they were subject to an *evil* as well as a good inspiration. On the other hand, such uniformity of appellations and imagery, and such identity of characteristics, protracted through such a series of writings, go to confirm the received doctrine of a real personality.

But there are other difficulties than these general

ones, by which the theory of personification is encumbered. This theory supposes the devil to be the *principle of evil.* Let it be applied in the interpretation of two or three passages of Scripture. 'Then was Jesus led up of the Spirit into the wilderness, to be tempted of the devil' (Matt. iv. 1-11). Was Jesus tempted by a real, personal being? or was it by the principle of evil? If by the latter, in whom or what did this principle reside? Was it in Jesus? Then it could not be true that in him was no sin. The very principle of sin was in him, which would have made him the tempter of himself. This is bad hermeneutics, producing worse theology. Let it also be remembered that this *principle* of evil, in order to be moral evil, must *inhere* in some conscious moral being. Sin is evil, only as it implies the state or action of some personal and accountable agent. Who was this agent of evil in the Temptation? Was it to a mere abstraction that the Saviour said, 'Thou shalt not tempt the Lord thy God;' 'Get thee behind me, Satan?' Or was it to a real person, having desires and purposes and volitions, —*evil*, because these desires and purposes and volitions were evil? There is but one intelligible answer to such questions. And that answer shows how perfectly untenable is the position that the devil, or Satan, is only the personification of evil. Again: 'He was a murderer from the beginning, and abode not in the truth: he is a liar and the father of it' (John viii. 44). With what propriety could these specific acts of guilt be charged upon an abstraction? An abstraction a murderer! a liar! The principle of evil *abode* not in the truth! Seriously to affirm such things of the mere abstraction of evil is a solemn fiction; while, to assert them of a fallen angel, who beguiled Eve by falsehood, and brought death upon all the race of man, is an intelligible and affecting truth. What necessity for inspired men to write that the devil sinned from the beginning, if he be only the principle of evil? What consistency, on this hypothesis, in their saying that he transforms himself into an angel of light, if he has no volition, no purpose, no craft, no ends or agency? If there are such things as personal attributes, it must be conceded that the sacred writers do ascribe them to Satan. On any other supposition, the writers of the New Testament could more easily be convicted of insanity than believed to be inspired. The principle of interpretation by which the personality of Satan is discarded, leads to the denial of the personality of the Deity.

Natural History.—The class of beings to which Satan originally belonged, and which constituted a celestial hierarchy, is very numerous: 'Ten thousand times ten thousand stood before him' (Dan. vii. 10). They were created and dependent (John i. 3). Analogy leads to the conclusion that there are different grades among the angels as among other races of beings. The Scriptures warrant the same. Michael is described as one of the chief princes (Dan. x. 13); as chief captain of the host of Jehovah (Josh. v. 14). Similar distinctions exist among the fallen angels (Col. ii. 15; Eph. vi. 12). It is also reasonable to suppose that they were created susceptible of improvement in all respects, except moral purity, as they certainly were capable of apostacy. As to the time when they were brought into being, the Bible is silent; and where it is silent, we should be silent, or speak with modesty. Some suppose that they were called into existence after the creation of the world; among whom is Dr. John Dick. Others have supposed that they were created just anterior to the creation of man, and for purposes of a merciful ministration to him. It is more probable, however, that as they were the highest in rank among the creatures of God, so they were the first in the order of time; and that they may have continued for ages in obedience to their Maker, before the creation of man, or the fall of the apostate angels.

The Scriptures are explicit as to the apostacy of some, of whom Satan was the chief and leader. 'And the angels which kept not their first estate or principality, but left their own habitation,' &c. (Jude, ver. 6). 'For if God spared not the angels that sinned,' &c. (2 Pet. ii. 4). Those who followed Satan in his apostacy are described as belonging to him. The company is called the devil and his angels (*τῷ Διαβόλῳ καὶ τοῖς ἀγγέλοις αὐτοῦ*, Matt. xxv. 41). The relation marked here denotes the instrumentality which the devil may have exerted in inducing those called his angels to rebel against Jehovah and join themselves to his interests. How Satan and his followers, being created so high in excellence and holiness, became sinful and fell, is a question upon which theologians have differed, but which they have not settled. The difficulty has seemed so great to Schleiermacher and others, that they have denied the fact of such an apostacy. They have untied the knot by cutting it. Still the difficulty remains. The denial of mystery is not the removal of it. Even philosophy teaches us to believe sometimes where we cannot understand. It is here that the grave question of the introduction of evil first meets us. If we admit the fact of apostacy among the angels, as by a fair interpretation of Scripture we are constrained to do, the admission of such a fact in the case of human beings will follow more easily, they being the lower order of creatures, in whom defection would be less surprising. As to what constituted the first sin of Satan and his followers, there has been a diversity of opinions. Some have supposed that it was the beguiling of our first parents. Others have believed that the first sin of the angels is mentioned in Gen. vi. 2. The sacred writers intimate very plainly that the first transgression was pride, and that from this sprang open rebellion. Of a bishop, the apostle says (1 Tim. iii. 6), 'He must not be a novice, lest, being puffed up with *pride*, he fall into the condemnation of the devil.' From which it appears that pride was the sin of Satan, and that for this he was condemned. This, however, marks the *quality* of the sin, and not the act.

In his physical nature, Satan is among those that are termed spiritual beings; not as excluding necessarily all idea of matter, but as opposed rather to the *animal* nature. It is the *πνευματικός*, in opposition to the *ψυχικός*. The good angels are all ministering *spirits*, *πνεύματα* (Heb. i. 14). Satan is one of the angels that kept not their first principality. The fall produced no change in his physical or metaphysical nature. Paul, in warning the Ephesians against the wiles of the devil (*τὰς μεθοδείας τοῦ διαβόλου*), tells them (Eph. vi. 12) that they contended not against flesh

and blood, mere human enemies, but against principalities and powers, against the rulers of the darkness of this world, against spiritual wickedness in high places; *πρὸς τὰ πνευματικὰ τῆς πονηρίας ἐν τοῖς ἐπουρανίοις*, in which the contrast is between human and superhuman foes, the *τὰ πνευματικὰ* being for *τὰς φύσεις πνευματικάς*, or *τὰ πνεύματα*, spiritual natures, or *spirits*, in opposition to flesh and blood (Rosenmüller, *in loc.*). Satan is not pure spirit in the sense that God is spirit, nor necessarily to the exclusion of body; but that body, if he has any, is ethereal, pneumatic, invisible. He is unlike God, because finite and dependent; and, in his ethereal physical nature, and the rapidity with which he moves unseen from place to place, he is unlike to man. He is immortal, but not eternal; neither omniscient nor omnipresent, but raised high above the human race in knowledge and power. The Persian mythology, in its early stage, and, subsequently, the Gnostics and Manicheans, ranked the evil principle as coeval and co-ordinate, or nearly so, with God, or the good principle. The doctrine of the Jewish church always made him a dependent creature, subject to the control of the Almighty. By the modifications which Zoroaster subsequently introduced, the Persian angelology came more nearly to resemble that of the Jews. Some have ascribed to Satan the power of working miracles, contending that there are two series of antagonistical miracles running through the Bible. To the miracles of Moses were opposed those of the Egyptian magicians; and to those of Christ and his apostles, the signs and wonders of false prophets and Antichrists—the Divine and the Satanic. Olshausen maintains this view; as do some of the older commentators (*Biblischen Commentar.*, vol. i. p. 242). The evidence in support of such a belief has not been sufficient to procure for it general acceptance (see Rosenmüller and Calvin on Matt. xxiv. 24; 2 Thess. ii. 9; Hengstenberg's *Egypt and the Books of Moses*, ch. iii.; also Rosenmüller and Bush on Exod., ch. vii.). With a substantial presence in only one place at one time, yet, as the head of a spiritual kingdom, he is virtually present wherever his angels or servants are executing his will.

His character is evil, purely and entirely so (1 John iii. 8; John viii. 44). His character is denoted by his titles, Satan, Adversary, Diabolos, False Accuser, Tempter, &c. All the representations of him in Scripture show him to have unmixed and confirmed evil as the basis of his character, exhibiting itself in respect to God in assuming to be his equal, and in wishing to transfer the homage and service which belong only to God to himself; and in respect to men, in efforts to draw them away from God and attach them to his kingdom. The evil developes itself in all possible ways and by all possible means of opposition to God, and to those who are striving to establish and extend his dominion. Evil is so transcendent in him, that his whole intellectual and moral nature is subordinated to it. His character is symmetrical. It has a dreadful consistency, from the concurrence in evil, and subjection to it, of all the powers of his being. It is unique and complete in evil, made so by the act of apostacy, and continued so by a pertinacious adherence to evil as his good. Quenstedt says that 'some angels are called evil, not by reason of their essential constitution, but, first, from an evil act, that is, apostacy from God; secondly, from an habitual perverseness which followed this act of apostacy; thirdly, on account of an irreclaimable persistency in evil.' Evil is his fixed state, in which he is confirmed by the invincibility of his dispositions to sin—an invincibility which no motives can ever overcome. This confirmation of evil is denoted by the everlasting chains of darkness in which the apostate angels are reserved unto the judgment of the great day (Jude, ver. 6). The immutability of his evil character precludes the idea of repentance, and therefore the possibility of recovering grace. 'He possesses an understanding which misapprehends exactly that which is most worthy to be known, to which the key fails without which nothing can be understood in its true relations,—an understanding darkened, however deep it may penetrate, however wide it may reach. He is thereby necessarily unblessed; torn away from the centre of life, yet without ever finding it in himself; from the sense of inward emptiness, continually driven to the exterior world, and yet with it, as with himself, in eternal contradiction; for ever fleeing from God, yet never escaping him; constantly labouring to frustrate his designs, yet always conscious of being obliged to promote them; instead of enjoyment in the contemplation of his excellence, the never satisfied desire after an object which it cannot attain; instead of hope, a perpetual wavering between doubt and despair; instead of love, a powerless hatred against God, against his fellow-beings, against himself' (Twesten).

Agency.—The agency of Satan extends to all that he does or causes to be done: 'Qui facit per alium facit per se.' To this agency the following restrictions have been generally supposed to exist: it is limited, first, by the direct power of God; he cannot transcend the power on which he is dependent for existence;—secondly, by the finiteness of his own created faculties;—thirdly, by the established connection of cause and effect, or the laws of nature. The miracles, which he has been supposed to have the power of working, are denominated lying signs and wonders, *σημείοις καὶ τέρασι ψεύδους* (2 Thess. ii. 9). With these restrictions, the devil goes about like a roaring lion.

His agency is moral and physical. First, moral. He beguiled our first parents, and thus brought sin and death upon them and their posterity (Gen. iii.). He moved David to number the people (1 Chron. xxi. 1). He resisted Joshua the high-priest (Zech. iii. 1). He tempted Jesus (Matt. iv.); entered into Judas, to induce him to betray his master (Luke xxii. 3); instigated Ananias and Sapphira to lie to the Holy Ghost (Acts v. 3); hindered Paul and Barnabas on their way to the Thessalonians (1 Thess. ii. 18). He is the spirit that now worketh in the children of disobedience (Eph. ii. 2); and he deceiveth the whole world (Rev. xii. 9).

The means which he uses are variously called wiles, darts, depths, snares, all deceivableness of unrighteousness. He darkens the understandings of men, to keep them in ignorance. He perverts their judgments, that he may lead them into error. He insinuates evil thoughts, and thereby awakens in them unholy desires. He excites them to

pride, anger, and revenge; to discontent, repinings, and rebellion. He labours to prop up false systems of religion, and to corrupt and overturn the true one. He came into most direct and determined conflict with the Saviour in the temptation, hoping to draw him from his allegiance to God, and procure homage for himself: but he failed in his purpose. Next, he instigated the Jews to put him to death, thinking thus to thwart his designs and frustrate his plans. Here too he failed, and was made to subserve the very ends which he most wished to prevent. Into a similar conflict does he come with all the saints, and with like ultimate ill success. God uses his temptations as the means of trial to his people, and of strength by trial, and points them out as a motive to watchfulness and prayer. Such are the nature and mode of his moral influence and agency.

But his efforts are directed against the bodies of men, as well as against their souls. That the agency of Satan was concerned in producing physical diseases the Scriptures plainly teach (Job ii. 7; Luke xiii. 16). Peter says of Christ, that he went about doing good and healing (ἰώμενος) all that were oppressed of the devil (τοῦ διαβόλου) (Acts x. 38). Hymeneus and Alexander were delivered to Satan, that they might learn not to blaspheme (1 Tim. i. 20); where physical suffering by the agency of Satan, as a divine chastisement, is manifestly intended.

Farmer seems to have been among the first in modern times who adopted the rationalistic, or accommodation principle of interpretation, upon the subject of demoniacal possessions. Semler introduced his work on *Demoniacs* into Germany, and the German neologists adopted substantially his view. For a refutation of this system of interpretation, see Twesten's *Dogmatik*, Olshausen's *Commentar*, Storr and Flatt's *Biblical Theol.*, and Appleton's *Lectures;* and for a general statement of the arguments on both sides see the articles Demon; Demoniacs.

Whatever the demons may have been, they were considered by the New Testament writers as belonging to the kingdom of Satan. They are called unclean spirits, evil demons. They are conscious of being under condemnation (Matt. viii. 29). Christ came to destroy the works of Satan; and he refers to his casting out demons by the finger of God as proof that he was executing that work. And when charged with casting them out by the prince of demons, he meets the charge by the assertion that this would be dividing the kingdom of Satan—Satan casting out Satan, *i. e.* casting out his own subjects;—the irresistible inference from which is, that Satan and the demons are *one house*, pertain to *one* and the *same kingdom*.

It is of no avail that there are difficulties connected with the agency ascribed to Satan. Objections are of little weight when brought against well-authenticated facts. Any objections raised against the agency of Satan are equally valid against his existence. If he exists, he must act; and if he is evil, his agency must be evil. The fact of such an agency being revealed, as it is, is every way as consonant with reason and religious consciousness as are the existence and agency of good angels. Neither reason nor consciousness could by themselves establish such a fact; but all the testimony they are capable of adducing is in agreement with the Scripture representation on the subject. If God communicates with good men without their consciousness, there is no apparent reason why Satan may not, without their consciousness, communicate with bad men. And if good men become better by the influence of good beings, it is equally easy to suppose that bad men may become worse by the influence of evil beings. Such an influence no more militates against the benevolence of God, than does the agency of wicked men, or the existence of moral evil in any form. Evil agents are as really under the divine control as are good agents. And out of evil, God will cause good to come. He will make the wrath of devils as well as of men to praise him, and the remainder He will restrain.—E. A. L.

SAUL (שָׁאוּל; Sept. and New Test. Σαούλ), son of Kish, of the tribe of Benjamin, was the first king of the Israelites. The corrupt administration of justice by Samuel's sons furnished an occasion to the Hebrews for rejecting that theocracy, of which they neither appreciated the value, nor, through their unfaithfulness to it, enjoyed the full advantages (1 Sam. viii.). An invasion by the Ammonites seems also to have conspired with the cause just mentioned, and with a love of novelty, in prompting the demand for a king (1 Sam. xii. 12)—an officer evidently alien to the genius of the theocracy, though contemplated as an historical certainty, and provided for by the Jewish lawgiver (1 Sam. xii. 17-20; Deut. xvii. 14-20; on which see Grotius's note; also *De Jure Belli*, &c. i. 4. 6, with the remarks of Gronovius, who (as Puffendorf also does) controverts the views of Grotius). An explanation of the nature of this request, as not only an instance of ingratitude to Samuel, but of rebellion against Jehovah, and the delineation of the manner in which their kings—notwithstanding the restrictions prescribed in the law—might be expected to conduct themselves (מִשְׁפַּט הַמֶּלֶךְ, Sept. δικαίωμα τοῦ βασιλέως; 1 Sam. viii. 11; x. 25), having failed to move the people from their resolution, the Lord sent Saul, who had left home in quest of his father's asses, which had strayed, to Samuel, who having informed Saul of the divine purpose regarding him, and having at a feast shown him a preference, which, no doubt, the other guests understood, privately anointed him king, and gave him various tokens, by which he might be assured that his designation was from Jehovah (1 Sam. ix. x.). Moved by the authority of Samuel, and by the fulfilment of these signs, Saul's reluctance to assume the office to which he was called was overcome; which may be the meaning of the expression לְבַדֵּר (1 Sam. x. 9), though his hesitation afterwards returned (ver. 21, 22). On his way home, meeting a company of prophets, he was seized with the prophetic afflatus, and so gave occasion to a proverb afterwards in use among the Jews, though elsewhere a different origin is assigned to the saying (1 Sam. xix. 24). Immediately after, Saul was elected at Mizpah in a solemn assembly by the determination of the miraculous lot—a method of election not confined to the Hebrews (Aristot. *Polit.* vi. 11; and Virg. *Æn.* ii. 'Laocoon lectus Neptuni sorte sacerdos'); and both previously to that election (x. 16), and subsequently, when in-

sulted by the worthless portion of the Israelites, he showed that modesty, humility, and forbearance which seem to have characterized him till corrupted by the possession of power. The person thus set apart to discharge the royal function, possessed at least those corporeal advantages which most ancient nations desiderated in their sovereigns (the εἶδος ἄξιον τυραννίδος. Eurip.). His person was tall and commanding, and he soon showed that his courage was not inferior to his strength (1 Sam. ix. 1; x. 23). His belonging to Benjamin also, the smallest of the tribes, though of distinguished bravery, prevented the mutual jealousy with which either of the two great tribes, Judah and Ephraim, would have regarded a king chosen from the other; so that his election was received with general rejoicing, and a number of men, moved by the authority of Samuel (x. 20), even attached themselves to him as a body guard, or as counsellors and assistants. In the mean time the Ammonites, whose invasion had hastened the appointment of a king, having besieged Jabesh in Gilead, and Nahash their king having proposed insulting conditions to them, the elders of that town, apparently not aware of Saul's election (1 Sam. xi. 3), sent messengers through the land imploring help. Saul acted with wisdom and promptitude, summoning the people, *en masse*, to meet him at Bezek; and having at the head of a vast multitude totally routed the Ammonites (ver. 11), and obtained a higher glory, by exhibiting a new instance of clemency, whether dictated by principle or policy —'Novum imperium inchoantibus utilis clementiæ fama' (Tac. *Hist.* iv. 63), 'For lowliness is young ambition's ladder;'—he and the people betook themselves, under the direction of Samuel, to Gilgal, there with solemn sacrifices to reinstal the victorious leader in his kingdom (1 Sam. xi.). If the number set down in the Hebrew text, of those who followed Saul (1 Sam. xi. 8), can be depended on (the Sept. more than doubles them, and Josephus outgoes even the Sept.), it would appear that the tribe of Judah was dissatisfied with Saul's election, for the soldiers furnished by the other tribes were 300,000, while Judah sent only 30,000; whereas the population of the former, compared with that of Judah, appears, from other passages, to have been as about five to three (2 Kings xxiv. 9). And yet it is strange that this remissness is neither punished (1 Sam. xi. 7) nor noticed. At Gilgal Saul was publicly anointed, and solemnly installed in the kingdom by Samuel, who took occasion to vindicate the purity of his own administration—which he virtually transferred to Saul—to censure the people for their ingratitude and impiety, and to warn both them and Saul of the danger of disobedience to the commands of Jehovah (1 Sam. xii.). These were the principal transactions that occurred during the first year of Saul's reign (which we venture to assign as the meaning of the first clause of chap. xiii. בן שנה שאול במלכו, 'the son of a year was Saul in his reigning'—the emendation of Origen, 'Saul was thirty years old,' which the chronology contradicts, for he seems now to have been forty years old, and the omission of the whole first verse by the Sept., being evidently arbitrary, and, therefore, inadmissible expedients for solving a difficulty); and the subsequent events happened in the second year—which may be the meaning of the latter clause.

Saul's first trial and transgression.—The restrictions on which he held the sovereignty had (1 Sam. x. 25) been fully explained as well to Saul as to the people, so that he was not ignorant of his true position as merely the lieutenant of Jehovah, king of Israel, who not only gave all the laws, but whose will, in the execution of them, was constantly to be consulted and complied with. The first occasion on which his obedience to this constitution was put to the test brought out those defects in his character which showed his unfitness for his high office, and incurred a threat of that rejection which his subsequent conduct confirmed (1 Sam. xiii. 13). Saul could not understand his proper position, as only the servant of Jehovah speaking through his ministers, or confine himself to it; and in this respect he was not, what David, with many individual and private faults and crimes, was—a man after God's own heart, a king faithful to the principles of the theocracy.

Having organized a small standing army, part of which, under Jonathan, had taken a fort of the Philistines, Saul summoned the people to withstand the forces which their oppressors, now alarmed for their dominion, would naturally assemble. But so numerous a host came against Saul, that the people, panic-stricken, fled to rocks and caverns for safety—years of servitude having extinguished their courage, which the want of arms, of which the policy of the Philistines had deprived them, still further diminished. The number of chariots, 30,000, seems a mistake; unless we suppose, with Le Clerc, that they were not war-chariots, but baggage-waggons (an improbable supposition), so that 3000 may be the true number. Apparently reduced to extremity, and the seventh day being come, but not being ended, the expiration of which Samuel had enjoined him to wait, Saul at least *ordered* sacrifices to be offered—for the expression (1 Sam. xiii. 9) does not necessarily imply that he intruded into the priest's office (2 Sam. vi. 13; 1 Kings iii. 2-4), though that is the most obvious meaning of the text. Whether that which Saul now disregarded was the injunction referred to (1 Sam. x. 8), or one subsequently addressed to him, this is evident, that Saul acted in the full knowledge that he sinned (xiii. 12); and his guilt, in that act of conscious disobedience, was probably increased by its clearly involving an assumption of authority to conduct the war according to his own judgment and will. Samuel having denounced the displeasure of Jehovah and its consequences, left him, and Saul returned to Gibeah (the addition made to the text of the Sept. ver. 15, where after 'from Gilgal,' the clause, 'and the rest of the people went up after Saul to meet the enemy from Gilgal to Gibeah,' &c., being required apparently by the sense, which, probably, has been the only authority for its insertion). Left to himself, Saul's errors multiplied apace. Jonathan, having assaulted a garrison of the Philistines (apparently at Michmash, 1 Sam. xiv. 31, which, therefore, must have been situated near Migron in Gibeah, ver. 1, and within sight of it, ver. 15), Saul, aided by a panic of the enemy, an earthquake, and the co-operation of his fugitive soldiers, effected a great slaughter; but by a

rash and foolish denunciation, he (1) impeded his success (ver. 30), (2) involved the people in a violation of the law (ver. 33), and (3), unless prevented by the more enlightened conscience of the people, would have ended with putting Jonathan to death for an act which, being done in invincible ignorance, could involve no guilt. This success against the Philistines was followed, not only by their retirement for a time within their own territory, but by other considerable successes against the other enemies of his country—Moab, Ammon, Edom, the kings of Zobah, the Amalekites, and the Philistines, all of whom he harassed, but did not subdue. These wars may have occupied five or six years, till the tenth or eleventh year of Saul's reign, rather than the sixteenth, as marked in the Bible chronology.

Saul's second transgression.—Another trial was afforded Saul before his final rejection, the command to extirpate the Amalekites, whose hostility to the people of God was inveterate Deut. xxv. 18; Exod. xvii. 8-16; Num. xiv. 42-45; Judg. iii. 13; vi. 3), and who had not by repentance averted that doom which had been delayed 550 years (1 Sam. xiv. 48). They who represent this sentence as unworthy of the God of the whole earth, should ask on what principle the execution of a criminal under human governments can be defended? If men judge that the welfare of society demands the destruction of one of their fellows, surely God, who can better judge what the interests of his government require, and has a more perfect right to dispose of men's lives, may cut off by the sword of his servants the persons whom, without any imputation of injustice, he might destroy by disease, famine, or any such visitation. It is more to our present purpose to remark, that the apparent cruelty of this commission was not the reason why it was not fully executed, as Saul himself confessed when Samuel upbraided him, 'I feared the people and obeyed their voice' (1 Sam. xv. 24). This stubbornness in persisting to rebel against the directions of Jehovah was now visited by that final rejection of his family from succeeding him on the throne, which had before been threatened (ver. 23; xiii. 13, 14), and which was now significantly represented, or mystically predicted, by the rending of the prophet's mantle. After this second and flagrant disobedience, Saul received no more public countenance from the venerable prophet, who now left him to his sins and his punishment; 'nevertheless, he mourned for Saul,' and the Lord repented that he had made Saul king (xv. 35).

Saul's conduct to David.—The denunciations of Samuel sunk into the heart of Saul, and produced a deep melancholy, which either really was, or which his physicians (1 Sam. xvi. 14, 15; comp. Gen. l. 2) told him, was occasioned by an evil spirit from the Lord; unless we understand the phrase רוח רעה subjectively, as denoting the condition itself of Saul's mind, instead of the cause of that condition (Isa. xxix. 10; Num. v. 14; Rom. xi. 8). We can conceive that music might affect Saul's feelings, might cheer his despondency, or divert his melancholy; but how it should have the power to chase away a spiritual messenger whom the Lord had sent to chasten the monarch for his transgressions, is not so easily understood. Saul's case must probably be judged of by the same principles as that of the demoniacs mentioned in the New Testament [Demoniacs]. David was recommended to Saul on account of his skill as a musician (1 Sam. xvi. 16-23), though the narrative of his introduction to Saul, his subsequently killing Goliath, Saul's ignorance of David's person after he had been his attendant and armour-bearer, with various other circumstances in the narrative (1 Sam. xvi. 14-23; xvii. xviii. 1-4), present difficulties which neither the arbitrary omissions in the Sept., nor the ingenuity of subsequent critics, have succeeded in removing, and which have led many eminent scholars to suppose the existence of extensive dislocations in this part of the Old Testament. Certainly the solutions offered by those who would reconcile the narrative as it now stands in the Hebrew text, demand too much ingenuity, and appear very unsatisfactory. That proposed by Hales and others seems to be the most feasible, which would place the passage, xvi. 14-23, after xviii. 9; yet why should Saul's attendants need to describe so minutely a person whom he and all Israel knew so well already? Also, how can we conceive that Saul should love so much (xvi. 21) a person against whom his jealousy and hatred had been so powerfully excited as his probable successor in the kingdom? (xviii. 9). Besides, David had occupied already a much higher position (xviii. 5); and, therefore, his being made Saul's armour-bearer must have been the very opposite of promotion, which the text (xvi. 21) supposes it was.

Though not acquainted with the unction of David, yet having received intimation that the kingdom should be given to another, Saul soon suspected from his accomplishments, heroism, wisdom, and popularity, that David was his destined successor; and, instead of concluding that his resistance to the divine purpose would only accelerate his own ruin, Saul, in the spirit of jealousy and rage, commenced a series of murderous attempts on the life of his rival, that must have lost him the respect and sympathy of his people, which they secured for the object of his malice and envy, whose noble qualities also they both exercised and rendered more conspicuous. He attempted twice to assassinate him with his own hand (xviii. 10, 11; xix. 10); he sent him on dangerous military expeditions (xviii. 5, 13, 17); he proposed that David should marry first his elder daughter, whom yet he gave to another, and then his younger, that the procuring of the dowry might prove fatal to David; and then he sought to make his daughter an instrument of her husband's destruction; and it seems probable, that unless miraculously prevented, he would have embrued his hands in the blood of the venerable Samuel himself (1 Sam. xix. 18), while the text seems to intimate (xx. 33) that even the life of Jonathan was not safe from his fury, though the subsequent context may warrant a doubt whether Jonathan was the party aimed at by Saul. The slaughter of Ahimelech the priest (1 Sam. xxii.), under pretence of his being a partisan of David, and of eighty-five other priests of the house of Eli, to whom nothing could be imputed, as well as the whole inhabitants of Nob, was an atrocity perhaps never exceeded; and yet the wickedness of the act was not greater than its infatuation, for it must have inspired his subjects not only with abhorrence of their king as

an inhuman tyrant, but with horror of him as an impious and sacrilegious monster. This crime of Saul put David in possession of the sacred lot, which Abiathar, the only surviving member of Eli's priestly family, brought with him, and by which he was enabled to obtain oracles directing him in his critical affairs (xxii. 21-23; xxiii. 1, 2).

Having compelled David to assume the position of an outlaw, around whom gathered a number of turbulent and desperate characters, Saul might persuade himself that he was justified in bestowing the hand of David's wife on another, and in making expeditions to apprehend and destroy him. A portion of the people were base enough to minister to the evil passions of Saul (1 Sam. xxiii. 19; xxvi. 1), and others, perhaps, might colour their fear by the pretence of conscience (xxiii. 12). But his sparing Saul's life twice, when he was completely in his power, must have destroyed all colour of right in Saul's conduct in the minds of the people, as it also did in his own conscience (xxiv. 3-7; xxvi.); which two passages, though presenting many points of similarity, cannot be referred to the same occasion, without denying to the narrative all historic accuracy and trustworthiness. Though thus degraded and paralysed by the indulgence of malevolent passions, Saul still acted with vigour in repelling the enemies of his country, and in other affairs wherein his jealousy of David was not concerned (xxiii. 27, 28).

The Bible chronology, as does also Ussher, dates David's marriage with Michal, A.M. 2491, the same year in which Goliath was slain. Hales, with apparent reason, makes it five years later, when David had attained the age of twenty-five. The same year Mephibosheth was born; which seems to be alluded to in 2 Sam. iv. 4; and about five years more appear to have elapsed before the death of Saul. Samuel's death had taken place not long before, as the statement in 1 Sam. xxviii. 3 implies. Probably two years are sufficient to allow time for the intermediate transactions (1 Sam. xxv.-xxxi.), instead of four, as set down in the Bible chronology.

Saul's third offence and death.—The measure of Saul's iniquity, now almost full, was completed by an act of direct treason against Jehovah the God of Israel (Exod. xxii. 18; Lev. xix. 31; xx. 27; Deut. xviii. 10, 11). Saul, probably in a fit of zeal, and perhaps as some atonement for his disobedience in other respects, had executed the penalty of the law on those who practised necromancy and divination (1 Sam. xxviii. 3). Now, however, forsaken of God, who gave him no oracles, and rendered, by a course of wickedness, both desperate and infatuated, he requested his attendants to seek him a woman who had a familiar spirit (which is the loose rendering in the English Bible of the expression occurring twice in ver. 7, אשת בעלת אוב, 'a woman a mistress of Oh;' 'habens Pythonem,' Vulg.), that he might obtain from her that direction which Jehovah refused to afford him. The question as to the character of the apparition evoked by the witch of Endor, falls more properly to be considered under other articles [DIVINATION; WITCH]; but we may remark that the king himself manifestly both saw and conversed with the phantom, whatever it was, which appeared in the form and spoke in the character of Samuel, and that the predictions uttered by the spectre were real oracles, implying distinct and certain foreknowledge, as the event proved (see Hales, vol. ii., who has discussed this subject very judiciously).

Assured of his own death the next day, and that of his sons; of the ruin of his army, and the triumph of his most formidable enemies, whose invasion had tempted him to try this unhallowed expedient,—all announced to him by that same authority which had foretold his possession of the kingdom, and whose words had never been falsified—Saul, in a state of dejection which could not promise success to his followers, met the enemy next day in Gilboa, on the extremity of the great plain of Esdraelon; and having seen the total rout of his army, and the slaughter of his three sons, of whom the magnanimous Jonathan was one; and having in vain solicited death from the hand of his armour-bearer (Doeg the Edomite, the Jews say, 'A partner before of his master's crimes, and now of his punishment'), Saul perished at last by his own hand. 'So Saul died for his transgression which he committed against the word of the Lord, which he kept not, and also for asking counsel of one that had a familiar spirit, to inquire of it; and inquired not of the Lord, therefore the Lord slew him, and turned the kingdom unto David' (1 Chron. x. 13, 14).

When the Philistines came on the morrow to plunder the slain, they found Saul's body and the bodies of his sons, which, having beheaded them, they fastened to the wall of Bethshan; but the men of Jabesh-gilead, mindful of their former obligation to Saul (1 Sam. xi.), when they heard of the indignity, gratefully and heroically went by night and carried them off, and buried them under a tree in Jabesh, and fasted seven days. It is pleasing to think that even the worst men have left behind them those in whom gratitude and affection are duties. Saul had those who mourned him, as some hand was found to have strewed flowers on the newly-made grave of Nero. From Jabesh the bones of Saul and of his sons were removed by David, and buried in Zelah, in the sepulchre of Kish his father.

There is not in the sacred history, or in any other, a character more melancholy to contemplate than that of Saul. Naturally humble and modest, though of strong passions, he might have adorned a private station. In circumstances which did not expose him to strong temptation, he would probably have acted virtuously. But his natural rashness was controlled neither by a powerful understanding nor a scrupulous conscience; and the obligations of duty, and the ties of gratitude, always felt by him too slightly, were totally disregarded when ambition, envy, and jealousy had taken possession of his mind. The diabolical nature of these passions is seen, with frightful distinctness, in Saul, whom their indulgence transformed into an unnatural and blood-thirsty monster, who constantly exhibited the moral infatuation, so common among those who have abandoned themselves to sin, of thinking that the punishment of one crime may be escaped by the perpetration of another. In him also is seen that moral anomaly or contradiction, which would be incredible, did we not

so often witness it, of an individual pursuing habitually a course which his better nature pronounces not only flagitious, but insane (1 Sam. xxiv. 16-22). Saul knew that that person should be king whom yet he persisted in seeking to destroy, and so accelerated his own ruin. For it can hardly be doubted that the distractions and disaffection occasioned by Saul's persecution of David produced that weakness in his government which encouraged the Philistines to make the invasion in which himself and his sons perished. 'I gave thee a king in mine anger, and took him away in my wrath' (Hos. xii. 11). In the prolonged troubles and disastrous termination of this first reign, the Hebrews were vividly shown how vain was their favourite remedy for the mischiefs of foreign invasion and intestine discord. —R. L.

SCAPE-GOAT. [Goat, Scape.]

SCARLET. [Purple.]

SCEPTRE. The Hebrew word thus rendered is שֵׁבֶט, which in its primary signification denotes a staff of wood (Ezek. xix. 11), about the height of a man, which the ancient kings and chiefs bore as an insigne of honour (*Iliad*, i. 234, 245; ii. 185, sq.: Amos i. 5; Zech. x. 11; Ezek. xix. 11; Wisd. x. 14; comp. Gen. xlix. 10; Num. xxiv. 17; Isa. xiv. 5). As such it appears to have originated in the shepherd's staff, since the first kings were mostly nomade princes (Strabo, xvi. 783; comp. Ps. xxix). There were, however, some nations among whom the agricultural life must have been the earliest known; and we should not among them expect to find the shepherd's staff advanced to symbolical honour. Accordingly, Diodorus Siculus (iii. 3) informs us, that the sceptre of the Egyptian kings bore the shape of a plough—a testimony confirmed by existing monuments, in which the long staff which forms the sceptre, terminates in a form obviously intended to represent a plough.

A golden sceptre, that is, one washed or plated with gold, is mentioned in Ezek. iv. 11 (comp. Xenoph. *Cyrop.* viii. 7, 13; *Iliad*, i. 15; ii. 268; *Odyss.* xi. 91). Other decorations of Oriental sceptres are noticed by Strabo (xvi. 746). Inclining the sceptre was a mark of kingly favour (Esth. iv. 11), and the kissing it a token of submission (Esth. v. 2). Saul appears to have carried his javelin as a mark of superiority (1 Sam. xv. 10; xxii. 6).

SCHOOLS, EDUCATION. Before the exile, the Jews, like the ancient Romans, seem to have had no notion whatever of public and national schools, since the sphere of our present elementary knowledge, reading and writing, was confined to but a few. Children were usually taught the simple doctrines of religion by their parents, by means of aphorisms, sacred stories and rites (Deut. vi. 7, 20, sq.; xi. 19; Prov. vi. 20), while the children of kings seem to have had tutors of their own (2 Sam. xii. 25). Even after the exile, national instruction was chiefly limited to religion, as might naturally be expected from a nation whose political institutions were founded on theocratic principles.

The question naturally suggests itself here, How did it, then, happen that the Jews, confined to so small a territory in Syria, living continually isolated and apart from other nations, and not possessing in their own territory resources of any kind for the advancement of education, should, nevertheless, have mustered such an host of sages and learned men? It must indeed perplex those who are initiated in the Hebrew literature to discover by what means learning, thought, and inquiry were, under such circumstances, fostered and cultivated: and it will be asked, In what connection stood the so-called *great synagogue*, under Ezra and Zerubabel, with the schools of the prophets in previous times? And how did John, the herald of Christ, and Paul the Apostle, receive that education which made the former the teacher of his own nation, and the latter that of so many nations and ages? The solution of these questions we may find in the establishment of an institution among the later Israelites, unique in its kind, and eventually brought to a high degree of perfection; namely, the public meetings of the learned men, for the purpose of expounding the sacred writings and of giving instruction in practical philosophy. We shall bring together some of the scattered records concerning this institution, to show its powerful influence upon education in general.

For the later period of Jewish civilization, from Ezra and Nehemiah to the destruction of Jerusalem by Titus, and the collection of the Talmud in the second century after Christ, a great number of philosophical and religious aphorisms are found collected in the Talmud, as originating with the men of those learned assemblies in various epochs, and in which we may trace the spirit of many passages even of the New Testament.

In the Babylon Talmud (Tr. *Sanhedrin*) those desirous of knowledge are exhorted to repair to the learned meetings of certain celebrated rabbies who taught in Lydda, Burin, Pekun, Jabneh, Benebarak, Rome, Sikni, Zipporim, or Nesibis; and in the land of captivity to the great teacher in Beth-shaarim, and to the sages who taught in the hall Gaazith. The Talmud also mentions many other seats of the learned, such as Jerusalem, Cæsarea, Bethshan, Acco, Bether, Magdala, Ushah, Raccat (Tiberias), and Alexandria in Egypt. In Tiberias the most learned men of the age assembled to compose that famous monument of Jewish learning, the Talmud [Talmud]. Gamaliel (Paul's master) was head of the learned assembly or college at Jabneh (Jamnia), which, it is stated, numbered not fewer than 380 students. At Zipporim in Galilee also, where the celebrated R. Judah Hakkadosh passed the latter part of his life, there is said to have been several of these schools, and eminent teachers, all of whom are mentioned by name. In Tr. *Sanhedrin*, we further read: 'There were three teachers at Bether, and in Jabneh four—R. Eliezer, R. Akibah, R. Joshua, and R. Simon; the last spoke in the presence of the others, although he still sat upon the ground'—that is, he was present as an auditor merely, although occasionally allowed to act as a teacher. In the same tract it is said—'the meeting rests upon men;' on which the gloss is, 'Wherever there are ten men whose occupations do not prevent them from devoting their whole time to sacred learning, a house for their meetings must be built.' In the Jerusalem Talmud (Tr. *Chetub.*), a tradition is alleged that there had been at Jerusalem 460 synagogues, each of which

contained an apartment for the reading of the law, and another for the meeting of men for inquiry, deep research, and instruction. Such a meeting-hall is called by the Talmudists Beth-Midrash (בת מדרש), that is, an apartment where lectures were given, or conversations held on various subjects of inquiry. There were three of these meeting-places in the Temple (Tr. *Megillah*), and in all of them it was the custom for the students to sit on the floor, while the teachers occupied raised seats (T. Hieros. Tr. *Taanith*); hence Paul describes himself as having, when a student, 'sat at the feet of Gamaliel' (Acts xxii. 3).

There are many hints in the Talmud which throw light upon the manner of proceeding in these assemblies. Thus, a student asked Gamaliel whether the evening prayer was obligatory by the law, or not. He answered in the affirmative; on which the student informed him that R. Joshua had told him it was not obligatory. 'Well,' said Gamaliel, 'when he appears to-morrow in the assembly, step forward and ask him the question again.' He did so, and the expected answer raised a discussion, a full account of which is given. It appears that these learned men delivered their dicta and arguments in Hebrew to an interpreter at their side, who then explained them in the vernacular dialect to the audience. This is the explanation given of an anecdote, that a celebrated teacher was unable to proceed for want of an interpreter, till Rabh volunteered his services (Tr. *Yomah*). In such meetings there was one who was recognised as president or chief professor, and another as vice-president (Tr. *Horayoth*).

These teachers and professors, who were the 'lawyers' and 'doctors' of the New Testament, formed no mean opinion of their own dignity and importance, as indeed the Gospels evince. It is said, 'A wise man (more particularly a chief professor) is of more consequence than a king; for when the former dies there is (often) no one to replace him, but any one may replace the latter. A wise man, even though a bastard, ranks even above the high-priest, if the latter be one of the unlearned.' Even the students under these personages claimed to be regarded with respect; they were called the 'holy people' (עם קדוש), as opposed to the masses, who are contemptuously designated עם הארץ, 'people of the earth.'

Philo (*De Vita Contemp.*), speaking of the meetings of the Essenes, who are supposed to have observe the regulations of the ancient prophets, says, 'After the head teacher had finished his exposition to the assembly, upon a proposed question, he stands up and begins to sing (a hymn or psalm), in which the choirs join at certain intervals; and the audience listen quietly till the repetition of the leading theme, when all join in it.'

Now the practices mentioned in the preceding citations entirely correspond with the intimations of the New Testament, and with them may be taken into the series of facts illustrative of the condition of learning and education and the mode of instruction among the Jews, for the period considerably before and long after the time of Christ. The following passages in particular may be indicated in this connection—Luke ii. 46; Acts vi. 9, 10; xix. 8, 9; xxii. 3; 1 Cor. xiv. 26-33; 2 Tim. ii. 2. In the last but one of these, it is true, the description applies to the Christian assemblies; but, on comparing it with the other passages, it will appear that the first Christian teachers had retained many of the regulations of the Jewish assemblies. The Apocryphal books of the Old Testament, which belong to this period, contain some curious and distinct intimations to the same purport, and illustrative of the general subject. See in particular, Wisd. viii. 8, 10; Sirach xxxv. 3, sq.; xxxix. 2, 3; xliv. 3-5; 1 Macc. vii. 11; 2 Macc. vi. 18.

From the above, and from sundry other passages of the same import, which we have not thought it necessary to produce, we may safely draw the following conclusions:—

1. That soon after the Babylonian exile, assemblies of the learned not only existed, but had increased to a considerable extent.

2. That these meetings took place not only at Jerusalem, but also in other places, remote from the capital of Palestine, such as Galilee, the frontiers of Idumæa, Lebanon, and even in heathen countries.

3. That the meeting-places of the wise stood mostly in connection with the synagogues; and that the wise or learned men usually met soon after divine worship and reading were over, in the upper apartment of the synagogues, in order to discuss those matters which required more research and inquiry.

4. That the *Beth-Midrash* was a place where subjects of religious philosophy and various *paradoxes* * from the moral and material world were treated, serving as a sort of academical lectures for those higher students who aspired to fill in time the place of teacher themselves. These institutions may therefore be fairly likened to the academies, or learned societies, so famous in ancient Greece and Rome.

5. That these assemblies of the wise were quite different from those of the priests, who occupied themselves merely with investigations on the religious rites and ceremonies, &c.; as also from those where *civil laws* were discussed, and law-suits decided, (בית דין, *Beth-din*,† 'court of judgment'); though many of the learned priests were no doubt members of the literary assemblies, and probably often proposed in the Beth-Midrash questions of a character more suited to a sacred than to a philosophical society.

6. That such societies (assemblies of the wise) chose their own president from amongst the most distinguished and learned of their members; and consisted of more or fewer members, but certainly not less than ten, capable of partaking in a discussion on some proposed learned question.

It is perhaps worth notice that we may trace in some of the fragments which have descended to us from those assemblies, ten different speakers or lecturers; see, ex. gr., Eccles. i. 3 to iv. 16, where

* *Paradoxes*, or inquiries on such subjects as concern the spirit of the philosophy of the age, will surprise no one who sees in those assemblies something more than mere popular instruction. Nor do we lack in the New Testament traces of esoteric and exoteric systems in teaching; *ex. gr.* Mark iv. 33, sq.

† This is what is commonly called Sanhedrim, and which, according to the Talmud, consisted of a quorum of three, twenty-three, or seventy-one persons [SANHEDRIM].

the following sections evidently bear the character of different speakers and different subjects: (1) ch. i. 3-7; (2) 8-11; (3) ch. xii. 2-26; (4) ch. iii. 1-8; (5) 9 15; (6) 16-22; (7) ch. iv. 1-6; (8) 7-8; (9) 9-12; (10) 13-16. Again we can distinguish another assembly and different speakers in the following verses of Eccles.: (1) ch. viii. 8-10; (2) 11-13; (3) 14, 15; (4) 16, 17; (5) ch. ix. 1; (6) 2-4; (7) 4-6; (8) 7-10; (9) 11, 12; 10) 13; ch. x. 1.

7. That the president or head of the assembly usually brought forward the question or subject at issue very briefly, and sometimes even in a very low voice, so as not to be heard by the whole assembly, but only by those close at his elbow, who then detailed and delivered it at large in a louder voice to the meeting.

Traces of the developed details of subjects thus briefly proposed by the president of the assembly, cannot escape the eye of the inquiring reader of Ecclesiastes and the Book of Wisdom. Thus, in the counter-songs in Ecclesiastes, perhaps the introduction, the few laconic words, 'vanity of vanities, all is vanity!' constituted the sentence with which the president opened the subject or question. So also in the Book of Wisdom vi. 22; ix. 17; where perhaps the naked question, 'What is wisdom? whence does it come?' belonged to the president, who in this brief manner opened the subject, leaving the discussion and enlargement to the other able members. Comp. also v. 23 with vi. 1-21; and see 1 Cor. xiv. 27, 28.

8. That the pupils or students in those assemblies were not mere boys coming to be instructed in the rudiments of knowledge, but men or youths of more or less advanced education, who came thither either to profit by listening to the learned discussions, or even to participate in them themselves: thus paving the way and preparing themselves for the office of the presidency at some future time.

9. That these meetings were *public*, admitting any one, though not a member, and even allowing him to propose questions.

10. That the subjects propounded in those assemblies were of a manifold character: (1) songs, in which the audience now and then joined; (2) counter-songs, in which several of the learned members delivered their thoughts and opinions on a certain proposed question; (3) adages; (4) solutions of obscure questions and problems (*αἰνίγματα*).

11. That the principal task of these assemblies was to preserve the remains of the sages of olden times by collecting and writing them down.

This office probably procured for *Ezra* (the president of such an assembly) the distinguished title of סוֹפֵר, 'scribe' (Ezra vii. 6, 11, 12).

12. That these assemblies and meetings were still in existence in the times of Christ and his apostles.*

Comp., moreover, Matt. xi. 2, 9; xiii. 57; xxi. 11; xxiii. 29-39 (v. 34 *προφῆται, σοφοί*, and *γραμματεῖς* stand as synonymous); Mark iv. 33, 34; vi. 29; Luke i. 76; xi. 1; John i. 35-41; iii. 25; Acts iii. 22-25; xi. 27; xiii. 1; xv. 32; xxi. 9, 10.

Specimens of the matters discussed in those assemblies in this latter period, are found in the Talmud, in the collections of Baruch and Jesus (son of Sirach), and more especially in the Book of Wisdom. Perhaps some expressions of John the Baptist and some speeches of Christ might be compared with them. Even the frequent passages in the New Testament, in which Christ and the apostles warn the people against the sophistries, subtleties, idle questions, and vain researches of the so-called wise, show us that these important institutions had greatly degenerated in the latter part of the period under our notice (John x. 34; xi. 34; xv. 25; Col. ii. 8; 1 Tim. i. 4, 6; iv. 7; vi. 4, 20; Tit. iii. 9). And so we find it in reality, when we examine with attention the scanty materials which exist for the history of this time (Ex. gr. T. Bab. Tr. *Hagigah*).

The originally useful objects of this institution were soon lost sight of in the ambitious views of the sages on whom its character depended to shine, and to say something new and original, however absurd and paradoxical, a mania visible already in the second part of the *Book of Wisdom*, and which soon contributed and lent charms to the cabalistic researches and interpretations, and art of extravagant speculation, which supplanted even in the first period of our Christian era all other solid researches among the Jews, and caused the downfall of those assemblies.

This mania of distinction also led to banterings and quarrels among the little Jewish academies or literary societies, thus dividing them into various sects or parties.

The most violent of these schisms were those which broke out between the Pharisees and Sadducees. The Pharisees soon obtained, it is true, the mastery over their opponents, but they themselves were also split into many parties by the disputes between the school of the celebrated teacher *Hillel*, and that of *Shammai*, the former advocating the right of the traditional law even in opposition to that of Moses, while the latter (like Christ) attached but little weight to traditions whenever they were found to clash with the Mosaical law. These disputes between the various schools of the Jewish doctors at the close of that period, were often carried not only to gross personalities, but even to bodily assaults, and murder (Tr. *Sabbath* and *Shebuoth*); and it had at last become a proverb 'that even Elijah the Tishbite would not be able to reconcile the adherents of *Hillel* and *Shammai*.' What the one party permitted the other was sure to prohibit, and vice versâ. The school of Hillel, however, had from an early period always numbered a vast majority in its favour, so that the modern Jewish Rabbis are uniformly guided by the opinion of that school in their decisions.

Now, as the Talmud contains (with the exception of a few genuine *κειμηλια* from the treasures of the early periods, which are now and then found in the heavy volumes of useless researches) for the most part only the opinions and disputes of those schools concerning the traditional laws, glossed over with cabalistic subtilties and sophistical speculations, it is very natural that but little of real interest is to be found in it.

* Even in the present day, indeed, an imitation of these assemblies exists among all Jewish congregations throughout Poland and Germany, and the *locale* bears the name of *Beth-Midrash*, where the rabbi of the place lectures on the various subjects of the law.

Nevertheless some remnants of the researches of the 'Assemblies of the Wise' from the earlier periods, have also descended to us in the Book of Wisdom, and in the collections of the son of Sirach, showing us those colleges in their dignified and more pure aspect. From this source we may collect the following intimations :—

1. That the object of these assemblies in the earlier periods was chiefly to exercise the minds of those who had devoted themselves to the higher branches of studies, and furnish them with matter for reflection and opportunities to develope their thoughts. It is true that no specimens are extant from that period exhibiting the solution of obscure problems (חידות, *αἰνίγματα*), which were admirably calculated in that early stage of civilization, and in that climate, for the developement of the thinking faculties; yet there can be no doubt, as we have shown above, that such had come under their consideration. All that has been preserved are, *Songs*, *Counter-songs*, and *Adages*.

2. That the *Counter-songs*, which seem to have constituted the main debates in those assemblies, were by no means founded on egotism, or a spirit of contradiction, but simply on the desire of mutual information and instruction; and it is manifest in many of them that the authors had *truth* for their object, both in advancing their own original ideas, and in refuting those of their colleagues.

3. That these discourses had at first assumed the poetical tone so peculiar to that time and climate, when and where the SONG comprised all that can be said and thought; but that gradually that tone was lowered to a *poetical prose*, traces of which we still discover in many of the sayings in the New Testament.

4. That these discourses treated of subjects bearing on religious philosophy, and the worship of God; recommending virtue and morals, exhorting to wisdom, laying down principles for practical life, not omitting, however, still higher objects, such as the immortality of the soul, and the condition of the bad and good after death, &c.

In the middle period of the Jewish history of civilization, from the time of Samuel to that of Jeremiah and Ezra, these philosophic assemblies occur under a double appellation: 1, *Schools of the Prophets*, in the first part of that period, and 2, *Assemblies of the Wise*, in the latter part. Of the existence of such schools or meetings so early as the time of Moses but faint traces are found, in comparing Exod. xviii. 13—26, with Num. xi. 24—29, where the eminent men whom Moses used to consult on important affairs receive the same designation (of 'prophets') as the members of the prophet-schools in the subsequent ages. But in the time of Samuel we find more distinct proofs of their existence (1 Sam. ix. 9; x. 5-11; xix. 18 sq.; 1 Chron. xxv. 6, 7; 2 Kings ii. 3; iii. 15, 16; iv. 18, 43; Isa. viii. 16-19; Prov. i. 2-6; xxv. 1; Eccles. i. 2; xii. 8; vii. 27; xii. 9-11).

By paying a little attention to the passages which we have quoted above regarding these assemblies in the two periods, the following results may fairly be deduced from them :—

1. That the *schools of the prophets* in the earlier periods were identical with the *assemblies of the wise* of the later periods, both in design and form. This will not appear doubtful when we trace the term נביא 'prophet' to its etymology—*flowing out*, *inspired* (singers).* Thus are Miriam (Exod. xv. 20) and Deborah (Judg. iv. 4) styled נביאה, 'prophetesses,' because they uttered inspired, enthusiastic songs. Also (1 Kings xviii. 29) it is said that the priests of Baal ויתנבאו, 'prophesied,' while in 1 Chr. xxv. 1 occurs the expression נביאים בכנרות ובנבלים, 'to prophesy with harps and psalteries,' which is illustrated (ver. 6) by בשיר בנבלים וכנרות, 'for song with psalteries and harps' (ver. 7) by מלמדי שיר 'instructed in song;' so that הנבא, 'prophet,' (ver. 2, 3) may also be rendered *singer*.†

2. That the places where these prophets or *inspired singers* (who among other people would have been called *thinkers* or *philosophers*) met, were Ramah (1 Sam. xix. 18-24), Bethel (2 Kings ii. 3), Jericho (ii. 5), Gilgal (iv. 38; vi. 1). By comparing 1 Kings xviii. 30 with 2 Kings ii. 25, there seems to have been another such place somewhere in Mount Carmel.

3. That the schools of the prophets, or assemblies of the wise, were unions of men‡ distinguished by learning and wisdom, or who strove for that distinction, and were competent to appear as public orators or singers, animated declamation and song being identical in their origin.

4. That these institutions were chiefly intended—

a. To rouse, develope, and strengthen the powers of thought, by mutual instruction, communication, criticism, and controversy.

b. To hear public teachers, counsellors, and leaders of the people and the monarchs.

c. To save from oblivion the sayings and speeches of ancient times, by collecting them in proper order; and,

d. To rear from among them teachers and writers for the public.

5. That the subjects treated of in these *schools* or *assemblies*, comprised everything that might appear important to the philosophers of those times and that country, and, more especially, songs of praise to Jehovah, observations on man and nature, exhortations to morality and virtue, warnings against idolatry and enmity towards their fellow-citizens, &c.

6. That the *form* of those discourses, in both the *schools of the prophets* and *assemblies of the wise*, may be divided into—

---

* Quintilian observes, that in the early stages of civilization, the performers on musical instruments (as such are first described the 'prophets,' 1 Sam. x.) were identical with wise men, inspired singers, and seers. Quis ignorat musicen tantum jam illis antiquis temporibus, non studii modo, verum etiam venerationis habuisse, *ut iidem Musici et Vates et Sapientes judicarentur*, (mittam alios) *Orpheus et Linus* (*Inst.* i. 10).

† Even the Chaldee translates ויתנבאו, 'they prophesied,' in 1 Sam. xix. 20, 'they sang songs of praise.' In the same sense must we also take *προφητευειν*, in 1 Cor. xi. 4, 5.

‡ That the so-called (sons) pupils of the prophets were not boys, but grown men, is evident from 1 Kings xx. 35, sq.; 2 Kings ii. 15, 16; where mention is made of fifty *strong men* (בני חיל), the pupils of the prophets, who had assembled at Jericho; as also from 2 Kings iv. 40.

a. Sayings of the wise.

b. Songs and counter-songs (שירים לענות, Ps. lxxxviii. 1; Sept. στροφαὶ λόγων, Prov. i. 3); containing thoughts leading to reflection and further investigation (משל ומליצה, σκοτεινὸς λόγος).

c. Obscure questions (חירות, αἰνίγματα), and their solutions.

7. That the president of the assembly opened the meeting with a sentence or question, which was left to the various speakers to develope or discuss.

8. That the members of these literary unions comprised also laymen—*ex. gr.* Saul and David—though Levites were frequently not only members but even founders of such schools—*ex. gr.* Samuel, &c. To judge, however, from many passages where censure is passed on the too strict observance of outward ceremony as demanded by the priests, as also on their arrogance of despotic power, it would seem that such unions were just forming a sort of opposition to those evils, trying to out-argue them, and showing by their own example, in the selection of a president and other distinguished members, that more respect is due to personal merit than to hereditary right, as advocated by the priests.*

484. [Turkish School.]

Specimens of the form and style of the objects treated in those early periods in the *schools of the prophets*, may probably be contained in the *hymns* in many of the Psalms, assisted by a *chorus*, such as Ps. viii., xlii., xliii., xlix., civ.; as also the counter-songs in Ps. lxxxviii., lxxxix., lx., lxi., lxv., and ciii. 1-18; as also cxxxix., where three singers seem to have performed successively, after the *finale* of the chorus. Nor can we fail to discover, in Canticles and Proverbs, numerous passages belonging to those *assemblies* or *schools* at various periods (*vide* the superscriptions of ch. x., xxv., xxx., and xxxi.).—E. M.

[It would appear that elementary instruction among the mass of the people became more common after the Exile than it had been previously, when the ability to read was regarded as a mark of learning (Isa. xxix. 12); and in the time of Christ reading and writing seem to have been attainments common to every class above the very lowest. We *know* that several of the apostles, who were fishermen, could read and write, and may assume that others of the same class of life could do the same; yet they were certainly considered 'unlearned' men (Acts iv. 13). The state of common education about that period appears to us to have been in all probability as nearly as possible similar in almost every respect to that which now prevails in Moslem countries. Here also a further and very striking resemblance arises out of the prominence given to instruction in the sacred books. Among Moslems persons quite unable to read or write can nevertheless repeat a large part, and sometimes the whole, of the Koran by rote; and there is reason to think that among the Jews a similar acquaintance with the law, and with parts of the psalms and prophets, as well as a general knowledge of the historical and other books, existed by means of oral instruction even among those who had not learned to read and write. The Moslems make it, indeed, their first object to instil into the

* It is a curious fact, that among the places named as rendezvous for the sons of the prophets, not one Levitical town is found (comp. Josh. xxi. and 1 Chron. vi. 54, sq.), though such places may seem to have been the most appropriate for literary purposes.

minds of their children the principles of their religion, and then submit them, if they can afford the small expense, to the instruction of a schoolmaster. Most of the children of the higher and middle classes, and many of the lower also, are taught by the schoolmaster to read, and to recite the whole or certain portions of the Koran by memory. They afterwards learn the common rules of arithmetic. Schools are numerous in every large town, and there is one at least in every considerable village. There are also schools attached to mosques and other public buildings, in which children are instructed at a very trifling expense. The lessons are generally written upon tablets of wood painted white, and when one is learnt, the tablet is washed and another written. Writing is also practised on the same tablet. The master and pupils sit on the ground, and each boy has a tablet in his hand, or a copy of the Koran, or of one of its thirty sections, on a kind of small desk of palm-sticks. All who are learning to read recite their lessons aloud at the same time, rocking their bodies incessantly backwards and forwards: which is thought to assist the memory. Boys who misbehave are beaten by the master on the soles of the feet with a palm-stick.

It is to be observed that these schools teach little more than reading and learning by heart, the reading lessons being written on tablets not by the boys themselves but by the master; and one who can read well, and recite a good deal of the Koran, is considered to have had a fair education. Those who learn to write are such as are likely to require that art in the employments for which they are designed; and as few schoolmasters teach writing, they learn it of a person employed in the bazaars.

Some parents employ a master to teach their boys at home; and those who intend to devote themselves to a learned or religious life, pursue a regular course of study in the colleges (Medrasseh—the same name as the Hebrew for similar institutions) connected with the great mosques. Females are seldom taught to read or write, or even to say their prayers; but there are many schools in which they are taught needlework, embroidery, &c. (Lane, *Mod. Egypt.* i. 62-69; Schubert, *Morgenlande*, pp. 72-74). The Jews, while they paid equal attention to their sacred books, appear to have made, in the later Scriptural times, writing more generally a part of common education than the Moslems now do; and the religious education of females was less neglected by them, as appears in the case of almost every woman named in the New Testament. In other respects the state of things seems to have been very similar to the present.]

SCRIBES (סֹפֵר), a learned body of men, otherwise denominated lawyers, whose influence with the Jewish nation was very great at the time when our Saviour appeared.

The genius of a social or religious system may be ascertained even from the signification of the names borne by its high functionaries. The title Consul, which directs the thoughts to consultation as the chief duty of the officer who bore it, could have had no existence in any of the Oriental despotisms. Haruspices, soothsayers, determines the degree of religious enlightenment to which Rome, the mistress of the world, had been able to attain. The feudal designation Marshall (Master of the Horse) points to a state of society in which brute force had the mastery. Our Saxon title of a ruler, namely, king (könig, that is, 'the knower,' 'the skilful man'), shows that the very basis of our social institutions was laid in superior knowledge and ability, and not in mere physical pre-eminence. In the same way the word 'scribe' of itself pronounces a eulogy on the Mosaic institutions. Writers at an early period held a high rank in the Hebrew polity, and in consequence that polity must have been essentially of a liberal character, and of a refining tendency. 'Scribe,' indeed, has reference to 'law,' and of itself it suggests the idea; and the social institutions that are founded on law, and not on force—on law, and not on the will of one man—take a high rank even in their origin, and may presumably merit high praise.

If now we invert the remark, intimating that law, as the foundation of social institutions, implies scribes, we shall see at once that the learned caste of which we speak must have taken their rise contemporaneously with the commencement of the Mosaic polity. In a system so complex as was that polity, there were no means but repeated transcripts which could make the law sufficiently known for it to be duly observed by the nation at large. It is true that at first the function of the scribe may have been ill-defined, and his services have been only occasionally demanded; but as the nation became settled in their territorial possessions, and the provisions of Moses began to take effect, the scribe would be more and more in demand, till at last the office became a regular and necessary part of social life, and grew finally into all the dignity, order, and coherence of a learned caste. And this growth would be accelerated or retarded in the same manner and degree as the idea of law was honoured, out of which it sprang. In seasons of national depression, when might prevailed against right, law was silenced and scribes were oppressed. When, however, the Mosaic law was honoured; when, as in the reign of David, law had triumphed over force, and laid the foundations of a flourishing empire, then the scribe stood at the king's right hand, and the pen became at once the symbol and the instrument of power. So, too, when the exile, with its weighty penalties, had taught the people to value, respect, and obey the law of God, the law of their forefathers, then the scribe is raised to the highest offices of civil society, and even an Ezra is designated by the name.

But law, in the Mosaic institutions, had a religious as well as a civil sanction. With the Hebrews, indeed, social was lost in religious life. There was but one view of society, and of man individually, and that was the religious view. Education, politics, morals, even the useful arts, were only religion in different exercises and manifestations. Hence writing was a sacred art, and writers (scribes) holy men; and that the rather, because scribes were engaged immediately about the law, which was the written will of God, and so the embodiment of all knowledge, truth and duty. The scribes, therefore, were not only a learned but a sacred caste.

In the same manner may we learn what, in general, the functions of the scribes were. A writer at the present day is frequently used as

synonymous with an author, and an author is necessarily a teacher. The scribes then had the care of the law; it was their duty to make transcripts of it; they also expounded its difficulties, and taught its doctrines, and so performed several functions which are now distributed among different professions, being keepers of the records, consulting lawyers, authorized expounders of holy writ, and, finally, schoolmasters—thus blending together in one character the several elements of intellectual, moral, social, and religious influence. It scarcely needs to be added that their power was very great.

A few details drawn from individual passages of Scripture will confirm and enlarge these observations. So early as the events recorded in Judg. v. 14, we find mention of those 'who handle the pen of the writer,' as if the class of scribes were then well known. Zebulun seems to have been famous as a school for scribes. Among the high officers of the court of David mention is made of 'Seraiah the scribe,' as if he stood on the same footing in dignity as the chief-priests and the generalissimo (2 Sam. viii. 16-18). By comparing this with other passages (2 Kings xxv. 19: 1 Chron. ii. 55; 2 Chron. xxxiv. 13; 1 Chron. xxvii. 32) we learn that in the time of the kings the scribes constituted a learned, organized, much esteemed, and highly influential body of men, recognised and supported by the state. When, however, the regal power had been overturned, and force of arms had been found insufficient to preserve the integrity of a nation that could not be wholly weaned from idolatry; and when at length sorrow had wrought what prosperity had failed to achieve, then in the downfall of external pomp and greatness, and the rise and predominance of God's will, as enshrined in the law, the scribe rose to a higher eminence than ever, and continued to hold his lofty position, with some slight variations, till letters were again compelled to yield to arms, and the holy city was trodden down by the hoof of heathen soldiery (Ezra vii. 6, 11; Neh. viii. 1; xii. 26; Jer. viii. 8; xxxvi. 12, 26; Ezek. ix. 2). And thus 'Captain Sword' appeared to have gained a final victory over 'Captain Pen;' but the power of the new knowledge which Jesus, 'the light of life,' had recently brought into the world, soon altered the face of society, and took the laurels from the ensanguined hand that held them boastfully.

'Twas only for many-soul'd Captain Pen
To make a world of swordless men.

In the New Testament the scribes are found as a body of high state functionaries, who, in conjunction with the Pharisees and the high-priests, constituted the Sanhedrim, and united all the resources of their power and learning in order to entrap and destroy the Saviour of mankind. The passages are so numerous as not to need citation. It may be of more service to draw the reader's attention to the great array of influence thus brought to bear against 'the carpenter's son.' That influence comprised, besides the supreme power of the state, the first legal functionaries, who watched Jesus closely in order to detect him in some breach of the law; the recognised expositors of duty, who lost no opportunity to take exception to his utterances, to blame his conduct, and misrepresent his morals; also the acutest intellects of the nation, who eagerly sought to entangle him in the web of their sophistries, or to confound him by their artful questions. Yet even all these malign influences failed. Jesus was triumphant in argument; he failed only when force interposed its revengeful arm. The passage found in Luke xx. 19-47 is full of instruction on this subject. At the close of this striking Scripture our Lord thus describes these men (ver. 46): 'Beware of the scribes, which desire to walk in long robes, and love greetings in the markets, and the highest seats in the synagogues, and the chief rooms at feasts; which devour widows' houses, and for a show make long prayers.' Their opportunity of assailing our Lord was the greater from their constant vigilance. Winer (*Real-wörterb.*) thinks that they, in union with the high-priests, formed a kind of police, who were on duty in the Temple and the synagogues (Luke xx. 1; Acts vi. 12). Nor was their influence limited to the capital; from Luke v. 17, we learn that members of the body were found in every town of Galilee and Judæa. Like the learned castes of most nations, they were attached to the traditions of the elders (Matt. xv. 1); had ample influence with the people (Luke xx. 46); and though some of them belonged to the free-thinking and self-satisfied Sadducees, they were for the most part of the predominant sect of Pharisees (Luke xi. 45; Acts xxiii. 9; Matt. v. 20; xii. 38; xv. 1).

It may serve to read a lesson to those who reason as if they had a right to expect to find every thing in Josephus, and who are ready to make his silence an argument conclusive against the evangelists, that very little appears in the Jewish historian touching this class of men. In his *Antiquities* (xvii. 6. 2) two are incidentally mentioned as engaged in education, Judas and Matthias, 'two of the most eloquent men among the Jews, and the most celebrated interpreters of the Jewish laws, men well beloved by the people, because of the education of their youth; for all those that were studious of virtue frequented their lectures every day.' This description calls to mind the sophists and philosophers of Greece; indeed, these same persons are termed by Josephus in another part (*De Bell. Jud.* i. 33. 2) *σοφισταί*. Hence, however, it is clear that the scribes were the Jewish schoolmasters as well as lawyers. In this character they appear in the Talmud. In the outer courts of the temple were many chambers, in which they sat on elevated platforms to give their lessons to their pupils, who sat on a lower elevation, and so at their feet. Of these dignified instructors Gamaliel was one (Acts v. 34); and before these learned doctors was Jesus found when only twelve years old, hearing and asking questions after the manner in which instruction was communicated in these class-rooms (Luke ii. 46; Acts xxii. 3; Lightfoot (*Horæ Hebraicæ*, pp. 741-3); *Pirke Aboth*, v. 23).—J. R. B.

SCRIPTURE (HOLY), or SCRIPTURES (HOLY), the term generally applied in the Christian Church since the second century, to denote the collective writings of the Old and New Testaments [BIBLE]. The names *Scripture*, or 'writing' (*ἡ γραφή*, 2 Pet. i. 20), *Scriptures* (*αἱ γραφαί*, Matt. xxii. 29; Acts viii. 24), *Holy Scriptures* (*ἱερὰ γράμματα*, 2 Tim. iii. 15), are those generally employed in the New Testament

to denote exclusively the writings of the Old [See PETER, EPISTLES OF]. About A.D. 180, the term *Holy Scriptures* (αἱ ἁγίαι γραφαί) is used by Theophilus (*Ad Autolyc.* iii. 12) to include the Gospels. Irenæus (ii. 27) calls the whole collection of the books of the Old and New Testament, *the Divine Scriptures* (θεῖαι γραφαί), and the *Lord's Scriptures* (Dominicæ Scripturæ, v. 20. 2). By Clement of Alexandria (*Strom.* vii.) they are called the *Scriptures* (γραφαί), and the *inspired Scriptures* (αἱ θεοπνεύστοι γραφαί.) From the end of the second and beginning of the third century, at which time a collection of the New Testament writings was generally received, the term came into constant use, and was so applied as to include all the books contained in the version of the Seventy, as well as those of the Hebrew canon [DEUTEROCANONICAL].

Contents of the Scriptures.—The Scriptures are divided into the books held sacred by the Jews, and those held sacred both by Jews and Christians. The former are familiarly known by the name of the *Old* Testament, and the latter by that of the *New* [BIBLE]. The Old Testament, according to the oldest catalogue extant in the Christian Church, that of Melito, Bishop of Sardis in the second century, consists of the five books of Moses, or the Pentateuch (viz. Genesis, Exodus, Leviticus, Numbers, and Deuteronomy); Joshua, Judges, and Ruth; four books of Kings and two of *Paralipomena* (Chronicles); the Psalms of David; the Proverbs of Solomon, Ecclesiastes, Canticles, and Job; the Prophets Isaiah and Jeremiah; the twelve Prophets; the books of Daniel, Ezekiel, and Ezra, under which head Nehemiah and Esther seem to be included (Eusebius, *Hist. Eccles.* iv. 26). Origen, in the next century, reckons twenty-two books, calling them by their Hebrew names, which consisted generally of the initial word of the book, viz. Bresith or Genesis; Walmoth, or Exodus; Waikra, or Leviticus; Ammesphekodeim, or Numbers; Ellahadebarim, or Deuteronomy; Joshua ben Nun; Sophetim, or Judges and Ruth; Samuel; Wahammelech Dabid, or 3 and 4 Kings; Dibre Hajammin, or Chronicles; Ezra, which included Nehemiah; Sepher Thillim, or Psalms; Misloth, or Proverbs; Koheleth, or Ecclesiastes; Sir Hasirim, or Canticles; Isaiah; Jeremiah, Lamentations, and the Epistle; Daniel; Ezekiel; Job; and Esther; 'besides which,' he adds, 'is Sarbath Sarbane El, or Maccabees.' He omits, perhaps by an oversight, the book of the twelve minor prophets. To the books enumerated in the preceding catalogue, Origen applies the term *canonical Scriptures* in contradistinction to *secret* (apocryphal) and heretical books. He does not however include in these latter the deuterocanonical (ἐν δεύτερῳ, see Cyril of Jerus. *Catech.* iv. 36) or ecclesiastical books; to which he also applies the terms *Scripture*, the *Divine Word*, and the *Sacred Books* (*De Princip.* ii. 1; Opp. i. pp. 16, 79, &c. &c.; *Cont. Cels.* viii. Opp. i. p. 778). Jerome enumerates twenty-two books, viz.: 1. The Pentateuch, which he terms *Thora*, or the *Law*. 2. The eight Prophets, viz., Joshua; Judges and Ruth; Samuel; Kings; Isaiah; Jeremiah; Ezekiel; and the twelve Prophets. 3. Nine Hagiographa, viz. Job; Psalms; Proverbs; Ecclesiastes; Canticles; Daniel; Chronicles; Ezra; and Esther. Some, he adds, enumerate twenty-four books, placing Ruth and Lamentations among the Hagiographa. The other books, read in the churches, but not found in the Canon, as Wisdom, Sirach, Judith, Tobit, and The Shepherd, he terms *Apocrypha*. With this catalogue agrees his contemporary Rufinus, who accuses Jerome as we have already seen [DEUTEROCANONICAL] of compiling, or rather plundering (compilandi), the Scriptures, in consequence of the rejection by that Father of Susanna and the Benedicite. Cyril of Alexandria divides the canonical books into five of Moses, seven other historical, five metrical, and five prophetical.

With these catalogues the Jews also agree. Josephus enumerates twenty-two books, five of Moses, thirteen prophets, and four books of morality. The Prophets were divided by the ancient Jews into the early Prophets, viz., Joshua, Judges, Samuel, and Kings—and the later Prophets, which were again subdivided into the greater, viz., Isaiah, Jeremiah, and Ezekiel; and the twelve lesser Prophets. The Talmud and the modern Jews agree with Jerome's division into eight Prophets, and nine Hagiographa (*Chetubim*).

The Canon of the Alexandrian version includes the other books, called ecclesiastical, which we have already given in their order [DEUTEROCANONICAL]. As the early Christians (who were not acquainted with Hebrew) received this version, for which they had the sanction of its employment by the New Testament writers, and as from it flowed the old Latin, and several other ancient versions, we must not be surprised at finding that all these books, being thus placed in the Bible without any mark of distinction, were received indiscriminately by the primitive Christians, and were, equally with the canonical, read in the churches. Jerome, in his Latin translation of the Bible from the Hebrew, in the fourth century, introduced a distinction by means of his prefaces, prefixed to each book, which continued to be placed, in all the MSS., and in the early printed editions of Jerome's version, in the body of the text, from which they were for the first time removed to the beginning or end of the Bible after the decree of the Council of Trent in A.D. 1546 (See Rev. G. C. Gorham's* Letter to Van Ess, Lond. 1826). Luther was the first who separated these books from the others, and removed them to a place by themselves in his translation. Lonicer, in his edition of the Septuagint, 1526, followed his example, but gave so much offence by so doing that they were restored to their places by Cephalæus in 1529. They were however published in a separate form by Plantin in 1575, and have been since that period omitted in many editions of the Septuagint. Although they were never received into the canon either by the Palestinian or Alexandrian Jews, yet they seem to have been by the latter considered as an appendix to the canon (De Wette, *Einleitung*). There are, besides these, many books cited which have long since perished, as the Book of Jasher† (Josh. x. 13;

* Mr. Gorham is the author of the Historical Examination of the book of Enoch, referred to above in p. 172, note.

† The book of Jasher, published at New York in 1840, is not, as would appear from the Appendix to Parker's translation of De Wette's *Introduction*, a reprint of the Bristol forgery, but

2 Sam. i. 18) [JASHER], and the Book of the Wars of Jehovah (Num. xxi. 14). In regard to the order of the books, the Talmudists and the Masoretes, and even some MSS. of the latter, differ from each other. The Alexandrian translators differ from both, and Luther's arrangement, which is generally followed by Protestants, is made entirely according to his own judgment. The modern Hebrew Bibles are thus arranged, viz. five books of Moses, Joshua, Judges, two books of Samuel, two books of Kings, Isaiah, Jeremiah, and Ezekiel, twelve minor Prophets, Psalms, Proverbs, Job, Canticles, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah, and 1 and 2 Chronicles. The New Testament consists of four Gospels, the Acts, Epistles of St. Paul, Catholic Epistles, and the Apocalypse: these are differently arranged in the Greek and Latin MSS. All these writings have been considered in the Christian church from the earliest period as divinely inspired (*θεόπνευστοι*, 2 Tim. iii. 14-16), as no doubt the books of the Old Testament were by the Jews (see Talmud, *passim;* Philo, *De Vit. Mosis*, ii.; Josephus, *Cont. Apion*, i. 3, and the manner of their citation in the New Testament). The early Christian writers also constantly maintain their inspiration (Justin Martyr, *Second Apology;* Irenæus, i. 4; Origen, *περὶ ἀρχῶν*, *Præf.*), the only difference of opinion being as to its limits. Some of the fathers maintain their verbal inspiration, others only that of the thoughts or sentiments, or that the sacred writers were merely preserved from error (Du Pin, *On the Canon*). But the first controversy raised on this subject was in the sixteenth century, when the theses of the Jesuits [see MACCABEES], who had maintained the lower notion of inspiration, were condemned by the faculties of Louvain and Douai. Jahn observes (*Introd.*) that on this subject the entire Christian world was divided, and that the condemnation of the theses was not sanctioned by the Church or the Roman primate, and that the Council of Trent has pronounced no judgment on the subject. Henry Holden, doctor of the Sorbonne, published his *Analysis Fidei* in 1652, in which he defended that notion of the Fathers, which maintained only an exemption from errors appertaining to doctrine. Jahn further observes (*l. c.*) that most Protestants, until the middle of the eighteenth century, defended the most rigid notions of verbal inspiration; but that, from the time of Toellner and Semler, the idea of inspiration was frittered away and eventually discarded. The high notion of inspiration has been recently revived amongst Protestants, especially in the eloquent work of M. Gaussen of Geneva (*Theopneustia*, 1842). The moderate view has been that generally adopted by English divines (Henderson, *On Inspiration*, Horne's *Introd.;* Appendix to Vol. I.)

Some of the most important subjects connected with the Holy Scriptures having been treated of throughout this work, it may not prove unacceptable to add a brief account of the text of the Bible, and chiefly in respect to its external form.

I. *The Hebrew Text.*—The *text* (textus), or that portion which was composed by the original authors, has descended to our times in MSS., the oldest of which (in Hebrew), are written on skins of animals, and date from the twelfth century. They are written in the present square characters, which subsequently to the exile superseded the old character (see Jerome, *Prolog. Gal.*), somewhat resembling the Samaritan, and still preserved on the Maccabæan coins. The present characters are a modification of the Aramæan, and not dissimilar to those on the Palmyrene inscriptions. The existing MSS. (except the Synagogue rolls) are furnished with vowel and diacritical points, and the words are separated from each other, a practice which appears to have been but partially observed in the more ancient writing (De Wette, *Einleitung*). We have no data on which to form a history of the text previous to that unknown period after the Exile when the Canon was closed, and the separate books formed into a collected whole. It is probable that the other sacred books, as well as the Law, were preserved in or by the side of the ark of the covenant (Deut. xxxi. 24-26); and we learn from Josephus (*De Bell. Jud.* vii. 5) that the Law (*Νόμος*) was among the spoils of the Temple which graced the triumph of Titus, who afterwards presented the *sacred books* (*βίβλια ἱερὰ*), upon his requesting them, to that historian (*Vita*, ch. 75). From the period of the return of the Jews from Babylon our information is still but scanty, but we are in possession of two important documents bearing on the history of the text, viz., the Samaritan Pentateuch, and the version of the Seventy. The former of these was known to exist only from the citations of Origen, Jerome, and many others among the Fathers, and was supposed to have been lost, when a MS. of it, written in the thirteenth century, was brought into Europe in A.D. 1616, and was first published in the Paris Polyglott. This work is supposed by some to have existed before the separation of the Tribes, but is more generally assigned to the period of the revolt of Manasseh, who was contemporary with Nehemiah, although Josephus places him in the reign of Alexander the Great. The Pentateuch of the Seventy dates from the commencement of the third century before Christ, and the remainder of the books were completed before the time of Sirach, who lived about B.C. 130. [SEPTUAGINT.] These documents, although the work of inaccurate and capricious, if not sometimes ignorant translators, and although the version of the Seventy has come down to us in a very corrupted state, are notwithstanding sufficiently close in their general resemblance to our Hebrew copies to show that the text in use among the Jews long before the Christian era, was essentially the same with that which is now in our hands.

The Jews of Palestine and Babylon, both before and at the period of the Christian era, were, however, still careful of the original text. This is clear from the fact that the versions of Aquila and other translators executed soon after the Christian era, adhere much more closely than that of the Seventy to the present or Masoretic text. Origen, also, in the third century, and Jerome in the fourth, used manuscripts which must have been

---

a translation of the much more respectable (though also spurious) Book of Jasher, which we have already referred to in p. 71 as published at Naples in 1625, and written in excellent Hebrew, before the close of the 15th century. See the American *Christian Examiner* for May, 1840.

nearly identical with our present copies. Down to this period the text was beyond question unfurnished with points or diacritical marks.

In the work called the Talmud, a digest of Jewish laws compiled between the second and sixth centuries, we find evident traces of an anxiety to preserve an accurate text, and even an enumeration of various readings in different MSS., as well as of the words and letters in the Bible. When the Talmud was completed, the Masoretes of Tiberias commenced their labours. The *Masora* (tradition) consisted of scattered annotations handed down by oral tradition from the previous centuries. The *Masora* was written at first in separate books, but afterwards in the margin of manuscripts. The Masoretes continued the labours of the Talmudists, whom they imitated in counting the words and letters, and constantly added fresh annotations to the text until the eleventh century. The text of the early Masoretes, or that of the sixth century, cannot now be separated from that of the later. The emendations which they continued to make on the text were of various kinds, critical, orthographical, and grammatical, founded partly on tradition, partly on conjecture. Of the Masoretic text we now possess two recensions, both dating from the eleventh century, namely, the western, or that of Rabbi ben Asher, a native of Palestine, and the eastern, or that of Rabbi ben Naphthali of Babylon. The variants in these texts amount to near a thousand. From this period dates the completion of the system of vowel points. The earliest manuscripts are all pointed, the unpointed having probably become neglected; nor has any portion of the Hebrew Bible, dating before the twelfth or the close of the preceding century, descended to our times. Our oldest MSS. of the Bible are those of the Greek version, which exceed the Hebrew in antiquity by seven hundred years.

The Jews were not slow in taking advantage of the new and beautiful invention which, in the middle of the fifteenth century, superseded the labours of the calligraphists. So early as 1477 the Psalter was printed at Bologna, in folio, but without points except in a few passages, and without any accents except that which denoted the end of the verse (*Soph Pasuk*). The Pentateuch was printed at the same place, with points, in 1482, folio. This was followed by Ruth, Ecclesiastes, Canticles, and Lamentations, and from the press at Soncino, in 1486, there issued the early and later prophets. At Soncino also, in 1488, the entire Hebrew Bible was first printed, which was followed by an edition at Naples in 1491, and another at Brescia, by Rabbi Gerson, in 1494. This was succeeded by the Hebrew of the Complutensian Polyglott in 1517, and in the following year was published at Venice Bomberg's first edition of his Rabbinical Bible, 4 vols. fol., edited by the learned Jew, Felix Pratensis. This, and Robert Stephens's beautiful editions of 1539-1544, were derived from Gerson's, which was that used by Luther for his German Bible. Sebastian Munster's edition (1536) was also of this family.

Bomberg's second edition (Venice, 1525), which was followed by several others, is the parent of Stephens's editions of 1544-46, and of our present Hebrew Bibles. The Antwerp Polyglott (1569) and Hutter's edition (1587) contain a mixed text. Le Jaye and Walton have retained the text of the Antwerp Polyglott. Other accurate editions were published by Buxtorf (1611 and 1618), and by Athias (1661 and 1667), with a preface by Leusden. Van der Hooght's (1705) is a reprint of the edition of Athias. The various readings are contained in the Rabbinical Bibles of Bomberg and Buxtorf, and in the editions of Munster, Van der Hooght, Michaelis, Houbigant, Kennicott, Doederlein, Meisner, Jahn, and the Polyglotts. All these editions represent the Masoretic recension, which, most probably, judging from the ancient translations, represented the text which was received at the introduction of Christianity. The early Protestant divines zealously contended for the integrity of the text of the Masoretic MSS., in opposition to the ante-Masoretic, or that which was the basis of the Septuagint (see Löscher, *De Caus. Ling. Heb.*; Carpzov, *Crit. Sacr.*; Buxtorf, *De Punct. Antiq. et Orig.*); and notwithstanding the learning and acumen with which they were opposed, it is now generally conceded that the Protestants were right. They proceeded too far, however, when they contended for the antiquity, and even the divine origin of the vowel points. 'The Protestants,' says Jahn (*Introd.*), 'who until the middle of the eighteenth century maintained the perfect clearness of the sense of Scripture, contended that the vowel points were coeval with the consonants, in order, doubtless, to obviate the notion that the Scriptures were at one time less clear than at another. But since their rejection of this dogma they agree with us that the points are but a commentary of the middle ages.' Louis Capell, an eminent French Protestant divine, who had contended, in opposition to the two Buxtorfs, against the antiquity of the points, was unable to obtain a licence in France for the publication of his *Arcanum Punctationis*, to which the Protestants of that day were warmly opposed, although their views were contrary to the more correct judgment of Luther, Calvin, and others among the early reformers. The consonants alone are the true objects of sacred criticism.

It was also contended that the sacred text had descended to us in a faultless state. But this notion, against which the critical sceptics Capell, and, in more recent times, our own Kennicott, had to contend (De Wette, § 81), and for which they had to endure much obloquy, has been long exploded. Such was the force of prejudice, that, when Louis Capell in his *Critica Sacra* had formed a collection of various readings and errors which he believed to have crept into the copies of the Bible, the Protestants prevented the impression of it, and it was only after his son, John Capell, had joined the church of Rome, that he obtained the French king's licence to print it, in 1650. The errors of transcribers, either from accident, mistake, or design, the wish to correct seeming difficulties, or the introduction of scholia into the text, abbreviations, &c., &c., are such as are common to all manuscripts, and the true text of the Scriptures must be collected, as in similar cases, and, so far as may be, restored, from a comparison of these, from parallel passages, ancient versions, the Talmud, the Masora, and critical conjecture [Criticism, Biblical.]. The accusation sometimes made against the Jews of designedly falsify-

ing the text in their controversies with the early Christians is now generally considered to be without foundation.

II. *The Greek Text.*—The Greek text, or that of the New Testament, has been noticed under another head [Recensions]. 'The only certain result,' observes De Wette (*Einleitung*) 'which is derived from the enquiries that have been instituted into the history of the text, consists in the fact that certain MSS. and other critical testimonies correspond according to a certain analogy, and again diverge from each other. The Alexandrian do this in the greatest degree, although in these also are many commutations and admixtures.'

The text of the New Testament, observes the same distinguished critic, as it is found in MSS. from the fifth to the fifteenth century, is confessedly free from 'gross and palpable errors.' The vigilance produced by the constant controversies between the catholics and the heretics tended to maintain this purity (De Wette, *l. c.*). This did not, however, preserve the text from numerous errors, which arose here, as well as in the Old Testament, from the commutation of letters, transposition of words, seeing and hearing incorrectly, abbreviations, reception into the text of marginal glosses and parallel passages, and other obvious causes. The text was also altered by attempts at making it clearer, and correcting what appeared difficult or erroneous, as well as from its liturgical use. The various readings arising from these and other causes amounted in Mill's edition (1707) to thirty thousand. This circumstance at one time excited great alarm among religious men, among whom was the amiable Bengel, and was the source of triumph to infidels (Whitby's *Examen var. lect.* Joh. Millii; Bentley's *Phileleutherus Lipsiensis*, in reply to Collins's *Discourse on Free-thinking*). Some Roman-catholic writers made use of the same fact in order to prove the superior advantage of having recourse only to the Latin 'authentic' Vulgate (Coppinger's *Reasons*), forgetting that the MSS. of the Vulgate were liable to the same charge [Vulgate.] But these delusions have been long since dissipated, and although the various readings have, in consequence of the labours of subsequent editors, increased to one hundred or one hundred and fifty thousand, it is now generally felt that the greater part of the variations are only similar to those in all other MSS. that have been frequently copied; and that with the exception of a few important passages they are of no authority or consequence; 'and that it is a matter scarcely worth consideration, as regards the study of our religion and its history, whether, after making a very few corrections, we take the received text formed as it was, or the very best which the most laborious and judicious criticism might produce' (Norton's *Genuineness of the Gospels*, vol. i. p. xl.; see also Dr. Wiseman's *Lectures on the Connection between Science and Revealed Religion*, Lect. x.).

The first portion of the Greek Testament that appeared after the invention of printing was the Hymns of Zacharias and Elizabeth, printed at Venice in 1486, and six first chapters of St. John's Gospel, which issued from the press of Aldus Manutius in 1501. But what has been long called the *Received Text* was Elzevir's reprint, in 1624, of Robert Stephens's third edition, or that of 1550, from which, however, it differs in one hundred and thirty places. We shall here give a brief history of this edition, which forms an epoch in Biblical Literature.

The first printed edition of the entire New Testament was that of the Complutensian Polyglott, published at the munificent cost of the celebrated Cardinal Ximenes. The New Testament, in this edition, was commenced in 1502, and bears the date of 1514, but was not published until 1522, four years after the completion of the entire Polyglott. The text of the New Testament was not founded on very ancient manuscripts. The editors state in their preface that they have placed 'the Latin version of St. Jerome between the Hebrew and Greek, to represent the Synagogue and the Oriental church as the two thieves, and Jesus, that is, the Roman or Latin church, in the midst.' It was not, however, meant by this to disparage the original texts, of which Ximenes in his dedication speaks 'in as high terms as Luther could have used' (Marsh's *Michaelis*).

Before this edition saw the light, and consequently before he could have derived any aid from it, Erasmus published his edition, which issued from the press of Basel in 1516. This was followed by the editions of 1519, 1522, 1527, and 1535. It was in the edition of 1522 that he inserted the disputed clause, 1 John v. 7 [John, Epistles of]. Erasmus's editions are chiefly founded on four Basel cursive manuscripts, B. vi. 27, B. vi. 17, B. vi. 25, B. ix., and B. x. 20, none of which is older than the tenth century. The first of these, which is the most ancient, and contains the whole New Testament except the Apocalypse, represents in the Acts and Epistles what has been called by Griesbach and Scholz the Constantinopolitan; and in the Gospels, which are considered by Bengel the only correct portion of the MS., it harmonizes with what is called the Alexandrian recension. B. vi. 25, from which the press was set, is an incorrect MS. of the Gospels of the (so called) Constantinopolitan recension, and of the fifteenth century. The other MSS. contain only portions of the New Testament. He had for the first edition but one incomplete MS. of part of the Apocalypse, part of which he himself translated from the Latin, correcting in his fourth edition (1527) from the Complutensian text.

The Aldine edition (1518) was founded on the text of Erasmus. This was followed by many others, which it is unnecessary here to particularize.

In 1546 appeared the first, or *O mirificam* edition, of Robert Stephens, 16mo. This principally followed the Complutensian text, compared with that of Erasmus. The second edition (1549) gives nearly the same text. But the third edition (in folio, 1550), which is the most beautiful of all Stephens's editions, had for its basis Erasmus's fifth edition, of which indeed it was little more than a reprint. With this, however, he collated fifteen MSS. in the Royal Library, together with the Complutensian text, adding in the margin their various readings. These MSS. have been identified, one of them being the Cambridge MS. or Cod. Bezæ (D), with another uncial MS. of the ninth century, still in the Royal Library of Paris. Stephens's fourth edi-

tion was published in 1551, and another by his son Robert in 1569.

In respect to all these editions, observes Hug, the editors seized upon the best MSS. in their vicinity, without the slightest knowledge of the critical stores which were within their reach in the obscurity of libraries, of the various critical phenomena occurring in the New Testament, or of the proper principles on which to proceed. They acted without plan, took MSS. at haphazard, and amended them according to their fancy. They belong therefore to the history of Biblical literature and of the typography and cultivation of the sixteenth century, but they are of no use in the criticism of the New Testament, except in tracing back to their origin the mistakes and false readings in our printed editions. The other editions, for a considerable time after this period, were little more than reprints of the Stephanian, Complutensian, and Erasmian editions. The Complutensian was that adopted by Plantin and the editor of the Paris and Antwerp polyglotts; the Erasmian by Cephalæus and others. The most distinguished of the Erasmian are those of Boyard in 1543, and of Colinæus in 1534, the latter with the aid of some MSS. in the Royal Library and that of St. Victor. For the other editions see Hug's *Introd.* § 57.

The first attempt at a critical edition was by the celebrated Theodore Beza, who used for this purpose the collations made for Robert Stephens by his son Henry. His first edition was published in 1565, and his second in 1576, which were followed by those of 1582, 1589, and 1598. He made use of nineteen MSS. (including, for his third edition, the Cambridge and Clermont, both uncials), as well as an Arabic, and the Syrian Peschito version, which had been published by Widmanstadt in 1555. 'It has been Beza's lot to be frequently much commended, and frequently much censured, both with equal reason' (Hug's *Introd.*). No principles, however, had yet been established for reducing to practice his scanty materials. Beza's editions were the basis of Elzevir's, or the Textus Receptus, the first edition of which was published in 1624, and the second in 1633. In the preface it is announced, 'Textum habes ab omnibus receptum in quo nihil immutatum, aut corruptum damus.' There were in all five editions published from this 'infallible press,' amounting to 8000 copies. A new edition was published, with marginal various readings by Curcellæus, in 1633, previous to which there was a splendid reprint of it published by the Roman-catholic editor J. Morinus, at Paris in 1628. This was followed by the editions of Gerhard von Maestricht and Bœcler, in 1711, 1715 and 1760. Walton, however, in the Polyglott, adhered to the third edition of Stephens, adding the various readings of the Codex Alexandrinus (1657).

Bishop Fell's edition of 1625 prepared the way for that of Dr. John Mill, the first truly critical edition (1707), the basis of which was the third of Stephens, whose text he adopted. He furnished the various readings of many MSS. hitherto uncollated, making use of all the ancient versions and the citations of the fathers. He prefixed valuable Prolegomena, but only survived a few days the publication of his work, which commenced an entirely new era in sacred criticism. A new edition was published by Küster, who himself collated for the work the Codex Bœrnerianus of St. Paul's Epistles (1710). [See Vulgate.]

The first of the Germans who engaged in the laudable undertaking of giving a more correct text of the New Testament, was the excellent and conscientious Bengel, a man of great genius in this department, who simplified criticism by classifying all the manuscripts into two distinct *families*, the African and the Asiatic, to which Griesbach afterwards gave the name of *recensions*. The chief value of his work consists in his 'Apparatus,' for he made no change in the *Textus Receptus*, and makes a merit of introducing no reading which had not been already *in print*. His edition was printed at Tübingen in 1734.

Our limits will not allow us to dwell on the peculiar merits of John James Wetstein, whose splendid edition appeared in 1751. He collated all the MSS. used by his predecessors, together with many others, including C., or the Codex Ephræmi. His Prolegomena furnish a rich treasure to the Biblical student. Herein he first denominated the various MSS. by the letters of the alphabet, by which they are still known. He made, however, no alteration in the old printed text. The first who successfully entered this field was the celebrated J. J. Griesbach, whose edition, published in 1775-1777, ushered in the 'golden age' of criticism. Whatever difference of opinion exists as to the correctness of his text, all are agreed in commending his untiring zeal and strict conscientiousness in this department. The various readings which he had collected rendered his edition the most perfect of its kind which had yet appeared. 'With this work,' observes Hug, 'he adorned the evening of a laborious and praiseworthy life, and left behind him an honourable memorial, which may perhaps be surpassed in respect to the critical materials it contains (for these are daily increasing), but hardly in regard to elaborate and accurate criticism.' The peculiarity of Griesbach's *text* (as distinct from his edition) consists in the preference he gives to what he considers the Alexandrian or Oriental readings. In this he has met with a zealous antagonist in the indefatigable Professor Scholz, of Bonn, an eminent critic of the Roman church, who has, in his edition of 1830-35, represented the so-called Constantinopolitan or common text of the modern MSS., to which he attaches a decided preference. To the 674 MSS. of Griesbach he has added no less than 607, which he has the honour of having first made known, but which he has but cursorily and *superficially* inspected, rendering further investigation more indispensable than ever. The Constantinopolitan text, which he merely assumes, from what he considers its internal excellence, as well as from its being the public and authorized text of the Greek church, to correspond with the autographs of the sacred writers, approaches to that of Elzevir, from the accidental circumstance that the earlier editors made use of materials chiefly of this class. Many, who are disposed to adopt his theory from its simplicity, and its satisfactory explanation of the phenomena of the case, are unwilling to commit themselves to all his details. An English scholar and divine, the latest who has treated of this subject, although disposed to favour

Scholz's theory, conceives that his historical demonstration of the truth of his system is likely to carry conviction to few who really know what historical demonstration means, and that on the point of internal evidence his edition is a decided failure. He concludes his valuable observations with expressing his regret that Scholz's edition should have been received in England with a degree of consideration to which it has slender claims. 'I fully,' he adds, 'admit the value of this critic's exertions as a collator of MSS. I admire his diligence, and venerate his zeal. His theory of recensions I conceive to approximate very near to the truth. But he seems disqualified by a lack of judgment for the delicate task of selecting from the mass of discordant readings the genuine text of Holy Scripture' (*Supplement to the Authorized English Version of the New Testament*, by the Rev. F. H. Scrivener, M.A., London, 1845).

An edition of Scholz's text, but without the apparatus, was published by Mr. Bagster, in his *Hexapla*, in 4to., in 1841; and another neat edition in 12mo., accompanied with the English version, and the principal variations of Griesbach's text (without a date) in 1843. The anonymous editor of this Testament has, however, departed from Scholz's punctuation and divisions into paragraphs. (Comp. 1 Tim. iii. 15).

Scholz's system of recensions has met with a powerful antagonist in Tischendorf, in his *Prolegomena* to his portable and comprehensive edition of the New Testament, published at Leipsic, in 1841. Tischendorf has furnished the Alexandrian text with the most remarkable various readings, and an excellent critical apparatus. His work is considered by De Wette to be hastily executed. He was the first to apply the St. Gall MS. to the criticism of the Gospels. The theories and criticisms of Vater, Tittmann, Lachmann and others have been referred to in another article. Lachmann rejects all former theories, and admits no MS. which does not represent the text of the first four centuries. He has added to his edition a most valuable text of the Vulgate, which he has formed for himself from two ancient MSS.; and agreeing with Eichhorn and Dr. Wiseman, that the first Latin version was made in Africa, he devotes a large share of attention to the collection of its fragments.

We may now reasonably hope, from the vast accession which is daily making to our stock of materials, that we are approaching the means of forming a more correct estimate of the true state of the text than it has been hitherto our lot to enjoy.

We shall next treat of the divisions and marks of distinction in the several books.

The *divisions of the Hebrew text*, as they are now found in the printed Bibles, have descended from a very remote antiquity. The sections called *parashes* (פרשיות), or paragraphs, are noticed in the Talmud, and were therefore in existence anterior to the times of the Masoretes, whose textual labours, it will be recollected, commenced in the sixth century. Of these *parashes* (*divisions*) the Pentateuch contains 669. They are of two sorts, greater and smaller, or open and shut paragraphs. The *open* paragraphs (פתוחות *petuchoth*) are so called because they commenced the line; and the others סתומות, or *shut*, because they were separated within the line by a space or break. They are also marked in the common MSS. with the initials פ or ס, and the former by a triple space. In the synagogue rolls they are distinguished by spaces merely (which was probably the only aboriginal note of division), and not by those initial letters, and they are in the Talmud referred to Moses himself as their author. There is a similar division, marked by spaces only, in the *Prophets* and *Chethubim*, which are also referred to in the Talmud. These divisions (sometimes called *pisqua*) are found even in some of the hymns which are stichometrically arranged, viz. Judg. v.; 2 Sam. xxii.; Exod. xv.; but they are wanting in those contained in 1 Sam. xxiv. and 2 Sam. i.; and they sometimes even occur in the middle of the verse. Each separate *psalm* is also called in the Talmud a *parash*, as well as each portion of the cxixth Psalm. In the book of Job the transitions from prose to verse, as well as the commencement of Elihu's speech, are marked in the MSS. by a larger space, and everywhere else in the same book the change of speakers is marked by a smaller (Hupfeld, *Ausfürliche Grammatik*). In addition to these there are found in the MSS. of the Pentateuch larger sections, of which there are fifty-four in number, and of which one is read in the synagogues on every Sabbath Day. These are sometimes called *sidarim* (סדרים); they are not mentioned in the Talmud, and appear to have had their origin in the Masora. The smaller sections have been made use of as far as possible for the purpose of dividing the Sabbath lessons among several readers. They have sometimes been considered as subdivisions of the larger sections. When the Sabbath lessons coincide in their commencement with the *parashes*, they are marked with a triple פ פ פ or ס ס ס, according as these are *open* or *shut*. There is one only (Gen. xlvii. 28) which has no space before it. There is also another division, into *sidarim*, found in the Rabbinical Bible of Ben-chaijim, printed in 1525, the number of which amounts in the whole Bible to 447. There is some diversity in the MSS. in the use of the initial letters for marking open and shut sections (see Leusden, *Phil. Heb.*, diss. iv.), and there are further divisions of the text marked by spaces only, several of which are identical with the modern or Latin chapters of the thirteenth century. These sections were divided into פסוקים, short sentences, or *verses*, regulated by the sense [Verse], and the number of *sidarim* or larger sections in each book, together with the number of verses in each, was noted at the end of the book in the Masoretic copies. In Buxtorf's Rabbinical Bible the number of verses is marked at the end of each section. There is also, in the prophetical books, a corresponding division into, or rather selection of, הפטרות (*Haphtaroth*) or Sabbath lessons, from הפטרה, a word nearly synonymous with the Latin *missa*, or dismissal, because the people were dismissed when these were read. These הפטרות are also mentioned in the *Mishna*. They are written each on a separate roll.

The divisions found in the MSS. of the ancient Greek, Latin, and other versions are different from these, and more resemble the Ammonio-Eusebian κεφάλαια or *capitula* of the MSS. of the New Testament, which we shall

presently refer to. We find traces of these in the Old Testament in the *Codex Alexandrinus*, where, however, they are confined to the former part of Deuteronomy, and the middle of the book of Joshua. Thus Deut. i. 9 is marked with a ϛ, denoting the second *capitulum*, commencing with καὶ εἶπε; the third *capitulum* commences with our 19th verse; the fourth with our 40th; the fifth with ch. ii. 1; the sixth with ch. ii. ver. 7; the seventh with ver. 14, and the eighth with ver. 24. The numbers are placed in the margin, and the *capitula* commence the line with a capital letter. That such divisions were very ancient is further evident from Tertullian (*Scorpiac.* 2), who, after reciting Deut. xiii. 1-5, proceeds to cite the passage commencing with the next verse, as 'another chapter' (*capitulum*). And Jerome observes that a capitulum had ended in the Sept. where it began in the Hebrew (in Mic. vi. 9; Soph. iii. 14; and *Quæst. Heb.* Gen. xxv. 13–18). In the *Monument. Eccles.* of Cotelerius, Deut. xxv. 8 is cited as the ninety-third capitulum; from which it appears that there were more than one hundred of these short sections in the book of Deuteronomy. Exod. xx. 1 is, in the same document, cited as the sixty-third capitulum, and xx. 22 as the sixty-eighth; also Lev. xxv. as the hundred and twentieth, and Num. xxxv. as the hundred and thirty-seventh. This latter book, therefore, was divided into about one hundred and forty chapters.

In the *Cod. Alex.* the first number noted in Joshua is 12 (ιϐ), coinciding with our ch. ix. 3; the thirteenth commences with ch. x. 1; the fourteenth with ch. x. 16; the fifteenth with ch. x. 29; the sixteenth with ch. x. 31; the seventeenth with ch. x. 34; the eighteenth with ch. x. 36; and the nineteenth with ch. x. 38. The twentieth corresponds with the commencement of our chapter xi.; the twenty-second with our ch. xi. 16; the twenty-third with ch. xi. 21; the twenty-fourth with ch. xii. 1; the twenty-fifth with ch. xii. 4; the twenty-sixth with ch. xii. 7; the twenty-seventh with ch. xiii. 1; the twenty-eighth number is omitted; the twenty-ninth corresponds with ch. xiii. 24; the thirtieth with ch. xiii. 29; the thirty-first with ch. xiv. 1; the thirty-second with ch. xiv. 6; the thirty-third with ch. xviii. 1; the thirty-fourth number is omitted; the thirty-fifth answers to ch. xviii. 8; the thirty-sixth is omitted; the thirty-seventh answers to our ch. xviii. 10; the thirty-eighth to ch. xix. 17; and here the numeration of this ancient codex ends. The above comparison will probably serve to convey to the reader a correct view of the ancient system of capitulation, which appears to be sufficiently unequal and arbitrary, some chapters being comparatively long, and others not exceeding in length one of our present verses. The only other numbers in this codex are those of the Decalogue, in Exod. xx., of which the fourth, fifth, and sixth commandments only (according to the Origenian or Greek division), are numbered, with the letters γ, δ, and ϵ (3, 4, and 5), as in the Latin and Lutheran communions. In the Vatican MS. there exist only the remains of a very obscure division, which is confined to the four prophets (see *Pref. to Roman ed.*) [Decalogue].

In the Aldine edition of the Septuagint and Greek Testament the only capitulated portions are the books of Ezra, Esther, Tobit, Judith, and Job, the first of which is divided into 80 chapters (κεφάλαια); the second into 55; the third into 93; the fourth into 63; and Job into 32. These are all numbered in the margin; and at the beginning of each book (except Tobit and Judith) is a table containing the numbers and the few first words of each κεφάλαιον, thus showing the design and use of the enumeration. These, but no other books (except the Pentateuch, Joshua, Judges, Ruth, and Chronicles), have the Latin chapters, only in Chronicles they are sometimes of double length.

The Latin version of St. Jerome, as published by Martianay, has a somewhat similar division into sections, there designated *tituli*, *capitula*, and *breves*. These are all of unequal and arbitrary length, and at the commencement of each book is a *breviarium* or index, referring to the numbers of the tituli, capitula, and breves, and containing a short *lemma* or abstract of the contents of each. These divisions are confined to the Pentateuch, Joshua, Samuel, and Kings, the two latter books being furnished with titles only. Genesis, *e. g.* has 46 breves, 70 capitula, and 38 titles; and Kings has 222 titles. Each of these has its argument prefixed. These divisions generally commence at the same place, and are sometimes identical. Thus the first *brevis* in Genesis is entitled, 'De lucis exordio, et divisione tenebrarum a luce, et secundâ die' [ch. i. 1-5]; the first *capitulum*, 'De die primo in quo lux facta est' [also vers. 1-5]; and the first *titulus*, 'De creatione mundi et plasmate hominis' [vers. 1; iii. 20]. Exodus contains 18 titles, 21 breves, and 138 capitula or chapters; Leviticus 16 titles, 16 breves, and 88 chapters; Numbers 20 titles, 74 breves, and 97 chapters; Deuteronomy 19 titles, 142 breves, and 155 chapters; Joshua 11 titles, 32 breves, and 110 chapters; Judges 8 titles, 18 breves, and 50 chapters; Samuel 137 titles, and Kings 220. The books of Chronicles are divided into short sentences resembling our verses.

In later manuscripts of the Latin Vulgate there is found a continuous capitulation, carried through the whole books, canonical and uncanonical. Of these the Charlemagne MS. is an example. This valuable document, now the property of the British Museum, has the following divisions:—Genesis contains 82 capitula, Exodus 139, Numbers 74, Deuteronomy 45, Joshua 33, Judges 18 (Ruth is not capitulated), 1 Kings contains 26, 2 Kings 18, 3 Kings 18, 4 Kings 17. There is no capitulation of Isaiah, Jeremiah, Daniel, the minor prophets, nor Job, but the paragraphs in these books commence the line with rubricated capitals. The prayer of Jeremiah is divided into sentences, numbered in the margin with Greek letters; and the numbers of the Psalms are also attached in the margin, and each psalm separated by the point ·.· . The Proverbs are divided into 59 chapters, but there are 60 noted in the table of contents. The 59th chapter is entitled, *Sacramentum de muliere forte*, and the 60th, *Retributio de fructibus manuum*. Ecclesiastes contains 31 chapters; the Song of Solomon is not capitulated, but in the body of the text there are rubricated titles, as Vox Ecclesiæ, Vox amicorum, Vox Christi, &c.; Wisdom has 18 capitula, and Ecclesiasticus 127. There is no division whatever in Chronicles, Ezra, or Nehemiah, but there occur a few in the latter part of Esther, with Jerome's notes, commencing with a rubri-

cated capital. There are no divisions in Tobit or Judith, except unrubricated paragraphs, and the portion answering to our present 19th chapter of Tobit, which commences with a red letter. 1 Maccabees contains 61 chapters, and 2 Maccabees 55.

In the New Testament Matthew contains 81 chapters, Mark 46, Luke 73, John 35, and Acts 74. The Epistle of James has 20, 1 Peter 20, and 2 Peter 11, Rom. 51, 1 Cor. 62, 2 Cor. 28, Gal. 37, Eph. 31, Phil. 18, 1 Thess. 25, 2 Thess. 8, Coloss. 31, 1 Tim. 28, 2 Tim. 25, Titus 10, Philem. 4, Heb. 38. After this follows the Epistle to the Laodiceans, which is not capitulated. Then follows the Apocalypse, containing 22 chapters. All the capitulated books are preceded by the capitulation or table of the contents of each chapter, except the Apocalypse, the table prefixed to which contains, instead of such summary, the few first words of each division. The Gospels are marked with the Eusebian canons, and besides the Ammonian numbers, the initial of each evangelist's name referred to in the canons is attached. The Pauline Epistles have also a canon prefixed containing the parallel passages. This is probably the canon which James Faber of Etaples erroneously ascribed to Ammonius (Zucagni, *Monumenta*).

The Decalogue is divided according to the Hieronymian (the same as the Greek) division, with the number of each commandment prefixed, and the table of contents contains the following summary:

Verba legis quæ precepit Dominus custodire.

I. Non erunt tibi dii alii absque me.

II. Non facies tibi idolum neque ullam similitudinem.

III. Non sumes nomen Domini tui in vanum.

IV. In mente habe diem Sabbatorum.

V. Honora patrem tuum et matrem.

VI. Non occides. VII. Non mœchaberis.

VIII. Non furtum facies. VIIII. Non dices falsum testimonium.

X. Non concupisces uxorem proximi tui, neque aliquid ejus.

Later MSS. have the numbers of the capitula inserted in the body of the text; and after the invention of the Latin chapters, the numbers of these latter are placed in the margin. In one of those in the British Museum, Harl. 5021 (written on vellum in the 13th century), the capitulation of which is not completed, Genesis contains about 70 chapters, Exodus 140, Leviticus 24, Numbers 72, Deuteronomy 156, Joshua 34, Judges * * *, Ruth 4, 1 and 2 Kings 96, 3 Kings 56, 4 Kings * * *, 1 Chronicles * * *, 2 Chronicles 20, Ezra 36, Judith 23, Esther 11, Tobit 15, 1 Macc. 57, and 2 Macc. 56.

Divisions of the New Testament. The most ancient MSS. of the New Testament which have descended to our times also contain numerous divisions of the text. Of these the most ancient marked by numbers, are the *Ammonian* chapters, to which the Eusebian canons were afterwards attached,—the larger chapters, pericopæ, or *titles*,—the church-lessons, and other peculiar divisions. Besides these are paragraphs marked by capitals commencing the line, and stichometrical divisions or verses [Verse].

Κεφάλαια, or chapters. We find divisions under this name extant in the time of Tertullian (*Ad Uxor.* 2; *De Pudicit.* xvi.; and *De Carn. Christ.* xix.), who calls by the name of capitulum the phrase 'non ex sanguine, neque ex voluntate viri, sed ex Deo nati sunt.' They are also mentioned in A.D. 260, by Dionysius of Alexandria (ap. Eusebium, *Hist. Eccles.* vii. 25), who observes that some have attempted to refute the Apocalypse, criticising every *chapter*, and pronouncing it unintelligible (see Revelation; also Stuart's *Commentary on the Apocalyse*, 1845, § 17).* But the earliest division of which we can speak with historical accuracy is that of Ammonius, the deacon of Alexandria, who published his *Monotessaron*, or *Harmony of the Gospels*, in the middle of the third century. Cæsarius, the brother of Gregory Nazianzen, observes of these (*Dial.* i.), that there are four Gospels containing 1162 chapters; and Epiphanius (*Ancor.* c. 50) makes the same enumeration. These divisions are accurately marked in the margin of several ancient MSS. But the numeral notations were adopted, not for the purpose of reference, or of facilitating citation, according to the usage of modern times, but merely as a companion to the author's harmony or abridgment of the Gospels; of these chapters St. Matthew's Gospel contains 355, St. Mark's 235, St. Luke's 342, and St. John's 232. It has been supposed that this division was confined to Ammonius' own copy, and not generally published (Mill's *Proleg.*); but this copy happening to fall into the hands of Eusebius of Cæsarea, he conceived the idea of forming a perfect Diatessaron by the help of those divisions and the numerals which Ammonius had placed in the margin of his copy (See Eusebius, *Letter to Carpianus*). He for this purpose reduced all the chapters to ten classes, and arranged them in ten tables or canons. Eusebius made no new divisions, but confined himself to those numbered by Ammonius. His ten canons thus contain—1. The sections in which the four Gospels agree; 2. Those in which the first three agree; 3. Those in which Matthew, Luke, and John agree; 4. Those in which Mark and John agree; 5. Those in which Matthew and Luke agree; 6. Those in which Matthew and Mark agree; 7. Those in which Matthew and John agree; 8. Those in which Luke and Mark agree; 9. Those in which Luke and John agree; 10. Those which are peculiar to only one of the Evangelists. He then placed additional numeral letters, rubricated, in the margin of the Gospels referring to each canon, viz., α to denote the first canon, ϐ the second, &c. A single glance at the page thus indicates how many of the Evangelists agree in the subject of each chapter, or otherwise; *e.g.* at Matt. iii. 6 (according to the modern division), 'and Jesus, being baptized, went up out of the water,' there will be found in the margin, besides the Ammonian number ιδ, or xiv, the numeral α signifying canon i., in running the eye down which the number of the chapter again occurs, on a line with which will be perceived the corresponding chapter in the three other Gospels, viz., Mark vi.; Luke xiii.;

* This work, which we conceive to be the best treatise on the Apocalypse that has yet appeared in English, was published subsequently to the articles Revelation and Spurious Revelations having gone to press.

John xv.; answering according to the modern division to Mark i. 9-11, Luke iii. 21, 22, and John i. 32-34. The groundwork of the whole is St. Matthew's Gospel, the figures in the margin of which refer to the parallel passages of the other three Evangelists.

The *Monotessaron* of Ammonius is now no longer extant, but in the eighth century, Victor, bishop of Capua, discovered what he believed to be the identical work, of which he made a Latin translation, attaching to it the Eusebian canons. This work having long sunk into oblivion, was discovered by Michael Memler, a printer at Mayntz, in 1521. Wetstein, however, maintained that this could not have been the genuine work of Ammonius, inasmuch as, besides other reasons, the Latin has the four Gospels in one canon, but Ammonius in four, the Latin only indicating the parallel passages of the other Gospels by numerals; the Latin also has the history of the adulteress, which was not known to Ammonius.

Another ancient numerical division is that of the τίτλοι (*titles* or *inscriptions*) also called by the name of *pericopæ* and *chapters* (κεφάλαια). These are distinct in their nature from the former divisions, and like them, are confined to the four Gospels. Of these divisions there are found in St. Matthew's Gospel 68, St. Mark's 48, St. Luke's 83, and St. John's 18. They are called *titles*, inasmuch as there is a short title or summary of the contents of each placed at the top or bottom of the page, together with a numerical reference in the margin to each *title;* and a table of the titles with the number of each is prefixed to the Gospels. Thus the first chapter is entitled περὶ τῶν μάγων (of the wise men), the second περὶ τῶν παιδίων ἀναιρηθέντων (of the slaughtered infants), &c. A chapter (κεφάλαιον), therefore, denotes a larger section, when the table or index of the chapter is prefixed to the MS., but the same word, when the number is only inserted in the margin, without reference to a table of contents or an inscription at the top of the page, denotes one of the smaller or Ammonian chapters (See Simon's *Histoire Critique*).

There is some difference of opinion as to the age of these larger chapters, some ascribing them to the third, others to the fifth or sixth century. From the silence of Eusebius respecting them (*Letter to Carpianus*), it has been deduced that he was unacquainted with them; nor does Chrysostom ever refer to them, but the *titles* referring to the destruction of the Jews are cited by Athanasius in his third *Orat. adv. Arianos*. They could not have been designed for ἀναγνώσεις or church lessons; for, like the Ammonian chapters, there is an immense irregularity in their respective lengths, both the titles and the Ammonian chapters containing a portion sometimes exceeding an hundred, and at other times amounting to but two or three or even one of our modern verses. Neither could they have been designed for the distinction of subjects; for although the title of the chapter for the most part expresses but one subject, the chapter itself contains several, and even the Ammonian chapters sometimes contain several of the larger chapters or titles, or parts of several. Still less was either division ever designed for the purpose of reference or citation, for we never find a single instance of this kind before Euthymius Eugabenus in the twelfth century, who cites passages which he observes are found in the *sixty-fifth*, *sixty-sixth*, and *sixty-seventh* chapters of St. Matthew's Gospel, and the *eightieth* of St. Luke's. The chapters thus cited are the *titles*, not the Ammonian chapters. Mill (*Proleg.*), conceiving that no other object remains to which these larger sections could be applied except that of a harmony, refers them to Tatian the Assyrian, who composed, A.D. 192, his harmony of the Gospels entitled *Diapente*, probably because it included the Gospel of the Ebionites. This work was different in character from the later harmony of Ammonius, being in the form of a diatessaron compiled in the words of the Evangelists. Of this work, which Tatian had written for the benefit of his disciples, Theodoret, bishop of Cyprus in the fourth century, found two hundred copies read in his churches. Mill conjectures that on occasion of this work, Tatian invented the larger chapters, which are marked in the inner margin of the MSS. with capital numerals. We have already perceived that the first of these chapters in St. Matthew's Gospel commences with the journey of the wise men (Matt. ii.); Mark's Gospel commences with i. 23, and Luke's and John's each with our second chapter. The omissions have been accounted for by supposing that the author of these divisions left the commencement vacant in order to supply it with illuminated letters, and that although in the present MSS. the chapters are marked with alphabetical letters in regular order, the author added the titles or inscriptions only in the margin, but that subsequent transcribers transferred them to the top and bottom of the page, placing the numerals by way of reference, which after the year A.D. 500 were added in capital letters in the inner margin (Mill's *Proleg.*). Others account for the omissions by supposing that the numerals were not intended to denote chap. 1, 2, 3, &c., but rather the place of chap. 1, 2, and 3; for as the first section (or title) is placed at the end of the first chapter and the beginning of the second, the title prefixed to chap. 2 must necessarily correspond with A, and that prefixed to chap. 3 with B, which marks the second section (See Rumpæus, *Commentatio Critica*).

We have observed that both these divisions are contained in most of the ancient MSS. Thus A, or the Alexandrian MS. (Brit. Mus.), has the Ammonian chapters and numbers, and the Eusebian canons, together with the larger chapters or titles, and the usual index of the larger chapters at the commencement of the Gospels. This MS. has, besides the numeral capitals, a peculiar mark (ϗ) in Matthew and Mark on the left margin; instead of which the *titles* are indicated by a cross, with the usual letter, *rubricated*, in Luke and John. It has the corresponding titles on the top of the page.

C, or the Codex Ephraemi, has, *a primâ manu*, the Ammonian chapters, but has not the Eusebian canons. This circumstance was first noticed by Tischendorf, all former writers having erroneously stated that it contained the Eusebian canons and the titles, and all *a primâ manu*. With respect to these latter, it is remarkable that although there is a catalogue of them prefixed to the Gospels (that to Matthew is lost), there is no indication of them whatever in the text. Of this celebrated codex,

which had been partially collated by Wetstein and Griesbach, a beautiful and accurate facsimile was published by Tischendorf at Leipsic, in 1843, with valuable Prolegomena. A great portion of the writing of this Palimpsest, which had been hitherto illegible, has been restored by a chemical process (see *Codex Ephræmi Syri Rescriptus*. Lipsiæ, 1843, 4to.).*

D, or the Cod. Bezæ, has also, but not *a primâ manu*, the Ammonian chapters and numerals only, without the Eusebian canons. Probably it was intended by the copyist to add these. Bishop Marsh (*Notes to Michaelis*) thinks that the division itself was different from the Ammonian. This MS. has also the ἀναγνώσματα, or church lessons, marked in the margin, but not *a primâ manu*. Z, or the Dublin Palimpsest, corresponds with C in having the Ammonian sections without the canons; it has the titles or larger chapters, of which, however, but a few reminiscences have escaped the ravages of time. There remains, indeed, but one of the Ammonian numbers, viz., in plate xxxiii., No. ροη, [ch. xvii.], and of the titles, the No. ΔΖ at the same place; in plate xvii., at the top of the page, the twentieth title, viz. κ. περὶ τοῦ γενομένου ῥήματος πρὸ . . . Ἰωάννην; and in plate lix. the title περὶ τῶν δέκα παρθένων, but without the number; in plate lxvii. the title τύπος μυστικός; and in plate lxiv. ἄρνησις Πέτρου.

B, or the celebrated Vatican MS., contains neither the Ammonian nor the larger chapters, but has divisions peculiar to itself, distinguished only by red numerals in the margin; of which Matthew contains 170, Mark 72, Luke 152, and John 80; Acts 79, James 9, 1 Peter 8, 1 John 11, and Jude 2. St. Paul's Epistles in this MS. have a peculiar and unique numeration, being capitulated in one continued series, as if they made one book. There are ninety-three chapters, of which fifty-nine extend to the close of the Epistle to the Galatians; then Ephesians immediately commences with ch. lxx., the ten omitted numbers being applied to the margin of the Epistle to the Hebrews, which is placed after those to the Thessalonians. The last part of Hebrews is wanting in this MS., together with the Epistles to Timothy, Titus, and Philemon, and the Apocalypse (Zacagni, *Monumenta*). The Codex Cyprius, and the Codex Regius 62 (Stephens's η), both MSS. of the eighth century, have the Ammonio-Eusebian divisions, and the κεφάλαια, long before which period they had become firmly established, and were adopted into most Greek MSS., as well as into the Latin version. They were inserted in the editions of Erasmus, and in Robert Stephens's beautiful folio edition (1550).

There was an edition of St. Paul's Epistles, with capitular divisions, published at the desire of a certain bishop in the fifth century by Euthalius, the deacon, afterwards bishop of Sulca. Euthalius was not himself the author, but, as he informs us, a Syrian bishop, 'one of the wisest of the fathers,' who also wrote an ἔκθεσις, or summary of the contents of each chapter. The anonymous author is conjectured by Mill, with much probability, to have been no other than the celebrated commentator, Theodore of Mopsuestia. This edition had been completed on the 29th June, A.D. 396. The following are the divisions which it contains:—Romans 19 chapters, 1 Cor. 9, 2 Cor. 11, Gal. 12, Eph. 10, Phil. 7, Col. 10, 1 Thess. 7, 2 Thess. 6, Heb. 22, 1 Tim. 12, 2 Tim. 18, Titus 6, Philem. 2. Euthalius himself, at a later period, published his stichometrical edition of the Acts and Catholic Epistles, at the desire of Athanasius the younger, bishop of Alexandria, in which he himself introduced a similar division and summary of the contents of each chapter. The Acts contained 11 chapters, the Epistles of James 6, 1 Peter 8, 2 Peter 4, 1 John 7, 2 and 3 John 1 each, and Jude 4. Euthalius also subdivided his chapters by marking them with asterisks in rubric, and distinguished the chapters by numeral letters, as we still find them in MSS. of the Euthalian chapters. He also marked the citations from the Old Testament by numerals, as well as by including them in parentheses, and placing the references to the books in the margin. This edition of Euthalius was completed in the year 458.

Another very ancient division, probably the most ancient of all, was that into church lessons, ἀναγνώσματα. It was probably introduced in imitation of the divisions of the Law and the Prophets, which were read in the first Christian assemblies. Euthalius, in his edition, has given the division into church lessons as follows:—Acts contains 16 lessons, James 2, 1 Peter 2, 2 Peter 1, 1 John 2, 2 John 1, 3 John 1, Jude 1, Rom. 5, 1 Cor. 5, 2 Cor. 4, Gal. 2, Eph. 2, Phil. 2, Col. 2, 1 Thess. 1, 2 Thess. 1, Heb. 3, 1 Tim. 1, 2 Tim. 1, Titus 1, Philem. 2. These lessons, or *Pericopæ*, as they are called, in speaking of the lessons of the prophets, by Justin Martyr (*Dial. c. Tryph.*), were regulated by the number of Sundays, to which the additional three were for the festivals of Easter, Whitsuntide, and Christmas. The Gospels had a similar division; but, according as church festivals increased, the number of church lessons increased also, and these were therefore proportionably brief. These divisions are the foundation of our present Epistles and Gospels. At the close of the fifth century, Lectionaries were published in the Western Church, which were divided into Epistolaria and Evangelaria, generally in the order in which the church lessons were read; but these books were not introduced among the Greeks before the eighth century.

All these divisions (viz., the longer and shorter chapters, and the church lessons) are marked in the MSS. by a space or point, and sometimes by both, in the middle of the line, and frequently by commencing the line with a capital letter extending into the margin. But the section itself, in order to save parchment, often commences with a small letter after a point or space in the middle of the line, the line still commencing with a capital letter, which, therefore, is sometimes placed in the middle of a word. The church lessons are also distinguished by the word

* Tischendorf discovered the remains of the transverse line of the Θ in ΟΣ or ΘΣ (1 Tim. iii. 15) in this MS., which had escaped the observation of Wetstein and Griesbach. He is, however, convinced that this, as well as the mark of abbreviation above the ΘΣ, proceeded from the second corrector, who lived in the ninth century. He is satisfied, from personal examination, that ὃς, not θεὸς, was the original reading of the Codex Alexandrinus in the same passage.

ἀρχή, or sometimes A, at the commencement, and τέλος or T. at the end. At the close of the fifth century, Andrew, bishop of Cappadocia, introduced an imitation of the ancient capitular divisions into the Apocalypse, distinguishing it into twenty-four λόγοι, or *sermones*, and seventy-four *titles*. The former were, except in two instances, identical with our present chapters.

The ancient divisions are marked in some of the early printed editions, especially those of Erasmus and Robert Stephens. In the Aldine edition of the New Testament, there is no capitular, nor any division whatever, of either the Gospels or Acts, except occasionally short spaces generally within the line; but some of St. Paul's Epistles are divided into short chapters, with numbers annexed, of which Romans contains 14, 1 Cor. 67, and 2 Cor. 26, where the numeration and division cease.

But all these divisions were superseded in the middle of the thirteenth century by the present division into chapters, the origin of which is involved in some obscurity. Inasmuch as in some of the books of the New Testament, these sections tally with some of the more ancient divisions, Croius (*Observat.*) is anxious to ascribe to them all a more ancient date than is justified by the historical evidence. Among other arguments, he adduces the index to each Gospel ascribed to Theophylact, which contains the present chapters, but this index is evidently a later addition. Bale, Bishop of Ossory, the celebrated antiquarian, with great appearance of probability ascribes these divisions to Stephen Langton, Archbishop of Canterbury in the thirteenth century (*Hist. Eccles.* Cent. xiii. c. 7, 10). Genebrard (*Chron.* iv. p. 644) says that the authors of our present chapters were the scholastics who were perhaps the authors of the Concordance ascribed to Cardinal Hugh of St. Cher, who at this period (A.D. 1262) published his *Biblia cum Postilla*, wherein the references are for the first time made to these divisions. It is certain that their application to this Concordance brought them into repute, and from this period we may date the practice of citing by chapters, which had been hitherto done merely by a reference to the book (see Heb. iv. 7), as was the custom of the Fathers, or to the subject, or some remarkable word therein, as was the case with the Jews and Samaritans. An example of this appears in Mark ii. 26, where 1 Sam. xxi. xxii. is referred to as 'Abiathar,' and xii. 26, 'the bush' refers to Exod. iii.; also Rom. xi. 2, the word 'Elias' refers to 1 Kings xvii.—xix. [See also HAGIOGRAPHA.] In this Concordance, however, there was no reference to a division of *verses*, as Professor Moses Stuart supposes (*Bib. Sac.* No. ii. 1843, p. 264).* The subordinate references were indicated in Hugh's Bible by the capital letters A, B, C, D, E, F, G, placed at equal distances from each other in the margin when the chapters were long, or by a proportionably lesser number of capitals according to the size of the chapters. The references to the verses by their number had its origin at a much later period, viz. in A.D. 1438-45, when Rabbi Nathan wrote his Concordance to the Hebrew Bible, which he named מאיר נתיב, *the illuminator of the path*, נתיבות עולם, *the path of the world*, and אור זרוע, *the light sown*. Those Jews who wished to avail themselves of this Concordance must have marked the references thereto in their MSS. of the Hebrew Scriptures. Dean Prideaux observes that 'the first publishing of Nathan's Concordance happening about the time that printing was invented [1440], it hath since that time undergone several editions,' and Mr. Horne (*Introd.*) follows Prideaux in stating that Nathan, instead of adopting the marginal letters of Hugo, marked every fifth *verse* with a Hebrew numeral; but we conceive this to be an error. Rabbi Nathan's Concordance, which was an adaptation of the Latin Concordance of Peter Arlot, was not printed before A.D. 1523 or 1524, when it issued from Bomberg's press at Venice. It afterwards indeed passed through several editions, and was published in a Latin translation by Anthony Reuchlin, in 1556, fol. at the press of Henry Peter, in Basel. There is also a translation in MS. by Nicholas Fuller, in the Bodleian Library. Now in all these the reference is to the chapter, and to each single verse; or, as Nathan himself expressed it in his preface, 'As I observed that the Latin translation has each book divided into a certain number of sections and chapters, which are not in our [Hebrew] Bibles, I have therefore marked all the verses, according to their numbers, together with the number of each chapter; I have also marked the numbers of the verses, as they exist in our [Hebrew] Bibles, for the greater facility of finding each passage referred to.' We have examined ourselves attentively all the early printed editions of the Hebrew Bible, and while we find the Latin chapters marked with Hebrew letters in all those editions, commencing with Bomberg's of 1518 (for Jahn is mistaken in stating (*Introd.* §. 102) that the chapters were first marked in Bomberg's edition of 1525), we yet find no edition of the Hebrew Bible in which there is any reference to the verses by their numbers before the edition of the Pentateuch, Megilloth, and Haphtaroth, published at Sabionetta in Italy in 1557, 12mo. In this edition every fifth verse is marked with a Hebrew numeral, and De Rossi observes of it, 'Me quidem judice prima omnium hæc est editio, saltem primorum una in quibus hoc obvium est' (*Annales Typog. Sabionet.*, 1788). And every fifth verse is equally marked throughout the whole Bible in the edition of Plantin, printed in 1566. Sebastian Munster, in his edition (1534), marked the number of the chapters in Latin as well as Hebrew numerals in the margin. The chapters were first separated in Hebrew in Plantin's beautiful edition of 1574. In this edition each separate verse of the first twelve chapters of Genesis is also marked in the margin with an Arabic numeral, except the fifth verse, which is indicated as before by a Hebrew letter, after which the Latin numeration of verses is discontinued throughout the whole of the Old Testament. Pagninus, however, had long before, viz. in 1528, marked all the verses in his translation of the Bible with an Arabic figure in the margin opposite each verse. Although this practice had, after Robert Stephens's edition of the Latin Vulgate in 1555, become general both in this and the modern versions, it was not until the year 1661 that the whole

* Notice of Hahn's ed. of Titmann's text of the New Testament, stereotyped at New York, 1842, under the care of Professor Robinson.

Hebrew Bible was thus marked, when Athias introduced the Arabic figures opposite each verse, at the instigation of Leusden (see his *Philol. Heb.*) in his accurate edition published at Antwerp in that year.

The Latin chapters were not adopted by the Greeks before the fifteenth century, when they were first introduced by those Greeks who fled into the west after the taking of Constantinople by the Turks in 1453. It was in this century, and generally in Italy, that most of the MSS. now extant of the Greek Testament were written, and this fact is of material importance in fixing the date of MSS. Thus we have already observed [JOHN, EPISTLES OF] that the *Codex Montfortianus* (which most suppose to be the *Cod. Britannicus* of Erasmus; see Davidson's *Lectures on Biblical Criticism*) contains the Latin chapters; but we are enabled to add, on the authority of a letter which we have received from Dr. Todd, the librarian of Trinity College, Dublin, that these divisions are not marked by their number, but only by a space left in the text for an initial letter, which letter does not appear to have been in any one case inserted. The numbers of the chapters, indeed, are added in a clumsy way by a recent hand, but the Eusebian numbers are marked with Greek numerals in a coeval hand in good rubric in the margin, as far as Matt. x., and in bad red ink as far as Luke xii., but thenceforward they are discontinued. The paragraphs into which the text of the New Testament has been divided by Bengel, Vater, and others, are a decided improvement on the Latin chapters.

Language of the Scriptures. The old Testament is written in Hebrew [HEBREW LANGUAGE], with the exception of parts of the books of Ezra, Nehemiah, and Daniel, which are in Chaldee [CHALDEE]. The New Testament is written in Greek, or rather in what has been called Hellenistic or Hebraizing Greek. The most Hebraizing book is the Apocalypse, and the most correct Greek the Epistle to the Hebrews; but the voice of antiquity favours the opinion that this was originally written in Hebrew or Aramaic (*Prælectio Theologica*, auctore Gul. Hodge Mill, S. T. P., 1843). A Hebrew original of St. Matthew's Gospel has been also contended for.

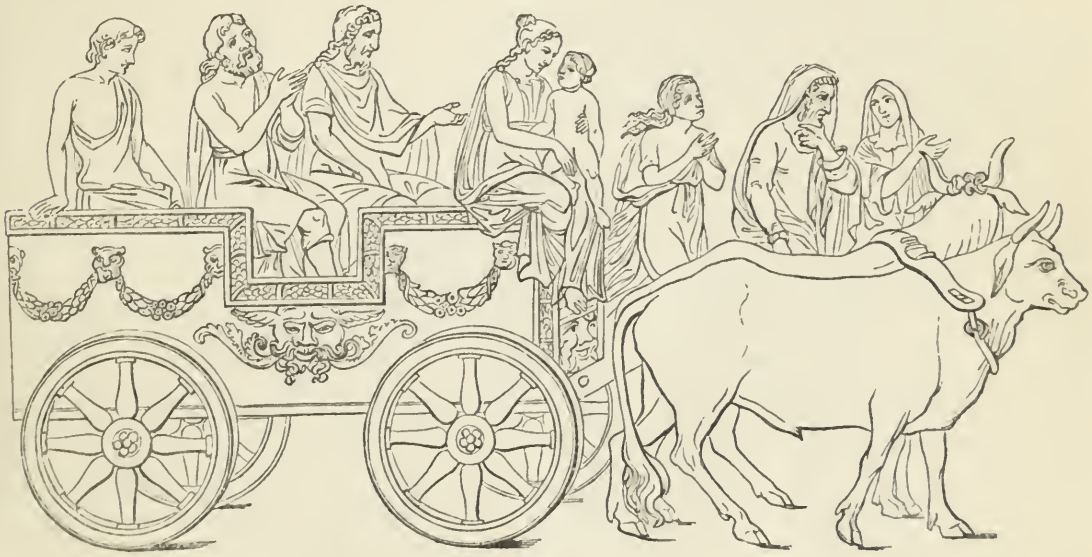
POLYGLOTTS, &c. Among the most useful aids to the study of Biblical Literature must be reckoned the diglott, triglott, and polyglott editions. These are accurately described in Le Long's *Bibliotheca Sacra*, and Simon's *Histoire Critique*. We shall confine ourselves to a brief notice of the *Polyglotts*.

Although the earliest specimen of a Polyglott was that of a projected work of the celebrated printer Aldus Manutius, of which one page only was published, the first of this kind was the COMPLUTENSIAN POLYGLOTT, entitled *Biblia Sacra Polyglotta, nunc primum impressa*, &c., comprised in 6 vols. fol. We are indebted for this work to the celebrated Cardinal, Statesman, and General, Francis Ximenes de Cisneros, who published it at his own expense, at the cost of 50,000 ducats. It was commenced in 1502, completed in 1517, and published in 1522. The editors were Ælius Antonius, Ducas, Pincianus, Stunica, Zamora, Coronellus, and Johannes de Vergera. The three last were originally Jews. The first four volumes contain the Old Testament, with the Hebrew, Latin, and Greek, in three columns, the Targum, and a Latin version of the same. The fifth volume contains the Greek Testament, with the Latin Vulgate. The last volume consists of Vocabularies, Indexes, &c. &c. The Greek Testament, as has been already observed [JOHN'S EPISTLES], was finished in 1517; but the MSS. were modern, and not of much critical value. (See Dr. Bowring's letter, *Monthly Repository* for 1827, p. 572). There is little doubt that the celebrated text of the three witnesses in this edition was translated from the Latin. There were 600 copies only printed of this splendid work, of which three were on vellum. One of these was sold in England, in 1829, for 600 guineas.

The *Antwerp Polyglott* was published in 1569-72, in 8 vols. fol., at the expense of Philip II., King of Spain. It contains, in addition to the Complutensian texts, a Chaldee Paraphrase, the Syriac version, and the Latin translation of Arias Montanus, which was a correction of that of Pagninus. It also contains lexicons and grammars of the various languages of the originals and versions.

The *Paris Polyglott*, in addition to the contents of the former works, has a Syriac and Arabic version of both the Old and New Testaments, with the Samaritan Pentateuch, now published for the first time, and edited by J. Morinus. This Polyglott also contains the Samaritan *version* of the same. It was published in 1645, in 10 vols. large folio. The editor of this valuable, but unwieldy work, was Michael le Jay, who was ruined by the publication.

The *London Polyglott*, edited by Brian Walton, afterwards Bishop of Chester, is much more comprehensive than any of the former. It was published in 1657, in 6 vols. fol. The first vol., besides prolegomena, contains the Pentateuch, exhibiting on one page the Hebrew text, with the interlinear Latin version of Arias Montanus, the Latin Vulgate of the Clementine edition, the Septuagint of the Roman edition, and the various readings of the Cod. Alex., the Latin version of Flaminius Nobilius, the Syriac, with a Latin version, the Targum of Onkelos, with a Latin version, the Samaritan Pentateuch, with the Samaritan version of the same, and a Latin translation serving for both, and the Arabic, with a Latin version. The second volume comprises the historical books, with the Targums of Jonathan. The third volume contains the books from Job to Malachi, and, besides the versions in all the former languages, the Psalms in Ethiopic, and a Latin translation. The fourth volume has all the Dutero-canonical books in Greek, Latin, Arabic, and Syriac; the two Hebrew texts of Tobit [TOBIT], and two Chaldee and a Persian Targum on the Pentateuch, with Latin versions. The fifth volume has the New Testament, with Arias Montanus's translation; the Syriac, Persic, Latin Vulgate, Arabic, and Ethiopic versions. These, with separate Latin versions of the oriental translations, are all given on one page. The sixth volume contains various readings and critical remarks. The whole of this stupendous labour was completed in four years. It was published by subscription, under the patronage of Oliver Cromwell, who died before its completion. This gave occasion to the cancelling of two leaves of the pre-



face, in order to transfer to King Charles II. the compliments addressed to Cromwell. There are, in consequence, both *Republican* and *Royal* copies, the former of which are the most scarce and valuable. For the variations between these, see Butler's *Horæ Biblicæ* and Adam Clark's *Succession of Sacred Literature*. This Polyglott was accompanied by Castell's *Heptaglott Lexicon*, in 2 vols. fol.

Mr. Bagster's *Polyglott*, fol., London, 1831, contains in one volume the Hebrew text, the Samaritan Pentateuch, the Septuagint, Vulgate, and Syriac versions, the Greek text of Mill in the New Testament, together with Luther's German, Diodati's Italian, Ostervald's French, Scio's Spanish, and the English authorized versions of the Bible. The quarto edition, part of the impression of which was destroyed by fire, contains the Hebrew and Samaritan texts, the Greek text of the New Testament, with the Septuagint, Vulgate, and English versions. There are valuable Prolegomena by Dr. Lee.

There are also Polyglotts of several portions of the Bible, of which one of the most valuable is that published at Constantinople. in Hebrew, Chaldee, Persian, and Arabic, in 1546.

—W. W.

485. [A Scythian Family.]

SCYTHIAN (Σκύθης), a name which occurs only in Col. iii. 11. It was anciently applied sometimes to a particular people, and sometimes to all the nomade tribes which had their seat to the north of the Black and Caspian seas, stretching

486. [1. A Scythian. 2. A Scythian General.]

indefinitely eastward into the unknown regions of Asia. It had thus much the same latitude as 'Tartars,' and was in like manner synonymous with Barbarian, Βάρβαρος. The name also occurs in 2 Macc. iv. 47, and Joseph. *Cont. Apion.* ii. 37. The Scythians were, in fact, the ancient representatives of the modern Tartars, and like them moved from place to place in carts drawn by oxen. It is from this circumstance that they, or a tribe nearly allied to them, may be recognised on the monuments of Egypt. About seven centuries before Christ, the Scythians invaded South-Western Asia, and extended their incursions as far as Egypt (Herodot. i. 103). In doing this they could not but have touched on or passed through Palestine: and it is even supposed that Bethshan derived its classical name of Scythopolis from them [BETHSHAN]. It is singular, however, that the Hebrew writers take no notice of this transaction; for we cannot admit that the prophecies of Joel and Zephaniah have reference to it, as some writers have imagined.

SEA. The term יָם *yam*, or 'sea,' was used by the Hebrews more extensively than with us, being applied generally to all large collections of water, as they had not a set of terms such as we employ (defectively, indeed) to discriminate the

* The following important works on this subject have appeared since this article went to press: *A Chronological Introduction to the History of the Church*, &c., by the Rev. S. F. Jarvis, D.D., Historiographer of the [Protestant Episcopal] Church of the U. S., and *The Times of Daniel, Chronological and Prophetical*, by George, Duke of Manchester, London, 1845.

different kinds. 'Sea' for large collections, and 'pool' for smaller, formed the extent of their vocabulary; although, indeed, pools were distinguished into אגם *agom*, a natural pool or pond (Ps. cvii. 35; cxiv. 8; Isa. xxxv. 7; xli. 18, &c.), and ברכה *bereekah*, the same as the Arabic *beerkeh*, an artificial pool or reservoir (2 Sam. ii. 13; iv. 12; Nah. ii. 9). The term 'sea' is applied to various parts of the ocean, and also to lakes, for ים is used for these in Job xiv. 11.

1. The Mediterranean, being on the west, and therefore behind a person facing the east, is called in Scripture the *Hinder Sea* (הים האחרון, Deut. xi. 24; Joel ii. 20), that is, *Western Sea;* and also, 'the *Sea of the Philistines*' (Exod. xxiii. 31), as that people possessed the largest proportion of its shore in Palestine. Being also the largest sea with which the Hebrews were acquainted, they called it by pre-eminence, '*the Great Sea*' (Num. xxxiv. 6, 7; Josh. i. 4; ix. 1; Ezek. xlvii. 10, 15, 20); or simply 'the sea' (Josh. xv. 47).

2. The Red Sea.—This gulf of the Indian Ocean is called in Hebrew ים סוף *Yam Suph* (Exod. x. 19; xiii. 18; Ps. cvi. 7, 9, 22), which is also its Egyptian name, and is supposed to mean 'weedy sea' (Michaelis, *Suppl.* p. 1726; Jablonsky, *Opuscul.* i. 266). This designation has been by some supposed to refer to the quantity of sea-weed found in it. But Bruce, who traversed its whole extent, declares that he never saw any sort of weed in it, and gives it as his opinion that it is from the large trees or plants of white coral, spread every where over the bottom of the sea, and greatly resembling plants on land, that it derived its name. It is also called 'the Egyptian sea' (Isa. xi. 15). In other places, where the context plainly indicates what sea is intended, it is called simply 'the sea.' In the New Testament it bears its usual Greek name, ἡ ἐρυθρὰ θάλασσα (Acts vii. 36; Heb. xi. 29; also 1 Macc iv. 9; Herodot. i. 1; Diod. Sic. iii. 18), whence our 'Red Sea.' How it came by the name of Red Sea is not agreed. Prideaux assumes (*Connection*, i. 14, 15) that the ancient inhabitants of the bordering countries called it *Yam Edom*, or, 'the sea of Edom' (it is *never* so called in Scripture), as its north-eastern part washed the country possessed by the Edomites. Now Edom means *red* (Gen. xxv. 30), and the Greeks, who borrowed the name from the Phœnicians, mistook it for an appellative instead of a proper name, and rendered it by ἐρυθρὰ θάλασσα, that is, 'the Red Sea.' Some information in correction of this notion seems, however, to have been afterwards acquired: for Strabo (xvi. p. 766), Pliny (*Hist. Nat.* vi. 23), Mela (iii. 8), Agatharcides (p. 2, ed. Oxon.), Q. Curtius (viii. 9; x. 1), Philostratus (iii. 15), and others, distinctly admit that the sea obtained this name, not from any redness in its waters, but from a great king called Erythrus, who reigned in the adjacent country. The word Erythrus means the same in the Greek that Edom does in the Phœnician and Hebrew languages; which seems to prove that this king Erythrus was no other than Edom, whose name was given to the country over which his descendants reigned. This explanation seems satisfactory; but Prideaux, from whom we take it, by a very strange confusion of ideas, in an immediately preceding page (i. 10), ascribes the name Red Sea, as applied to *another part* of the Erythræan Sea, to 'the waters appearing of a reddish colour by reason of the fierceness of the sunbeams, constantly beating upon it in that hot climate.' Such a fancy needs no answer, as neither water nor the rays of the sun are the more red for being more hot. Others have conjectured that the Arabian Gulf derived its name from the coral rocks and reefs in which it abounds; but the coral of the Red Sea is white, not red. In so large a tract of shore and water it would be strange if some red objects did not appear, and minds on the watch for some physical cause for the name would naturally refer to circumstances which would not otherwise have engaged attention. Some of the mountains that stretch along the western coast have a singularly red appearance, looking, as Bruce expresses it, as if they were sprinkled with Havannah or Brazil snuff, or brick-dust; and from this a notion is derived that these mountains, presenting their conspicuous sides to the early navigators of the sea, induced them to give it a name from that predominant colour. Salt indicates a fact which affords a basis for another conjecture as to the origin of the name. He says—'At one o'clock on the 7th of February, the sea for a considerable distance around the ship became so extremely red.... As we were anxious to ascertain the cause of this very singular appearance, a bucket was let down into the water, by which we obtained a considerable quantity of the substance floating on the surface. It proved to be of a jelly-like consistence, composed of a numberless multitude of very small mollusca, each of which having a small red spot in the centre, formed, when in a mass, a bright body of colour nearly allied to that produced by a mixture of red lead with water.' This account has been more recently confirmed by Ehrenberg.

The ancients applied the name of Erythræan Sea not only to the Arabian Gulf, but to that part of the Indian Ocean which is enclosed between the peninsulas of India and Arabia; but in modern usage the name of Red Sea is restricted to the Arabian Gulf, which enters into the land from the Indian Ocean in a westerly direction, and then, at the straits of Bab-el-Mandeb, turns N.N.W., maintaining that direction till it makes a near approach to the Mediterranean, from which its western arm is only separated by the isthmus of Suez. It thus separates the western coast of Arabia from the eastern coast of the north-eastern part of Africa. It is about 1400 miles in length from Suez to the straits, and on an average 150 miles in breadth. On approaching its northern termination the gulf divides into two branches, which enclose between them the peninsula of Sinai. The western arm, which terminates a little above Suez, is far more extensive than the other, and is that which was crossed by the Israelites in their escape from Egypt. An account of this important transaction has been given under another head [Exodus]. This arm, anciently called Heroopoliticus Sinus, and now the Gulf of Suez, is 190 miles long by an average breadth of 21 miles; but at one part (Birket el-Faroun) it is as wide as 32 miles. The eastern arm, which terminates at Akabah, and bears the name of the Gulf of Akabah, was anciently called Ælaniticus Sinus, from the port of Ælana, the Scriptural Elath, and is about 112 miles long by an average breadth of 15 miles. Towards its extremity were the ports

of Elath and Eziongeber, celebrated in the history of the attempts made by the Hebrew kings to establish a maritime traffic with the East [see the several words].

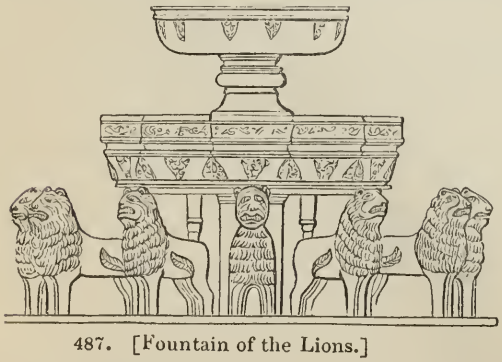
3. The Sea of Chinnereth, יַם כִּנֶּרֶת (Num. xxxiv. 11), called in the New Testament 'the Sea of Galilee' (Matt. iv. 18), the 'Sea of Tiberias' (John xxi. 1), and 'the sea' or 'lake of Gennesareth' (Matt. xiv. 34; Mark vi. 53; Luke v. 17); which last is but a variation of the Hebrew name.

This lake lies very deep, among fruitful hills and mountains, from which, in the rainy season, many rivulets descend: its shape will be seen from the map. The Jordan enters it on the north, and quits it on the south; and it is said that the river passes through it without the waters mingling. Its extent has been greatly over-rated: Professor Robinson considers that its length, in a straight line, does not exceed eleven or twelve geographical miles, and that its breadth is from five to six miles. From numerous indications it is inferred that the bed of this lake was formed by some ancient volcanic eruption, which history has not recorded: the waters are very clear and sweet, and contain various kinds of excellent fish in great abundance. It will be remembered that several of the apostles were fishermen of this lake, and that it was also the scene of several transactions in the life of Christ: it is thus frequently mentioned in the New Testament, but very rarely in the Old. The borders of the lake were in the time of Christ well peopled, being covered with numerous towns and villages; but now they are almost desolate, and the fish and water-fowl are but little disturbed.

The best descriptions of the lake of Tiberias are those of Burckhardt (*Syria*, p. 332), Buckingham (*Palestine*, ch. xxvi.), Irby and Mangles (p. 295), Jowett (pp. 172-176), Hardy (pp. 237-241), Elliott (ii. 342-350), Schubert (iii. 231-240), Robinson (ii. 372-402), Olin (iii. 253, 261-265), Lord Nugent (*Lands, Classical and Sacred*, ii. 209).

4. The Dead Sea, called in Scripture the *Salt Sea*, יָם הַמֶּלַח (Gen. xiv. 3), the *Sea of the Plain*, or the *Arabah*, יָם הָעֲרָבָה (Dent. iv. 40), and *the Eastern Sea*, הַיָּם הַקַּדְמוֹנִי (Joel ii. 20; Ezek. xlvii. 18; Zech. xiv. 8). It is not named or alluded to in the New Testament. It is called by Josephus (*De Bell. Jud.* iii. 10. 7) λίμνη Ἀσφαλτίτης, by which name, or in the Latin form of Lacus Asphaltites, it was known to the classical writers. This designation it obtained from the large quantities of asphaltum which it afforded. The Arabs call it *Birket Lut*, 'the Sea of Lot.' From its history and qualities, it is the most remarkable of all the lakes of Palestine. It was long assumed that this lake did not exist before the destruction of Sodom and the other 'cities of the plain' (Gen. xix.); and that before that time the present bed of the lake was a fertile plain, in which these cities stood. It was also concluded that the river Jordan then flowed through this plain, and afterwards pursued its course, through the great valley of Arabah, to the eastern arm of the Red Sea. The careful observations of Professor Robinson have now, however, rendered it more probable that a lake which, as now, received the river Jordan, existed here before Sodom was destroyed; but that an encroachment of the waters southward then took place, overwhelming a beautiful and well-watered plain which lay on the southern border of the lake, and on which Sodom, Gomorrah, Admah, Zeboim, and Zoar were situated. The promontory, or rather peninsula, towards the south, which is so distinct a feature of this lake, probably marks the original boundary of the lake in that direction, and shows the point at which the waters broke into the plain beyond.

The Dead Sea is about thirty-nine or forty geographical miles long from north to south, and nine or ten miles wide from east to west: it lies embedded very deep between lofty cliffs on the western side, which are about 1500 feet high, and mountains on the eastern shore, the highest ridges of which are reckoned to be from 2000 to 2500 feet above the water. The water of the lake is much salter than that of the sea. From the quantity of salt which it holds in solution it is thick and heavy, and no fish can live or marine plants grow in it. The old stories about the pestiferous qualities of the Dead Sea and its waters are mere fables or delusions; the actual appearances being the natural and obvious effects of the confined and deep situation, the intense heat, and the uncommon saltness of the waters. Lying in its deep cauldron, surrounded by lofty cliffs of naked limestone rock, exposed for seven or eight months in the year to the unclouded beams of a burning sun, nothing but sterility and solitude can be looked for upon its shores; and nothing else is actually found, except in those parts where there are fountains or streams of fresh water; in all such places there is a fertile soil and abundant vegetation. Birds also abound, and they are observed to fly above and across the sea without being, as old stories tell, injured or killed by its exhalations. Professor Robinson was five days in the vicinity of its shores, without being able to perceive that any noisome smell or noxious vapour arose from the bosom of the lake. Its coasts have always been peopled, and are so now; and although the inhabitants suffer from fevers in summer, this is not more than might be expected from the concentrated heat of the climate in connection with the marshes. The same effects might be experienced were there no lake, or were the waters fresh instead of salt.



On the borders of this lake is found much sulphur, in pieces as large as walnuts, and even larger. There is also a black shining stone, which will partly burn in the fire, and which then emits a bituminous smell: this is the 'stinkstone' of Burckhardt. At Jerusalem it is made into rosaries and toys, of which great quantities are sold to the pilgrims who visit the sacred places. Another remarkable production, from which, indeed, the lake takes one of its names, is the *asphaltum*, or bitumen. Josephus says, that 'the sea in many places sends up black masses of asphaltum, which float upon the surface, having the size and shape of headless oxen' (*De Bell. Jud.* iv. 8, 4). From recent information it appears that large masses are rarely found, and then generally only after earthquakes. The substance is doubtless produced from the bottom of the sea, in which it coagulates, and rises to the surface; or possibly the coagulation may have been ancient,

and the substance adheres to the bottom until detached by earthquakes and other convulsions, when its buoyancy brings it to the surface. We know that 'the vale of Siddim' (Gen. xiv. 10) was anciently 'full of slime-pits,' or sources of bitumen; and these, now under the water, probably supply the asphaltum which is found on such occasions.

An admirable and very full account of the Dead Sea is given by Dr. Robinson (*Bibl. Researches*, ii. 216-238). See also Nau (*Nov. Voyage*, pp. 577-588), Morison (*Voyage*, ch. xxx.), Shaw (ii. 157-158), Hasselquist (pp. 130, 131, 284), Burckhardt (*Syria*), Seetzen (in Zach's *Monat. Corresp.* xviii. 440, sq.), Irby and Mangles (pp. 351-356; 446-459), Elliot (ii. 479-486), Stephens (ii. ch. xv.), Paxton (pp. 150-163), Schubert (iii. 84-94), Olin (ii. 234-245).

5. The Lake Merom is named once only in Scripture, where it is called מי מרום, *waters of Merom* (Josh. xi. 5, 7). By Josephus it is called Semechonitis (Σεμεχωνίτις, *Antiq.* v. 5. 1), and at present bears the name of Huleh: this is the uppermost and smallest of the three lakes on the Jordan. It serves as a kind of reservoir to collect the waters which form that river and again to send them forth in a single stream. In the spring, when the waters are highest, the lake is seven miles long and three and a half broad; but in summer it becomes a mere marsh. In some parts it is sown with rice, and its reeds and rushes afford shelter to wild hogs. (Pococke, ii. p. 72; Burckhardt, *Syria*, p. 514; Richardson, ii. 445, 446; Lindsay, ii. 91; Robinson, iii. 339-342.) A full description of the three lakes of the Jordan (Lake Huleh, Lake of Gennesareth, and the Dead Sea) is given in Kitto's *Physical History of Palestine*, ch. vi.

SEA, MOLTEN (יָם מוּצָק). The immense brazen reservoir which, with smaller lavers [Laver], stood in the court of Solomon's temple, was thus, by hyperbole, denominated. It was of a hemispherical figure, ten cubits in width, five deep, and thirty in circumference. In 1 Kings vii. 23, it is stated to have contained 2000 baths, equal to 16,000 gallons; but in 2 Chron. iv. 5, it is said to have contained 3000 baths, and the latter estimate is followed by Josephus. It was probably capable of holding the larger quantity, but did not usually contain more than the smaller.

487. [Fountain of the Lions.]

It was decorated on the upper edge with figures resembling lilies in bloom, and was enriched with various ornamental objects; and it rested, or seemed to rest, upon the backs of twelve oxen, three looking to the north, three to the east, three to the south, and three to the west (1 Kings vi. 26; vii. 40-47; 2 Chron. iv. 3-5). The Jewish writers state that this great basin was supplied with water by a pipe from the well of Etam, although some few allege that it was filled by the manual labour of the Gibeonites. It was, according to the same accounts, kept constantly flowing, there being spouts which discharged for use from the basin as much water as it received from the well of Etam. If this be correct, it is not improbable that the spouts discharged their water through the mouths of the oxen—or, as some suppose, through embossed heads in the sides of the vessel. This is perhaps the largest vessel of molten brass which was ever made—other large reservoirs, which might compete in dimensions with it, being either of wood, marble, or sheet copper. The Fountain of the Lions in the Moorish palace (Alhambra), at Grenada, is of stone, and the animals which support it are lions: but it supplies some remarkable analogies to Solomon's great work, in imitation of which it is said to have been constructed. The conception, and still more the successful execution of this great work, gives a very favourable idea of the state of the metallurgical arts in the time of Solomon.

SEAL. There seem to have been two kinds of seals in use among the Hebrews. A notion appears to exist that all ancient seals, being signets, were rings, intended to be worn on the hand. But this was by no means the case; nor is it so now in the East, where signet rings are still, probably, as common as they ever were in ancient times. Their general use of seals was very different from ours, as they were employed not for the purpose of impressing a device on wax, but in the place of a sign manual, to stamp the name of the owner upon any document to which he desired to affix it. The name thus impressed had the same legal validity as the actual signature, as is still the case in the East. This practice may be illustrated by a circumstance which occurred in the last days of George IV. When he became too ill to affix his sign manual to the numerous documents which required it, a fac-simile was engraved on a stamp, by which it was in his presence impressed upon them. By this contrivance any one may give to any paper the legal sanction of his name, although he may be unable to write; and the awkward contrivance to which we resort in such cases, of affixing a cross or mark with the signature of an attesting witness, is unnecessary. For this purpose the surface of the seal is smeared with a black pigment, which leaves the figure of the body of the seal upon the paper, in which the characters appear blank or white. The characters required are often too large or too many to be conveniently used in a signet ring, in which case they are engraved on a seal shaped not unlike those in use among ourselves, which is carried in the bosom, or suspended from the neck over the breast. This custom was ancient, and, no doubt, existed among the Hebrews (Gen. xxxviii. 18; Cant. viii. 6; Haggai ii. 23). These seals are often entirely of metal—brass, silver, or gold; but sometimes of stone set in metal. As an appendage thus shaped might be inconvenient from the pressure of its edges, the engraved stone was sometimes made to turn in its metal frame, like our swivel seals, so as to present a flat surface

to the body. Very ancient Egyptian seals of this kind have been found.

If a door or box was to be sealed, it was first fastened with some ligament, over which was placed some well compacted clay to receive the impression of the seal. Clay was used because it hardens in the heat which would dissolve wax; and this is the reason that wax is not used in the East. A person leaving property in the custody of strangers—say in one of the cells of a caravanserai—seals the door to prevent the place from being entered without legal proof of the fact. The simplicity of the Eastern locks, and the ease with which they might be picked, render this precaution the more necessary. We have sometimes seen a coarsely engraved and large wooden seal employed for this purpose. There are distinct allusions to this custom in Job xxxviii. 14; Cant. iv. 12.

Signet rings were very common, especially among persons of rank. They were sometimes wholly of metal, but often the inscription was borne by a stone set in silver or gold. The impression from the signet ring of a monarch gave the force of a royal decree to any instrument to which it was affixed. Hence the delivery or transfer of it to any one gave the power of using the royal name, and created the highest office in the state (Gen. xli. 42; Esth. iii. 10, 12; viii. 2; Jer. xxii. 24; Dan. vi. 10, 13, 17: comp. 1 Kings xxi. 8). Rings being so much employed as seals, were called טבעות *tabbaoth;* which is derived from a root signifying to imprint, and also to seal. They were commonly worn as ornaments on the fingers—usually on the little finger of the right hand (Exod. xxxv. 22; Luke xv. 22: James ii. 2).

SEASONS. [Palestine.]

SEBAC (סְבָךְ) occurs in two or three places of the Old Testament, and is considered by some to be the name of a particular plant, as the bramble, smilax, jasmine, atriplex; by others it is supposed to denote briars or thorns. Celsius, however, has shown that the meaning of the term is *perplexitas*, 'id quod densum et intricatum est;' that it is especially applied to the branches of trees, shrubs, and climbing plants, and is hence rightly translated in the Auth. Vers., in Gen. xxii. 13, 'And Abraham beheld a ram caught in a *thicket* (*sebac*) by his horns.' So in Isa. ix. 18; x. 34.—J. F. R.

SECUNDUS (Σεκουνδος), a disciple of Thessalonica, who accompanied Paul in some of his voyages (Acts xx. 4).

SEER. [Prophecy.]

SEIR (שֵׂעִיר, *hairy;* Sept. Σηείρ). 1. A phylarch or chief of the Horim, who were the former inhabitants of the country afterwards possessed by the Edomites.

2. Seir, Mount. The mountainous country of the Edomites, extending from the Dead Sea to the Elanitic Gulf. The name is usually derived from the Seir above-mentioned, and as he was a great chief of the original inhabitants, it is difficult to reject such a conclusion. Some, however, as Gesenius, would rather regard Seir as an appellative, and as denoting 'the shaggy mountain,' *i. e.* clothed or bristly with woods and forests; but this is not, in any marked way, a characteristic of the range in question. These mountains were first inhabited by the Horim (Gen. xiv. 6; Deut. ii. 12); then by Esau (Gen. xxxii. 3; xxxiii. 14, 16) and his posterity (Deut. ii 4, 19; 2 Chron. xx. 10). The northern part of them now bears the designation of Jebal, and the southern that of esh-Sherah, which seems no other than a modification of the ancient name. In modern times these mountains were first visited and described by Burckhardt (*Syria*, p. 40), but they have often since been visited by other travellers, among whom Dr. Robinson has perhaps furnished the best description of them (*Bib. Researches*, ii. 551, 552). At the base of the chain are low hills of limestone or argillaceous rock; then lofty masses of porphyry, which constitute the body of the mountain; above these is sandstone broken into irregular ridges and grotesque groups of cliffs; and again, further back and higher than all, are long elevated ridges of limestone without precipices. Beyond all these stretches off indefinitely the high plateau of the great eastern desert. The height of the porphyry cliffs is estimated by Dr. Robinson at about 2000 feet above the Arabah (the great valley between the Dead Sea and Elanitic Gulf); the elevation of Wady Musa [Selah] above the same is perhaps 2000 or 2200 feet; while the limestone ridges further back probably do not fall short of 3000 feet. The whole breadth of the mountainous tract between the Arabah and the eastern desert above does not exceed 15 or 20 geog. miles. These mountains are quite different in character from those which front them on the other (west) side of the Arabah. The latter seem to be not more than two-thirds as high as the former, and are wholly desert and sterile; while those on the east appear to enjoy a sufficiency of rain, and are covered with tufts of herbs and occasional trees. The valleys are also full of trees and shrubs and flowers, the eastern and higher parts being extensively cultivated, and yielding good crops. The general appearance of the soil is not unlike that around Hebron; though the face of the country is very different. It is indeed the region of which Isaac said to his son Esau: 'Behold, thy dwelling shall be of the fatness of the earth, and of the dew of heaven from above' (Gen. xxvii. 39).

3. A mountain in the territory of Judah (Josh. xv. 10).

SELAH. [Psalms.]

SELAH, or rather Sela (סֶלַע, 'rock,' with the article in 2 Kings xiv. 7, הַסֶּלַע, 'the rock;' Gr. ἡ Πέτρα, Petra, which has the same signification as Selah; sometimes plural, αἱ Πέτραι), the metropolis of the Edomites in Mount Seir. In the Jewish history it is recorded that Amaziah, king of Judah, 'slew of Edom in the valley of Salt ten thousand, and took Selah by war, and called the name of it Joktheel unto this day' (2 Kings xiv. 7). This name seems however to have passed away with the Hebrew rule over Edom, for no further trace of it is to be found; and it is still called Selah by Isaiah (xvi. 1). These are all the certain notices of the place in Scripture; for it may well be doubted whether it is designated in Judg. i. 36 and Isa. xlii. 11, as some suppose. We next meet with it as the Petra of the Greek writers, which is merely a translation of the native name Selah. The earliest notice of it under that name by them is

connected with the fact that Antigonus, one of Alexander's successors, sent two expeditions against the Nabathæans in Petra (Diod. Sic. xix. 94-98). For points of history not immediately connected with the city, see EDOMITES; NABATHÆANS. Strabo, writing of the Nabathæans in the time of Augustus, thus describes their capital:—'The metropolis of the Nabathæans is Petra, so called; for it lies in a place in other respects plain and level, but shut in by rocks round about, but within having copious fountains for the supply of water and the irrigation of gardens. Beyond the enclosure the region is mostly a desert, especially towards Judæa' (*Geog.* xvi. p. 906). At this time the town had become a place of transit for the productions of the east, and was much resorted to by foreigners (Diod. Sic. xix. 95; Strabo, *l. c.*). Pliny more definitely describes Petra as situated in a valley less than two miles (Roman) in amplitude, surrounded by inaccessible mountains, with a stream flowing through it (*Hist. Nat.* vi. 28). About the same period it is often named by Josephus as the capital of Arabia Petræa, with which kingdom it passed under the immediate sway of the Romans in the time of Trajan, whose successor Hadrian seems to have bestowed on it some advantage, which led the inhabitants to give his name to the city upon coins, several of which are still extant (Mionnet, *Med. Antiques*, v. 587; Eckhel, *Doctr. Num.* ii. 503). In the fourth century, Petra is several times mentioned by Eusebius and Jerome; and in the Greek ecclesiastical Notitiæ of the fifth and sixth centuries it appears as the metropolitan see of the third Palestine (Reland, *Palæst.* pp. 215, 217); the last-named of the bishops is Theodorus, who was present at the council of Jerusalem in A.D. 536 (*Oriens Christ.* iii. 725). From that time not the slightest notice of Petra is to be found in any quarter; and as no trace of it as an inhabited site is to be met with in the Arabian writers, the probability seems to be that it was destroyed in some unrecorded incursion of the desert hordes, and was afterwards left unpeopled. It is true that Petra occurs in the writers of the era of the Crusades; but they applied this name to Kerek, and thus introduced a confusion as to the true Petra which is not even now entirely removed. It was not until the reports concerning the wonderful remains in Wady Musa had been verified by Burckhardt, that the latter traveller first ventured to assume the identity of the site with that of the ancient capital of Arabia Petræa. He expresses this opinion in a letter dated at Cairo, Sept. 12th, 1812, published in 1819, in the preface to his *Travels in Nubia;* but before its appearance the eminent geographer, Carl Ritter, had suggested the same conclusion on the strength of Seetzen's intimations (*Erdkunde*, ii. 117). Burckhardt's view was more amply developed in his *Travels in Syria*, p. 431, published in 1822, and received the high sanction of his editor, Col. Leake, who produces in support of it all the arguments which have since been relied upon, namely, the agreement of the ancient descriptions with this site, and their inapplicability to Kerek; the coincidence of the ancient specifications of the distances of Petra from the Elanitic Gulf and from the Dead Sea, which all point to Wady Musa, and not to Kerek; that Josephus, Eusebius, and Jerome testify that the Mount Hor where Aaron died was in the vicinity of Petra; and that to this day the mountain which tradition and circumstances point out as the same, still rears its lonely head above the vale of Wady Musa, while in all the district of Kerek there is not a single mountain which could in itself be regarded as Mount Hor; and even if there were, its position would be incompatible with the recorded journeyings of the Israelites (Leake's Preface to Burckhardt's *Travels in Syria*, pp. vii.-ix.; Robinson's *Palestine*, ii. 576-579; 653-659).

488. [Petra, from above the Amphitheatre.]

The ruined city lies in a narrow valley, surrounded by lofty, and, for the most part, perfectly precipitous mountains. Those which form its southern limit are not so steep as to be impassable; and it is over these, or rather through them, along an abrupt and difficult ravine, that travellers from Sinai or Egypt usually wind their laborious way into the scene of magnificent desolation. The ancient and more interesting entrance is on the eastern side, through the deep narrow gorge of Wady Syke. It is not easy to determine the precise limits of the ancient city, though the precipitous mountains by which the site is encompassed mark with perfect distinctness the boundaries beyond which it never could have extended. These natural barriers seem to have constituted the real limits of the city; and they give an extent of more than a mile in length, nearly from north to south, by a variable breadth of about half a mile. Several spurs from the surrounding mountains encroach upon this area; but, with inconsiderable exceptions, the whole is fit for building on. The sides of the valley are walled up by perpendicular rocks, from four hundred to six or seven hundred feet high. The northern and southern barriers are neither so lofty nor so steep, and they both admit of the passage of camels. A great many small recesses or side valleys open into the principal one, thus enlarging as well as varying almost infinitely the outline. With only one or two exceptions, however, they have no outlet, but come to a speedy and abrupt termination among the overhanging cliffs, as precipitous as the natural bulwark that bounds the principal valley. Including these irregularities, the whole circumference of Petra may be four miles or more. The length of this irregular outline, though it gives no idea of the extent of the area within its embrace, is perhaps the best

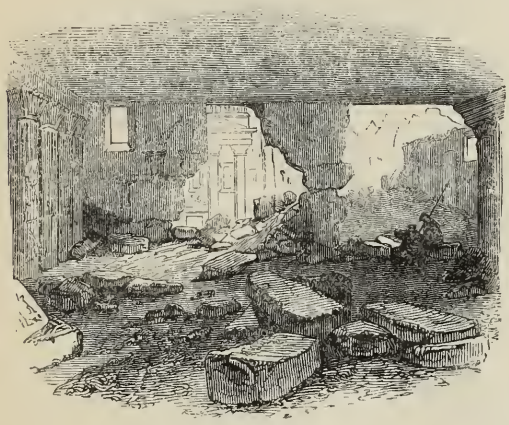
measure of the extent of the excavations. A small stream, or rather mountain torrent, enters the valley from the east through the Wady Syke, and after a course of less than half a mile, passes out nearly opposite to the point of entrance on the western side. This pretty brook flows with a scanty stream within the gorge of Wady Syke, but is usually quite dry after entering the valley. Two smaller streams flow in the season of rain from the gorges of the northern mountain, and join the principal torrent along courses nearly at right angles with it. The bottom of this river, as for distinction it may be called, was paved for the better preservation of its water from waste and filth, and its sides were faced with a wall of hewn stone. Considerable remains of the wall and pavement, and some large flagstones belonging to a paved way that ran along the side of the river, still remain; as do the foundations of several bridges which spanned its channel.

The chief public buildings occupied the banks of the river and the high ground further south, as their ruins sufficiently show. One sumptuous edifice remains standing, though in an imperfect and dilapidated state. It is on the south side of the river, near the western side of the valley, and seems to have been a palace, rather than a temple. It is called Pharaoh's house, and is thirty-four paces square. The walls are nearly entire, and on the eastern side they are still surmounted by a handsome cornice. The front, which looks toward the north, was ornamented with a row of columns, four of which are standing. An open piazza, behind the colonnade, extended the whole length of the building. In the rear of this piazza are three apartments, the principal of which is entered under a noble arch, apparently thirty-five or forty feet high. It is an imposing ruin, though not of the purest style of architecture, and is the more striking as the only edifice now standing in Petra.

A little east of this, and in a range with some of the most beautiful excavations in the mountain on the east side of the valley, are the remains of what appears to have been a triumphal arch. Under it were three passages, and a number of pedestals of columns, as well as other fragments, would lead to the belief that a magnificent colonnade was connected with it.

A few rods south are extensive ruins, which probably belonged to a temple. The ground is covered with fragments of columns five feet in diameter. Twelve of these, whose pedestals still remain in their places, adorned either side of this stately edifice. There were also four columns in front and six in the rear of the temple. They are prostrate on the ground, and Dr. Olin counted thirty-seven massive frusta, of which one of them was composed.

Still further south are other piles of ruins—columns and hewn stones—parts no doubt of important public buildings. The same traveller counted not less than fourteen similar heaps of ruins, having columns and fragments of columns intermingled with blocks of stone, in this part of the site of ancient Petra. They indicate the great wealth and magnificence of this ancient capital, as well as its unparalleled calamities. These sumptuous edifices occupied what may be called the central parts of Petra. A large surface on the north side of the river is covered with substructions, which probably belonged to private habitations. An extensive region still farther north retains no vestiges of the buildings which once covered it. The same appearances are observable in Thebes, Athens, and Rome. Public wealth was lavished on palaces and temples, while the houses of the common people were slightly and meanly built, of such materials as a few years, or at most a few centuries, were sufficient to dissolve.



489. [Ruined Temple]

The mountain torrents which, at times, sweep over the lower parts of the ancient site, have undermined many foundations, and carried away many a chiselled stone, and worn many a finished specimen of sculpture into unshapely masses. The soft texture of the rock seconds the destructive agencies of the elements. Even the accumulations of rubbish, which mark the site of all other decayed cities, have mostly disappeared; and the extent which was covered with human habitations can only be determined by the broken pottery scattered over the surface, or mingled with the sand—the universal, and, it would seem, an imperishable memorial of populous cities that exist no longer. These vestiges, the extent of which Dr. Olin took great pains to trace, cover an area one-third as large as that of Cairo, excluding its large gardens from the estimate, and very sufficient, he thinks, to contain the whole population of Athens in its prosperous days.

The attention of travellers has however been chiefly engaged by the excavations which, having more successfully resisted the ravages of time, constitute at present the great and peculiar attraction of the place. These excavations, whether formed for temples, tombs, or the dwellings of living men, surprise the visitor by their incredible number and extent. They not only occupy the front of the entire mountain by which the valley is encompassed, but of the numerous ravines and recesses which radiate on all sides from this enclosed area. They exist too in great numbers in the precipitous rocks which shoot out from the principal mountains into the southern, and still more into the northern part of the site, and they are seen along all the approaches to the place, which, in the days of its prosperity, were perhaps the

suburbs of the overpeopled valley. Were these excavations, instead of following all the sinuosities of the mountain and its numerous gorges, ranged in regular order, they probably would form a street not less than five or six miles in length. They are often seen rising one above another in the face of the cliff, and convenient steps, now much worn, cut in the rock, lead in all directions through the fissures, and along the sides of the mountains, to the various tombs that occupy these lofty positions. Some of them are apparently not less than from two hundred to three or four hundred feet above the level of the valley. Conspicuous situations, visible from below, were generally chosen; but sometimes the opposite taste prevailed, and the most secluded cliffs, fronting towards some dark ravine, and quite hidden from the gaze of the multitude, were preferred. The flights of steps, all cut in the solid rock, are almost innumerable, and they ascend to great heights, as well as in all directions. Sometimes the connection with the city is interrupted, and one sees in a gorge, or upon the face of a cliff, fifty or a hundred feet above him, a long series of steps rising from the edge of an inaccessible precipice. The action of winter torrents and other agencies have worn the easy ascent into a channel for the waters, and thus interrupted the communication.

490. [Interior of a Tomb.]

The situations of these excavations are not more various than their forms and dimensions. Mere niches are sometimes cut in the face of the rock, of little depth and of various sizes and forms, of which it is difficult to conjecture the object, unless they had some connection with votive offerings and religious rites. By far the largest number of excavations were manifestly designed as places for the interment of the dead; and thus exhibit a variety in form and size, of interior arrangement and external decorations, adapted to the different fortunes of their occupants, and conformable to the prevailing tastes of the times in which they were made. There are many tombs consisting of a single chamber, ten, fifteen, or twenty feet square by ten or twelve in height, containing a recess in the wall large enough to receive one or a few deposits; sometimes on a level with the floor, at others one or two feet above it, and not unfrequently near the ceiling, at the height of eight or ten feet. Occasionally oblong pits or graves are sunk in the recesses, or in the floor of the principal apartment. Some of these are of considerable depth, but they are mostly choked with stones and rubbish, so that it is impossible to ascertain it. In these plebeian tombs there is commonly a door of small dimensions, and an absence of all architectural decorations; in some of larger dimensions there are several recesses occupying two or three sides of the apartment. These seem to have been formed for family tombs. Besides these unadorned habitations of the humble dead, there is a vast number of excavations enriched with various architectural ornaments. To these unique and sumptuous monuments of the taste of one of the most ancient races of men with whom history has made us acquainted, Petra is indebted for its great and peculiar attractions. This ornamental architecture is wholly confined to the front, while the interior is quite plain and destitute of all decoration. Pass the threshold, and nothing is seen but perpendicular walls, bearing the marks of the chisel, without mouldings, columns, or any species of ornament. But the exteriors of these primitive and even rude apartments exhibit some of the most beautiful and imposing results of ancient taste and skill which have remained to our times. The front of the mountain is wrought into façades of splendid temples, rivalling in their aspect and symmetry the most celebrated monuments of Grecian art. Columns of various orders, graceful pediments, broad rich entablatures, and sometimes statuary, all hewn out of the solid rock, and still forming part of the native mass, transform the base of the mountain into a vast splendid pile of architecture, while the overhanging cliffs, towering above in shapes as rugged and wild as any on which the eye ever rested, form the most striking and curious of contrasts. In most instances it is impossible to assign these beautiful façades to any particular style of architecture. Many of the columns resemble those of the Corinthian order; but they deviate so far both in their forms and ornaments from this elegant model, that it would be impossible to rank them in the class. A few are Doric, which are precisely those that have suffered most from the ravages of time, and are probably very ancient.

But nothing contributes so much to the almost magical effect of some of these monuments as the rich and various colours of the rock out of which, or more properly in which, they are formed. The mountains that encompass the vale of Petra are of sandstone, of which red is the predominant hue. Their surface is a good deal burned and faded by the elements, and is of a dull brick colour, and most of the sandstone formations in this vicinity, as well as a number of the excavations of Petra, exhibit nothing remarkable in their colouring which does not belong to the same species of rock throughout a considerable region of Arabia Petræa. Many of them, however, are adorned with such a profusion of the most lovely and brilliant colours as it is scarcely possible to describe. Red, purple, yellow, azure or sky blue, black and white, are seen in the same mass distinctly in successive layers, or blended so as to form every shade and hue of which they are capable—as brilliant and as soft as they ever appear in flowers, or in the plumage of birds, or in the sky when illuminated by the most glorious sunset. The red perpetually shades into pale, or deep rose or flesh colour, and

again approaches the hue of the lilac or violet. The white, which is often as pure as snow, is occasionally just dashed with blue or red. The blue is usually the pale azure of the clear sky, or of the ocean, but sometimes has the deep and peculiar shade of the clouds in summer when agitated by a tempest. Yellow is an epithet often applied to sand and sandstone. The yellow of the rocks of Petræa is as bright as that of saffron. It is more easy to imagine than describe the effect of tall, graceful columns, exhibiting these exquisite colours in their succession of regular horizontal strata. They are displayed to still greater advantage in the walls and ceilings of some of the excavations where there is a slight dip in the strata.

We have thus endeavoured to give the reader a general idea of this remarkable place. Detailed descriptions of the principal monuments have been furnished by Laborde (*Voyage en Arabia Petræa*), Robinson (*Biblical Researches*), and Olin (*Travels in the East*, from which the above description has been chiefly taken). Interesting notices of Petra may also be found in the respective *Travels, Journeys*, &c. of Burckhardt, Macmichael, Irby and Mangles, Stephens, Lord Lindsay, and Schubert.

SELEUCIA (Σελεύκεια), a city of Syria, situated west of Antioch on the sea-coast, near the mouth of the Orontes; sometimes called Seleucia Pieria, from the neighbouring Mount Pierus: and also Seleucia ad Mare, in order to distinguish it from several other cities of the same name, all of them denominated from Seleucus Nicanor. Paul and Barnabas on their first journey embarked at this port for Cyprus (Acts xiii. 4; see also 1 Macc. xi. 8; Joseph. *Antiq.* xviii. 9. 8).

SENEH (סְנֶה) occurs in the well known passage of Exod. iii. 2, where the angel of the Lord appeared unto Moses in a flaming fire, out of the midst of a *bush* (*seneh*), and the bush was not consumed. It occurs also in vers. 3 and 4, and in Deut. xxxiii. 16. The Septuagint translates *seneh* by the Greek word βάτος, which usually signifies the *Rubus* or *Bramble;* so in the New Testament βατος is employed when referring to the above miracle of the burning bush. The monks of the monastery of St. Catherine, on Mount Sinai, have a species of *rubus* planted in their garden, near their Chapel of the Burning Bush; but this cannot be considered as any proof of its identity with the *seneh*, from the little attention which they have usually paid to correctness in such points. Bové says of it, 'C'est une espèce de Rubus, qui est voisin de notre R. fruticosus.' The species of *rubus* are not common either in Syria or Arabia. *Rubus sanctus*, the holy bramble, is found in Palestine, and is mentioned by Dr. Russell as existing in the neighbourhood of Aleppo, and Hasselquist found a *rubus* among the ruins of Scanderetta, and another in the neighbourhood of Seide. It is also found among the ruins of Petra (?) (Calcott). Celsius and others quote Hebrew authors as stating that Mount Sinai obtained its name from the abundance of these bushes (*seneh*), 'Dictus est mons Sinai de nomine ejus.' But no species of *rubus* seems to have been discovered in a wild state on this mountain. This was observed by Pococke. He found, however, on Mount Horeb several hawthorn bushes, and says that the holy bush was more likely to have been a hawthorn than a bramble, and that this must have been the spot where the phenomenon was observed, being a sequestered place and affording excellent pasture, whereas near the chapel of the holy bush not a single herb grows. Shaw states that the *Oxyacantha arabica* grows in many places on St. Catherine's mountain. Bové says, on ascending Mount Sinai, 'J'ai trouvé entre les rochers de granit un *mespilus* voisin de l'oxyacantha.' Dr. Robinson mentions it as called *zarur;* but it is evident that we cannot have anything like proof in favour of either plant.—

J. F. R.

SENIR. [Hermon.]

SENNACHERIB, king of Assyria, who, in the fourteenth year of King Hezekiah (B.C. 713), came up against all the fenced cities of Judah, and took them; on which Hezekiah agreed to pay the Assyrian monarch a tribute of three hundred talents of silver, and thirty talents of gold. This, however, did not satisfy Sennacherib, who sent an embassy with hostile intentions, charging Hezekiah with trusting on 'this bruised reed Egypt.' The king of Judah in his perplexity had recourse to Isaiah, who counselled confidence and hope, giving a divine promise of miraculous aid. Meanwhile 'Tirhakah, king of Ethiopia,' and of Thebes in Egypt, had come out to fight against the Assyrians, who had threatened Lower Egypt with an invasion. On learning this, Sennacherib sent another deputation to Hezekiah, who thereon applied for aid to Jehovah, who promised to defend the capital. 'And it came to pass that night that the angel of the Lord went out and smote in the camp of the Assyrians an hundred fourscore and five thousand; and when they arose early in the morning, behold they were all dead corpses' (2 Kings xviii. 13, sq.). On this, Sennacherib returned to Nineveh, and was shortly after murdered by two of his sons as he was praying in the house of Nisroch his god (2 Kings xix. 36, sq.; 2 Chron. xxxii.; Isa. xxxvii.).

With this narrative other authorities (as given in Wilkinson's *Ancient Egypt.* i. 140, sq.) are found to agree. The Tirhakah mentioned in the Bible, as given above (2 Kings xix. 9), was king of Upper Egypt at the time that Sethos, a priest of Pthah, ruled the lower country (B.C. 710 to 689). During Tirhakah's reign Sennacherib threatened to invade Lower Egypt. Sethos, from his sacerdotal predilections, was averse to the soldiery, whom he treated with indignity. They therefore were ill-affected towards their priest-king, whose dominions were consequently in great danger of being overrun. Indeed the troops refused to march against the enemy, when their effeminate master retired to the shrine of his god to bewail his misfortunes. There sinking into a profound sleep, he saw the Deity in a dream, who promised him safety if he put himself at the head of his troops, and marched to meet the enemy. Sethos thereupon proceeded to Pelusium, the key of Lower Egypt, with an army made up solely of tradesmen and artisans. The promised assistance soon came. Tirhakah had heard of the approach of Sennacherib, and at once came down the country, entered Palestine, and

defeated the Assyrian monarch, thus delivering the territory of Sethos as well as that of Hezekiah. The priests of Memphis, however, who were the informants of Herodotus, gave this event a colouring which suited their own purposes. According to their account, the victory was owing to the miraculous interposition of the god Pthah. Keeping out of sight the effective aid rendered by Tirhakah, these priests told Herodotus that when the Assyrians and the feeble army of Sethos stood over against each other, a prodigious number of rats entered the enemy's camp by night, and gnawed in pieces their quivers and bows, as well as the handles of their shields, so that the Assyrians in the morning finding themselves without arms, fled in confusion, and suffered considerable loss of men. In order to commemorate the event, a marble statue of Sethos was erected in the temple of Pthah, at Memphis, representing the king, holding a rat in his hand, with this inscription, 'Whoever thou art, learn from my fortune to reverence the gods.'

The rationalistic school would put these two accounts on the same footing, and so reduce the miracle of Scripture to a level with the fiction or the legend recorded in Herodotus. A less prejudiced state of mind will think it very probable that what is common in the two narratives rests on, as it intimates, some extraordinary event, or, in other words, some unusual and special display of the power of Him whose will is law, and whose word is either life or death. A comparison of the two narratives in the original sources and statements would serve to illustrate the value, as well as the credibility, of the Biblical records.—J. R. B.

SEORAH (שְׂעֹרָה, said to be derived from שַׂעֲרָה, 'hair'), by some written also *shoreh*, derives its name in Hebrew, according to Lexicographers, from its long awns, or beards, as they are also called, somewhat resembling hair. The word is very similar to the Arabic *shair*, which means the same thing, and has already been treated of under the head of Barley.—J. F. R.

SEPHAR (סְפַר; Sept. Σαφηρά), 'a mountain of the east,' a line drawn from which to Mesha formed the boundary of the Joktanite tribes (Gen. x. 30). The name may remind us of Saphar, which the ancients mention as a chief place of South Arabia. The excellent map of Berghaus exhibits on the south-west point of Arabia a mountain called Sabber, which perhaps supplies the spot we seek. If this be the case, and Mesha be (as usually supposed) the Mesene of the ancients, the line between them would intersect Arabia from north-east to south-west. That Sephar is called 'a mountain of *the east*,' is to be understood with reference to popular language, according to which Arabia is described as the 'east country.' See Baumgarten, *Theolog. Commentar zum A. T.* i. 152.

SEPHARAD (סְפָרַד; Sept. Ἐφραθά), a region to which the exiles from Jerusalem were taken (Obad. 20). Most of the Rabbins regard Sepharad as Spain, interpreting the whole passage with reference to their present captivity or dispersion; and so we find it in the Syriac and Chaldee. Jerome informs us that the Hebrew who was his instructor told him that Bosphorus was called Sepharad, whither Adrian is said to have sent the Jews into exile. That the district Sepharad is to be sought somewhere in the region of the Bosphorus, has lately been confirmed by a palæographic discovery. In the celebrated cuneiform inscription containing a list of the tribes of Persia (Niebuhr, tab. 31, lett. i.), after Assyria, Gorydene, Armenia, *Cappadocia*, and before Ionia and Greece, is found the name CPaRaD, as read both by Bournouf and Lassen; and this was recognized also by De Sacy as the Sephar of Obad. 20. It was therefore a district of Western Asia Minor, or at least near to it (Bournouf, *Mém. sur Deux Inscr. Cuneif.*, 1836, p. 147; Gesenius, *Thesaur.* s. v.).

SEPHARVAIM (סְפַרְוַיִם; Sept. Σεπφαρουαΐμ), a city of the Assyrian empire, whence colonists were brought into the territory of Israel, afterwards called Samaria (2 Kings xvii. 24; xviii. 34; xix. 13; Isa. xxxvi. 19; xxxvii. 13). The place is probably represented by Sipphara in Mesopotamia, situated upon the east bank of the Euphrates above Babylon.

SEPTUAGINT. The oldest version of the Old Testament in any language is the Greek translation commonly called the Septuagint, either because it was approved and sanctioned by the Jewish Sanhedrim consisting of seventy-two persons; or rather from the Jewish account, which states that so many individuals were employed in making it. The history of this version is obscure. Few notices of its origin are extant; and even such as do exist are suspicious and contradictory.

The space allotted to the present article will only allow the writer to *touch upon the chief points* relating to the Septuagint. A radical and minute investigation, such as the subject *now* demands, cannot therefore be expected. *Results alone* must be *briefly* stated.

The oldest writer who makes mention of the Septuagint is Aristobulus, an author referred to by Eusebius (*Præpar. Evangel.*), and Clement of Alexandria (*Stromata*). According to Eusebius, he was a Jew, who united the Aristotelian with the Jewish philosophy, and composed a commentary on the law of Moses, dedicated to Ptolemy Philometor. He is also mentioned in 2 Macc. i. 10. Both Clement and Eusebius make him contemporary with Philometor; for the passages in their writings, in which they speak of him under Philadelphus, must either have been corrupted by ignorant transcribers, or have been so written by mistake (Valckenaer, §§ 10, 11; Dæhne, p. 81, sq.). His words relative to the Septuagint are: ἡ δ' ὅλη ἑρμηνεία τῶν διὰ τοῦ νόμου πάντων ἐπὶ τοῦ προσαγορευθέντος Φιλαδέλφου βασιλέως—Δημητρίου τοῦ Φαληρέως πραγματευσαμένου τὰ περὶ τούτων. The entire passage, of which the preceding words form a brief portion, has occasioned much conjecture and discussion. It is given by Valckenaer, Thiersch, and Frankel. It appears to us, that the words of Aristobulus do not speak of any *prior Greek translation*, as Hody supposes, or indeed of any translation whatever. They rather refer to some brief extracts relative to Jewish history, which had been made from the Pentateuch into a language commonly understood by the Jews in

Egypt, before the time of Demetrius. *The entire law, ἡ δ' ὅλη ἑρμηνεία τῶν διὰ τοῦ νόμου πάντων,* was first rendered into Greek under Philadelphus. Hody, and after him Eichhorn, conjectured that the fragments of Aristobulus preserved by Eusebius and Clement were written in the second century by another Aristobulus, a Christian; and that Aristobulus, the professed Peripatetic, was a heathen. But the quotation of Cyril of Alexandria (*contra Julianum*, lib. vi.), to which they appeal, was erroneously made by that father, as may be seen by comparing it with Clement. Richard Simon also denied the authenticity of Aristobulus's remains (*Histoire Critique du V. T.*, p. 189). But Valckenaer has sufficiently established their authenticity. The testimony of Aristobulus is corroborated by a Latin scholion recently found in a MS. of Plautus at Rome, which has been described and illustrated by Ritschl in a little book entitled '*Die Alexandrinischen Bibliotheken und die Sammlung der Homerischen Gedichte nach Anleitung eines Plautinischen Scholium's*, Berlin, 1838.' From the passage of Aristobulus already quoted, it appears, that in the time of Aristobulus, *i. e.* the beginning of the second century B.C., this version was considered to have been made when Demetrius Phalereus lived, or in the reign of Ptolemy Soter. Hody, indeed, has endeavoured to show that this account contradicts the voice of certain history, because it places Demetrius in the reign of Philadelphus. But the version may have been begun under Soter and completed under Philadelphus his successor. In this way may be reconciled the discordant notices of the time when it originated; for it is well known that the Palestinian account, followed by various fathers of the church, asserts, that Ptolemy Soter carried the work into execution; while according to Aristeas, Philo, Josephus, &c. &c., his son Philadelphus was the person. Hody harmonises the discrepancy, by placing the translation of the Pentateuch in the two years during which father and son reigned conjointly, 286 and 285 B.C. The object of Demetrius, in advising Soter to have in his library a copy of the Jewish laws in Greek, is not stated by Aristobulus; but Aristeas relates that the librarian represented it to the king as a desirable thing that such a book should be deposited in the Alexandrian library. Some think that *a literary*, rather than *a religious* motive, led to the version. So Hävernick. This, however, may be reasonably doubted. Hody, Sturz, Frankel, and others, conjecture that the object was *religious* or *ecclesiastical*. Eichhorn refers it to *private impulse*; while Hug takes the object to have been *political*. It is not probable, however, that the version was intended for the king's use, or that he wished to obtain from it information respecting the best mode of governing a nation, and enacting laws for its economic well-being. The character and language of the version unite to show that an Egyptian king, probably ignorant of Greek, could not have understood the work. Perhaps *an ecclesiastical* motive prompted the Jews, who were originally interested in it; while Demetrius Phalereus and the king may have been actuated by some other design.

It is difficult, if not impossible, to ascertain, whether Aristobulus's words imply that *all* the books of the Old Testament were translated into Greek under Philadelphus, or simply the Pentateuch. Hody contends that *νόμος*, the term used by Aristobulus, meant at that time the Mosaic books alone; although it was afterwards taken in a wider sense, so as to embrace all the Old Testament. Valckenaer thinks that *all* the books were comprehended under it. It is certainly more natural to restrict it to the Pentateuch. The Pentateuch, therefore, was completed under Philadelphus.

The next historical testimony regarding the Septuagint, is the prologue of Jesus the son of Sirach, a document containing the judgment of a Palestinian Jew concerning the version before us. His words are these: *οὐ μόνον δὲ ταῦτα ἀλλὰ καὶ αὐτὸς ὁ νόμος καὶ αἱ προφητεῖαι καὶ τὰ λοιπὰ τῶν βιβλίων οὐ μικρὰν ἔχει τὴν διαφορὰν ἐν ἑαυτοῖς λεγόμενα*—'and not only these things, but the law itself, and the prophets, and the rest of the books, have no small difference when they are spoken in their own language.' Frankel has endeavoured to throw suspicion on this passage, as though it were unauthentic; but his reasons are extremely slender (p. 21, note w). It appears from it, that the law, the prophets, and the other books, had been translated into Greek in the time of the son of Sirach, *i. e.* that of Ptolemy Physcon, 130 B.C.

The account given by Aristeas comes next before us. This writer pretends to be a Gentile, and a favourite at the court of Ptolemy Philadelphus, King of Egypt. In a letter addressed to his brother Philocrates, he relates that Philadelphus, when forming a library at great expense, was advised by Demetrius Phalereus to apply to the Jewish high priest Eleazar for a copy of the book containing the Jewish laws. Having previously purchased the freedom of more than a hundred thousand captive Jews in Egypt, the king sent Aristeas and Andreas to Jerusalem, with a letter requesting of Eleazar seventy-two persons as interpreters, six out of each tribe. They were dispatched accordingly, with a magnificent copy of the law; and were received and entertained by the king for several days, with great respect and liberality. Demetrius led them to an island, probably Pharos, where they lodged together. The translation was finished in seventy-two days, having been written down by Demetrius, piece by piece, as agreed upon after mutual consultation. It was then publicly read by Demetrius to a number of Jews whom he had summoned together. They approved of it; and imprecations were uttered against any one who should presume to alter it. The Jews requested permission to take copies of it for their use; and it was carefully preserved by command of the king. The interpreters were sent home, loaded with presents. Josephus agrees in the main with Aristeas; but Philo's account differs in a number of circumstances. Justin Martyr endeavoured to harmonise the various traditions current in his day, but without success. Exaggerations and glaring falsehoods had been added to the story of Aristeas, in the days of Justin and Epiphanius, which these credulous men received without hesitation, and to which it is probable they themselves contributed. The interpreters are said to have been shut up in separate cells, where they made separate versions, which were

found on comparison to agree in every minute particular. Hence they were looked upon as inspired, and their version as infallibly correct. Most of the fathers received this tradition, and the early Jewish Rabbins equally believed it. Even Philo regarded the translators as inspired; but it is evident that he was ignorant of Hebrew. Jerome seems to have been the first who distinctly rejected the story of their inspiration, although he did not doubt the veracity of Aristeas, whose simpler narrative makes no mention of inspiration. Until the latter half of the seventeenth century, the origin of the Septuagint as given by Aristeas, was firmly believed; while the numerous additions that had been made to the original story, in the progress of centuries, were unhesitatingly received as equally genuine. The story was first reckoned improbable by L. Vives (in a note to Augustine's *De Civitate Dei*); then Scaliger asserted that it was written by a Jew; and Richard Simon was too acute a critic not to perceive the truth of Scaliger's assertion. Hody was the first who demonstrated with great learning, skill, and discrimination, that the narrative could not be authentic. It is now universally pronounced fabulous.

The work of Aristeas, which was first published in the original Greek by Simon Schard, at Basel, 1561, 8vo., and several times reprinted, was also given by Hody in Greek and Latin, in his book entitled *De Bibliorum textibus originalibus, versionibus Græcis, et Latina Vulgata*, Oxonii, 1705, fol. The most accurate edition, however, is that by Gallandi, in the *Bibliotheca Vet. Patrum*, vol. ii. It was translated into English by Whiston, and published at London in 1727, 8vo.

It is a difficult point to determine the extent to which truth is mixed up with fable in this ancient story. However absurd the traditions may appear in the view of modern criticism, *some* truth must lie at the basis of them. In separating the true from the fabulous, it appears to us that Hody has not been successful. From the extreme credulity manifested in the reception of the fable, he has gone to the extreme of scepticism. Yet he has been generally followed. That the Pentateuch was translated a considerable time before the prophets, is not warranted by the language of Justin, Clement of Alexandria, Tertullian, Epiphanius, and Hilary of Poitiers; although we are aware that Aristeas, Josephus, Philo, the Talmudists, and Jerome, mention *the law only* as having been interpreted by the seventy-two. Hody thinks that the Jews first resorted to the reading of the prophets in their synagogues when Antiochus Epiphanes forbade the use of the law; and, therefore, that the prophetic portion was not translated till after the commencement of Philometor's reign. It is wholly improbable, however, that Antiochus interdicted the Jews merely from reading the Pentateuch (comp. 1 Macc. i. 41, &c.; and Josephus, *Antiq.* xii. 5; Frankel, pp. 48, 49). The interval between the translating of the law and the prophets, of which many speak, was probably very short. Hody's proof that the book of Joshua was not translated till upwards of twenty years after the death of Ptolemy Lagi, founded upon the word γαισός, is perfectly nugatory; although the time assigned cannot be far from the truth. The epilogue to the book of Esther does *not* state that this part of the Old Testament was translated under Ptolemy Philometor, or that it was dedicated to him. On the contrary, it refers to a certain epistle containing apocryphal additions to the canonical book of Esther (Valckenaer, pp. 33, 63). It is a fruitless task to attempt to ascertain the precise times at which separate portions of the version were made. All that can be known with any degree of probability is, that it was begun under Lagi, and finished before the thirty-eighth year of Ptolemy Physcon.

It is obvious, from internal evidence, that there were several translators; but certainly not seventy-two. Hody has endeavoured to parcel out their version into small portions, assigning each part to a separate person, and affirming that they were put together in one cento without revision; but his notions of rigid uniformity in the translators are such as exclude perspicuity, freedom, variety, and elegance. There is no ground for believing that the Pentateuch proceeded from more than one interpreter, who was unquestionably the most skilful of all. The entire work was made by five or six individuals at least; and must, consequently, be of unequal value.

In opposition to the Pseudo-Aristeas, we cannot but maintain that the translators were *Alexandrian*, not *Palestinian* Jews. The internal character of the entire version, particularly of the Pentateuch, sufficiently attests the fact. We find, accordingly, that proper names, and terms peculiar to Egypt are rendered in such a manner as must have been unintelligible to a Greek-speaking population other than the Egyptian Jews. That the translators were Egyptians has been proved to the satisfaction of all by Hody; although some of his examples, such as the words γένεσις and ἱππόδρομος, are not appropriate or conclusive. Frankel supposes that the version was made not only at different times, but *at different places*. This is quite arbitrary. There is no reason for believing with him, that different books originated after this fashion, the impulse having gone forth from Alexandria, and spreading to localities where the Jews had settled, especially Cyrene, Leontopolis, and even Asia Minor.

Next to the Pentateuch, in point of goodness, is the version of the Proverbs. The translator of Job, though familiar with the Greek poets, and master of an elegant diction, was very imperfectly acquainted with Hebrew. The Psalms and Prophets have been indifferently executed. Jeremiah is best translated among the prophetic books. Amos and Ezekiel stand in the next rank. Isaiah met with a very incompetent translator. The version of Daniel is the worst. The version of Theodotion was very early substituted for it. Michaelis and Bertholdt conjecture that Daniel was first translated after the advent of Christ. It is certain that Jerome did not know the reason why Theodotion's had been substituted in place of that belonging to the Septuagint. Most of the historical books are not well interpreted.

With regard to *the external form* of the MS. or MSS. from which this version was made, it is not difficult to see that the letters were substantially the same as the present square characters —that there were no vowel-points—that there was

no separation into words; no final letters; that the letter ϐ wanted the *diacritic point;* and that words were frequently abbreviated. The division into verses and chapters is much later than the age of the translators. Our present editions have been printed in conformity with the division into chapters made in the twelfth century; though they are not uniform in this particular. Still, however, many MSS. have separations in the text. The Alexandrine codex is said by Grabe to have one hundred and forty divisions, or as they may be called, *chapters*, in the book of Numbers alone (*Prolegomena*, c. i. § 7).

The titles given to the books, such as Γένεσις, &c., could hardly have been affixed by the translators, since often they do not harmonise with the version of the book itself to which they belong.

It has been inquired, whether the translator of the Pentateuch followed a Hebrew or a Samaritan codex. The Septuagint and Samaritan harmonise in more than a thousand places, where they differ from the Hebrew. Hence it has been supposed that the Samaritan edition was the basis of the version. Various considerations have been adduced in favour of this opinion; and the names of De Dieu, Selden, Whiston, Hottinger, Hassencamp, and Eichhorn, are enlisted on its behalf. But the irreconcilable enmity subsisting between the Jews and the Samaritans, both in Egypt and Palestine, effectually militates against it. Besides, in the prophets and hagiographa the number of variations from the Masoretic text is even greater and more remarkable than those in the Pentateuch; whereas the Samaritan extends no farther than the Mosaic books. No solution, therefore, can be satisfactory, which will not serve to explain at once the cause or causes both of the differences between the Seventy and Hebrew in the Pentateuch, and those found in the remaining books. The problem can be fully solved only by such an hypothesis as will throw light on the remarkable form of the Septuagint in Jeremiah and Esther, where it deviates most from the Masoretic MSS., presenting such transpositions and interpolations as excite the surprise of the most superficial reader. How, then, is the agreement between the Samaritan and Septuagint to be explained?

Some suppose that the one was *interpolated* from the other—a conjecture not at all probable. Jahn and Bauer imagine that the Hebrew MS. used by the Egyptian Jews agreed much more closely with the Samaritan in the text and forms of its letters, than the present Masoretic copies. This hypothesis, however, even if it were otherwise correct, would not account for the great harmony existing between the Samaritan and Septuagint.

Another hypothesis has been put forth by Gesenius (*Commentatio de Pent. Samar. orig., indole, et auctor.*), viz. that both the Samaritan and Septuagint flowed from a common recension (ἔκδοσις) of the Hebrew Scriptures, one older than either, and different in many places from the recension of the Masoretes now in common use. 'This supposition,' says Prof. Stuart, by whom it is adopted, 'will account for the differences and for the agreements of the Septuagint and Samaritan.'

The following objections have been made to this ingenious and plausible hypothesis.

1. It assumes, that before the whole of the Old Testament was written there had been a recension or revision of several books. But there is no record or tradition in favour of the idea, that *inspired* men applied a correcting hand in this manner till the close of the canon. To say that *others* did so, is not in unison with right notions of the inspiration of Scripture, unless it be equally affirmed that they *corrupted*, under the idea of *correcting*, the holy books.

2. This hypothesis implies, that a recension took place at a period comparatively early, before any books had been written except the Pentateuch, Joshua, Judges, and the writings of David and Solomon. If it be improbable that a revised edition was made before the completion of the canon, it is much more improbable that it was undertaken when few books were written.

3. It supposes, that an older recension was still current after Ezra had revised the whole collection and closed the canon. In making the Septuagint version, it is very improbable that the Jews, who were the translators, followed a recension far inferior in their estimation to the copy of the sacred books corrected by Ezra. This objection rests on the assumption that Ezra completed the canon of the Old Testament, having been prompted, as well as inspired, to arrange and revise the books of Scripture. Such is the Jewish tradition; and although a majority of the German critics disallow its truth, yet it is held by very able and accomplished men.

Prof. Lee (*Prolegomena to Bagster's Polyglott*) accounts for the agreement between the Septuagint and Samaritan in another way. He conjectures that the early Christians interspersed their copies with Samaritan glosses, which ignorant transcribers afterwards inserted in the text. But he has not shown that Christians in general were acquainted with the Samaritan Pentateuch and its additions to the Hebrew copy; neither has he taken into account the reverence entertained by the early Christians for the sacred books. We cannot, therefore, attribute the least probability to this hypothesis.

Another hypothesis has been mentioned by Frankel, viz. that the Septuagint flowed from a Chaldee version, which was used before and after the time of Ezra—a version inexact and paraphrastic, which had undergone many alterations and corruptions. This was first proposed by R. Asaria di Rossi, in the midst of other conjectures.

Frankel admits that the assumption of such a version is superfluous, except in relation to the Samaritan Pentateuch, where much is gained by it. This Chaldee version circulated in various transcripts here and there; and as the same care was not applied in preserving its integrity as was exercised with respect to the original Hebrew, the copies of it presented considerable differences among themselves. Both the Greek version and the Samaritan Pentateuch were taken from it. Frankel concedes that this hypothesis is not satisfactory with regard to the Septuagint, because the mistakes found in that version must have frequently originated in misunderstanding *the Hebrew* text. There is no evidence, however, that any Targum or Chaldee version had been made before Ezra's time, or soon after. *Explanations of the lessons publicly read by the Jews* were given in Chaldee, not regularly perhaps, or

uniformly; but it can scarcely be assumed that a Chaldee version had been made out in writing, and circulated in different copies. Glosses, or short expositions of words and sentences, were furnished by the public readers for the benefit of the people; and it is by no means improbable that several of these traditional comments were incorporated with the version by the Jewish translators, to whom they were familiar.

In short, no hypothesis yet proposed commends itself to general reception, although the *Vorstudien* of Frankel have probably opened up the way towards a correct solution. The great source from which the striking peculiarities in the Seventy and the Samaritan flowed, appears to us to have been *early traditional interpretations* current among the Jews, *targums*, or *paraphrases*—not written perhaps, but orally circulated. Such glossarial versions, which must have circulated chiefly in Palestine, require to be traced back to an early epoch; to the period of the second temple. They existed, *in substance* at least, in ancient times, at once indicating and modifying the Jewish mode of interpretation. The Alexandrian mode of interpretation stood in close connection with the Palestinian; for the Jews of Egypt looked upon Jerusalem as their chief city, and the Sanhedrim of Jerusalem as their ecclesiastical rulers. If, therefore, we can ascertain the traditional paraphrases of the one, those of the other must have been substantially the same (see Gieseler's *Eccles. Hist.*, transl. by Cunningham, vol. i. p. 30).

Tychsen (*Tentamen de variis codd. Heb. V. T. MSS. gener.*) thought that the Septuagint was made from the Hebrew transcribed into Hebrew-Greek characters. It is almost unnecessary to refer to such a notion. It never obtained general currency, having been examined and refuted by Dathe, Michaelis, and Hassencamp.

The Septuagint does not appear to have obtained *general authority* as long as Hebrew was understood at Alexandria. It is remarkable that Aristobulus quotes the original, even where it departs from the text of the Seventy. The version was indeed spread abroad in Egypt, northern Africa, and Asia Minor; but it may be doubted, whether it was ever so highly esteemed by the Jews as to be publicly read in their synagogues, *in place of the original.* The passages quoted by Hody from the fathers go to prove no more than that it was found in the synagogues. From the 146 Novella of Justinian it would seem, that some Jews wished the public interpreter, who read the lessons out of the law and the prophets in Hebrew, to give his explanations of them in Greek; while others desired to have them in Chaldee. The reader, therefore, employed this translation as explanatory of the sections recited in the original. It cannot be shown that, after the Septuagint had been made, the Jews commonly laid aside the original, and *substituted* the Greek in the synagogue-service. Though they highly esteemed the Greek, they did not regard it as equal to the Hebrew. Philo and Josephus adopted it; and it was universally received by the early Christians. Even the Talmudists make honourable mention of its origin. It is true that the Talmud also speaks of it as an abomination to the Jews in Palestine; but this refers to the second century and *the time following*, not to the period *immediately* after the appearance of Christ.

When controversies arose between Christians and Jews, and the former appealed with irresistible force of argument to this version, the latter denied that it agreed with the Hebrew original. Thus by degrees it became odious to the Jews—as much execrated as it had before been commended. They had recourse to the translation of Aquila, who is supposed to have undertaken a new work from the Hebrew, with the express object of supplanting the Septuagint, and favouring the sentiments of his brethren.

After the general reception of the Septuagint version, numerous mistakes were made in the transcription and multiplication of copies. In the time of the early fathers its text had already been altered; and the Jews, in argument with the Christians, commonly said, that such and such things were not in the Hebrew original. This affirmation was generally sufficient to silence the professors of the Christian religion, who were unable to follow their critical antagonists into the Hebrew text.

In order to rectify the text of the Septuagint, and to place Christians on even ground with their Jewish opponents, Origen undertook to revise it. After travelling about for twenty-eight years in quest of materials, and meeting with six Greek translations,—three belonging to Aquila, Symmachus, and Theodotion respectively; and three anonymous—he began his great work, probably at Alexandria, and finished it, according to the best accounts, at Tyre. Some think that he published at first his *Tetrapla*, containing in four columns the versions of Aquila, Symmachus, Theodotion, and the Seventy. Thus the *Tetrapla* was only preparatory to his projected emendation of the Seventy. In an enlarged edition, he added the Hebrew text in Hebrew and in Greek letters; and as the work then consisted of six columns, it was termed *Hexapla.* Such is the opinion of Hody, Montfaucon, and Bauer; but Eichhorn, Eichstaedt, and Frankel, think that the Tetrapla was not a distinct work preparatory to the Hexapla, but only an abridgment of the latter. In some parts he used two other Greek versions made by unknown authors, and occasionally a third anonymous translation. Hence the names *Octapla* and *Enneapla.* Thus the different appellations by which the work is distinguished, refer merely to the number of columns. The following is their order:—1. The Hebrew text in its proper characters; 2. The same in Greek letters; 3. Aquila; 4. Symmachus; 5. Septuagint; 6. Theodotion; 7, 8, and 9. The three anonymous Greek versions were called the fifth, sixth, and seventh, in relation to the other four (see a specimen of the *Enneapla* in Davidson's *Bib. Criticism*, p. 53).

Origen's object in this laborious work was not so much to correct the Septuagint, as to show where and how it differed from the original Hebrew. When he discovered a word in Hebrew, or in the Greek versions, which was not in the Seventy, he inserted it out of Theodotion. If Theodotion wanted it also, he made up the deficiency from Aquila, and occasionally from Symmachus. In every case, he put the name of the translation from which a supplement was made, with an asterisk at the commencement, and two

dots at the end, to show the extent of the supplied matter. And where the Septuagint, as compared with other Greek versions and the original, seemed to be redundant, he did not expunge the superfluity, but appended marks to point out this particular. His recension is called the *Hexaplarian* text, to distinguish it from the text as it existed before, which has been styled the *common* (κοινή) or *ante-hexaplarian*.

This great work, consisting of about fifty volumes, is thought to have perished at Cæsarea, when the town was sacked by the Saracens, A.D. 653. It was never transcribed.

In the beginning of the fourth century, Pamphilus and Eusebius copied the column containing the text of the Seventy, with the passages and scholia out of the other translators, and the critical marks used by Origen. It is to be regretted that this copy was soon extensively corrupted. The Hexaplarian text, coming through such a transcript, with fragments of the other versions, was published by Montfaucon, at Paris, 1714, 2 vols. fol.; and afterwards reprinted, in an abridgment, by Bahrdt, Leipzig, 1769-70, 2 vols. 8vo.

At the beginning of the same century, Lucian, a presbyter of Antioch, undertook to amend the text of the Seventy, after the Hebrew original. This recension was called the *editio vulgata* (κοινή and also Λουκιανός), and became current in various churches. Another revision was undertaken about the same time by Hesychius, an Egyptian bishop, which, according to Jerome, was generally used in the churches of Egypt. Hesychius and Lucian probably used the versions of Aquila, Symmachus, and Theodotion, not the Hebrew text; although Hody thinks otherwise. From these three recensions all our printed editions have been derived. In the two great MSS. of the Seventy, the Vatican and Alexandrine, the basis of the former is the *common*, or earlier text; while the latter exhibits more of the readings and interpolations of the Hexaplarian text. Both have not been always kept distinct. The Vatican text is far purer than the Alexandrine. It is free from the asterisks, obeli, and other marks used by Origen, as well as the transpositions which he made. Besides, the Alexandrine has been very frequently conformed to the Masoretic text, which must be considered as a corruption.

All printed editions of the Septuagint may be reduced to four; viz., the Aldine, the Complutensian, the Roman, and the Grabian.

The Aldine or Venetian appeared at Venice in 1518, fol. The editor has not specified the MSS. from which the text was taken. He merely affirms that he collated many very ancient copies, and was favoured with the advice of some learned men. According to Walton, the text of this edition is purer than the Complutensian, and resembles most the Roman text. It has been interpolated, however, in various instances, out of Theodotion, Aquila, and the New Testament.

The Complutensian was published in 1522, as a column of the Complutensian Polyglott. Perhaps the text of it has been *occasionally* adapted to that of the Masoretic Hebrew copies; but certainly not to the extent assumed by Ussher, Walton, and Hody. Most of its *alterations*, as they are called in relation to the text of other editions, were probably taken from Greek MSS. containing Origen's improved Hexaplaric text, as Simon believed.

The Roman edition appeared under the auspices of Sixtus the Fifth, in 1587, fol., superintended by Cardinal Carafa. The text follows closely the celebrated *codex Vaticanus*. Yet the editors made alterations in the orthography, and in particulars which they looked upon as the mistakes of copyists. Other MSS. were necessarily used, since almost the entire book of Genesis is wanting in cod. B., besides Psalms 105—138, and the books of the Maccabees.

The Grabian edition appeared at Oxford, in 1707 and following years, 4 vols. fol., and 8 vols. 8vo., being prepared for the press by Dr. Grabe, a learned Prussian, and published in part by himself. This edition exhibits the text of the Codex Alexandrinus, but not perfectly; since Grabe altered and improved many places.

The latest and most splendid critical edition is that begun in 1798 by Dr. Holmes, and finished by Parsons, Oxford, 1798-1827, five vols. folio, with a large critical apparatus. The continuator appears to have become weary of his task, for he has only selected the readings most important in his own judgment. The text is that of the Roman edition. The work has not satisfied the reasonable expectations of the learned; and a *good* edition is still a desideratum. The Roman is still the best; although *no one edition* should be followed *absolutely* (see Credner's *Beiträge*, vol. ii. pp. 74-98).

The best Lexicon to the Septuagint is that of *Schleusner*, published at Leipzig, in 1820, in five parts, and reprinted at Glasgow. The best Concordance is that of *Trommius*, published at Amsterdam, 2 vols. fol. 1718.

A great number of other versions have been founded on the Seventy. 1. Various early Latin translations, the chief of which was the *Vetus Itala*; 2. The Coptic and Sahidic, belonging to the first and second centuries; 3. The Ethiopic, belonging to the fourth century; 4. The Armenian, of the fifth century; 5. The Georgian, of the sixth century; 6. Various Syriac versions, of the sixth and eighth centuries; 7. Some Arabic versions [Arabic Versions]; 8. The Slavonic, belonging to the ninth century.

Great value should unquestionably be attached to this version. In the criticism and interpretation of the Old Testament, it holds a conspicuous place. Yet most of the translators were incompetent. They often mistook the sense of the original. They indulged in many liberties with regard to the text. They inserted glosses, and paraphrased with unmeaning latitude. Their errors are neither few nor small. It must be recollected, however, that the text is in a state of irremediable disorder. The labours of Origen, however laudable the motive that prompted them, introduced great confusion. On the whole, the translation is *free* rather than *literal*. Figures, metaphors, and anthropomorphic expressions are frequently resolved. Still the document is important, not only in the criticism, but also in the exposition of the Old Testament.

(For a more copious account of the Septuagint, the reader is referred to Davidson's *Lectures on Biblical Criticism*, and the books there specified. On the Pentateuch part of it, the best work is that of Thiersch, *De Pentateuchi Versione Alexan-*

drina, libri tres, Erlangæ, 1841, 8vo., in which the character of the diction employed by the translator is minutely and admirably investigated. See also Toepler, *De Pentateuchi interpretationis Alexandrinæ indole critica et hermeneutica*, Hal. Sax. 1830, 8vo.; Plüschke, *Lectiones Alexandrinæ et Hebraicæ, &c.* Bonn, 1837, 8vo. This writer would correct the present Hebrew text by the Seventy in many cases, although the idea of doing so is preposterous. *Vorstudien zu der Septuaginta*, von Dr. Z. Frankel; Leipzig, 1841, 8vo. This is the most remarkable and most important work on the Septuagint that has appeared for many years. The present is only the first part of the first volume, and we are unable to say whether more has been published. Gfrörer, *Urchristenthum*, Th. i. B. ii., Stuttgart, 1831, 8vo.; Dähne, *Judisch-Alexandrinische Philosophie*, Th. ii. Halle, 1834, 8vo.; Fabricii *Bibliotheca Sacra*, ed. Harless, vol. 3; Michaelis's *Oriental. Bibliothek*, and *Neue Orient. Biblioth.*; Eichhorn's *Allgem. Bibliothek* and *Repertorium;* Studer, *De Versionis Alexandrinæ origine, historia, usu, et abusu critico*, Bernæ, 1823, 8vo.; Grabe's *Prolegomena* to his edition of the Seventy; Holmes's *Præfatio* to his edition; Credner's *Beiträge zur Einleitung*, u. s. w., 2 vols. 8vo. SEPTUAGINT CHRONOLOGY. [Chronology.]

SEPULCHRE. [Burial.]

SERAIAH (שְׂרָיָה and שְׂרָיָהוּ, 'warrior of Jehovah;' Sept. Σαραΐας). There are several persons of this name in Scripture.

1. Seraiah, the scribe or secretary of David (2 Sam. viii. 17). This person's name is in other places corrupted into שְׁוָא, Auth. Vers. Sheva (1 Sam. xx. 25), שִׁישָׁא, Shisha (1 Kings iv. 3), and שַׁוְשָׁא, Shavsha (1 Chron. xviii. 16).

2. Seraiah, the father of Ezra (Ez. vii. 1).

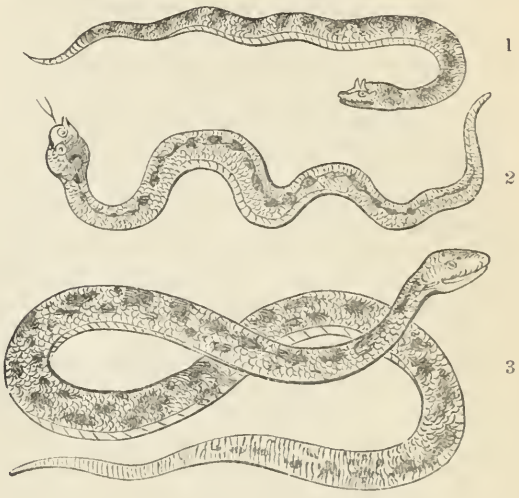
3. Seraiah, the high priest at the time that Jerusalem was taken by the Chaldæans. He was sent prisoner to Nebuchadnezzar at Riblah, who put him to death (2 Kings xxv. 18; 1 Chron. vi. 14; Jer. lii. 24; Ez. vii. 1).

4. Seraiah, son of Azriel, one of the persons charged with the apprehension of Jeremiah and Baruch (Jer. xxxvi. 26).

5. Seraiah, son of Neriah, who held a high office in the court of King Zedekiah, the nature of which is somewhat uncertain. In the Auth. Vers. we have, 'This Seraiah was a quiet prince,' where the words rendered 'quiet prince' are שַׂר מְנוּחָה, which, according to Kimchi, means 'a chamberlain,' or one who attended the king when he retired to rest; but better, perhaps, according to Gesenius, 'chief of the quarters' for the king and his army, that is *quarter-master-general.* This Seraiah was sent by Zedekiah on an embassy to Babylon, probably to render his submission to that monarch, about seven years before the fall of Jerusalem. He was charged by Jeremiah to communicate to the Jews already in exile a book, in which the prophet had written out his prediction of all the evil that should come upon Babylon. It is not stated how Seraiah acquitted himself of his task; but that he accepted it at all, shows such respect for the prophet as may allow us to conclude that he would not neglect the duty which it imposed.

6. Seraiah, son of Tanhumeth, an accomplice of Ishmael in the conspiracy against Gedaliah (2 Kings xxv. 23; Jer. xl. 8).

SERAH (שֶׂרַח, '*abundance;*' Sept. Σάρα), daughter of Asher, named among those who went down into Egypt (Gen. xlvi. 17; Num. xxvi. 46; 1 Chron. vii. 30). The mention of a female in a list of this kind, in which no others of her sex are named, and contrary to the usual practice of the Jews, seems to indicate something extraordinary in connection with her history or circumstances. This has sufficed to excite the ever active imaginations of the Rabbins, and Serah shares with the princess of Egypt who saved Moses, with Jochebed his mother, and with Deborah, the honour of occupying a prominent place in their fables.



SERAPHIM (שְׂרָפִים; Sept. Σεραφίμ), or Seraphs, the plural of the word שָׂרָף *saraph*, 'burning,' or 'fiery:' celestial beings described in Isa. vi. 2-6, as an order of angels or ministers of God, who stand around his throne, having each six wings, and also hands and feet, and praising God with their voices. They were therefore of human form, and, like the Cherubim, furnished with wings as the swift messengers of God. Some have indeed identified the Cherubim and Seraphim as the same beings, but under names descriptive of different qualities; *Seraphim* denoting the burning and dazzling appearance of the beings elsewhere described as *Cherubim.* It would be difficult either to prove or disprove this; but there are differences between the *cherubim* of Ezekiel, and the *seraphim* of Isaiah, which it does not appear easy to reconcile. The 'living creatures' of the former prophet had four wings; the 'seraphim' of the latter, six; and while the cherubim had four faces, the seraphim had but one (comp. Isa. vi. 2, 3; Ezek. i. 5-12). If the figures were in all cases purely symbolical, the difference does not signify; and whether they were so, or not, must be determined by the considerations which have been indicated under Cherubim.

There is much symbolical force and propriety in the attitude in which the Seraphim are described as standing; while two of their wings were kept ready for instant flight in the service of God, with two others they hid their face, to express their unworthiness to look upon the divine Majesty (comp. Exod. iii. 6), and with two others they covered their feet, or the whole of the lower part of their bodies—a practice which still prevails in the East, when persons appear in a monarch's presence. It may be seen in the article Serpent, that a species of serpent was called *Saraph;* and this has led some to conceive that the Seraphim were a kind of basilisk-headed Cherubim (Bauer, *Theolog. A. T.* p. 189); or else that they were animal forms with serpents' heads, such as we find figured in the ancient temples of Thebes (Gesen. *Comment. in Jes.*). Hitzig and others identify the Seraphim with the Egyptian Serapis; for although it is true that the worship of Serapis was

not introduced into Egypt till the time of the Ptolemies, it is known that this was but a modification of the more ancient worship of Kneph, who was figured under the form of a serpent of the same kind, the head of which afterwards formed the crest of Serapis.

SERGIUS PAULUS (Σέργιος Παῦλος), a Roman proconsul in command at Cyprus, who was converted by the preaching of Paul and Barnabas (Acts xiii. 7). The title given to this functionary exhibits one of those minute accuracies which, apart from its inspiration, would substantiate the sacred book as a genuine and contemporary record. Cyprus was originally a *prætorian* province (στρατηγική), and not *proconsular;* but it was left by Augustus under the Senate, and hence was governed by a proconsul (ἀνθύπατος), as stated by the Evangelist (Acts xiii. 6, 8, 12; Dion Cass. liv. p. 523; Kuinoel, on Acts xiii. 7; see also the art. Cyprus). Sergius is described by the Evangelist as a 'discreet' or 'intelligent' man; by which we are probably to understand that he was a man of large and liberal views, and of an inquiring turn of mind. Hence he had entertained Elymas, and hence also he became curious to hear the new doctrine which the apostle brought to the island. Nothing of his history subsequent to his conversion is known from Scripture. There is no reason to suppose that he abandoned his post as governor of Cyprus; but the legends assert that he did so, and followed Paul; and that eventually he went with the apostle into Spain, and was left by him at Narbonne in France, of which he became the bishop, and died there.

SERPENT (נָחָשׁ *nachash*). Systematical nomenclators and travellers enumerate considerably more than forty species of serpents in Northern Africa, Arabia, and Syria. Of these it is scarcely possible to point out with certainty a single one named in the Bible, where very few descriptive indications occur beyond what in scientific language would now be applied generically. It is true that, among the names in the list, several may be synonyms of one and the same species; still none but the most recent researches give characters sufficient to be depended upon, and as yet nothing like a complete erpetology of the regions in question has been established; for snakes being able to resist a certain degree of cold, and also the greatest heat, there are instances of species being found, such as the *hayes*, precisely the same, from the Ganges to the Cape of Good Hope; others, again, may be traced from Great Britain to Persia and Egypt, as is instanced in the common viper and its varieties. Instead therefore of making vain efforts at identifying all the serpents named, it will be a preferable course to assign them to their proper families, with the exception of those that can be pointed out with certainty; and in so doing it will appear that even now species of importance mentioned by the ancients are far from being clearly established. Serpents may be divided generally into two very distinct sections,—the first embracing all those that are provided with moveable tubular fangs and poison-bags in the upper jaw; all regarded as ovoviviparous, and called by contraction *vipers:* they constitute not quite one-fifth of the species hitherto noticed by naturalists. The second section, much more numerous, is the *colubrine*, not so armed, but not therefore always entirely innocuous, since there may be in some cases venomous secretions capable of penetrating into the wounds made by their fixed teeth, which in all serpents are single points, and in some species increase in size as they stand back in the jaws. The greater part, if not all, the innocuous species are oviparous, including the largest or giant snakes, and the *pelamis* and *hydrophis*, or water-serpents, among which several are venomous.

491. [1. Shephiphon: Cerastes. 2. Peten: Coluber Lebatina. 3. Python tigris Albicans; probably Thaibanne.]

Scriptural evidence attests the serpent's influence on the early destinies of mankind; and this fact may be traced in the history, the legends, and creeds of most ancient nations. It is far from being obliterated at this day among the pagan, barbarian, and savage tribes of both continents, where the most virulent and dangerous animals of the viviparous class are not uncommonly adored, but more generally respected, from motives originating in fear; and others of the oviparous race are suffered to abide in human dwellings, and are often supplied with food, from causes not easily determined, excepting that the serpent is ever considered to be possessed of some mysterious superhuman knowledge or power. Hence, beside real species, ideal forms, taken from the living, but combining other or additional properties, occur, at the most early periods, as metaphorical types, in fable and history, and in the hieroglyphics and religious paintings of many nations. Such are the innumerable fables in Hindu lore of Nagas and Naga Kings; the primæval astronomy which placed the serpent in the skies, and called the milky way by the name of Ananta and Sesha Naga; the Pagan obscure yet almost universal record of the deluge typified by a serpent endeavouring to destroy the ark; which astronomy has likewise transferred to the skies in the form of a dragon about to devour the moon, when, in an eclipsed state, it appears in the form of an amphipromnos or crescent-shaped boat; and, strange as it may seem, lunar eclipses still continue to be regarded in this character, and to excite general apprehension in Central Africa, as well as in China; in the South Sea Islands, as well as in America [Dragon]. The nations of the North once believed in the Jormunds Gander, or Kater serpent of the deep;

and they, together with the Celts and Basques, and all Asia, had legends of the Orm, the Paystha, the dragon-guardian of riches, brooding on gold in caverns deep below the surface of the earth, or lying in huge folds on dreary and extensive heaths. These fables were a residue of that antique dragon worship which had its temples from High Asia and Colchis to the north of Great Britain, and once flourished both in Greece and Northern Africa—structures with avenues of upright stones of several miles in length, whereof the ruins may still be traced at Carnak in Brittany, Abury in Wiltshire, and Redruth in Cornwall—the two last mentioned more particularly showing their connection with the circle constituting a form of the mundane egg, which again was an emblem of the deluge and the ark. The Hesperian, Colchian, and Lernæan dragons are only Greek legends of the same doctrine, still more distorted, and affording ample proof how far the Pagan world had departed from the simplicity of Scriptural truth, from the excessive use of metaphorical descriptions and fanciful symbols. In Egypt, the early centre of Ophiolatry, this debasing service was so deeply rooted, that a Christian sect of heretics, called Ophitæ, or according to Clemens Alexandrinus, Ophiani, arose in the second century of our era. As an emanation of the Gnostics their errors are particularly noticed by Tertullian, and form a signal instance of human perverseness ingeniously misleading itself and others by the abuse of symbols; yet when the anguine type did not pass into long distorted legends, it is evident, from the brazen serpent raised by Moses in the wilderness, that it was correctly appreciated by the people as a sign, not in itself a power, of Divine aid; and that its true symbolical meaning did not even escape Pagan comprehension appears from profane history, in Meissi, the good serpent, being likewise properly understood by the Egyptians, until idolatry distorted all the national reminiscences, and the promise of what was not fully revealed till the Saviour appeared on earth was obliterated. Ob, Oub, the Coptic Hof, Obion in Kircher, was, however, the general name for serpents in Egypt; and Kneeph, or Cnuphis, or Ihh-Nuphi, the good genius, always figured as the Nachash or Thermuth, is therefore the same as Naga Sahib, or lord-serpent of India [Adder], and still a personification of the vanquisher of the deluge—Vishnu, with many others, being Pagan denominations of Noah. In this sense the good genius Cnuphis was a type of the Saviour of men, and called by them the spirit pervading nature, the creator from whose mouth proceeded the mundane egg: being referred, after the loss of the true interpretation, to any typical form of the patriarch, the events of the deluge and the creation, thus confounding the operations of the Almighty with the ministry of his servant.

There was, however, another idolized snake of the great destroyer Python tribe, which devour even each other; it is represented on Egyptian monuments bearing a mummy figure on its tail, and gliding over a seated divinity with an egg on the head, while human sacrifice by decapitation is performed before it. This serpent is so carefully drawn that we recognise the Thaîbanne, Thebanus Ophites, which grows to twelve or more feet in length, is still found in Upper Egypt, and is a congener, if not the same as Python Tigris Albicans, the great snake even at present worshipped in Cutch: it may be the Aphophis of the Egyptians. To descant further on this subject would lead us too far from our purpose; but the Egyptian Python here noticed, changing its character from being a type of the deluge to that of an emblem of the ark carrying the spirit of human life within or upon it, was not without its counterpart in England, where lately, in digging out the deep black mud of a ditch, a boat-shaped Python, carrying the eight Eones (?) or Noachidæ, has been discovered, with emblems that denote them to be the solar regenerators of mankind. Parts of these objects, in hard black wood, are now in possession of Sir Samuel R. Meyrick.

Thus, as is ever the case in polytheistical legends, the type disappears through multiplied transitions and the number of other symbols and personifications characterized by the same emblem: it was so in this instance, when the snake form was conferred also on abstractions bearing the names of divinities, such as Ranno, Hoph, Bai, Hoh or Hih, and others.

The asserted longevity of the serpent tribe may have suggested the representation of the harmless house-snake biting its tail as typical of eternity; and this same quality was no doubt the cause why this animal, entwined round a staff, was the symbol of health, and the distinctive attribute of the classical Æsculapius and Hygia. There are species of this genus common to Palestine and the southern parts of continental Europe; they were domesticated in Druidical and other Pagan sanctuaries, and were employed for omens and other impostures; but the mysterious Ag or Hagstone was asserted to be produced by the venomous viper species. It is indeed with the section of noxious serpents that Biblical research has most to do. In the article Adder we have already noticed those of the present genus Haye, the hooded snake, or Cobra de Capello, which in one or more of its species is generically included in the Hebrew נחש *nachash*, and עכשוב *achsub*, the first being a general appellation, and the second probably confined to the Hayes proper, or to one of the species or varieties.

שרף *saraph*, the supposed winged serpent, we take also to be a Haye, one of the more eastern species or varieties, which have the faculty of actually distending the hood, as if they had wings at the side of the head, and are the same as, or nearly allied to, the well known spectacle-snake of India; and this interpretation seems to accord with the words of Moses, הנחשים השרפים *han-nechashim has-seraphim* (Num. xxi. 6). The serpent may exhibit this particular state of irritation when it stands half erect with its hood distended, or it may be that variety which is possessed of this faculty to the greatest extent. Naga Reflectrix, the Pof or Spooch adder of the Cape colonists, is reported by Dr. Smith to be scarcely distinct from the Egyptian Naga Haye. With regard to the faculty of flying, the lengthened form, the muscular apparatus, the absence of air-cells, and the whole osteological structure, are all incompatible with flight or the presence of wings: hence Herodotus, in his search for flying serpents at Buto, may have observed heaps of exuviæ of locusts cast on shore by the sea—a phenomenon not un-

frequent on that coast—but most assuredly not heaps of bones and ribs of serpents. As for those of Plutarch, they may have been noxious sandflies. Flying serpents are only found represented in the symbolical pictures of Egypt, where they occur with birds' wings. Those of history, and of barbarous nations excessively habituated to figurative forms of speech, are various, some being so called because of their rapid motion, others on account of a kind of spring they are said to make at their victims, and a third class because they climb trees, and are reported to swing themselves from thence upon their victims, or to other trees. Now, many species of serpents are climbers; many hang by the tail from slender branches of low trees in highly heated glens, snapping at insects as they wheel around them; but all are delicately jointed; and if any should swing further than merely to change their hold, and should miss catching a branch, they would most certainly be dislocated, and, if not killed, very seriously injured. From personal experiments we can attest that serpents are heavy in proportion to their bulk, and without the means of breaking their fall; that few, large or small, could encounter the shock of twelve or fourteen feet elevation without fracturing many spinous processes of their vertebræ, and avoid being stunned for a length of time, or absolutely crushed to death. Being instinctively conscious of the brittleness of their structure, nearly all snakes are timid, and desirous of avoiding a contest, unless greatly provoked. This remark applies, we believe, to all innoxious serpents, the great boas perhaps excepted, and to most of the poisonous, exclusive of several species of viper and cobra de capello.

Of the so-called flying, or rather darting serpents, Niebuhr found, near Basra, a venomous species called Heie Sursurie, and Heie Thiare, that is, 'flying serpent,' because it was said to fling itself from one tree to another. Admiral Anson heard, at the island of Quibo, of snakes flying without wings: we may notice the Acontias and Prester, that fell like arrows from the tops of trees, and the green Ætula of Ceylon, said to spring from trees at the eyes of cattle—an accusation repeated of more than one species in tropical America. Next we have the Uler Tampang Hari, seen in a forest near the river Pedang Bessie, somewhere, we believe, in the Austral-Asian islands, under circumstances that most certainly require confirmation; since this fiery serpent, so called from the burning pain and fatal effect of its bite, swung itself from one tree to another, 240 feet distant, with a declination to the horizon of only about fifteen degrees!

We find Leffah and Bætan, both conjectured to be the Saraph and Tsimmaon, without being able to point out the species in natural history, where, nevertheless, it seems most likely that varieties or perhaps different species of the common viper may be meant, as is likewise assumed of Acontias and Prester, since that family, in hot and dry climates, is far more virulently noxious than in Europe. The Leffah, though little more than a foot long, regarded by Shaw at least as the most formidable serpent of Northern Africa, is one of this genus, and may be the אפעה *Ephoch*, Arabic *Epha*, and Persian *Mar-iefy*; but as there is some difference in dimensions and markings, as well as a still greater extent of region assigned to these, more than one species of viper is most likely included in the above names. But that the Ephoeh is a name of most ancient date is plain from its being employed in Job xx. 16, and Isaiah xxx. 6; while under the form of ἔχιδνα, that is, 'viper,' it occurs in the New Testament, Matt. iii. 7; xii. 34; xxiii. 33; Luke iii. 7; and Acts xxviii. 3. The last of these texts confirms the common superstitious belief of antiquity, which regarded the bite of one of these serpents as a punishment directly inflicted by Heaven.

פתן *pethen* (Deut. xxxii. 33; Job xx. 14, 16; Ps. lviii. 4; xci. 13; Isa. xi. 8) is more properly the Bætan of Forskal; the *Coluber (vipera) Lebetina* of Linn., and by him characterized as one foot in length, the body spotted with black and white, and oviparous (?), though excessively poisonous. The learned author evidently never saw this species in a living state, and appears to have derived all he knew upon the subject from the literati of Cyprus, who call it *Asp*, and the vulgar *Kufi* (κουφη), 'deaf.' Such an authority is of little weight: a serpent of Cyprus may not belong to Palestine or Egypt, and an oviparous species may not be poisonous. It is referred to the Aspis of the ancients, as to which it is still in dispute whether it should be identified with *Vipera Ammodytes*, *Vipera Berus*, or *Vipera Prester*, all ovoviviparous, and as such strikingly illustrative of the words of Isaiah (lix. 5). It may here be remarked that the so-called 'deaf adder' (Ps. lviii. 5, 6) is not without hearing, but is only not obedient to the musical notes which the serpent-charmers produce in order to make their captured snakes vibrate in a particular erect posture as if they were dancing; and it is asserted of some, that while in a free state they are actually enticed to come to and follow the musician.

צמאון *tzimmaon* (Deut. viii. 15) appears to be the 'Drought' of some versions, so called because of the intolerable thirst occasioned by its bite. If this translation be correct, it will form in modern nomenclature one of the genus Hurria, and sub-genus Dipsas or Bongarus. But no species of this division of snakes has yet been found in Western Asia, albeit there are several in India; and Avicenna locates the Torrida Dipsas in Egypt and Syria; whereupon Cuvier remarks that Gesner's figure of Dipsas belongs precisely to the sub-genus here pointed out. As one of the Colubrine family it should not be venomous; but the last-mentioned writer remarks that several of these are regarded in their native localities with great dread; and on examination it is found that, although they have no erectile tubercular fangs, with a poison-bag at the roots, there is on the long back teeth a groove, and a large gland at the base of the maxilla, which it is not unlikely contains, in some at least, highly venomous matter. It may be further observed, that when the Acontias, or darting serpent, perhaps the Turreiki of Shaw, is mentioned, it must be considered as belonging to the oviparous section, for a characteristic of the venom snakes is to be slow in their motions, and to watch being attacked rather than to court hostilities. This character may be supposed to exist even in the צפע *tzepha*, or צפעני *tziphoni*, translated 'cockatrice' in Prov. xxiii. 32, and Isa. xi. 8. This is an indefinite English name, which belongs to no identified serpent, and

now appears only in the works of ancient compilers and heralds, where it is figured with a crest, though there is no really crested or frilled species known to exist in the whole Ophidian order. Crested serpents occur, it is true, on Greek and Etruscan vases; but they are invariably mythological representations, probably derived from descriptive rumours of the hooded Nagas, Cerastes, and perhaps Murænæ: the first of these having what may be likened to a turbaned, the other to a coronated head, and the third fins at the operculum. But it is from the apparently crowned form that the denominations of Basilisk and Regulus were derived. There are, however, two very distinct species of horned serpents in Egypt and Northern Africa, probably extending to Syria and Arabia. They are of different genera; for the Cerastes, supposed to be the

שְׁפִיפֹן *shephiphon* of the Bible, is a viper with two scales on the head, one above each eye, standing erect somewhat in the form of horns. This is a dangerous species, usually burrowing in sand near the holes of jerboas, and occasionally in the cattle-paths; for there are now few or no ruts of cart-wheels, where it is pretended they used to conceal themselves to assault unwary passers. It is still common in Egypt and Arabia. The other species is the *Eryx Cerastes* of Daudin, also small, having no moveable poison-fangs, but remarkable for two very long back teeth in the lower jaw, which pass through the upper jaw, and appear in the shape of two white horns above its surface. It is known to the Egyptian Arabs by the name of Harbagi, which may be a distortion of Οὐβαῖος in Horapollo, and is classed by Hasselquist among slow-worms, because in form the tail does not taper to a point. Its colours are black and white marblings, and the eyes being lateral and very near the snout, the species has an exceedingly sinister aspect, which may be the cause of the ancient opinion that the מלכה *melekah*, or basilisk, for we take it for this species, killed with its looks, and had a pointed crown on the head: now serpents in the form of slow-worms, reputed to kill by their sight, are evidently not rapid in their movements.

In conclusion, we may observe again with reference to the figurative form of the Semitic tongues, that the proper names of objects, and particularly of animals, are very often descriptive of characters which are not exclusively applicable to specific individuals, and consequently that the same sounds or names readily suggest themselves when the property which distinguishes the appellative term recurs in another object. Thus we have on one or two occasions 'young lions' for 'venom-snakes,' Tseboa (hyænas) likewise for serpents, probably because in the first case the idea of slaughter or destruction is associated with both, and because in the second the notion of striped or varied is predominant. So also in Achsub, either a serpent striking backwards, or a scorpion, or a tarantula doing the same thing, may be understood, from the same faculty being ascribed to them all.—C. H. S.

SERVANT. [Slave.]

SERUG (שְׂרוּג, *shoot, tendril;* Sept. and New Test. Σερούχ), son of Reu, and father of Nahor the grandfather of Abraham (Gen. xi. 20; 1 Chron. i. 6). He was 130 years old at the birth of Nahor, and died at the age of 330. The name occurs in the genealogy of Christ (Luke iii. 35). The Jewish traditions affirm that Serug was the first of his line who fell into idolatry; and this seems to be sanctioned by, and is probably built upon, the charge of idolatry brought against Terah and the fathers beyond the Euphrates in Josh. xxiv. 2.

SETH (שֵׁת, *compensation;* Sept. Σήθ), the third son of Adam, to whom Eve gave this name in consequence of regarding him as sent to replace Abel, whom Cain had slain (Gen. iv. 25, 26; v. 3, sq.).

SEVEN, &c. (Heb. שֶׁבַע, whence the Greek ἑπτά, the aspirate breathing being substituted for the sibilant letter, as in ἕξ for שֵׁשׁ, &c., which, however, appears again in the Latin *septem*, and English *seven*). This word is used to express the number 6 + 1. Thus Balaam said unto Balak, 'Build me here seven altars, and prepare me here seven oxen and seven rams; and Balak and Balaam offered on every altar a bullock and a ram' (Num. xxiii. 1, 2. Sept. ἑπτά). The Vulgate reads, 'Ædifica mihi hic septem aras et para totidem vitulos, ejusdem numeri arietes.' (In the New Test. see Matt. xv. 34-36; xxii. 25, &c.) The Lexicons generally, both ancient and modern, also assign to the word and its derivatives the farther office of a round or indefinite number, to express a small number, in the sense of several (as we use *ten* or a *dozen*). Thus Suidas says, 'ἑπτὰ ἐπὶ πλήθους τάττεται.' And Gesenius says the same; but his first reference under this head to Gen. xli. 2, &c., is inappropriate; for there the word certainly denotes the particular number, namely, the 'seven well-favoured kine of Pharaoh's dream, which ate up the seven ill-favoured, and the seven thin ears of corn which ate up the seven good ones,' and which are respectively interpreted by Joseph to mean seven years of plenty and seven years of famine, and are recorded to have been *numerically* fulfilled (comp. 2-7; 25-30; 47-54). It appears to us possible to resolve all the other passages referred by Gesenius and others to this class, into the idea of sufficiency, satisfaction, fulness, completeness, perfection, abundance, &c., intimated in the Hebrew root שבע, from which the numeral in question is derived. For instance, Gesenius refers to 1 Sam. ii. 5, 'The barren hath born seven,' that is, hath been blessed with an ample family (Vulg. Sterilis peperit plurimos); to Isa. iv. 1, 'Seven women shall take hold of one man,' where the idea seems to be that of abundance of females compared with the men, so many of the latter having been slain in the war (see Lowth *in loc.*); to Ruth iv. 15, 'Better to thee than seven sons,' *i. e.* an abundance of them; to Prov. xxvi. 25. 'There are seven abominations in his heart,' *i. e.* completeness of depravity (comp. Prov. vi. 31), where the thief is said to make a 'sevenfold,' that is, complete restitution (comp. Exod. xxii. 1-4). Thus also the phrase, 'To flee seven ways' (Deut. xxviii. 7), denotes a total overthrow; to 'punish seven times' (Lev. xxvi. 24), to punish completely; 'Six and seven troubles,' a very great and entire calamity (Job v. 19); 'Give a portion to seven, also to eight,' be not only duly liberal, but abundant; 'Silver purified seven times,' perfectly purified (Psa. xii. 6); 'Seven times a day do I praise

thee,' I fully perform the duty of thanksgiving (Psa. cxix. 164). Rabbi Solomon, however, contends for the literal interpretation of this passage, which seems to have been acted upon by certain Jews and Christians. Some of the Greek versions in Montfaucon's *Hexapla* render the Hebrew word by πλειστάκις, 'often,' 'frequently.' The above explanation applies to Gesenius's instances of 'poetical fictions,' viz., Job's seven sons and seven thousand sheep (i. 2, 3), and the seven days and seven nights during which his friends sat with him in silence on the ground (ii. 13). The word is used in the New Testament to express the same idea of abundance or completeness; thus, 'Mary Magdalene, out of whom Jesus cast seven devils' (Mark xvi. 9); where we must either suppose the Evangelist to give by inspiration a numerical statement, or that his words mean a most entire case of extraordinary and not understood disease. Our Lord's comparison of the men of that generation to the case of the demon which had gone out of a man, returning with seven other spirits more wicked than himself, seems to mean that if Jesus were to grant the sign demanded by the Pharisees, no other result would ensue than a momentary conviction, followed by consummate unbelief (Matt. xii. 43). 'The seven spirits before the throne' would seem to be a periphrasis of perfection, denoting the Holy Spirit (Rev. i. 4). Multiples of this number convey the idea of superabundance. Thus, Gen. iv. 24, 'If Cain be avenged sevenfold [that is abundantly], surely Lamech seventy and sevenfold,' whose guilt from accidental homicide is so much less. Similar is St. Peter's question respecting the forgiveness of injuries, and the answer he received. It is most likely that the idea of sufficiency and completeness became originally associated with the number seven, from the Creator having finished, completed, or made sufficient, all his work on the seventh day; and that hence also it was adopted as a sacred number, or a number chiefly employed in religious concerns, in order to remind mankind of the creation and its true author. Thus there were seven offerings in making a covenant (Gen. xxi. 28); seven lamps in the golden candlestick (Exod. xxxvii. 23); the blood was sprinkled seven times (Lev. iv. 16, 17); every seventh year was sabbatical, seven sabbaths of years in the jubilee (xxv. 8); seven trumpets, seven priests that sounded them seven days round Jericho, seven lamps, seven seals, &c. &c. We also find, as might naturally be expected, the number seven introduced into forms of superstition, &c. Thus Samson said, 'If they bind me with seven green withs, if thou weavest the seven locks of my head,' from which it may be inferred that the Nazarite bound up his hair in this number of curls or plaited locks (Judg. xvi. 7-13). Balaam ordered seven altars to be erected. It was considered a fortunate number among the Persians (Esth. i. 10-14; ii. 9). Cicero calls it the knot and cement of all things, as being that by which the natural and spiritual world are comprehended in one idea (*Tusc. Quæst.* i. 10). Nor is this subject devoid of practical utility. The references which occur in the patriarchal history to the number seven, as denoting a week or period of seven days, sufficiency, &c., and a sacred number, afford a minute, indirect, but not an inconsiderable argument, that the institution of the Sabbath was both established and observed from the commencement; and not, as Paley thinks, during the wandering in the wilderness: an argument abundantly confirmed by the regard to the seventh day which has prevailed too far and wide among various nations, to be attributed to their comparatively late intercourse with the Jews (Josephus, *Cont. Ap.* ii. 39).—J. F. D.

SHAALBIM (שַׁעַלְבִים, *city of foxes;* Sept. Σαλαβίν), called also SHAALBIN, a city of the tribe of Dan (Josh. xix. 42), but of which it could not for a long while dispossess the Amorites (Judg. i. 35). In the time of Solomon it was the station of one of the twelve officers or intendants appointed to regulate the collection of provisions for the court (1 Kings iv. 9). One of David's worthies belonged to this place (2 Sam. xxiii. 32; 1 Chron. xi. 32).

SHAALIM (שַׁעֲלִים, *foxes' region;* Sept. Σεγαλίμ), a district named in 1 Sam. ix. 4; probably that in which Shaalbim was situated.

SHAASHGAZ (שַׁעַשְׁגַּז; Sept. Γαί), the appropriate name (meaning in Persian, *servant of the beautiful*) of a Persian eunuch, the keeper of the women in the court of Ahasuerus (Esth. ii. 14).

SHADDAI (שַׁדַּי; Sept. παντοκράτωρ; Vulg. in Pentateuch, *Omnipotens*), an epithet or name applied to JEHOVAH, sometimes with (Gen. xvii. 1; Exod. vi. 3), and sometimes without (John v. 7; vi. 4; viii. 3, 13; Gen. xlix. 5; Ruth i. 20, 21, and elsewhere), the prefix אֵל *El.* In the Authorized Version the name is given as EL-SHADDAI where it first occurs; but is everywhere else rendered by 'Almighty,' which is the true signification, the word being a pluralis excellentiæ from the singular שַׁד, 'mighty,' 'powerful.'

SHADRACH, one of the three friends of Daniel, who were delivered from the burning, fiery furnace [ABEDNEGO].

SHAIT. [THORNS.]

SHAKED (שָׁקֵד) occurs in several passages of Scripture, and is generally acknowledged to mean the *almond;* as in Gen. xliii. 11, where Jacob desires his sons to take into Egypt of the best fruits of the land *almonds* (*shakedim*), &c. In Exod. xxv. 33, 34; xxxvii. 19, bowls are directed to be made like unto *almonds.* In Num. xvii. 8, the rod of Aaron is described as having 'brought forth buds, and bloomed blossoms, and yielded *almonds*' (*shakedim*). The word occurs in the singular in Eccles. xii. 5, and in Jer. i. 11. In the article LUZ, we have already stated, that from the similarity of that word to the Arabic Louz, there could be no doubt of the former having the same meaning as the latter, both denoting the almond. There is nothing remarkable in a tree like this, so conspicuous from its early flowering, showy appearance, and useful fruit, having two names; one (*luz*) applicable to the tree, and the other (*shaked*), to the fruit. Rosenmüller says, 'The difference between *luz* and *shaked* seems to be, that the former word designates the "wild," the latter the "cultivated" tree.' The almond tree is said to be called *shaked*, because it flowers earlier in the spring than other trees. R. Solomon, on Eccles. xii. 5, as translated by Celsius (*Hierobot.* i. p. 297), says, '*Shaked* est

arbor Amygdalarum, et sic dicitur, quia flores mature profert ante omnes arbores.' This is well known to be the case even in this country. It was observed by the ancients, as Pliny (*Hist. Nat.* xvi. 25) remarks, 'Ex his quæ hyeme aquila exoriente concipiunt, floret prima omnium Amygdala mense Januario: Martio vero pomum maturat.' The name *shaked* is said to be derived 'a verbo שָׁקַד *shakad*, assiduus et diligens fuit;' and which is also translated 'to make haste,' 'to awake

492. [Almond Tree.]

early.' As the almond tree is a native of Syria and Palestine, and extends from thence to Affghanistan, and is not likely to have been indigenous in Egypt, almonds were very likely to form part of a present from Jacob, even to the great men of Egypt; the more especially as the practice of the East is for people to present what they can afford in their respective stations. The form of the almond would lead to its selection for ornamental carved work, independently of its forming an esteemed esculent, as well as probably yielding a useful oil. In Eccles. xii. 5, it is said, 'The almond tree shall flourish, and the fruit of the caper [ABIYONAH] droop, because man goeth to his long home.' This evidently refers to the profuse flowering and white appearance of the almond tree when in full bloom, and before its leaves appear. It is hence adduced as illustrative of the hoary hairs of age, in the same way as the drooping of the fruit of the caper seems to refer to the hanging down of the head. Mr. Kitto mentions the almond among the first trees that flower in January. 'There are two species of Amygdalus in Palestine; the common *almond* tree, and the *peach* tree, and both are this month in blossom in every part of Palestine, on both sides of the Jordan. It was doubtless from this winter blossoming of the almond tree, not less than from the snowy whiteness of the blossoms, that the hoary head of the aged man is, by a beautiful metaphor, said in Scripture, to flourish like the almond tree' (*Physic. Hist. of Palestine*).

—J. F. R.

SHALISHA (שָׁלִישָׁה; Sept. Σελχά), a district in the vicinity of the mountains of Ephraim (1 Sam. ix. 4), in which appears to have been situated the city of Baal-Shalisha (2 Kings iv. 22). This city is called by Eusebius Beth-Shalisha, and is placed by him 15 miles from Diospolis (Lydda), towards the north.

SHALLUM (שַׁלֻּם, *retribution*; Sept. Σελλούμ), the fifteenth king of Israel. In the troubled times which followed the death of Jeroboam II., B.C. 772, his son Zechariah was slain in the presence of the people by Shallum, who by this act extinguished the dynasty of Jehu. Shallum then mounted the throne (B.C. 771), but occupied it only one month, being opposed and slain by Menahem, who mounted the throne thus vacated (2 Kings xv. 10-15).

2. A king of Judah, son of Josiah (Jer. xxii. 11), better known by the name of Jehoahaz [JEHOAHAZ II.].

3. The husband of Huldah the prophetess (2 Kings xxii. 14). Several other persons of this name occur in Ezra ii. 42; vii. 2; x. 24, 42; Neh. iii. 12; vii 45; 1 Chron. ii. 40.

SHALMANESER, king of Assyria [ASSYRIA].

SHAMGAR (שַׁמְגַּר; Sept. Σαμεγάρ), son of Anath, and third judge of Israel. It is not known whether the only exploit recorded of him was that by which his authority was acquired. It is said that he 'slew of the Philistines 600 men with an ox-goad' (Judg. iii. 31). It is supposed that he was labouring in the field, without any other weapon than the long staff armed with a strong point, used in urging and guiding the cattle yoked to the plough, when he perceived a party of the Philistines, whom, with the aid of the husbandmen and neighbours, he repulsed with much slaughter. The date and duration of his government are unknown, but may be probably assigned to the end of that long period of repose which followed the deliverance under Ehud. In Shamgar's time, as the song of Deborah informs us (Judg. v. 6), the condition of the people was so deplorably insecure that the highways were forsaken, and travellers went through by-ways, and, for the same reason, the villages were abandoned for the walled towns.

1. SHAMIR, a precious stone, named in Jer. xvii. 1; Ezek. iii. 9; Zech. vii. 12. The Sept. in Jer. xvii. 1, and the Vulgate in all the passages, take it for the diamond. The signification of the word, 'a sharp point,' countenances this interpretation, the diamond being for its hardness used in perforating and cutting other minerals. Indeed, this use of the *shamir* is distinctly alluded to in Jer. xvii. 1, where the *stylus* pointed with it is distinguished from one of iron (comp. Plin. *Hist. Nat.* xxxvii. 15). The two other passages also favour this view by using it figuratively to express the hardness and obduracy of the Israelites. Our Authorized Version has 'diamond' in Jer. xvii. 1, and 'adamant' in the other texts: but in the original the word is the same in all. Bochart, however (*Hieroz.* iii. 843, sq.), rejects the usual explanation, and comparing the word *shamir* with the Greek σμίρις or σμύρις, conceives it to mean 'emery.' This is a calcined iron mixed with siliceous earth, occurring in livid scales of such

hardness that in ancient times, as at present, it was used for polishing and engraving precious stones, diamonds excepted (Hoffmann, *Mineral.* i. 561, sq.). Rosenmüller is in favour of the diamond in his *Scholia;* but in his *Alterthumskunde*, he takes up Bochart's notion, and urges that if the Hebrews had been acquainted with the diamond, and the manner of working it, we should doubtless have found it among the stones of the high-priest's breastplate; and that, as the *shamir* was not one of the stones thus employed, therefore it was not the diamond. But to this Winer well answers, that it was perhaps not used because it could not be engraved on, or was possibly not introduced until a later period. The argument drawn from the rarity of the word in the Old Testament is of little weight, and there is no necessity for seeking an Oriental origin of the word *σμύρις*, or ground for considering it identical with *shamir*, as it may easily be traced from the Greek itself. (See Passow, s. v.; Eichhorn, *De Gemmis Sculpt. Hebr.*)

2. SHAMIR, a city of Judah (Josh. xv. 48).

3. SHAMIR, a city in the mountains of Ephraim, where Tola lived and was buried (Judg. x. 1, 2).

4. SHAMIR [Thorns].

SHAMMAH (שַׁמָּה, *astonishment;* Σαμαΐα), one of the three chief of the thirty champions of David. The exploit by which he obtained this high distinction, as described in 2 Sam. xxiii. 11, 12, is manifestly the same as that which in 1 Chron. xi. 12-14, is ascribed to David himself, assisted by Eleazar the son of Dodo. The inference, therefore, is, that Shammah's exploit lay in the assistance which he thus rendered to David and Eleazar. It consisted in the stand which the others enabled David to make, in a field of lentiles, against the Philistines. Shammah also shared in the dangers which Eleazar and Jashobeam incurred in the chivalric exploit of forcing a way through the Philistine host to gratify David's thirst for the waters of Bethlehem (2 Sam. xxiii. 16).

Other persons of this name occur. 2. A son of Reuel (Gen. xxxvi. 13, 17). 3. A brother of David (1 Sam. xvi. 9; xvii. 3), who is elsewhere called Shimeah (2 Sam. xiii. 3, 32) and Shimma (1 Chron. ii. 13). 4. One of David's thirty champions, seemingly distinct from the chief of the same name (2 Sam. xxiii. 33). 5. Another of the champions distinguished as Shammah the Harodite; he is called Shammoth in 1 Chron. xi. 27, and Shamhuth in 1 Chron. xxvii. 8. That three of the thirty champions should bear the same name is somewhat remarkable.

SHAPHAN (שָׁפָן), occurs in Lev. xl. 5; Deut. xiv. 7; Ps. civ. 18; Prov. xxx. 26. Commentators, in general, now conclude, on the most satisfactory grounds, that those versions which give Cony for the Hebrew Shaphan are incorrect; but several still maintain that the species to which Shaphan belongs ruminates, which is equally an error. The Shaphan is, in truth, as Bruce justly indicated, the same as the Ashkoko, the Ganam, not Daman, Israel, the Wabber of the Arabs, and in scientific zoology is one of the small genus Hyrax, distinguished by the specific name of Syrian (*Syriacus*). In the upper jaw it has no incisors, but two rather pointed tusks directed downwards, with an open space between them; in the lower are four short, separated, roundish incisors, pointing obliquely forward; there are six molars on each side, above and below, the upper round on the surface, somewhat resembling the human back teeth, and the lower more narrow, but neither composed of alternate laminæ of bony and enamel substance as in ruminants; nor is the jaw-bone articulated so as to admit freely of a similar action; finally, the internal structure as well as the whole osteology represents that of a rhinoceros in miniature, and has no appearance of the complicated four-fold stomachs of ruminants; therefore the hyrax is neither a rodent like hares and rabbits, nor a ruminant, but is anomalous, and most nearly allied to the great Pachyderms of systematic zoology. Externally, the hyrax is somewhat of the size, form, and brownish colour of a rabbit, and, though it has short round ears, sufficiently like for inexact observers to mistake the one for the other. Navigators and colonists often carry the local names of their native land to other countries, and bestow them upon new objects with little propriety: this seems to have been done in the instance before us; there being reason to believe that the Phœnicians, on visiting the western shores of the European side of the Mediterranean, found the country, as other authorities likewise assert, infested with rabbits or conies, and that without attending to the difference they bestowed upon them the Hebrew or Phœnician name of Shaphan, applying it also to the country itself by forming שפן *sphan*, into שפניה *sphanih*, which they intended should mean 'the land of conies;' and from this misnomer 'Hispania" and our 'Spain' are presumed to be derived.

493. [Hyrax Syriacus.]

The hyrax is of clumsier structure than the rabbit, without tail, having long bristly hairs scattered through the general fur; the feet are naked below, and all the nails are flat and rounded, save those on each inner toe of the hind feet, which are long and awl-shaped; therefore the species cannot dig, and is by nature intended to reside, not, like rabbits, in burrows, but in the clefts of rocks. This character is correctly applied to the Shaphan by David.

Their timid gregarious habits, and the tenderness of their paws, make them truly 'the wise and feeble folk' of Solomon; for the gems lives in colonies in the crevices of stony places in Syria, Palestine, Arabia, Eastern Egypt, Abyssinia, and even at the Cape of Good Hope, where one or two additional species exist. In every locality, they are quiet, gentle creatures, loving to bask in the sun, never stirring far from their retreats, moving with caution, and shrinking from the shadow of a passing bird; for they are often the prey of eagles and hawks; their habits are strictly diurnal, and they feed on vegetables and

seeds. It may be that the peculiar structure of their anterior teeth is convenient for stripping off the seeds of grasses and tritica, and that these in part retained in the mouth cause a practice of working the jaws, which, to common observers, may appear to be chewing the cud. In hares and rats a similar appearance is produced by a particular friction of the incisors or nippers, which, growing with great rapidity, would soon extend beyond a serviceable length, if they were not kept to their proper size by constant gnawing, and by working the cutting edges against each other. This action, observed in the motion of the lips of most rodents, when in a state of rest, caused the belief of rumination in the hare, though, like the hyrax, all rodentia are equally unprovided with the several stomachs, and want the muscular apparatus necessary to force the food back into the mouth for remastication at pleasure, which constitute the leading peculiarities of the anatomical structure of the ruminantia. But they may possess, in common with pachydermata, like the horse and hog, the peculiar articulation and form of jaws which give them the power of grinding their food, and laminated teeth, fitted for the purpose.—C. H. S.

SHAPHAN, the scribe or secretary of King Josiah (2 Kings xxii. 3, 12; Jer. xxxvi. 10; comp. Ezra viii. 11). Contemporary with him was a state officer named Ahikam, constantly mentioned as 'the son of Shaphan' (2 Kings xxii. 12; xxv. 22; Jer. xxvi. 24; xxxix. 14; and perhaps xxxix. 3); but this Shaphan, the father of Ahikam, can hardly be the same with Shaphan the scribe, although the heedless reader may be apt to confound them.

SHARAB (שָׁרָב). This word properly means 'heat of the sun,' as in Isa. xlix. 10. Hence it is used to designate a phenomenon which is frequent in Arabia and Egypt, and may be occasionally seen in the southern parts of Europe; called by the Arabs *Serab*, and by the French *le Mirage*, by which name it is also commonly known in English. Descriptions of this illusion are often given by travellers. It consists in the presentation to the view of a lake or sea in the midst of a plain where none in reality exists. It is produced by the refraction of the rays of light, during the exhalation of vapours, by the excessive heat of the sun; and it frequently exhibits, along with the undulating appearance of water, the shadows of objects within or around the plain, both in a natural and in an inverted position. The deception is most complete; and to the weary traveller who is attracted by it, in the highest degree mortifying; since, instead of refreshing water, he finds himself in the midst of nothing but glowing sand. It is often used proverbially, or for the sake of comparison, by the Arabs, as in the Koran (Sur. xxiv. 39): 'But as for those who believe not, their works are like the Serab of the plain: the thirsty imagines it to be water, but when he reaches it he finds it is nothing.' The same figure occurs in Isa. xxxv. 7: 'The *sharab* shall become a lake,' *i. e.* the illusive appearance of a lake in the desert shall become a real lake of refreshing waters. See Gesenius and Henderson on Isaiah, and comp. the descriptions and explanations in Kitto's *Physical History of Palestine*, pp. 147, 150, 151.

SHAREZER (שַׂרְאֶצֶר, Persic, *prince of fire*; Sept. Σαρασάρ), a son of Sennacherib, one of those who slew his father (2 Kings xix. 37; Isa. xxxvii. 38). Another person of this name occurs in Zech. vii. 2.

SHARON (שָׁרוֹן; Sept. Σάρων), a level tract along the Mediterranean, between Mount Carmel and Cæsarea, celebrated for its rich fields and pastures (Josh. xii. 18; Cant. ii. 1; Isa. xxxiii. 9; xxxv. 2; lxv. 10; 1 Chron. xxvii. 9). See the head 'Plains,' in the art. PALESTINE.

SHAVE. [BEARD; HAIR; MOURNING.]

SHAVEH (שָׁוֵה; Sept. Σαβύ), a valley on the north of Jerusalem, called also the King's Dale (Gen. xiv. 17; comp. 2 Sam. xviii. 18).

SHAVEH-KIRJATHAIM (Gen. xiv. 5), a plain near the city of Kirjathaim, beyond Jordan, which eventually belonged to Reuben (Num. xxxii. 37; Josh. xiii. 19).

SHEALTIEL (שְׁאַלְתִּיאֵל, *asked of God*; Sept. Σαλαθιήλ), the father of Zerubbabel (Ezra iii. 2; Neh. xii. 1; Hag. i. 12, 14; ii. 2); called also *Salathiel* (1 Chron. iii. 7).

SHEAR-JASHUB (שְׁאָר יָשׁוּב, *the remnant shall return*; Sept. ὁ καταλειφθεὶς Ἰασούβ), son of the prophet Isaiah, who accompanied his father when he proceeded to deliver to king Ahaz the celebrated prophecy contained in Isa. vii. (see verse 3). As the sons of Isaiah sometimes stood for signs in Israel (Isa. viii. 18), and the name of Maher-shalal-hash-baz was given to one of them by way of prophetic intimation, it has been conjectured that the somewhat remarkable name of Shear-jashub intimated that the people who had then retired within the walls of Jerusalem should return in peace to their fields and villages. But we cannot build on this, as it is not distinctly stated that the name of Shear-jashub was chosen, like that of his brother, with any prophetic intention.

SHEBA, SEBA, SABÆANS. As much confusion has been introduced by the variety of meanings which the name *Sabæans* has been made to bear, it may be proper to specify in this place their distinctive derivations and use. In our Authorized Version of Scripture the term seems to be applied to *three* different tribes. 1st. To the *Sebaiim* (סְבָאִים, with a *samech*), the descendants of Seba or Saba, son of Cush, who ultimately settled in Ethiopia (see the article *Seba*). 2nd. To the *Shebaiim* (שְׁבָאִים, with a *shin*), the descendants of Sheba, son of Joktan, the *Sabæi* of the Greeks and Romans, who settled in Arabia Felix. They are the 'Sabæans' of Joel iii. 8, to whom the Jews were to sell the captives of Tyre. The unpublished Arabic Version, quoted by Pocock, has 'the people of Yemen.' Hence they are called 'a people afar off,' the very designation given in Jer. vi. 20 to Sheba, as the country of frankincense and the rich aromatic reed, and also by our Lord in Matt. xii. 42, who says, the queen of Sheba, or 'the south,' came, ἐκ τῶν περάτων τῆς γῆς, 'from the earth's extremes.' 3rd. To another tribe of *Shebans* (שְׁבָא, also with a *shin*), a horde of Bedawee marauders in the days of Job (ch. i. 15); for whether we place the

NABLUS.

(SHECHEM.)

land of Uz in Idumæa or in Ausitis, it is by no means likely that the Arabs of the south would extend their excursions so very far. We must, therefore, look for this tribe in Desert Arabia; and it is singular enough, that besides the Seba of Cush, and the Shaba of Joktan, there is another Sheba, son of Jokshan, and grandson of Abraham, by Keturah (Gen. xxv. 33); and his posterity appear to have been 'men of the wilderness,' as were their kinsmen of Midian, Ephah, and Dedan. To them, however, the above-cited passage in the prophecy of Joel could not apply, because in respect neither to the lands of Judah nor of Uz could they be correctly described as a people 'afar off.' As for the *Sabaim* of Ezek. xxiii. 42 (which our version also renders by 'Sabæans'), while the Keri has סְבָאִים, the Kethib has סוֹבְאִים, *i. e.* 'drunkards,' which better suits the context.

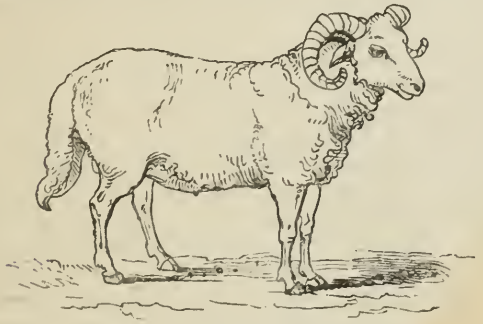
Yet, as if to increase the confusion in the use of this name of 'Sabæans,' it has also been applied—4th. To the ancient star-worshippers of Western Asia, though they ought properly to be styled *Tsabians*, and their religion not Sabaism but *Tsabaism*, the name being most probably derived from the object of their adoration, צָבָא, *the host*, *i. e.* of heaven (see an excursus by Gesenius in his translation of Isaiah, *On the Astral Worship of the Chaldæans*). 5th. The name of Sabæans, or Sabians, has also been given to a modern sect in the East, *the Mandaïtes*, or, as they are commonly but incorrectly called, the 'Christians' of St. John; for they deny the Messiahship of Christ, and pay superior honour to John the Baptist. They are mentioned in the Koran under the name of *Sabionna*, and it is probable that the Arabs confounded them with the ancient Tsabians above mentioned. Norberg, however, says that they themselves derive their own name from that which they give to the Baptist, which is *Abo Sabo Zakrio;* from Abo, 'father;' *Sabo*, 'to grow old together;' and Zakrio, *e. g.* Zecharia. 'The reason they assign for calling him *Sabo* is because his father, in his old age, had this son by his wife *Aneschbat* (Elizabeth), she being also in her old age (see Norberg's *Codex Nasaræus*, *Liber Adami Apellatus*, and Silvestre de Sacy, in the *Journal des Savans* for 1819).

Seba (סְבָא) was the eldest son of Cush (Gen. x. 7; 1 Chron. i. 9), and gave name to the country of Seba or Saba, and to one of the tribes called Sabæans, not, however, the *Shebaiim* (with a *shin*), but the *Sebaiim* (with a *samech*). There seems no reason to doubt that their ultimate settlement was in that region of Africa which was known to the Hebrews as the land of Cush, and to the Greeks and Romans as Ethiopia; and the Scriptural notices respecting them and their country have been already anticipated in the articles Cush and Ethiopia. If the kingdom of *Seba* was the far-famed Meroë, and the kingdom of *Sheba* the no less famous Yemen, then it is with peculiar propriety that the king of African Seba in the west, and the king of Asiatic Sheba in the east, are represented by the Psalmist (Ps. lxxii. 10) as bearing their united homage to the 'great king of Judah.' The commerce and wealth of these Sabæans of Ethiopia, as also their gigantic stature, are alluded to by the prophet Isaiah (ch. xliii. 3; xlv. 14), and his testimony is confirmed by the profane writers of antiquity. The passages quoted, however, are the only places in Scripture where the Sabæans of Africa are expressly mentioned; for the Sabæans of Job i. 15 were a tribe of Bedowees, or 'men of the desert,' descended from Sheba, grandson of Keturah; and the Sabæans of Joel iii. 8 were the posterity of another Sheba, son of Joktan, in Arabia Felix. There was, indeed, another Sheba, the son of Raagmah and the grandson of Cush, and consequently the nephew of the Seba who is the subject of the present article, but his posterity appear to have mingled with those of his uncle. As for the 'Sabæans' mentioned in our version at Ezek. xxiii. 42, although the Keri reading be סְבָאִים *Sabaim*, the Kethib has סוֹבְאִים *Sobeim*, 'drunkards,' which gives a better sense; besides that elsewhere the African Sabæans are not styled Sabaiim but Sebaiim, and the Arab Sabæans, Shebaiim.—N. M.

SHEBAT (שְׁבָט; Sept. Σαβάτ), the eleventh month of the Hebrew year, from the new moon of February to the new moon of March. The name only occurs once in Scripture (Zech. i. 7), and is the same which is given in the Arabic and Syriac languages to the same month.

SHEBNA (שֶׁבְנָא, *a youth;* Sept. Σομνᾶς), the prefect of the palace to king Hezekiah (Isa. xxii. 15); afterwards promoted to be scribe or secretary to the same monarch, when his former office was given to Eliakim (Isa. xxii. 15; xxxvi. 3; 2 Kings xviii. 26, 27; xix. 2).

SHECHEM (שְׁכֶם; Sept. Συχέμ, also τὰ Σίκιμα), a town of central Palestine, in Samaria, among the mountains of Ephraim (Josh. xx. 7; 1 Kings xii. 25), in the narrow valley between the mountains of Ebal and Gerizim (comp. Judg. ix. 7; Joseph. *Antiq.* iv. 8. 44), and consequently within the tribe of Ephraim (Josh. xxi. 20). It is in N. lat. 32° 17′, E. long. 35° 20′, being thirty-four miles north of Jerusalem and seven miles south of Samaria. It was a very ancient place, and appears to have arisen as a town in the interval between the arrival of Abraham in Palestine and the return of Jacob from Padan-aram, for it is mentioned only as a place, described by reference to the oaks in the neighbourhood, when Abraham came there on first entering the land of Canaan (Gen. xii. 6). But, in the history of Jacob it repeatedly occurs as a town having walls and gates: it could not, however, have been very large or important if we may judge from the consequence which the inhabitants attached to an alliance with Jacob, and from the facility with which the sons of the Patriarch were able to surprise and destroy them (Gen. xxxiii. 18, 19: xxxiv. 1, 2, 20, 24, 26). After the conquest of the country, Shechem was made a city of refuge (Josh. xx. 7), and one of the Levitical towns (Josh. xxi. 21), and during the lifetime of Joshua it was a centre of union to the tribes (Josh. xxiv. 1, 25), probably because it was the nearest considerable town to the residence of that chief in Timnath-serah. In the time of the judges, Shechem became the capital of the kingdom set up by Abimelech (Judg. ix. 1, sq.), but was at length conquered and destroyed by

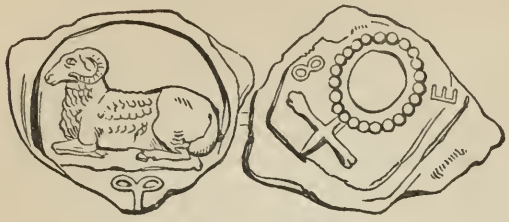


him (Judg. ix. 34). It must, however, have been ere long rebuilt, for it had again become of so much importance by the time of Rehoboam's accession, that he there gave the meeting to the delegates of the tribes, which ended in the separation of the kingdom (1 Kings xii. 10). It was Shechem which the first monarch of the new kingdom made the capital of his dominions (1 Kings xii. 25; comp. xiv. 17), although later in his reign the pleasantness of Tirzah induced him to build a palace there, and to make it the summer residence of his court; which gave it such importance, that it at length came to be regarded as the capital of the kingdom, till Samaria eventually deprived it of that honour (1 Kings xiv. 7; xvi. 24; see ISRAEL). Shechem, however, still throve. It subsisted during the exile (Jer. xli. 5), and continued for many ages after the chief seat of the Samaritans and of their worship, their sole temple being upon the mountain (Gerizim), at whose foot the city stood (Joseph. *Antiq.* xi. 8. 6; comp. John iv. 20; and see also the articles EBAL and GERIZIM, SAMARITANS). The city was taken, and the temple destroyed, by John Hyrcanus, B.C. 129 (Joseph. *Antiq.* xiii. 9. 1; *De Bell. Jud.* i. 2. 6). In the New Testament it occurs under the name of Sychar (Συχάρ; John iv. 5), which seems to have been a sort of nick-name (perhaps from שֶׁקֶר *sheker*, 'falsehood,' spoken of idols in Hab. ii. 18; or from שִׁכּוֹר *shikkor*, 'drunkard,' in allusion to Isa. xviii. 1, 7),—such as the Jews were fond of imposing upon places they disliked; and nothing could exceed the enmity which existed between them and the Samaritans, who possessed Shechem. Stephen, however, in his historical retrospect, still uses the proper and ancient name (Acts vii. 16). Not long after the times of the New Testament the place received the name of Neapolis, which it still retains in the Arabic form of Nablus, being one of the very few names imposed by the Romans in Palestine which have survived to the present day. It had probably suffered much, if it was not completely destroyed, in the war with the Romans, and would seem to have been restored or rebuilt by Vespasian, and then to have taken this new name; for the coins of the city, of which there are many, all bear the inscription, Flavia Neapolis—the former epithet no doubt derived from Flavius Vespasian (Eckhel, *Doctr. Num.* iii. 433; Mionnet, *Méd. Antiq.* v. 499). The name occurs first in Josephus (*De Bell. Jud.* iv. 8. 1), and then in Pliny (*Hist. Nat.* v. 14), Ptolemy (*Geog.* v. 16). There had already been converts to the Christian faith at this place under our Saviour, and it is probable that a church had been gathered here by the Apostles (John iv. 30-42; Acts viii. 25; ix. 31; xv. 3). Justin Martyr was a native of Neapolis (*Apolog.* ii. 41). The name of Germanus, bishop of Neapolis, occurs in A.D. 314; and other bishops continue to be mentioned down to A.D. 536, when the bishop John signed his name at the synod of Jerusalem (Reland, *Palæst.* p. 1009). When the Moslems invaded Palestine, Neapolis and other small towns in the neighbourhood were subdued while the siege of Jerusalem was going on (Abulfeda, *Annal.* i. 229). After the taking of Jerusalem by the Crusaders, Neapolis and other towns in the mountains of Samaria tendered their submission, and Tancred took possession of them without resistance (Will. Tyr. ix. 20). Neapolis was laid waste by the Saracens in A.D. 1113; but a few years after (A.D. 1120) a council was held here by king Baldwin II., to consult upon the state of the country (Fulcher, p. 424; Will. Tyr. xii. 13). Neapolis was not made a Latin bishopric, but belonged probably to that of Samaria, and the property of it was assigned to the abbot and canons of the Holy Sepulchre (Jac. de Vitriacus, ch. lviii.). After some disasters in the unquiet times which ensued, and after some circumstances which show its remaining importance, the place was finally taken from the Christians in A.D. 1242, by Abu Ali, the colleague of Sultan Bibars, and has remained in Moslem hands ever since.

There is no reason to question that the present town occupies the site of the ancient Shechem, although its dimensions are probably more contracted. The fertility and beauty of the deep and narrow valley in which the town stands, especially in its immediate neighbourhood, have been much admired by travellers, as far exceeding what they had seen in any other part of Palestine. This valley is not more than 500 yards wide at the town, which stands directly upon its water-shed, the streams on the eastern part flowing off east into the plain, and so towards the Jordan, while the fountains on the western side send off a pretty brook down the valley N.W. towards the Mediterranean. The town itself is long and narrow, extending along the N.E. base of Mount Gerizim, and partly resting upon its declivity. The streets are narrow; the houses high, and in general well built, all of stone, with domes upon the roofs as at Jerusalem. The bazaars are good and well supplied. There are no ruins which can be called ancient in this country, but there are remains of a church of fine Byzantine architecture, and a handsome arched gateway, both apparently of the time of the first crusades. These occur in the main street, through the whole length of which a stream of clear water rushes down—a rare circumstance in the East. The population of the place is rated by Dr. Olin at 8000 or 10,000, of whom 500 or 600 are Christians of the Greek communion, and the rest Moslems, with the exception of about 130 Samaritans, and one-third that number of Jews. The inhabitants bear the character of being an unusually valiant as well as a turbulent race, and some years since maintained a desperate struggle against the Egyptian government in some bloody rebellions (Robinson, *Palestine*, ii. 94-136; Olin, *Travels*. ii. 339-365; *Narrative of the Scottish Deputation*, p. 208-218; Schubert, *Morgenland*, iii. 136-154; Winer, *Real-wört.* s. v.; Lord Nugent, *Lands Classical and Sacred*, ii. 172-180.

2. SHECHEM, son of Hamor prince of the country or district of Shechem, in which Jacob formed his camp on his return from Mesopotamia. This young man having seen Jacob's daughter Dinah, was smitten with her beauty, and deflowered her. This wrong was terribly and cruelly avenged by the damsel's uterine brothers, Simeon and Levi, as described in the article DINAH (Gen. xxxv.). It seems likely that the town of Shechem, even if of recent origin, must have existed before the birth of a man so young as Hamor's son appears to have

been; and we may therefore suppose it a name preserved in the family, and which both the town and the princes inherited. Shechem's name is always connected with that of his father Hamor (Gen. xxxiii. 19; xxxv.; Acts vii. 16).



SHEEP, שֶׂה *seh*, צאן *tzon*, both it appears occasionally used as a collective term, including goats; Arab. *zain;* כֶּבֶשׂ *kebes*, a lamb under a year old; אַיִל *ajil*, the adult ram, but originally applied also to the males of other ruminants, such as deer, &c.; רחל *rachal*, a female or ewe sheep—all referable to Hebrew roots with apposite meanings, deserving the more confidence since the earliest patriarchs of the nation, being themselves shepherds and graziers, had never at any time received this portion of their domesticated cattle from foreign nations, and therefore had indigenous names for them.

494. [Syrian Sheep.]

Domestic sheep, moreover, although commonly regarded as the progeny of one particular wild species, are probably an instance, among many similar, where the wisdom of Providence has provided subsistence for man in different regions, by bestowing the domesticating and submissive instincts upon the different species of animals which the human family might find in their wanderings; for it is certain that even the American *argali* can be rendered tractable, and that the Corsican *musmon* will breed with the common sheep. The normal animal, from which all or the greater part of the western domestic races are assumed to be descended, is still found wild in the high mountain regions of Persia, and is readily distinguished from two other wild species bordering on the same region. What breeds the earliest shepherd tribes reared in and about Palestine can now be only inferred from negative characters; yet they are sufficient to show that they were the same, or nearly so, as the common horned variety of Egypt and continental Europe: in general white, and occasionally black, although there was on the upper Nile a speckled race; and so early as the time of Aristotle the Arabians possessed a rufous breed, another with a very long tail, and above all a broad-tailed sheep, which at present is commonly denominated the Syrian. These three varieties are said to be of African origin, the red hairy, in particular, having all the characteristics to mark its descent from the wild Ovis Tragelaphus or Barbatus (كبش), or Kebsch of the Arabian and Egyptian mountains [Rams' Skins, Red]. Flocks of the ancient breed, derived from the Bedouins, are now extant in Syria, with little or no change in external characters, chiefly the broad-tailed and the common horned white, often with black and white about the face and feet, the tail somewhat thicker and longer than the European. The others are chiefly valued for the fat of their broad tails, which tastes not unlike marrow; for the flesh of neither race is remarkably delicate, nor are the fleeces of superior quality. Sheep in the various conditions of existence wherein they would occur among a pastoral and agricultural people, are noticed in numerous places of the Bible, and furnish many beautiful allegorical images, where purity, innocence, mildness, and submission are pourtrayed—the Saviour himself being denominated 'the Lamb of God,' in twofold allusion to his patient meekness, and to his being the true paschal lamb, 'slain from the foundation of the world' (Rev. xiii. 8). The meaning of the Hebrew word קשיטה *kesitah*, occurring only in Gen. xxxiii. 19, and Job xlii. 11, has, we think, been contested with more earnestness than candour, Bochart himself pointing to the Greek, Onkelos, Syrian, Arabic, and Vulgate translations, where we find *sheep* or *lambs*—these authorities being supported by the Chaldee. On the other hand, the Rabbinical expounders have rendered it *money;* while in Costard's dissertation on the subject neither interpretation seems to him satisfactory; for he, in common with Bochart and others, finding no Hebrew word or root to justify the version *sheep* or *lambs*, would prefer *money*, but that, according to him, there was none coined till the era of Cyrus, and never any bearing the impression of a lamb, &c. Now here we have assumptions, and not proofs; there is no reason why sheep should not in the East, a land eminently pastoral, have been an object of barter in kind, and why in process of time the same word should not have been applied to a piece of metal, as *pecus* in Italy, which likewise at first denoted sheep or ox, and subsequently a coin. There is every reason to believe that metals, very anciently, in the shape of mere rings or plates of a given weight, represented the value of sheep in a more convenient form. The Jewish שקל *shakal*, 'to weigh,' indicates this early character of money; and its use is plainly shown in Gen. xxiii. 16, where Abraham, buying a field and cave, weighs out four hundred shekels of silver, a kind of current money, the medium of exchange between merchants, but not therefore coin, which implies a characteristic impression on the metal. In Gen. xxxiii. 19, *Kesitah* may be a Canaanitish, or more properly a Scytho-Chaldaic designation of sheep in the time of Jacob, already represented by silver, most probably cast in the form of that animal, and of a standard weight, for the Hebrews were not as yet a people, and the Egyptians cast their weights in metal shaped like cattle, &c.; and that Phœnicia, at a later period, had sheep actually impressed on a silver coin, is proved by that figured in the travels of Clarke. It is a medal found in Cyprus, of irregular form, with the impression of a ram recumbent on one side, and on the other a sun-flower, Heliotropium or Calendula, which occurs also on the peltæ of Amazons, and among Indian bas-reliefs. Two Phœnician letters are visible at the sides of the flower. But in Job xlii. 11, where *Kesitah* is rendered in the Authorized Version by 'money,'

we think it may have designated 'sheep;' since rings of gold, translated 'ear-rings,' follow imme-

495. [Supposed Kesitah.]

diately after; and it is now known that gold, during the earlier ages, was in Egypt worked into rings, as an article of exchange, and is frequently represented instead of money among the objects of tribute. Rings were surely more likely to be presented to Job as money, than as ornaments for the ears. It would lead us beyond our limits to show the probable affinity of Kesita and Kebesch with ancient Scythian roots, whereof Kaisak, Kupjak, Kirtak, Kutschi, and even the Persian and Turkish Kotschkui and Dachkutch are all mutations, having reference to 'sheep' or 'fleece.' *Kesitah* was a foreign term, and might perhaps be traced to the Pelhevi, or some other more eastern language.—C. H. S.

SHEKEL. [Weights and Measures.]

SHEKINAH or Shechinah (שְׁכִינָה), a term applied by the ancient Jews, especially in the Chaldee Targums, to that visible symbol of the divine glory which dwelt in the tabernacle and temple. The word, though nowhere met with in this form in the Scriptures, is a direct derivative from the Hebrew root שכן *shûkan*, 'to dwell,' 'to dwell in a tent or tabernacle,' which is of frequent occurrence in the sacred writers, and is used mainly to imply the *tabernacled presence and residence* of the Most High, by a visible symbol among the chosen people. Though found in several connections where the sense of *secular* habitation is obvious, yet there can be no doubt that the dominant idea is that of *sacred* indwelling, of which the following passages afford striking specimens: Exod. xxv. 8, 'Let them make me a tabernacle that I may *dwell* (שכנתי) among them.' Exod. xxix. 45, 'And I will *dwell* (שכנתי) among the children of Israel, and will be their God.' Num. v. 3, 'That they defile not their camps, in the midst whereof I *dwell* (שכנתי).' Ps. lxviii. 16, 'This is the hill which God delighteth to dwell in, yea, the Lord will *dwell in it* (ישכן) for ever.' Ps. lxxiv. 2, 'Remember—this Mount Zion wherein thou hast *dwelt* (שכנת).' It is more especially employed when the Lord is said to 'cause his name to dwell,' implying the stated visible manifestation of his presence. Ezra vi. 12, 'And the God that hath *caused his name to dwell there* (שכן שמה, literally, *hath shakinized his name*)' (comp. Deut. xii. 11; xiv. 23; xvi. 6; xxvi. 2). It is emphatically employed in speaking of the cloud of the divine glory dwelling upon Mount Sinai: Exod. xxiv. 16, 'And the glory of the Lord *abode* (וישכן) upon Mount Sinai.' The term *shekinah* (שכינה) is defined by Buxtorf (*Lex. Talm.* voc. שכן) as meaning primarily *habitation*, or *inhabitation*, but as having a dominant reference to *the divine glory in its outward visible manifestation*. The term is of very frequent occurrence in the Chaldee Targums, where it is employed interchangeably with 'Glory,' 'Glory of the Lord,' 'Angels of the Lord,' and often with 'Lord' (Jehovah) itself The citations that follow will more fully disclose the usage in this respect: Ps. lxxii. 2, 'Remember thy congregation which thou hast purchased of old, this Mount Zion wherein thou hast dwelt.' Targ. Exod. xxv. 8, 'Let them make me a tabernacle that I may dwell among them.' Chal. 'I will make *my shekinah* to dwell among them.' Arab. 'I will make my light (or splendour) to dwell among them.' Haggai i. 8, 'Go up to the mountain, and bring wood, and build the house, and I will take pleasure, and will be glorified, saith the Lord.' Targ. 'I will make my *shekinah* to dwell there in glory.' Ps. lxxxv. 10, 'His salvation is nigh them that fear him, that glory may dwell in our land.' Thus explained by Aben Ezra, 'That *the shekinah* may be established in the land.' It would be easy to multiply these quotations to almost any extent, but sufficient has been produced to illustrate the *usus loquendi*, and to show that we have ample authority for employing the term with the utmost freedom in reference to the divine *theophanies* or *manifestations*.

From the tenor of these and a multitude of similar texts, it is evident that the Most High, whose essence no man hath seen, or can see, was pleased anciently to manifest himself to the eyes of men by an external visible symbol.* As to the *precise nature* of the phenomenon thus exhibited, we can only say, that it appears to have been a concentrated glowing brightness, a preternatural splendour, an effulgent something, which was appropriately expressed by the term 'Glory;' but whether in philosophical strictness it was material or immaterial, it is probably impossible to determine. A luminous object of this description seems intrinsically the most appropriate symbol of that Being of whom, perhaps in allusion to this very mode of manifestation, it is said, that 'he is light,' and that 'he dwelleth in light unapproachable, and full of glory.' The presence of such a sensible representation of Jehovah seems to be absolutely necessary in order to harmonize what is frequently said of 'seeing God' with the truth of his nature as an incorporeal and essentially invisible spirit. While we are told in one place that 'no man hath seen God at any time,' we are elsewhere informed that Moses and Aaron, and the seventy elders, '*saw* the God of Israel,' when called up to the summit of the Holy Mount. So also Isaiah says of himself (Isa. vi. 1, 5) that 'in the year that king Uzziah died he *saw* the Lord sitting upon his throne,' and that, in consequence, he cried out, 'I am undone; for mine eyes have *seen* the Lord of hosts.' In these cases it is obvious that the object seen was not God in his essence, but some external visible symbol, which, because it stood for God, is called by his name.

* Even at the early period of the expulsion of our sinning progenitors from Paradise, such a manifestation seems to have been made in connection with the cherubim which the Most High *placed* (Heb. וישכן *yishkan*, shekinized) at the east of the garden of Eden, and which, probably, constituted that 'presence of the Lord,' from which Cain fled after the murder of his brother.'

It seems beyond question that the divine appearances vouchsafed in the earlier ages of the world, to the patriarchs and prophets, was under the aspect, or with the accompaniment of light or fire, or that which conveys to the mind the idea of 'Glory.' Thus, in Stephen's account of the call of Abraham (Acts vii. 2), 'And he said, men, brethren, and fathers, the *God of Glory* appeared unto our father Abraham when he was in Mesopotamia,' &c. This is a phrase very unwonted in plain narrative prose, and doubtless carries with it an allusion to the fact of God's appearing in a *glorious* manner, with a bright and overpowering effulgence, or, in other words, by the symbol of the *shekinah*. So too when he appeared to Moses in the burning bush, it was doubtless by the usual symbol; and this supernatural light or fire, glowing with a lambent and vivid, but innocuous flame, was no other than the splendour of the *shekinah*. To this august phenomenon the apostle plainly alludes, when, speaking of the distinguished prerogatives of the covenanted race (Rom. ix. 4), 'to whom pertaineth the adoption, and *the glory*, and the covenants, and the giving of the law,' &c.

But of all these ancient recorded theophanies, the most signal and illustrious was undoubtedly that which was vouchsafed in the pillar of cloud that guided the march of the children of Israel through the wilderness on their way to Canaan. A correct view of this subject clothes it at once with a sanctity and grandeur which seldom appear from the naked letter of the narrative. There can be little doubt that the columnar cloud was the seat of the *shekinah*. We have already seen that the term *shekinizing* is applied to the abiding of the cloud on the summit of the mountain (Exod. xxiv. 16). Within the towering aërial mass, we suppose, was enfolded the inner effulgent brightness, to which the appellation 'Glory of the Lord' more properly belonged, and which was only *occasionally* disclosed. In several instances in which God would indicate his anger to his people, it is said that they looked to the cloud and beheld the 'Glory of the Lord' (Num. xiv. 10; xvi. 19, 42). So when he would inspire a trembling awe of his Majesty at the giving of the Law, it is said, the 'Glory of the Lord appeared as a devouring fire' on the summit of the Mount. Nor must the fact be forgotten in this connection, that when Nadab and Abihu, the two sons of Aaron, offended by strange fire in their offerings, a fatal flash from the cloudy pillar instantaneously extinguished their lives. The evidence would seem then to be conclusive, that this wondrous pillar-cloud was the seat or throne of the *shekinah*, the visible representative of Jehovah dwelling in the midst of his people.

But it will be proper, in a matter of so much importance, to enter somewhat more fully into the genius of that mode of diction which obtains in regard to the *shekinah*; particularly the usage by which the term 'Angel' is applied to this visible phenomenon, deserves our investigation. This term occurs frequently in the Arabic version of those passages which speak of the divine manifestations, especially as made in connection with the cloudy pillar. Thus, when we read (Exod. xiii. 21), 'That the Lord went before them in a pillar of cloud by day, and by night in a pillar of fire,' the Arabic translation has it, 'The *angel of the Lord* went before them.' This is countenanced by the express language of Exod. xiv. 19, 'And the *angel of God* which went before the camp of Israel, removed and went behind them; and the *pillar of the cloud* went from before their face, and stood behind them.' Here it is obvious that the same object is set before us under two different forms of expression; the 'Pillar of Cloud' in the last clause being evidently the same as 'Angel of God' in the first. In seeking the true solution of this phraseology, it is necessary to bear in mind that 'Angel,' in the Scripture idiom, is a term of *office*, and not of *nature* [ANGELS]. It is by no means confined to any order of rational, intelligent, or *personal* beings, whether celestial or terrestrial. Though primarily employed to denote *messengers*, yet nothing is clearer than that it is used in speaking of *impersonal* agents, such as winds, fires, pestilences, remarkable dispensations—any thing in fact which might serve as a *medium* to make known the divine will, or to illustrate the divine working. 'He maketh the winds his angels, and the flaming fires his ministers.'

From the wide and extensive use of the term *angel*, in the language of Holy Writ, we are prepared to recognise at once the propriety of its application to the *theophanies*, or special manifestations of the Deity, of which so much is said in the Old Testament. We perceive that we are furnished from this source with a key to all those passages in which mention is made of the appearance of the *angel of the Lord*, whether to Abraham, to Isaac, to Jacob, to Hagar, to Moses, or any of the ancient worthies. So far as the letter is concerned the intimation would seem, in many cases, to be, that a created and delegated angel was sent upon various messages to the patriarchs, and became visible to their eyes and audible to their ears. These celestial messengers have been supposed occasionally to speak in the name, and even in the person, of Him whose mandates they communicated. Thus, when Abraham was about to offer up Isaac we are told that the *angel of the Lord* called to him out of heaven, and said (Gen. xxii. 15-18), 'By myself I have sworn, that in blessing I will bless thee, and that in multiplying I will multiply thy seed as the stars of heaven,' &c. This might seem at first view to be the voice of an angel-messenger speaking in the name, and by the authority, of him who sent him. But from the usage now developed, we understand that it was the *visible object that appeared*, which is called the angel. So when it is said that 'the angel of the Lord appeared to Moses in the burning bush,' we see it was the burning bush itself that was called the angel, because it was the *medium of manifestation* to Jehovah in making this communication to his servant. The language which he utters on that occasion is evidently not competent to any created being, and must be considered as proceeding from the *shekinah*, to which no other than the infinite Spirit was present. The appropriation, therefore, of this language to the majestic pillar of cloud viewed as the *shekinah* of Jehovah, receives a countenance which cannot be questioned. We see no room to hesitate in believing, that when it is said, 'the *angel of God* went before them,' the meaning is, that the pillar of cloud

went before them, or, in other words, that the pillar is called 'the angel.'

In pursuance then of this train of investigation, we advance to another phasis of the mystic column that marshalled the way of the sojourning hosts, in their march to Canaan. In Exod. xxiii. 2, it is said, 'Behold I send an angel before thee, to keep thee in the way, and to bring thee into the place that I have prepared. Beware of him, and obey his voice, provoke him not; for he will not pardon your transgressions: for my name is in him.' The first impression, upon the perusal of this, would perhaps be, that a created and tutelary angel was intended, one whom, whether visible or invisible, they used to treat with the greatest reverence as a kind of personal representative of Jehovah himself. This representative and commissioned character would be apt to be recognised in the phrase, 'My name is in him,' equivalent, as would be supposed, to the declaration, 'My *authority* is in him.' But then, on the other hand, we have shown that the term 'angel' *is* applied to the cloudy pillar, and as we have no intimation of any other angel being visibly present with the travelling tribes, the inference is certainly a fair one, that the angel here mentioned is but the designation of that glorious object which stood forth to the eye of the congregation, as having the *shekinah* essentially connected with it.

And now with the light of this peculiar usage to guide us, can we hesitate in regard to the genuine scope of the following passage from Isaiah, which we must assuredly recognise as a parallelism (Isa. lxiii. 8)? 'For he said, surely they are my people, children that will not lie; so he was their Saviour. In all their afflictions he was afflicted, and *the angel of his presenee* saved them: in his love and in his pity he redeemed them; and he bore them and carried them all the days of old.' The allusion is undoubtedly to the same grand symbolical object which we are now considering. After what has been said we can have no difficulty in understanding why the title, 'Angel of his presence,' is applied to the cloudy column of the wilderness. It was evidently so termed, because it was the medium of manifestation to the divine presence. The invisible Deity, in some mysterious manner, dwelt in it, and was associated with it. It was called the 'Angel of the Divine Presence,' or, more literally, *faee* (פני), because, as the human face is the grand medium of expression to the human spirit, so the *shekinah* was the medium of manifestation or expression to the Divine Spirit. Indeed Moses, on one occasion, when apprehensive that the guiding glory of his people would be withdrawn on account of their transgressions, makes use of this language, 'If thy presence go not with me, carry us not up hence. And the Lord said, my presence shall go with thee.' So also in Deut. iv. 37, we find the word *presence* or *faee* used with a personal import, 'And because he loved thy fathers, therefore he chose their seed after them, and brought thee out *in his sight* (בפניו, *with, by, or through, his presenee, i. e.* the angel of his presence), with his mighty power out of Egypt.' We see not, therefore, that anything is hazarded in the position, that *the angel of God's presence*, of whom Isaiah speaks, is essentially the same with *the angel of God's pillar*, of which Moses speaks, and which is invested with personal attributes, because the Israelites were taught to view it in a personal character as a visible representative of their covenant God.

But our conception of the subject is essentially incomplete without the exhibition of another aspect of the cloudy pillar. This is as the *oraele* of the chosen people. So long as that sublime symbol continued as the outward visible token of the divine presence, it performed the office of an oracle in issuing commands and delivering responses. 'They called upon the Lord,' says the Psalmist (Ps. xcix. 6, 7), 'and he answered them. He *spake unto them in the eloudy pillar;*' that is, the cloudy pillar was the medium of his communications. This is indeed sufficiently express; but still more unequivocal is the language of Exod. xxxiii. 9, 'And it came to pass, as Moses entered into the tabernacle, the cloudy pillar descended and stood at the door of the tabernacle, and *talked with* Moses.' It is true indeed that in our established version we read that '*the Lord* talked with Moses,' but the words 'the Lord' are printed in italics to show that there is nothing in the original answering to them. We have given a literal translation; still there is no special impropriety in supplying the words as above, if it be borne in mind that the mystic pillar was regarded as a visible embodiment of Jehovah, and, therefore, that in the diction of the sacred writer the two terms are equivalent and convertible. This is evident from what follows in the connection, 'And all the people saw the cloudy pillar stand at the tabernacle door, and the Lord spake unto Moses face to face, as a man speaketh to his friend.' The 'Lord' here must unequivocally be applied to the symbol of the Lord, or the *shekinah*, which was the true organ of communication with the people. It would be easy to carry out this line of investigation to still further results: but the considerations which have been offered will suffice to indicate the general bearings of this interesting subject.

SHEM (שֵׁם, *name;* Sept. Σήμ), one of the three sons of Noah (Gen. v. 32), from whom descended the nations enumerated in Gen. x. 22, sq., and who was the progenitor of that great branch of the Noachic family (called from him Shemitic or Semitic) to which the Hebrews belong. The name of Shem is placed first wherever the sons of Noah are mentioned together; whence he would seem to have been the eldest brother. But against this conclusion is brought the text Gen. x. 21, which, according to the Authorized, and many other versions, has 'Shem the brother of Japheth the elder;' whence it has been conceived very generally that Japheth was really the eldest, and that Shem is put first by way of excellency, seeing that from him the holy line descended. But this conclusion is not built upon a critical knowledge of the Hebrew, which would show that הגדול, 'the elder,' must in this text be referred not to Japheth but to Shem, so that it should be read 'Shem....the elder brother of Japheth.' The current version of the

text is sanctioned only by the Septuagint among the ancient versions, and it is there supposed by some to be corrupt. The Samaritan, Syriac, Arabic, and Vulgate, adopt the other interpretation, which indeed is the only one that the analogy of the Hebrew language will admit. The whole Bible offers no other instance of such a construction as that by which אחי יפת הגדול becomes 'the brother of Japhet the elder,' which indeed would be an awkward phrase in any language. The object of the sacred writer is to mark the seniority and consequent superiority of Shem. He had already told us (Gen. ix. 24) that Ham was, if not the youngest, at least a younger son of Noah, and he is now careful to acquaint us that Shem, the stem of the Hebrews, was older than Japheth (See Baumgarten, *Theolog. Commentar zum Alten Test.*; Geddes, *Critical Remarks:* respecting the posterity of Shem see NATIONS, DISPERSION OF).

1. SHEMAIAH (שְׁמַעְיָה, *whom Jehovah hears;* Sept. Σαμαίας), a prophet of the time of Rehoboam, who was commissioned to enjoin that monarch to forego his design of reducing the ten tribes to obedience (1 Kings xii. 22-24). In 1 Chron. xii. 15, this Shemaiah is stated to have written the Chronicles of the reign in which he flourished.

2. SHEMAIAH, a person who, without authority, assumed the functions of a prophet among the Israelites in exile. He was so much annoyed by the prophecies which Jeremiah sent to Babylon, the tendency of which was contrary to his own, that he wrote to Jerusalem, denouncing the prophet as an impostor, and urging the authorities to enforce his silence. In return he received new prophecies, announcing that he should never behold that close of the bondage which he fancied to be at hand, and that none of his race should witness the re-establishment of the nation (Jer. xxix. 24-32).

SHEMARIM (שְׁמָרִים, from שָׁמַר *shâmar, to keep, to preserve*). This term is generally understood to denote the *lees* or *dregs* of wine, and it is asserted that the radical idea expresses the fact that these *preserve* the strength and flavour of the wine. There is evidently a reference to this in Ps. lxxv. 8:—'For in the hand of Jehovah there is a cup, and the wine (יין *yayin*) is red (or thick and turbid, חמר *khâmar*): it is full of mixture (מסך *meseech*), and he poureth out this; but the dregs thereof (שמריה *shemâreyhâ*) all the rebels of the earth shall press and suck;' in which verse we have four of the terms rendered 'wine' by the translators of the English Bible. This verse is interesting, as indicating accurately the import of the term under discussion, at least in this particular passage. *Shemârim* are here the sediments in a cup compounded with articles, two of which, at least, are designated by terms invariably used in the Scriptures to designate something obtained from the vine. *Yayin* is employed in the Mishna (*Tr. Nedarim*, vi. 9) to designate a drink obtained from apples (יין תפוחים); but this is different from its Scriptural use. The inference is, that *shemârim* here denotes the dregs of wine. This cannot be the meaning of the term, however, in Isa. xxv. 6, where, we think, it must refer to some rich *preserves* appropriate to the feast of which that text speaks (*Tirosh lo Yayin*, iv. 8). The verse may be rendered thus:—'And Jehovah of hosts shall make to all peoples in this mountain a feast of fat things (*shemânim*), a feast of preserves (*shemârim*), of the richest fatness, of preserves well refined.' Considerable diversity of opinion has obtained among biblical critics in regard to both the literal meaning and prophetic bearing of this text. The most usual interpretation supposes a reference to *wines on the lees;* but there are strong objections to this view, the most obvious of which is, that it is exceedingly inappropriate. There is no mention of wine in the original, but simply of dregs; and interpreters have been forced to suppose a reference to the former, from a conviction that the latter was altogether inapt. The mention of dregs does not naturally call up (by synecdoche, as is supposed, though dregs are not a *part* of the wine which has been purified from them) the idea of wine which has been drawn from them. The trope here supposed is at variance with a fundamental principle of figurative language, which takes advantage of 'that great variety of relations between objects, by means of which the mind is assisted to pass easily from one to another; and by the name of the one, understands the other to be meant. It is always some accessory idea, which recalls the principal to the imagination; and commonly recalls it with more force than if the principal idea had been expressed' (Blair's *Lectures on Rhet. and Bell. Lett.*, lect. xiv.). Vitringa, indeed, renders the language with apparent literal propriety, *a feast of dregs* (*convivium fæcum*), but he explains it of *wine purified from its dregs* (ex *vino defæcato*, a fæcibus purgato) (*Comm. in loc.*). Vitringa may well say of the expression as thus rendered: 'phrasi quidem fateor singulari et insolente.' Munster supposes very absurdly a reference to a highly intoxicating wine ('convivium vino unde omnes inebriabuntur'), which would prove a curse rather than a blessing, and refers to the supposed fulfilment of the prophecy in Gog and Magog, when 'Dominus tanquam ebrios faciet eos ruere in mutuam cædem' (*Critici Sacri*, in loc.). Clarius, Forerius, and Grotius render it, *a feast of vine-fruit* (vindemiæ); but Clarius gives also the same explanation as Munster. Our readers, we trust, will agree with us in rejecting the idea of intoxication from this beautiful passage; which, indeed, has but few supporters. We agree with the great majority of interpreters, that a signal blessing is here referred to; but we cannot agree with those who suppose that wine drawn off from dregs is made the emblem of that blessing. Such wine would evidently not answer the purpose. It was not the best wine. In reference to the separation of *dregs* and *sediment* from wine before it was drunk, Professor Ramsay says, 'Occasionally a piece of linen cloth (σάκκος, *saccus*) was placed over the τρύγοπος or *colum* (Pollux, vi. 19; x. 75), and the wine (σακκίας, *saccatus*) filtered through (Martial, viii. 15). The use of the *saccus* was considered objectionable for all delicate wines, since it was believed to injure (Hor. *Sat.* ii. 4, 51), if not entirely to destroy, their flavour, and in every instance to *diminish the strength* of the liquor. For this reason it was employed by the dissipated *in order that they might be able to*

swallow a greater quantity without becoming intoxicated' (Smith's *Dictionary of Greek and Roman Antiquities*, art. VINUM). Vitringa and others suppose that the wine in the passage before us was prepared by the very method which Professor Ramsay justly says was believed *to injure, if not entirely to destroy its flavour*. Columella, Cato, and Pliny, speak of wine made from dregs or lees; but none of them speak of it as of superior excellence: on the contrary, they mention it as rather inferior.

These considerations have induced us to think of another interpretation of the term. We regard it as indicating something excellent in its kind, and the best of its kind. It seems to refer to some rich *preserves* made from grapes or other fruits. We thus fall back on the radical idea of the word, and connect that idea with its use in the present passage, which is different from its use in other texts. These preserves might be usually prepared from the grape, but it is not necessary to limit them to such a preparation; thus we find עָסִיס *asis*, properly the *juice* of the grape (Joel i. 5), used to denote the *juice* of the pomegranate (Cant. viii. 2).

It is difficult to say how these *preserves* were prepared. 'In the East grapes enter very largely into the provisions at an entertainment. Thus Norden was treated by the Aga of Assaoun with coffee, and some bunches of grapes of an excellent taste' (Robinson's *Calmet*, art. VINE). It is probable, however, that some solid preparation of the dried grape ('uva passa') is here intended. The very best grapes were anciently, and still are, employed to make such preparations in Palestine. The finest grapes in that country grow in the vineyards around Hebron. 'The produce of these vineyards,' says Professor Robinson, 'is celebrated throughout Palestine. No wine, however, nor 'Arak is made from them, except by the Jews, and this is not in great quantity. The wine is good. *The finest grapes are dried as raisins;* and the rest, being trodden and pressed, the juice is boiled down to a syrup, which, under the name of Dibs (our author states in a note that 'this is the Hebrew word דִּבְשׁ *debhash*, signifying *honey*, and also *syrup of grapes*') is much used by all classes, wherever vineyards are found, as a condiment with their food. It resembles thin molasses, but is more pleasant to the taste' (*Biblical Researches in Palestine*, ii. 442). The fact here stated regarding the use made of the finest grapes, supplies us with an article worthy of the feast mentioned in the text. Buckingham, a well-known traveller, mentions the following interesting facts:—'By way of dessert, some walnuts and dried figs were afterwards served to us, besides a very curious article, probably resembling the dried wine of the ancients, which they are said to have preserved in cakes. They were of the size of a cucumber, and were made out of the fermented juice of the grape formed into a jelly, and in this state wound round a central thread of the kernel of walnuts; the pieces of the nuts thus forming a support for the outer coat of jelly, which became harder as it dried, and would keep, it is said, fresh and good for many months, forming a welcome treat at all times, and being particularly well adapted for sick or delicate persons, who might require some grateful provisions capable of being carried in a small compass, and without risk of injury on a journey' (*Travels among the Arabs*, p. 137). Whether this intelligent traveller is right in asserting that the article mentioned by him was made out of the fermented juice of the grape, we cannot determine. If so, it must have been entirely different from our fermented wines, for none of them could be 'formed into a jelly.' The article, as he found it, was in a solid state, having become hard as it dried, and was, probably, free of the intoxicating principle.

Were we able to say how the article designated by *shemârim* was prepared, we could easily explain the force of the epithet מְזֻקָּקִים *mezukkâkim*. It is the passive participle of the pual (or intensitive) species of the verb זָקַק *zâkak*, which is usually explained as signifying *to purify*, a meaning sufficiently applicable in the present case. The preserves might be purified by clearing out the skins of the grapes, the stones, &c. Rosenmüller (*Scholia, in loc.*), following Vitringa, supposes here a reference to filtration, by which the dregs were separated from the wine, and by which consequently the wine was purified. We have already given a reason why this interpretation must be rejected. The following remark of Horace (*Sat.* ii. 4. 51) is directly opposed to it, and shows that wine thus prepared would have no claim to stand side by side with the rich delicacies mentioned in the text:—

'Massica si cœlo suppones vina sereno,
Nocturna, si quid crassi est, tenuabitur aura,
Et decedet odor nervis inimicus: at illa
Integrum perdunt lino vitiata saporem.'

'The sky serene, put out your Massic wine;
In the night air its foulness shall refine,
And lose the scent, unfriendly to the nerves,
But filtrated, no flavour it preserves.'

Francis.

Dr. E. Henderson (*Notes on Isaiah*) and Barnes (*Notes on Isaiah*) suppose that purification by fermentation is here referred to; but these distinguished writers, to be thoroughly consistent, should adopt the opinion of Munster. Some have sought a resemblance between the process by which metals are purified, and that employed to refine the *shemârim*, the same word being used in connection with each (Job xxviii. 1; 1 Chron. xxviii. 18; xxix. 4; Ps. xii. 6 [*Heb.* 7]; Mal. iii. 3); but probably the *fact* of refinement is all that may be intended, without reference to the *process*. Other interpretations (as that of Seb. Ravius, in *Diatribe de epulo funebri gentibus dando ad Jes.*, cap. xxv. 6, 7, 8; Traj. ad Rhen., 1747, p. 23, sq.; of J. D. Michaelis, in *Supplem. ad Lex. Hebr.*, p. ii. 642) we omit, as anticipated in the preceding observations, or unworthy of notice.

After a full consideration of the subject, we conclude that the *shemârim* of this text was a solid article, different from אֲשִׁישָׁה *ashishah*, *grape-cake* (Gesenius, *Heb. Lex.*, sub voc.), as not being pressed in any particular form, and different from צִמֻקִּים *tsimmukim*, *dried grapes*, as being refined and prepared for being served up at a sumptuous entertainment.

This subject might be further illustrated by a consideration of the Hebrew taste in regard to the produce of the vineyard. It will not be denied that the figurative language of the Scriptures is to be illustrated by reference to Jewish

customs. Those commentators, however, who suppose that Isaiah here speaks of *good old fermented wine*, advocate an article which is rather offensive than agreeable to the Hebrew taste. In Cant. ii. 4, the bride says of the object of her affection, 'He brought me to the house of grapes' (בית היין), an arbour being referred to, probably similar to those found in our gardens and orchards, or perhaps larger (Robinson's *Palestine*, vol. i. p. 314), such houses or tents being common in vineyards, and resorted to at the time of the vintage. The sweetness of honey seems to have been preferred in their wines; for in Cant. v. 1, the bridegroom says, 'I have eaten my honey (not honey-comb, as 'some have falsely and carelessly rendered it'—Gesenius) [HONEY], with my grape syrup;' and the mildness of milk was also agreeable, for he adds, 'I have drunk my wine with my milk.' That which 'goeth down sweetly' is approved of (Cant. vii. 9), as well as that which has the flavour of spices, with the addition of the juice of the pomegranate (Cant. viii. 2), or that of other fruits. Wisdom, too (Prov. ix. 2), is said to have 'mingled her wine,' a circumstance which plainly indicates that the wine referred to was thick and syrupy, and for use required to be mingled with a quantity of water equal to that which had been evaporated by boiling. The ancient Jews had two objects in view in mingling their wine—one of which we have now mentioned, and the other was by the mixture of drugs to produce a highly-intoxicating drink (Isa. v. 22). It would be no compliment, therefore, to a sober Israelite to be promised an abundant supply of old fermented wine at a rich entertainment; in fact, it would be regarded as a kind of mockery.

We may state briefly the results to which the preceding observations conduct us:—

(*a.*) The term *shemárim* does not naturally call up the idea of wine.

(*b.*) It properly signifies *preservers* or *preserves*.

(*c.*) There is a paronomasia in the text in the words *shemânim* (delicacies) and *shemârim* (preserves), the beauty of which is increased by the repetition of these terms.

(*d.*) The interpretation of *rich preserves* is the only one that suggests an article worthy of being placed side by side with the *rich delicacies* which interpreters acknowledge to be designated by the accompanying term.

(*e.*) Wine filtered or drawn off from the lees was not in high repute.

(*f.*) The Hebrew taste was in favour of a solid preparation of the grape.

Neither of the other passages (Jer. xlviii. 11, Zeph. i. 12), which relate to *shemárim*, is invested with special interest. The wine was separated from the lees, sometimes at least, by being drawn off from one vessel to another, as appears from Jeremiah xlviii. 11, which Bishop Lowth renders thus:—

'Moab hath been at ease from his youth,
And he hath settled upon his lees;
Nor hath he been drawn off from vessel to vessel,
Neither hath he gone into captivity:
Therefore his taste remaineth in him,
And his flavour is not changed.'

Moab is here represented as spending a life of quiet indifference, living undisturbed in sin. Such, too, was the situation of those of whom Jehovah says (Zeph. i. 12), 'I will punish the men that are settled on their lees;' that is, those who disregarded his admonitions, and prosecuted their sinful courses, unmoved by his threatenings.—P. M.

SHEMEBER (שֶׁמְאֶבֶר, *lofty flight;* Sept. Συμοβόρ), king of Zeboim, one of the five 'cities of the plain' (Gen. xiv. 2).

SHEMER (שֶׁמֶר, *lees;* Sept. Σεμήρ), the owner of the hill of Samaria, which derived its name from him. Omri bought the hill for two talents of silver, and built thereon the city, also called Samaria, which he made the capital of his kingdom (1 Kings xvi. 24) [see SAMARIA]. As the Israelites were prevented by the law (Lev. xxv. 23) from thus alienating their inheritances, and as his name occurs without the usual genealogical marks, it is more than probable that Shemer was descended from those Canaanites whom the Hebrews had not dispossessed of their lands.

SHEMINITH. [PSALMS.]

SHEOL. [HADES.]

1. SHEPHATIAH (שְׁפַטְיָה, *whom Jehovah defends;* Sept. Σαφατία), a son of David by Abital (2 Sam. iii. 4).

2. SHEPHATIAH, one of the nobles who urged Zedekiah to put Jeremiah to death (Jer. xxxviii. 1).

3. SHEPHATIAH, one of the heads of families who settled in Jerusalem after the exile (Neh. xi. 6).

4. SHEPHATIAH, the head of one of the families, numbering three hundred and seventy-two persons, of the returned exiles (Ezra ii. 4, 57).

The same name, with a slight variation in the original (שְׁפַטְיהוּ), but not in the Authorized Version, occurs in the following:

5. SHEPHATIAH, a son of king Jehoshaphat (2 Chron. xxi. 2).

6. SHEPHATIAH, one of the chief of those valiant men who went to David when at Ziklag (1 Chron. xii. 5).

7. SHEPHATIAH, the governor of the tribe of Simeon in the time of David (1 Chron. xxvii. 16).

SHEPHERD. [PASTURAGE.]

SHESH (שֵׁשׁ), ALSO SHESHI, translated *fine linen* in the Authorized Version, occurs twenty-eight times in Exodus, once in Genesis, once in Proverbs, and three times in Ezekiel. Considerable doubts have, however, always been entertained respecting the true meaning of the word; some have thought it signified *fine wool*, others *silk;* the Arabs have translated it by words referring to colours in the passages of Ezekiel and of Proverbs. Some of the Rabbins state that it is the same word as that which denotes the number six, and that it refers to the number of threads of which the yarn was composed. Thus Abarbanel on Gen. xxv. says: 'Schesch est linum Ægyptiacum, quod est pretiosissimum inter species lini. Quum vero tortum est sex filis in unum, vocatur *schesch*, aut *schesch moschsar*. Sin ex unico filo tantum, dicitur *bad*' (Cels. *Hierobot.* ii. p. 260). This interpretation, however, has satisfied but few. The Greek Alexandrian translators used the word βύσσος, which by some has been supposed to indicate 'cotton,' and by others 'linen.'

In the article Byssus we have seen that the word *bad*, translated *linen*, occurs in various passages of the Old Testament, but that the word *butz*, translated *fine linen* and *white linen*, is employed only at a later period. Under the word Karpas, used in Esth. i. 6, we have shown the probability of its being derived from the Sanscrit *karpasum*, and that it signifies 'cotton.' We have there stated our opinion that cotton was known to the Hebrews when in Persia, and that *butz*, which is not used before the time when the book of Chronicles was written, probably also signifies cotton. *Ethun*, as well as ὀθόνιον, appears to have been applied either to linen or cotton cloth. *Bad* we conceive may mean linen only. *Pishtah*, flax, we know was one of the great productions of Egypt.

Shesh, however, must now be taken into consideration. In the several passages where we find the word used, we do not obtain any information respecting the plant; but it is clear it was spun by women (Exod. xxx. 25), was used as an article of clothing, also for hangings, and even for the sails of ships, as in Ezekiel xxvii. 7, '*Fine linen* (*shesh*) with broidered work from Egypt was that which thou spreadest forth to be thy sail.' It is evident from these facts, that it must have been a plant known as cultivated in Egypt at the earliest period, and which, or its fibre, the Israelites were able to obtain even when in the desert. As cotton does not appear to have been known at this very early period, we must seek for *shesh* among the other fibre-yielding plants, such as flax and hemp. Both these are suited to the purpose, and were procurable in those countries at the times specified. Lexicographers do not give us much assistance in determining the point, from the little certainty in their inferences. The word *shesh*, however, appears to us to have a very great resemblance, with the exception of the aspirate, to the Arabic name of a plant, which, it is curious, was also one of those earliest cultivated for its fibre, namely, *hemp*. Of this plant, one of the Arabic names is حشيش *husheesh*, or the herb *par excellence*, the term being sometimes applied to the powdered leaves only, with which an intoxicating electuary is prepared. This name has long been known, and is thought by some to have given origin to our word assassin or hassasin. Makrizi treats of the hemp in his account of the ancient pleasure-grounds in the vicinity of Cairo, 'famous above all for the sale of the hasheesha, which is still greedily consumed by the dregs of the people, and from the consumption of which sprung the excesses, which led to the name of "assassin" being given to the Saracens in the holy wars.'

Hemp is a plant which in the present day is extensively distributed, being cultivated in Europe, and extending through Persia to the southernmost parts of India. In the plains of that country it is cultivated on account of its intoxicating product, so well known as *bang*; in the Himalayas both on this account and for its yielding the ligneous fibre which is used for sack and rope-making. Its European names are no doubt derived from the Arabic *kinnab*, which is supposed to be connected with the Sanscrit *shanapee*. There is no doubt, therefore, that it might easily have been cultivated in Egypt. Herodotus mentions it as being employed by the Thracians for making garments. 'These were so like linen that none but a very experienced person could tell whether they were of hemp or flax; one who had never seen hemp would certainly suppose them to be linen.' Hemp is used in the present day for smockfrocks and tunics; and Russia sheeting and Russia duck are well known. *Cannabis* is mentioned in the works of Hippocrates on account of its medical properties. Dioscorides describes it as being employed for making ropes, and it was a good deal cultivated by the Greeks for this purpose. Though we are unable at present to prove that it was cultivated in Egypt at an early period, and used for making garments, yet there is nothing improbable in its having been so. Indeed as it was known to various Asiatic nations, it could hardly have been unknown to the Egyptians, and the similarity of the word *husheesh* to the Arabic *shesh* would lead to a belief that they were acquainted with it, especially as in a language like the Hebrew it is more probable that different names were applied to totally different things, than that the same thing had two or three different names. Hemp might thus have been used at an early period, along with flax and wool, for making cloth for garments and for hangings, and would be much valued until cotton and the finer kinds of linen came to be known.

Flax and Linen. Reference has been made to this article from Byssus and from Pishtah, for an account of flax and the cloth made from it. So many words are translated *linen* in the Authorized Version of the Scriptures, that it has been considered doubtful whether they indicate only different qualities of the same thing, or totally different substances. The latter has by some been thought the most probable, on account of the poverty of the Hebrew language; hence, instead of considering the one a synonym of the other, we have been led to enquire, as above, whether *shesh* may not signify cloth made of *hemp* instead of flax. This would leave *bad* and *pishtah* as the only words peculiarly appropriated to *linen* and *flax*. The passages in which *bad* occurs have already been indicated [Byssus]. On referring to them we find that it is used only when articles of clothing are alluded to. It is curious, and probably not accidental, that the Sanscrit word *pat* signifies cloth made from flax-like substances. It has been remarked that the official garments of the Hebrews, like those of the Egyptians, were all made of linen; and we find in the several passages where *bad* occurs, that linen garments and clothes, linen breeches, linen girdle, linen ephod, linen mitre, are intended; so in Exod. xxxix. 28, and they made for Aaron and his sons 'a mitre of fine linen, and goodly bonnets of fine linen, and linen breeches of fine twined linen.' In the article Cotton we have seen that the mummy cloths are composed very generally, if not universally, of linen cloth.

Pishtah (פִּשְׁתָּה) no doubt refers to the flax plant, if we may judge from the context of the passages in which it occurs. Thus, in Exod. ix. 31, in the plague of the hail storm, it is related, 'And the *flax* (*pishtah*) and the barley was smitten: for the barley was in the ear, and the flax was bolled,' or in blossom, according to

Gesenius. As the departure of the Israelites took place in the spring, this passage has reference no doubt to the practice adopted in Egypt, as well as in India, of sowing these grains partly in the months of September and October, and partly in spring, so that the wheat might easily be in blade at the same time that the barley and flax were more advanced. From the numerous references

496. [Flax.]

to flax and linen, there is no doubt that the plant was extensively cultivated, not only in Egypt, but also in Palestine. As to Egypt we have proof in the mummy cloth being made of linen, and also in the representations of the flax cultivation in the paintings of the Grotto of El Kab, which represent the whole process with the utmost clearness; and numerous testimonies might be adduced from ancient authors, of the esteem in which the linen of Egypt was held. Flax continues to be extensively cultivated in the present day. That it was also much cultivated in Palestine, and well known to the Hebrews, we have proofs in the number of times it is mentioned; as in Josh. xi. 6, where Rahab is described as concealing the two Hebrew spies with the stalks of flax which she had laid in order upon the roof. In several passages, as Lev. xiii. 47, 48, 52, 59; Deut. xxii. 11; Jer. xcii. 1; Ezek. xl. 3; xliv. 17, 18, we find it mentioned as forming different articles of clothing, as girdles, cords, and bands. In Prov. xxxi. 13, the careful housewife 'seeketh wool and flax, and worketh it willingly with her hands.' The words of Isaiah (xlii. 3), 'A bruised reed shall he not break, and the smoking flax shall he not quench,' are evidently referred to in Matt. xii. 20, where λίνον is used as the name of flax, and as the equivalent of *pishtah*. But there can be no doubt of this word being correctly understood, as it has been well investigated by several authors. (Cels. *Hierobot.* ii. p. 283; Yates, *Textrinum Antiquorum*, p. 253.)—J. F. R.

SHESHACH (שֵׁשַׁךְ), a name twice given by Jeremiah to Babylon (Jer. xxv. 26; li. 41). Its etymology and proper signification are doubtful. The Jewish interpreters, followed by Jerome, suppose שֵׁשַׁךְ *Sheshach* to stand for בבל *Babel*, according to the secret or cabbalistic mode of writing called *athbash*, in which the alphabet is inverted, so that ת, the last letter, is put for א the first, ש the penultimate letter for ב the second, and so on; and this they suppose was done by the prophet for fear of the Chaldæans. But Gesenius very properly asks, even supposing these cabbalistic mysteries of trifling had been already current in the time of Jeremiah, which cannot by any means be admitted, how comes it to pass that Babylon is in the very same verse mentioned under its own proper name? C. B. Michaelis ingeniously conjectures that שֵׁשַׁךְ comes from שכשך *shikshach*, 'to overlay with iron or other plates,' so that it might designate Babylon as χαλκόπυλος. Von Bohlen thinks the word synonymous with the Persian *Shih-Shah*, i. e. 'house of the prince;' but it is doubtful whether, at so early a period as the age of Jeremiah, Babylon could have received a Persian name that would be known in Judæa.

SHESHAN (שֵׁשָׁן, *lily;* Sept. Σωσάν), a Hebrew, who during the sojourn in Egypt gave his daughter in marriage to his freed Egyptian slave (1 Chron. ii. 34) [JARHAH].

SHESHBAZZAR. [ZERUBBABEL.]

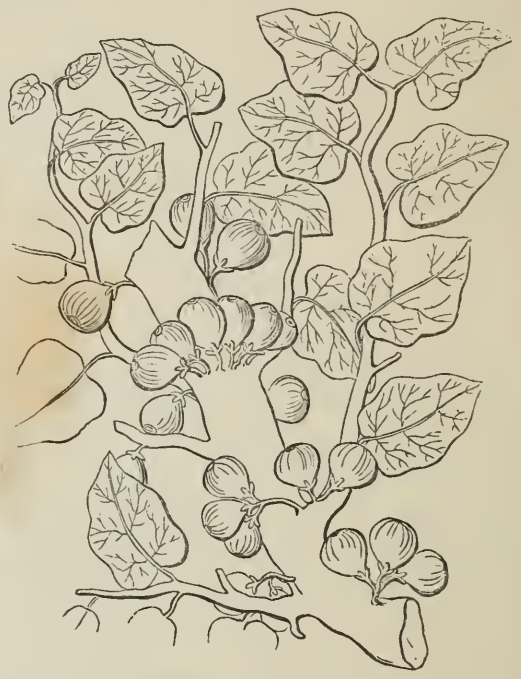
SHETHAR (שֵׁתָר; Pers., *a star;* Sept. Σαρσαθαῖος), one of the seven princes of Persia and Media, 'who saw the king's face, and sat the first in the kingdom' (Est. i. 14).

SHETHAR-BOZNAI (שֵׁתַר בּוֹזְנַי; Pers., *shining star;* Sept. Σαθαρβουζαναῖ), one of the Persian governors in Syria, who visited Jerusalem in company with Tatnai, to investigate the charges made against the Jews (Ezra v. 3; vi. 6) [TATNAI].

SHEVA. [SERAIAH.]

SHEW-BREAD. In the outer apartment of the tabernacle, on the right hand, or north side, stood a table, made of acacia (shittim) wood, two cubits long, one broad, and one and a half high, and covered with laminæ of gold. The top of the leaf of this table was encircled by a border or rim of gold. The frame of the table, immediately below the leaf, was encircled with a piece of wood of about four inches in breadth, around the edge of which was a rim or border, similar to that around the leaf. A little lower down, but at equal distances from the top of the table, there were four rings of gold fastened to the legs, through which staves covered with gold were inserted for the purpose of carrying it (Exod. xxv. 23-28; xxxvii. 10-16). These rings were not found in the table which was afterwards made for the temple, nor indeed in any of the sacred furniture, where they had previously been, except in the ark of the covenant. Twelve unleavened loaves were placed upon this table, which were sprinkled with frankincense (the Sept. adds salt; Lev. xxiv. 7). The number twelve represented the twelve tribes, and was not diminished after the defection of ten of the tribes from the worship of God in his sanctuary, because the covenant with the sons of Abraham was not formally abrogated, and because there were still many true Israelites among the apostatizing tribes. The twelve loaves were also a constant record against them, and served as a standing

testimonial that their proper place was before the forsaken altar of Jehovah.



The loaves were placed in two piles, one above another, and were changed every Sabbath day by the priests. The frankincense that had stood on the bread during the week was then burnt as an oblation, and the removed bread became the property of the priests, who, as God's servants, had a right to eat of the bread that came from his table; but they were obliged to eat it in the holy place, and nowhere else. No others might lawfully eat of it; but in a case of extreme emergency the priest incurred no blame if he imparted it to persons who were in a state of ceremonial purity, as in the instance of David and his men (1 Sam. xxi. 4-6; Matt. xii. 4). The bread was called לחם פנים, 'the bread of the face,' or, 'of the presence,' because it was set forth before the face or in the presence of Jehovah in his holy place. This is translated 'shew-bread.' It is also called לחם המערכה, 'the bread arranged in order,' and לחם תמיד, 'the perpetual bread,' because it was never absent from the table (Lev. xxiv. 6, 7; 1 Chron. xxiii. 29).

Wine also was placed upon the table of 'shew-bread,' in bowls, some larger, קערות, and some smaller, כפות; also in vessels that were covered, קשׂות, and in cups, מנקיות, which were probably employed in pouring in and taking out the wine from the other vessels, or in making libations. Gesenius calls them 'pateræ libatoriæ;' and they appear in the Authorized Version as 'spoons' (See generally Exod. xxv. 29, 30; xxxvii. 10-16; xl. 4, 24; Lev. xxiv. 5-9; Num. iv. 7).

SHIBBOLETH (שִׁבֹּלֶת). The word means a stream or flood, and was hence naturally suggested to the followers of Jephthah, when, having seized the fords of the Jordan to prevent the retreat of the defeated Ephraimites, they sought to distinguish them through their known inability to utter the aspirated sound *sh*. The fugitives gave instead the unaspirated *s*, *sibboleth*, on which they were slain without mercy (Judg. xii. 6). The certainty which was felt that the Ephraimites could not pronounce *sh*, is very remarkable, and strongly illustrates the varieties of dialect which had already arisen in Israel, and which perhaps even served to distinguish different tribes, as similar peculiarities distinguish men of different counties with us. If what is here mentioned as the characteristic of a particular tribe had been shared by other tribes, it would not have been sufficiently discriminating as a test. [Hebrew Language.]

SHIELD. [Arms.]

SHIKMOTH (שִׁקְמוֹת) and SHIKMIM (שִׁקְמִים), translated 'sycomore,' occur in several passages of the Old Testament, but always in the plural. From the context it is evident that it must have been a tree of some size, common in the plains, unable to bear great cold, with wood of inferior quality, but still cultivated and valued on account of its fruit. It was not what is called sycamore in this country, which is a kind of maple, and in some of its characters the reverse of what is required. The Septuagint everywhere renders it *συκάμινος*, which signifies the mulberry. In the Arabic translation the word جميز *jumeez* is used as synonymous. Now *jumeez* is applied by the Arabs in the present day, and has been so from ancient times, to a great tree of Egypt. According to Abu'l Fadli, as translated by Celsius, 'Giummeis nomen est Syriacum arbori simili ficui, sed foliis morum referenti.' These few words would be sufficient to direct us to the tree which was called *συκόμορος* by the Greeks, from *συκῆ*, a fig, and *μόρος*, the mulberry tree, and which is the *Ficus Sycomorus* of botanists, being a genuine species of *Ficus*, to which the ancient name has been added as the specific one. The fruit in its general characters resembles that of the fig, while the leaves resemble those of the mulberry tree. Prosper Alpinus says of it, 'Arbor vastissima ab Ægyptiis *Zumez* vocata, in Ægypto provenit, quam nostri Sycomorum, ac ficum Ægyptiam appellant.'

497. [Sycamore-Fig. Ficus Sycomorus.]

The ancients were well acquainted with it; and it is common in Egypt as well as in Syria. In Egypt, being one of the few trees indigenous in that country, its wood was proportionally much employed, as in making mummy-cases, though it is coarse grained, and would not be valued where other trees are more common. Thus, in Isa. ix. 10, 'The sycamores are cut down, but we will change them into cedars.' By this the Israelites intimate that they will soon be able to repair their losses, and rebuild in greater perfection than ever. So in 1 Kings x. 27; 2 Chron. i. 15, the riches introduced by Solomon, and the improvements made by him are, in like manner, intimated by contrasting the cedar with the sycamore:—'And the king made silver to be in Jerusalem as stones, and cedars made he as the sycamore trees that are in the vale for abundance.' Though the wood of this sycamore is coarse grained, it is yet very durable in a dry climate like that of Egypt; hence the mummy-cases even in the present day seem as if made with fresh wood. This may no doubt be partly ascribed

to the preservative effects of the resinous coats, paints, &c. with which they are impregnated. The late Professor Don was of opinion that this wood was that of *Cordia Myæa*, or the Sebesten tree; but it hardly grows large enough. The sycamore being a tree abundant in Egypt must necessarily be one suited to plains and vales, and hence would also be one likely to be injured by cold, as in Psa. lxxviii. 47, 'He destroyed their vines with hail, and their sycamore trees with frost.' That the sycamore was cultivated and esteemed in Palestine we learn from 1 Chron. xxvii. 28, 'And over the olive trees and the *sycamore* trees that were in the low plains was Baal-hanan the Gederite.' This was on account of its fruit, which it bears on its stem and branches, like the common fig, and continues to produce in succession for months. The fruit is palatable, sweetish in taste, and still used as food in the East. One mode of ripening the fruit is supposed to be alluded to in Amos vii. 14, 'I was an herdman, and a *gatherer* of sycamore fruit;' but the latter part of the sentence is understood to mean 'scraping or making incisions in the sycamore fruit,' and to refer to the practice mentioned by Hasselquist as existing even in modern times. When the fruit has reached the size of an inch in diameter, the inhabitants pare off a part at the centre point. They say that without this operation it would not come to maturity. The same practice is mentioned by Theophrastus and Pliny, &c. As the sycamore is a lofty, shady tree, it was well suited for climbing up into, as described in Luke xix. 4, where Zacchæus ascends one to see Jesus pass by.—J. F. R.

SHILOH (שִׁילֹה), the epithet applied, in the prophetic benediction of Jacob on his death-bed (Gen. xlix. 10), to the personage to whom 'the gathering of the nations should be,' and which has ever been regarded by Christians and by the ancient Jews as a denomination of the Messiah. The oracle occurs in the blessing of Judah, and is thus worded—'The sceptre shall not depart from Judah, nor a lawgiver from between his feet, until Shiloh come: and unto him the gathering of the people shall be.' The term itself, as well as the whole passage to which it belongs, has ever been a fruitful theme of controversy between Jews and Christians, the former, although they admit for the most part the Messianic reference of the text, being still fertile in expedients to evade the Christian argument founded upon it. Neither our limits nor our object will permit us to enter largely into the theological bearings of this prediction; but it is perhaps scarcely possible to do justice to the discussion as a question of pure philology, without at the same time displaying the strength of the Christian interpretation, and trenching upon the province occupied by the proofs of Jesus of Nazareth being the Messiah of the Old Testament prophecies.

Before entering upon the more essential merits of the question, it may be well to recite the ancient versions of this passage, which are mostly to be referred to a date that must exempt them from the charge of undue bias towards any but the right construction. Influences of this nature have, of course, become operative with Jews of a later period. The version of the Sept. is peculiar—'A prince shall not fail from Judah, nor a captain out of his loins, ἕως ἂν ἔλθῃ τὰ ἀποκείμενα αὐτῷ, *until the things come that are laid up for him*.' In some copies another reading is found, ᾧ ἀπόκειται, *for whom it is laid up;* meaning, doubtless, *in the kingdom*,—for whom the kingdom is laid up in reserve. This rendering is probably to be referred to an erroneous lection, אשר לו, *whose it is*. Targ. Onk., 'One having the principality shall not be taken from the house of Judah, nor a scribe from his children's children, until the Messiah come, whose the kingdom is.' Targ. Jerus., 'Kings shall not fail from the house of Judah, nor skilful doctors of the law from their children's children, till the time when the King's Messiah shall come.' Syr., 'The sceptre shall not fail from Judah, nor an expounder from between his feet, till he come whose it is;' *i. e.* the sceptre, the right, the dominion. Arab., 'The sceptre shall not be taken away from Judah, nor a lawgiver from under his rule, until he shall come whose it is.' Sam., 'The sceptre shall not be taken away from Judah, nor a leader from his banners, until the Pacific shall come.' Lat. Vulg., 'The sceptre shall not be taken away from Judah, nor a leader from his thigh—donec veniet qui mittendus est, *until he shall come who is to be sent*.' This is evidently founded upon mistaking in the original שילה for שילח, which latter comes from the root שלח, signifying *to send*. It is, however, adopted by Grotius as the truest reading, the present form of the word being owing, in his opinion, to the error of transcribers in substituting ה for ח.

Various other etymologies have been assigned to the term, the advocates of which may be divided into two classes: those who consider the word שילה as a compound; and those who deem it a radical or simple derivation. Those of the first class coincide, for the most part, with the ancient interpreters, taking שילה as equivalent to שלו, and this to be made up of ש, the contraction of אשר, *who*, and לו, the dative of the third personal pronoun. The rendering, accordingly, in this case, would be *cujus est*, or *cui est*, *whose it is, to whom it belongs*, *i. e.* the sceptre or dominion. This interpretation is defended by Jahn (*Einl. in A. T.* i. p. 507, and *Vat. Mes.* ii. p. 179). It is approved also by Hess, De Wette, Krummacher, and others. The authority of the ancient versions, already alluded to, is the principal ground upon which its advocates rely. But to this sense it is a serious objection, that there is no evidence that the abbreviation of אשר into ש was known in the time of Moses. There is no other instance of it in the Pentateuch, and it is only in the book of Judges that we first meet with it. However the rendering of the old translators is to be accounted for, there is no sufficient ground for the belief that the form in question was the received one in their time. If it was, we should doubtless find some traces of it in existing manuscripts. But though these copies exhibit the reading שילו, not one of them gives שלו, and but very few שלה: which Hengstenberg deems of no consequence, as the omission of the yod was merely a defective way of writing, which

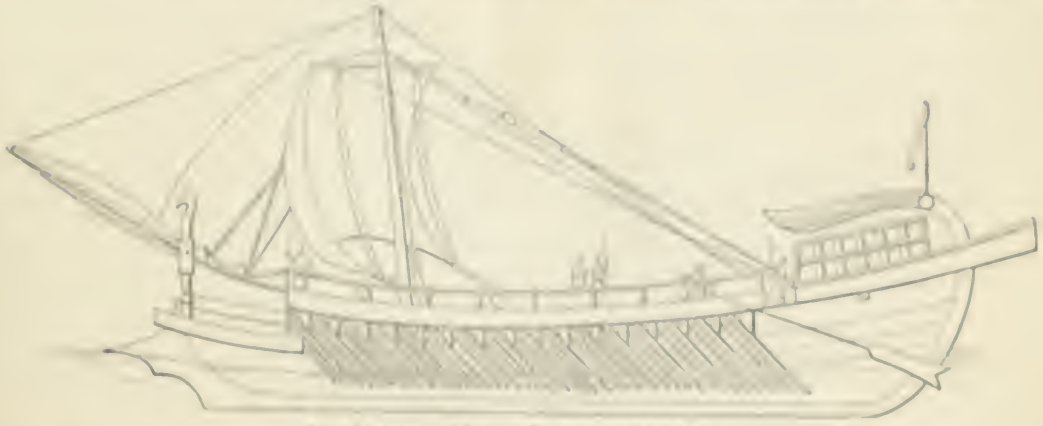
often occurs in words of similar structure. An argument for this interpretation has indeed been derived from Ezek. xxi. 27, where the words, 'until he shall come, whose is the dominion, אשר לו המשפט,' are regarded as an obvious paraphrase of שלו or שלה. But to this it may be answered, that while Ezekiel may have had the present passage in his eye, and intended an allusion to the *character* or *prerogatives* of the Messiah, yet there is no evidence that this was designed as an *interpretation of the name* under consideration. The reasons, therefore, appear ample for setting aside, as wholly untenable, the explication of the time here propounded, without adverting to the fact, that the ellipsis involved in this construction is so unnatural and violent, that no parallel to it can be found in the whole Scriptures.

Another solution proposed by some expositors is, to derive the word שילה from שיל, *child*, and the suffix ה for ו. This will yield the reading, 'until his (Judah's) *son* or *descendant*, the Messiah, shall come.' Thus the Targ. Jon., 'Until the time when the king's Messiah shall come, *the little one of his sons*.' This view is favoured by Calvin (*in loc.*) and by Knapp (*Dogm.* ii. p. 138), and also by Dathe. But as this resolves שילה into a synonym with שליה, *afterbirth* (Deut. xxviii. 57), rendered 'young one,' it requires us to adopt the unnatural supposition, that the term properly denoting the *secundines*, or the membrane that encloses the fœtus, is taken for the fœtus itself. Besides, this exposition has an air of grossness about it which prompts its involuntary rejection.

The second class consists of those who consider שילה as a radical or simple derivative. Of these we may remark, that it is principally among the Jews that the opinion of Aben Ezra finds currency, who makes שילה here to be the name of the place (Shiloh) where the tabernacle was first fixed after the conquest of Canaan. The sense of the oracle, according to this construction, will be, that Judah was to be the leader of the tribes during the whole journey to Canaan, until they came to Shiloh. Subsequent to this event, in consequence of the distribution of the tribes according to the boundaries assigned them, it was to lose its pre-eminence. But there is no mention made of Shiloh elsewhere in the Pentateuch, and no probability that any such place existed in the time of Jacob. It is, moreover, scarcely conceivable that such a splendid train of prediction should be interrupted by an allusion to such an inconsiderable locality. It is so utterly out of keeping with the general tone of the prophecy, that it is surprising that any mind not infatuated by Rabbinic trivialities, should entertain the theory for a moment. Yet Teller, Mendelsohn, Eichhorn, Ammon, Rosenmüller (in first edition), Kelle, and others have enrolled themselves in favour of this crude conceit.

But an exposition of far more weight, both from its intrinsic fitness, and from the catalogue of distinguished names which have espoused it, is that which traces the term to the root שלה *quievit, to rest, to be at peace*, and makes it equivalent to Pacificator, Tranquillizer, or Great Author of Peace. This is a sense accordant with the anticipated and realized character of the Messiah, one of whose crowning denominations is 'Prince of Peace.' Still it is an objection to this sense of the term, that it is not sufficiently sustained by the analogy of forms. The idea conveyed by the proposed interpretation, is that of *causing* or *effecting* peace; an idea for which the Hebrew has an appropriate form of expression, and which, in this word, would normally be משליה *mashliah*. The actual form, however, is wholly diverse from this, and though several examples are adduced by the advocates of this interpretation, of analogous derivations from a tri-literal root, as בידור from בדר, כישור from כשר, קיטור from קטר, &c., yet it is certain that the original characteristic of this form is a *passive* instead of an *active* sense, which שילה obviously requires according to the exegesis proposed.

In these circumstances we venture to suggest another origin for the term. In our view the legitimate derivation is from שאל, *to ask, seek, require*, so that its true import is *the desired, the longed for one*. The appropriate participial form for this is שאול, or its equivalent שאיל, in which the passive sense is predominant. In words of this class the weak guttural א not only remits its vowel to the preceding letter, but falls out in the writing, as פי for פאי, שלה for שאלה, רשית for ראשית, ויארב for וירב, שרית for שארית. We obtain by this process שיל for שאיל, or שאול, *the asked, the desired*, which leaves the passive import unimpaired. We have then to account for the supplementary letters וה *oh* (שילוה=שילה). It would perhaps be reasonable to expect that the form שאול would not be retained in this connection, as it might be confounded with שאול, *hades*, from the same root. In order, therefore, to distinguish it, and at the same time to convey in the word itself an intimation of the divine character of the personage announced, we may suppose that two of the letters of the word יהוה *Jehovah* are appended; than which nothing is more common in the construction of proper names in Hebrew. Thus, in the names of Abraham and Sarah we recognise the insertion of the letter ה as a fragment of the divine title יהוה; and it is well known that the termination *el* and *oh*, in nearly all the proper names of Scripture, are derived from the divine designation (Simonis, *Onomast.* § x.). As there is nothing then on the ground of strict philology which can be objected to this pedigree of the term, and as the idea conveyed by it is wholly in accordance with the *character* of the predicted Messiah, we do not hesitate to give it the decided preference over any other that has been assigned. An expression in Abarbanel's *Commentary* on this passage, would seem to indicate that he had at least a gleam of this as its true import. In speaking of the requisite characters of the Messiah, he says, 'The eighth condition and attribute to be found in the promised King is, that *the nations should require him*, שאליו, and that his rest should be glorious.' The reader who



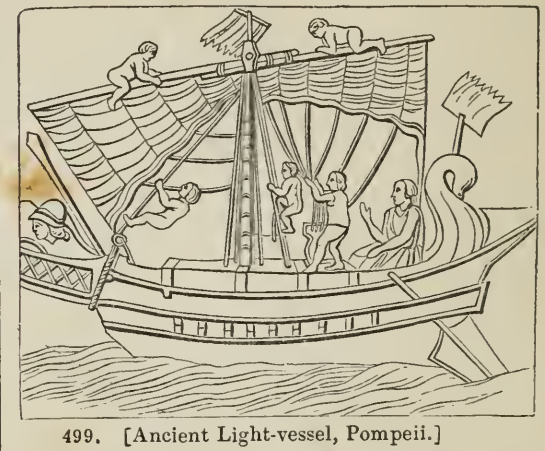
would pursue the inquiry into this subject, may consult with advantage Jacobi, *Alting Schilo*, iii. 8; Hengstenberg, *Christol.* ch. ii. 1 *a*, p. 41, Keith's Transl.—G. B.

2. SHILOH, a city in the tribe of Ephraim, situated among the hills to the north of Bethel, eastward of the great northern road, where the tabernacle and ark remained for a long time, from the days of Joshua, during the ministry of all the judges, down to the end of Eli's life (Josh. xviii. 1; 1 Sam. iv. 3). To this circumstance Shiloh owed all its importance; for after the loss of the ark—which never returned thither after it had been restored to Israel by the Philistines—it sunk into insignificance. It was, indeed, the residence of Ahijah the prophet (1 Kings xi. 29; xii. 15; xiv. 2), but it is more than once mentioned as accursed and forsaken (Ps. lxxviii. 60; Jer. vii. 12, 14; xxvi. 6). The last mention of it in Scripture is in Jer. xli. 5, which only shows that it survived the exile. Dr. Robinson identifies it with a place named Seilun, a city surrounded by hills, with an opening by a narrow valley into a plain on the south. The ruins consist chiefly of an old tower with walls four feet thick, and of large stones and fragments of columns indicative of an ancient site (see Robinson's *Palestine*, iii. 85-89).

SHIMEI (שִׁמְעִי, *renowned*; Sept. Σεμεΐ), a member of the family of Saul, residing at Bahurim, who grievously insulted king David when he fled from Absalom (2 Sam. xvi. 5-13). The king not only saved him from the immediate resentment of his followers, but on his triumphant return by the same road after the overthrow of his rebellious son, he bestowed on Shimei the pardon which he implored (2 Sam. xix. 16). It seems, however, that it was policy which chiefly dictated this course, for it was by the advice of David himself (1 Kings ii. 8, 9) that Solomon, after his father's death, made Shimei a prisoner at large in Jerusalem (1 Kings ii. 36, 37). Three years after he broke his parole by leaving Jerusalem in pursuit of some runaway slaves, and was, on his return, put to death by order of the king (1 Kings ii. 39-46).

SHINAR (שִׁנְעָר; Sept. Σενναάρ), the proper name of Babylonia, particularly of the country around Babylon (Gen. x. 10; xiv. 1; Isa. xi. 11; Dan. i. 2; Zech. v. 11); see BABYLONIA.

SHIP. In few things is there greater danger of modern associations misleading the reader of the Scriptures than in regard to the subject of the present article. To an Englishman a ship calls up the idea of 'the wooden walls of old England,' which have so long withstood the 'battle and the breeze,' and done so much to spread the fame and the influence of the British nation throughout the world. But both the ships and the navigation of the ancients, even of the most maritime states, were as dissimilar as things of the same kind can well be to the realities which the terms now represent. Navigation confined itself to coasting, or if necessity, foul weather, or chance drove a vessel from the land, a regard to safety urged the commander to a speedy return, for he had no guide but such as the stars might afford under skies with which he was but imperfectly acquainted. And ships, whether designed for commercial or warlike purposes, were small in size and frail in structure, if our immense piles of oak and iron be taken as the objects of comparison.

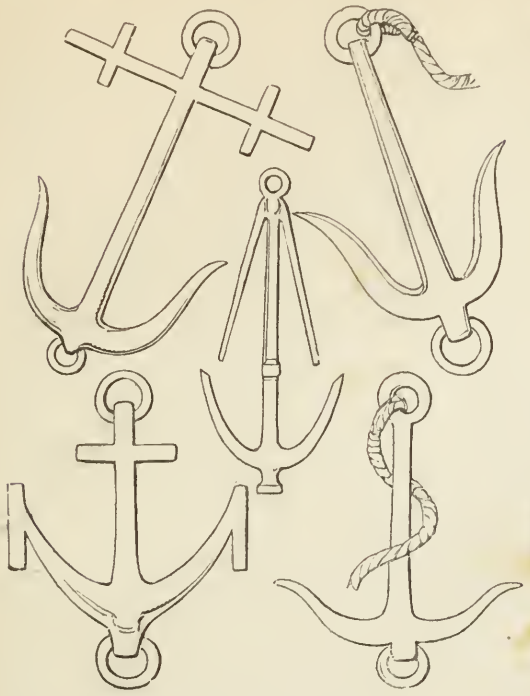


438. [Ancient Ship of the largest kind.]

The Jews cannot be said to have been a seafaring people; yet their position on the map of the world is such as to lead us to feel that they could not have been ignorant of ships and the business which relates thereunto. Phœnicia, the north-western part of Palestine, was unquestionably among, if not at the head of, the earliest cultivators of maritime affairs. Then the Holy Land itself lay with one side coasting a sea which was anciently the great highway of navigation, and the centre of social and commercial enterprise. Within its own borders it had a navigable lake. The Nile, with which even the fathers of the nation had become acquainted in their bondage, was another great thoroughfare for ships. And the Red Sea itself, which conducted towards the remote east, was at no great distance even from the capital of the land. Then at different points in its long line of sea-coast there were harbours of no mean repute. Let the reader call to mind Tyre and Sidon in Phœnicia, and Acre (Accho) and Jaffa (Joppa) in Palestine. Yet the decidedly agricultural bearing of the Israelitish constitution checked such a development of power, activity, and wealth, as these favourable opportunities might have called forth on behalf of seafaring pursuits. There can, however, be no doubt that the arts of ship-building and of navigation came to Greece and Italy from the East, and immediately from the Levant; whence we may justifiably infer that these arts, so far as they were cul-

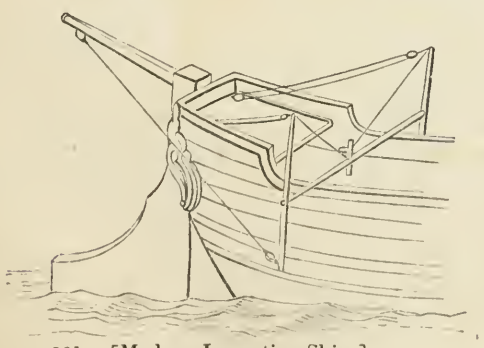
vated in Palestine, were there in a higher state of perfection at an early period, at least, than in the more western parts of the world (Ezek. xxvii.; Strabo, lib. xvi.; Comenz, *De Nave Tyriâ*). In the early periods of their history the Israelites themselves would partake to a small extent of this skill and of its advantages, since it was only by degrees that they gained possession of the entire land, and for a long time were obliged to give up the sovereignty of very much of their seaboard to the Philistines and other hostile tribes. The earliest history of Palestinian ships lies in impenetrable darkness, so far as individual facts are concerned. In Gen. xlix. 13 there is, however, a prophecy, the fulfilment of which would connect the Israelites with shipping at an early period: 'Zebulun shall dwell at the haven of the sea, and he shall be for a haven of ships, and his border shall be unto Zidon' (compare Deut. xxxiii. 19; Josh. xix. 10, sq.): words which seem more fitly to describe the position of Asher in the actual division of the land. These local advantages, however, could have been only partially improved, since we find Hiram, King of Tyre, acting as carrier by sea for Solomon, engaging to convey in floats to Joppa the timber cut in Lebanon for the temple, and leaving to the Hebrew prince the duty of transporting the wood from the coast to Jerusalem. And when, after having conquered Elath and Ezion-geber on the further arm of the Red Sea, Solomon proceeded to convert them into naval stations for his own purposes, he was still, whatever he did himself, indebted to Hiram for 'shipmen that had knowledge of the sea' (1 Kings ix. 26; x. 22). The effort, however, to form and keep a navy in connection with the East was not lastingly successful; it soon began to decline, and Jehoshaphat failed when at a later day he tried to give new life and energy to the enterprise (1 Kings xxii. 49, 50).

In the time of the Maccabees Joppa was a Jewish seaport (1 Macc. xiv. 5). Herod the Great availed himself of the opportunities naturally afforded to form a more capacious port at Cæsarea (Joseph. *De Bell. Jud.*, iii. 9. 3). Nevertheless no purely Jewish trade by sea was hence even now called into being. Cæsarea was the place whence Paul embarked in order to proceed as a prisoner to Rome (Acts xxvii. 2). His voyage on that occasion, as described most graphically in the Acts of the Apostles (ch. xxvii., xxviii.), if it requires some knowledge of ancient maritime affairs in order to be rightly understood, affords also rich and valuable materials towards a history of the subject, and might, we feel convinced, be so treated as of itself to supply many irresistible evidences of the certainty of the events therein recorded, and, by warrantable inferences, of the credibility of the evangelical history in general. No one but an eye-witness could have written the minute, exact, true, and graphic account which these two chapters give.



The reader of the New Testament is well aware how frequently he finds himself with the Saviour on the romantic shores of the sea of Gennesareth. There Jesus is seen, now addressing the people from on board a vessel, πλοῖον (Matt. xiii. 2; Luke v. 3); now sailing up and down the lake (Matt. viii. 23; ix. 1; xiv. 13; John vi. 17). Some of his earliest disciples were proprietors of barks which sailed on this inland sea (Matt. iv. 21: John xxi. 3; Luke v. 3). These 'ships' were indeed small. Josephus designates the ships here employed by the term σκάφη. They were not, however, mere boats. They carried their anchor with them (*De Bell. Jud.*, iii. 10. 1; *Vit.* xxxiii.). There was too a kind of vessel larger than this, called σχεδία by Josephus, who narrates a sea-fight which took place on the lake, conducted on the part of the Romans by Vespasian himself (*De Bell. Jud.*, iii. 10. 9). It thus appears that the lake was not contemptible, nor its vessels mean; and those should hence learn to qualify their language who represent the Galilean fishermen as of the poorest class.

499. [Ancient Light-vessel, Pompeii.]



The vessels connected with Biblical history were for the most part ships of burden, almost indeed exclusively so, at least within the period of known historical facts, though in a remote antiquity the Phœnician states can hardly fail to have supported a navy for warlike, as it is known they did for predatory, purposes. This peculiarity, however, of the Biblical ships exonerates the writer from entering into the general subject of the construction of ancient ships and their several sub-divisions. A good general summary on that head may be found in Smith's *Dictionary of Greek and Roman Antiquities*, p. 875, sq. A few details respecting chiefly ships of burden may be of service to the Scriptural student. In a ship of this kind was Paul conveyed to Italy. They (naves onerariæ) were, for the purposes to which they were destined, rounder and deeper than ships of war, and sometimes of great capacity. In consequence of their bulk, and when laden, of their weight, they were impelled by sails rather than by oars. On the prow stood the insignia from which the ship was named, and by which it was known. These in Acts (xxviii. 11) are called παράσημον, 'sign,' which it appears consisted in this case of figures of Castor and Pollux—lucida sidera—brilliant constellations, auspicious to navigators (Horat. *Od.*, i. 3; Liv. xxxvii. 92; Tac. *Ann.* vi. 34; Ovid, *Fast.* i. 10. 1). Each ship was provided with a boat, intended in the case of peril to facilitate escape, σκάφη (Acts xxvii. 16; xxx. 32; Cic. *De Invent.* ii. 51); and several anchors (Acts xxvii. 29, 40; Cæs. *Civ.* i. 25); also a plumb-line for sounding (Acts xxvii. 28; Isidor. *Orig.* xix. 4). Among the sails one bore the name of ἀρτέμων, translated in Acts xxvii. 40, by 'mainsail;' but pos-

sibly the word may rather mean what is now termed the 'topsail' (*Schol. ad Juven.* xii. 68).

500. [Ancient Anchors.]

In great danger it was customary to gird the vessel with cables, in order to prevent her from falling to pieces under the force of wind and sea (Acts xxvii. 17: Polyb. xxvii. 3. 3; Athen. v. 204; Hor. *Od.* i. 14. 6). The various expedients that were employed in order to prevent shipwreck are described to the eye in the passage in the Acts. First, the vessel was lightened by throwing overboard all lumber, luggage, and everything that could be spared. The term employed by Luke is σκευή (xxvii. 19), one of a very wide signification, which the words we have just employed do not, we think, more than equal. If the peril grew more imminent, the freight was sacrificed (xxvii. 38). When hope or endurance had come to a period, recourse was had to the boat, or efforts were made to reach the shore on spars or rafts (xxvii. 38, 44). The captain was denominated ναύκληρος (xxvii. 11), steersman, though he was a different person from him who had the actual charge of the helm, who bore the name of κυβερνήτης, which is the root

501. [Modern Levantine Ship.]

of our word 'governor' (Lat. gubernator, helmsman).

The dangers of the ocean to sailors on board such ships as these were, and in the then ignorance of navigation, caused sailing to be restricted to the months of spring, summer, and autumn; winter was avoided. To the Romans the sea was opened in March and closed in November (Cæs. *Bell. Gall.* iv. 36; v. 23; Philo, *Opp.* iv. 548; Acts xxvii. 9); and ships which towards the end of the year were still at sea earnestly sought a harbour in which to pass the winter (Acts xxvii. 12).

SHISHAK (שִׁישַׁק; Sept. Σουσακίμ), a king of Egypt contemporary with Jeroboam, to whom he gave an asylum when he fled from Solomon (1 Kings xi. 40). This was indicative of his politic disposition to encourage the weakening of the neighbouring kingdom, the growth of which under David and Solomon was probably regarded by the kings of Egypt with some alarm. After Jeroboam had become king of Israel, and probably at his suggestion, Shishak invaded the kingdom of Judah, B.C. 971, at the head of an immense army; and after having taken the fortified places, advanced against Jerusalem. Satisfied with the submission of Rehoboam, and with the immense spoils of the Temple, the king of Egypt withdrew without imposing any onerous conditions upon the humbled grandson of David (1 Kings xiv. 25, 26; 2 Chron. xii. 2-9). Shishak has been identified as the first king of the 22nd or Diospolitan dynasty, the Sesonchis of profane history. His name has been found on the Egyptian monuments. He is said to have been of Ethiopian origin, and it is supposed that, with the support of the military caste, he dethroned the Pharaoh who gave his daughter to Solomon (1 Kings iii. 1). In the palace-temple of Karnak there still exists a large bas-relief representing Sesonchis, who bears to the feet of three great Theban gods the chiefs of vanquished nations. To each figure is attached an oval, indicating the town or district which he represents. One of the figures, with a pointed beard and a physiognomy which some decide to be Jewish, bears on his oval characters which M. Champollion interprets Yooda Melchi, or 'kingdom of Judah,' a name whose component letters agree with the hieroglyphics, though Sir J. G. Wilkinson and others think that the place it holds is not sufficiently marked to satisfy the scruples of a rigid sceptic. It is well to observe that this figure has not, as some have hastily conceived, been alleged to represent the king, but to personify the kingdom of Judah (Champollion, *Système Hieroglyph.* p. 205; Rosellini, *Monumenti Storici*, i. 85; Wilkinson, *Anc. Egypt.* i. 37; Cory, *Chronological Inquiry*, p. 5).

SHITTAH (שִׁטָּה) and SHITTIM (שִׁטִּם) occur in several passages of Exodus, and indicate the kind of wood which was employed in making various parts of the tabernacle while the Israelites were wandering in the wilderness. It

is mentioned also as forming part of the offerings, as in Exod. xxv. 5, 'rams' skins dyed red, and badgers' skins, and *shittim* wood;' and in xxxv. 7, 24. In Isa. xli. 19, it is mentioned as a tree worthy of planting, 'I will plant in the wilderness the cedar, the *shittah* tree, and the myrtle, and the oil tree,' &c. But considerable doubts have been entertained respecting the kind of wood or tree intended; hence the great diversity of rendering, some translators retaining the original word. It is evident that the wood must either have been brought to the coast of the Red Sea from Egypt or some other country, or it must have been one of the few timber trees indigenous in the desert where the Israelites wandered. It is curious that a wood has for many ages formed an article of commerce from India to the Red Sea, and that its name, *sheeshum* or *seesum*, is very similar in sound to the *shittim* of Scripture. This wood we have already mentioned in the article Hobnim, and identified it with the *sheeshum* of Forskal, considering it as probably the same as the *sesamina* of the *Periplus* of Arrian. This would seem to afford some grounds for the opinion held by some authors, that the shittah of Scripture was some valuable foreign wood.

502. [Acacia Seyal.]

But there does not appear any proof that *shittim* was an imported wood, and it is more probable that it was the wood of a tree of the desert. Rosenmüller (after Celsius, ii. p. 499) says: 'the Hebrew name, which is properly *shintah*, was formed from the Egyptian word *shant*, the double *t* being substituted for the *nt*, for the sake of sound and an easier pronunciation.' The Arabs also call it قرظ *kart* or *karatz*, written also *kharad*. The Arabs pronounce the Egyptian name *sont*. This is a tree of the genus *Acacia*, found both in Egypt and in the deserts of Arabia. Thus Prosper Alpinus (*De Plantis Ægypti*, p. 6): 'Acacia, quam *sant* Ægyptii appellant, in Ægypti locis a mari remotis nascitur: hujusque arbores copiosissimæ in montibus Synai, pene rubrum mare positis proveniunt.' Celsius, moreover, quotes Eugene Roger (*T. S.* p. 17) as stating, 'Le Sethim ne se trouve que dans l'Arabie deserte, et croist proche de la terre des Madianites, peu eloignée du mont Sinai, en un lieu qu'on appelle *Sethim* ou *Sethe*, soit que l'arbre tire son nom du lieu, ou que l'arbre donne le nom au lieu mesme de sa naissance. Son bois est leger, de tres bonne odeur, et incorruptible aussi bien que le bois de cedre, c'est du bois de *sethim* que fut fabriquée l'arche d'alliance.' 'The acacia tree,' says Dr. Shaw, 'being by much the largest and most common tree in these deserts (Arabia Petræa), we have some reason to conjecture that the *shittim* wood was the wood of the acacia, especially as its flowers are of an excellent smell, for the *shittah* tree is, in Isa. xli. 19, joined with the myrtle and other fragrant shrubs.' Mr. Bruce, again, as quoted by Dr. Harris, remarks, that 'the acacia seems the only indigenous tree in the Thebaid. The male is called the *Saicl;* from it proceeds the gum-arabic on incision with an axe. This gum chiefly comes from Arabia Petræa, where these trees are most numerous.' Mr. Kitto says: The required species is found in either the *Acacia gummifera*, or in the *A. Seyel*, or rather in both. They both grow abundantly in the valleys of that region in which the Israelites wandered for forty years, and both supply products which must have rendered them of much value to the Israelites. We think the probability is, that the *A. Seyel* supplied the shittim wood, if, indeed, the name did not denote acacia wood in general. This tree grows from fifteen to twenty feet in height.' So M. Bové: 'Le lendemain, en traversant le Voodé (Wady) Schen, je vis un grand nombre *d'Acacia Seyel;* cet arbre s'élève à la hauteur de vingt à vingt-cinq pieds. Les Arabes font avec son bois du charbon qu'ils vont vendre à Suez.' Robinson and Smith frequently mention the *Seyel* as occurring in the same situations. It is very probable therefore that it yielded the shittim wood of Scripture.—J. F. R.

SHITTIM, a spot in the plain of Moab, east of the Dead Sea, where the Israelites formed their last encampment before passing the Jordan (Num. xxv. 1; comp. Micah vi. 5). See Wandering.

SHITTIM, VALLEY OF, mentioned in Joel iii. 18. It must certainly have been west of the Jordan, and probably in the neighbourhood of Jerusalem, although the particular vale cannot now be distinguished. The name is probably to be regarded as an appellative—'acacia vale' denoting, perhaps, as that tree delights in a dry soil, an arid, unfruitful vale.

SHOE. [Sandal.]

SHOHAM (שֹׁהַם), a precious stone mentioned in Gen. ii. 12; Exod. xxviii. 9; xxxv. 9-27; Job xxviii. 16; Ezek. xxviii. 13. That it is really unknown is evinced by the variety of opinions which have been hazarded concerning it. In the two last texts the Sept. makes it the beryl (*βηρύλλιον*), and is followed by the Vulgate. Josephus also gives it the same name (*Antiq.* iii. 7. 5). This is a great weight of authority; and whether the beryl be the *shoham* or not, it is a Scriptural stone by virtue of the mention of it in Rev. xxi. 20. There is no doubt that the stone which we call beryl is the substance to which the ancients gave the same name. It is of a pale sea-green colour, inclining sometimes to water blue, and sometimes to yellow. In its crystallized

form it exhibits sexagonal columns striped longitudinally. The *shoham* furnished the shoulder-pieces in the breastplate of the high-priest, on each of which six names were engraven, and for this purpose the stalky beryl, consisting of long, stout, hexagonal pieces, was peculiarly suited. Beryls are found, but not often, in collections of ancient gems. In Gen. ii. 12, the *shoham* is named as the product of Havilah; in Job xxviii. 16, it is mentioned as a stone of great value, being classed with the sapphire and the gold of Ophir; in Ezek. xxviii. 13, it appears as a valuable article of commerce.

In Gen. ii. 12, the Sept. renders the word, which it elsewhere gives as the beryl, by λίθος ὁ πράσινος, or the 'chrysoprasus,' according to its etymology 'leek-green stone;' but as the ancients did not nicely distinguish between stones of similar quality and colour, it is probable that the beryl is still intended by the translator in this text. The chrysoprasus (χρυσόπρασος) is, however, a Scriptural stone, being named in Rev. xxi. 20. It is, as the name imports, of a greenish golden colour, like a leek; *i. e.* usually apple-green, passing into a grass-green (Plin. *Hist. Nat.* xxvii. 20, 21).

Luther, relying upon the authority of some ancient versions, makes the *shoham* to have been the onyx, an interpretation which Braun, Michaelis, Eichhorn, and others support on etymological grounds. This indeed is the stone usually given for the Shoham in Hebrew lexicons, and is the one which the Authorized Version has also adopted.

SHUAL. שׁוּעָל *shual*, and אִי *aye* or *ije*, jackal (?), are both somewhat arbitrarily interpreted by the word 'fox;' although that denomination is not uniformly employed in different texts (Judg. xv. 4; Neh. iv. 3; xi. 27; Ps. lxiii. 10; Cant. ii. 15; Lam. v. 18; Ezek. xiii. 4). Fox is thus applied to two or more species, though only strictly applicable in a systematic view to *Taaleb*, which is the Arabic name of a wild canine, probably the Syrian fox, *Vulpes Thaleb* or *Taaleb* of modern zoologists, and the only genuine species indigenous in Palestine. Fox is again the translation of ἀλώπηξ, in Matt. viii. 20; Luke ix. 5-8; xiii. 32: but here also the word in the original texts may apply generically to several species rather than to one

503. [Syrian Fox.]

only. There is in the language of the ancients a vague and often an indiscriminating use of zoological names; while among the moderns the contrary tendency exists, it being often attempted to apply specifically those ancient terms which in their original acceptation were more or less generic; and mere scholars, not familiar with the principles which guide the reasoning of systematists, often disregard their conclusions, and follow the still more fallacious inferences drawn from arbitrary etymologies and the fancied authority of similarity of names in kindred languages. Yet every modern tongue of the west, notwithstanding the greater attention that is paid to a more definite terminology, abounds in similar transferences of the same radical names from one species to another, and often to genera totally distinct. These remarks apply forcibly in the present case; for, of vulpine animals, though the taaleb alone is considered indigenous, there is the so-called Turkish fox (*Cynalopex Turcicus*) of Asia Minor, not unknown to the south as far as the Orontes, and therefore likely to be an occasional visitant at least of the woods of Libanus. This animal is one of an osculant group, with the general characters of vulpes, but having the pupils of the eyes less contractile in a vertical direction, and a gland on the base of the tail, marked by a dark spot. There, is besides, one of a third group, namely, *Thous anthus*, or *deeb* of the Arabs, occasionally held to be the wolf of Scripture, because it resembles the species in general appearance, though so far inferior in weight, size, and powers, as not to be in the least dangerous, or likely to be the wolf of the Bible. The two first do not howl, and the third is solitary and howls seldom; but there is a fourth (*Canis Syriacus*, Ehrenb.) which howls, is lower and smaller than a fox, has a long ill-furnished tail, small ears, and a rufous-grey livery. This may be the *Canis aureus*, or jackal of Palestine, though certainly not the χρύσεος of Ælian. The German naturalists seem not to have considered it identical with the common jackal (*Sacalius aureus*), which is sufficiently common along the coast, is eminently gregarious, offensive in smell; howls intolerably in complete concert with all others within hearing; burrows; is crepuscular and nocturnal, impudent, thievish; penetrates into outhouses; ravages poultry-yards more ruinously than the fox; feeds on game, lizards, locusts, insects, garbage, grapes; and leaves not even the graves of man himself undisturbed. It may ultimately turn out that *Canis Syriacus* is not a jackal, but a chrysens, or wild dog, belonging to the group of Dholes, well known in India, and, though closely allied to, distinct from, the jackal. But whether the last-mentioned is the אִי and אִיִּים, is a question which Bochart does not solve by making *thoes* synonymous with أوي *awi*, and *beni-awi*, since that denomination is only a slight mutation of *U'awa*, the name applied to wild dogs in India, China, and even in South America, being an imitation of barking; while *thoes*, *thos*, the Phrygian *daus*, Greek θώς, are of the same radical origin as our dog, and Teutonic *docke*, *dogue;* and in Semitic tongues appears in the forms of *tokla*, *tulke*, *tilki*, applied to species not of the same genus.

Russell heard of four species of Canidæ at Aleppo, Emprich and Ehrenberg of four in Libanus, not identical with each other; nor are any of these clearly included in the thirteen species which the last-named writers recognise in Egypt. They still omit, or are not cognizant of, wild dogs, already mentioned in this work [Dogs], and likewise other wild species in Arabia and Persia; all, including foxes, having migratory habits, and

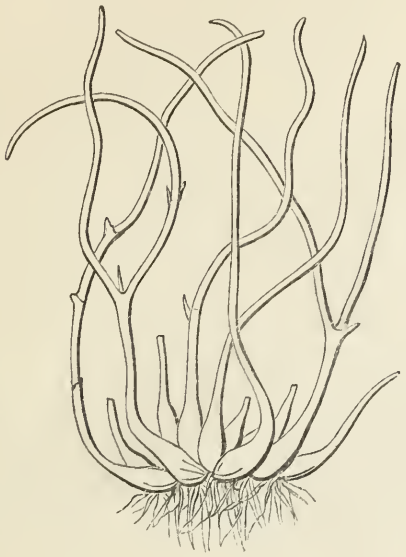
therefore not unlikely to visit Palestine. Some of these may have accompanied the movements of the great invasions of antiquity, or the caravans, and become acclimated; and, again, may have departed, or have been gradually extinguished by local circumstances, such as the destruction of the forests or of the inhabitants, and the consequent reduction of the means of subsistence; or finally, they may have been extirpated since the introduction of gunpowder.

We have therefore no proof that *shual* denotes exclusively the fox, and that *aye* or *ije* and *iyim*, and Hasselquist's little foxes, refer solely to jackals; particularly as these animals were, if really known, not abundant in Western Asia, even during the first century of the Roman empire; for they are but little noticed by the Greek writers and sportsmen who resided where now they are heard and seen every evening; these authorities offering no remark on the most prominent characteristic of the species, namely, the chorus of howlings lasting all night — a habit so intolerable that it is the invariable theme of all the Semitic writers since the Hegira whenever they mention the jackal. We may therefore infer that *shual*, if a general denomination, and that *ajim*, if the etymology be just, is derived from howling or barking, and may designate the jackal, though more probably it includes also those wild Canidæ which have a similar habit.

Vulpes Taaleb, or *Taleb*, the Syrian fox, is of the size of an English cur fox, and similarly formed; but the ears are wider and longer, the fur in general ochry-rufous above, and whitish beneath: there is a faint black ring towards the tip of the tail, and the back of the ears are sooty, with bright fulvous edges. The species burrows, is silent and solitary, extends eastward into Southern Persia, and is said to be found in Natolia. Ehrenberg's two species of *Taleb* (one of which he takes to be the *Anubis* of ancient Egypt, and Geoffroy's *Canis Niloticus*, the Abou Hossein of the Arabs) are nearly allied to, or varieties of the species, but residing in Egypt, and further to the same south, where it seems they do not burrow. The Syrian *Taleb* is reputed to be very destructive in the vineyards, or rather a plunderer of ripe grapes; but he is certainly less so than the jackal, whose ravages are carried on in troops and with less fear of man.

None of the explanations which we have seen of the controverted passage in Judg. xv. 4, 5, relative to the *shualim*, foxes, jackals, or other canines, which Samson employed to set fire to the corn of the Philistines, is altogether satisfactory to our mind. First, taking Dr. Kennicott's proposed explanation of the case by changing שועלים to שעלים, thus reading 'foxes' instead of 'sheaves,' and translating וכב, 'ends,' instead of 'tails,' the meaning then would be, that Samson merely connected three hundred shocks of corn, already reaped, by bands or ends, and thus burned the whole. We admit that this, at first view, appears a rational explanation; but it should be observed that three hundred shocks of corn would not make two stacks, and therefore the result would be quite inadequate, considered as a punishment or act of vengeance upon the Philistine population, then predominant over the greater part of Palestine: and if we take shocks to mean corn-stacks, then it may be asked how, and for what object, were three hundred corn-stacks brought together in one place from a surface of country at least equal to Yorkshire? The task, in that hilly region, would have occupied all the cattle and vehicles for several months; and then the corn could not have been thrashed out without making the whole population travel repeatedly, in order finally to reload the grain and take it to their threshing floors.

Reverting to the interpretation of foxes burning the harvest by means of firebrands attached to their tails, the case is borne out by Ovid (*Fasti*, iv. 681)—



> 'Cur igitur missæ junctis ardentia telis
> Terga ferunt vulpes.'

And again, in the fable of Apthonius, quoted by Merrick; but not, as is alleged, by the brick with a bas-relief representing a man driving two foxes with fire fastened to their tails, which was found twenty-eight feet below the present surface of London; because tiles of similar character and execution have been dug up in other parts of England, some representing the history of Susanna and the elders, and others the four Evangelists, and therefore all derived from biblical, not pagan sources.

Commentators, following the reading of the Sept., have with common consent adopted the interpretation, that two foxes were tied together by their tails with a firebrand between them. Now this does not appear to have been the practice of the Romans, nor does it occur in the fable of Apthonius. We understand the text to mean, that each fox had a separate brand; and most naturally so; for it may be questioned whether two united would run in the same direction. They would assuredly pull counter to each other, and ultimately fight most fiercely; whereas there can be no doubt that every canine would run, with fire attached to its tail, not from choice but necessity, through standing corn, if the field lay in the direction of the animal's burrow: for foxes and jackals, when chased, run direct to their holes, and sportsmen well know the necessity of stopping up those of the fox while the animal is abroad, or there is no chance of a chace. We therefore submit that by the words rendered 'tail to tail' we should understand the end of the firebrand attached to the extremity of the tail. Finally, as the operation of tying 300 brands to as many fierce and irascible animals could not be effected in one day by a single man, nor produce the result intended if done in one place, it seems more probable that the name of Samson, as the chief director of the act, is employed to represent the whole party who effected his intentions in different places at the same time, and thereby insured that general conflagration of the harvest which was the signal of open resistance on the part of Israel to the long-endured oppression of the Philistine people. These observations, though by no means sufficiently answering all the objections, are the best we can offer on a difficult question which could not be passed over altogether without notice [Dog; Wolf].—C. H. S.

SHUMIM (שׁוּמִים) occurs only once in Scripture, and that in the passage which has already been quoted under Abattachim, &c., where the Israelites are described as murmuring, among

other things, for the leeks, the onions, and the garlic (*shumim*) of Egypt. There can be no doubt of its being correctly so translated, as the Arabic ثوم (*thom*) still signifies a species of garlic, which is cultivated and esteemed throughout Eastern countries. Ancient authors mention that garlic was cultivated in Egypt. Herodotus

504. [Shallot. Allium Ascalonicum.]

enumerates it as one of the substances upon which a large sum (1600 talents) was spent for feeding labourers employed in building the Pyramids; so also Pliny, who, moreover, states that it was so highly esteemed, that 'allium cepasque inter Deos in jurejurando habuere olim Ægyptii.' The species considered to have been thus cultivated in Egypt, is *Allium Ascalonicum*, which is the most common in Eastern countries, and obtains its specific name from having been brought into Europe from Ascalon. It is now usually known in the kitchen garden by the name of 'eschalot' or 'shallot,' and is too common to require a fuller notice.—J. F. R.

SHUNEM (שׁוּנֵם; Sept. Σουνάμ), a town of the tribe of Issachar (Josh. xix. 18), where the Philistines encamped before Saul's last battle (1 Sam. xxviii. 4), and to which belonged Abishag, the last wife of David (1 Kings i. 3), and 'the Shunamite woman,' with whom Elisha lodged (2 Kings iv. 8-37; viii. 1-6). Eusebius and Jerome describe it as, in their day, a village, lying five Roman miles from Mount Tabor towards the south. They call it Sulem (Σουλήμ). It has of late years been recognised in a village called Solam, three miles and a half north of Zerin (Jezreel), which is a small place on the slope of a hill, where nothing occurs to denote an ancient site (Elliot, ii. 378; Schubert, iii. 165; Robinson, iii. 169, 170).

SHUR (שׁוּר; Sept. Σούρ), a city on the confines of Egypt and Palestine (Gen. xvi. 7; xx. 1; xxv. 18; 1 Sam. xv. 7); xxvii. 8). Josephus makes it the same as Pelusium (*Antiq.* vi. 7, 3; comp. 1 Sam. xv. 7); but this city bore among the Hebrews the name of Sin. More probably Shur was somewhere in the vicinity of the modern Suez. The desert extending from the borders of Palestine to Shur, is called in Exod. xv. 22, the 'desert of Shur,' but in Num. xxxiii. 8, the 'desert of Etham.'

SHUSHAN (שׁוּשָׁן), also Shushannah (שׁוֹשַׁנָּה; Sept. κρίνον), occurs in several passages of the Old Testament, and is translated *lily* in the Authorized Version. In the article Krinon we have mentioned that several plants have been adduced as the lily of the New Testament, such as *Amaryllis lutea*, *Ixiolirion montanum*, &c., but that *Lilium chalcedonicum*, or the scarlet martagon lily, appears to be the one alluded to by our Saviour. Besides the above, there are no doubt several other plants indigenous in Syria, which might be grouped with them, and come under the denomination of lily, when that name is used in a general sense, as it often is by travellers and others. The term *shoshun* or *sosun* seems also to have been employed in this sense. It was known to the Greeks; for Dioscorides describes the mode of preparing an ointment called *susinon*, which others, he says, call κρινινόν, that is, *lilinum*. So Athenæus, as translated by Celsius: '*Suson* enim id significare Persis, quod κρίνον Græcis.' The Arabic authors also use the word in a general sense, several varieties being described under the head سمسن *sosun*. The name is applied even to kinds of Iris, of which several species, with various coloured flowers, are distinguished.

505. [Lotus. Water-lily.]

The *shushan* of Scripture has been variously interpreted by translators, being by some thought to be the rose, by others the violet, or convallaria, a jasmine, or some one or more of the plants included under the general name of lily. But it appears to us that none but a plant which was well known and highly esteemed would be found occurring in so many different passages. Thus, in 1 Kings vii. 19-26, and 2 Chron. iv. 5, it is mentioned as forming the ornamental work of the pillars and of the brazen sea, made of molten brass, for the house of Solomon, by Hiram of Tyre. In Canticles the word is frequently mentioned; and it is curious that in

five passages, Cant. ii. 2 and 16; iv. 5; vi. 2 and 3, there is a reference to feeding among lilies: which appears unaccountable, when we consider that the allusion is made simply to an ornamental or sweet-smelling plant; and this the *shushan* appears to have been from the other passages in which it is mentioned. Thus in Cant. ii. 1, 'I am the rose of Sharon and the *lily* of the valleys;' ver. 2, 'as the *lily* among thorns, so is my love among the daughters;' v. 13, 'his lips like *lilies*, dropping sweet-smelling myrrh;' vii. 2, 'thy belly is like an heap of wheat set about with *lilies*.' If we consider that the book of Canticles is supposed to have been written on the occasion of the marriage of Solomon with a princess of Egypt, it is natural to suppose that some of the imagery may have been derived from her native country, and that the above lily may be a plant of Egypt, rather than of Palestine. And this appears to us to be the case, especially as the water lily or lotus of the Nile seems suitable to most of the above passages, as we may endeavour on some future occasion to prove. Thus Herodotus (ii. 92) says: 'When the waters have risen to their extremest height, and all the fields are overflowed, there appears above the surface an immense quantity of plants of the lily species, which the Egyptians call the lotus; having cut down these they dry them in the sun. The seed of the flowers, which resembles that of the poppy, they bake, and make into a kind of bread: they also eat the root of this plant, which is round, of an agreeable flavour, and about the size of an apple. There is a second species of the lotus, which grows in the Nile, and which is not unlike a rose. The fruit, which grows from the bottom of the root resembles a wasp's nest: it is found to contain a number of kernels of the size of an olive stone, which are very grateful either fresh or dried.' All this exists even to the present day. Both the roots and the stalks form articles of diet in Eastern countries, and the large farinaceous seeds of both the nymphæa and nelumbium are roasted and eaten. Hence probably the reference to feeding among lilies in the above quoted passages.

In confirmation of this view we may adduce also the remarks of Dr. W. C. Taylor in his '*Bible illustrated by Egyptian monuments*,' where he says that the lilies of the xlv. and lxix. Psalms have puzzled all Biblical critics. The title, 'To the chief musician upon Shoshannim,' has been supposed to be the name of some unknown tune to which the Psalm was to be sung. But Dr. Taylor says, 'the word Shoshannim is universally acknowledged to signify lilies, and lilies have nothing to do with the subject of the ode. But this hymeneal ode was intended to be sung by the female attendants of the Egyptian princess, and they are called "the lilies," not only by a poetic reference to the lotus lilies of the Nile, but by a direct allusion to their custom of making the lotus lily a conspicuous ornament of their head-dress.' Thus, therefore, all the passages of Scripture in which *Shoshan* occurs appear to be explained by considering it to refer to the lotus lily of the Nile.—J. F. R.

2. SHUSHAN, or Susa, the chief town of Susiana, and capital of Persia, in which the kings of Persia had their winter residence (Dan. viii. 2; Neh. i. 1; Esther i. 2, 5). It was situated upon the Eulæus or Choaspes, probably on the spot now occupied by the village Shus (Rennel, *Geog. of Herodotus*; Kinneir, *Mem. Pers. Empire;* K. Porter, *Travels*, ii. 4, 11; Ritter, *Erdkunde Asien*, ix. 294; *Pictorial Bible*, on Dan. viii. 2). Others believe the site to be that of Shuster (Vincent, *Commeree and Navig. of the Ancients;* Von Hammer, in *Mem. of the Geog. Soc. of Paris*, ii. 320, sq.; 333, sq.). At Shus, which is the more likely position, there are extensive ruins, stretching perhaps twelve miles from one extremity to the other, and consisting, like the other ruins of this region, of hillocks of earth and rubbish covered with broken pieces of brick and coloured tile. At the foot of these mounds is the so-called tomb of Daniel, a small building erected on the spot where the remains of that prophet are locally believed to rest. It is apparently modern; but nothing but the belief that this was the site of the prophet's sepulchre could have led to its being built in the place where it stands (Malcolm, *Hist. of Persia*, i. 255, 256); and it may be added that such identifications are of far more value in these parts, where occasion for them is rare, than among the crowded 'holy places' of Palestine. The city of Shus is now a gloomy wilderness, infested by lions, hyænas, and other beasts of prey. It is in N. lat. 31° 56′ and E. long. 48° 26′.

SIDON. [Zidon.]

SIHON (סִיחוֹן, *sweeping away; i. e.* a warrior sweeping all before him; Sept. Σηών), the king of the Amorites, reigning at Heshbon, who was destroyed, and his kingdom subjugated, in the attempt to resist the progress of the Israelites through his dominions (Num. xxi. 21, 23, sq.) [Amorites].

SIHOR (שִׁחוֹר), more properly Shichor, the Hebrew proper name for the Nile (Isa. xxiii. 3; Jer. ii. 18). The word means 'black;' and a corresponding name or epithet (Μέλας) was by the Greeks applied to the same river (Serv. *ad Virg. Georg.* iv. 291), on account of the black slime left after the subsidence of the inundation. In Josh. xiii. 3; 1 Chron. xiii. 5, Sihor is put as the south-western limit of Palestine, where one would rather expect 'the torrent of Egypt;' see River.

SIHOR-LIBNATH (שִׁיחוֹר לִבְנַת), a small stream or river emptying itself into the sea in the territory of Asher (Josh. xix. 26). Michaelis (*Hist. Vitri*, § 2, in *Com. Soc. Gott.* iv.) translates it 'glass-river,' and identifies it with the Belus, which joins the sea near Acre, and from whose sands the first glass was made by the Phœnicians (Strabo, xvi. p. 758; Tacit. *Hist.* v. 7; Joseph. *De Bell. Jud.* ii. 10. 2).

SILAS (Σίλας), a contraction of Silvanus (Σιλουανός), a distinguished Christian teacher in the church at Jerusalem, who, with Barnabas, was associated by that church with Paul (Acts xv. 22, 32), and accompanied him in his second journey through Asia Minor to Macedonia (Acts xv. 40; xvi. 19, 25; xvii. 4). He remained behind at Berea for a short time, when Paul was obliged to flee from that place (Acts xvii. 10, 14). They met again at Corinth (Acts xviii. 5; comp. Thess. i. 1), where Silas was active in the work of an evangelist (2

Cor. i. 19). He is invariably called Silvanus in the Epistles, but the contraction Silas is always used in the Acts. Whether this Silvanus is the same person who was the bearer of St. Peter's epistle to the churches in Asia Minor (1 Pet. v. 12), cannot be ascertained. The traditions (ap. Dorothæum et Hippolytum) regard Silas and Silvanus as different persons, making the former bishop of Corinth, and the latter bishop of Thessalonica. See Fabricius, *Lux Evang.* p. 117; Cellarius, *Diss. de Sila Viro Apostol.*

SILOAH. [Siloam.]

SILOAM (Σιλωάμ), or Shiloah (שִׁלֹחַ). The name Siloah or Siloam is found only three times in Scripture as applied to water; once in Isaiah (viii. 6), who speaks of it as running water; again, as a pool, in Nehemiah ii. 15; and lastly, also as a pool, in the account of our Lord's healing the man who had been born blind (John ix. 7-11). None of these passages affords any clue to the situation of Siloam; but this silence is supplied by Josephus, who makes frequent mention of it as a fountain (*De Bell. Jud.* v. 4, § 1, 2), and indicates its situation at the mouth of the valley of Tyropœon, where the fountain, now and long since indicated as that of Siloam, is still found. He describes its waters as sweet and abundant. Jerome (*Comment.* in Esa. viii. 6), indicating its situation more precisely, also mentions its irregular flow—a very remarkable circumstance, which has been noticed by most subsequent pilgrims and travellers. This assures us that the present fountain of Siloam is that which he had in view; and that it is the same to which the Scriptural notices refer there is no reason to doubt. The pool of Siloam is within and at the mouth of the valley of Tyropœon, and about eighty paces above its termination is that of Jehoshaphat. The water flows out of a small artificial basin under the cliff, the entrance to which is excavated in the form of an arch, and is immediately received into a larger reservoir, fifty-three feet in length by eighteen feet in width. A flight of steps leads down to the bottom of the reservoir, which is nineteen feet deep. This large receptacle is faced with a wall of stone, now slightly out of repair. Several columns stand out of the side walls, extending from the top downward into the cistern, the design of which it is difficult to conjecture. The water passes out of this reservoir through a channel cut in the rock, which is covered for a short distance; but subsequently it opens and discloses a lively copious stream, which is conducted into an enclosed garden planted with fig-trees. It is afterwards subdivided, and seems to be exhausted in irrigating a number of gardens occupied with figs, apricots, olive and other trees, and some flourishing legumes. The small upper basin or fountain excavated in the rock is merely the entrance, or rather the termination of a long and narrow subterranean passage beyond, by which the water comes from the Fountain of the Virgin. This has been established beyond dispute by Dr. Robinson, who, with his companion, had the hardihood to crawl through the passage. They found it 1750 feet in length, which, owing to its windings, is several hundred feet more than the direct distance above ground. It is thus proved that the water of both these fountains is the same, though some travellers have pronounced the water of Siloam to be bad, and that of the other fountain good. It has a peculiar taste, sweetish and very slightly brackish, but not at all disagreeable. Late in the season, when the water is low, it is said to become more brackish and unpleasant. The most remarkable circumstance is the ebb and flow of the waters, which, although often mentioned as a characteristic of Siloam, must belong equally to both fountains. Dr. Robinson himself witnessed this phenomenon in the fountain of the Virgin, where the water rose in five minutes one foot in the reservoir, and in another five minutes sunk to its former level. The intervals and the extent of the flow and ebb in this and the fountain of Siloam, vary with the season; but the fact, though it has not yet been accounted for, is beyond dispute (see Robinson's *Palestine*, i. 460, 492-498; Olin's *Travels*, ii. 153, 154; Williams's *Holy City*, pp. 378, 379.

SILVANUS. [Silas.]

SILVER. There is no mention of this metal in Scripture until the time of Abraham. Before that time brass and iron appear to have been the only metals in use (Gen. iv. 22). Abraham was rich in gold and silver, as well as in flocks and herds, and silver in his day was in general circulation as money. It was uncoined, and estimated always by weight. Coined money was not in use among the Israelites until an advanced period of their history. The Romans are said to have had only copper money until within five years of the first Punic war, when they began to coin silver (Pliny, *Hist. Nat.* xxx. 3). Their coins were extensively introduced into Judæa after it became a Roman province.

Silver, as well as gold, is frequently mentioned in Scripture. They were both largely used by the Jews in the manufacture of articles of ornament, and of various vessels for domestic purposes, and also for the service of the temple. Many of the idols, and other objects belonging to the idolatrous nations, are stated to have been of silver. This metal was so abundant as to be little thought of in the days of Solomon, although it was at that time, and both before and long afterwards, the principal medium of exchange among the Jews—the only recognised standard or measure of value [Metals].—G. M. B.

SIMEON (שִׁמְעוֹן, *favourable hearing*; Συμεών), the second son of Jacob, born of Leah (Gen. xxix. 33), and progenitor of the tribe of the same name. He was the full brother of Levi (Gen. xxxiv. 25; xxxv. 23), with whom he took part in cruelly avenging upon the men of Shechem the injury which their sister Dinah had received from the son of Hamor (Gen. xxxiv. 25-30); see Dinah. The ferocity of character thus indicated probably furnishes the reason that Joseph singled Simeon out to remain behind in Egypt, when his other brethren were the first time dismissed (Gen. xlii. 24); but when they returned he was restored safely to them (Gen. xliii. 23). Nothing more of his personal history is known. The tribe descended from Simeon contained 59,300 able bodied men at the time of the Exode (Num. i. 23), but was reduced to 22,000 before entering Palestine (Num. xxvi. 14). This immense decrease in the course of one generation was greater than that sustained by all the other tribes together, and reduced Simeon from

the third rank to the lowest of all in point of numbers. It cannot well be accounted for but by supposing that the tribe erred most conspicuously, and was punished most severely in those transactions which drew down judgments from God. As it appeared that Judah had received too large a territory in the first distribution of lands, a portion of it was afterwards assigned to Simeon. This portion lay in the south-west, towards the borders of Philistia and the southern desert, and contained seventeen towns (Josh. xix. 1-9). However, the Judahites must afterwards have re-appropriated some of these towns; at least Beersheba (1 Kings ix. 3) and Ziklag (1 Sam. xxvii. 6) appear at a subsequent period as belonging to the kingdom of Judah. The remarkable passage in 1 Chron. iv. 41-43 points to an emigration of or from this tribe, perhaps more extensive than the words would seem to indicate, and suggests that when they ceased to have common interests, this small tribe was obliged to give way before the greater power of Judah and the pressure of its population (comp. Gen. xlix. 7). Nothing more of this tribe is recorded, although its name occurs in unhistorical intimations (Ezek. xlviii. 24; Rev. vii. 8).

2. SIMEON, the aged person who, when Jesus was presented by his mother at the temple, recognised the infant as the expected Messiah, and took him in his arms and blessed him, glorifying God (Luke ii. 25-35). The circumstance is interesting, as evincing the expectations which were then entertained of the speedy advent of the Messiah; and important from the attestation which it conveyed in favour of Jesus, from one who was known to have received the divine promise that he should 'not taste of death till he had seen the Lord's Christ.' It has been often supposed that this Simeon was the same with Rabban Simeon, the son of the famous Hillel, and father of Gamaliel; but this is merely a conjecture, founded on circumstances too weak to establish such a conclusion.

SIMON (Σίμων), the same name, in origin and signification, as SIMEON.

1. SIMON MACCABÆUS. [MACCABÆAN FAMILY.]

2. SIMON, the apostle, to whom Christ gave the name of Peter, after which he was rarely called by his former name alone, but usually by that of Peter, or else Simon Peter [PETER].

3. SIMON, surnamed ZELOTES (Σίμων ὁ Ζηλωτής), one of the twelve apostles (Luke vi. 15; Acts i. 13), and probably so named from having been one of the Zealots. He is also called 'The Canaanite' (Σίμων ὁ Κανανίτης) in Matt. x. 4; Mark iii. 18. This, however, is not, as is usually the case, to be taken for a Gentile name, but is merely an Aramaic word signifying 'zeal,' and therefore of the same signification as Zelotes. Simon is the least known of all the apostles, not a single circumstance, beyond the fact of his apostleship, being recorded in the Scriptures. He is probably to be identified with Simon the son of Cleophas; and if so, the traditions concerning that person, given by those who make them distinct, must be assigned to him. These traditions, however, assign a different destiny to this Simon, alleging that he preached the Gospel throughout North Africa, from Egypt to Mauritania, and that he even proceeded to the remote isles of Britain.

4. SIMON, son of Cleophas and Mary, brother of the apostles James and Jude, and a kinsman of Jesus (Matt. xiii. 55; Mark vi. 3). He is probably the same with the Simon Zelotes above mentioned, and in that case we must regard the separate traditions respecting him as apocryphal, and take those assigned to the present Simon as proper to both. They amount to this, that after St. James had been slain by the Jews in A.D. 62, his brother Simon was appointed to succeed him in the government of the church at Jerusalem, and that forty-three years after, when Trajan caused search to be made for all those who claimed to be of the race of David, he was accused before Atticus, the governor of Palestine, and after enduring great torture was crucified, being then 120 years of age (Epiphanius, *Hæres.* c. 14; Euseb. *Hist. Eccles.* iii. 32; Tillemont, *Hist. Eccles.* ii. 204).

5. SIMON, father of Judas Iscariot (John vi. 71; xii. 4; xiii. 2, 26).

6. SIMON, a Pharisee who invited Jesus to his house (Luke vii. 40, 43, 44).

7. SIMON THE LEPER, so called from having formerly been afflicted with leprosy (Matt. xxvi. 6; Mark xiv. 3). He was of Bethany, and after the raising of Lazarus, gave a feast, probably in celebration of that event, at which both Jesus and Lazarus were present (comp. John xii. 2). He was, therefore, probably a near friend or relation of Lazarus: some suppose that he was his brother; others that he was the husband of Mary, the sister of Lazarus, who at this feast anointed the Lord's feet, and that Lazarus abode with them. But all this is pure conjecture.

8. SIMON THE CYRENIAN, who was compelled to aid in bearing the cross of Jesus (Matt. xxvii. 32; Mark xv. 21; Luke xxiii. 26). Whether this surname indicated that Simon was one of the many Jews from Cyrene, who came to Jerusalem at the Passover, or that he was originally from Cyrene, although then settled at Jerusalem, is uncertain. The latter seems the more likely opinion, as Simon's two sons, Alexander and Rufus, were certainly disciples of Christ; and it was perhaps the knowledge of this fact which led the Jews to incite the soldiers to lay on him the burden of the cross. The family of Simon seems to have resided afterwards at Rome; for St. Paul, in his epistle to the church there, salutes the wife of Simon with tenderness and respect, calling her his 'mother,' though he does not expressly name her: 'Salute Rufus, and his mother and mine' (Rom. xvi. 13).

9. SIMON THE TANNER, with whom St. Peter lodged at Joppa (Acts ix. 43; x. 6; xvii. 32). He was doubtless a disciple. His house was by the sea side, beyond the wall, as the trade of a tanner was one which the Jews did not allow to be carried on inside their towns.

10. SIMON MAGUS. In the eighth chapter of the Acts we read that Philip the Evangelist, whilst preaching the Gospel in a city of Samaria, came in contact with a person of the name of Simon, who had formerly exercised immense power over the minds of the people by his skill in the resources of magic. So high were the pretensions of this impostor, and so profound the impression he had made on the minds of the multitude, that they not only received with readiness all that he taught, but admitted his

claim to be regarded as an incarnation of the demiurgic power of God. The doctrines of Philip, however, concerning Christ as the true and only incarnation of Deity, supported by the unparalleled and beneficent miracles which he performed, had the effect of dispelling this delusion, and inducing the people to renounce their allegiance to Simon and receive baptism as the disciples of Christ. On the mind of Simon himself a deep impression was also produced. In his former pursuits he had been probably not a little of a dupe as well as a deceiver, for the belief in the reality of magical power was so widely diffused through the East that we can easily suppose Simon to have been thoroughly convinced, not only that the possession of such power was attainable, but that the charms of which he was master actually conferred upon him a portion of that power, though very far short of what he pretended to have. To his mind, therefore, the idea in all probability suggested by the miracles of Philip, the reality of which he could not doubt, was, that here was a magician of a higher order than himself—one who was possessed of charms and secrets more powerful and mysterious than those which he had obtained. To Philip, consequently, as a greater master of his science than himself, he deemed it wise to succumb, in the hope doubtless of being able ere long to participate in his knowledge and to wield his power. With this view he professed himself a disciple of Jesus, and as such was baptised by Philip.

On the news of Philip's success reaching Jerusalem, Peter and John went down to Samaria to confer upon the new converts the spiritual gifts which were vouchsafed to the primitive churches. During their visit Simon discovered that by means of prayer and the imposition of hands the Apostles were able to dispense the power of the Holy Ghost; and supposing probably that in this lay the much-prized secret of their superior power, he attempted to induce the Apostles to impart to him this power by offering them money. This, which for such a man was a very natural act, intimated to the Apostles at once his true character (or rather, to express more accurately our conviction, it enabled them to manifest to the people and publicly to act upon what their own power of discerning spirits must have already taught them of his true character); and accordingly Peter indignantly repudiated his offer, proclaimed his utter want of all true knowledge of Christian doctrine (so we understand the words οὐκ ἔστι σοι μερὶς οὐδὲ κλῆρος ἐν τῷ λόγῳ τούτῳ, ver. 21), and exhorted him to repentance and to prayer for forgiveness. The words of Peter on this occasion, it is justly remarked by Neander, 'present the doctrine of the Gospel, which so expressly intimates the absolute necessity of a right state of mind for the reception of all that Christianity conveys, in direct opposition to the Magianism, which denies all necessary connection between the state of mind and that which is divine and supernatural, brings down the divine and supernatural within the sphere of ordinary nature, and imagines that divine power may be appropriated by means of something else than that which is allied to it in man's nature, and which supplies the only point of union between the two' (*Apostol. Zeitalt.* i. 82). The solemn and threatening words of the Apostle struck dread into the bosom of the impostor, who besought the Apostle to pray for him that none of the things he had threatened might come upon him—an entreaty which shows that his mind still laboured under what Neander above describes as the chief error of the Magian doctrine.

After this we read no more of Simon Magus in the New Testament. By the ecclesiastical writers, however, he is frequently referred to, and several curious particulars are recorded concerning him, some of which must unquestionably be abandoned to the region of fable, but many of which are apparently true. According to Justin Martyr (*Apol.* i. § 26), Theodoret (*Hæret. fab.* i. 1), Epiphanius (*Hær.* xxi. 55), and others, he was a native of Gitton or Gittum, a town of Samaria. The Clementine Homilies (ii. 22), inform us that he studied at Alexandria; but their authority is very doubtful. Josephus speaks of a Simon Magus who was a dependant of Felix and the minister of his vices (*Antiq.* xx. 7. 2), and whom Neander regards as the same person with the one now under notice (*Lib. cit.* p. 84). Justin says he went to Rome in the reign of Claudius, where he attracted much attention, and gained such reverence that he was worshipped as a God. The same writer affirms that he even saw a statue erected in the Tiber, between the two bridges, to his memory, and bearing the inscription 'Simoni Deo Sancto,' and this is repeated by many of the fathers. It is now, however, very generally supposed that Justin's partial acquaintance with the Latin language and mythology led him to mistake a statue of the Sabine deity, Semo, for one to Simon, a supposition which it is hardly possible to resist when we know that a piece of marble has been found in an island of the Tiber actually bearing the inscription Semoni Sanco Deo Fidio Sacrum (Salmasius, *Ad Spartianum*, p. 38; Van Dale, *De Oraculis*, p. 579; Burton, *Heresies of the Apostolic Age*, p. 374, &c.). Eusebius adds (*Hist. Eccles.* ii. 13, 14), that the popularity of the impostor was completely destroyed by St. Peter's coming to Rome; and later writers give us a wonderful legend of his destruction by the miraculous power of the Apostle's prayers joined to those of St. Paul. All are agreed in regarding these legendary accounts as fabulous, but Dr. Burton has with much ingenuity endeavoured to expiscate the truth which may be involved in them. According to his view it is probable that Simon, in endeavouring to work something that should pass for a miracle, and to maintain his credit against the Apostles, met with an accident which ended in his death (*Lib. cit.* p. 371). To us it appears more probable that the whole is a mythic fable; the silence of all the earlier fathers regarding it is sufficient to invalidate its pretensions to be viewed as history.

Simon's doctrines were substantially those of the Gnostics, and he is not without reason regarded as the first who attempted to engraft the theurgy and egotism of the Magian philosophy upon Christianity. He represented himself, according to Jerome (*In Matt.*, Opp. iv. 114), as the Word of God, the Perfection, the Paraclete, the Almighty, the All of Deity; and Irenæus (i. 20) tells us he carried with him a beautiful female named Helena, whom he set forth as the

first idea (ἔννοια) of Deity. If this be not exaggerated fable on the part of his enemies, we must suppose that such modes of speech and representation were adopted by him as suited to the highly allegorical character of Orientalism in his day; for were we to suppose him to have meant such utterances to be taken literally, we should be constrained to look upon him in the light of a madman.

L. A.

SIN (סִין; Sept. Σαΐς), a city of Egypt, which is mentioned in Ezek. xxx. 15, 16, in connection with Thebes and Memphis, and is described as 'the strength of Egypt,' showing it to have been a fortified place. The Sept. makes it to have been Saïs, but Jerome regards it as Pelusium. This latter identification has been generally adopted, and is scarcely open to dispute. Sin means 'mire,' and Pelusium, from the Greek *pelos*, has the same meaning, which is, indeed, preserved in the modern name Tineh, 'clay,' all doubtless derived from the muddy nature of the soil in the vicinity. Sir J. G. Wilkinson, however, supposes that the ancient native name more nearly resembled the Peremoun or Pheromis of the Copts; and the latter is, doubtless, the origin of the Farama of the Arabs, by which it is still known. Pelusium was anciently a place of great consequence. It was strongly fortified, being the bulwark of the Egyptian frontier on the eastern side, and was considered the 'key,' or, as the prophet terms it, 'the strength' of Egypt (*Hist. Bell. Alexand.* p. 20, 27; Liv. xlv. 11; Joseph. *Antiq.* xiv. 8. 1; *De Bell. Jud.* i. 8. 7; i. 9. 3). It was near this place that Pompey met his death, being murdered by order of Ptolemy, whose protection he had claimed. It lay among swamps and morasses on the most easterly estuary of the Nile (which received from it the name of Ostium Pelusiacum), and stood twenty stades from the Mediterranean (Strabo, xvi. p. 760; xvii. 801, 802; Plin. *Hist. Nat.* v. 11). The site is now only approachable by boats during a high Nile, or by land when the summer sun has dried the mud left by the inundation: the remains consist only of mounds and a few fallen columns. The climate is very unwholesome (Wilkinson's *Mod. Egypt.* i. 406, 444; Savary's *Letters on Egypt*, i. let. 24; Henniker's *Travels*).

SIN, the desert which the Israelites entered on turning off from the Red Sea (Exod. xvi. 1; xvii. 1: Num. xxxiii. 12) [Sinai].

SINAI (סִינַי; Sept. Σινά). The Hebrew name, denoting a district of broken or cleft rocks, is descriptive of the region to which it is applied. That region, according to Exod. xix. 1; Lev. vii. 38; Num. i. 1, 3, 4, is a wild mountainous country in Arabia Petræa, whither the Israelites went from Rephidim, after they had been out of Egypt for the space of three months. Here the law was given to Moses, which fact renders this spot one of special and lasting interest. From the magnitude and prominence of the Sinaitic group of mountains, the entire district of which it forms a part has received the name of the peninsula of Sinai. This peninsula may be roughly described as formed by a line running from Suez to Ailah, all that lies on the south of this line falling within the peninsula. In the present day the name Sinai is given by Christians to the cluster of mountains to which we have referred; but the Arabs have no other name for this group than Jebel et-Tar, sometimes adding the distinctive epithet Sina. In a stricter sense the name Sinai is applied to a very lofty ridge which lies between the two parallel valleys of Sher and el-Lega. Of this ridge the northern end is termed Horeb, the southern Sinai, now called Jebel Mûsa, or Moses' Mount. The entire district is a heap of lofty granite rocks, with steep gorges and deep valleys. The several mountains in the peninsula seem all to ascend gradually till they reach their highest point in the group of Sinai, which presents a wild aspect of broken, cleft, and irregular masses, with pointed tops and precipitous sides. The entire group is made up of four huge ranges, which run south and north with an inclination eastward. The ranges are separated from each other by deep valleys or watercourses. Of the four longitudinal masses of mountain, Sinai lies the most easterly but one, namely, Jebel ed-Deir. The range which lies on the west of Sinai is designated at its southern extremity Jebel Catharine, which is the highest mountain in the district, for Sinai is 7033, and Catharine 8063 Parisian feet above the level of the Mediterranean (the highest point of Hermon being 10,000 feet). The Sinai ridge, including Horeb, is at least three miles in length. It rises boldly and majestically from the southern end of the plain Rahah, which is two geographical miles long, and ranges in breadth from one-third to two-thirds of a mile, making at least one square mile. This space is nearly doubled by extensions of the valley on the west and east. 'The examination convinced us,' says Robinson (*Biblical Researches*, i. 141), 'that here was space enough to satisfy all the requisitions of the Scriptural narrative, so far as it relates to the assembling of the congregation to receive the law.' Water is abundant in this mountainous region, to which the Bedouins betake themselves when oppressed by drought in the lower lands. As there is water, so also is there in the valleys great fruitfulness and sometimes luxuriance of vegetation, as well as beauty. What was the exact locality from which the law was given, it may not be easy to ascertain. The book of Deuteronomy (i. 6; iv. 18, &c.) makes it to be Horeb, which seems most probable; for this, the north end of the range, rises immediately from the plain of which we have just spoken as the headquarters of the Israelites. Sinai is, indeed, generally reputed to be the spot, and, as we have seen, the southern extremity of the range is denominated Moses' Mount; but this may have arisen from confounding together two meanings of Sinai, inasmuch as it denotes 1, a district; 2, a particular part of that district. It was no doubt on Horeb, in the region of Sinai, that the law was promulgated. Robinson imputes the common error to tradition, and declares that 'there is not the slightest reason for supposing that Moses had any thing to do with the summit which now bears his name. It is three miles distant from the plain

on which the Israelites must have stood, and hidden from it by the intervening peaks of modern Horeb. No part of the plain is visible from the summit, nor are the bottoms of the adjacent valleys, nor is any spot to be seen around it where the people could have been assembled.' Robinson also ascended the northern extremity of the ridge, and had there a prospect which he thus describes: — 'The whole plain, er-Râhah, lay spread out beneath our feet with the adjacent Wadys and mountains. Our conviction was strengthened that here, or on some one of the adjacent cliffs, was the spot where the Lord "descended in fire," and proclaimed the law. Here lay the plain where the whole congregation might be assembled; here was the mount that could be approached and touched, if not forbidden; and here the mountain brow where alone the lightnings and the thick cloud would be visible, and the thunders and the voice of the trump be heard when "the Lord came down in the sight of all the people upon Mount Sinai." We gave ourselves up to the impressions of the awful scene, and read with a feeling that will never be forgotten the sublime account of the transaction and the commandment there promulgated.' On descending, Robinson came to a convent (5366 feet above the sea), his description of the vicinity of which will impress on the reader's mind what we have before said as to the fruitfulness of spots in these lofty regions. 'A large plantation of olive-trees extends far above and below the convent along the valley. Just around the buildings is also a garden of other fruit trees, in which apple and apricot trees were in blossom (March 26), and not far off is a small grove of tall poplars, here

506. [The summit of Mount Sinai.]

cultivated for timber. In this garden too was a rill of water. A family of serfs was here to keep the garden. As we entered, the sweet voice of a prattling Arab child struck my ear, and made my heart thrill as it recalled the thoughts of home' (i. 159). Tradition seems to have been busily and freely at work in the district. A rock is pointed out as that whence Moses made the water gush. It is in a narrow valley, and Robinson affirms that there is not the slightest ground for assuming any connection between it and Rephidim; but, on the contrary, every thing against such a supposition.

Having thus given a general view of Sinai, we shall now briefly trace the Israelites in their journey to the mountain. Another article [WANDERING] will follow their course into the Land of Promise. If the reader will turn back to EXODUS, he will find that we there conducted the fugitive horde through the Red Sea to the eastern shore of the gulf of Suez. The Biblical authorities for the portion of the task immediately before us may be found in Exod. xvi. 22; xvii., xviii., xix., 1 and 2; and Num. xxiii. 8-15. When safe on the eastern shore, the Israelites, had they taken the shortest route into Palestine, would have struck at once across the desert in a south-easterly direction to el-Arish or Gaza. But this route would have brought them into direct collision with the Philistines, with whom they were as yet quite unable to cope. Or they might have traversed the desert of Paran, following the pilgrim road of the present day to Elath, and, turning to the north, have made for Palestine. In order to accomplish this, however, hostile hordes and nations would have to be encountered, whose superior skill and experience in war might have proved fatal to the newly liberated tribes of Israel. Wisely, therefore, did their leader take a course which necessitated the lapse of time, and gave promise of affording intellectual and moral discipline of the highest value. A regard to this discipline chiefly determined Moses in the selection of his route. He resolved to lead his flock

to Sinai in order that they might see the wonders there to be exhibited, and hear the lessons there to be given. At Sinai, and on the journey thither, might the great leader hope that the moral brand which slavery had imprinted on his people would be effaced, and that they would acquire that self-respect, that regard to God's will, that capacity of self-guidance, which alone could make liberty a blessing to the nation, and enable Moses to realise on their behalf the great and benign intentions which God had led him to form. There were, however, two ways by which he might reach Sinai. By following a south-easterly direction, and proceeding across the desert el-Tyh, he would have reached at once the heart of the Sinaitic region. This was the shorter and the more expeditious road. The other route lay along the shore of the Red Sea, which must be pursued till an opening gave the means of turning suddenly to the east, and ascending at once into the lofty district. The latter was preferable for the reason before assigned, namely, the additional opportunities which it offered for the education of the undisciplined tribes of recently emancipated slaves. It, therefore, was wisely adopted by Moses.

Moses did not begin his arduous journey till, with a piety and a warmth of gratitude which well befitted the signal deliverance that his people had just been favoured with, he celebrated the power, majesty, and goodness of God in a triumphal ode, full of the most appropriate, striking, and splendid images; in which commemorative festivity he was assisted by 'Miriam the prophetess, the sister of Aaron,' and her associated female band, with poetry, music, and dancing. The nature of these festivities gives us full reason to conclude, that if the people at large were still slaves in intellect and morals, there were not wanting individuals in the camp who were eminently skilled in the best refinements of the age. The spot where these rejoicings were held could not have been far from that which still bears the name of Ayûn Mûsa, 'the fountains of Moses,' the situation of which is even now marked by a few palm-trees. This was a suitable place for the encampment, because well supplied with water. Here Robinson counted seven fountains, near which he saw a patch of barley, and a few cabbage plants. Hence the Israelites proceeded along the coast, three days' journey, into what is termed the wilderness of Shur. During this march they found no water. The district is hilly and sandy, with a few watercourses running into the Red Sea, which, failing rain, are dry. 'These Wadys,' says Robinson, 'are mere depressions in the desert, with only a few scattered herbs and shrubs, now withered and parched with drought.' At the end of three days the Israelites reached the fountain Marah, but the waters were bitter, and could not be drunk. The stock which they had brought with them being now exhausted, they began to utter murmurings on finding themselves disappointed at Marah. Moses appealed to God, who directed him to a tree, which, being thrown into the waters, sweetened them. The people were satisfied and admonished. About this station authorities are agreed. It is identified with the fountain Hawârah. The basin is six or eight feet in diameter, and the water Robinson found about two feet deep. Its taste is unpleasant, saltish, and somewhat bitter. The Arabs pronounce it bitter, and consider it as the worst water in all these regions. Near the spring are numerous bushes of the shrub *ghurkud*—a low, bushy, thorny shrub, producing a small fruit, which ripens in June, not unlike the blackberry, very juicy, and slightly acidulous. It delights in a saline soil, and is found growing near the brackish fountains in and around Palestine, affording a grateful refreshment to travellers. By means of the berries, or, if they were not ripe, the leaves of this plant, the bitterness may have been removed from the waters of Marah. Not improbably the miracle in the case lay in this, that Jehovah directed Moses to use the tree (bush) itself, instead of what was usual, the berries, as from the time of year, shortly after Easter, they could hardly have been ripe.

The next station mentioned in Scripture is Elim, where were twelve wells of water, and three score and ten palm-trees. As is customary with travellers in these regions, 'they encamped there by the waters' (Exod. xvi. 1). The indications given in the Bible are not numerous, nor very distinct. Neither time nor distance is accurately laid down. Hence we can expect only general accuracy in our maps, and but partial success in fixing localities. Elim, however, is generally admitted to be Wady Ghurundel, lying about half a day's journey south-east from Marah. The way from Egypt to Sinai lies through this valley, and on account of its water and verdure it is a chief caravan station at the present day. From Elim the Israelites marched, encamping on the shore of the Red Sea, for which purpose they must have kept the high ground for some time, since the precipices of Jebel Hûmmâm—a lofty and precipitous mountain of chalky limestone—run down to the brink of the sea. They, therefore, went on the land side of this mountain to the head of Wady Taiyikeh, which passes down south-west through the mountains to the shore. On the plain at the mouth of this valley was the encampment 'by the Red Sea' (Num. xxxiii. 10).

According to Num. xxxiii. 11, the Israelites removed from the Red Sea, and encamped next in the wilderness of Sin. This Robinson identifies with 'the great plain which, beginning near el-Mûrkhâh, extends with greater or less breadth almost to the extremity of the peninsula. In its broadest part it is called el-Kâ-a' (i. 106). Thus they kept along the shore, and did not yet ascend any of the fruitful valleys which run up towards the centre of the district. They arrived in the wilderness of Sin on the fifteenth day of the second month after their departure out of the land of Egypt; and being now wearied with their journey, and tired of their scanty fare, they began again to murmur. Indeed, it is not easy to see how the most ordinary and niggard food could have been supplied to them, constituting as they did nearly two millions of persons, in such a country as that into which they had come. It is true that some provision might have been made by individuals ere the march from Suez began. It is also possible that the accounts of encampments which we have, are to be regarded as chiefly those of Moses and his principal men, with a chosen body of troops, while the multitude were allowed to traverse the open country, and forage in the valleys. Still the region was unfavour-

able for the purpose, and we are brought to the conclusion that here we have one of those numerical difficulties which are not uncommon in the Old Testament Scriptures, and which make us suspect some radical error in our conceptions of the Hebrew system of numbers. The contrast between the scant supply of the desert and the abundance of Egypt, furnished the immediate occasion of the outbreak of dissatisfaction. Bread and flesh were the chief demand; bread and flesh were miraculously supplied; the former by manna, the latter by quails. Manna grows in some of the neighbouring valleys; but the Israelites were in the wilderness, so that the supply could not have proceeded from natural resources, even had such existed to a sufficient extent for the purpose.

The next station mentioned in Exodus is Rephidim; but in Numbers Dophkah and Alush are added. The two latter were reached after the people had taken 'their journey out of the wilderness of Sin.' Exact precision and minute agreement are not to be expected. The circumstances of the case forbid us to look for them. In a desert, mountainous, and rarely frequented country, the names of places are not lasting. There was the less reason for permanence in the case before us, because the Israelites had not taken the shorter and more frequented road over the mountains to Sinai, but kept along the shore of the Red Sea. It still deserves notice, that in Exodus (xvii. 1) there is something like an intimation given of other stations besides Rephidim in the words 'after their journeys.' Dophkah is probably to be found near the spot where Wady Feirân runs into the gulf of Suez. Alush may have lain on the shore near Ras Jehan. From this point a range of calcareous rocks, termed Jebal Hemam, stretches along the shore, near the southern end of which the Hebrews took a sudden turn to the north-east, and going up Wady Hibrân, reached the central Sinaitic district. On the opposite side, the eastern, the Sinaitic mountains come to a sudden stop, breaking off, and presenting like a wall nearly perpendicular granite cliffs. These cliffs are cut by Wady Hibrân, and at the point of intersection with the plain which runs between the two ranges, lay Rephidim.

This was the last station before Sinai itself was reached. Naturally enough is it recorded, that 'there was no water for the people to drink.' The road was an arid gravelly plain; on either side were barren rocks. A natural supply was impossible. A miracle was wrought, and water was given. The Scripture makes it clear that it was from the Sinaitic group that the water was produced (Exod. xvii. 6). The plain received two descriptive names: Massah, 'Temptation;' and Meribah, 'Strife.' It appears that the congregation was not allowed to pursue their way to Sinai unmolested. The Arabs thought the Israelites suitable for plunder, and fell upon them. These hordes are termed Amalek. The Amalekites may have been out on a predatory expedition, or they may have followed the Israelites from the north, and only overtaken them at Rephidim; any way no conclusion can be gathered from this fact as to the ordinary abode of these nomades. It appears, however, that the conflict was a severe and doubtful one, which by some extraordinary aid ended in favour of the children of Israel. This aggression on the part of Amalek gave occasion to a permanent national hatred, which ended only in the extermination of the tribe (Num. xxiv. 20; Exod. xvii. 14-16). In commemoration of this victory Moses was commanded to write an account of it in a book: he also erected there an altar to Jehovah, and called the name of it 'Jehovah, my banner.' There is no occasion to inquire whether or not there was space for a battle in the spot where Moses was. It was a nomade horde that made the attack, and not a modern army. The fight was not a pitched battle. The word Horeb, applied by Moses to the place whence the water was gained, suggests the idea that Horeb was the general, and Sinai the specific name; Horeb standing for the entire district, and Sinai for one particular mountain. Many passages sanction this distinction. But in the New Testament Sinai only is read, having then apparently become a general name, as it is at the present day (Acts vii. 30-38; Gal. iv. 24). It is a monkish usage which gives the name Sinai to Jebel Mûsa, and Horeb to the northern part of the same ridge.

The district of Sinai is remarkable for the numerous inscriptions engraved on the face of the rocks. They are found on all the routes which lead from the west towards the mountain, as far south as Tûr, and extend to the very base of Sinai. The spot where they exist in the greatest number is the Wady, which hence derives its name, W. Mukatteb, 'Written Valley,' through which the usual road to Sinai passes before reaching Wady Teirân. Here inscriptions occur by thousands on the rocks, chiefly at such points as would form convenient resting-places for travellers or pilgrims during the noon-day sun. Many of them are accompanied by crosses. The characters are every where the same, and till recently had defied all the efforts of the ablest palæographists. In the year 1839, Professor Beer, of the university of Leipzig, succeeded in deciphering them. The characters of the Sinaitic inscriptions the Professor finds to belong to a distinct and independent alphabet; some being wholly peculiar, others having more or less affinity with the Cufic, which may have been developed from them. The contents hitherto ascertained (1839) consist of proper names, preceded by some such word as '*peace; blessed; in memory of.*' The word *son* often occurs between the names. No Jewish nor Christian name has been found. Beer thinks the writers were pilgrims: it is probable, from the presence of the cross, that they were also Christians. The inscriptions are ascribed to the fourth century, and may have been made by the native inhabitants of the mountains. The Leipzig Professor considers them as the only remains of the language and character once peculiar to the Nabathæans of Arabia Petræa. Inscriptions have also been discovered on the rocks of Hisn Ghorab in Hadramaut, on the southern extremity of Arabia, of which, and of the deciphering of which, a very interesting account may be found in Forster's recently published and very valuable work, *The Historical Geography of Arabia, or the Patriarchal Evidences of Revealed Religion*, 2 vols. 8vo. Lond. 1844. Robinson's work before referred to is a classical one on the subject, though we are unable to assent to all his views. The celebrated Rauмer's *Beiträge* to his *Palestine* should be studied in connection with Robinson. Within the last few

years very much has been done for laying open the regions through which our minds have passed, by Niebuhr, Burckhardt, and Laborde. See also Büsching, *Erdbeschreibung*, v.; and Rosenmuller, *Alterthum.* iii. 131, sq.—J. R. B.

SINAPI (Σίναπι), translated 'mustard tree' in the Auth. Vers. of the New Testament, has engaged the attention of many commentators, great difficulty having been experienced in finding a plant with the requisite characteristics, notwithstanding the several attempts which have been made. The subject was investigated by the present writer in a paper read before the Royal Asiatic Society, on the 16th March, 1844. Having referred to the passages of the New Testament in which the word occurs (Matt. xiii. 31; xvii. 20; Mark iv. 31; Luke xiii. 19; xvii. 6), he first showed how unsuitable were the plants which had been adduced to the circumstances of the sacred narrative, and mentioned that his own attention had been turned to the subject in consequence of the present Bishop of Lichfield having informed him that Mr. Amuény, a Syrian student of King's College, was well acquainted with the tree. Mr. A. stated that this tree was found near Jerusalem, but most abundantly on the banks of the Jordan and round the sea of Tiberias; that its seed was employed as a substitute for mustard, and that it was called *khardal*, which, indeed, is the common Arabic name for mustard. In the writer's *MS. Materia Medica of the East*, mentioned in vol. i. p. 6, he had enumerated, 1. *Khardal*, or common mustard; 2. *Khardal barree*, or wild mustard; 3. *Khardal roomee*, Turkish mustard. The last appeared to be the plant referred to, but nothing more than this name was known of it. In his *Illustrations of Himalayan Botany*, he found a tree of N. W. India, which was there called *kharjal*, and which appeared possessed of the requisite properties, but he could not find it mentioned in any systematic work, or local Flora, as a native of Palestine. The plant is *Salvadora Persica*, a large shrub, or tree of moderate size, a native of the hot and dry parts of India, of

507. [Salvadora Persica.]

Persia, and of Arabia. Dr. Roxburgh describes the berries as much smaller than a grain of black pepper, having a strong aromatic smell, and a taste much like that of garden cresses. Dr. Lindley informed the writer that he had seen them in a collection made by Bové. Lastly, Irby and Mangles, in their travels, mention a tree which they suppose to be the mustard tree of Scripture. They met with it while advancing towards Kerek, from the southern extremity of the Dead Sea. It bore its fruit in bunches resembling the currant; and the seeds had a pleasant, though strongly aromatic taste, nearly resembling mustard. They say, 'We think it possible that this is the tree our Saviour alluded to in the parable of the mustard seed, and not the mustard plant which we have in the north, and which, even when growing large, can never be called a tree, whereas the other is really such, and birds might easily, and actually do, take shelter under its shadow.' On further inquiry, the writer learned that a specimen of the tree had been brought home by Mr. W. Barker, and that it had been ascertained by Messrs. Don and Lambert to be the *Salvadora Persica* of botanists; but both had written against its claim to be the mustard tree of Scripture, while Mr. Frost, hearing a conversation on the subject, had supposed the tree to be a *Phytolacea*, and had hence maintained it to be the mustard tree of Scripture, but without adducing proofs of any kind.

The paper above referred to concludes by stating it as an important fact, that the writer had come to the same conclusion as Irby and Mangles, by an independent mode of investigation, even when he could not ascertain that the plant existed in Palestine; which is, at all events, interesting, as proving that the name *kharjal* is applied, even in so remote a country as the north-west of India, to the same plant which, in Syria, is called *khardal*, and which no doubt is the *chardal* of the Talmudists, one of whom describes it as a tree of which the wood was sufficient to cover a potter's shed, and another says that he was wont to climb into it, as men climb into a fig-tree. Hence the author stated that he had no doubt but that *Salvadora Persica* is the mustard tree of Scripture. The plant has a small seed, which produces a large tree with numerous branches, in which the birds of the air may take shelter. The seed is possessed of the same properties, and is used for the same purposes, as mustard, and has a name, *khardal*, of which *sinapi* is the true translation, and which, moreover, grows abundantly on the very shores of the sea of Galilee, where our Saviour addressed to the multitude the parable of the mustard seed.—J. F. R.

SINIM (סִינִים; Sept. γῆ Περσῶν), a people whose country, 'land of Sinim,' is mentioned only in Isa. xlix. 12, where the context implies a remote region, situated in the eastern or southern extremity of the earth. Many Biblical geographers think this may possibly denote the Sinese or Chinese, whose country is Sina, China. This ancient people were known to the Arabians by the name of صين Sin, and to the Syrians by that of ܨܝܢ Tsini; and a Hebrew writer may well have heard of them, especially if sojourning at Babylon, the metropolis, as it were, of all Asia. This name appears to have been given to the Chinese by other Asiatics; for the Chinese themselves, though not unacquainted with it, do not employ it, either adopting the names of the reigning dynasties, or osten-

tationsly assuming high-sounding titles, *e. g.* Tchungkue, 'central empire.' But when the name was thus given by other nations, and whence it was derived, is uncertain. The opinion of those writers is possibly correct, who suppose that the name סִינִים *Sineses* came from the fourth dynasty, called Tshin, which held the throne from 249 to 206 B.C. (Du Halde, *Descript. de la Chine*, i. § 1, p. 306; A. Rémusat, *Nouv. Mélanges Asiatiques*, ii. 334, sq.; Klaproth, *Journal Asiat.* x. 53, sq.). A people called Tshinas are spoken of in the laws of Menu, and the name of this dynasty may have been known among foreign nations long before it acquired the sovereign power over all China. See this view more largely stated by Gesenius (*Thesaurus*, pp. 948-950). It is not void of probability, but objections to it are obvious and considerable. Some, therefore, think that by the Sinim the inhabitants of Pelusium (Sin) are, by synecdoche, denoted for the Egyptians (Bochart, *Phaleg*, iv. 27). But as the text seems to point to a region more distant, others have upheld the claims of the people of Syene, taken to represent the Ethiopians (Michaelis, *Spicil.* ii. 32, sq.; *Suppl.* p. 1741, sq.). See SYENE. If, however, 'the land of Sinim' was named either from Sin or Syene, it is remarkable that the Seventy, who knew Egypt well, should have gone eastward in search of it, even so far east as Persia; and if they considered it as lying in the remote eastern parts of the Persian empire, which extended to the borders of India, the great step which is thus taken in the direction of China would give some support to the identification of the Chinese with the Sinim.

SINITE (סִינִי; Sept. Ἀσενναῖος), a people probably near Mount Lebanon (Gen. x. 17; 1 Chron. i. 15). Strabo mentions a city in Lebanon called Siuna (*Geog.* xvi. 756). Jerome also speaks of a place called Sini, not far from Arca (*Quæst. Heb.* in Gen.).

SISERA (סִיסְרָא, *battle array*; Sept. Σισάρα), the general in command of the mighty army of the Canaanitish king Jabin. As this is the only instance in those early times of armies being commanded by other than kings in person, the circumstance, taken in connection with others, intimates that Sisera was a general eminent for his abilities and success. He was, however, defeated by Barak, and slain (Judg. iv. 2-22), under the circumstances which have been described in the article JAEL.

SIVAN (סִיוָן; Sept. Νισάν), the third month of the Hebrew year, from the new moon of June to the new moon of July. The name admits of a Hebrew etymology; but as it occurs only in Esth. viii. 9, it is better to regard it as of Persian origin, like the other names of months; the corresponding Persian month being called *Sefendarmed*; Zend, *Çpenti Armaiti*; Pehlv. *Sapandomad.* (Benfey, *Monatsnamen*, pp. 13, 41, sq.; 122, sq.; Gesen. *Thesaur.* p. 946).

SKHINOS (Σχῖνος) occurs only in the book entitled Susannah, ver. 54, where one of the elders says that he saw Susannah with a young man, ὑπὸ σχῖνον, which is correctly translated 'under a mastic-tree.' The other elder replied, that it was ὑπὸ πρῖνον, 'under a holm-tree,' that is, a species of oak. The mastic-tree was well known to the Greeks by the name of σχῖνος. It is the *Pistacia Lentiscus* of botanists, and belongs to the same genus as the *Pistachio* nut and turpentine tree [BOTNIM and ALAH]. The mastic-tree is a native of the Mediterranean region, and is found in different parts of Syria. It is a moderate-sized tree or large shrub. It is celebrated for producing mastic, a resin which exudes from incisions made in the bark, chiefly in the island of Scio. The hardened mastic, in the form of roundish straw-coloured tears, is much chewed by Turkish women. It consists of resin, with a minute portion of volatile oil: it is much used as a varnish, and sometimes as a medicine, and by dentists in this country.—J. F. R.

SLAVE (עֶבֶד; Sept. παῖς, δοῦλος, οἰκέτης; Vulg. *servus*; Auth. Eng. Version, *servant* and *bondman*; Fem. אָמָה and שִׁפְחָה, δούλη, παιδίσκη, οἰκέτις, *ancilla*). The term SLAVERY, though frequently applied to the Jewish system of servitude, is not wholly appropriate. Among the Greeks and Romans, it properly expressed the legal condition of captives taken in war, or the victims of the existing slave-trade, and the offspring of female slaves. Those slaves were held to be the absolute property of their masters, and their slavery was regarded as perpetual and hereditary. Nor does Jewish servitude bear any resemblance to modern slavery, which, however it may differ from the Greek and Roman in some of its minor incidents, resembles it in its essential principles. If under the Roman law slaves were held 'pro nullis, pro mortuis, pro quadrupedibus,' so under the law of the United States they are adjudged to be chattels personal in the hand of their owners, to all intents, constructions, and purposes whatsoever; and their slavery, like that of the ancient Romans, is, as a necessary consequence, perpetual and hereditary.

It is difficult to trace the origin of slavery. It may have existed before the deluge, when violence filled the earth, and drew upon it the vengeance of God. But the first direct reference to slavery, or rather slave-trading, in the Bible, is found in the history of Joseph, who was sold by his brethren to the Ishmaelites (Gen. xxxvii. 27, 28). In Ezek. xxvii. 12, 13, we find a reference to the slave-trade carried on with Tyre by Javan, Tubal, and Meshech. And in the Apocalypse we find enumerated in the merchandise of pagan Rome (the mystic Babylon) *slaves* (σωμάτα) and the souls of men (Rev. xviii. 13).

The sacred historians refer to various kinds of bondage:—

1. *Patriarchal Servitude.*—The exact nature of this service cannot be defined: there can be no doubt, however, that it was regulated by principles of justice, equity, and kindness. The servants of the patriarchs were of two kinds, those 'born in the house,' and those 'bought with money' (Gen. xvii. 13). Abraham appears to have had a large number of servants. At one time he armed three hundred and eighteen young men, 'born in his own house,' with whom he pursued the kings who had taken 'Lot and his goods, and the women also, and the people,' and recaptured them (Gen. xiv. 1-16). The servants born in the house were perhaps entitled to greater privileges than the others. Eliezer of Damascus, a home-born servant, was

Abraham's steward, and, in default of issue, would have been his heir (Gen. xv. 2-4). This class of servants was honoured with the most intimate confidence of their masters, and was employed in the most important services. An instance of this kind will be found in Gen. xxiv. 1-9, where the eldest or chief servant of Abraham's house, who ruled over all that he had, was sent to Mesopotamia to select a wife for Isaac, though then forty years of age. The authority of Abraham was that of a prince or chief over his patriarchate or family, and was regulated by usage and the general consent of his dependents. It could not have been otherwise in his circumstances; nor, from the knowledge which the Scriptures give of his character, would he have taken advantage of any circumstances to oppress or degrade them: 'for I know him, saith the Lord, that he will command his children and his household after him, and they shall keep the way of the Lord, to do justice and judgment, that the Lord may bring upon Abraham that which he hath spoken of him' (Gen. xviii. 19). The servants of Abraham were admitted into the same religious privileges with their master, and received the seal of the covenant (Gen. xvii. 9, 14, 24, 27).

There is a clear distinction made between the 'servants' of Abraham and the things which constituted his property or wealth. Abraham was very rich in cattle, in silver, and in gold (Gen. xiii. 2, 5). But when the patriarch's power or greatness is spoken of, then servants are spoken of as well as the objects which constituted his riches (Gen. xxiv. 34, 35). It is said of Isaac, 'And the man waxed great, and went forward, and grew until he became *very great*, for he had possession of flocks, and possession of herds, and great store of *servants*' (Gen. xxvi. 13, 14, 16, 26, 28, 29). When Hamor and Shechem speak to the Hivites of the riches of Jacob and his sons, they say, 'Shall not their cattle and their substance and every beast of theirs be ours?' (Gen. xxxiv. 23). Jacob's wives say to him, 'All the *riches* which God hath taken from our father, that is ours and our children's.' Then follows an inventory of property: 'all his cattle,' 'all his goods,' 'the cattle of his getting.' His numerous servants are not included with his property (comp. Gen. xxxi. 43—16, 18). When Jacob sent messengers to Esau, wishing to impress him with an idea of his state and sway, he bade them tell him not only of his RICHES, but of his *greatness*, and that he had oxen and asses and flocks, and men-servants and maid-servants' (Gen. xxxii. 4, 5). Yet in the present which he sent there were no servants, though he manifestly selected the most valuable kinds of property (Gen. xxxii. 14, 15; see also xxxiv. 23; xxxvi. 6, 7). In no single instance do we find that the patriarchs either gave away or sold their servants, or purchased them of *third* persons. Abraham had servants 'bought with money.' It has been assumed that they were bought of third parties, whereas there is no proof that this was the case. The probability is that they sold themselves to the patriarch for an equivalent; that is to say, they entered into voluntary engagements to serve him for a longer or shorter period of time, in return for the money advanced them. It is a fallacy to suppose that whatever *costs* money *is* money or property. The children of Israel were required to purchase their first-born (Num. xviii. 15, 16; iii. 45, 51; Exod. xiii. 13; xxxiv. 20). They were, moreover, required to pay money for their own souls; and when they set themselves or their children apart by vow unto the Lord, the price of release was fixed by statute (Lev. xxvii. 2-8). Boaz bought Ruth (Ruth iv. 10). Hosea bought his wife (Hos. iii. 2). Jacob bought his wives Rachel and Leah; and not having money, paid for them in labour, seven years a-piece (Gen. xxix. 16-23). That the purchase of wives, either with money or by service, was the general practice, is plain from such passages as Exod. xxii. 17, and 1 Sam. xviii. 25. But the idea of property does not appear in any of these purchases. For the various ways in which the terms 'bought,' 'buy,' and 'bought with money,' are used, consult Neh. v. 8; Gen. xlvii. 18-26, &c. In Lev. xxv. 47, will be found the case of the Israelite who became the servant of the stranger. The words are, 'If he *sell himself* unto the stranger.' Yet the 51st verse says that this servant was 'bought,' and that the price of the purchase was paid to *himself*. For a further clue to Scripture usage, the reader is referred to 1 Kings xxi. 20, 25; 2 Kings xvii. 17; Isa. lv. 1; lii. 3: see also Jer. xxxiv. 14; Rom. vi. 16; vii. 14; John viii. 34. Probably Job had more servants than either of the patriarchs to whom reference has been made (Job i. 2, 3). In what light he regarded, and how he treated, his servants, may be gathered from Job xxxi. 13-23. And that Abraham acted in the same spirit we have the divine testimony in Jer. xxii. 15, 16, 17, where his conduct is placed in direct contrast with that of some of his descendants, who used their neighbour's service without wages, and gave him not for his work (ver. 13).

2. *Egyptian Bondage.*—The Israelites were frequently reminded, after their exode from Egypt, of the oppressions they endured in that 'house of bondage,' from which they had been delivered by the direct interposition of God. The design of these admonitions was to teach them justice and kindness towards their servants when they should become settled in Canaan (Deut. v. 15; viii. 14; x. 19; xv. 15; xxiii. 7, &c.), as well as to impress them with gratitude towards their great deliverer. The Egyptians had domestic servants, who may have been slaves (Exod. ix. 14, 20, 21; xi. 5). But the Israelites were not dispersed among the families of Egypt; they formed a special community (Gen. xlvi. 34; Exod. viii. 22, 24; ix. 26; x. 23; xi. 7; iv. 29; ii. 9; xvi. 22; xvii. 5; vi. 14). They had exclusive possession of the land of Goshen, 'the best part of the land of Egypt.' They lived in permanent dwellings, their own houses, and not in tents (Exod. xii. 22). Each family seems to have had its own house (Exod. xii. 4; comp. Acts vii. 20); and judging from the regulations about eating the Passover, they could scarcely have been small ones (Exod. xii., &c.). They appear to have been well clothed (Exod. xii. 11). They owned 'flocks and herds, and very much cattle' (Exod. xii. 4, 6, 32, 37, 38). They had their own form of government; and although occupying a province of Egypt, and *tributary* to it, they preserved their tribes and family divisions, and their internal organization throughout (Exod. ii. 1; xii. 19, 21; vi. 14, 25; v. 19; iii. 16, 18). They had to a considerable degree the disposal

of their own time (Exod. iii. 16, 18; xii. 6; ii. 9; iv. 27, 29, 31). They were not unacquainted with the fine arts (Exod. xxxii. 4; xxxv. 22, 35). They were all armed (Exod. xxxii. 27). The women seem to have known something of domestic refinement. They were familiar with instruments of music, and skilled in the working of fine fabrics (Exod. xv. 20; xxxv. 25, 26); and both males and females were able to read and write (Deut. xi. 18, 20; xvii. 19; xxvii. 3). Their food was abundant and of great variety (Exod. xvi. 3; Num. xi. 4, 5; xx. 5). The service required from the Israelites by their taskmasters seems to have been exacted from males only, and probably a portion only of the people were compelled to labour at any one time. As tributaries, they probably supplied levies of men, from which the wealthy appear to have been exempted (Exod. iii. 16; iv. 29; v. 20). The poor were the oppressed; 'and all the service wherewith they made them serve was with rigour' (Exod. i. 11-14). But Jehovah saw their 'afflictions and heard their groanings,' and delivered them after having inflicted the most terrible plagues on their oppressors.

3. *Jewish Servitude.*—Whatever difficulties may be found in indicating the precise nature of patriarchal servitude, none exists in reference to that which was sanctioned and regulated by the Mosaic institutes.

The moral law is a revelation of great principles. It requires supreme love to God and universal love among men, and whatever is incompatible with the exercise of that love is strictly forbidden and condemned. Hence immediately after the giving of the law at Sinai, as if to guard against all slavery and slave-trading on the part of the Israelites, God promulgated this ordinance: 'He that stealeth a man and selleth him, or if he be found in his hands, he shall surely be put to death' (Exod. xxi. 16; Deut. xxiv. 7). The crime is stated in its threefold form, man-*stealing*, *selling*, and *holding*; the penalty for either of which was DEATH. The law punished the stealing of mere property by enforcing restitution, in some cases twofold, in others fivefold (Exod. xxii. 14). When property was stolen, the legal penalty was compensation to the person injured; but when a man was stolen, no property compensation was allowed; death was inflicted, and the guilty offender paid the forfeit of his life for his transgression; God thereby declaring the infinite dignity and worth of man, and the inviolability of his person. The reason of this may be found in the great fact that God created man in his own image (Gen. i. 26-28)—a high distinction, more than once repeated with great solemnity (v. 1; and ix. 6). Such was the operation of this law, and the obedience paid to it, that we have not the remotest hint that the sale and purchase of slaves ever occurred among the Israelites. The cities of Judæa were not, like the cities of Greece and Rome, slave-markets, nor were there found throughout all its coasts either helots or slaves. With the Israelites service was either voluntary, or judicially imposed by the law of God (Lev. xxv. 39, 47; Exod. xxi. 7; xxii. 3, 4; Deut. xx. 14). Strangers only, or the descendants of strangers, became their possession by purchase (Lev. xxv. 44-46); but, however acquired, the law gave the Jewish servants many rights and privileges: they were admitted into covenant with God (Deut. xxix. 10, 13); they were guests at all the national and family festivals (Exod. xii. 43, 44; Deut. xii. 18; xvi. 10-16); they were statedly instructed in morals and religion (Deut. xxxi. 10-13; Josh. viii. 33-35; 2 Chron. xvii. 8, 9; xxxv. 3; xxxiv. 30; Neh. viii. 7, 8); they were released from their regular labour nearly one-half of their term of servitude, viz., every seventh year (Lev. xxv. 3-6); every seventh day (Exod. xx.); at the three annual festivals (Exod. xxiii. 17; xxxiv. 23), viz., the Passover and Feast of Weeks, which lasted each seven days, and the Feast of Tabernacles, which lasted eight. Also on the new moons, the Feast of Trumpets, and the Day of Atonement. Besides these were the local festivals (Judg. xxi. 19; 1 Sam. ix. 12, 22, &c.), and the various family feasts, as the weaning of children, marriages, sheep-shearing, and circumcisions; the making of covenants, &c. (1 Sam. xx. 6, 28, 29). To these must be added the Feast of Purim, which lasted three days, and the Dedication, which lasted eight. The servants of the Israelites were protected by the law equally with their masters (Deut. i. 16, 17; xxvii. 19; Lev. xix. 15; xxiv. 22; Num. xv. 29); and their civil and religious rights were the same (Num. xv. 15, 16, 29; ix. 14; Deut. i. 16, 17; Lev. xxiv. 22). To these might be added numerous passages which represent the Deity as regarding alike the natural rights of all, and making for all an equal provision (2 Chron. xix. 7; Prov. xxiv. 23; xxviii. 21; Job xxxiv. 19; 2 Sam. xiv. 14; Ephes. vi. 9). Finally, these servants had the power of changing their masters, and of seeking protection where they pleased (Deut. xxiii. 15, 16); and should their masters by any act of violence injure their persons, they were released from their engagements (Exod. xxi. 26, 27). The term of Hebrew servitude was six years, beyond which they could not be held unless they entered into new engagements (Exod. xxi. 1-11; Deut. xv. 12); while that of strangers, over whom the rights of the master were comparatively absolute (Lev. xxv. 44-46), terminated in every case on the return of the jubilee, when liberty was proclaimed to all (Lev. xxv. 8, 10, 54). On one occasion the state of the sexennial slavery was violated, and the result was fearful (Jer. xxxiv. 8-22). See also Exod. xxi. 20; Lev. xix. 20-22; Tobit x. 10 (*σώματα*); Ecclus. vii. 20, 21; x. 25; xxxiii. 24-31.

4. *Gibeonitish Servitude.*—The condition of the inhabitants of Gibeon, Chephirah, Beeroth, and Kirjath-jearim, under the Hebrew commonwealth, was not that of slavery. It was voluntary (Josh. ix. 8-11). They were not employed in the families of the Israelites, but resided in their own cities, tended their own flocks and herds, and exercised the functions of a distinct though not independent community (Josh. x. 6-18). The injuries inflicted on them by Saul were avenged by the Almighty on his descendants (2 Sam. xxi. 1-9). They appear to have been devoted exclusively to the service of the 'house of God' or the Tabernacles, and only a few of them comparatively could have been engaged at any one time. The rest dwelt in their cities, one of which was a great city, as one of the royal cities. The service they rendered may be

regarded as a natural tribute for the privilege of protection. No service seems to have been required of their wives and daughters. On the return from the Babylonish captivity they dwelt at Ophel (Neh. iii. 26). See also 1 Chron. ix. 2; Ezra ii. 43; Neh. vii. 24; viii. 17; x. 28; xi. 21 [NETHINIM].

The laws which the great Deliverer and Redeemer of mankind gave for the government of his kingdom, were those of universal justice and benevolence, and as such were subversive of every system of tyranny and oppression. To suppose, therefore, as has been rashly asserted, that Jesus or his apostles gave their sanction to the existing systems of slavery among the Greeks and Romans, is to dishonour them. That the reciprocal duties of masters and servants (δοῦλοι) were inculcated, admits, indeed, of no doubt (Col. iii. 22; iv. 1; Tit. ii. 9; 1 Pet. ii. 18; Ephes. vi. 5-9). But the performance of these duties on the part of the masters, supposing them to have been slave-masters, would have been tantamount to the utter subversion of the relation. There can be no doubt either that 'servants under the yoke,' or the slaves of heathens, are exhorted to yield obedience to their masters (1 Tim. vi. 1). But this argues no approval of the relation; for, 1. Jesus, in an analogous case, appeals to the paramount law of nature as superseding such temporary regulations as the 'hardness of men's hearts' had rendered necessary (see *Slavery at the Cape of Good Hope*, by the Rev. W. Wright, M.A., 1831, p. 58); and, 2. St. Paul, while counselling the duties of contentment and submission under inevitable bondage, inculcates at the same time on the slave the duty of adopting all legitimate means of obtaining his freedom (1 Cor. vii. 18-20). We are aware that the application of this passage has been denied by Chrysostom, Photius, Theodoret, and Theophylact, who maintain that it is the state of slavery which St. Paul here recommends the slave to prefer. But although this interpretation is indeed rendered admissible by the context, yet the more received meaning, or that which counsels freedom, is both more easily connected with the preceding phrase, 'if thou mayest be made *free*, use *it* rather,' and is, as Neander observes, 'more in accordance with the liberal views of the free-minded Paul' (Bilroth, *Commentary on Corinthians*, in *Bib. Cabinet*). Besides which, the character of the existing slavery, to which we shall now refer, was utterly inconsistent with the entire tenor of the moral and humane principles of the precepts of Jesus.

5. *Roman Slavery.*—Our limits will not allow us to enter into detail on the only kind of slavery referred to in the New Testament, for there is no indication that the Jews possessed any slaves in the time of Christ. Suffice it therefore to say that, in addition to the fact that Roman slavery was perpetual and hereditary, the slave had no protection whatever against the avarice, rage, or lust of his master. The bondsman was viewed less as a human being, subject to arbitrary dominion, than as an inferior animal, dependent wholly on the will of his owner. The master possessed the uncontrolled power of life and death over his slave,—a power which continued at least to the time of the Emperor Hadrian. He might, and frequently did, kill, mutilate, and torture his slaves, for any or for no offence, so that slaves were sometimes crucified from mere caprice. He might force them to become prostitutes or gladiators; and, instead of the perpetual obligation of the marriage tie, their temporary unions (*contubernia*) were formed and dissolved at his command, families and friends were separated, and no obligation existed to provide for their wants in sickness or in health. But, notwithstanding all the barbarous cruelties of Roman slavery, it had one decided advantage over that which was introduced in modern times into European colonies, both law and custom being decidedly favourable to the freedom of the slave (*Inquiry into the State of Slavery among the Romans*, by W. Blair, Esq. 1833). The Mahommedan law also, in this respect, contrasts favourably with those of the European settlements.

Although the condition of the Roman slaves was no doubt improved under the emperors, the early effects of Christian principles were manifest in mitigating the horrors, and bringing about the gradual abolition of slavery. St. Onesimus, according to the concurrent testimony of antiquity, was liberated by Philemon (Phil. ver. 21); and in addition to the testimonies cited in Wright's *Slavery* (ut supra, p. 60), see the preface of Euthalius to this Epistle. The servile condition formed no obstacle to attaining the highest dignities of the Christian priesthood. Our space will not allow us to pursue this subject. 'It was,' says M. Guizot, 'by putting an end to the cruel institution of slavery that Christianity extended its mild influence to the practice of war; and that barbarous art, softened by its humane spirit, ceased to be so destructive' (Milman's *Gibbon*, i. 61). 'It is not,' says Robertson, 'the authority of any single detached precept in the Gospel, but the spirit and genius of the Christian religion, more powerful than any particular command, which has abolished the practice of slavery throughout the world.' Although, even in the most corrupt times of the church, the operation of Christian principles tended to this benevolent object, they unfortunately did not prevent the revival of slavery in the European settlements in the sixteenth and seventeenth centuries, together with that nefarious traffic, the suppression of which has rendered the name of Wilberforce for ever illustrious. Modern servitude had all the characteristic evils of the Roman, except, perhaps, the uncontrolled power of life and death, while it was destitute of that redeeming quality to which we have referred, its tendency being to perpetuate the condition of slavery. It has also been supposed to have introduced the unfortunate prejudice of colour, which was unknown to the ancients (Linstant's *Essai*, 1841). It was the benevolent wish of the philosophic Herder (*History of Man*, 1788) that the time might come 'when we shall look back with as much compassion on our inhuman traffic in negroes, as on the ancient Roman slavery or Spartan helots.' This is now no longer a hope, so far as England is concerned, as she not only set the example of abolishing the traffic, but evinced the soundness of her Christian principles by the greatest national act of justice which history has yet recorded, in the total abolition of slavery throughout all her dependencies.

W. W.

SLIME. [ASPHALTUM.]

SMITH (חָרָשׁ), *a workman* in stone, wood, or metal, like the Latin *faber*, but sometimes more accurately defined by what follows, as חָרַשׁ בַּרְזֶל, a workman in iron, a smith; Sept. *τέκτων, τέκτων σιδήρου, χαλκεύς, τεχνίτης*; Vulg. *faber* and *faber ferrarius* (1 Sam. xiii. 19; Isa. xliv. 12; liv. 16; 2 Kings xxiv. 14; Jer. xxiv. 1; xxix. 2). In 2 Chron. xxiv. 12, 'workers in iron and brass' are mentioned. The first smith mentioned in Scripture is Tubal-Cain, whom some writers, arguing from the similarity of the names, identify with Vulcan (Gerh. Vossius, *De Orig. Idolol.* i. 16). He is said to have been 'an instructor of every artificer in brass and iron (Gen. iv. 22), or perhaps more properly, a whetter or sharpener of every instrument of copper or iron. So Montanus, '*acuentem* omne artificium æris et ferri;' Sept. *σφυροκόπος χαλκεὺς χαλκοῦ καὶ σιδήρου*; Vulg. 'fuit malleator et faber in cuncta opera æris et ferri.' Josephus says that he first of all invented the art of making brass (*Antiq.* i. 2. 2). As the art of the smith is one of the first essentials to civilization, the mention of its founder was worthy of a place among the other fathers of inventions. So requisite was the trade of a smith in ancient warfare that conquerors removed these artizans from a vanquished nation, in order the more effectually to disable it. Thus the Philistines deprived the Hebrews of their smiths (1 Sam. xiii. 19; comp. Judg. v. 8). So Nebuchadnezzar, king of Babylon, treated them in later times (2 Kings xxiv. 14; Jer. xxiv. 1; xxix. 2). With these instances the commentators compare the stipulation of Porsenna with the Roman people, after the expulsion of their kings: 'Ne ferro, nisi in agricultura, uterentur' (Pliny, *Hist. Nat.* xxxi. 14). Cyrus treated the Lydians in the same manner (Herodotus, i. 142). מסגר, *smith*, occurs in 2 Kings xxiv. 14, 16; Sept. *συγκλείοντα*; Jer. xxiv. 1; xxix. 2; Vulg. 'clusor,' or 'inclusor.' Buxtorf gives 'claustrarius, faber ferrarius.' The root סגר, *to close*, indicates artizans 'with busy hammers closing rivets up;' which suits the context better than other renderings, as setters of precious stones, seal-engravers, &c. In the New Testament we meet with Demetrius, 'the silversmith,' at Ephesus, *ἀργυροκόπος*, 'a worker in silver,' Vulg. *argentarius;* but the commentators are not agreed whether he was a manufacturer of small silver models of the Temple of Diana, *ναοὺς ἀργυροῦς*, or at least of the chapel which contained the famous statue of the goddess, to be sold to foreigners, or used in private devotion, or taken with them by travellers as a safeguard; or whether he made large *coins* representing the temple and image. Beza, Scaliger, and others, understand a coiner or mintmaster (see Kuinoel *in loc.*). That the word may signify a silver-*founder*, is clear from the Sept. rendering of Jer. vi. 29. From Plutarch (*Opp.* t. ix. pp. 301 and 473, ed. Reisk.) and Hesychius it appears that the word signifies any worker in silver or money. A *coppersmith* named Alexander is mentioned as an opponent of St. Paul (2 Tim. iv. 14) [Coal, Iron, Metals].—J. F. D.

SMYRNA (Σμύρνα), a celebrated commercial city of Ionia (Ptolem. v. 2), situated near the bottom of that gulf of the Ægean Sea which received its name from it (Mela, i. 17. 3), at the mouth of the small river Meles, and 320 stades north of Ephesus (Strabo, xv. p. 632). It is in N. lat. 38° 26′, E. long. 27° 7′. Smyrna was a very ancient city, but having been destroyed by the Lydians it lay waste 400 years, to the time of Alexander the Great (Plin. v. 29; Pausan. vii. 5); or, according to Strabo, to that of Antigonus. It was rebuilt at the distance of twenty stades from the ancient city (Strabo, xiv. p. 646), and we soon find it flourishing greatly; and in the time of the first Roman emperors it was one of the finest cities of Asia (Strabo, iv. 9). It was at this period that it became the seat of a Christian church, which is noticed in the Apocalypse, as one of 'the seven churches of Asia' (Rev. i. 11; ii. 8-11). It was destroyed by an earthquake in A.D. 177; but the emperor Marcus Aurelius caused it to be rebuilt with even more than its former splendour. It afterwards, however, suffered greatly from earthquakes and conflagrations, and must be regarded as having declined much from its ancient importance, although from the convenience of its situation it has still maintained its rank as a great city and the central emporium of the Levantine trade; and seeing the terrible decay which has fallen upon the numerous great and beautiful cities of Asia Minor, its relative rank among the existing cities of that region is probably greater than that which it anciently bore. The Turks call it Izmir. It is a better built town than Constantinople, and in proportion to its size there are few places in the Turkish dominions which have so large a population. It is computed at 130,000, of which the Franks compose a far greater proportion than in any other town of Turkey; and they are generally in good circumstances. Next to the Turks the Greeks form the most numerous class of inhabitants, and they have a bishop and two churches. The unusually large proportion of Christians in the town renders it peculiarly unclean in the eyes of strict Moslems, whence it has acquired among them the name of Giaour Izmir or Infidel Smyrna. There are in it 20,000 Greeks, 8000 Armenians, 1000 Europeans, and 9000 Jews: the rest are Moslems.

The prosperity of Smyrna is now rather on the increase than the decline; houses of painted wood are giving way in all directions to mansions of stone; and probably not many years will elapse before the modern town may not unworthily represent that city which the ancients delighted to call 'the lovely—the crown of Ionia—the ornament of Asia.'

Smyrna stands at the foot of a range of mountains, which enclose it on three sides. The only ancient ruins are upon the mountains behind the town, and to the south. Upon the highest summit stands an old dilapidated castle, which is supposed by some to mark the previous (but not the *most* ancient) site of the city; frequent earthquakes having dictated the necessity of removing it to the plain below, and to the lower declivities of the mountains. Mr. Arundell says—'Few of the Ionian cities have furnished more relics of antiquity than Smyrna; but the convenience of transporting them, with the number of investigators, have exhausted the mine; it is therefore not at all wonderful that of the stoas and temples the very ruins have vanished; and it is now ex-

tremely difficult to determine the sites of any of the ancient buildings with the exception of the stadium, the theatre, and the temple of Jupiter Acræus, which was within the Acropolis' (*Discoveries in Asia Minor*, ii. 407). Of the stadium here mentioned the ground-plot only remains, it being stripped of its seats and marble decorations. It is supposed to be the place where Polycarp, the disciple of St. John, and probably 'the angel of the church of Smyrna' (John ii. 8), to whom the Apocalyptic message was addressed, suffered martyrdom. The Christians of Smyrna hold the memory of this venerable person in high honour, and go annually in procession to his supposed tomb, which is at a short distance from the place of martyrdom (Rosenmüller, *Alterthumsk.* i. 2. 224, sq.; Turner, *Travels*, iii. 138-141; 285-291; Arundell, u. s.; Richter, p. 495; Schubert, i. 272-283; *Narrat. of Scottish Mission*, pp. 328-336; Eōthen, ch. v.).

SNAIL (שַׁבְלוּל). Snails and slugs are not very common in countries so dry in summer as Palestine. Hence, perhaps, the fact, that there is only one allusion to them in Scripture. This occurs in Psalm lviii. 8, where the figure seems to be more significant, if understood of snails without shells, *i. e.* slugs, rather than shell-snails, though true of both. 'Let them melt away . . . as the snail which melteth as it goeth.' The name itself, *shablul*, from a verb signifying 'to smear' or 'soil,' has reference to the slime and moisture of this animal (like λείμαξ, from λείβω). The Sept. does not regard the word as denoting a snail at all, but in the text cited translates it by κηρός, 'bees' wax.'

SO (סוֹא; Sept. Σηγώρ), a king of Egypt, whom Hoshea, the last king of Israel, called to his help against the Assyrians under Shalmaneser (2 Kings xvii. 4). It has been questioned whether this So was the same with Sahaco, the first king of the Ethiopian dynasty in Upper Egypt, or his son and successor Sevechus, the second king of the same dynasty, and the immediate predecessor of Tirhakah. Winer hesitates between them, and Gesenius concludes for the latter. Sevechus reigned twelve years, according to Manetho, fourteen according to Syncellus. This name, in Egyptian Sevech, is also that of the god Saturn (Champollion, *Panth. Egypt.* No. 21, 22; Winer, *Real-Wörterb.* s. v.; Gesenius, *Comment. in Jes.* i. 696).

SOAP. [Borith; Neter.]

SODOM (סְדֹם; Sept. Σόδομα), a city in the vale of Siddim, where Lot settled after his separation from Abraham (Gen. xiii. 12; xiv. 12; xix. 1). It had its own chief or 'king,' as had the other four cities of the plain (Gen. xiv. 2, 8, 10), and was along with them, Zoar only excepted, destroyed by fire from heaven, on account of the gross wickedness of the inhabitants; the memory of which event has been perpetuated in a name of infamy to all generations (Gen. xix.). The destruction of Sodom claims attention from the solemnity with which it is introduced (Gen. xviii. 20-22); from the circumstances which preceded and followed—the intercession of Abraham, the preservation of Lot, and the judgment which overtook his lingering wife (Gen. xviii. 25-33; xix.); and from the nature of the physical agencies through which the overthrow was effected. Most of these particulars are easily understood; but the last has awakened much discussion, and may therefore require a larger measure of attention. The circumstances are these. In the first place, we learn that the vale of Siddim, in which Sodom lay, was very fertile, and everywhere well watered—'like the garden of the Lord;' and these circumstances induced Lot to fix his abode there, notwithstanding the wickedness of the inhabitants (Gen. xiii. 10, 11). Next it appears that this vale was full of 'slime-pits.' This means sources of bitumen, for the word is the same as that which is applied to the cement used by the builders of Babylon, and we know that to have been bitumen or asphaltum (Gen. xiv. 10; comp. xi. 3). These pits appear to have been of considerable extent; and, indeed, it was from them doubtless that the whole valley derived its name of Siddim (שִׂדִּים). At length, when the day of destruction arrived, 'the Lord rained upon Sodom and upon Gomorrah fire and brimstone from the Lord out of heaven; and he overthrew those cities, and all the plain, and all the inhabitants of those cities, and that which grew upon the ground' (Gen. xix. 24, 25). In the escape from this overthrow, the wife of Lot 'looked back, and became a pillar of salt' (ver. 26). When Abraham, early that same morning, from the neighbourhood of his distant camp, 'looked towards Sodom and Gomorrah, and towards all the land of the plain, and beheld, and, lo, the smoke of the country went up as the smoke of a furnace' (ver. 27). These are the simple facts of the case. It has usually been assumed that the vale of Siddim occupied the basin of what is now the Dead Sea, which did not previously exist, but was one of the results of this catastrophe. It has now, however, been established by Dr. Robinson, that a lake to receive the Jordan and other waters must have occupied this basin long before the catastrophe of Sodom; as all the geological characteristics of the region go to show that its present configuration is in its main features coëval with the present condition of the surface of the earth in general, and is not the effect of any local catastrophe at a subsequent period [Sea, Dead]. But although a lake must then have existed, to receive the Jordan and other waters of the north, which could not have passed more southward, as was at one time supposed, and which must even, as is now proved, have received the waters of the south also, we are at liberty to assume, and it is necessary to do so, that the Dead Sea anciently covered a much less extent of surface than at present. The cities which were destroyed must have been situated at the south end of the lake, as it then existed; for Lot fled to Zoar, which was near Sodom (Gen. xix. 20), and Zoar lay almost at the southern end of the present sea [Zoar]. 'Even at the present day,' says Robinson, 'more living streams flow into the Ghor, at the south end of the sea, from wadys of the eastern mountains, than are to be found so near together in all Palestine; and the tract, although now mostly desert, is still better watered through these streams, and by the many fountains, than any other district throughout the whole country' (*Bibl. Researches*, ii. 603). The slime-pits, or wells of asphaltum, are no longer to be seen; but it seems that masses of floating asphaltum occur only in the southern part of the lake; and as they are seen

but rarely, and immediately after earthquakes, the asphaltum appears to be gradually consolidated in the lake, and not being able to flow off, forms by consequence a layer at the bottom, portions of which may be detached by earthquakes and other convulsions of nature, and then appear on the surface of the water or upon the shore. The eminent geologist, Leopold von Buch, in his letter to Dr. Robinson (*Bibl. Researches*, ii. 606-608), thinks it quite probable that this accumulation may have taken place in remote times, as well as at the present day. Thus another circumstance of importance is produced in coincidence with the sacred accounts; and again, with reference to the southern portion of the *present* lake, suggesting the probability that the remarkable bay, or 'back water,' at its southern extremity, is the portion of it which did not in ancient times exist, that it in fact covers the more fertile vale of Siddim, and the site of Sodom and the other cities which the Lord destroyed; and that, in the words of Dr. Robinson—'by some convulsion or catastrophe of nature, connected with the miraculous destruction of the cities, either the surface of this plain was scooped out, or the bottom of the sea was heaved up, so as to cause the waters to overflow, and cover permanently a larger tract than formerly. The country is, as we know, subject to earthquakes, and exhibits also frequent traces of volcanic action. It would have been no uncommon effect of either of these causes, to heave up the bottom of the ancient lake, and thus produce the phenomenon in question. But the historical account of the destruction of the cities implies also the agency of fire. Perhaps both causes were therefore at work; for volcanic action and earthquakes go hand in hand; and the accompanying electric discharges usually cause lightnings to play and thunders to roll. In this way we have all the phenomena which the most literal interpretation of the sacred records can demand.' The same writer, with the geological sanction of Leopold von Buch, repeats the conjecture of Le Clerc and others, that the bitumen had become accumulated around the sources, and had perhaps formed strata, spreading for some distance upon the plain; that possibly these strata in some parts extended under the soil, and might thus approach the vicinity of the cities:—'If, indeed, we might suppose all this, then the kindling of such a heap of combustible materials, through volcanic action or lightning from heaven, would cause a conflagration sufficient not only to engulf the cities, but also to destroy the surface of the plain, so that 'the smoke of the country would go up as the smoke of a furnace, and the sea rushing in, would convert it to a tract of waters.' The supposition of such an accumulation of bitumen, with our present knowledge, appears less extraordinary than it might in former times have seemed, and requires nothing more than nature presents to our view in the wonderful lake, or rather tract, of bitumen, in the island of Trinidad. The subsequent barrenness of the remaining portion of the plain is readily accounted for by the presence of the masses of fossil salt which now abound in its neighbourhood, and which were perhaps then, for the first time, brought to light. These being carried by the waters to the bottom of the valley, would suffice to take away its productive power. In connection with this fact, the circumstance that the wife of Lot 'became a pillar of *salt*,' is significant and suggestive, whatever interpretation we may assign to the fact recorded.

SOHERETH (סֹהֶרֶת; *πάρινος λίθος*), a kind of costly stone, used for tesselated pavements (Esth. i. 6). It seems to have been either a species of black marble, as a similar word in Syriac would suggest; or else marble marked with round spots like shields, *i. e. spotted* or *shielded* marble. This interpretation finds the meaning in the Hebrew word סהרה *sohērah*, which is the name for a shield. It is however easier to discover the meaning of the name than the application of it. We do not feel satisfied with that which has been given; and still less with that of Hartmann (*Hebräerin*, iii. 363), who supposes the *sohereth* to have been *tortoise-shell*, consisting as it were of shields; for tortoise-shell would hardly be interspersed in a pavement with various kinds of marble.

SOLOMON (שְׁלֹמֹה, *pacific*; Sept. Σαλωμών). The reign of Solomon over all Israel, although second in importance only to that of David, has so little variety of incident as to occupy a far less space in the Bible narrative. Moreover, some of the problems which that narrative suggests do not admit of a solution sufficiently certain to allow of our entering on the discussion.

In the declining age of David, his eldest surviving son, Adonijah, endeavoured to place himself on the throne, by the aid of Joab the chief captain, and Abiathar one of the chief priests, both of whom had been associated with David's early sufferings under the persecution of Saul. The aged monarch did not for a moment give way to the formidable usurpation, but at the remonstrance of his favourite, Bathsheba, resolved forthwith to raise Solomon to the throne. To Joab he was able to oppose the celebrated name of Benaiah; to Abiathar his colleague Zadok and the aged prophet Nathan. The plot of Adonijah was at once defeated by this decisive measure; and Solomon, being anointed by Nathan, was solemnly acknowledged as king. The date of this event is, as nearly as can be ascertained, B.C. 1015.

The death of David would seem to have followed very quick upon these transactions. At least, no public measures in the interval are recorded, except Solomon's verbal forgiveness of Adonijah. But after the removal of David, the first events of which we hear are the destruction of Adonijah, Joab, and Shimei son of Gera, with the degradation of Abiathar. Those who look for Christian perfection in the conduct of Solomon do some violence to the facts in order to explain these transactions; which are in themselves clear enough. Despotic monarchs are seldom found to forgive unsuccessful competitors for the crown, or their assistants; and their first deed is not rarely to put to death even their innocent brothers (2 Chron. xxi. 4). The promise of Solomon to Adonijah, almost as much as his command to Shimei (1 Kings ii. 37), was but a deferring of vengeance to a more convenient time; and the same absolute power, which could interpret into treason the humble suit for the hand of a beautiful but obscure damsel, would have

been sure sooner or later to find a plausible excuse for effecting the object determined on. In fact, Abiathar is declared 'worthy of death,' clearly not for any new offences, but for his participation in Adonijah's original attempt; and Joab is put to death solely because he is alarmed at the treatment of his associates (ver. 26-29). For the wicked Joab no pity need be felt; yet the complexion of the whole affair proves that his murder of two chief captains was rather a convenient excuse than the true ground of his death. As for Shimei, the tyrannical restriction on his innocent liberty, by which a pretence for his death was found, is far less respectable than simple violence; and almost makes David's public forgiveness of him (2 Sam. xvi. 9-12) and solemn oath (xix. 21-23), appear like an ostentatious catching at popularity, which concealed implacable resentment. It is remarkable that these three executions are all perpetrated by the hand of Benaiah himself, who was head of David's body-guard, and after Joab's death chief captain of the army.

After this, the history enters upon a general narrative of the reign of Solomon; but we have very few notices of time, and cannot attempt to fix the order of any of the events. All the information, however, which we have concerning him, may be consolidated under the following heads: (1) his traffic and wealth; (2) his buildings; (3) his ecclesiastical arrangements; (4) his general administration; (5) his seraglio; (6) his enemies.

(1.) The overflowing wealth in which he is so vividly depicted is not easy to reduce to a modern financial estimate; partly because the numbers are so often treacherous, and partly because it is uncertain what items of expenditure fell on the general funds of the government. In illustration of the former topic, it is enough to observe, that the money prepared for the temple by David, is computed in 1 Chron. xxix. 4 at 3000 talents of pure gold and 7000 of silver, while in xxii. 14 it is called 100,000 of gold and 1,000,000 of silver; also the sum for which David buys the floor of Araunah is, in 2 Sam. xxiv. 24, 50 shekels of silver; but this in 1 Chron. xxi. 25, is become 600 shekels of gold. Efforts are made to resolve the former difficulty; but they are superseded by the latter, and by numerous other manifestly exaggerated figures. But abandoning all attempt at numerical estimates, it cannot be doubted that the wealth of Solomon was very great; and it remains for us to consider from what sources it was supplied.

The profound peace which the nation enjoyed as a fruit of David's victories, stimulated the industry of all Israel. The tribes beyond the Jordan had become rich by the plunder of the Hagarenes, and had a wide district where their cattle might multiply to an indefinite extent. The agricultural tribes enjoyed a soil and climate in some parts eminently fruitful, and in all richly rewarding the toil of irrigation; so that, in the security of peace, nothing more was wanted to develope the resources of the nation than markets for its various produce. In food for men and cattle, in timber and fruit trees, in stone, and probably in the useful metals, the land supplied of itself all the first wants of its people in abundance. For exportation, it is distinctly stated, that wheat, barley, oil, and wine, were in chief demand; to which we may conjecturally add, wool, hides, and other raw materials. The king undoubtedly had large districts and extensive herds of his own; but besides this, he received presents *in kind* from his own people and from the subject nations; and it was possible in this way to make demands upon them, without severe oppression, to an extent that is unbearable where taxes must be paid in gold or silver. He was himself at once monarch and merchant; and we may with much confidence infer, that no private merchant will be allowed to compete with a prince who has assumed the mercantile character. By his intimate commercial union with the Tyrians, he was put into the most favourable of all positions for disposing of his goods. That energetic nation, possessing so small a strip of territory, had much need of various raw produce for their own wants. Another large demand was made by them for the raw materials of manufactures, and for articles which they could with advantage sell again: and as they were able to furnish so many acceptable luxuries to the court of Solomon, a most active exchange soon commenced. Only second in importance to this, and superior in fame, was the commerce of the Red Sea, which could not have been successfully prosecuted without the aid of Tyrian enterprise and experience. The navigation to Sheba, and the districts beyond—whether of Eastern Arabia or of Africa—in spite of its tediousness, was highly lucrative, from the vast diversity of productions between the countries so exchanging; while, as it was a trade of monopoly, a very disproportionate share of the whole gain fell to the carriers of the merchandise. The Egyptians were the only nation who might have been rivals in the southern maritime traffic; but their religion and their exclusive principles did not favour sea-voyages; and there is some reason to think that at this early period they abstained from sending their own people abroad for commerce. The goods brought back from the south were chiefly gold, precious stones, spice, almug or other scented woods, and ivory; all of which were probably so abundant in their native regions as to be parted with on easy terms; and of course were all admirably suited for re-exportation to Europe. The carrying trade, which was thus shared between Solomon and the Tyrians, was probably the most lucrative part of the southern and eastern commerce. How large a portion of it went on by caravans of camels, is wholly unknown; yet that this branch was considerable, is certain. From Egypt Solomon imported not only linen yarn, but even horses and chariots, which were sold again to the princes of Syria and of the Hittites; and were probably prized for the superior breed of the horses, and for the light, strong, and elegant structure of the chariots. Wine being abundant in Palestine, and wholly wanting in Egypt, was no doubt a principal means of repayment. Moreover, Solomon's fortifying of Tadmor (or Palmyra), and retention of Thapsacus on the Euphrates, show that he had an important interest in the direct land and river trade to Babylon; although we have no details on this subject. The difficulty which meets us is, to imagine by what exports, light enough to bear land carriage, he was able to pay for his imports.

We may conjecture that he sent out Tyrian cloths and trinkets, or Egyptian linen of the finest fabric; yet in many of these things the Babylonians also excelled. On the whole, when we consider that in the case of Solomon the commercial wealth of the entire community was concentrated in the hands of the government; that much of the trade was a monopoly; and that all was assisted or directed by the experience and energy of the Tyrians; the overwhelming riches of this eminent merchant-sovereign are perhaps not surprising.

The visit of the Queen of Sheba to Solomon, although not strictly commercial, rose out of commercial intercourse, and may perhaps be here noticed. The territory of Sheba, according to Strabo, reached so far north as to meet that of the Nabathæans, although its proper seat was at the southernmost angle of Arabia. The very rich presents made by the queen show the extreme value of her commerce with the Hebrew monarch; and this early interchange of hospitality derives a peculiar interest from the fact, that in much later ages—those of the Maccabees and downwards—the intercourse of the Jews with Sheba became so intimate, and their influence, and even power, so great. Jewish circumcision took root there, and princes held sway who were called Jewish. The language of Sheba is believed to have been strongly different from the literate Arabic; yet, like the Ethiopic, it belonged to the great Syro-Arabian family, and was not alien to the Hebrew in the same sense that the Egyptian was; and the great ease with which the pure monotheism of the Maccabees propagated itself in Sheba, gives plausibility to the opinion, that even at the time of Solomon the people of Sheba had much religious superiority over the Arabs and Syrians in general. If so, it becomes clear, how the curiosity of the southern queen would be worked upon, by seeing the riches of the distant monarch, whose purer creed must have been carried every where with them by his sailors and servants.

(2.) Besides the great work which has rendered the name of Solomon so famous—the Temple at Jerusalem—we are informed of the palaces which he built, viz., his own palace, the queen's palace, and the house of the forest of Lebanon, his porch (or piazza) for no specified object, and his porch of judgment, or law court. He also added to the walls of Jerusalem, and fortified Millo ('in the city of David,' 2 Chron. xxxii. 5), and many other strong-holds. The temple seems to have been of very small dimensions—60 cubits long, 20 broad, and 30 high (1 Kings vi. 3) —or smaller than many moderate-sized parish churches in England; but it was wonderful for the lavish use of precious materials. Whether the three palaces were parts of the same great pile, remains uncertain. The house of the forest of Lebanon, it has been ingeniously conjectured, was so called from the multitude of cedar pillars, similar to a forest. That Solomon's own house was of far greater extent than the temple, appears from its having occupied thirteen years in building, while the temple was finished in seven. In all these works he had the aid of the Tyrians, whose skill in hewing timber and in carving stone, and in the application of machines for conveying heavy masses, was of the first importance. The cedar was cut from Mount Lebanon, and, as would appear, from a district which belonged to the Tyrians; either because in the Hebrew parts of the mountain the timber was not so fine, or from want of roads by which it might be conveyed. The hewing was superintended by Tyrian carpenters, but all the hard labour was performed by Hebrew bondsmen. This circumstance discloses to us an important fact—the existence of so large a body of public slaves in the heart of the Israelitish monarchy, who are reckoned at 153,600 in 2 Chron. ii. 17; see also 1 Kings ix. 20-23. During the preparation for the temple, it is stated (ver. 13-18) that 70,000 men were employed to bear burdens, 80,000 hewers of wood in the mountains; besides 3300 overseers. The meaning of this, however, is rather obscure; since it also states that there was a 'levy' of 30,000, of whom 10,000 at a time went to Lebanon. Perhaps the 150,000 was the whole number *liable to serve*, of whom only one-fifth was actually called out. From the large number said to 'bear burdens,' we may infer that the mode of working was very lavish of human exertion, and little aided by the strength of beasts. It is inferred that at least the Hittites had recognized princes of their own, since they are named as purchasers of Egyptian chariots from Solomon; yet the mass of these nations were clearly pressed down by a cruel bondage, which must have reacted on the oppressors at every time of weakness. The word מַס, which is translated 'levy' and 'tribute,' means especially the personal service performed by public slaves, and is rendered 'task,' in Exod. i. 11, when speaking of the Israelites in Egypt.

(3.) Until the temple was finished, the *tabernacle* appears to have continued at Gibeon, although the *ark* had been brought by David to Zion (2 Chron. i. 3, 4). [This distinction was overlooked in a passage concerning David, i. 529 a. of this work.] David, it appears, had pitched a tent on purpose to receive the ark, where Asaph and his brethren the Levites ministered before it with singing, while Zadok and his brethren the priests ministered before the tabernacle at Gibeon with sacrifices (1 Chron. xv. 16-24; xvi. 37-40). This shows that even in David's mind the idea of a single centre of religious unity was not fully formed; as the co-ordinate authority of Abiathar and Zadok indicates that no single high priest was recognized. But from the time of the dedication of the temple, not only the ark, but all the holy vessels from the tabernacle were brought into it (1 Kings viii. 4), and the high priest naturally confined his ministrations to the temple, Zadok having been left without an equal by the disgrace of Abiathar. Nevertheless, the whole of the later history of the Jewish monarchy, even under the most pious kings, proves that the mass of the nation never became reconciled to the new idea, that 'in Jerusalem (alone) was the place where they ought to worship.' The 'high places,' at which Jehovah was worshipped with sacrifice, are perpetually alluded to in terms which show that, until the reign of Josiah, it was impossible for kings, priests, or prophets, to bring about a uniformity and central superintendence of the national religion.

After the death of Nathan and Zadok, those faithful friends of David, although Solomon continued to celebrate with the same splendour all the exterior ceremonies of worship, it is hard to believe that much of that spirit of God which was in his father animated his ecclesiastical proceedings. Side by side with the worship of Jehovah foreign idolatries were established; and the disgust which this inspired in the prophets of Jehovah is clearly seen in the address of Ahijah the Shilonite to Jeroboam, so manifestly exciting him to rebel against the son of David (1 Kings xi. 29-39). The priests were too much under the direct domination of the crown to act an independent part; the prophets had little sympathy with the routine of pompous solemnities. Solomon himself, with all his erudition and insight into man's nature, had little, as far as we are aware, of that devotional character and susceptible feeling which distinguished David; and however well meant his ostentatious patronage of divine worship, it probably could have produced no spiritual fruit, even if he had not finally neutralized it by his impartial support of heathen superstitions.

(4.) Concerning his general administration little is recorded beyond the names of various high officers. Among his chief ministers (1 Kings iv. 1-6) are named a son of Zadok, and two sons of Nathan. There is a difficulty in the list, since it names Abiathar and Zadok as joint priests, at a time when Benaiah is already 'over the host;' although the latter event could not have been until after the death of Joab, and therefore after the ejection of Abiathar. The two sons of Nathan seem to be named as peculiarly eminent; for one of them, Azariah, is said to have been 'over the officers;' the other, Zabud, is called 'principal officer and the king's friend.' It is not likely that any other considerable changes were made in his government, as compared with David's, than such as peace and commerce, in place of war, necessitate. Yet it is probable that Solomon's peculiar talents and taste led him to perform one function which is always looked for in Oriental royalty, viz., to act personally as *Judge* in cases of oppression. His award between the two contending mothers cannot be regarded as an isolated fact: and 'the porch of judgment' which he built for himself may imply that he devoted fixed portions of time to the judicial duties (see 2 Kings xv. 5 of Jotham). In all the older civilization of the world, the quality most valued in a judge is the ability to detect truth in spite of the perjury of witnesses, or defect of (what we should esteem) legal evidence; a defect which must be of daily occurrence where the art of writing is little used for common contracts. The celebrity which Solomon gained for wisdom, although founded mainly perhaps on his political and commercial sagacity, must have received great popular impetus from his administration of law, and from his readiness in seeing through the entanglements of affairs which arise in commercial transactions.

(5.) For the harem of Solomon—consisting of 700 wives and 300 concubines—no other apology can be made, than the fact, that in countries where polygamy is not disreputable, an unlimited indulgence as to the number of wives is looked upon as the chief luxury of wealth, and the most appropriate appendage to royalty. Permission once being given and the taste established, nothing but poverty can set a limit; since an establishment of a hundred or a thousand wives is perhaps more harmonious than one of two or three. The only remarkable facts are, his marriage with an Egyptian princess, and his establishment of his wives' idolatry.

The commercial union of Tyre with Egypt, in spite of the vast diversity of genius between the two nations, was in those days very close; and it appears highly probable that the affinity to Pharaoh was sought by Solomon as a means of aiding his commercial projects. Although his possession of the Edomite ports on the gulf of Akaba made him to a certain extent independent of Egypt, the friendship of that power must have been of extreme importance to him in the dangerous navigation of the Red Sea; and was perhaps a chief cause of his brilliant success in so new an enterprise. That Pharaoh continued for some time on good terms with him, appears from a singular present which the Egyptian king made him (1 Kings ix. 16): 'Pharaoh had gone up and taken Gezer, and burnt it with fire, and slain the Canaanites that dwelt in the city, and given it for a present unto his daughter, Solomon's wife;' in consequence of which, Solomon rebuilt and fortified the town. In his declining years, a very different spirit is manifested towards him by Shishak, the new Egyptian king; whether after the death of the princess who had been the link between the two kingdoms, or from a new view of policy in the new king, is unknown.

The proceedings of Solomon towards the religion of his wives has been mildly or approvingly regarded by various learned men, as being only what we have learned to name *Toleration*. But such a view seems to imply a want of discrimination between those times and our own; and besides, would require us to suppose the statements in the history to be exaggerated, as though they were highly improbable. The religions of antiquity, being essentially ceremonial, were of a most obtrusive kind. It is one thing to allow men in private to hold their conscientious sentiments, or indeed by argument and discussion to aim at propagating them, and quite another to sanction public idolatries, which appeal to and allure the senses of the ignorant, and scandalize the minds of the better taught; to say nothing of the impurities and cruelties with which these idolatries were almost always connected. The spirituality and individuality of religion were not as yet so developed as to allow of our ascribing Solomon's conduct to right and noble views of toleration. Besides, he was under no necessity to marry these foreign wives at all. Unless prompted by mere voluptuousness (as in the case of the concubines), he must have taken them from political motives; although distinctly knowing that the step would draw after it his public establishment of heathen sin and superstition. This is widely different from allowing foreigners, who for trade resided in the country, to practise their own religious ceremonies at their own prompting and expense; and yet even this, if permitted at all, would have been permitted only within walled and separated streets appropriated to the foreigners, by a king anxious to obey the law of Moses and of Jehovah in ever so liberal

and unconfined a spirit. This is a topic of prime consequence in the history of the Jewish monarchy. Modern commentators, impressed with the importance of liberty of conscience, are naturally prone to suspect that the prophetical or priestly feeling under which the history of the kings was composed, has misrepresented the more liberal policy of these monarchs. But granting, as we may, that it was not given to those prophets or priests to understand the Christian rule of universal toleration, it is certain that the times were not ripe for the application of that rule, and that the most earnest, devout, and spiritually enlightened men of those days were the most vehemently opposed to a public toleration of idolatry. Taking this merely as a great and unalterable *fact*, it was shortsighted policy in Solomon, as well as worldly want of faith, to seek to conciliate the foreign heathen, at the expense of the devoted allegiance of God's chosen ones in Israel. He won at best a momentary good will from Ammonites, Moabites, or Sidonians, by such an affinity, and by such an introduction of their favourite idols: he lost the heart of the prophets of Jehovah, and, as a result, he could not transmit to his son more than a fraction of his kingdom. It is no mere fiction of priestly prejudice, but a historical certainty, that David owed his rise mainly to the overruling and pervading power exerted on him by the pure and monotheistic faith of the prophets; while Solomon lost (for his posterity) the kingdom of the ten tribes, and perpetuated strife, weakness, debasement, and superstition, by preferring the attractive splendours of this world to that godliness which would in the end have been rewarded even in the present life.

(6.) The enemies especially named as rising against him in his later years, are Jeroboam, Hadad the Edomite, and Rezon of Damascus. The first is described as having had no treasonable intentions, until Solomon sought to kill him, on learning the prophecy made to him by Ahijah. Jeroboam was received and fostered by Shishak, king of Egypt, and ultimately became the providential instrument of punishing Solomon's iniquity, though not without heavy guilt of his own. As for Hadad, his enmity to Israel began from the times of David, and is ascribed to the savage butchery perpetrated by Joab on his people. He also, when a mere child, was warmly received in Egypt, apparently by the father-in-law of Solomon; but this does not seem to have been prompted by hostility to David. Having married the sister of Pharaoh's queen, he must have been in very high station in Egypt; still, upon the death of David, he begged leave to depart into Edom, and during the earlier part of Solomon's reign was probably forming his party in secret, and preparing for that dangerous border warfare which he carried on somewhat later. Rezon, on the contrary, seems to have had no personal cause against the Hebrew monarchy; but having become powerful at Damascus and on its frontier, sought, not in vain, to aggrandize himself at its expense. In the long continuance of peace David's veterans had died, and no successors to them can have been trained; and considering the other great expenses of the court, it may be confidently inferred that the standing army had not been kept up in any efficiency. The revenues which would have maintained it were spent on a thousand royal wives: the king himself was unwarlike; and a petty foe, if energetic, was very formidable. Such were the vexations which darkened the setting splendours of the greatest Israelitish king. But from within also his prosperity was unsound. Deep discontent pervaded his own people, when the dazzle of his grandeur had become familiar; when it had become clear, that the royal wealth, instead of denoting national well being, was really sucked out of the nation's vitals. Having no constitutional organ to express their discontent, they waited sullenly, until the recognition of a successor to the crown should give them the opportunity of extorting a removal of burdens which could not permanently be endured.

The picture of Solomon here drawn is far less favourable than could be wished; yet an endeavour has been made to keep close to the facts. Undoubtedly the book of Chronicles,—which (contrary to custom) in this reign adds little or nothing to that of the Kings,—by omission nevertheless gives a seriously altered view of this celebrated man: for not only are his numerous marriages, his idolatries, his oppressions, his vexatious enemies, and the grave rebuke of the prophet Ahijah, left out of the narrative entirely,—but his building of a special palace for his Egyptian queen is ascribed to his pious objection to her dwelling in the house of David, because of the ark having passed through it (2 Chron. viii. 11). From a mind of so sensitive scrupulosity no one could have expected an establishment of heathenish worship. This very circumstance will show how tender was the feeling of the Levitical body towards him, and how little likely it is that the book of Kings has in any way given a discoloured and unfair view of his lamentable worldliness of principle.—F. W. N.

SOLOMON, WISDOM OF. [Wisdom of Solomon.]

SOLOMON'S SONG. [Canticles.]

SONG. [Poetry.]

SOOTHSAYER. [Divination.]

SOPATER (Σώπατρος), a Christian at Berœa, and one of the party of brethren who accompanied Paul into Asia Minor from Greece (Acts xx. 4). He is supposed to be the same with the Sosipater (Σωσίπατρος) named in Rom. xvi. 21; and, if so, was a kinsman of St. Paul.

SORCERER. [Divination.]

1. SOREK (שֹׂרֵק; Sept. σωρήκ), a vine of the finest and noblest kind (Isa. v. 2; comp. Gen. xlix. 11, where שׂרקה *sorekah*, is translated a 'choice vine;' and Jer. ii. 21, where שׂורק *sorek*, is rendered 'noble vine'). [Vine.]

2. SOREK, a valley, probably so called from its vineyards (Judg. xvi. 4). Eusebius and Jerome place it north of Eleutheropolis, and near to Zorah.

SOSIPATER. [Sopater.]

SOSTHENES (Σωσθένης), the chief of the synagogue at Corinth, when Paul was in that city on his second journey into Greece (Acts xviii. 17). He was seized and beaten by the people, before the judgment-seat of Gallio, on account of the tumult raised by the Jews against Paul, of which he seems to have been one of the leaders. He is supposed to have been afterwards

converted to Christianity, as a Sosthenes is mentioned by Paul as 'a brother,' and coupled with himself in 1 Cor. i. 1. This identity is, however, a pure conjecture, and not remarkably probable. Apart from it, however, we know nothing of this second Sosthenes. Eusebius makes him one of the seventy disciples, and later tradition describes him as bishop of Kolophon.

SOUL. The present article is a sequel to that on PUNISHMENT, in which the *literature* only of the question concerning *future punishment* will be briefly stated. It is frequently conceded that we have not authority decidedly to say that any other motives were *held out* to the ancient Hebrews to pursue good and avoid evil, than those derived from the rewards and punishments of this life (Jahn, *Biblisches Archäologie*, § 314). It is, however, considered by some learned Jews that one reference in the book of Genesis to punishment in a future state has been overlooked. God said to the Noachidæ (ch. ix. 5), 'And surely your own blood will I require,' &c. According to tradition, the first part of the text is directed against suicide; but it seems to us more like the enunciation of the general subject, which afterwards descends to particulars. Then follows the unintelligible rendering, 'at the hand of every *beast* will I require it.' Now it is a surprising fact that wherever, throughout the Scriptures, we find חיה (here rendered *beast*) applied to the brute creation, it is always in conjunction with the word בהמה (cattle), רמש (reptile), or עוף (bird), and that if none of these words accompany it, the expression is either חית הארץ (beasts of the earth), or חית השדה (beasts of the field), or חיתו יער (beast of the forest), or חיה רעה (a wild beast); but that whenever, as in this instance, no adjunct is coupled with חיה, it invariably relates to the *soul of man*. This rule is, by the best Hebraists, allowed to be general, the only exception throughout the Scriptures being the text now before us, in which the word חיה stands by itself without any adjunct, but is nevertheless made in our version to refer to the brute creation. It would, however, remove these apparent difficulties to suppose that the general rule holds good in our text, as well as in every other part of Scripture, and that the word here also means the soul of man. Suppose then the first part of the verse, 'Surely your own life-blood will I require,' to be taken as a general prohibition against the unauthorized destruction of human life, then the following words may be understood as beginning to particularise, first, the punishment of suicide, 'of every soul will I require it,' that is, of every soul will I require his own blood shed by himself. Then follows the punishment of homicide, 'and at the hand of man, yea, at the hand of every man, will I require the life of man his brother;' literally, 'and at the hand of the man, at the hand of man his brother, will I require the life of man;' which words, as has already been suggested, may be the foundation of the law of blood-revenge [PUNISHMENT]. Next follows, agreeably to the style of the book of Genesis, an emphatical recapitulation of this punishment of homicide, and the reason of it (ver. 6): 'Whoso sheddeth man's blood, by man shall his blood be shed, for in the image of God made he man.' If then the rendering, 'at the hand of every soul will I require it,' be admitted, and this part of the text be understood concerning suicide, the meaning must necessarily be, 'from the *soul* of the suicide will I require his blood.' Hence then we have the satisfaction to find in the Scriptures this early and perfect indication of a punishment to the soul after death, and the necessary sequitur—its immortality (Naphtaly Herz Wesseley, in the מאסף, or *Gatherer for Adar Rishon*, 5548, p. 160; see also Menasseh Ben Israel's *Nishmat Chayim*, and the *New Translation of the Scriptures*, with notes, by the Rev. D. A. De Sola, &c., pp. 51, 52). The literature of the question concerning the nature and duration of future punishment consists of the following particulars. First, its duration was believed by the heathens to be eternal, or more correctly speaking, at least in our language, everlasting. For though these two words are often used as synonymous, yet strictness of use requires that the word eternal should be limited to that which has neither beginning nor end; and everlasting, to that which has a beginning but no end. The duration of the Deity alone is eternal; that of the souls of men, angels, &c., everlasting. Thus Virgil, in his well-known description of Tartarus, 'Sedet, *æternumque* sedebit, Infelix Theseus.' For the Greeks reference is made to Liban. Or. 941 B: ἀντὶ μάκρου χρόνου τοῦ τῆς ἡδονῆς, ἀθάνατος ἐπικείσεται ζημία. Lycoph. 907: ἀκτέριστον ἐν πέτραις Αἰῶνα κωκύσουσιν ἠλοκισμένοι; and 928, αἰανῆ Θεὸν κυδανοῦσι. Secondly, there is a still more striking similarity between the descriptions both of the nature and duration of future punishment given in the Apocryphal books and those of the New Testament. Thus Judith xvi. 17: 'Woe, to the nations which rise up against my kindred; the Lord Almighty will take vengeance on them in the day of judgment, in putting fire and worms in their flesh; and they shall feel them, and weep for ever,' ἕως αἰῶνος (comp. Ecclus. vii. 17; Mark ix. 44). These terms seem *borrowed* from Isaiah's description of a different subject (ch. lxvi. 24). Thirdly, Josephus describes the doctrine of everlasting punishment as being held by the Pharisees and Essenes: 'that the souls of the wicked should be punished with perpetual punishment (ἀϊδίῳ τιμωρίᾳ), and that there was appointed for them a perpetual prison (εἱργμὸς ἀΐδιος'). (*De Bell. Jud.* ii. 8. 11, 14; *Antiq.* xviii. 1. 3). Josephus himself, in the discourse ascribed to him on Hades, speaks of a subterraneous region, a lake of unquenchable fire, everlasting punishment, and of a worm never dying (§ 2. 6); but that homily, as Whiston calls it, abounds with other evidence that its author was a Christian. For proofs that the Rabbinical writers held the notion of infinite punishment, see the references by Wetstein on Matt. xxv. 46. In the New Testament the *nature* of future punishment is almost always described by figures. The most abstract description occurs in Rom. ii. 9-16: 'Tribulation and anguish upon every soul of man that doeth evil, in the day when God shall judge the secrets of men.' Our Lord generally describes it under figures suggested by some comparison he had just before made, and in unison with it. Thus, having described future happiness under the figure of a midnight banquet, lighted up with lamps, then the state of the rejected is described under that of 'outer darkness' outside the man-

sion, and 'gnashing' or chattering 'of teeth,' from the extreme cold of an Oriental night (Matt. viii. 12; Luke xiii. 28); though the phrase also denotes rage and vexation (comp. Ecclus. xxx. 10). Our Lord employs the phrase 'wailing' or 'weeping and gnashing of teeth' no less than seven times. If 'the end of the world' be described by him under the figure of a harvest, then the wicked, who are represented by the tares, are accordingly gathered and burned. If his return be represented by a master returning to take account of his servants, then the wicked servant is cut asunder, or rather discarded—margin, 'cut off' (Matt. xxiv. 51); for in the same verse he is described as being still alive, and consigned to the place of 'weeping and gnashing of teeth.' Our Lord also frequently represents future punishment under the idea of fire, which Calvin, on Isa. lxvi. 24, remarks, must be understood metaphorically of spiritual punishment. Indeed both the *nature* and *variety* of the figures employed by our Saviour in regard to the subject fully justify Paley's observation, 'that our Lord's discourses exhibit no particular description of the invisible world. The future happiness of the good and the future misery of the bad, which is all we want to be assured of, is directly and positively affirmed, and is represented by metaphors and comparisons which were plainly intended as metaphors and comparisons, and nothing more. As to the rest a solemn reserve is maintained' (*Evidences of Christianity*, part ii. ch. ii.). The question of the *duration* of future punishment chiefly turns on the force of the words translated 'ever,' 'everlasting,' 'never,' which our Lord and his apostles apply to it, and which it is well known have sometimes a limited signification, and are very variously translated in the English version. Thus the word *αἰών*, as a substantive, occurs 128 times in the Greek Testament; and in our translation is rendered 72 times *ever*, twice *eternal*, 36 times *world*, 7 times *never*, 3 times *evermore*, twice *worlds*, twice *ages*, once *course*, once *world without end*, and twice it is passed over. The word *αἰώνιος*, as an adjective, occurs 71 times, and is once rendered *ever*, 42 times *eternal*, 3 times *world*, and 25 times *everlasting*. It is furthermore an important circumstance, that the terms of like import in the Old Testament, and translated in the Septuagint by these Greek words, when applied to the Mosaic law, as a 'statute for ever,' '*νόμιμον αἰώνιον*,' were urged in proof of the irrevocable perpetuity of that law, by the Judaizing teachers; yet St. Paul styles this argument 'a doting about questions, and a strife of words' (1 Tim. vi. 4); 'fighting about words' (2 Tim. ii. 14); 'foolish and untaught questions' (see Macknight's comment on these passages, and Archbishop Secker's *Sermons*, Serm. xvi. vol. 5, Lond. 1771). Hence, therefore, it is urged on the one side, that we can never settle the precise import of these words, as applied in the New Testament to the duration of future punishment, until we shall be able also to answer the following questions; namely, Was it part of the commission of Christ and his apostles to determine this matter? and if so, In what sense were the terms they used in regard to it meant by themselves, and understood by their hearers—whether as denoting a punishment of *unknown* duration, or one literally coexistent with the duration of the Eternal God? On the other side it is objected, that the same word is applied both to the happiness of the righteous and the misery of the wicked, though varied in our translation of Matt. xxv. 46: 'These shall go away into everlasting punishment, but the righteous into life eternal;' where Rosenmüller, reasoning from the context, infers '*the loss of the rewards of virtue*' to be meant, which will necessarily be infinite. Various opinions have been held concerning the nature and duration of future punishment, ascending from the doctrine of Edwards,—'Souls *full* of dreadful grief, bodies and every member of them *full* of racking *torture*, without any possibility of getting ease, without any possibility of moving God to pity' (*Discourse on the Eternity of Hell Torments*, p. 28, &c.), through the various modifications of the doctrine—punishment with pain, literally everlasting, but proportioned to the demerit of the condemned; punishment in the sense of loss or damage (see Greek of Matt. xvi. 26) to the same duration; punishment by pain, *remedial* in its intention, limited in duration, but yet followed by disadvantage literally everlasting—up to the highest extreme on the opposite side, namely, annihilation. Upon this truly important subject we cordially acquiesce in the remark of Doddridge: 'Miserable are they who venture their souls upon the possibility that the words in question, when applied to future punishment, may have a limited meaning.' Among the ancients, the following held that punishments, at least *sensible* ones, would some time *cease*: Justin Martyr, Theophilus, Tatian, Arnobius, &c. Grotius (apud Bloomfield, *Recensio Synoptica*, on Matt. xxv.) refers also, for the *doubts* of certain ancients, to the end of Jerome's *Commentary on Isaiah*. Among the more eminent moderns who have maintained that the future punishment of the wicked will be limited and corrective, see Bishop Rust, *Letter of Resolution concerning Origen*, 1661; Jeremy White (who had been Chaplain to the Protector Cromwell), *On the Restoration of all Things*, Lond. 1712; Dr. Thomas Burnet (Master of the Charter House) *De Statu Mortuorum*; Newton (Bishop of Bristol), *Sixtieth Dissertation*; Hartley, *Observations on Man*, 1791; Whiston, *The Eternity of Hell Torments considered*; Southwood Smith, *On the Divine Government*, Lond. 1826; and the List of Authors mentioned in his Appendix.

J. F. D.

SOUTH. The country, or quarter of the heavens, which the Shemite, standing with his face to the east, supposes to be on his right hand. It is denoted by seven Hebrew words (1. נֶגֶב; 2. דָּרוֹם; 3. תֵּיכָן; 4 יָמִין; 5. חֶדֶר; 6. מִדְבָּר; 7. מַיִם), nearly all of which refer to some characteristic of the region to which they are respectively applied. 1. נגב (root נגב in Syr. and Chald., *to be dry*), probably derived its name from the hot drying winds which blow annually into Syria, over Africa and Arabia. 'In March,' says Volney, 'appear in Syria the pernicious *southerly* winds, with the same circumstances as in Egypt, that is to say, their *heat*, which is carried to a degree so excessive, that it is difficult to form an idea of it without having felt it; but one can compare it to that of a great oven when the bread is drawn out (*Voyage en*

Syrie et Egypte, tom. i. p. 297; comp. p. 55; Luke xii. 55, 'When ye see the south wind blow ye say there will be heat;' and see Kitto's *Physical History of Palestine*, month of March, pp. 221, 222). The word is occasionally applied to a parched or dry tract of land. Caleb's daughter says to her father, 'Thou hast given me a south,' or rather 'dry land;' ארץ הנגב (Vulg. *terram arentem*); 'give me also springs of water' (Judg. i. 15; comp. ver. 9). At other times the word refers to those arid regions, notwithstanding their occasional fertility, over which the south wind blows into Syria. So the Sept. and Vulg. understood the 'whirlwinds from the south' (Isa. xxi. 1; δι' ἐρήμου, *turbines ab Aphrico*). 'The burden of the beasts in the south' is rendered τῶν τετραπόδων τῶν ἐν τῇ ἐρήμῳ (Isa. xxx. 6). At other times the word is rendered by νότος and λίψ, which latter is the Hellenized form of Libs, *Ventus ex Libya*, the south-west wind, and, by metonymy, the quarter whence it blows. In several instances the Hebrew word is simply put into Greek letters; thus, τὸν Ναγέβ, Josh. x. 40; τῆν γῆν Ναγέβ, *Alex.* τῆν Ναγέβ, *al.* Νεγέβ, xi. 16; Ναγέβ, Cyr. Ἀγέβ, Obad. 19, 20; and once, probably by a corruption, it is ἀργάβ, 1 Sam. xx. 41, *al.* νεγήβ, *al.* νεγέβ, *al.* ἐργάβ. The Vulgate renders the word by 'meridies, australis plaga, terra meridiana, auster ab Aphrico, terra australis.' More than once the Sept. differs widely from the present Hebrew text; thus, in Ezek. xx. 47, it renders מנגב צפונה by ἀπὸ ἀπηλιώτου ἕως βορρᾶ; Vulg. 'ab austro usque ad aquilonem;' so also in Exod. xxvi. 8, פאת נגבה is rendered πρὸς βορρᾶν; Vulg. 'ad austrum.' It is also used in the geographical sense in Num. xxxiv. 3; Josh. xv. 2; 1 Chron. ix. 24; 2 Chron. iv. 4; Ezek. xl. 2; xlvi. 9, &c. But a further and important use of the word is as the name or designation of the desert regions lying at the south of Judæa, consisting of the deserts of Shur, Zin, and Paran, the mountainous country of Edom or Idumæa, and part of Arabia Petræa (comp. Mal. i. 3; Shaw's *Travels*, p. 438). Thus Abraham, at his first entrance into Canaan, is said to have 'gone on toward the south' (Gen. xii. 9); Sept. ἐν τῇ ἐρήμῳ, Aquila νότονδε, Symmachus εἰς νότον; and upon his return from Egypt into Canaan, he is said to have gone 'into the south' (xiii. 1); Sept. εἰς τὸν ἔρημον; Vulg. 'ad australem plagam,' though he was in fact then travelling northward. Comp. ver. 3, 'He went from the south to Bethel;' Sept. εἰς τῆν ἔρημον; Vulg. 'a meridie in Bethel.' In this region the Amalekites are said to have dwelt, 'in the land of the south,' when Moses sent the spies to view the land of Canaan (Num. xiii. 29), viz., the locality between Idumæa and Egypt, and to the east of the Dead Sea and Mount Seir [Amalekites]. The inhabitants of this region were included in the conquests of Joshua (x. 40). Whenever the Sept. gives the Hebrew word in the Greek letters, Ναγέβ, it always relates to this particular district. To the same region belongs the passage, 'Turn our captivity as the streams in the south' (Ps. cxxvi. 4); Sept. ὡς χειμάῤῥους ἐν τῷ Νότῳ, 'as *winter torrents* in the south' (Vulg. 'sicut torrens in Austro'); which suddenly fill the wadys or valleys during the season of rain (comp. Ezek. vi. 3; xxxiv. 13; xxxv. 8; xxxvi. 4, 6). These are dry in summer (Job vi. 15-18). The Jews had, by their captivity, left their country empty and desolate, but by their return would 'flow again into it.' Through part of this sterile region the Israelites must repass in their vain application to Egypt (Isa. xxx. 6; comp. Deut. viii. 15). It is called the Wilderness of Judæa (Matt. iii. 1; Josh. xv. 61; comp. Ps. lxxv. 6, Hebrew or margin; see also Jer. xvii. 26; xxxii. 44; xxxiii. 14; Ezra xx. 46, 47; xxi. 4; comp. Obad. xix. 20; Zech. ix. 7). Through part of this region lay the road from Jerusalem to Gaza, 'which is desert' (Acts viii. 26). Thus, as Drusius observes, the word often means not the whole southern hemisphere of the earth, but a desert tract of land to the south of Judæa. Sometimes it is used in a relative sense; thus, the cities of Judah are called 'the cities of the south' (Jer. xiii. 19), relatively to Chaldæa, expressed by 'the north' (i. 14; comp. iv. 6; vi. 1). Jerusalem itself is called 'the forest of the south field,' or *country*, like the Latin *ager* (Ezek. xx. 46; comp. Gen. xiv. 7) [Forest]. Egypt is also called 'the south;' thus, 'the king of the south' (Dan. xi. 5) is Ptolemy Soter and his successors; comp. verses 6, 9, 11, 15, 25, 29, 40; but in the last-named verse, Mede understands the Saracen from Arabia Felix (*Works*, pp. 674, 816). 2. דרום, which, according to Gesenius, is a word of uncertain derivation. It is rendered by λίψ, Sept., Deut. xxxiii. 23; by νότος, Eccles. i. 6; xi. 3; Ezek. xl. 24, 27, 28, 44, 45; xli. 11; and by θάλλασσα, Ezek. xlii. 18. Vulg. 'meridies, auster, australis, ventus australis.' 3. תימן and its adverb תימנה, strictly what lies to the *right;* Sept. νότος, λίψ; and sometimes the word is simply put into Greek letters; thus, Θαιμάν (Hab. iii. 3). Indeed all the three preceding words are so rendered (Ezek. xx. 46), Υἱὲ ἀνθρώπου, στήρισον τὸ πρόσωπόν σου ἐπὶ θαιμὰν, καὶ ἐπίβλεψον ἐπὶ δαρὸμ, καὶ προφήτευσον ἐπὶ δρυμὸν ἡγούμενον ναγέβ: where perhaps the vocabulary of the translator did not afford him sufficient variety. The Vulgate here gives 'viam austri, ad aphricum, ad saltum agri meridiani,' and elsewhere renders the Hebrew word by 'meridiana plaga, ad meridiem.' It occurs in Exod. xxvi. 35; Num. ii. 10; iii. 29; x. 6; Job ix. 9; xxxix. 26; Ps. lxxviii. 26; Cant. iv. 16; Isa. xliii. 6; Hab. iii. 3; Zech. ix. 14; xiv. 4. In Zech. vi. 6, it denotes Egypt. It is poetically used for the south wind, like Shakspeare's 'sweet *south*;' Ps. lxxviii. 26, νότον, *Africum*, and Cant. iv. 16, νότε; for the explanation of the latter see North. Observe that תימנה and נגב are interchanged in Exod. xxvi. 18; xxxvi. 23; Ezek. xlvii. 1. 4. מין, also meaning the right side and south. Thus, Ps. lxxxix. 12, 'Thou hast made the north and the south;' Sept. θάλασσα; Vulg. *mare*. The word is evidently here used in its widest sense, comprehending not only all the countries lying south, but also the Indian ocean, &c., the whole hemisphere. Aquila, Βορρᾶν καὶ δεξιάν; Theodotion, Βορρᾶν καὶ Νότον. In some passages where our translation renders the word *right*, the meaning would have been clearer had it rendered it *south* (1 Sam. xxiii. 19, 24; 2 Sam. xxiv. 5; Job xxiii. 9). 5. חדר, 'Out of the south cometh the whirlwind' (Job xxxvii. 9), literally 'chamber' or 'storehouse,' ἐκταμιείων, *interioribus*. The full phrase occurs in ch. ix. 9, חדרי תמן, ταμεῖα νότου, *interiora austri*, the remotest south; perhaps in both these passages the word means the chambers or

storehouses of the south wind. 6. מִדְבָּר, 'Promotion cometh not from the south' (Ps. lxxv. 6), literally 'wilderness,' ἀπὸ ἐρήμων, *desertis montibus*. 7. מִים, 'And gathered them out of the lands, and from the south' (Ps. cvii. 3), θάλασσα, *mare;* where Gesenius contends that it ought to be translated 'west,' though it stands opposed to מִצָּפוֹן, as it is indeed so translated under exactly the same circumstances in Isa. xlix. 12. He refers to Deut. xxxiii. 23, and Amos viii. 12. It is also thus rendered in our version of the first of these references; and on the latter we can only refer to Archbishop Newcome's *Version of the Minor Prophets*, Pontefract, 1809, pp. 51, 52. In the New Testament we have *νότος* in the geographical sense, *βασίλισσα νότου, regina austri*, Matt. xii. 42 [Sheba, Queen of], and Luke xiii. 29; Rev. xxi. 13. The word *μεσημβρία* is also translated 'south' in Acts viii. 26, *κατὰ μεσημβρίαν, contra meridianum*. It is used in the same sense by Josephus (*Antiq.* iv. 5. 2). In Symmachus (1 Sam. xx. 41) for נֶגֶב. Hesychius defines Μεσημβρία· *τὰ τοῦ Νότου μέρη καὶ τὸ τῆς ἡμέρας μέσον*. The south-west λίψ occurs in St. Paul's dangerous voyage (Acts xxvii. 12); 'a haven of Crete,' *βλέποντα κατὰ λίβα, respicientem ad africum*, by metonymy the *wind*, for the quarter whence it blows. The south wind is mentioned ver. 13, *νότος, auster*, and xxviii. 13 [Winds].—J. F. D.

SOWER, SOWING. [Agriculture.]

SPAIN (Σπανία, Rom. xv. 24, 28; Ἱσπανία, 1 Macc. viii. 3). This name was anciently applied to the whole Peninsula which now comprises Spain and Portugal (Cellar. *Notit.* i. 51, sq.). In the time of Paul Spain was a Roman province, and many Jews appear to have settled there. It seems clear from Rom. xv. 24, 28, that Paul formed the design of proceeding to preach the Gospel in Spain: that he ever executed this intention is necessarily denied by those who hold that the apostle sustained but one imprisonment at Rome—namely, that in which the Acts of the Apostles leave him; and even those who hold that he was released from this imprisonment can only conjecture that, in the interval between it and the second, he fulfilled his intention. There is, in fact, during the three first centuries, no evidence on the subject, beyond a vague intimation by Clement, which is open to different explanations [Paul]; and later traditions are of small value.

SPARROW (צִפּוֹר *tzippor*) occurs in Gen. vii. 14; Lev. xiv. 4; Ps. lxxxiv. 3; cii. 7; *στρουθίον*, Matt. x. 29; Luke xii. 6, 7. The Hebrew word includes not only the sparrow, but also the whole family of small birds not exclusively feeding on grain, but denominated clean, or those that might be eaten according to the law: hence the same word is also, in many instances, translated 'bird,' the Hebrew name itself being evidently an imitation of the voice of small birds, synonymous with the English 'chirrup.' *Tzippor* includes many insectivorous and frugivorous species, all the thrushes we have in Europe, and the rose-coloured ouzel or locust-bird, rare with us, but numerous and cherished in the East, solely for the havock it makes among locusts, and named *Smurmur* by the Arabs, in imitation of its voice. It also includes perhaps the starlings (not *Zarzir*), the nightingale, all the European larks, the wagtails, and all the tribe of finches; but not fly-catchers, nor indeed swallows, which, there is reason to believe, were reckoned, along with night-hawks or goatsuckers, and crows, among the unclean and prohibited species. In Syria the sparrow is the same vivacious familiar bird we find it in Europe, and equally frequents the residence of man.—C. H. S.

SPEAR. [Arms.]

SPICES. This word, which occurs very frequently in our translation of the Scriptures, has usually been considered to indicate several of the aromatic substances to which the same general name is applied in the present day. The Hebrew words so translated are Necoth, Bosem, and *Sammim*, the corresponding Greek being ἄρωμα. These may indicate different things, as the two first words, or be merely different names, as *spices* and *aromatics* in English may be applied to the same kind of substances. *Sammim*, rendered in Exod. xxxv. 7 *incense*, and in ver. 34 *spices*, may be supposed to mean drugs and aromatics in general. When these are separately noticed, especially when several are enumerated, their names may lead us to their identification. Dr. Vincent has observed that 'in Exod. xxx. we find an enumeration of cinnamon, cassia, myrrh, frankincense, stacte, onycha, and galbanum, all of which are the produce either of India or Arabia.' More correctly, cinnamon, cassia, frankincense, and onycha, were probably obtained from India; myrrh, stacte, and some frankincense, from the east coast of Africa, and galbanum from Persia. Nine hundred years later, or about B.C. 588, in Ezek. xxvii. the chief spices are referred to, with the addition however of calamus. They are probably the same as those just enumerated. Dr. Vincent refers chiefly to the *Periplus*, ascribed to Arrian, written in the second century, as furnishing a proof that many Indian substances were, at that time, well known to commerce, as aloe or agila wood, gum bdellium, the googal of India, cassia and cinnamon, nard, costus, incense, that is, olibanum, ginger, pepper, and spices. If we examine the work of Dioscorides we shall find all these, and several other Indian products, not only mentioned, but described, as schœnanthus, calamus aromaticus, cyperus, malabathrum, turmeric. Among others, Lycium indicum is mentioned. This is the extract of Barberry root, and is prepared in the Himalayan mountains. (Royle on the Lycium of Dioscorides, *Linnean Trans.*). It is not unworthy of notice, that we find no mention of several very remarkable products of the East, such as camphor, cloves, nutmeg, betel leaf, cubebs, gamboge; all of which are so peculiar in their nature that we could not have failed to recognise them if they had been described at all, like those we have enumerated as the produce of India. These omissions are significant of the countries to which commerce and navigation had not extended, at the time when the other articles were well known (*Hindoo Medicine*, p. 93). If we trace these up to still earlier authors, we shall find many of them mentioned by Theophrastus, and even by Hippocrates; and if we trace them downwards to the time of the Arabs [Spikenard], and from that to modern times, we find many of them described under their present names in works

current throughout the East, and in which their ancient names are given as synonymes. We have, therefore, as much assurance as is possible in such cases, that the majority of the substances mentioned by the ancients have been identified; and that among the spices of early times were included many of those which now form articles of commerce from India to Europe. This has been shown in the articles on the different substances [Ahalim; Almug; Chelbenah; Hobnim; Kaneh-bosem; Ketzoh; Kiddah; Kinnemon; Lebona; Lot; Mor; Nard; Nataf; Necoth].

SPIDER (עַכָּבִישׁ; Sept. ἀράχνη; Vulg. *aranea*) occurs in Job viii. 14; Isa. lix. 5. In the other instance in which the word is used in our version (Prov. xxx. 28), and where the Hebrew has שְׂמָמִית, the Sept. καλαβώτης, and the Vulg. *stellio*, there is most probably a mistranslation [Semamith]. In the first of these passages, the reference seems clear to the spider's web, or literally, house (בית), whose fragility is alluded to as a fit representation of the hope of a *profane*, *ungodly*, or *profligate* person; for so the word חנף really means, and not 'hypocrite,' as in our version. The object of such a person's trust or confidence, who is always really in imminent danger of ruin, may be compared for its uncertainty to the spider's web. 'He shall lean upon *his* house (*i. e.* to keep it steady when it is shaken); he shall hold it fast (*i. e.* when it is about to be destroyed); nevertheless it shall not endure (ver. 15). In the second passage (Isa. lix. 5) it is said, 'The wicked weave the spider's web' (קורי, literally, 'thin threads);' but it is added, 'their thin threads shall not become garments, neither shall they cover themselves with their works;' that is, their artifices shall neither succeed, nor conceal themselves, as does the spider's web. This allusion intimates no *antipathy* to the spider itself, or to its habits when directed towards its own purposes; but simply to the adoption of those habits by man towards his fellow-creatures. No expression of an abstract antipathy towards any creature whatever is to be found in Scripture. Though certain species, indeed, which for good and wise reasons were prohibited as food, are *so far* called 'an abomination;' yet revelation throughout recognises every living creature as the work of God, and deserving the pious attention of mankind. It is worthy of remark, that natural history, with all its characteristic superiority to prejudices and antipathies, is indebted for its existence to revelation. The Creator himself first directed the attention of man to this science:—'Out of the ground the Lord God formed every beast of the field, and every fowl of the air, and brought them unto Adam, to see what he would call them; and whatsoever Adam called every living creature, that was the name thereof. And Adam gave names to all cattle, and to the fowl of the air, and to every beast of the field' (Gen. ii. 19, 20). The most ancient system or classification of the natural world is to be found in the writings of Moses (Gen. i. 20, &c.); a system recognised by the writers of Scripture in widely different times (Gen. vi. vii. viii. ix.; 1 Kings iv. 33; Ps. clxviii.; Acts x. 12). Michaelis well observes that 'the systematic division of quadrupeds given by Moses is so excellent, as never yet, after all the improvements in natural history, to have become obsolete, but, on the contrary, is still considered as useful by the greatest masters of the science:' 'a fact,' he adds, 'which cannot but be looked upon as truly wonderful' (*Commentary on the Laws of Moses*, Art. 204). It is recorded of Solomon, that 'he spake of trees, from the cedar tree that is in Lebanon, unto the hyssop (moss) that springeth out of the wall: he spake also of beasts, and of fowl, and of creeping things, and of fishes' (1 Kings iv. 33). To revelation also the rise of natural history, as a science, is to be attributed among the Gentiles; for there is good ground for believing that Aristotle had seen the writings of Solomon. It is revelation which, by teaching that 'all things' proceed from one and the same God, invests the science with interest to every discerning mind.

The study of insects is so new in this country, that even at the distance of some years after the death of Willughby, an attempt was made to set aside the will of a Lady Glanville, on the ground of lunacy, because she had shown a strong partiality for insects; and Mr. Ray had to appear on the day of trial to bear testimony to her sanity (see *Memoir of Willughby*, by Rev. J. F. Denham, p. 132, Edinburgh, 1838; or in the Naturalist's Library). Even poets, from Aristophanes to Thomson, have too often contributed to the popular prejudices against insects. The latter stigmatizes spiders as

> 'Cunning and fierce—
> Mixture abhorred;'

but these epithets are in reality as unjustly applied to them (at least with reference to the mode by which they procure necessary subsistence), as to the patient sportsman, who lays snares for the birds that are to serve for the dinner of his family: while it can be further pleaded in behalf of spiders, that they are actively serviceable to the human race, in checking the superfecundity of other insects, and afford in their various procedures the most astonishing displays of that Supreme Intelligence by which they are directed.

J. F. D.

SPIKENARD. [Nerd.]

SPIRIT and HOLY SPIRIT. The word for 'spirit' in the Hebrew is רוח; in the Greek, πνεῦμα; and in the German, *geist*. It is one of the most generic terms in either the English, Hebrew, or Greek language. A somewhat extended reference to the *usus loquendi*, both of the Old and New Testament, is necessary, in order to ascertain its Scriptural use and import.

Its leading significations may be classed under the following heads:—

1. The primary sense of the term is *wind*. 'He that formeth the mountains and createth the wind' (רוח, Amos iv. 13; Isa. xxvii. 8). 'The wind (πνεῦμα) bloweth where it listeth' (John iii. 8). This is the ground idea of the term 'spirit'—air—ether—air refined, sublimated, or vitalized: hence it denotes—

2. *Breath*, as of the mouth. 'At the blast of the breath of his nostrils (רוח אפו) are they consumed' (Job iv. 9). 'The Lord shall consume that wicked one with the breath of his mouth' (τῷ πνεύματι τοῦ στόματος, 2 Thess. ii. 8).

3. The *vital* principle which resides in and animates the body. In the Hebrew, נפש is the

main specific term for this. In the Greek it is ψυχή, and in the Latin, *anima*. 'No man hath power over the spirit (ברוח) to retain the spirit' (Eccles. viii. 8; Gen. vi. 17; vii. 15). 'Jesus yielded up the ghost' (ἀφῆκε τὸ πνεῦμα, Matt. xxvii. 50). 'And her spirit (πνεῦμα αὐτῆς) came again,' &c. (Luke viii. 55).

In close connection with this use of the word is another—

4. In which it has the sense of *apparition—spectre*. 'They supposed that they had seen a spirit,' *i. e.* spectre (Luke xxiv. 37). 'A spirit hath not flesh and bones, as ye see me have' (ver. 39; Matt. xiv. 26).

5. The *soul*—the rational immortal principle, by which man is distinguished from the brute creation. It is the τὸ πνεῦμα, in distinction from the ἡ ψυχή. With the Latins it is the *animus*. In this class may be included that use of the word spirit in which the various emotions and dispositions of the soul are spoken of. 'Into thy hands I commend my spirit' (τὸ πνεῦμά μου, Luke xxiii. 46; Acts vii. 59; 1 Cor. v. 5; vi. 20; vii. 34; Heb. xii. 9). 'My spirit hath rejoiced in God my Saviour' (Luke i. 47). 'Poor in spirit' (πτωχοὶ τῷ πνεύματι) denotes humility (Matt. v. 3). 'Ye know not what manner of spirit ye are of' (Luke ix. 55), where πνεῦμα denotes *disposition* or *temper*. 'He that hath no rule over his own spirit' (רוחו, Prov. xxv. 28; xvi. 32; Eccles. vii. 9). The moral affections are denominated 'the spirit of meekness' (Gal. vi. 1); 'of bondage' (Rom. viii. 15); 'of jealousy' (Num. v. 14); 'of fear' (2 Tim. i. 7); 'of slumber' (Rom. xi. 8). In the same way also the intellectual qualities of the soul are denominated 'the spirit of counsel' (Isa. xi. 2); 'the spirit of knowledge' (Isa. xi. 2); 'the spirit of wisdom' (Eph. i. 17); 'the spirit of truth and of error' (1 John iv. 6).

6. The race of superhuman created intelligences. Such beings are denominated spiritual beings because they have no bodies like ours. To both the holy and the sinning angels the term is applied. In their original constitution their natures were alike pure spirit. The apostacy occasioned no change in the *nature* of the fallen angels as spiritual beings.

In the New Testament dæmonology δαίμων, δαιμόνιον, πνεῦμα ἀκάθαρτον, πνεῦμα πονηρόν, are the distinctive epithets for a fallen spirit. Christ gave to his disciples power over unclean spirits (πν. ἀκαθάρτων, Matt. x. 1; Mark i. 23; Luke iv. 36; Acts v. 16). The holy angels are termed spirits:—'Are they not all ministering spirits' (λειτουργικὰ πνεύματα, Heb. i. 14)? 'And from the seven spirits (ἑπτὰ πνευμάτων) which are before his throne' (Rev. i. 4).

7. The term is applied to the Deity, as the sole, absolute, and uncreated Spirit. 'God is a Spirit' (πνεῦμα ὁ Θεός). This, as a predicate, belongs to the divine nature, irrespective of the distinction of persons in that nature. But its characteristic application is to the third person in the Divinity, who is called the Holy Spirit (Πνεῦμα ἅγιον), because of his essential holiness, and because in the Christian scheme it is his peculiar work to sanctify the people of God. He is denominated *The* Spirit, by way of eminence, as the immediate author of spiritual life in the hearts of Christians. The New Testament writers are full and explicit in referring the principle of the higher life to the Spirit. In the Old Testament the reference is more general. The Spirit is an all-pervading, animating principle of life in the world of nature. In the work of creation the Spirit of God moved upon, or brooded over, the face of the waters (Gen. i. 2; Job xxvi. 13). This relation of the Spirit to the natural world the ancients expressed as *Ens extra—Ens super—Ens intra mundanum*. The doctrine of the Spirit, as the omnipresent life and energy in nature, differs from Pantheism on the one hand, and from the Platonic soul of the world on the other. It makes the Spirit the immanent divine causality, working in and through natural laws, which work is called *nature;* as in the Christian life He is the indwelling divine causality, operating upon the soul, and through divine ordinances; and this is termed *grace*. The Spirit in the world may be considered as the divine omnipresence, and be classed among the doctrines which are more peculiarly theological. But the indwelling and operation of the Spirit in the heart of the believer is an essential doctrine of *Christianity*. The one province of the Spirit is nature, the other grace. Upon the difference between the two, in respect to the Spirit's work, rests the Christian consciousness. The general presence and work of the Spirit in nature is not a matter of consciousness. The special presence and work of the Spirit in the heart of the believer, by the effects which are produced, is a matter of which, from consciousness, there may be the most consoling and delightful assurance.

The words Spirit, and Holy Spirit, frequently occur in the New Testament, by metonymy, for the influence or effects of His agency.

a. As a procreative power—'the power of the Highest' (Luke i. 35).

b. As an influence, with which Jesus was endued (Luke iv. 4).

c. As a divine inspiration or *afflatus*, by which the prophets and holy men wrote and spoke (ἐν πνεύματι, διὰ πνεύματος, ὑπὸ πνεύματος). 'Holy men of God spake as they were moved by the Holy Ghost' (2 Pet. i. 21; Num. xi. 26; Neh. ix. 30; Ezek. iii. 12, 14). John in Patmos was wrapped in prophetic vision—was ἐν πνεύματι (Rev. i. 10; iv. 2; xvii. 3).

d. As miraculous gifts and powers, with which the Apostles were endowed, to qualify them for the work to which they were called. 'Jesus breathed on them, and said unto them, Receive ye the Holy Ghost' (Λάβετε Πνεῦμα ἅγιον, John xx. 22). 'And they were filled with the Holy Ghost,' &c. (Acts ii. 4). 'They were baptized with the Holy Ghost' (ἐν Πνεύματι ἁγίῳ, Acts i. 5; comp. Joel ii. 28 with Acts ii. 16-18, where the רוח of the prophet is translated πνεῦμα by the apostle).

But the phrase, Holy Spirit, is specially used to denote a *divine personal agent*. The Holy Spirit is associated, as a distinct person, with the Father and the Son, in the baptismal formula and the apostolical benediction. The Father and Son are real persons. It is reasonable to think that the spirit who is joined with them in this solemn form of induction into the Christian church, is also a personal agent, and not an abstraction—a mere power or influence. The subject is baptized into the belief of three personal

agents. To suppose that, in this solemn profession of faith, he avows his belief in the Father and the Son, and the *power* or *influence* of God, is forced and frigid.

He is baptized into the *name* of each of the three—εἰς τὸ ὄνομα τοῦ πατρὸς, καὶ τοῦ υἱοῦ, καὶ τοῦ ἁγίου πνεύματος (Matt. xxviii. 19). The word ὄνομα, Heb. שֵׁם, is the appellation of a person. And when used tropically, as in Acts i. 5, it stands for persons, and not for their influence, or virtue, or power. So in the formula ὄνομα = ἁγίου πνεύματος, by the *usus loquendi*, is required to be the designation of a personal agent. We are not baptized into the name of an influence or a power, but into the name of a person—of three real and distinct subjects, the Father, the Son, and the Holy Ghost.

In the apostolical benedictions, the Spirit, as a person, is associated in the same way with the Father and Son. 'The grace of our Lord Jesus Christ, and the love of God, and the communion of the Holy Ghost, be with you all' (2 Cor. xiii. 13). In this uniting of the three there is the recognition of the distinct personality of each, in the separate charisma which is appropriated to each. The χάρις is from Christ, the ἀγάπη from God, *i. e.* the Father, and the κοινωνία from the Spirit. The act of communion, of fellowship, implies a divine personal agent as really as does the grace or the love. The three are connected in a similar way in 1 Cor. xii. 4-6.

Distinct personal acts and attributes are ascribed to the Holy Spirit too frequently and fully to admit of explanation by the prosopopœia.

The Holy Ghost *speaks*, by Esaias the prophet (Acts xxviii. 25), expressly (1 Tim. iv. 1). He *teaches* (Luke xii. 12). He *reproves* the world of sin (John xvi. 8). The spirit helpeth our infirmities, and maketh intercession for the saints (Rom. viii. 26, 27). He is *grieved* (Eph. iv. 30).

Apostles are set apart to him in the work of the ministry, and he appoints them to that work (Acts xiii. 2; xv. 28).

These are all acts which imply a personal agent. Speaking, teaching, reproof, grief, intercession, are predicable only of a personal subject, except in the language of poetry or eloquence. In serious didactic style, in the language of prescription, of promise, of permanent institution and instruction, where clearness and precision, and not strong figures, are expected, they must denote a *person*.

And these acts and attributes distinguish the Spirit from the person of the Father on the one hand, and from the personal subjects upon which he acts on the other.

The Spirit, as a personal agent, comes from the Father, is sent by the Father, and of course cannot be the Father. As sent by the Father, he maketh intercession for the saints, *according to the will of God*, *i. e.* the Father from whom he came. The Spirit searcheth all things, yea, the deep things of God (1 Cor. ii. 10). If there be no distinct personality of the Spirit separate from that of the Father, the real import of these passages must be, that the Father comes from himself, is sent by himself, makes intercession to himself, according to the will of himself, and that he searches the deep things of himself,—which is a style of writing not to be ascribed to any rational man, and certainly not to inspired apostles. Nor can the personality of the Spirit, as Socinus affirms, be taken for the subjects who are affected by the divine influence. He is as distinct from the disciples, to whom he was sent, as from the Father, by whom he was sent. The promise of Christ is, that the Father will give them another comforter, one to take his place, as a teacher and comforter. And that comforter, he says, 'which is the Holy Ghost, whom the Father will send in my name, he shall *teach* you all things, and bring all things to your remembrance' (John xiv. 16, 26). This Παράκλητος, sent from the Father, to teach, and guide, and comfort the disciples, is as manifestly distinct from the disciples whom he came to teach, as the Father was, from whom he came, or as Christ was, who had been their teacher.

The procession of the Spirit may be considered as the intrinsic relation which he sustains to the Father and the Son, or with respect to the mode of his manifestation. In respect to the former, the procession, ἐκπόρευσις, of the Spirit has an implied reference to the generation, γέννησις, of the Son, and the ἀγέννησις of the Father. The Father is unbegotten, the Son is begotten; the Spirit proceeds from the Father alone, says the Greek church, from the Father and Son, says the Latin church. Christ says that the Spirit of truth proceedeth from the Father, παρὰ τοῦ Πατρὸς ἐκπορεύεται (John xv. 26). There is no such explicit statement in the Scriptures of the procession of the Spirit from the Son, yet equivalent expressions of the doctrine are supposed to be there. The Holy Ghost is called the Spirit of the Father, because he proceeds from the Father. For the same reason he is called the Spirit of Christ; because he proceedeth from the Father and the Son, because he is sent by both Father and Son: hence the formula of the Latin church has always been, 'Spiritus S. a Patre et Filio, non factus, nec creatus, nec genitus, sed procedens.' The addition of the Filioque to the Constantinopolitan confession of faith, by the Latin fathers, occasioned the division of the church into the eastern and western, or the Greek and Latin branches. It is from the relation implied in the procession, that the Spirit is called the third person in the Godhead. The Father is considered as *first* in the order, as the fountain and source of all things. The Son is the second person, as being begotten by the Father, and the Spirit is the third, as proceeding from and sharing the nature of both. 'These distinctive appellations denote,' says Augustine, 'the reciprocal relations of the three persons to each other, and not the substance itself, which is but one.' The order has relation to the distinction of persons; the unity of the divine nature has respect to the substance. The homoousan includes the three. The hypostasis applies to the distinctions. As to the homoousan, there is but one God; as to the hypostasis, there are three persons. The subordination of the Spirit does not imply inferiority, but is a term of office or of relation. Thus it is that the Scripture doctrine, maintaining the unity of the divine nature as belonging to the Father, Son, and Spirit, and also the proper distinction between the three, closes the door equally against Arianism and Sabellianism.

The Spirit of God (1 Cor. ii. 11) is not a created spirit; and if uncreated, it must be divine in the highest sense; but this Spirit is the Holy Spirit, and a proper person; hence he is God.

As the author of regeneration, or of the new spiritual and incorruptible life in the heart of the believer, he must be divine. This change, the Scriptures abundantly declare, is wrought by the Spirit and power of God.

Blasphemy against the Holy Ghost is the only sin for which there is no remission (Matt. xii. 31). This sin against the Holy Spirit, in whatever it may consist, is distinguished from all other sins by a degree of guilt which renders it unpardonable. If he be not in his nature truly God, there is nothing in him to give to sin against him such a peculiar aggravation. Although it is not simply because the Spirit is God that blasphemy against him is unpardonable—for then would blasphemy against the Father and the Son also be unpardonable—yet it is a sin against God, and, as being against the third person of the Godhead, it is aggravated to a degree of enormity which it could not receive if committed against any other being than God.

The divine and incommunicable attributes of the Deity are ascribed to the Spirit. These attributes belong exclusively to the divine nature; he who possesses them must have the divine nature and honour as God (for proof texts, see TRINITY).

Works truly divine are attributable to the Holy Spirit, as creation and preservation, and especially the work of sanctification. There are diversities of gifts, and there are differences of administrations, but the same Spirit. 'All these worketh that one and self-same Spirit, dividing to every man severally as he will' (1 Cor. xii. 4-11). Hence Peter calls the Holy Ghost, God (Acts v. 3, 4).

Of the office of the Holy Spirit, it is only necessary to say, that it is not ministerial, like that of the angels and apostles, but it is the peculiar work in the salvation of man which he performs, as sent by the Father and the Son. Paul has developed the functions or charismata of the office with great clearness in 1 Cor. xii., in which he shows that the diversities of gifts are all by the same Spirit. Each charisma is the 'manifestation of the Spirit' (ἡ φανέρωσις τοῦ Πνεύματος). This manifestation was in some particulars different in the apostolic age from what it was after Christianity was established. The gifts which were peculiar to that age, and which evinced the presence of the Holy Spirit by some immediate effect, remarks Neander, are called, in the New Testament, δύναμεῖς, σημεῖα, τέρατα. That period, he says, was peculiarly the creative epoch of Christianity. Other gifts belong to the office and operation of the Spirit in every age of the church, for the perfecting of the saints and the edifying of the body of Christ.

The views of the first Christians respecting the Holy Spirit were vague and diverse. His power had penetrated and pervaded the early church, and yet, in general, no distinct and adequate conceptions of him were formed in the mind. Baumgarten says, 'The doctrine of the Holy Spirit remained a long time undecided. It lay near to the first church in a *practical* respect only.' 'We see from this,' says Neander, 'how completely religion is a thing of life, before it can obtain for itself an adequate form of developement in definite conceptions.' Some believed him to be a mere power; some confounded the idea of person with the charisma; others supposed him to be a creature; others believed him to be God; and others still were undecided. The practical recognition of him, however, as the principle of the divine life in man, was almost universal in the early church.

The more distinct conceptions of the nature of the Spirit arose out of the baptismal formula, and the discussion of the doctrine of the Trinity, especially of the Arian controversy. Athanasius, Basil, and the Gregories believed in the equality of the Spirit, and contended that it was a common church doctrine from the beginning. The Council of Nice says, 'We believe in the Holy Ghost.' In the Constantinopolitan confession the deity of the Spirit was affirmed with more distinctness, and his procession from the Father alone implied. The council at Antioch rejected the homoousian in respect both to the Spirit and the Son. Under Theodosius the Scripture doctrine was restored, and it has since remained the catholic doctrine.

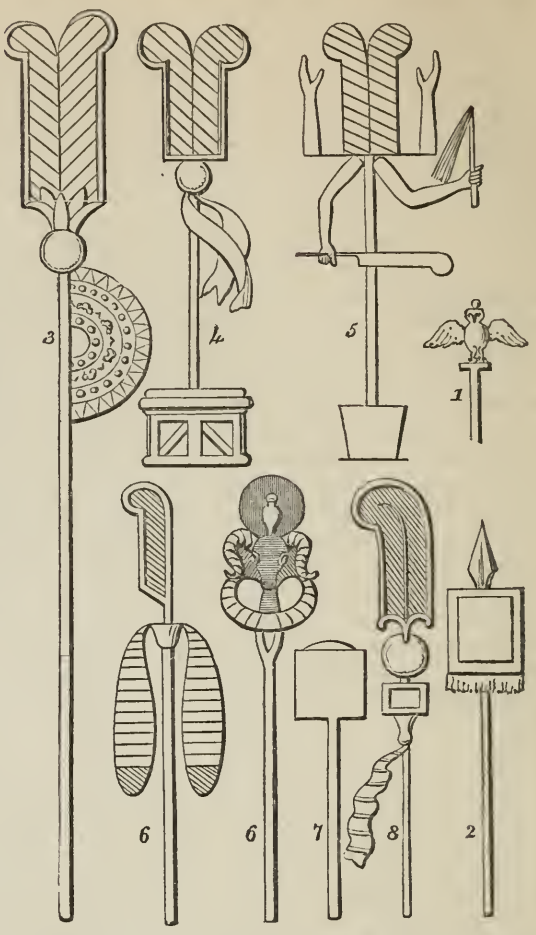
SPOUSE. [MARRIAGE.]

SPRING. [PALESTINE.]

STACHYS (Στάχυς), an unknown person, from his name apparently a Greek, a disciple at Rome, and a friend of Paul (Rom. xvi. 9).



STACTE. [NATAF.]

STANDARDS. Standards and ensigns are to be regarded as efficient instruments for maintaining the ranks and files of bodies of troops; and in Num. ii. 2 they are particularly noticed, the Israelites being not only enjoined to encamp 'each by the standard of his tribe and the ensign of his father's house,' but, as the sense evidently implies, in orders or lines. It is clear, when this verse is considered in connection with the religious, military, and battle pictures on Egyptian monuments, that the Hebrews had ensigns of at least three kinds, namely; 1. The great standards of the tribes, serving as rallying signals for marching, forming in battle array, and for encamping; 2. The divisional standards (משפחות *mishpachoth*) of clans; and, 3. Those of houses or families (בית אבות *beth aboth*); which after the occupation of the Promised Land may gradually have been applied more immediately to corps and companies, when the tribes, as such, no longer regularly took the field. That there were several standards may be inferred from the uniform practice of the East to this day; from their being useful in manœuvres, as already explained, and as shown in the Egyptian paintings; and from being absolutely necessary; for had there been only one to each tribe, it would not have been sufficiently visible to crowds of people of all ages and both sexes, amounting in most cases to more than 100,000, exclusive of the incumbrance of their baggage. Whole bodies, therefore, each under the guidance of the particular clan ensign, knew how to follow the tribal standard; and the families offered the same convenience to the smaller divisions. It may be doubted whether these three were enough for the purpose; for if they were carried in the ranks of the armed bodies, it must have been difficult for the households to

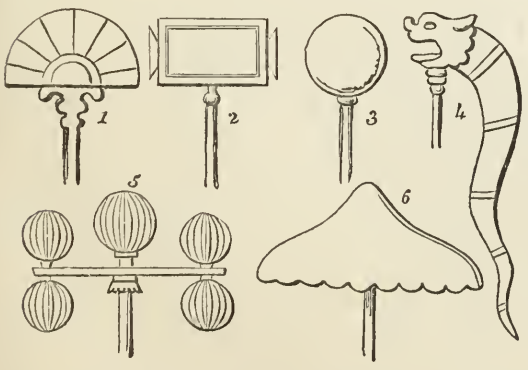
keep near them; and if they were with the crowd, the ranks must have had others to enable them to keep order, as we find that even in the Roman legions, thoroughly trained as they were, numerous vexilla were still held to be necessary. That there were others might be inferred (Isa. xiii. 2; Jer. li. 27) from the circumstance of their being planted on the summit of some high place, to mark the point where troops were to assemble: these last, therefore, were not ensigns of particular bodies, but signals for an understood purpose, such as both the Greeks and Romans employed when the general gave notice of his intention to engage, by hoisting above his tent a red tunic, or when Agamemnon recalled his troops in order to rally them, by the signal of a purple veil.

But what the form, colours, materials, and symbols of the Hebrew ensigns were it is more difficult to determine, chiefly because there has been a great quantity of learned trifling among Rabbinical writers and more modern heralds, all equally bent upon fearless assertions, and with so little true knowledge of the customs of antiquity, that they have uniformly described these ensigns as flags in shape like modern banners—a form not yet shown to have existed in the west of Asia or Europe anterior to the first invasion of the Huns, excepting on some naval medals of the empire.* In a collection of drawings, now before us, of 124 Egyptian, a considerable number of Persian, Bactrian, Etruscan, and Greek ensigns, and a very large series of Roman, all are effigies, spolia of animals or plants, tablets, globes, vexilla, or dragons. The vexillary or labarum form is known to be of Oriental (Bactrian) origin, and the dragon similarly originated among the equestrian nations of the East. It consisted of a head of metal with an open mouth, which turned on a spindle at the neck, where a long bag of coloured stuff was sewn to it, and kept the open mouth to the wind, filling the bag with air, and causing it to flout and twist like a serpent's tail. It was the origin of the vane and pendant: when the metal head was omitted on account of its weight on the top of a spear, and the bag which formed the body and tail was cut open, or reduced to one breadth, the dragon became the flammula or pennon of more recent times. The vexillum was a substitute for a tablet ensign, being made of cloth, and spread upon a short bar, placed crosswise on the summit of a pole.

As early as the days of the exode of Israel, the Egyptians had ensigns of different kinds. We observe on the monuments†—1. Thrones or palanquins, indicating the great and sacred centre of an army. 2. Royal fans attending the sacred centre; they are the '*Efthoudehs* of India,' always carried by princes, or sons of the Pharaoh, on the summit of long poles, and therefore intended as signs of honour, not for use as umbrellas. 3. A long spar borne on the shoulders of a row of men, surmounted by a globe with an enormous double feather, apparently twelve or fourteen feet high, and four or five broad, coloured green, white, and red. This has been denominated the standard of Sesostris, and was most likely the signal ensign of encampment, which was fixed before the royal tent, and when set up must have been visible high above all the other signa. 4. Standards of lower elevation, always with two great feathers issuing from a globe, and the foot set in a portable frame; which we take to be the signa of castrametation and of direction, serving as temporary guiding posts, indications of wells, lines of front in camp, &c. 5. We have found several tablets on poles, similarly set in frames, but with particular symbols above the tablet, and two, three, or four arms holding objects that can be inserted or taken off, and the arms themselves apparently moveable, the whole having the appearance of a complete telegraph. 6. Besides these there are very many varieties of effigial ensigns, with and without shawls beneath them, ensigns of particular temples, idols, cities, nomes. 7. Square tablets on poles borne by the file-leader of a tribe. 8. Ostrich feather ensigns, carried as marks of honour by princes, and sometimes seen stuck at the back in a broad belt.

508. 1. Bactrian eagle; 2. Persian vexillum; 3. Standard of Sesostris; 4. Egyptian ensign set in a frame, signal of castrametation and of direction; 5. Telegraphic ensign, varying with each Pharaoh; 6. Subordinate Egyptian ensigns; 7. Tribal tablet; 8. Plume ensign used in temples.

Ostrich feathers occur again as an ensign of the Lebanon people, or a nation of Palestine,



* In a work specially devoted to this subject, the present writer intends shortly to publish the result of many years' investigation, with many hundred drawings collected for the purpose: it will show how much nations, religious opinions, laws, authority, civilization, and war were influenced by the use of signa and symbols.

† See woodcut, Nos. 1, 2, 3, 4, 5, 6, 7, 8.

which is represented submitting to Sesostris. These ensigns are not necessarily made of plumes of the bird, and they occur white, white with a black bar, and barred red and white, red, white and black, and red, white, and green; so that there were many belonging to different appropriations. Indeed this ensign is still in use in Yemen and the southern desert, where many sheiks have it borne on bamboo poles as the cognizance of their clans.

These details we have deemed necessary in order to show that at the time when Israel departed out of Egypt, most, if not all of these kinds of ensigns, were well known, and that, therefore, it is likely they were, under proper modifications, adopted by that people when about to become wanderers over desert regions where order and discipline, directing signals, telegraphs, and indications of water would be most useful; and as the Egyptians, in common with other organized nations, had a *tensa deorum*, or sacred centre for their gods and the royal tent, so also had the chosen race a sacred centre, the twelve tribes taking their well-known stations around it—that centre rendered the more awful and sublime by the cloud hovering, or the light shining, above it [Encampment].

From the kind of service which each class of ensign was to render, we may take for granted, that the tribal standard (דגל *deghel*), at all times required to be distinguishable 'afar off,' would be elevated on high poles with conspicuously marked distinctions, and that, therefore, although the mottoes ascribed to the twelve tribes, and the symbolical effigies applied to them, may or may not have been adopted, something like the lofty flabelliform signa of Egypt most likely constituted their particular distinction; and this is the more probable, as no fans or umbrellas were borne about the ark, and, being royal, no chief, not even Moses himself, could assume them; but a priest or Levite may have carried that of each tribe in the form of a fan, as the distinction of highest dignity, and of service rendered to the Lord. They may have had beneath them vittæ, or shawls, of the particular colour of the stone in the breastplate of the high-priest (although it must be observed that that ornament is of later date than the standards); and they may have been embellished with in-

509. 1. Egyptian fans of state attending the king, or stuck upon the sacred arks; 2. Tablet ensign of the Jews (?), as represented on the arch of Titus; 3. Globe signum of Augustus; 4. Dragon ensign, common to many nations; 5. Parthian standard; 6. State umbrella, on a coin of Augustus.

scriptions, or with figures, which, at a time when every Hebrew knew that animal forms and other objects constituted parts of written hieroglyphic inscriptions, and even stood for sounds, could not be mistaken for idols, the great lawgiver himself adopting effigies when he shaped his cherubim for the ark and balls for the brazen sea. In after ages we find typical figures admitted in the ships carved on the monuments of the Maccabees, being the symbol of the tribe of Zebulon, and not even then prohibited, because ships were inanimate objects. As for the 'abomination of desolation,' if by that term the Roman eagle was really meant, it was with the Jews more an expression of excited political feeling under the form of religious zeal, than of pure devotion, and one of the many signs which preceded their national doom.

There is reason to believe that the *mishpachoth*, or clan ensigns, and אות *aoth*, were, at least in the earlier ages, symbolical figures; and that the shekels ascribed to David, bearing an olive or citron branch, to Nehemiah with three lilies, to Herod Agrippa with three ears of corn, and to Tryphon with a helmet and star, were so many types of families, which may all have been borne as sculptured figures, or, when the purism of later times demanded it, may have been painted upon tablets, like the supposed family or clan motto on the ensign of the Maccabees (מכבי). The practice was equally common among the heathen Egyptians, Persians, and Greeks; and, perhaps, the figures of those actually used in Jerusalem are represented in the sculptured triumphal procession on the arch of Titus, where the golden candlestick and other spoils of vanquished Judah are portrayed. A circumstance which confirms the meaning of the objects represented upon the Jewish shekels is, that on the reverse of those of Herod Agrippa is seen another sovereign ensign of Asia, namely, the umbrella (*chattah*, *chutah* of India), always attending monarchs, and sculptured at *Chehel Minar*, and at *Nacshi-Boostan*, where it marks the presence of the king. It is still the royal token through all the East and Islam Africa; and it appears that in the Macedonian era it was adopted by the Græco-Egyptian princes; for Antony is reproached with joining the Roman Eagles to the state umbrella of Cleopatra:—

'Interque signa (turpe!) militaria
Sol aspicit conopeum.'—Hor. *Epod.* ix.

The ensign of the family or clan of the royal house then reigning, of the judge of Israel, or of the captain of the host, was no doubt carried before the chief in power, although it does not appear that the Hebrew kings had, like the Pharaohs, four of them to mark their dignity; yet from analogy they may have had that number, since the practice was also known to the Parthian kings subsequently to the Byzantine emperors, and even to the Welsh princes.—C. H. S.

STAR IN THE EAST. Matthew (ch. ii. 1, sq.) relates that at the time of the birth of our Lord there came wise men (magi) from the East to Jerusalem, to inquire after the newly born king of the Jews, in order that they might offer him presents and worship him. A star, which they had seen in the East, guided them to the house where the infant Messiah was. Having come into his presence, they presented unto him gifts—gold, and frankincense, and myrrh.

The solid learning and free conjecture of Christian divines have combined with the unfriendly daring of infidelity to cast a heap of difficulties on the particulars involved in this passage of Holy Writ. Our space will not allow us to review and examine what has been written by friends and enemies (last of all, by Strauss, *Leben Jesu*, i. 249, 4th edit.) on the subject. We must content ourselves with a brief statement of what appears to us the right view of the case, referring in justification to the authorities whence we have drawn our materials.

These wise men were Chaldæan magi. During many centuries the magi had been given to the study of astronomy, and for some considerable time before the birth of our Lord they had corrupted and disfigured their scientific knowledge by astrological speculations and dreams. A conviction had long been spread throughout the East, that about the commencement of our era a great and victorious prince, or the Messiah, was to be born. His birth was, in consequence of words of Sacred Scripture (Num. xxiv. 17), connected with the appearance of a star. Calculations seem to have led the astrological astronomers of Mesopotamia to fix the time for the advent of this king in the latter days of Herod, and the place in the land of Judæa. Accordingly, at the appointed time two planets, Jupiter and Saturn, were in conjunction under such circumstances as to appear one resplendent heavenly body, and to marshal the way for the magi from their own homes to Jerusalem, Bethlehem, and the inn.

But as this view is, we believe, novel in this country, we will enter somewhat more into particulars. It owes its origin to no less a distinguished person than the astronomer Kepler. It has been investigated and approved by some of the soundest minds of Germany. Under the influence of a conjunction of Jupiter, Saturn, and Mars, which took place in the year 1604, Kepler was led to think that he had discovered means for determining the true year of our Saviour's birth. He made his calculations, and found that Jupiter and Saturn were in conjunction in the constellation of the Fishes (a fish is the astrological symbol of Judæa) in the latter half of the year of Rome 747, and were joined by Mars in 748. Here then he fixed the first figure in the date of our era, and here he found the appearance in the heavens which induced the magi to undertake their journey, and conducted them successfully on their way. Others have taken up this view, freed it from astrological impurities, and shown its trustworthiness and applicability in the case under consideration. It appears that Jupiter and Saturn came together for the first time on May 20th in the twentieth degree of the constellation of the Fishes. They then stood before sunrise in the eastern part of the heavens, and so were seen by the magi. Jupiter then passed by Saturn towards the north. About the middle of September they were near midnight both in opposition to the sun, Saturn in the thirteenth, Jupiter in the fifteenth degree, being distant from each other about a degree and a half. They then drew nearer: on October 27th there was a second conjunction in the sixteenth degree, and on November 12th there took place a third conjunction in the fifteenth degree of the same constellation. In the two last conjunctions the interval between the planets amounted to no more than a degree, so that to the unassisted eye the rays of the one planet were absorbed in those of the other, and the two bodies would appear as one. The two planets went past each other three times, came very near together, and showed themselves all night long for months in conjunction with each other, as if they would never separate again. Their first union in the East awoke the attention of the magi, told them the expected time had come, and bade them set off without delay towards Judæa (the fish land). When they reached Jerusalem the two planets were once more blended together. Then, in the evening, they stood in the southern part of the sky, pointing with their united rays to Bethlehem, where prophecy declared the Messiah was to be born. The magi followed the finger of heavenly light, and were brought to the child Jesus. The conclusion, in regard to the time of the advent, is, that our Lord was born in the latter part of the year of Rome 747, or six years before the common era.

We have not presented this view from any leaning in favour of a rationalistic interpretation, believing that God could, had he so pleased, have created a heavenly body for the purpose. But it must also be said that the divine Ruler of the universe is frugal (*absit invidia verbo*) of his instrumentalities, and might well, in the case before us, make use, for the gracious purposes of his providence, of cosmical arrangements which he had fixed ere the earth and heavens were made. They are, however, facts which have been set forth. As facts they explain a passage on which many doubts and difficulties have lain. The reader will determine whether he finds the explanation satisfactory. Kepler's ideas may be found in the essay *De Jesu Christi servatoris nostri vero anno natalitio*, and more fully in *De vero anno quo æternus Dei filius humanam naturam assumpsit*, Frankfürt, 1614. His view was taken up, and presented with approbation to the literary world, by a learned prelate of the Lutheran church, Bishop Münter (*Der Stern der Weisen*, Kopenh. 1827). It also gained approval from the celebrated astronomer Schubert, of Petersburg (*Vermischten Schriften*, Stuttgart, 1823). The learned and accurate Ideler (*Handbuch der Chronologie*, Berlin; see vol. ii. p. 399, sq.) reviewed the entire subject, and signified his agreement. Hase and De Wette, however, have stated objections. A recent writer of considerable merit, Wieseler (*Chronolog. Synop. der 4 Evangelien*, Hamburg, 1843), has applied this theory of Kepler's in conjunction with a discovery that he has made from some Chinese astronomical tables, which show that in the year of Rome 750 a comet appeared in the heavens, and was visible for seventy days. Wieseler's opinion is, that the conjunction of the planets excited and fixed the attention of the magi, but that their guiding-star was the aforesaid comet. The subject is worthy of attention, and we shall be glad if this notice of it should meet the eye of some distinguished astronomer who would give the subject a thorough investigation. The writer will be happy to supply to any competent inquirer full details of what has already been done. The literature connected with the subject is abundant, but appears to the writer to have lost much of its interest since Kepler's views have found acceptance. Those,

however, who wish to ascertain what works have been written on the subject are referred to Walch, *Bibliotheca Theol.* ii. 422, sq.; Thiess, *Krit. Comment.* ii. 350, sq. On the epoch of the birth of Christ, see Professor Wallace's *Dissertation on the True Age of the World* (a work, however, to which we do not attach much value), p. 84, London, 1844.—J. R. B.

STEPHANAS (Στέφανᾶς), a disciple at Corinth, whose household Paul baptized (1 Cor. i. 16), being the first converted to Christianity in Achaia (1 Cor. xvi. 15). From the last of these texts it would appear that Stephanas and his family, in the most exemplary manner, 'addicted themselves to the ministry of the saints;' which some interpret of their having taken upon them the office and duty of deacons; but which seems to admit of a larger sense (without excluding this), namely, that all the members of this excellent family ministered to the wants and promoted the comfort of their fellow-Christians, whether strangers or countrymen. As '*the household* of Stephanas' is mentioned in both texts, it has been supposed that Stephanas himself was dead when Paul wrote; but in verse 17 it is said, 'I am glad of the coming of Stephanas.'

STEPHEN (Στέφανος), one of the seven first deacons, and the proto-martyr, of the Christian church. It appears from his name that he was a Hellenist, as it was not common for the Jews of Palestine to adopt names for their children, except from the Hebrew or Syriac; though of what country he was is unknown. He is represented by Epiphanius (xl. p. 50) as one of the seventy disciples chosen by Christ; but this statement is without authority from Scripture, and is, in fact, inconsistent with what is there mentioned concerning him. He is spoken of by others as one of the first converts of Peter on the day of Pentecost; but this also is merely conjectural. Jerome (on Isa. xlvi. 12) and others of the Fathers praise him as a man of great learning and eloquence. The first authentic notice we find of him is in Acts vi. 5. In the distribution of the common fund that was entrusted to the apostles (Acts iv. 35-37) for the support of the poorer brethren (see Mosheim, *De Rebus Christ. ante Const.* p. 118, and *Dissert. ad Hist. Eccles. pertin.*), the Hellenistic Jews complained that a partiality was shown to the natives of Palestine, and that the poor and sick among their widows were neglected. Whether we conceive with Mosheim (*De Rebus*, &c. p. 118), that the distribution was made by individuals set apart for that office, though not yet possessing the name of deacons; or, with the writer in the *Encyclopædia Metropolitana* (art. 'Ecclesiastical History;' see also Archbishop Whately's *Kingdom of Christ*), we conclude that with the office they had also the name, but were limited to Hebrews; or whether we follow the more common view, as set forth by Bohmer (*Diss.* vii.; *Juris Eccles. Antiq.*), does not materially affect the present subject. The complaint of the Hellenists having reached the ears of the apostles, immediate directions were given by them with a view to remove the cause of it. Unwilling themselves to be called away from their proper employment of extending the bounds of the Christian community, they told the assembled multitude of believers to select seven men of their own number, in whose faith and integrity they might repose entire confidence, for the superintendence of every thing connected with the relief of the poor. The proposal of the apostles met with the approbation of the brethren, who proceeded at once with the choice of the prescribed number of individuals, among whom Stephen is first mentioned; hence the title of first deacon, or first of the deacons, is given to him by Irenæus (Iren. i. 12). He is distinguished in Scripture as a man 'full of faith and of the Holy Ghost' (Acts vi. 5). The newly elected individuals were brought to the apostles, who ordained them to their office, and they entered upon their duties with extraordinary zeal and success. The number of the disciples was greatly increased, and many priests were among the converts. In this work Stephen greatly distinguished himself by the miracles he performed before the people, and by the arguments he advanced in support of the Christian cause. From his foreign descent and education he was naturally led to address himself to the Hellenists, and in his disputations with Jews of the Synagogue of the Libertines and Cyrenians, &c. [Synagogue and Libertine], he brought forward views of the Christian scheme that could not be relished by the bigots of the ancient faith. As they were unable to withstand his powers of reasoning, their malice was excited; they suborned false witnesses against him, and dragged him before the Sanhedrim as a blasphemer. The charge brought against him was, that he had spoken against the law and the Temple, against Moses and against God. This accusation was calculated to incite all parties in the Sanhedrim against him (comp. Acts xxii. 22); and upon receiving it the predetermined purpose of the Council was not to be mistaken. Stephen saw that he was to be the victim of the blind and malignant spirit which had been exhibited by the Jews in every period of their history. But his serenity was unruffled; his confidence in the goodness of his cause, and in the promised support of his heavenly Master, imparted a divine tranquillity to his mind; and when the judges fixed their regards upon him, the light that was within beamed forth upon his countenance, and 'they saw his face as if it had been the face of an angel' (Acts vi. 15).

Benson (*History of the First Planting of the Christian Religion*) and others have considered the testimony of the witnesses against Stephen as in every respect false, and that we are not even to suppose that he had stated that Christ would change the customs which Moses delivered (Acts vi. 14), upon the ground of the improbability of more being revealed to Stephen than to the apostles, as to the abolition of the Levitical ceremonies. From the strain of the martyr's speech, however, a different conclusion may be drawn. His words imply, in various passages, that external rites were not essential, and that true religion was not confined to the Temple service (Acts vii. 8, 38, 44, &c.). And there seems much plausibility in the conjecture of Neander (*Planting and Training of the Christian Church*, translated by Ryland, vol. i. p. 56, sq.), that Stephen and the other deacons from their birth and education were less under the influence of Jewish prejudices than the natives of Palestine, and may thus have been prepared to precede the apostles themselves in apprehending the liberty which the Gospel was

to introduce. The statements of Stephen correspond in more than one particular with what was afterwards taught by St. Paul.

His speech is well deserving of the most diligent study, and the more it is understood the higher idea will it convey of the degree in which he possessed the qualities ascribed to him in the fifth chapter. Very different views have been taken of it by commentators. Upon the whole we are inclined to follow that which is given by Neander in the work referred to. Even as a composition it is curious and interesting from the connection which may be discovered between the various parts, and from the unity given to the whole by the honesty and earnestness of the speaker. Without any formal statement of his object, Stephen obviously gives a confession of his faith, sets forth a true view of the import of his preaching, in opposition to the false gloss that had been put upon it, maintains the justness of his cause, and shows how well founded were his denunciations against the impenitent Jews.

He first enters upon a historical statement, involving a refutation of the charges which had been made against him of hostility to the Old Testament institutions; but at the same time showing that acceptance with God does not depend upon outward relations. Under the same form he illustrates the providential care exercised by the Almighty in regard to the Jewish people, along with the opposition exhibited by the Jews towards those sent to them by God. And he points the application of his whole discourse by charging his carnal-minded hearers with resisting, like their fathers, the Holy Ghost. The effect upon his auditors was terrible. Conscience-smitten, they united in wreaking their vengeance on the faithful denouncer of their guilt. They drowned his voice with their clamorous outcries, they stopped their ears against him, they rushed on him with one accord in a tumultuary manner, they carried him forth, and without waiting for the authority of law, they stoned him to death as a blasphemer [STONING].

The frantic violence of his persecutors did not disturb the tranquillity of the martyr, and he died praying that his murderers might be forgiven (vii. 60). In his prayer he showed that a new spirit had been introduced into the world, and taught the Christians that the example of their Divine Master was to be followed even in circumstances that they might have conceived to be impossible. Nor was this prayer without effect. Saul of Tarsus, who consented to his death (viii. 1), and kept the clothes of them that stoned him (vii. 58), heard his words, mocking, doubtless, like the rest. But the prayer was heard, and to it we owe the ministry of the apostle Paul (Tillemont, *Mémoires*, vol. ii. p. 8).

The only other particular connected with Stephen, mentioned in Scripture, is, that 'devout men carried him to his burial, and made great lamentation over him' (viii. 2). No information is given respecting the time of his death, or the place of his burial. In the fifth century (415), however, the relics of the martyr were said to have been miraculously discovered by a Greek priest of the name of Lucian (Luciani Presbyteri *Epistola de Inventione S. Stephani*), and they were brought to Europe by Orosius. Evodius, Bishop of Myala, wrote a small treatise concerning the miracles performed by them; and Severus, a Bishop of the Island of Minorca, wrote a circular letter of the conversion of the Jews in that island, and of the miracles wrought in that place, by the relics which Orosius left there. These writings are contained in the works of Augustine, who gives the sanction of his authority to the incredible follies they record (*De Civit. Dei*, xxii. 8).

Since the fifth century, Stephen's day has been celebrated on the 26th of December. The date is confessed by many Roman Catholic writers to be arbitrary, and is wholly without authority.

STOICS AND EPICUREANS. A concise notice of these celebrated sects is all that is required for the elucidation of the Christian history, and all that the limits of the present work allow.

The Stoics derive their name from στοά, 'a porch;' because their founder Zeno was accustomed to teach in a certain porch at Athens. This Zeno, of Citium, in Cyprus, must not be confounded with an earlier Zeno of Elea. The younger and more celebrated philosopher of the name was born from 360 to 350 years B.C., and formed a system of tenets which combined much of the harsh asceticism of the Cynics with the noble moral aspirations and vexatious verbal quibblings of the Platonists. The Greek stoical schools produced the most elaborate speculations on grammar which those ages could boast of, and in moral teaching they showed a strong tendency to a technical and over-systematic nomenclature. Under such a covert a Jesuitical casuistry might easily arise, and it is not to be supposed that the asceticism and high pretensions of this sect uniformly implied virtuous conduct. Their most revolting paradoxes appear to be only exaggerations of truth: exaggerations into which they were probably forced by their intense controversy with the Epicureans, in part through their resolute adherence to the deductions of their own logic, in part from a certain love of eccentricity, with which the Stoics were not unjustly charged.

Epicurus is said to have been born at Athens B.C. 344, and to have opened a school (or rather a garden) where he propagated his tenets, at a time when the doctrines of Zeno had already obtained credit and currency. In *physics*, in *religion*, in *politics*, and in *morals*, the two systems espoused directly opposite views. The Stoics, like the Platonists, were practically disinclined to what we distinctively name PHYSICAL philosophy, and acquiesced in numerous vague dogmas concerning it, which had no ground in experiment or cautious observation, preferring mystical or moral views, and such as well combined with popular superstition. Thus they held the sun and stars to be real gods, because composed of fire, which was asserted to be a divine quality. The Epicureans, on the contrary, pursued physics, in too hasty a spirit, no doubt, but nevertheless, on the whole, with much of the genius of the moderns, and, we might add, with surprising success, if the followers of Epicurus had followed in his steps by inquiring as freely as he. With creditable discernment, he adopted the Atomic theory of Democritus, a philosopher of first-rate genius, though born before his time; who, when not a single sound principle had been laid down in chemistry, or in terrestrial mechanics, seized on the grand idea of Newton, that the heavenly bodies are regulated by the same

laws as the minutest objects on the surface of the earth, and taught, concerning the constituent particles of matter, a doctrine which Dalton and Berzelius have developed and established. Accordingly, in the physics of Epicurus was found an intense antagonism to existing prejudices and popular superstitions. With him the sun was only a large fire, and not a god; the lightning was guided by physical laws, and was not the bolt of Jupiter to strike down the impious. Many of the Epicurean explanations of physical phenomena (as may be seen in Lucretius) show the school to have been much in advance of the age; but as unfortunately they were not satisfied to learn gradually, they spoiled their best ideas by mingling them with the crudest absurdities.

It is in striking contradiction to what might have been expected from each school, that while Epicurus endowed his atoms with certain *chance*-movements (an idea which he had superadded to the theory of Democritus), the Stoics maintained that the whole universe, including the gods, were subject to an unalterable *fate*, which they also called *providence*. That they subjected the gods to this exterior force, is perhaps explained by their material conception of godhead.

Since they studied to keep as close as possible to the popular RELIGION, the Stoics almost necessarily applied a system of mystical allegorizing to all that was offensive in the current legends. In no part of their tenets is their sincerity more doubtful: nevertheless, if we may accept as any fair representation of their devotional feeling the hymn to Jupiter by the Stoic Cleanthes, which is by far the noblest religious address in all antiquity, we shall set them on a much higher eminence than any other sect. Cleanthes, while elevating Jupiter to a position which may satisfy a strict Monotheist, ascribes to him the purest moral character, as being 'the cause of every thing, except of Sin;' and concludes by fervent prayers for the divine teaching to scatter all darkness from the soul, and enable it to attain divine wisdom. The Epicureans (in spite of the chance-movements ascribed to atoms) pushed out to a great extent the supremacy of general laws in the universe; and as they were strict Materialists, could make no exception in favour of the moral world. Hence they would admit of no interferences of the deities in the concerns of man, whether by external visitation or by secret spiritual influence on the heart. The gods were represented as serene, majestic beings, too distant, and too quietly comfortable, to care about human concerns; so that while it was proper to think of them with reverence and admiration, to pray to them or worship them with ceremonies was absurd. They undoubtedly are such a nullity in the practical creed of Epicurus, and the muscular weakness, which, in consequence of the light and airy texture of their spiritual form, he ascribes to them, wears so ridiculous an aspect, as to give colour to the imputation that his Theism was assumed to avoid the popular odium which an undisguised Atheism would have incurred.

Concerning POLITICS no well-defined dogmas seem to have been propounded by the Stoics; but the genius of their creed led them to patronise the national religion in each country, and thereby to give to their pupils a strong sentiment of special citizenship. This is the first element of patriotic exertion everywhere; and the early Stoics, however unsuited by many parts of their creed for public life, maintained, in theory at least, that their wise man was the best ruler of a state, and ought upon occasion to devote property and life in his country's service. The Epicureans, from their devotion to physical science, and their contempt for general literature, were cosmopolitan in their tendency, with too little concern for any one particular state to make patriotic sacrifices. Even the trouble of exercising power was generally thought by them too heavy a burden. Whether less or more voluptuous in personal life—a Pomponius Atticus or a Mucianus—they were resolute in refusing, or glad to get rid of, official power, and to slip back into social comfort and quiet speculation, like the gods whom they admired. This political selfishness was in strange contrast with the unaffected and warm friendships of their private life, in which they were capable, if not of great sacrifices, yet of constant, amiable, forbearing, and active affection. But it is probable that a prevalent neglect of historical reading, joined with the distaste for the national ballads which their scepticism necessitated, could not but render political pursuits, in Greece, uncongenial to them.

The MORAL system of each school was in close connection with their other views. Both taught that we must live 'in harmony with Nature,' but they interpreted this differently. The Stoic theory erected a noble fabric of virtue, which the wise man would pursue at all events, and proclaimed, that while virtuous, he was perfectly happy, whatever his external circumstances. This may be forgiven, as only an over-statement of a valuable truth. The same may be said of their dogma, that 'all sins are equal,' that 'the wise cannot fall away,' and that 'he is a king, though in abject poverty.' But they to a great extent spoiled all that was excellent in these ideas, sometimes by sour asceticism and fanatical coxcombry, yet oftener perhaps by the despicable logical cavilling which they had inherited from Socrates and Plato. Grammar and dialectics appear literally to have been the curse of these schools, and utterly incapacitated them from acting on the popular intellect, to which their subtleties were unintelligible, and their verbose reasoning a source of merited disgust. Epicurus, on the contrary, like modern physical philosophers, cared for *things*, not for *words;* and had at least the good sense to know, that since morality belongs to the mass of mankind, it must rest on broad foundations which they can appreciate, and cannot need lengthy and hairspun reasonings to adapt it to practice. His contempt of rhetoric and of the art of elegant composition may possibly not have been more than is expected by us in every mathematical work, but has exposed him to frequent invectives from Cicero. The Epicurean theory of morals was undoubtedly wholly *selfish*, and this was its blight. Like the modern advocates of the selfish system, he taught that 'pleasing sensations' constitute all that is good in anything; even benevolence and generosity were resolved into selfish affections, by supposing them to have their spring in the 'pleasure' of him who exercises them. This theory has been innocently held by many Christians, in whom it is a fault of

the head, not of the heart; and the same may have been the case with numbers of the Epicureans. But it is impossible, without practical mischief to the multitude, to confound under the single name of 'pleasure' feelings so different as those of the sailor who risks his life to save a stranger, and those of the profligate who sacrifices the happiness of others to his sensuality. Epicurus taught that men should be amiable members of a family, enjoying freely all innocent social pleasures, and abstaining from all vice and crime, and his practice was as pure as his precepts; but he also said, that we should be thus virtuous, *because* this would yield us most pleasure; and by making this his foundation, he gave currency to a great debasing idea, which has always generated rottenness.

Thus far we have spoken of Stoicism and Epicureanism, chiefly as they were among the Greeks; but both systems underwent modification among the Romans; the former for the better, the latter (it would seem) for the worse. Perhaps this must in any case have happened. Stoicism, which had in it some great and true moral ideas, might have been expected to clear itself of its asceticism, its coxcombry, its love of paradox, its subtleties, its mythological absurdities, by the wear and tear of practical life, and by the ridicule of men. Epicureanism, which inculcated (at least in appearance) mere self-indulgence, would attract to itself all the more grovelling natures, and the philosophy itself would become deteriorated by the practice and interpretation of its votaries. But beside this, the Epicurean intellect miserably stagnated through the insane idolatry directed towards their founder. This is the more amazing, considering how little was original in his system; for he had taken his morals from Aristippus and Eudoxus, as his physics from Democritus: yet they seem to have made no effort to improve upon his theories, or perfect even his physical speculations, but wasted all their labour in endless *commentaries* on his work. Even the Roman poet Lucretius, a genius far superior to Epicurus, panegyrizes him in the most fulsome strains:—

'—— Deus ille fuit, Deus, inclute Memmi,
Qui princeps vitæ rationem invenit eam, quæ
Nunc appellatur Sapientia,' &c.

The Stoics were not so absurd, however great their respect for their founder; and, in consequence, they from time to time received new views and fresh light from several sources.

Moreover, it is probable that the genius of the Roman people, and of all Western Europe, was better fitted to improve Stoicism than Epicureanism. Their more practical mind despised and cast aside very much of the trashy logic which disgraced the acute Greeks, and a mere riddance from this was an immense gain to Stoicism. On the contrary, their coarser natures, in adopting such a theory, as, that 'pleasure was the chief good,' were likely to accept this in the worst sense; nor do they appear in general to have had much taste for the tranquil ease and intellectual retirement which was the paradise of the frugal Epicurus. Men of weak passions and strong mind may live virtuously under the selfish theory, or by arguments of expediency; but ambitious, ardent, or passionate temperaments, as they are capable of higher excellence, so are they in danger of deeper debasement, unless influenced by some nobler ideal of excellence. The Roman Stoics were the very prime of the nation; many of them characters who must ever be thought of with reverence and admiration. But before their doctrine reached its culminating point, it had received, we may believe, a mollifying influence from Christianity, which had risen by its side. Epictetus, a Greek, who is said to have flourished from Nero to Hadrian, or even later, is one eminent extant source of information concerning the improved Stoicism of the day. Self-denial is his great virtue, but a true and beautiful benevolence animates it. His contemporary, Seneca, and that best of emperors, Marcus Aurelius, are our authentic informants what Roman Stoicism had become. That they could not see Christianity to be a supernatural system may be lamented; but that they (consciously or unawares) drew much instruction from it, ought surely to be praised, not harshly censured, as it has been. Concerning the Epicureans, the poem of Lucretius is our most accessible source of knowledge. Laertius, Sextus Empiricus, Cicero, and Plutarch, are very valuable to us for the doctrines of both sects.—

F. W. N.

STONING. [Punishments.]

STORAX (Στύραξ) occurs only in Ecclesiasticus xxiv. 15, 'I gave a sweet smell like cinnamon and aspalathus, and I yielded a pleasant odour like the best myrrh,' &c. Sweet storax is mentioned by various Greek writers, from the time of Hippocrates to that of Dioscorides. Several kinds of it were known, varying chiefly in the form in which it was obtained, or the degree of adulteration to which it had been subjected. Most of the kinds are still known in commerce. It is obtained by incisions made in the bark of the tree called *styrax officinale* by botanists. This tree is a native of Greece, Asia Minor, Syria, and Palestine, and is about twenty feet high, with leaves like those of the quince, and flowers somewhat resembling those of the orange. Storax was, and is still, much esteemed, both as an incense and for its medical properties. It consists chiefly of resin, a volatile oil, and some Benzoic acid. It has a grateful balsamic odour, which no doubt made it valued in ancient times.

STORK (חֲסִידָה *chasidah*). In Egypt, the two species collectively are called *Anaseh*, the white, more particularly, *Belari;* in Arabic *Zakid*, *Zadig* (?), *Abuhist*, *Heklek*, *Hegleg*, and *Hadji Luglug*, the three last-mentioned expressing the peculiar clatter which storks make with their bills, and *Hadji*, or pilgrim, denoting their migratory habits. This quality several of the Western names likewise indicate, while our word stork, albeit the Greek στοργή implies natural affection, is an appellation which extends to the Icelandic, Danish, Swedish, German, Hungarian, Lette, and Wallachian languages, and is presumed originally to have been *Stor Eger*, *i. e.* migrating *Heron*, with which the Greek agrees in sound, but has no affinity of meaning, though it corroborates the interpretation of *Chasidah* in the Hebrew, similarly implying affection, piety, mercy, and gratitude. This name results from a belief, general through all ancient Asia, in the attachment of these birds to each other; of the

young towards the old, and of the parents towards their young. But the latter part of this opinion is alone verified by the moderns, in cases where the mother bird has perished while endeavouring to save her progeny. This occurred in the great fire at Delft, and more recently at the battle of Friedland, where a fir-tree with a stork's nest in it being set on fire by a howitzer-shell, the female made repeated efforts to extricate her young, and at length, as in the other case, was seen to sink in the flames. Without, therefore, admitting the exaggerated reports, or the popular opinions of the East, respecting the stork, enough is shown to justify the identification of *Chasidah* with that bird; notwithstanding that some learned commentators have referred the word to Heron, and to several other birds, though none upon investigation are found to unite in the same degree the qualities which are ascribed to the species in Lev. xi. 19; Deut. xiv. 18; Job xxxix. 13; Psa. civ. 17; Jer. viii. 7; Zech. v. 9.

510.

Storks are about a foot less in height than the crane, measuring only three feet six inches from the tip of the bill to the end of the toes, and nearly the same to the end of the tail. They have a stout, pointed, and rather long bill, which, together with their long legs, is of a bright scarlet colour; the toes are partially webbed, the nails at the extremities flat, and but little pointed beyond the tips of the joints. The orbits are blackish, but the whole bird is white, with the exception of a few scapulars, the greater wing covers, and all the quills, which are deep black: they are doubly scalloped out, with those nearest the body almost as long as the very foremost in the wing. This is a provision of nature, enabling the bird more effectually to sustain its after weight in the air; a faculty exceedingly important to its mode of flight with its long neck, and longer legs equally stretched out, and very necessary to a migrating species believed to fly without alighting from the lower Rhine, or even from the vicinity of Strasburg, to Africa, and to the Delta of the Nile. The passage is performed in October, and, like that of cranes, in single or in double columns, uniting in a point to cleave the air; but their departure is seldom seen, because they start generally in the night; they rise always with clapping wings, ascending with surprising rapidity out of human sight, and arriving at their southern destination as if by enchantment. Here they reside until the last days of March, when they again depart for the north, but more leisurely and less congregated. A feeling of attachment, not without superstition, procures them an unmolested life in all Moslem countries, and a notion of their utility still protects them in Switzerland, Western Germany, and particularly in Holland, where we have seen them (at Middelburg) walking with perfect composure in a crowded vegetable market. Storks build their nests in pine, fir, cedar, and other coniferous trees, but seem to prefer lofty old buildings, towers, and ruins: there are always several located on the tops of the isolated pillars at Persepolis; and they often obstruct the Muesim by nestling in their way, about the summits of the minarets which these servants of the mosques must ascend to call the congregation to prayer. Several modern writers still assert the filial affection of young storks, whom they describe as assisting their aged parents when they cannot any longer fly with vigour, and as bringing them food when unable to provide for themselves. Without entirely rejecting the fact of affectionate relations among these birds, it may be remarked that storks live to a good old age; and as they have a brood (sometimes two) every year, the question is, which of these takes charge of the decrepid parents? It cannot be the youngest, not as yet of sufficient strength, nor those of preceding years, which are no longer in their company. Besides, the weaker birds remain and breed in the south. May it not be conjectured that much of this belief is derived from a fact, which we have ourselves had an opportunity of witnessing, though we could not distinguish whether the flight was composed of cranes or storks? In an exceedingly stormy day, when their southward course had been suddenly opposed by a contrary gale, we saw a column of birds still persisting in their toil, but at a lower elevation, and changing their worn-out leader; and the bird on taking his station in the rear was clearly attended for a moment by three or four others of the last, who quitted their stations as if to help him to reach the wake of the line. With regard to the snake-eating habits of the species, the Marabbu, or adjutant bird of India, often classed with storks, is undoubtedly a great devourer of serpents, but not so much so as the common peacock; and that domestic fowls are active destroyers of the young of reptiles, may be observed even in England, where they carry off and devour small vipers. The chief resort however of storks, for above half the year, is in climates where serpents do not abound: and they seem at all times to prefer eels, frogs, toads, newts, and lizards; which sufficiently accounts for their being regarded as unclean (perhaps no bird sacred in Egypt was held clean by the Hebrew law). Storks feed also on field mice; but they do not appear to relish rats, though they break their bones by repeated blows of their bills.

In conclusion, *Agyst*, the Russian (?) name of the stork according to Merrick, does not appear to be related to the Hebrew, unless it could be shown that the Esthonian *Aigr* or *Aigro*, applied to the same bird, and the old Teutonic *Aigel*, Danish *Hegre*, Italian and Provençal *Arione*, *Aigron*, denominations of the common heron, are from the same source, and not primitive appellatives in the great northern family of languages, which, it must be confessed, are not solitary examples in vocabularies so remote from each other. Of the

smaller sized, more solitary black stork, no mention need be made in this place, because it is evidently not the bird referred to in the sacred writers.—C. H. S.

STREETS. [Towns.]

STRIPES. [Punishments.]

1. SUCCOTH (סֻכּוֹת, *booths;* Sept. Σοκχώθ), the first encampment of the Israelites on the Egyptian side of the Red Sea (Exod. xii. 37; xiii. 20; Num. xxxiii. 5) [Exodus].

2. SUCCOTH, a town in the tribe of Gad (Josh. xiii. 27), on the east of the Jordan (Judg. viii. 5; 1 Kings vii. 6). The spot in which the town stood is called 'the Valley of Succoth,' and must have been part of the valley of the Jordan. The place derived its name from Jacob having tarried some time there on his return from Padan-aram, and made *booths* for his cattle (Gen. xxxiii. 17).

SUMMER. [Palestine.]

SUPH (סוּף), translated 'flags' in the Auth. Vers., means some aquatic plant. It is mentioned in Exod. ii. 3, 5; Isa. xix. 6; Jonah ii. 6; but it is difficult to say whether it may not have been used in a comprehensive sense, as sea-weed is with us, rather than have been confined to one of the plants growing in the sea. The word *suph* occurs in several other passages: these, however, have reference to the Red Sea, which by the Hebrews was called *Suph Sea*. Rosenmüller states that this, 'in the Coptic version of the Pentateuch, and the Psalms, is called by its old Egyptian name, the *Shari* Sea.' But *Shari*, or, as the Greeks pronounced it, *Sari*, is the Egyptian name for tangles or sea-weeds, of which there is great abundance in that sea. In Jonah ii. 5, 'sea-weed was wrapped around my head,' one of the *fuci* would seem to be indicated. Lady Calcott selects *zostera marina*, or sea wrack, which resembles them in habit. It has by others been translated *juncus*, *arundo*, *carex*, &c. Rosenmüller says, there is no doubt that a species of *sari* is denoted by *suph*, which, according to Pliny, grows on the banks of the Nile. 'Fruticosi est generis sari, circa Nilum nascens, duorum ferme cubitorum altitudine, pollicari crassitudine; coma papyri, similique manditur modo.' This is supposed to be some reed, or grass-like plant. It is curious that the names *sar* and *sari* extend even to India. There is a species of *saccharum* growing in the neighbourhood of Calcutta, which has been named *S. Sari* by Dr. Roxburgh.—J. F. R.

SUPPER OF THE LORD (Κυριακὸν δεῖπνον), so called by St. Paul in his historical reference to the Passover Supper as observed by Jesus on the night in which he was betrayed (1 Cor. xi. 20; Matt. xxvi. 20-31). As regards the day on which our Lord observed the Passover, it seems more proper to say, that the Pharisees, the dominant party among the Jews, *deferred* its observance a day in accordance with their traditions, than that Jesus *anticipated* it. What one party considered the fourteenth Nisan, would to the other be the thirteenth. This supposition seems best to harmonize any apparent discrepancy in the accounts of the evangelists.

Several controverted points may perhaps be best adjusted by a connected harmony of the last Passover of the Lord, constructed from the evangelic narratives alluding to it, but filling up the various omitted circumstances from the known Passover rites [Passover].

'Now, when it was evening, Jesus sat down with the twelve (Matt.) Apostles' (Mark). The first customary washing and purifications being performed, the blessing over the *first cup* of wine, which began the feast, would be pronounced, probably in the usual form—'We thank thee, O God, our Heavenly Father, who hast created the fruit of the vine.' Considering the peculiarity of the circumstances, and the genius of the new dispensation about to be established—that the great Teacher had already declared the superiority of simple forms to the involved traditions of the Jewish doctors, and that his disciples alone were present on this occasion—it may be supposed that, after the blessing over the herbs, the recital of the liturgy (or *haggadah*) explanatory of the redemption of their ancestors from Egyptian bondage, would be somewhat simplified, and perhaps accompanied with new reflections.

Then probably *the second cup* of wine was mingled, and with the flesh of the paschal lamb, feast-offerings, and other viands, placed before the Lord. 'And he said unto them, With desire have I desired to eat this Pascha with you before I suffer; for I say unto you, I shall no more eat thereof until it be fulfilled in the kingdom of God. And he took the [second] cup, and gave thanks, and said, Take this, and divide among you, for I say unto you, I will not henceforth drink of the fruit of the vine until the kingdom of God shall come' (Luke).

When the wine distributed to each would be drunk off, one of the unleavened cakes would next be broken, the blessing said over it, and a piece distributed to each disciple, probably with the usual formula:—'This is the bread of affliction which your fathers did eat in the land of Egypt'—*i. e.*, not the identical bread, transubstantiated, but a memorial or sign of it. The company would then proceed with the proper supper, eating of the feast-offering, and, after a benediction, of the paschal lamb.

'And as they were at supper,* the Devil having now put it into the heart of Judas to betray him; Jesus, knowing that the Father had given all things into his hands, and that he was come from God, and was going to God, riseth from supper; and' after due preparations 'began to wash the disciples' feet' (John). After this striking symbolic exhortation to humility and mutual service (John xiii. 6-20), 'Jesus was troubled in spirit, and bare witness, and said, Verily, verily, I say unto you, that one of you will betray me. Then the disciples looked on one another, doubting of whom he spake' (John). 'And they were very sorry, and began each of them to say unto him, Lord, is it I?' (Matt.) 'One of the disciples, leaning back on Jesus's breast, saith unto him, Lord, is it I? Jesus answered, He it is to whom I shall

* The translation of the phrase δείπνου γενομένου by 'supper being ended,' has much confused the various narratives, and led many to think that Judas was present at the Lord's Supper, properly so called. The true reading probably is γινομένου (not γενομένου), as understood by the Arabic and Persic translators, in the sense 'while supper was about,' or 'during supper-time.'

give a sop, when I have dipped it. And after dipping the sop he giveth it to Judas Iscariot. Then Satan entered into him. Jesus saith unto him, What thou doest, do quickly. He then, on taking the sop, went immediately out; and it was night' (John).

The supper would then proceed, until each had eaten sufficient of the paschal lamb and feast-offering.

'And as they were eating, Jesus took the bread,' the other unleavened cake left unbroken, 'and blessed' God 'and brake it, and gave it to the' eleven 'disciples, and said, Take eat; this is my body (Matt., Mark), which is broken for you: this do in remembrance of me' (Luke, Paul, 1 Cor. xi. 24).

The supper being concluded, the hands were usually washed the second time, and *the third cup* or 'cup of blessing' (1 Cor. x. 16) prepared, over which the master usually gave thanks for the Covenant of Circumcision, and for the law given to Moses. Jesus, therefore, at this juncture, announced, with peculiar appropriateness, his New Covenant.

'After the same manner, also, Jesus took the cup after supper, and, having given thanks, gave it to them, saying, Drink all of you out of it; for this is my blood of the new covenant, which is shed for many for forgiveness of sins (Matt.): this do, as oft as ye drink, in remembrance of me' (1 Cor. xi. 24). But I say unto you, I shall not drink henceforth of this fruit of the vine, until that day when I drink it new (*καινόν*) with you in my Father's kingdom' (Matt.).

'And when they had sung a hymn' (Matt.), probably the Hallel, our Lord discoursed long with his disciples about his approaching death and departure (John xiii. 31; xiv. 31), and when he had finished he said, 'Arise, let us go hence.' 'And they went out on to the Mount of Olives' (Matt.).

A multitude of disputes and controversies have existed in the church, from the earliest ages of Christianity, regarding the nature, observance, and elements of the Lord's Supper. On these points the reader may consult the following works:—Pierce, Waterland, Cudworth, Hoadley, and Bell, *On the Eucharist;* Dr. Wiseman's Roman Catholic *Lectures*, and Dean Turton's *Reply;* Orme's *Lord's Supper Illustrated*, Lond. 1832; Goodman, *On the Eucharist*, Lond. 1841; Coleman's *Christ. Antiq.;* Dr. Halley, *On the Sacraments*, Lond. 1845; De Linde and Mearns's *Prize Essays on the Jewish Passover and Christian Eucharist*, Lond. 1845. The early church appears, from a vast preponderance of evidence, to have practised communion weekly, on the Lord's day. The custom, which prevailed during the first seven centuries, of mixing the wine with water, and in the Greek church with *hot* water, appears to have originated with the ancient Jews, who mingled their thick, boiled wine with water (Mishna, Tr. *Teroomoth*, xi.).* The raisin-wine, often employed both by the ancient and modern Jews (*Arbah Turim*, § 483, date 1300), contains water of course. Remnants of this custom are still traceable in the East. The Nestorian Christians, as late as the sixteenth century, as we find from the old travellers, celebrated the Eucharist in such wine, made by steeping raisins one night in water, the juice being pressed forth (Osorius, *De Rel. Emanuel*, lib. iii.; Boter, *Rel.*, p. 3, lib. ii.; Odoard Barboso, ap. Ramum., v. i. p. 313; Prof. Brerewood, *On Div. Lang.*, 1622, p. 147). The Christians of India (said to be converted by St. Thomas) used raisin-wine, as also do some of the Syrian churches at the present day (Ross's *Pansebeia;* 1683, p. 492; W. Ainsworth's *Travels in Asia Minor*, 1842). The third Council of Braga would not permit the use of the pure 'fruit of the vine,' for they condemned as heretics 'those who used *no other wine* but what they pressed out of the clusters of grapes, which were then presented at the Lord's Table' (Bingham, *Christ. Antiq.*, V. ch. ii.).

It seems to us, however, that the language of Jesus is conclusive on this point. Dr. De Wette (*on Matt.* xxvi. 29) observes, that 'the wine is called *new* here, in reference to the future renovation of all things at Christ's coming. It refers to an ideal celebration of the supper in a glorified state.' This is true; but this able critic should have further explained why the wine must be new rather than the bread. The reason is plainly referable to the *kind* of wine which the disciples were then drinking. Had Jesus been speaking of fermented wine he could not have used this language, because of such it is said that 'the *old* is better than the new' (Luke v. 39). But the wine here employed to symbolize the heavenly or spiritual feast was of a kind which is best when *new*, or, as Clement of Alexandria designates it (*Pæd.* ii.), '*the blood of the vine*,' which of course is in its best state when pure and fresh from the vintage. The wine employed at the last Supper of our Lord must, therefore, have been made either from dried or preserved grapes, or from the juice preserved by boiling or by preventing the access of air.

As regards the bread, many of the Eastern churches use unfermented bread in the Communion. 'The Greek church adopts a leavened bread, but the Roman church has it unleavened; and this difference has been the cause of much controversy, though it seems easy to decide which kind was used by Jesus, the last Supper having been on one of the "days of unleavened bread," when no other kind could be eaten in the land of Judæa.' The Protestant churches, generally, pay little regard to the *nature* of the elements, but use the ordinary bread, as well as wine, of the country. It was probably from regarding in a similar way the bread and wine as mere ordinary beverage, that some of the ancient sects gave up the wine altogether, and substituted other things. Epiphanius (*Hæres.* 49) and Augustine (*Hæres.* 28) mention an ancient sect of Christians in Phrygia, called Artotyrites, because they used bread and cheese. Others made use of bread and water only; and the third Council of Braga (A.D. 675) condemn a custom of communicating in bread and milk. If, however, the elements of the Supper are to be regarded in a symbolic sense, after the manner of the Jewish Passover—if the language of our Lord is to be applicable to wine in the present day—it would seem that at-

* Maimonides (in *Chometz Vematzah*, sect. vii.) states, that the proportion of pure wine in every cup must not be less than the fourth part of a quarter of a hin, besides water which must needs be mingled, that the drinking of it may be *the more pleasant.*

tention should be paid, not only to the name, but to the nature of the elements; that the symbol and the things symbolized should naturally correspond, and still retain a reference to the ancient Passover. 'For,' as St. Paul observes, 'Christ our Passover is sacrificed for us. Therefore let us keep the feast, not with old leaven, nor with the leaven of malice and wickedness; but with the unleavened *bread* of sincerity and truth' (1 Cor. v. 8).—F. R. L.

SUSA. [Shushan.]

SUSANNAH. [Daniel, Apocryphal addenda to.]

SWALLOW (סִיס *Sis*, and דְּרוֹר *Deror*). The latter is sometimes translated 'turtle-dove,' but it is more properly the 'swift' or 'black martin,' and, probably, the *Dururi* of Alexandria, mentioned by Forskal. The first occurs only in Isa. xxxviii. 14; Jer. viii. 7; the second in Psa. lxxxiv. 3; Prov. xxvi. 2. *Sis*, however, when coupled with עָגוּר *Ogur*, is by some thought to denote the *crane*, while the last-mentioned Hebrew word denotes the *swallow*. The Septuagint, Vulgate, and three ancient manuscripts point out the true meaning; and Bochart with others have established it by learned researches, which leave little to be desired, although Rabbinical writers produce Arabic authority to prove that *Sis* is the name of a long-legged bird. *Sis*, however, is an imitative name expressive of the swallow's voice or twitter, and in Dr. Kennicott's remark, that in thirteen Codices of Jerem. he read *Isis* for *Sis*, we find the source of the ancient fable of the Egyptian *Isis* being transformed into a swallow.

The species of Syria and Palestine, so far as they are known, appear all to be the same as those of Europe: they are, 1. *Hirundo rustica*, or *domestica*, the chimney swallow, with a forked tail, marked with a row of white spots, whereof *Hirundo Syriaca*, if at all different, is most likely only a variety.

2. *Hirundo Urbica*, the martin or common window swallow. These two are most likely the species comprehended under the name of *Sis*.

3. *Hirundo Riparia*, sand-martin or shore-bird, not uncommon in northern Egypt, near the mouths of the Delta, and in southern Palestine, about Gaza, where it nestles in holes, even on the sea-shore.

4. *Hirundo Assus*, the swift or black martin, distinguished by its larger size, short legs, very long wings, forked tail, and by all the toes of the feet turning forward: these, armed with small, crooked, and very sharp claws, enable the bird to hang against the sides of walls, but it cannot rise from the ground on account of the length of its wings. The last two, but more particularly this species, we take to be the *Deror*, on account of the name *Dururi*, already mentioned; which was most probably applied to it, because the swift martin prefers towers, minarets, and ruins to build in, and is, besides, a bird to which the epithet of 'free' is particularly applicable. On the European coast of the Mediterranean it bears the name of *Barbota*, and in several parts of France, including Paris, is known by the vulgar name of 'le Juif,' the Jew; and, finally, being the largest and most conspicuous bird of the species in Palestine, it is the type of the heraldic martlet, originally applied in the science of blazon as the especial distinction of Crusader pilgrims, being borrowed from Oriental nations, where the bird is likewise honoured with the term *Hadgi*, or Pilgrim, to designate its migratory habits. The *Deror* being mentioned as building on the altar, seems to imply a greater generalization of the name than we have given it; for habits of nesting in immediate contact with man belong only to the house and window swallows; but, in the present instance, the expression is not meant to convey a literal sense, but must be taken as referring to the whole structure of the temple, and in this view the swift bears that character more completely than the other. It is not necessary to dilate further on the history of a genus of birds so universally known.—C. H. S.

511. [The Swift—Dururi.]

SWEARING. [Oath.]

SWINE (חֲזִיר *chazir*). We have already noticed these animals [Boar], chiefly as they occur in a wild state, and here refer to the domesticated breeds only, because they appear to have been repeatedly introduced and reared by the Hebrew people, notwithstanding the strong prohibitions in the law of Moses (Isa. lxv. 4).

Egyptian pictures, the parable of the Prodigal Son, and Christ's miraculous cure of the demoniac, when he permitted swine to be possessed and destroyed by rushing over a precipice into the sea of Galilee, furnish ample proofs that during the dominion of the Romans they were kept around the kingdom of Judah; and the restrictive laws of Hyrcanus on this subject indicate that the Jews themselves were not altogether strangers to this unlawful practice. Commentators ascribe this abundance of swine to the numerous Pagan sacrifices of these animals in the temples: but we do not deem this to be a sufficiently correct view of the case, since hogs of every denomination were less used for that purpose than oxen, goats, and sheep. May it not be conjectured that in those days of a greatly condensed population the poor found in swine's flesh, and still more in the fat and lard, melted for culinary purposes, as it still is in every part of Pagan Africa, a most desirable aliment, still more acceptable than the salt fish imported from Sidon, to season their usual vegetable diet? 'When the melting fire burneth, the fire causeth the waters to boil' (Isa. lxiv. 2); and, again, 'a broth of abominable things in their vessels' (lxv. 4). For, although the Mosaic law

justly condemned the use of swine's flesh, at the time of the departure of Israel out of Egypt, when the state of slavery the people had been in, there is reason to believe, had greatly multiplied leprosy, and, moreover, when it was important to enforce cleanliness among the multitude on many accounts; yet the reasoning of the ancients and of commentators, Rabbinical and medical, regarding the unhealthiness of sound pork, in moderate quantities, as a condiment, or more generally as an article of food, is entirely erroneous. For in some provinces of Ancient Persia, the practice of curing animal food was known so early, that the procession of tribute-bearing deputies from the several satrapies, sculptured on the great stairs at Persepolis, represents at least one nation bringing preserved flesh meat, apparently hams, and already, before the conquest of northern Gaul by Cæsar, pork and various sausages were exported from Belgium to the Roman capital. Neither in the tropics, nor in the East, during the first centuries of Christianity, or in the era of the Crusades, or among the Christians of the present day, are any ill effects ascribed to the use of swine's flesh; and the Moslem population, which is debarred the use of this kind of food, is, perhaps, more liable to disease and to the plague than others, because it lacks the stamina of resistance to infection, and that supply of digestive nutriment which keeps the alimentary system in a healthy condition. The rich Moslem supply the deficiency by vegetable oils and butter, or ghee; hence, while the wealthy official class multiplies, the poorer classes, for want of a cheap supply of similar ingredients, diminish. As the Mosaic law was abrogated by the Christian, it was plainly meant to be only temporary; and if by the decrees of Providence the Gospel is once more to triumph in the land of the first Christian churches, it may hereafter be found that this apparently insignificant agent has been a considerable instrument in the event.—C. H. S.

SWORD. [Arms.]

SYCAMINE TREE (Συκάμινος) is mentioned only once in the New Testament, in Luke xvii. 6, 'And the Lord said, If ye had faith as a grain of mustard-seed, ye might say unto this *sycamine*-tree,' &c. From a slight similarity in name, this tree has often been confounded with the *sycamore*, both by ancient and modern writers. Both trees are, however, mentioned by the apostle, who must have had the technical knowledge necessary for distinguishing such things. Though the English version avoids translating the word, there can be little doubt of the mulberry-tree being intended; and it is frequently so rendered. Thus, Dioscorides says, Μορέα ἡ Συκαμινέα, &c., 'Mulberry or sycamine is well known.' Celsius shows (*Hierobot.* i. 290), by quotations from Athenæus, Galen, &c., that the Greeks called it by both names; and Corn. Celsus (*De Medicina*, iii. 18) says expressly, 'Græci morum συκάμινον appellant.' But still even ancient authors confound it with the sycamore, and therefore modern writers may be excused when so doing. Dr. Sibthorpe, who travelled as a botanist in Greece, for the express purpose of identifying the plants known to the Greeks, says that in Greece the white mulberry-tree is called μουρέα; the black mulberry-tree, συκαμενία. The mulberry, moreover, is a tree which we might expect to find mentioned in Scripture, since it is so common in Palestine. It is constantly alluded to by old travellers, and indeed is much cultivated in the present day, in consequence of its affording food for the silk-worm; and it must have been common also in

512. [Black Mulberry—Morus nigra.]

early times, or the silk-worms would not have obtained suitable food when first introduced. As the mulberry-tree is common, as it is lofty and affords shade, it is well calculated for the illustration of the above passage of Luke.—J. F. R.

SYCAMORE is a species of fig, *N. Ficus Sycomorus* of botanists, and the same as Shikmol.—J. F. R.

SYCHAR (Συχάρ), a name of reproach applied by the Jews to Shechem [Shechem].

SYCHEM (Συχέμ), the name for Shechem in Acts vii. 16, being that also used in the Septuagint version of the Old Testament [Shechem].

SYENE (סְוֵנָה; Sept. Συήνη) a city of Egypt, situated in the Thebaïs, on the southern extremity of the land towards Ethiopia (Ptol. iv. 5; Plin. *Hist. Nat.* v. 10; xii. 8; Strabo, pp. 787, 815). Ezekiel, describing the desolation to be brought upon Egypt through its whole extent, says, 'Thus saith the Lord, I will make the Land of Egypt utterly desolate, from the tower of Syene even to the border of Cush (Arabia),' or, as some read, is 'from Migdol to Syene,' implying, according to either version of the passage, the whole length of the country from north to south. Syene is represented by the present Assouan, which exhibits few remains of the ancient city, except some granite columns of a comparatively late date, and the sekos of a small temple. This building has been supposed by late travellers to have contained the famous well of Strabo (*Geog.* xvii. p. 817), into which the rays of a vertical sun were reported to fall during the summer solstice, a circumstance, says the geographer, that proves the place 'to lie under the tropic, the gnomon at midday casting no shadow.' But although excavations have been carried on considerably below

the pavement, which has been turned up in search of the well it was thought to *cover*, no other results have been obtained than that this sekos was a very improbable site for such an observatory, even if it ever existed; and that Strabo was strangely misinformed, since the Egyptians themselves could never in his time have imagined this city to lie under the tropic; for they were by no means ignorant of astronomy, and Syene was, even in the age of Hipparchus (B.C. 140, when the obliquity of the ecliptic was about 23° 51′ 20″), very far north of that line. The belief that Syene was in the tropic was however very general in the time of the Romans, and is noticed by Seneca, Lucan, Pliny, and others. But, as Sir J. G. Wilkinson remarks, 'a well would have been a bad kind of observatory if the sun *had* been really vertical; and if Strabo saw the meridian sun in a well, he might be sure he was not in the tropic' (*Mod. Egypt and Thebes*, ii. 286). The same writer adds, 'Unfortunately the observations of the ancient Greek writers on the obliquity of the ecliptic are not so satisfactory as might be wished, nor are we enabled, especially as La Grange's theory of the annual change of obliquity being variable is allowed to be correct, to ascertain the time when Assouan might have been within the tropic, a calculation or traditional fact in which, perhaps, originated the erroneous assertion of Strabo.' The latitude of Assouan is fixed by Wilkinson at 24° 5′ 30″, and the longitude is usually given as 32° 55′.

SYNAGOGUE (בֵּתֵּי הַכְּנֶסֶת), a Jewish place of worship. The Greek, from which the word is immediately derived (συναγωγή), denotes 'an assembly;' being similar in meaning to ἐκκλησία, whence our 'church' is taken. Both terms originally signified an assembly or congregation; but afterwards, by a natural deflection of meaning, they both came to designate the building in which such church or assembly met. The Hebrew phrase ('house of assembly') is more strictly descriptive of the place than were originally 'synagogue' and 'church.' The latter word retains its ambiguity; the former has lost it, signifying now and in the time of our Lord exclusively a building.

The precise age of the introduction of synagogues among the Israelites it does not appear easy to determine. There is a natural tendency among men, nor least among those who are given to letters, to refer institutions back to very early periods; and the Rabbins surpassed all others in this exaggerating propensity. Hence, we believe, arose the traditionary and Targuminical stories of the extreme antiquity of synagogues. Even a patriarchal origin has been ascribed to them. But the statements made are unworthy as of credence, so of investigation. It is quite certain that if synagogues were in use in the days of Abraham, we have no evidence to establish this as an historical fact; and averments which rest on conjecture or legends may well be passed in silence. A passage in Acts (xv. 21) certainly speaks of the antiquity of synagogues in the first century: 'Moses of old (ἐκ γενεῶν ἀρχαίων) hath in every city them that preach him, being read *in the synagogues* every Sabbath-day.' But 'of old' is a relative term. The 'ancient generations' here spoken of may not reach back farther than the return from Babylon. If, indeed, Psalm lxxiv. was written before the exile, synagogues were known previously to that event. This, however, would leave a long interval between the date of the psalm and the days of the patriarchs untouched and unaffected. The words to which we refer are found in ver. 8: 'They have burned up all the synagogues of God (מועדי אל) in the land.' Ewald (*Die Poet. Bücher des Alten Bundes*, 2 th. p. 293) refers this composition to the time of Nehemiah (B.C. 445). Tholuck gives for its date the year B.C. 588, when the kingdom of Judah was overrun by the Chaldæans, and the temple plundered and burnt down. The Hebrew words, however, do not necessarily denote synagogues. 'Houses of God' is a general term, and may refer to any sacred place. There may be here a reference to the schools of the prophets, preserved by the principle of reverence long after the spirit of prophecy and the pursuits of learning had ceased to fill them with eager pupils. If we might, from 2 Kings iv. 23, suppose that at least on festival occasions pious Israelites resorted to the prophets for prayer and advice, we could easily understand how such a practice would spontaneously convert the places where they abode into a species of synagogue; and not improbably we may here find the germ out of which the proper synagogue worship arose. Psalm cvii. 32, 'Let them exalt him also in the congregation of the people, and praise him in the assembly of the elders,' affords words which will correspond with that worship, but proves nothing as to a præ-exilian custom, since it was written after the return from captivity; for even Tholuck says, 'Freilich nach dem Exil' (*Psalmen für Geistliche und Laien*, p. 343. Halle, 1843).

The earliest worship was offered to God in what may with propriety be termed his own house—sub DIVO—before the eye of Heaven, in the open air. But such a temple was too vast for the human mind, which lost itself in the immensity of space, and needed narrower limits, in order to concentrate, fix, and inflame its sympathies. Accordingly, in the course of time, particular spots were approved of God as worshipping places, till at length one distinguished house of prayer was chosen and established in Zion. The temple-worship, as it was constituted in the days of David and Solomon, was grand, august, and imposing. Yet can we easily understand how a felt necessity would arise for a more intimate and closer, if it must be also majestic, intercourse with God, by the intermediation of certain solemnities in which all and each of a congregation would have an individual share. Nor would this feeling of want wait for any other condition than an active and somewhat refined religious sense experienced in a population of which only a small number could crowd and find room in the gates of the national temple: so that there is nothing unreasonable nor imaginary in giving to the origin of synagogues an earlier date than the period of the exile.

To this epoch it is that the origin of synagogues is generally referred; and beyond a doubt there were then peculiar circumstances which called for their establishment. Yet the considerations into which we have gone may possibly warrant the idea that the wish rather developed than originated the influences out of which the worship in question sprung. Unquestionably, however,

then, if not before, synagogues came into existence. A later date cannot well be assigned. Deprived of the solemnities of their national worship, yet still retaining their religious convictions, and keenly feeling the loss they had endured, earnestly, too, longing and praying for a restoration of their forfeited privileges, the captive Israelites could not help meeting together for the purposes of mutual sympathy, counsel, and aid, or of prayer and other devout exercises. But prayer makes every spot holy ground. Some degree of secrecy, too, may have been needful in the midst of scoffing and scornful enemies. Thus houses of prayer would arise; and the peculiar form of the synagogue worship—namely, devotion apart from external oblations—would come into being. It has, indeed, been asserted (Bauer, *Gottesd. Verfassung*, ii. 125) that synagogues were not known till the time of Antiochus Epiphanes (B.C. 174), on the ground that it is then for the first time that the term is used by Josephus—one more instance added to the hundreds which already existed, of the folly which denies an historical reality to every thing for which positive vouchers cannot be found in the Jewish historian. Such arguments would have some force if Josephus had professed to narrate every thing, and left us as many volumes as he has left us chapters. That he did not consider it 'set down in his duty' to give an exact history of the origin and progress of the synagogue-worship, may be inferred from the fact that his mention of synagogues is only occasional and *en passant*.

The authority of the Talmudists (such as it is) would go to show that a synagogue existed wherever there were ten families. What, however, is certain is, that in the times of Jesus Christ synagogues were found in all the chief

513. [Jewish Synagogue in Amsterdam.]

cities and lesser towns of Palestine. These places are then spoken of as well known, and therefore long-established houses of worship, and obviously formed an essential and recognised portion of the national inheritance. There was a synagogue at Nazareth (Luke iv. 16), one also at Capernaum (Mark i. 21), as well as in the several cities of Syria, Asia Minor, and Greece, which had a Jewish population (Acts ix. 2; xiii. 5; xiii. 42; xiv. 1; xvii. 1, 10; xviii. 4; xix. 8; and see also Joseph. *Antiq.* xix. 6. 3; *De Bell. Jud.* vii. 3. 3). The larger cities had several. In Acts ix. 2, we find Paul asking for letters to Damascus '*to the synagogues*' (ver. 20). In Jerusalem, one Rabbinical authority (*Megill.* lxxiii. 4) represents the number to have been 480; another (T. Hieros. *Ctuboth*, xxxv. 3) makes them 460. From Acts vi. 9, it appears that every separate tribe and colony had a synagogue in Jerusalem. The reader must not confound synagogues with the προσευχαί, houses of prayer, oratoria, oratories, chapels, places 'where prayer was wont to be made' (Acts xvi. 13), which, as in the place just cited, were mostly near a piece of flowing water, in order to afford the Jews means of observing their custom of washing before prayer (Joseph. *Antiq.* xiv. 10. 23; Deutsch, *De Sacris Judæorum ad litora frequenter exstructis*). Synagogues were built sometimes on the outside of cities, but more frequently within, and preferably on elevated spots. At a later period they were fixed near burial-places. A peculiar sanctity was attached to these spots, even after the building had fallen to ruin (Mishna, *Megill.* 3. 3). In the

Synagogue pious Israelites assembled every Sabbath and festival day, the women sitting apart from the men (Philo, *Opp.* ii. 458, 630); and at a later period, on every second and fifth day of each week (T. Hieros. *Megill.* 75. 1; T. Babyl. *Babd. Kama*, 82. 1), for the purposes of common prayer, and to hear portions of the sacred books read; which was performed sometimes by any one of the company (Luke ii. 16), or, according to Philo (*Opp.* ii. 630, ed. Mang.), by any one of the priests or elders (*τῶν ἱερέων δέ τις ὁ παρὼν ἢ τῶν γερόντων εἰς ἀναγινώσκει τοὺς ἱεροὺς νόμους αὐτοῖς καὶ καθ' ἕκαστον ἐξηγεῖται*), who, as the passage just quoted shows, expounded each particular as he proceeded. The writings thus read aloud and expounded were the Law, the Prophets, and other Old Testament books (Acts xiii. 15; xv. 21; Mishna, *Megill.* 3. 4; Eichhorn, *Einleit. ins A. T.* ii. 458, sq.). The language in which the Scriptural passages were read cannot be generally and accurately determined. It doubtless varied according to circumstances. Ezra (Neh. viii. 8), if he read in the old Hebrew, gave the sense in the Chaldee. The Septuagint translation was in very common use in the time of our Lord, and may have been *employed* in synagogues. It appears (T. Hieros. *Sota*, 7) that in Cæsarea, a city more Græcian than Jewish, the prayers were uttered in the Greek tongue. In synagogues out of Palestine, the Greek translation seems to have been read conjointly with the original text. The exposition of the Scripture was doubtless made in each nation in the vernacular tongue; accordingly, in Palestine the worship of the synagogue was conducted in Syro-Chaldee. In Egypt, from the time of the Ptolemies, the Greek language was customary in the services of the synagogue.

The expositor was not always the same person as the reader (Philo, *Opp.* ii. 458, 476). A memorable instance in which the reader and the expositor was the same person, and yet one distinct from the stated functionary, may be found in Luke iv. 16, sq., in which our Lord read and applied to himself the beautiful passage found in the prophecy of Isaiah (lxi. 4). The synagogue, indeed, afforded a great opportunity for preaching the gospel of the kingdom; and the reader may well suppose that the novelties of doctrine which were then for the first time heard within its walls created surprise, delight, wonder, and indignation in the minds of the hearers of our Lord and his apostles, according to their individual spiritual condition.

After the reading and exposition were concluded, a blessing was pronounced, commonly by a priest. The people gave a response by uttering the word *Amen;* when the assembly broke up (1 Cor. xiv. 16).

At the head of the officers stood the 'ruler of the synagogue' (*ἀρχισυνάγωγος*, ראש הכנסת), who had the chief direction of all the affairs connected with the purposes for which the synagogue existed (Luke viii. 49; xiii. 14; Mark v. 35, seq.; Acts xviii. 8; Vitringa, *Archisynag. Observat. novis Illustrat.*). Next in rank were the elders (Luke vii. 3), called also 'heads of the synagogue' (Mark v. 22; Acts xiii. 15), as well as 'shepherds' and 'presidents,' who formed a sort of college or governing body under the presidency of the chief ruler. There was in the third place the שליח הצבור, *legatus ecclesiæ*, 'the angel of the church,' who in the synagogue meetings acted commonly as the speaker, or as the Protestant minister, conducting the worship of the congregation (Mishna, *Rosh Hasshana*, 4. 9), as well as performed on other occasions the duties of secretary and messenger (Schöttgen, *Hor. Heb.* i. 1089, sq.). Then came, fourthly, 'the minister' (Luke iv. 20), the attendant who handed the books to the reader, was responsible for the cleanliness of the room, and for its order and decency, and opened and closed the synagogue, of which he had the general care. In addition, there probably were almoners or deacons, גבאי צדקה (Matt. vi. 2), who collected, held, and distributed the alms of the charitable.

In regard to the furniture of the synagogue, seats merely are mentioned in the New Testament (Matt. xxiii. 6; James ii. 3). The 'chief seats,' or rather 'front seats' (*πρωτοκαθεδρίαι*), were occupied by the Scribes and Pharisees. The outfit may have been more simple in the days of Christ; still there was probably then, as well as at a later period, a sort of pulpit (*βῆμα*, בימה, מגדל), and a desk or shelf (*θήκη*, תכה or תיק), for holding the sacred books (Mishna, *Berach*, v. 3; *Rosh Hasshana*, 4. 7; *Megilla*, 3. 1; *Sabb.* 16. 1). Some sort of summary judicature seems to have been held in the synagogues, and punishments of flogging and beating inflicted on the spot (Matt. x. 17; xxiii. 34; Mark xiii. 9; Luke xii. 11; xxi. 12; Acts xxii. 19; xxvi. 11; 1 Cor. xi. 22). The causes of which cognizance was here taken were perhaps exclusively of a religious kind. Some expressions in the Talmud seem to imply that a sort of judicial triumvirate presided in this court (Mishna, *Sanhed.* i.; *Maccoth*, 3. 12). It certainly appears from the New Testament that heresy and apostacy were punished before these tribunals by the application of stripes.

The reader may have been struck by some resemblance between this account and the arrangements which prevailed in the early Christian churches. The 'angel of the church' (Rev. ii. 1), the pastor, was obviously taken from the synagogue. Winer, however, denies that 'the messengers of the churches' (2 Cor. viii. 23) has any connection with the *legatus ecclesiæ*. The words 'because of the angels' (1 Cor. xi. 10) have been referred to this same office,—a reference which Winer does not approve. Meier (*Commentar*, in loc.) holds that the allusion is to celestial beings, an idea which he thinks Paul derived from Judaism (Septuagint, Ps. cxxxviii. 1; Tobit xii. 12; Burt, *Synag.* p. 15; Grotius, *in loc.;* Eisenmeier, *Entdeckt. Judenth.* ii. p. 193).

The work of Vitringa (*De Synagogâ Veterum*) remains the chief authority on the subject, though published in 1696. See also Burmann, *Exercitt. Acad.* ii. 3, sq.; Reland, *Antiq. Sacr.* i. 10; Carpzov, *Appar.* p. 307, sq.; Hartmann, *Verbind. des A. T. mit d. Neuen*, p. 225, sq.; Brown, *Antiquities of the Jews*, vol. i. p. 590, sq.—J. R. B.

SYNAGOGUE, GREAT (כְּנֶסֶת הַגְּדוֹלָה), the name applied in the Talmud to an assembly or synod presided over by Ezra, and consisting of one hundred and twenty men, alleged therein to have been engaged in restoring and reforming the worship of the Temple after the return of the Jews from Babylon. We shall here furnish the evidences of the existence of this assembly. 'The

house of judgment of Ezra is that called the *Great Synagogue*, which restored the crown to its original condition' (*Chron.* יוחסין, fol. 13). The *crown*, observes Buxtorf (*Tiberias*, ch. x.), 'was triple, consisting of the law, the priesthood, and the commonwealth;' and he explains this by adding that Ezra purified the law and the Scriptures generally from all corruptions. Again in the Jerusalem Talmud (*Cod. Megillah*, 3) it is said, 'When the men of the Great Synagogue arose, they restored magnificence (*i. e.* the crown of the law) to its pristine state.' In *Pirke Aboth*, cap. 1, it is observed that Moses received the law from Mount Sinai, gave it to Joshua, Joshua to the elders, the elders to the prophets, and these to the men of the Great Synagogue;' and in Tract *Yomah*, lxix. 2, it is added, 'Why is this called by the name of the Great Synagogue? Because they restored the crown to its pristine state.' In *Megillah*, fol. x. 2: 'This is a tradition from the men of the Great Synagogue;' and in *Baba Bathra*, fol. 15: 'The men of the Great Synagogue wrote Ezekiel, the twelve (minor) prophets, Daniel, and Esther;' and the glossator explains this by saying 'that they collected the books into one volume, and made new copies of them, knowing that the prophetic spirit was about to depart.' In *Pirke Aboth* it is added that Simeon the Just was the last survivor of the men of the Great Synagogue. He is supposed to have been contemporary with Alexander the Great (B.C. 332), and is said to have completed the canon by adding the books of Ezra and Nehemiah, and to have survived forty years the building of the second temple.

Abarbanel and some of the later Jewish commentators have amplified these statements, and some eminent Christian writers have adopted their views in regard to the history of the text of Scripture. We have already seen that several of the fathers held that the books of the law, having been destroyed at the burning of the temple by Nebuchadnezzar, were miraculously restored by Ezra [ESDRAS]. Buxtorf assumes that the labours of the Great Synagogue consisted only in restoring both the law and the entire Scriptures to their integrity, separating the false from the true, and removing corruptions. Carpzov (*Introd.* lib. i. ch. i.) observes, in reference to this subject, that the account of the restoration by Ezra of the law, which had been burned by Nebuchadnezzar, is 'a fable of the Papists derived from the fathers, but impugned by Bellarmine (*De Verb. Dei*, ii. 1), and Natalis Alexander, (*Hist. Eccles.*) [and others of the Roman church]. Neither,' he adds, 'did Ezra correct and amend the Scriptures, which had been corrupted during the captivity—a papistical comment built up by Cornelius a Lapide, (*Præm. Com.* p. 5), [and refuted by our divines (see Calovius); nor did he invent the present letters of the Hebrew alphabet, in place of the Samaritan—a fable refuted by Buxtorf [SCRIPTURE, HOLY]. But what Ezra really did was this: he collected the copies of the Scriptures into one volume, purified them by separating the spurious from the genuine, fixed the canon of divinely inspired books, and rejected all that was heterogeneous, and finally examined the canonical books, that nothing foreign or depraved should be mixed up with them, and pointed out the true method of reading and expounding them: in which labour he had the assistance of Haggai, Zechariah, Malachi, Nehemiah [Ezra, Mordecai, Simon the Just], and the others, in all one hundred and twenty.' 'It was,' he observes, 'the unshaken principle of both Jews and Christians that the canon of the Old Testament was fixed once for all by Ezra and the men of the Great Synagogue.' Bellarmine also (*l. c.*) maintains that although some of the fathers supposed that the whole Scriptures had been burned and miraculously restored by Ezra, as Basil, whose words (*Ep. ad Chilon.*) are, 'Hic campus in quo secessu facto Esdras omnes divinos libros ex mandato Dei eructavit,' yet that from the statements of Chrysostom, 'that out of the *remains* of the Scripture Ezra recomposed it;' of Hilary (*Præf. in Psal.*), that 'Ezra had collected the Psalms into one volume;' and of Theodoret, that 'the Scripture having been depraved in the time of the exile was restored by Ezra;'—these fathers did not mean to assert that Ezra had restored the whole from memory, but only that he collected into one body the different books which he had found dispersed in various places, and amended such parts as had been corrupted by the negligence of transcribers. In opposition to all these views, Le Clerc (*Sentiments de quelques Théologiens*) maintains that the whole history of the Great Synagogue and the Esdrine Recension was a Talmudical fable; in which he was followed by Father Simon and many others. There certainly appears but a very slight foundation for the superstructure raised by Buxtorf (*Tiberias*), Carpzov, and Prideaux [ESDRAS]. That the law and the prophets, however, had not perished, but were read by the Jews during the exile, appears from Dan. ix. 1, 2, 6, 11, 12; comp. Ezra vi. 18; vii. 10.

Genebrard asserts that there were no less than three Great Synagogues, one in A.M. 3610, or B.C. 394, when the Hebrew canon, consisting of twenty-two books, was fixed; another in 3860 (B.C. 144), when Tobit and Ecclesiasticus were added; and a third in 3950 (B.C. 54), when the whole was completed by the addition of the books of Maccabees. But this statement, being unsupported by any historical proof, has met with no reception.—W. W.

SYNTYCHE (Συντύχη), a female Christian named in Phil. iv. 2.

SYRACUSE (Συράκουσαι), a celebrated city on the south-east coast of the island of Sicily. It was a strong, wealthy, and populous place, to which Strabo gives a circumference of not less than one hundred and eighty stades. The great wealth and power of Syracuse arose from its trade, which was carried on extensively while it remained an independent state under its own kings; but about 200 B.C. it was taken by the Romans, after a siege rendered famous by the mechanical contrivances whereby Archimedes protracted the defence. Syracuse still exists as a considerable town under its original name, and some ruins of the ancient city yet remain. St. Paul spent three days at Syracuse, after leaving Melita, when being conveyed as a prisoner to Rome (Acts xxviii. 12).

SYRIA (Συρία). This great country is mentioned under the name of ARAM in the Hebrew Scriptures, several parts of it being so designated,

with the addition of a district name; and it is only by putting together the portions thus separately denominated, that we learn the extent of country which the word indicated among the Hebrews [see ARAM]. Aram is usually rendered Syria in the Authorized and other versions: and in the time of the kings it more frequently indicates the kingdom of which Damascus was the capital than the whole country, or any other part of it. [DAMASCUS.] In the Maccabees the Greek text frequently employs the term 'Syria' to designate the empire of the Seleucidæ; and in the New Testament it occurs as the name of the Roman province (Matt. iv. 24; Luke ii. 2; Acts xv. 23, 41; xviii. 18; xx. 3; xxi. 3; Gal. i. 21), which was governed by presidents, and to which Phœnicia and (with slight interruption) Judæa also were attached; for in and after the time of Christ, Judæa was for the most part governed by a procurator, who was accountable to the president of Syria.

The word Syria is of uncertain origin. Some conceive it to be merely a contraction of Assyria, which was sometimes considered as part of it; while others conjecture that it may have been derived from Sur (Tyre), which may be regarded as the best known, if not the chief, town of the whole country. The names of both Aram and Syria are now equally unknown in the country itself, which is called by the Arabs Bar-esh-Sham, or simply Esh-Sham, *i. e.* the country to the left, in contradistinction to Southern Arabia or Yemen, *i. e.* the country to the right; because when, in order to determine the direction of the cardinal points, the eye is supposed to be directed towards the east, Arabia lies on the right hand, and Syria on the left. It is difficult to define the limits of ancient Syria, as the name seems to have been very loosely applied by the old geographers. In general, however, we may perceive that they made it include the tract of country lying between the Euphrates and the Mediterranean, from the mountains of Taurus and Amanus in the north, to the desert of Suez and the borders of Egypt on the south; which coincides pretty well with the modern application of the name. Some ancient writers, such as Mela (i. 11) and Pliny (v. 13), give to Syria a much larger extent, carrying it beyond the Euphrates, and making it include Mesopotamia, Assyria, and Adiabene. Understood in the narrower and more usual applications, Syria may be described as composed of three tracts of land, of very different descriptions. That which adjoins the Mediterranean is a hot, damp, and rather unwholesome, but very fruitful valley. The part next to this consists of a double chain of mountains, running parallel from south-west to north-east, with craggy precipitous rocks, devious valleys, and hollow defiles. The air is here dry and healthy; and on the western declivities of the mountains are seen beautiful and highly cultivated terraces, alternating with well-watered valleys, which have a rich and fertile soil, and are densely peopled. The eastern declivities, on the contrary, are dreary mountain deserts, connected with the third region, which may be described as a spacious plain of sand and rock, presenting an extensive and almost unbroken level.

Spring and autumn are very agreeable in Syria, and the heat of summer in the mountain districts is supportable. But in the plains, as soon as the sun reaches the equator, it becomes of a sudden oppressively hot, and this heat continues till the end of October. On the other hand, the winter is so mild, that orange-trees, fig-trees, palms, and many tender shrubs and plants flourish in the open air, while the heights of Lebanon are glittering with snow and hoar-frost. In the districts, however, which lie north and east of the mountains, the severity of winter is greater, though the heat of the summer is not less. At Antioch, Aleppo, and Damascus, there are ice and snow for several weeks every winter. Yet, upon the whole, the climate and soil combine to render this country one of the most agreeable residences throughout the East.

The principal Syrian towns mentioned in Scripture are the following, all of which are noticed under their respective names in the present work:—Antioch, Seleucia, Helbon, Rezeph, Tiphsah, Rehoboth, Hamath, Riblah, Tadmor, Baal-Gad, Damascus, Hobah, Beth-Eden.

Syria, when we first become acquainted with its history, was divided into a number of small kingdoms, of which the most important of those mentioned in Scripture was that of which Damascus was the metropolis. A sketch of its history is given under DAMASCUS. These kingdoms were broken up, or rather consolidated by conquerors, of whom the first appears to have been Tiglath-pileser, King of Assyria, about 750 B.C. After the fall of the Assyrian monarchy, Syria came under the Chaldæan yoke. It shared the fate of Babylonia when that country was conquered by the Persians; and was again subdued by Alexander the Great. At his death in B.C. 323, it was erected into a separate monarchy under the Seleucidæ, and continued to be governed by its own sovereigns until, weakened and devastated by civil wars between competitors for the throne, it was finally, about B.C. 65, reduced by Pompey to the condition of a Roman province, after the monarchy had subsisted 257 years. On the decline of the Roman empire, the Saracens became the next possessors of Syria, about A.D. 622; and when the crusading armies poured into Asia, this country became the chief theatre of the great contest between the armies of the Crescent and the Cross, and its plains were deluged with Christian and Moslem blood. For nearly a century the Crusaders remained masters of the chief places in Syria; but at length the power of the Moslems predominated, and in 1186 Saladin, Sultan of Egypt, found himself in possession of Syria. It remained subject to the sultans of Egypt till, in A.D. 1517, the Turkish sultan, Selim I., overcame the Memlook dynasty, and Syria and Egypt became absorbed in the Ottoman empire. In 1832, a series of successes over the Turkish arms gave Syria to Mehemet Ali, the Pasha of Egypt; from whom, however, after nine years, it again passed to the Turks, in consequence of the operations undertaken for that purpose by the fleet under the command of Admiral Stopford, the chief of which was the bombardment of Acre in November 1840. The treaty restoring Syria to the Turks was ratified early in the ensuing year. See Rosenmüller's *Bib. Geograph.*, translated by the Rev. N. Morren; Winer's *Real-Wörterb.* s. v.; Volney's *Travels*, ii. 289, 358; *Modern Traveller*, vol. ii.; Napier's *War in Syria*.

SYRIAC VERSIONS. The old Syriac version of the Scriptures is often called the *Peshito;* a term in Syriac which signifies *simple* or *single*, and which is applied to this version to mark its freedom from glosses and allegorical modes of interpretation (Hävernick, *Einleit.* Erst. Theil. zweite Abtheil. S. 90). The time when the Peshito was made cannot now be certainly known. Various traditions respecting its origin have been current among the Syrians, which partake of the fabulous. Jacob of Edessa, in a passage communicated by Gregory Bar Hebræus, speaks of 'those translators who were sent to Palestine by the apostle Thaddeus, and by Abgarus king of Edessa' (Wiseman, *Horæ Syriaeæ*, p. 103). This statement is not improbable. There is no good ground for absolutely rejecting it. It is true that other accounts are repeated by Bar Hebræus which must be pronounced fabulous; but the present does not wear the same aspect. Ephrem the Syrian, who lived in the fourth century, refers to the translation before us in such a manner as implies its high antiquity. It was universally circulated among the Syrians in his time; and accordingly he speaks of it as OUR *version*, which he would scarcely have done had it not then obtained general authority. Besides, it has been shown by Wiseman that many expressions in it were either unintelligible to Ephrem, or at least obscure. Hence this father deemed it necessary to give an explanation of many terms and phrases for the benefit of his countrymen. Such circumstances are favourable to the idea of an early origin. Perhaps it was made in the first century, agreeably to the tradition in Jacob of Edessa.

Its internal character favours the opinion of those who think that the Old Testament part, of which we are now speaking, was made by Christians. Had it proceeded from Jews, or one Jew, as Simon supposed, it would not have been free from the glosses in which that people so much indulged. It would probably have resolved anthropomorphisms and other figurative expressions, as is done in the Sept.; and have exhibited less negligence and awkwardness in rendering the Levitical precepts (Hirzel, *De Pentat. vers. Syr. indole, Commentat. erit.-exeget.*, p. 127, et seq.). Besides, the Messianic passages show that no Jew translated them. Dathe conjectured that the author was a Jewish Christian, which is not improbable; for the version *does* present evidence of Jewish influences upon it—influences subdued and checked by Christian opinions, yet not wholly imperceptible. Hence some have thought that use was made of the Targums by the translator or translators. This can scarcely be proved. The Jews were numerous throughout Syria and Mesopotamia, as we learn from Josephus; and their modes of interpretation were prevalent in consequence. There is therefore an approach to the Chaldaic *usus loquendi*—a similarity to Jewish exegesis. If the authors were originally Jews, who had afterwards embraced Christianity, this indication of Jewish influence is at once accounted for, without having recourse to the supposition that they made actual use of the Targums when translating the original. It is now impossible to tell whether the Septuagint was consulted by the authors of the Peshito. There is indeed a considerable resemblance between it and our version, not so much in single passages as in general tenor; but it is not *necessary* to assume that the Greek was used. Perhaps it was afterwards employed in revising and correcting the Peshito. The latter was sometimes interpolated out of it in after times (Hävernick, p. 92; Hirzel, p. 100; Credner, p. 107).

It is certain that it was taken from the original Hebrew. In establishing this position, external and internal arguments unite.

Eichhorn tried to show, from the parts of the version itself, that it proceeded from several persons. Without assenting to all his arguments, or attaching importance to many of his presumptive circumstances, we agree with him in opinion. Tradition, too, affirms the same thing; and the words of Ephrem are favourable where he says, on Josh. xv. 28, 'since *those* who translated into Syriac did not understand the signification of the Hebrew word,' &c. (Von Lengerke, *Commentatio Critica de Ephr. Syro s. s. interprete*, p. 24).

The Peshito contains all the canonical books of the Old Testament. The Apocryphal were not originally included. They must, however, have been early rendered into Syriac out of the Septuagint, because Ephrem quotes them. In his day, the books of Maccabees were wanting in the Syriac; as also the apocryphal additions to Daniel. After the Syrian church had been divided into different sections, various recensions of the version were made. The recension of the Nestorians is often quoted in the scholia of Gregory Bar Hebræus. According to Wiseman, this recension extended no farther than the points appended to the Syriac letters. The Karkaphensian recension is also cited by Bar Hebræus. For a long time this was supposed to be a separate version, till the researches of Dr. Wiseman at Rome threw light upon its true character. From the examination of two codices in the Vatican library, he ascertained that it was merely a revision of the Peshito, distinguished by a peculiar mode of pointing and a peculiar arrangement of the books, but not deviating essentially from the common text. In this recension, Job comes before Samuel; and immediately after Isaiah, the minor prophets. The Proverbs succeed Daniel. The arrangement in the New Testament is quite as singular. It begins with the Acts of the Apostles, and ends with the four Gospels; while the epistles of James, Peter, and John come before the fourteen letters of Paul. This recension proceeded from the Monophysites. According to Assemani and Wiseman, the name signifies *mountainous*, because it originated with those living about Mount Sagara, where there was a monastery of Jacobite Syrians, or simply because it was used by them.

The Peshito in the Old and New Testaments is one and the same version, having been made in the first century of the Christian era. Bishop Marsh, in his notes to Michaelis's Introduction to the New Testament, contends that the New Testament part was not made till after the canon had been formed, *i. e.* about the middle of the second century. From the fact, however, of its wanting the books that were not received at once by the early Christians, viz., the second epistle of Peter, the second and third of John, Jude, and the Apocalypse, it claims a higher antiquity than the learned prelate assigns it. Had the version been made in the third century, it is not probable

that these epistles would have been wanting. Michaelis therefore seems to have been right in placing it in the first century. Hug has endeavoured to show that the Peshito had originally the Apocalypse and the four Catholic epistles which are now wanting, and that they gradually disappeared from the version in the fourth century; but his opinion is improbable, as has been shown by Bertholdt and Guerike (Bertholdt, *Einleit.* th. ii. s. 635; Guerike, *Einleit.* s. 44, not. 1).

As the Old Testament part was made from the original Hebrew, so the New Testament portion was translated from the original Greek.

In consequence of the variety observable in the mode of translating different books, Hug supposes that the New Testament proceeded from different hands. This, however, is scarcely probable. The tradition of the Syrians themselves (Assemani, *Biblioth. Orient.* ii. 486) refers it to one person; and such is the opinion of Eichhorn. The text of it is somewhat peculiar. Hug assigns it to the κοινὴ ἔκδοσις, or *unrevised* text; while Griesbach thinks that it comes nearer the *Occidental* than any of the other recensions. Scholz reckons it to the Constantinopolitan, although he admits that it contains *Alexandrian* and *singular* readings.

The Old Testament Peshito was first printed in the Paris Polyglott, with a translation by Gabriel Sionita. The text is by no means accurate, for the editor supplied deficiencies in his MSS. out of the Vulgate. It was afterwards printed in the London Polyglott from various MSS.; but Professor Roediger pronounces the London edition to have been more carelessly executed on the whole than the Paris one (*Hallische Lit. Zeit.* 1832, No. 5, p. 38). The edition published by Professor Lee in 1823, 4to., for the use of the British and Foreign Bible Society, is the best. It was ably reviewed by Roediger in the *Hall. Lit. Zeit.* for 1832, No. 4. The best lexicon is Michaelis's reprint and enlargement of Castell's, published in two parts at Göttingen, 1788, 4to.

The New Testament Peshito was first made known in Europe by Moses of Merdin, a Syrian priest, who was sent by Ignatius, patriarch of Antioch, in 1552, to Pope Julius III., to acknowledge the supremacy of the Roman pontiff in the name of the Syrian church, and also to superintend the printing of the Syriac Testament. It was first published at Vienna in 1555, by Albert Widmanstadt, chancellor of Austria under Ferdinand I. Two MSS. were employed. L. de Dieu subsequently published the Apocalypse from an ancient MS. formerly in the library of the younger Scaliger, and afterwards in that of the university at Leyden, containing part of the Philoxenian or younger Syriac version; or rather of the translation made by Thomas of Harclea. (Lugd. Bat. 1627, 4to., reprinted with a Latin version and notes in his *Critica Sacra*, Amsterdam, 1693, fol.). Pococke published the four epistles, viz., second Peter, second and third John, and Jude, from a MS. in the Bodleian library (Lugd. Bat. 1630, 4to.). This is the *only* MS. of the Peshito, so far as is yet known, which contains these four epistles, together with the Acts and the three Catholic epistles universally acknowledged. The character of *this version* of the four epistles does not generally correspond with that of the Peshito; on the contrary, it appears to betray a later age, and probably belongs to the Philoxenian or Heraclean, of which it apparently forms a part. All the parts were collected and printed in the Paris Polyglott along with the Old Testament portion; and transferred to the London Polyglott, with corrections. The best editions of the New Testament Peshito are the second edition of Schaaf, Lugd. Bat. 4to., 1717; and that prepared by Professor Lee for the Bible Society, London, 1816, 4to. The best Lexicon, which also serves as a concordance, is Schaaf's, in one quarto volume, published at Leyden, in 1709, 4to.

The style of this version is generally pure, the original well translated, and the idioms transferred to the Syriac with ease, vigour, and propriety. It need create no surprise that it differs considerably from the Hebrew and Greek MSS. of the Old and New Testaments, since it existed much earlier than the oldest codices now extant. Its assistance in the interpretation of the New Testament is valuable and important. Nor is it wholly without its use in *the criticism* of the same (Winer, *De usu vers. Syriacæ N. T. critico caute instituendo*, Erlang. 1823, 4to.). See Davidson's *Lectures on Biblical Criticism*, the various Introductions to the Old and New Testaments, especially those of Hävernick and De Wette (last edition) to the Old, and those of Hug, Michaelis (by Marsh), and De Wette (last edition) to the New Testament; Wiseman, *Horæ Syriacæ*, vol. i., Romæ, 1828, 8vo. For the Old Testament Peshito consult also Hirzel, *De Pentat. vers. Syr. quam vocant Peschito, indole*, Lips. 1825, 8vo.; Credner, *De Prophetarum min. vers. Syr. quam Peschito vocant indole*, Götting. 1827, 8vo.; C. v. Lengerke, *De Ephræmi Syr. arte hermeneutica*, Regiom. 1831, 8vo., and *Comm. crit. de Ephr. Syro s. s. interprete*, Hal. 1828, 4to.; Gesenius, *Ueber Jesaia*, vol. i.; Lee, *Prolegomena* to Bagster's *Polyglott;* Simon, *Histoire Critique du V. T.*, Paris, 1678, 4to.

For the New Testament Peshito see also J. G. C. Adler, *N. T. versiones Syriacæ simplex, Philoxeniana et Hierosolymitana, denuo examinatæ et ad fidem*, &c., Hafniæ, 1789, 4to.; G. C. Storr, *Observationes super N. T. versionibus Syriacis*, Stuttg. 1772, 8vo.; J. G. Reusch, *Syrus interpres cum fonte N. T. Græco collatus*, Lips. 1741, 8vo. Various Arabic versions have been made from the Old Testament Peshito. These have been already mentioned [Arabic Versions]. The Persian version of the Gospels in the London Polyglott was also derived from the Peshito. Hug thinks that it was made at Edessa (*Introduction*, §§ 81, 82, 83).

Besides the Peshito, Gregory Bar Hebræus, in the preface to his *Horreum Mysteriorum*, mentions two other versions of the New Testament, the *Philoxenian* and the *Harclean*.

The *Philoxenian* was made from the original Greek into Syriac, in the city of Mabug. It is so called from Philoxenus or Xenayas, Bishop of Mabug or Hierapolis, in Syria. There is some uncertainty in relation to the part which this bishop took in the version. The testimony of Bar Hebræus is not uniform. In one passage he affirms that it was made *in the time of* Philoxenus; in his *Chronicon*, that it was done *by desire* of this bishop; and in another place of the

same work, that it was *his own production*. Aghelæus (Assemani, *Biblioth. Orient.* tom. ii. p. 83) states, that the author of it was Polycarp, rural Bishop of Philoxenus. Again, in an Arabic MS. quoted by Assemani, Philoxenus is said to have translated the four Gospels into Syriac. Thus all is uncertainty in regard to the authorship of the version. It cannot be ascertained whether it proceeded in whole, or in part only, from Philoxenus himself; or whether Polycarp, acting under his auspices and by his advice, deserves the honour of the work. One thing is certain, that it was made between the years 485 and 518 of the Christian era, most probably in 508.

No MS. of this version has been yet discovered, either complete or otherwise, so that it is impossible to ascertain its intrinsic merit. Bar Hebræus does not quote it. Hence it would seem to have been almost supplanted in his day. It is known to the public only by a few fragments constituting the marginal annotations of a very ancient Vatican MS. examined by Wiseman and numbered 153. The passages were first printed by Wiseman in his *Horæ Syriacæ*, p. 178, sq. As far as it is possible to judge from these specimens, the version was much superior to the Peshito,—a conclusion which agrees with the Syrian tradition respecting it.

The *Harelean* derives its name from Thomas of Harkel or Heraclea, in Syria. Various notices of Thomas's life have been collected by Bernstein from ancient authors. He was bishop of Mabug at the conclusion of the sixth and the commencement of the seventh century. From thence he fled into Egypt, and took up his abode in a monastery at Alexandria, where he laboured in amending the Syriac Philoxenian version of the New Testament. From postscripts added by himself it appears that he corrected the Gospels of the Philoxenian after two (some MSS. have *three*) Greek MSS.; the Acts and the Catholic epistles after one. Having revised and amended the entire text with great care, rendering it as conformable as possible to the Greek copies which he had before him, the work was completed and published in the year of Christ 616. The basis of it was the Philoxenian; but the Peshito seems to have been also consulted. Still it was not so much *a new recension* of the Philoxenian, as an additional version of the New Testament; and accordingly it is described as *a third* translation by Bar Hebræus. The most complete MS. of this translation which has yet been described, is that which formerly belonged to Ridley, now in the library of New College Oxford. Those who wish to know more of this copy must consult Ridley's *Dissertation concerning the Genius and Use of Syriac Versions of the New Testament* (London, 1761), and White's preface to the printed edition of it. It contains all the books of the New Testament except the Apocalypse, and from the 27th verse of the eleventh chapter of the Epistle to the Hebrews, to the end of that epistle. The edition of Professor White is the only one of *the Harelean* version published. It is in four volumes 4to., Oxford, 1778-1803. The text agrees generally with the Alexandrine family, as might be inferred *à priori* from the place where it was made. It is now impossible to determine whether the Harclean version embraced originally the entire New Testament. No MS. has yet been found which has the Apocalypse. Gregory Bar Hebræus, who quotes and criticises the version, has no citation from this book—a circumstance favourable to the opinion that it never belonged to the version in question. It is also impossible to determine whether it ever extended to the Old Testament.

The version is extremely literal. It seems to have been the translator's endeavour that not a word or syllable of the original should be lost. Accordingly, he has often sacrificed the Syriac idiom to a rigid adherence to the Greek text. The style is inferior to that of the Peshito. Bernstein thus contrasts the two translations: 'In illâ (Simplice) interpretatio est liberior, verborum quodque non exprimens, sed sensum eorum per ambitum magis, quam ad fidem enuntians, oratio consuetudini sermonis Syriaci accommodatior, elegantior, et intellectu facilior; hæc (Charklensis) ad verbum facta diligenter archetypum reddit, sed oratio ejus ea ipsa de causa a communi Syrorum usu loquendi saepe abhorret, locisque haud paucis obscura est et sine Græco exemplo vix apta ad intelligendum. Illa Syrorum istius temporis doctorum de Novi Testamenti locis sententias et explicationes refert, hæc Græcorum præcipuæ auctoritatis exemplarium, quæ exeunte seculo sexto Thomas Charklensis Alexandriæ, illustri literarum illius temporis sede, invenit, effigiem mira similitudine exscriptam repræsentat' (p. 38). The same writer has printed a specimen of it along with a specimen of the old Syriac; as also the readings quoted by Bar Hebræus in his *Horreum Mysteriorum*.

From the preceding description it will be seen, that what is usually called *the Philoxenian*, should be designated *the Harelean* version. The two are quite distinct. Of the one we know exceedingly little; the other has been printed under the superintendence of White, who erroneously calls it *the Philoxenian*. (See Wiseman's *Horæ Syriacæ;* Bernstein's *Commentatio de Charklensi Novi Testamenti translatione Syriacâ;* Ridley's *Dissertatio de Syriacarum Novi Fœderis versionum indole atque usu;* Adler's *Novi Testamenti versiones Syriacæ Simplex, Philoxeniana et Hierosolymitana*, &c.; White's edition of the *Harelean*, vol. i.; Bertholdt's *Krit. Journal der neuesten Theol. Literatur*, tom. xiv.; Loehnis's *Grundzüge*, pp. 373-4; and Davidson's *Lectures on Biblical Criticism.*)

There is also *another Syriac version* of the New Testament called the *Jerusalem* or *Palæstino-Syriac*, which was discovered by Adler in a Vatican MS. (No. 19). The MS. seems, from the subscription, to have been written in a monastery at Antioch, A.D. 1030. The language is a mixture of Chaldee and Syriac, similar to that of the Jerusalem Talmud, and the *character* employed is peculiar. The MS. consists merely of a *lectionary* or *evangelistarium*, embracing no more than lessons from the four Gospels for all the Sundays and festivals in the year. Internal evidence favours the idea, that this version was made in some part of Syria, subject at the time to the Romans; probably in the fifth century. The text agrees with the western family. The story of the adulteress, though wanting in the Peshito and Harclean, is given in this version, almost in the same form as that in which it appears in the Codex Bezæ. Specimens of it are

given by Adler in his *Treatise on Syriac Versions*, p. 137, sq. See also Eichhorn's *Allgem. Biblioth.* ii., p. 498, sq.; and Marsh's *Notes to Michaelis's Introduction*. Dr. Scholz collated it for his edition of the Greek Testament. (Davidson's *Lectures*, pp. 65, 66.)—S. D.

SYRO-PHŒNICIA (Συροφοινίκη), OR PHŒNICIA PROPER, called Syro or Syrian Phœnicia, from being included in the Roman province of Syria. It includes that part of the coast of Canaan, on the borders of the Mediterranean, in which the cities of Tyre and Sidon were situated; and the same country, which is called Syro-Phœnicia in the Acts, is in the Gospels called the coasts of Tyre and Sidon. The woman also described as Syro-Phœnician (Συροφοίνισσα) in Mark vii. 2-6, is in Matt. xv. 22 called a Canaanitish woman, because that country was still occupied by the descendants of Canaan, of whom Sidon was the eldest son.

T.

TAANACH (תַּעְנַךְ; Sept. Θανάκ), a royal city of the Canaanites (Josh. xii. 21), in the territory of Issachar, but assigned to Manasseh (Judg. i. 27; v. 19; Josh. xvii. 11-21; 1 Kings iv. 12). Schubert, followed by Robinson, finds it in the modern Taannuk, now a mean hamlet on the south side of a small hill, with a summit of table-land. It lies on the south-western border of the plain of Esdraelon, four miles south of Megiddo, in connection with which it is mentioned in the triumphal song of Deborah and Barak (Judg. v. 19). Schubert, *Morgenland*, iii. 164; Robinson, *Bib. Res.* iii. 156: *Bib. Sacra*, i. 76.

TABEAL (טָבְאֵל, *God is good;* Sept. Ταβεήλ), father of the unnamed person on whom Rezin, king of Syria, and Pekah, king of Israel, proposed to bestow the crown of Judah in case they succeeded in dethroning Ahaz (Isa. vii. 6). Who 'Tabeal's son' was is unknown, but it is conjectured that he was some factious and powerful Ephraimite (perhaps Zichri, 2 Chron. xxviii. 7), who promoted the war in the hope of this result.

TABERAH, one of the stations of the Israelites in the desert. [WANDERING.]

TABERNACLE (אֹהֶל מוֹעֵד, *tent of assembly*, from the root יעד, *to fix* or *appoint time and place of a meeting*). Kimchi explains the name thus: '*And thus was called the* אהל מועד, *because the Israelites were assembled and congregated there*, and also because he (Jehovah) met there with Moses,' &c. It is also called אהל העדות, or משכן העדות, *tent of testimony*, from עוד, *testari*, to witness. The Septuagint almost constantly uses the phrase σκηνὴ τοῦ μαρτυρίου, and in Kings viii., σκήνωμα τοῦ μαρτυρίου, not distinguishing the roots יעד and עוד. The Vulgate has tabernaculum fœderis, *tent of the covenant*. With this rendering agrees Luther's *Stiftshütte*. The Chaldee and Syrian translators have משכן זמנא, *tent of festival*.

We may distinguish in the Old Testament three sacred tabernacles: I. The ANTE-SINAITIC, which was probably the dwelling of Moses, and was placed by the camp of the Israelites in the desert, for the transaction of public business. Exod. xxxiii. 7, 'Moses took the tabernacle, and pitched it without the camp, afar off from the camp, and called it the tabernacle of the congregation. And it came to pass, that every one which sought the Lord went out unto the tabernacle of the congregation, which was without the camp. And it came to pass, when Moses went out unto the tabernacle, that all the people rose up, and stood every man at his tent door, and looked after Moses until he was gone into the tabernacle. And it came to pass, as Moses entered into the tabernacle, the cloudy pillar descended and stood at the door of the tabernacle, and the Lord talked with Moses. And all the people saw the cloudy pillar stand at the tabernacle door: and all the people rose up and worshipped, every one in his tent door.'

II. The ANTE-SINAITIC tabernacle, which had served for the transaction of public business probably from the beginning of the Exodus, was superseded by the SINAITIC: this was constructed by Bezaleel and Aholiab as a portable mansion-house, guildhall, and cathedral, and set up on the first day of the first month in the second year after leaving Egypt. Of this alone we have accurate descriptions. Philo (*Opera*, ii. p. 146) calls it ἱερὸν φορητόν, and Josephus (*Antiq.* iii. 6. 1), ναὸς μεταφερόμενος καὶ συμπερινοστῶν, *a portable travelling temple*. It is also sometimes called היכל, 'temple' (1 Sam. i. 9, iii. 3).

III. The DAVIDIC tabernacle was erected by David in Jerusalem for the reception of the ark (2 Sam. vi. 12), while the old tabernacle remained to the days of Solomon at Gibeon, together with the brazen altar, as the place where sacrifices were offered (1 Chron. xvi. 39, and 2 Chron. i. 3).

The second of these sacred tents is, as the most important, called the tabernacle *par excellence*. Moses was commanded by Jehovah to have it erected in the Arabian desert, by voluntary contributions of the Israelites, who carried it about with them in their migrations until after the conquest of Canaan, when it remained stationary for longer periods in various towns of Palestine.

The materials of which this tent was composed were so costly, that sceptics have questioned whether they could be furnished by a nomadic race. The tabernacle exceeded in costliness and splendour, in proportion to the slender means of a nomadic people, the magnificence of any cathedral of the present day, compared with the wealth of the surrounding population. It is, however, remarkable that Moses was directed by Jehovah to collect the means for erecting the tabernacle, not by church-rates, but by the voluntary principle. The mode of collecting these means, and the design of the structure, are fully described in Exod. xxv. to xxvii., and in xxxv. to xxxvii., which the reader should peruse in connection with the following remarks: 'And the Lord spake unto Moses, saying, Speak unto the children of Israel, that they bring me an offering: of every man that giveth it willingly with his heart ye shall take my offering. And this is the offering which ye shall take of them; gold, and silver, and brass, and blue, and purple, and scarlet, and fine linen, and goats' hair, and rams' skins dyed red, and badgers' skins, and shittim-wood,' &c.

In addition to these voluntary contributions, the half shekel redemption-money, which every adult male paid in substitution of the first-born, was applied to the casting of the sockets on which the boards rested—in the whole 100 talents, and 1775 shekels. Of the 100 talents were cast 100 sockets, and of the remaining 1775 shekels were made hooks, platings, and bands for the pillars (Exod. xxx. 13; xxxviii. 24-28). Public worship was also maintained by various fines and trespass-offerings (Lev. v. 15; xxvii. 3; Num. iii. 47; vii. 55).

The graphic description given in Exodus indicates that the framework of the tabernacle consisted of perpendicular gilded boards of acacia wood. These boards were fixed into silver sockets, and were kept together by means of golden rings, through which transverse bars were passed. Over this wooden framework four coverings were spread, the first of which consisted of byssus, or of a fine cotton texture, dark blue, purple, and scarlet, into which the representations of cherubim were woven. The second was somewhat larger than the first, and consisted of a texture made of the very fine wool which grows between the hair of some breeds of goats. The third covering was a pall, made of red morocco leather; and the fourth was also a pall of a stronger leather, more capable of resisting inclement weather. It was probably made of sealskins, which were furnished by the Red Sea. The first and second of these coverings consisted of several curtains, which were connected with each other by means of golden hooks and eyes.

In the pictorial illustrations the four coverings of the tabernacle are usually represented as being all spread over the wooden frame, so as to hang down outside the boards. But this seems, as Bähr remarks, not quite correct. The splendid covering of blue and purple byssus, with interwoven images of cherubim, was suspended by hooks and eyes within the boards, so that the inside of the tabernacle was covered entirely as with costly tapestry.

The entrance was turned towards the east, and was closed by means of a splendid curtain of byssus, into which figures were woven. This curtain was supported by fine wooden columns, which were plated with gold. Against inclement weather the curtain was protected, according to the statement of Josephus, by a linen covering. The interior of the tabernacle was divided into two rooms. The sanctuary was twenty cubits long, ten cubits wide, and ten high. The holy of holies was ten cubits square, and ten high, and was separated from the sanctuary by a curtain, into which the figures of cherubim were woven, and which was supported by four columns plated with gold. The tabernacle was surrounded by a sort of court-yard, which was one hundred cubits long and fifty cubits wide, and was surrounded by columns, from which cotton curtains were suspended. The entrance was twenty cubits wide, and was closed by a suspended curtain. In the holy of holies stood the ark of the covenant. In the sanctuary was placed on the north the table with the twelve loaves of shewbread, together with cups, saucers, &c.; opposite to this table towards the south stood the golden candlestick with six branches; in the middle, between the table and the candlestick, stood the altar of incense. In the court under the open sky stood the altar of burnt offerings, and between this altar and the sanctuary was placed the brazen laver.

Among the pictorial illustrations of the structure of the tabernacle, those lately published by Captain W. Rhind are distinguished by their beauty.

The typology of the tabernacle has been explained by divines of former centuries in a rather daring manner. Salomon Van Til, in his *Commentatio de Tabernaculo Mosis*, is very explicit in his typological statements. For instance: 'Considerare oportet materiam quæ est lignum fragile, ita quoque ecclesia colligitur ex hominibus ejusdem conditionis, dum omnes naturâ fragiles sunt.' *The wood of the tabernacle signifies the fragility of men constituting the Church.* 'Ornatus ab auro introductus est emblema correctæ fragilitatis, scilicet vocati sancti intus gloriosi sunt propter dona spiritualia una cum justitiâ Christi imputatâ.' *The golden ornaments signify that the fragility of the saints has been removed by the spiritual gifts and the imputed righteousness of Christ.* 'Tegumenta pellicea rubefacta inclementiæ aëris exposita, quidni nobis sint emblemata martyrum sanguine Christi et suo tinctorum? nam sicut tegumenta pellicea illa ex mactatis animalibus detracta fuerant, ita quoque martyres occisi et mactati per memoriam martyrii sui ecclesiæ quasi exuvias relinquunt perpetuo ostentandas, quod diligentissime factum est in martyrologiis.' *The skins dyed red are emblems of the martyrs whose example is exhibited in the martyrologies*, &c.

Vestiges of typological interpretations occur even in Philo (*Opera*, ii. p. 146, sq.); Josephus (*Antiq.* iii. 7. 7); Clem. Alex. (*Stromata*, V. p. 562, sq.), and Hieronymus (*Ep.* 64, *ad Fabiol.*) Compare Witsii *Miscellanea Saera*, i. 318, sq.; Kraftii *Observationes Saeræ*, i. p. 136; and Bähr's *Symbolik Medosas ischen Cultus.*

We do not belong to those who either deny or overlook the symbolism of the Old Testament in general, or that of the tabernacle in particular. It appears to us, however, that the interpretations and applications of the typologians are generally more arbitrary and less cogent than the psychological and moral facts which the history of the tabernacle places before our observation, and to which the Epistle to the Hebrews refers.

Compare the cognate articles Aaron; Altar; Ark; Cherubim; Court; Elders; Eleazar; Gershonites; Incense; Kohathites; Korahites; Laver; Levites; Merarites; Offerings; Priests; Sacrifices; Shew-bread; Sea, Brazen; Urim and Thummim, &c.

TABERNACLES, FEAST OF (חַג הַסֻּכּוֹת; in Josephus σκηνοπηγία), one of the three great festivals of the Jews, being that of the closing year, as the Passover was of the spring. In Lev. xxiii. 34-43, directions for observing the feast are given in very clear terms. It was to commence on the fifteenth day of the seventh month (Tisri), and consequently five days after the great day of annual atonement; it was to last for seven days; the first day and the following eighth day were to be Sabbaths; seven days were offerings to be made: 'And ye shall take you on the first day the boughs of goodly trees, branches of palm-trees, and the boughs of thick trees, and willows of the brook; ye shall dwell in booths seven days, and ye shall rejoice before the Lord your God, when ye have gathered in the fruit of the land; that your generations may know that I made the children of Israel to dwell in booths when I brought them out of the land of Egypt' (comp. Num. xxix. 13-34). The festival was therefore commemorative of the divine goodness as exercised towards the Jews when they were wandering in the desert, as well as expressive of gratitude for the supply of the rich fruits of the earth; and so was fitted to awaken the most lively feelings of piety in the minds of the Hebrews in each successive generation. Nor would it be a small enhancement of the joy felt on the occasion that the solemn purification of the day of atonement had just taken place, leaving the heart open to free and unrestrained emotions of pleasure. It is equally clear that such an observance was a very important element in that system of education, by facts, customs, and institutions, which formed so marked a peculiarity in Mosaism, and must have proved most effectual for the religious and moral training of the young, and for the confirming of the mature and the aged in their great national convictions and remembrances. That the influence of the Feast of Tabernacles was of a general character appears from the fact that it required the actual presence in Jerusalem of all Israelites (Deut. xvi. 15, sq.; xxxi. 10; Zech. xiv. 16; John vii. 2). Still more to further the educational and religious aims of the observance, Moses commanded that every Sabbatical year, 'in the solemnity of the year of release, in the Feast of Tabernacles, when all Israel is come to appear before Jehovah thy God, thou shalt read this law before all Israel in their hearing. Gather the people together, men and women, and children, and thy stranger that is within thy gates, that they may hear, and that they may learn, and fear Jehovah, and observe to do all the words of this law; and that their children, which have not known [the event commemorated], may hear and learn to fear Jehovah, as long as ye live in the land, whither ye go over Jordan to possess it' (Deut. xxxi. 10-13). After reading a command so full and emphatic as this, and after contemplating the important purposes designed to be promoted, one is not a little surprised to read in Winer (*Real-Wörterbuch*, ii. 8) that this festival was not celebrated, or at least not legitimately celebrated, before the Babylonish Captivity. In the first place we complain of the vagueness and uncertainty of such a statement. Whether does Winer mean that the feast was not observed at all? or that it was only partially observed? These are very different propositions, and must rest on very different evidence. The only authority for his statement to which Winer refers is Neh. viii. 17, where, after a description of the observance of the festival on the part of the returned exiles, it is added, 'since the days of Joshua, the son of Nun, unto that day had not the children of Israel done so.' These words make one thing clear, namely, that Winer is wrong in saying that the feast was not kept before the Captivity; for they clearly imply that during the days of Joshua, that which they deny to have taken place after his days, did take place then. But what do they deny? The observance of the festival? No, but the manner merely of such observance, which must have varied somewhat with the lapse of time and the great changes that were successively introduced into the solemnities of the national worship. From the writings of the Rabbins we learn, 1. That those who took part in the festival bore in their left hand a branch of citron, and in their right a palm branch, entwined with willows and myrtle. In 1 Sam. vii. 6, we read that in Samuel's days, with a view to cleanse themselves from Baalim and Ashtaroth, the Israelites gathered together to Mizpeh, and drew water, and poured it out before Jehovah, and fasted on that day, and said, 'We have sinned against Jehovah.' 2. A similar libation of water took place on each of the seven days (Isa. xii. 3; John vii. 37); at the time of the morning oblation a priest drew from the fount of Siloam water in a jar holding three logs, and poured it out, together with wine, into two channels or conduits, made on the west side of the altar, the water into the one, the wine into the other; intending thereby, if we may judge from the terms employed in the passage of the book of Samuel, to signify and pray for moral purification, and also, not improbably, to bring to mind the value and supply of water during the journeyings in the wilderness, while the grand choral symphonies of the temple music and sacred song swelled and reverberated around. 3. In the outer court of the women there began, on the evening of the first day, an illumination on great golden candlesticks, which threw its light over the whole of Jerusalem; and a dance by torch-light (the torches being made from the priest's cast-off linen), attended by song and music, was performed before the candelabra. To this illumination our Lord has been thought to allude, when he says, 'I am the light of the world' (John viii. 12), as in his words, 'If any man thirst, let him come unto me and drink' (John vii. 37), he is supposed to have referred to the libation on the seventh day (Succa, *Mishna*, v. 2-4; Tosaphta, in Ugolini, *Thes.* tom. xviii.; Succa, iii. 12). From the passage in Nehemiah (viii. 13, sq.) it appears that it was customary in Jerusalem and all the cities to 'go forth unto the mount and fetch olive branches and pine branches, and myrtle branches, and palm branches, and branches of thick trees, to make booths.' It is added, 'So the people made themselves booths, every one upon the roof of his house, and in their courts, and in the courts of the house of God, and in the street of the water-gate, and the street of the gate of Ephraim.' From the details given in this article, it appears that the Feast of

Tabernacles was a season of universal joy. Jerusalem bore the appearance of a camp. The entire population again dwelt in tents, but not with the accompaniments of travel, fatigue, and solicitude; all was hilarity, all wore a holiday appearance; the varied green of the ten thousand branches of different trees; the picturesque ceremony of the water-libation, the general illumination, the sacred solemnities in and before the temple; the feast, the dance, the sacred song; the full harmony of the choral music; the bright joy that lighted up every face, and the gratitude at 'harvest home,' which swelled every bosom, —all conspired to make these days a season of pure, deep, and lively joy, which, in all its elements, finds no parallel among the observances of men. Plutarch (*Sympos.* iv. 5) has found in the Feast of Tabernacles a Dionysian or Bacchanalian festival. He could trace any outward resemblance there was between the Jewish and his own heathen festivals, but the deep and appropriate moral and spiritual import of the Feast of Tabernacles he was unable to discern (Biel, *De Sacrificio aquæ* in scenar. *festo vino misceri solito*, Vit. 1716; Reland, *Antiq. Sacr.* iv. 5; Carpzov, *Appar.* p. 414, sq.; Nicolaus, *De Phyllobolia*, *Thes.* in Ugolini, tom. xxx.).

TABITHA (Ταβιθά, *antelope*), the Aramæan name of a Christian female, called in Greek Dorcas (Δορκάς), resident at Joppa, whose benevolent and liberal conduct, especially in providing the poor with clothing, so endeared her to the Church in that place, that on her death they sent for Peter, then six miles off at Lydda, imploring him to come to them. Why they sent is not stated. It is probable that they desired his presence to comfort and sustain them in their affliction. That they expected he would raise her from the dead is less likely, as the Apostles had not yet performed such a miracle, and as even Stephen had not been restored to life. But the Apostle, after fervent prayer to God in the chamber of death, bade the corpse arise; on which Tabitha 'opened her eyes, and when she saw Peter, she sat up.' This great miracle was not only an act of benevolence, but tended to give authority to the teaching of the Apostles, and to secure attention for the doctrines which they promulgated (see Acts ix. 36-42).

1. TABOR (תָּבוֹר; Γαιθβώρ; Θαβώρ; Ἰταβύριον), a mountain on the confines of Zebulun and Naphtali, standing out in the north-east border of the plain of Esdraelon, the name of which appears among Greek and Roman writers in the forms of Itabyrion and Atabyrion, and which is now known by the name of جبل طور *Jebel Tur*. It is mentioned in Josh. xix. 22; Judg. iv. 6; viii. 18; Ps. lxxxix. 12; Jer. xlvi. 18; Hos. v. 1). Mount Tabor stands out alone and eminent above the plain, with all its fine proportions from base to summit displayed at one view. It lies at the distance of two hours and a quarter south of Nazareth. According to the barometrical measurements of Schubert, the height of Tabor above the level of the sea is 1748 Paris feet, and 1310 Paris feet above the level of the plain at its base. Seen from the south-west, it presents a semi-globular appearance; but from the north-west, it more resembles a truncated cone. By an ancient path, which winds considerably, one may *ride* to the summit, where is a small oblong plain, with the foundations of ancient buildings. The view of the country from this place is very beautiful and extensive. The mountain is of limestone, which is the general rock of Palestine. The sides of the mountain are mostly covered with bushes, and woods of oak trees (ilex and ægilops), with occasionally pistachio trees, presenting a beautiful appearance, and affording a fine shade. There are various tracks up its sides, often crossing one another. The ascent usually occupies an hour, though it has been done in less time. The crest of the mountain is table-land, of some six or seven hundred yards in height from north to south, and about half as much across; and a flat field of about an acre occurs at a level of some twenty or twenty-five feet lower than the eastern brow. There are remains of several small ruined tanks on the crest, which still catches the rain-water dripping through the crevices of the rock, and preserves it cool and pure, it is said, throughout the year. The view from the summit, though one edge or the other of the table-land, wherever one stands, always intervenes to make a small break in the distant horizon, is declared by Lord Nugent to be the most splendid he could recollect having ever seen from any natural height. This writer cites an observation made many years ago, in his hearing, by Mr. Riddle, that he had never been on any *natural* hill, or rock, or mountain, from which could be seen an unbroken circumference with a radius of three miles in every part. This, his lordship says, has been verified in all his own experience, and it was so at Mount Tabor, although there are many abrupt points of vantage ground on the summit (*Lands Classical and Sacred*, ii. 204, 205).

This mountain is several times mentioned in the Old Testament (Josh. xix. 12, 22; Judg. iv. 6, 12, 14); but not in the New. Its summit has however been usually regarded as the 'high mountain apart,' where our Lord was transfigured before Peter, James, and John. But the probability of this is opposed by circumstances which cannot be gainsaid. It is manifest that the Transfiguration took place in a solitary place, not only from the word 'apart,' but from the circumstance that Peter in his bewilderment proposed to build 'three tabernacles' on the spot (Matt. xvii. 1-8; Luke ix. 28-36). But we know that a fortified town occupied the top of Tabor for at least 220 years before and 60 years after the birth of Christ, and probably much before and long after (Polybius, v. 70. 6; Joseph. *Antiq.* xiv. 6. 3; *De Bell. Jud.* i. 8. 7; ii. 20. 1; iv. 1. 8; *Vita*, § 37); and the tradition itself cannot be traced back earlier than towards the end of the fourth century, previously to which we have in the *Onomasticon* notices of Mount Tabor, without any allusion to its being regarded as the site of the Transfiguration. It may further be remarked that this part of Galilee abounds with 'high mountains apart,' so that in removing the scene of this great event from Tabor, there is no difficulty in providing other suitable sites for it (Robinson, *Bibl. Researches*, iii. 210-227; Lord Nugent, *u. s.*, ii. 198-204; Schubert, *Morgenland*, iii. 174-180; Burckhardt, *Syria*, pp. 332-336; Stephens, ii. 317-19; Elliot, ii. 364).

2. TABOR is also the name of a grove of oaks in the vicinity of Benjamin, in 1 Sam. x. 3, the topography of which chapter is usually much embarrassed by the groundless notion that Mount Tabor is meant.

3. TABOR, a Levitical city in Zebulun, situated upon Mount Tabor (1 Chron. vi. 62).

TABRET. [Musical Instruments.]

TABRET. [Weights and Measures.]

TACHMAS (תַּחְמָס, Lev. xi. 16; Deut. xiv. 15) is mentioned as one of the unclean birds in the Pentateuch, but so little characterised that no decided opinion can be expressed as to what species is really intended. Commentators incline to the belief that the name imports voracity, and therefore indicates a species of owl, which, however, we take to be not this bird, but the לִלִית *lilith;* and as the night-hawk of Europe (*Caprimulgus Europæus*), or a species very nearly allied to it, is an inhabitant of Syria, there is no reason for absolutely rejecting it in this place, since it belongs to a genus highly connected with superstitions in all countries; and though a voracious bird among moths (*Phalenæ*) and other insects that are abroad during darkness, it is absolutely harmless to all other animals, and as wrongfully accused of sucking the udders of goats, as of being an indicator of misfortune and death to those who happen to see it fly past them after evening twilight; yet, beside the name of 'goatsucker,' it is denominated 'night-hawk' and 'night-raven,' as if it were a bulky species, with similar powers of mischief as those day birds possess. The night-hawk is a migratory bird, inferior in size to a thrush, and has very weak talons and bill; but the gape or mouth is wide; it makes now and then a plaintive cry, and preys on the wing; it flies with the velocity and action of a swallow, the two genera being nearly allied. Like those of most night birds, the eyes are large and remarkable, and the plumage a mixture of colours and dots, with a prevailing grey effect; it is finely webbed, and entirely noiseless in its passage through the air. Thus the bright eyes, wide mouth, sudden and inaudible flight in the dusk, are the original causes of the superstitious fear these birds have excited; and as there are in southern climates other species of this genus, much larger in size, with peculiarly contrasted colours, strangely disposed feathers on the head, or paddle-shaped single plumes, one at each shoulder, projecting in the form of two additional wings, and with plaintive loud voices often uttered in the night, all the species contribute to the general awe they have inspired in every country and in all ages. We see here that it is not the bulk of a species, nor the exact extent of injury it may inflict, that determines the importance attached to the name, but the opinions, true or false, which the public may have held or still entertain concerning it. The goatsucker is thus confounded with owls by the Arabian peasantry, and the name *massasa* more particularly belongs to it. But that the confusion with the *lilith* is not confined to Arabia and Egypt, is sufficiently evident from the Sclavonic names of the bird, being in Russian, *lilok*, *lelek;* Polish, *lelek;* Lithuanian, *lehlis;* and Hungarian, *egeli;* all clearly allied to the Semitic denomination of the owl.—C. H. S.

TADMOR (תַּדְמֹר; Sept. Θοεδμόρ) or Tamar (תמר), a town built by King Solomon (1 Kings ix. 18; 2 Chron. viii. 4). The name Tamar signifies a palm-tree, and hence the Greek and Roman designation of Palmyra, 'city of palms;' but this name never superseded the other among the natives, who even to this day give it the name of Thadmor. The form Tamar seems more ancient than that of Tadmor. It is found in the text (*kethib*) of 1 Kings ix. 18, while the latter stands in the margin (*keri*): but in the later historical book 'Tadmor,' having become the usual designation, stands in the text without any various reading. Palm trees are still found in the gardens around the town, but not in such numbers as would warrant, as they once did, the imposition of the name. Tadmor was situated between the Euphrates and Hamath, to the south-east of that city, in a fertile tract or oasis of the desert. It was built by Solomon probably with the view of securing an interest in and command over the great caravan traffic from the east, similar to that which he had established in respect of the trade between Syria and Egypt. See this idea developed in the *Pictorial Bible*, note on 2 Chron. viii. 4; where it is shown at some length that the presence of water in this small oasis must early have made this a station for the caravans coming west through the desert; and this circumstance probably dictated to Solomon the importance of founding here a garrison town, which would entitle him—in return for the protection he could give from the depredations of the Arabs, and for offering an intermediate station where the factors of the west might meet the merchants of the east—to a certain regulating power, and perhaps to some dues, to which they would find it more convenient to submit than to change the line of route. It is even possible that the Phœnicians, who took much interest in this important trade, pointed out to Solomon the advantage which he and his subjects might derive from the regulation and protection of it, by building a fortified town in the quarter where it was exposed to the greatest danger. A most important indication in favour of these conjectures is found in the fact that all our information concerning Palmyra from heathen writers, describes it as a city of merchants, who sold to the western natives the products of India and Arabia, and who were so enriched by the traffic that the place became proverbial for luxury and wealth, and for the expensive habits of its citizens.

We do not again read of Tadmor in Scripture, nor is it likely that the Hebrews retained possession of it long after the death of Solomon. No other source acquaints us with the subsequent history of the place, till it reappears in the account of Pliny (*Hist. Nat.* v. 24), as a considerable town, which, along with its territory, formed an independent state, between the Roman and Parthian empires. In the time of Trajan, however, it was lying waste; but it was rebuilt by his successor Adrian, and from him took the name of Adrianopolis. From Caracalla it received the privileges of a Roman colony. During the weak administration of the emperors Gallienus and Valerian, in the third century, while independent governments were rising in

several provinces of the Roman empire, Odenatus became master of Palmyra and the whole of Mesopotamia, and assuming the regal title himself, also bestowed it upon his consort Zenobia, and his eldest son Herod. After his death, Zenobia, styling herself queen of the East, ruled over most of the eastern provinces of the Roman empire, as well as over her own territories, with so much firmness and policy, that Aurelian, who vanquished her and led her in triumph to Rome, could not withhold his admiration. On the revolt of Palmyra shortly after, Aurelian, having recovered possession of it, caused it to be levelled with the ground, and the greater part of the inhabitants to be put to death. He, however, ordered the temple of the sun to be restored, placed a garrison in the town, and appointed a deputy over the district attached to it. Diocletian adorned the city with additional buildings; and under the Emperor Honorius it still had a garrison, and was the seat of a bishop. Justinian strengthened the fortifications, and also constructed a very costly aqueduct, the remains of which still exist. When the successors of Mohammed extended their conquests beyond the confines of Arabia, Palmyra was one of the first places which became subject to the khalifs. In the year 659, a battle was here fought between the khalifs Ali and Moawiyah, and won by the former. In 744 it was still so strongly fortified that it took the

514. [Palmyra.]

khalif Merwan seven months to reduce it, the rebel Solyman having shut himself up in it. From this period it seems to have gradually fallen into decay. Benjamin of Tudela, who was there towards the end of the 12th century, speaks of it as 'Thadmor in the desert, built by Solomon of equally large stones (with Baalbec). This city is surrounded by a wall, and stands in the desert, far from any inhabited place. It is four days' journey from Baalath (Baalbec), and contains 2000 warlike Jews, who are at war with the Christians and with the Arabian subjects of Noureddin, and aid their neighbours the Mohammedans.' In connection with this statement, it may be remarked that the existing inscriptions of Palmyra attest the presence of Jews there in its most flourishing period, and that they, in common with its other citizens, shared in the general trade, and were even objects of public honour. One inscription intimates the erection of a statue to Julius Schalmalat, a Jew, for having at his own expense conducted a caravan to Palmyra. This was in A.D. 258, not long before the time of Zenobia, who, according to some writers, was of Jewish extraction. Irby and Mangles (*Travels*, p. 273) also noticed a Hebrew inscription on the architrave of the great colonnade, but give no copy of it, nor say what it expressed. The latest historical notice of Tadmor which we have been able to find is, that it was plundered in 1400 by the army of Timur Beg (Tamerlane), when 200,000 sheep were taken (Rankin, *Wars of the Mongols*). And Abulfeda, at the beginning of the fourteenth century (*Arab. Descript.* p. 98), speaks of Tadmor as merely a village, but celebrated for its ruins of old and magnificent edifices. These relics of ancient art and magnificence were scarcely known in Europe till towards the close of the seventeenth century. In the year 1678, some English merchants at Aleppo resolved to verify, by actual inspection, the reports concerning these ruins which existed in that place. The expedition was unfortunate; for they were plundered of every thing by the Arabs, and returned with their object unaccomplished. A second expedition, in 1691, had

better success; but the accounts which were brought back received little credit: as it seemed unlikely that a city which, according to their report, must have been so magnificent, should have been erected in the midst of deserts. When, however, in the year 1753, Robert Wood published the views and plans, which had been taken with great accuracy on the spot two years before, by Dawkins, the truth of the earlier accounts could no longer be doubted; and it appeared that neither Greece nor Italy could exhibit antiquities which in point of splendour could rival those of Palmyra. The examinations of these travellers show that the ruins are of two kinds. The one class must have originated in very remote times, and consists of rude, unshapen hillocks of ruin and rubbish, covered with soil and herbage, such as now alone mark the site of the most ancient cities of Mesopotamia and Babylonia, and among which it would be reasonable to seek any traces of the more ancient city of Solomon. The other, to which the most gorgeous monuments belong, bears the impress of later ages. It is clear from the style of architecture that the later buildings belong to the three centuries preceding Diocletian, in which the Corinthian order of pillars was preferred to any other.

The ruins cover a sandy plain stretching along the bases of a range of mountains called Jebel Belaes, running nearly north and south, dividing the great desert from the desert plains extending westward towards Damascus, and the north of Syria. The lower eminences of these mountains, bordering the ruins, are covered with numerous solitary square towers, the tombs of the ancient Palmyrenes, in which are found memorials similar to those of Egypt. They are seen to a great distance, and have a striking effect in this desert solitude. Beyond the valley which leads through these hills, the ruined city first opens upon the view. The thousands of Corinthian columns of white marble, erect and fallen, and covering an extent of about a mile and a half, present an appearance which travellers compare to that of a forest. The site on which the city stands is slightly elevated above the level of the surrounding desert for a circumference of about ten miles; which the Arabs believe to coincide with the extent of the ancient city, as they find ancient remains whenever they dig within this space. There are indeed traces of an old wall, not more than three miles in circumference; but this was probably built by Justinian, at a time when Palmyra had lost its ancient importance and become a desolate place; and when it was consequently desirable to contract its bounds, so as to include only the more valuable portion. Volney well describes the general aspect which these ruins present:—'In the space covered by these ruins we sometimes find a palace, of which nothing remains but the court and walls; sometimes a temple whose peristyle is half thrown down; and now a portico, a gallery, or triumphal arch. Here stand groups of columns, whose symmetry is destroyed by the fall of many of them; there, we see them ranged in rows of such length that, similar to rows of trees, they deceive the sight and assume the appearance of continued walls. If from this striking scene we cast our eyes upon the ground, another, almost as varied, presents itself: on all sides we behold nothing but subverted shafts, some whole, others shattered to pieces, or dislocated in their joints; and on which side soever we looked, the earth is strewed with vast stones, half buried; with broken entablatures, mutilated friezes, disfigured reliefs, effaced sculptures, violated tombs, and altars defiled by dust.'

It may be right to add, that the account which has been more recently given of these ruins by Captains Irby and Mangles, is a much less glowing one than those of other travellers, English and French. They speak indeed with admiration of the general view, which exceeded anything they had ever seen. But they add, 'Great, however, was our disappointment when, on a minute examination, we found that there was not a single column, pediment, architrave, portal, frieze, or any architectural remnant worthy of admiration.' They inform us that none of the pillars exceed four feet in diameter, or forty feet in height; that the stone scarcely deserves the name of marble, though striking from its snowy whiteness; that no part of the ruins taken separately excite any interest, and are altogether much inferior to those of Baalbec; and that the plates in the magnificent work of Messrs. Wood and Dawkins do far more than justice to Palmyra. Perhaps this difference of estimate may arise from the fact that earlier travellers found more wonderful and finished works at Palmyra than their information had prepared them to expect; whereas, in the latter instance, the finished representations in the plates of Wood's great work raised the expectation so highly, that their disappointment inclined the mind to rather a detractive estimate of the claims of this ruined city—Tadmor in the wilderness. The present Tadmor consists of numbers of peasants' mud huts, clustered together around the great temple of the sun. This temple is the most remarkable and magnificent ruin of Palmyra. The court by which it was enclosed was 179 feet square, within which a double row of columns was continued all round. They were 390 in number, of which about sixty still remain standing. In the middle of the court stood the temple, an oblong quadrangular building, surrounded with columns, of which about twenty still exist, though without capitals, of which they have been plundered, probably because they were composed of metal. In the interior, at the south end, is now the humble mosque of the village.

The remains of Palmyra, not being of any direct Scriptural interest, cannot here be more particularly described. Very good accounts of them may be seen in Wood and Dawkins, *Ruins of Palmyra, otherwise Tadmor in the Desert;* Irby and Mangles, *Travels;* Richter, *Wallfahrten;* Addison, *Damascus and Palmyra.* The last work contains a good history of the place; for which see also Rosenmüller's *Bib. Geog.* translated by the Rev. N. Morren; and in particular Cellarius, *Dissert. de Imp. Palmyreno*, 1693. Besides Wood's great work, excellent views of the place have been published by Cassas in his *Voyage Pittoresque de la Syrie;* and more recently by Laborde in his *Voyage en Orient.*

TAHASH-SKINS. [Rams'-Skins, Red.]

TAHPANHES (תַּחְפַּנְחֵס), or Tehaphnehes (תְּחַפְנֵחס), a city of Egypt. The former name is used by Jeremiah (ii. 16; xliii. 7-9; xliv. 1: xlvi. 14), and the latter by Eze-

kiel (xxx. 18). The Sept. render it by Τάφνη, Τάφναι, the name of a goddess, *Tphnet* (Champollion, pp. 121, 123). This was doubtless *Daphne*, a strong boundary city on the Pelusiac arm of the Nile (Herodot. ii. 30, 107). A mound called Tel Defenneh, nearly in a direct line between the modern Zan and Pelusium, is supposed from its name and position to mark the site of Daphne (Wilkinson, *Mod. Egypt.*, i. 447). Isaiah (xxx. 4) names it in the abbreviated form Hanes. It was to this place that Johanan and his party repaired, taking Jeremiah with them, after the murder of Gedaliah.

TAHPENES (תַּחְפְּנֵיס, *head of the age;* Sept. Θεκεμίνας), a queen of Egypt, consort of the Pharaoh contemporary with David. Her sister was given in marriage to Hadad, the fugitive prince of Edom (1 Kings xi. 19) [Hadad].

TALMAI (תַּלְמַי, *full of furrows;* Sept. Θολμί), king of Geshur, and father of David's wife Maacah, the mother of Absalom (2 Sam. iii. 3; xiii. 37; 1 Chron. iii. 1, 2) [Geshur].

TALMUD. The Talmud (תַּלְמוּד, *doctrine*, from לָמַד, *to learn*) is the work which embodies the civil and canonical law of the Jewish people. It contains those rules and institutions by which, in addition to the Old Testament, the conduct of that nation is regulated. Whatever is obligatory on them, besides the law, is recorded in this work. Here doubts are resolved, duties explained, cases of conscience cleared up, and the most minute circumstances relative to the conduct of life discussed with wonderful particularity. Hence the contents of the Talmud are of a diversified character, relating not merely to religion, but to philosophy, medicine, history, jurisprudence, and the various branches of practical duty.

The Jews have been accustomed to divide their law into *written* and *unwritten*—the former being contained in the Pentateuch; the latter having been handed down orally, until circumstances compelled them to commit it also to writing. The *oral* law is an interpretation of the *written*, and constitutes the *text* of the Talmud. To the *oral law* the same antiquity is assigned as belongs to the *written*. According to the Jews, Moses received *both* on Mount Sinai. It was received by Joshua from Moses; Joshua again delivered it to the seventy elders, from whom it was received by the prophets, who transmitted it to the men of the great synagogue, the last of whom was Simon the Just. From the men of the synagogue it was received by the Rabbins. After the second destruction of Jerusalem under Adrian, and the consequent dispersion of the Jews throughout the world, fears were entertained lest the oral traditions which they held so sacred should be lost, particularly as their number rendered it inconvenient, or rather impossible, to preserve them in the memory. Hence arose the necessity of committing them to writing, that they might be handed down from age to age as a national treasure. It is generally agreed that Rabbi Judah *Hakkadosh* (i. e. *the holy*) made the first permanent record of them, about 120 or 150 years from the destruction of the Temple, A.D. 190 or 220. Morin, however, has assigned a much later date, viz. the *sixth* century, relying chiefly on the fact that Origen, Epiphanius, and Jerome, make no mention of such a work (*Exercitationes Biblicæ*, lib. ii. exercit. vi. cap. 2, p. 294, sq.). But the circumstances adduced by this learned and ingenious writer are not conclusive in favour of his peculiar opinion. R. Judah is said to have lived under Antoninus Pius. Such was the origin of the *Mishna* or text. It must not be supposed, however, that all the traditional interpretations or *midrashim* were embodied in the official Mishna. Many others existed which were not incorporated in that work.

A twofold commentary, or series of commentaries, was subsequently appended to it; one called the Babylonian *Gemara*, the other the Jerusalem *Gemara*. The former was begun by R. Asche, who died A.D. 427, and was completed A.D. 500. It is the work of several Rabbins, whose names continue to be venerated by the learned Jews. Morin indeed thinks that it was not finished till the commencement of the *eighth* century; but in this sentiment he has not been followed. These portions, committed to writing after the *Mishna*, constitute *notes on that text*, and make up, together with it, the *Babylonian Talmud*.

The Jerusalem Gemara proceeded from the academy at Tiberias, and embodied the comments of the Palestinian Jews. It is said to have been written chiefly by R. Jochanan, rector of that academy. It is not agreed when R. Jochanan lived; but most writers follow Buxtorf, who places him in A.D. 230. David Ganz prefers 270; while Moses Maimonides, Abarbanel, Simeon Mikkenon, and Elias Levita, fix upon A.D. 370. But internal evidence shows that it was composed towards the end of the last half of the fourth century, which would agree nearly with the opinion of Maimonides. Hence R. Jochanan could not have been the principal author. Morin, Vossius, and Pezronius, assign to this Gemara a later date. According to Vossius, it was begun in A.D. 655, and finished in 727. Morin refers it to the seventh century; while Pezronius fixes it between 614 and 628. Morin alludes to the occurrence of Gothic and other barbarous words, and to the name *Turcs* which is found in it. Such evidence is scarcely conclusive. The Jerusalem Talmud has contributed to the Babylonian, since there are evident traces of it in the latter.

From this statement it will be seen that the two Talmuds differ in their *Gemaras* or *notes upon the text*, while both have *the same Mishna*. The term *mishna* (מִשְׁנָה) signifies *repetition*, from שָׁנָה, *to repeat*, because it is, as it were, *a repetition* of the written law, or *a second law* (δευτέρωσις). The word *gemara* (גְּמָרָא), according to Buxtorf, denotes *completion* or *supplement*, inasmuch as it *completes* the work; but it is better to regard it as synonymous with *talmud*, 'doctrine,' from the Aramæan גמר, *to learn*, equivalent to the Hebrew למד. By the Jews the Babylonian is always preferred to the Jerusalem Talmud. It is far more copious and abundant in its expositions. Hence, in speaking of it, they call it *the Talmud*, while the other is never mentioned without prefixing the name Jerusalem. Yet Christians generally value the Jerusalem Talmud more than the Babylonian: its brevity and succinctness recommend it to them; besides, it is generally free from the absurdities and fables of the other; it is, however, more difficult

cult to be understood; both, indeed, partake of obscurity. The Mishna is written in the Hebrew dialect, but the Gemara in Aramæan. The former is tolerably pure, and free from the admixture of foreign terms, but the latter contains many Persian, Greek, and Latin words—a circumstance which contributes to the difficulty of understanding it. The style of the Babylonian Gemara differs from that of the Jerusalem commentary. The latter is more in the Palestinian dialect, approaching to the Syriac. 'The almost unconquerable difficulty of the style,' says Lightfoot, 'the frightful roughness of the language, and the amazing emptiness and sophistry of the matters handled, do torture, vex, and tire him that reads them (the Talmudic authors). They do everywhere abound with trifles in that manner, as though they had no mind to be read; with obscurities and difficulties as though they had no mind to be understood; so that the reader hath need of patience all along, to enable him to bear both trifling in sense, and roughness in expression.'

The Mishna is divided into six parts, ששה סדרים, or, in the abbreviated form, ש״ס.

1. The first סדר *seder*, i. e. *order, disposition, division,* is called סדר זרעים *seder zeraim, the order of seeds.* It treats of sowing, the productions of the earth, herbs, trees, the uses of fruits, of seeds, &c. &c.

2. The second is called סדר מועד *seder moed, the order of festivals,* and is occupied with a statement of the times when the festivals should begin and when they should terminate, as also of the different rites and ceremonies to be observed at such seasons.

3. סדר נשים *seder nashim, the order of women.* This section discusses the distinctive rights of men and women, marriage, divorce; the customs, inclinations, and sicknesses of women, &c.

4. סדר נזיקים *seder nezikim, the order of damages.* This division treats of the losses and injuries which one may be the means of bringing on another, of the damages done by cattle, of restitution, of the punishment to be inflicted for such offences or losses, &c. &c.

5. סדר קדשים *seder kodashim, the order of holy things,* treating of sacrifices, oblations, their different species, &c. &c.

6. סדר טהרות *seder taharoth, the order of purifications,* relative to the purity and impurity of vessels, to household furniture and other things, and the way in which they should be purified.

Each of these סדרים is subdivided into several מסכתות *massictoth, treatises,* or *tracts,* which again are subdivided into פרקים *perakim, sections* or *chapters.*

I. סדר זרעים.

1. מסכת ברכות *masseceth berachoth, the treatise of blessings,* containing precepts relative to prayers and thanksgivings for the fruits of the earth and other blessings given by God; instructions in relation to the times, places, and modes in which such prayers should be offered up. This treatise contains nine chapters.

2. מסכת פאה *masseceth peah, treatise of the corner.* This treatise shows how corners of the harvest fields should be left to the poor at the time of reaping, and how the fruits of the field should be gathered. Here there are eight chapters.

3. דמאי *masseceth demai, treatise of the doubtful.* This treatise refers to things about which some doubts may be raised whether tithes should be paid from them or not. Here there are seven chapters.

4. כלאים *masseceth cilaim, treatise of the heterogeneous,* i. e. the mixing of several kinds of seed, &c. Here there are nine chapters.

5. שביעית *masseceth shebiith,* of the seventh year, i. e. the sabbatical year, in which the Jews were forbidden to sow. In this treatise are ten chapters.

6. תרומה *masseceth terumah, oblation,* treating of free-will gifts and offerings, what one must take out of his own property and bring to the priest, as also who ought and who ought not to do so, &c. &c. This contains eleven chapters.

7. מעשר ראשון *maasher rishon, the first tenth* or *tithe,* which belonged to the Levites, and with what things it should be discharged. Here there are five chapters.

8. מעשר שני *maasher sheni, the second tenth,* which the Levites had to pay out of their tenth to the priests. Here again there are five chapters.

2. חלה *challah, cake,* i. e. the cake which the women were required to bring of kneaded dough to the priest, &c. This treatise has four chapters.

10. ערלה *orlah, prepuce.* Young trees were so called; for during the first three years their fruit was reckoned impure and injurious, and was thrown away. In the fourth year it was consecrated to God. Here are three chapters.

11. בכורים *bicurim, first-fruits.* This treatise is occupied with an examination of the things of which first-fruits were to be brought into the temple. Here are four chapters.

The entire *seder* consists of seventy-five chapters.

II. סדר מועד.

1. מסכת שבת *masseceth shabbath,* of the sabbath, its privileges and its sacredness; of lights, oil used on that day; of ovens in which articles of food were warmed on the sabbath, and the dress of men and women used on the same day. This treatise has twenty-four chapters.

2. ערובים *erubim, mixings.* This treatise shows how, on the evening of the sabbath, the food collected by various neighbours should unite them in such a manner as if they belonged to one household. This was done lest persons living at a distance should break the sabbath by too long journeys. If they lived beyond the *zechum shabbath,* i. e. the proper limits of a sabbath day's journey, the food was placed in such a position as that an individual was allowed to go farther than he otherwise might lawfully have done. His eating it at the place where it was put was reckoned equivalent to his eating it at home. Here are ten chapters.

3. פסחים *pesachim, the Passover.* This treatise relates to the Passover, and all things connected with the celebration of it. Here again are ten chapters.

4. שקלים *shekalim, shekels.* This treatise is occupied with a statement of the contributions which individuals were to pay towards the daily sacrifice, and the defraying of other expenses connected with the temple worship. This treatise has eight chapters.

5. יומא *yoma, the day of expiation* or *atonement*, a day spent by the Jews in fasting and chastising the body in many ways. This treatise has also eight chapters.

6. סוכה *sueeah, the Feast of Tabernaeles.* This treats of the form of the tents, the mode of living in them, &c. &c. Here are five chapters.

7. ביצה *betzah, egg.* This treatise begins with the question, whether it be right to eat on the day of a festival, or a יום טוב *yom tob*, the egg which a hen has laid on the same day. It relates to everything which a person should do or omit on any feast-day except the sabbath. Here again are five chapters.

8. ראש השנה *rosh hashannah.* This treatise is occupied with remarks about the new year, the beginning of the new year on the new moon of the month Tisri, and the manner in which the day should be kept. Here are four chapters.

9. תענית *taanith, fasting.* This relates to fasting and the different kinds of it. It has also four chapters.

10. מגלה *megillah.* This treatise refers to the Feast of Purim, and is so called because the megillah of Esther is read at that time. Here are four chapters.

11. מועד קטון *moed katon.* In the present treatise are discussed the minor festivals intervening between the first and last days of the great festival. Here are three chapters.

12. חגיגה *chagigah.* This treatise is founded on the command contained in Exodus xxiii. 17, that all the males should appear three times in the year before the Lord at Jerusalem. Here again are three chapters.

The entire *seder* contains eighty-eight chapters.

III. סדר נשים.

1. יבמות *yebamoth.* This treatise concerns the marrying of a deceased brother's wife, who has had no children by her husband. Here are sixteen chapters.

2. כתובות *eethuboth.* The present treatise relates to matrimonial contracts, dowries, and writings connected with marriage. Here are thirteen chapters.

3. נדרים *nedarim, vows,* discussing what vows are binding or otherwise; who can make vows and who not. Here are eleven chapters.

4. נזרות *neziroth.* This treatise refers to the vows of the Nazarites, and their mode of living. It contains nine chapters.

5. גיטין *gittin,* respecting divorce, and the writing given to the wife on that occasion, how it must be written, &c. &c. This treatise consists of nine chapters.

6. סוטה *sotah.* This treatise regards the adulteress, or rather the woman suspected of conjugal infidelity; how she must drink the bitter water that causeth the curse, &c. &c. Here again are nine chapters.

7. קדושין *kiddushin,* respecting betrothment. Here are four chapters.

This third *seder*, or order, contains seventy-one chapters.

IV. סדר נזיקין.

1. בבא קמא *baba kama, the first gate,* relative to the losses sustained by men and beasts from one another. This treatise consists of ten chapters.

2. בבא מציעא *baba metziah, the middle gate.* This treatise refers to things found or deposited, usury, &c. &c. It has also ten chapters.

3. בבא בתרא *baba bathra, the last gate.* This treatise relates to commercial transactions, buying and selling, inheritances, &c. &c. Here again are ten chapters.

4. סנהדרין *Sanhedrim.* This is a most important treatise, relating to the great tribunal, to various punishments, judges, witnesses; who of the Israelites shall have part in the future life, and who not. It consists of eleven chapters or sections.

5. מכות *maeeoth.* This treatise relates to the forty stripes (Deuteron. xxv. 3) which were to be inflicted on certain offenders. Here the reason is explained why the expounders of the law omitted one stripe of the forty (2 Cor. xi. 24). It contains three chapters.

6. שבועות *shebuoth,* respecting oaths; who can take an oath, and who not. This treatise consists of eight chapters.

7. עדיות *edaioth,* respecting witnesses and witness-bearing. Here again are eight chapters.

8. אבות *aboth,* or פרקי אבות *pirke aboth.* This treatise relates to the Jewish fathers who handed down the oral law from the time of Moses. It contains six chapters.

9. הוריות *horaioth,* respecting the statutes and other original documents, according to which every man was required to judge in cases of trial; and how transgressors should be punished. The present treatise contains three chapters.

10. אבודה זרה *abodah zarah,* called also עבודת אלילים *abodath elilim,* and also אבודת כוכבים *abodath cocabim,* respecting idolatry, and the avoiding of communion with the idolatrous Christians. This treatise is wanting in the Basel edition, because it has severe reflections upon Jesus Christ and his followers. It is printed in the Venice edition, and consists of five chapters. The entire *seder* contains seventy-four chapters.

V. סדר קדשים.

1. זבחים *zebachim,* sacrifices. This treatise has fourteen chapters.

2. מנחות *menachoth,* the evening sacrifices. This treatise has thirteen chapters.

3. חולין *eholin.* This treatise respects the clean and unclean animals which the Jews were required or forbidden to eat. Here are twelve chapters.

4. בכורות *becoroth,* respecting the first-born of beasts. Here are nine chapters.

5. ערכין *eracin.* This treatise relates to the valuing and taxing of such things as are dedicated to the Lord. It consists of nine chapters.

6. תמורה *temurah.* This treatise refers to the putting of one sacrifice in place of another;

whether such a thing is lawful or not. It consists of seven chapters.

7. כריתות *cerithuth*, the cutting off a soul from a future life, and the sins which cause such a punishment: thirty-six kinds of this excision are enumerated. Here are six chapters.

8. מעילה *meïlah*, respecting sins committed in offering up animals in sacrifice. This treatise also has six chapters.

9. תמיד *tamid*, respecting the daily morning and evening sacrifice. Here are six chapters.

10. מדות *middoth*. This treatise relates to the measuring of the temple. It consists of five chapters.

11. קנים *kinnim*, relating to birds' nests. The treatise is divided into three chapters.

The whole *seder* has ninety sections.

VI. סדר טהרות.

1. כלים *celim*, respecting measures, household furniture, clothes, and their purification. This treatise has thirty chapters.

2. אהלות *aholoth*, respecting cottages or houses; how they become unclean, and how they must be cleaned. This treatise has eighteen chapters.

3. נגעים *negaim*, regarding leprosy. Here are fourteen sections.

4. פרה *parah*, the red heifer (Num. xix.). This treatise is divided into twelve chapters.

5. טהרות *tahoroth*, respecting purification, when a person who has touched any object has been made unclean. Here are ten chapters.

6. מקואות *mikvaoth*. This treatise concerns those reservoirs of water in which the Jews washed their bodies. It is divided into ten chapters.

7. נדה *niddah*, respecting the uncleanness of women. This treatise has also ten chapters.

8. מכשירין *mecshirin*, of fluids and their purification. It consists of six chapters.

9. זבים *zabim*, of nocturnal pollution. This treatise is divided into five sections.

10. טבול יום *tebul yom*, respecting the washing of the same day, or what is washed while it is yet day. This treatise consists of four sections.

11. ידים *yadaim*, respecting the washing of hands. Here again are four chapters or sections.

12. עוקצין *oketzim*, relative to the stalks of fruits; and how they, by touching other fruits, become unclean. This treatise has three chapters.

The entire *seder* has 126 chapters.

From the detailed account now given, it appears that the Talmud consists of six *sedarim*, or orders, containing sixty-three *massecoth*, or tractates, and five hundred twenty and four *perakim*, or chapters.

The *Babylonian Gemara* extends to one tractate of the first order, i. e. *Berachoth*, and to most in the succeeding four orders except *Shekalim* in the second order; *Aboth* and *Edaioth* in the fourth; *Middoth*, *Kinnim*, and the half of *Tamid* in the fifth. In *Taharoth* (the sixth order) there is only a Gemara in both Talmuds to the tract *Nidda*.

The *Jerusalem Talmud* originally extended to the first five orders of the Mishna. It is now, however, incomplete. The order *Kodashim* is entirely wanting. There is no Gemara to the four last chapters of Shabbath, to the three last of Maccoth, nor to Aboth and Edaioth.

Four treatises were afterwards added to the Talmud, viz.:

1. מסכת סופרים *masseceth sopherim*, containing directions for the writers of manuscript rolls. This treatise consists of twenty-one chapters.

2. אבל רבתי *ebel rabbethe*, or מסכת שמחות *masseceth shemachoth*. This treatise relates to mourning for the dead, and the manner in which mourners should be comforted. It has fourteen chapters.

3. כלה *callah*, how one should take a wife, &c. &c. Here there is but one chapter.

4. מסכת דרך ארץ *masseceth derek eretz*, about modes of life, &c. This treatise is separated into a greater and a less, the former containing ten chapters, the latter six. To this is appended a פרק שלום *perek shalom*, or chapter of peace, by way of conclusion.

The earliest edition of the *Jerusalem Talmud* was published at Venice by Bomberg, in one volume folio, about the year 1523. No date is attached to it. Another edition was published at Cracow in 1609, folio; and another at Amsterdam, in 1710, folio. The *Babylonian Talmud* was published by Bomberg at Venice in twelve folio volumes, in 1520-30. This edition contains the comments of Rashi and others, as also various appendices by different Rabbins. In the years 1578, 1579, 1580, the celebrated Froben of Basel published the same work; but passages which calumniated Christ were rejected by command of the Tridentine bishops. Accordingly the Jews prepared a new and complete edition at Cracow, in 13 volumes folio, in 1603, and following years. Another edition was prepared and published at Frankfort and Berlin, 1715, in 12 vols. folio; and another at Amsterdam, 1763, in 18 vols. folio, with additions and notes, besides various passages not found in preceding impressions. This last has been pronounced the best.

Various parts of the Talmud have also been printed at different times by different editors; sometimes with translations and commentaries, ex. gr. by Coch, Schmidt, l'Empereur, Leusden, Dachs, Wagenseil, &c.

The best edition of the Mishna is that of Surenhusius, published at Amsterdam, 1698, and following years, in six folio volumes, with a Latin version and copious commentaries by the Rabbins. The Mishna was translated into Arabic by desire of Alhachem, king of Ismael, at Corduba, in the tenth century after Christ. It has also been translated into German by Rabe, in six parts, Anspach, 1760. No English version of it has appeared; much less has the whole Talmud been translated into our language. *The Greek words* have been collected by Landau in his lexicon entitled, *Rabbinisch-aramäisch-deutsches Wörterbuch zur Kentniss des Talmuds, der Targumim und Midraschim, mit Anmerkungen für Philologie, Geschichte, Archäologie, Geographie, Natur und Kunst*, 5 Bände, 8vo. Lips. 1819. Reland has a dissertation on the *Persian* terms, in the second volume of his Miscellaneous Disputations. The best lexicon to the Talmud is still that of Buxtorf, Basel, 1639, folio. The modern

work of Landau is a valuable accompaniment, but cannot compensate for the want of Buxtorf's volume. The celebrated Maimonides, in the twelfth century, made a digest of all the laws and ordinances contained in the Talmud. This excellent abridgment is sufficiently copious for most readers, since it contains everything of value in the whole work. It is entitled *Yad Hachazakah, seu manus fortis quam fecit Moses in conspectu Israel*, and was first published at Soncino, 1490, folio; republished at Venice, 1524, 3 vols. folio; and at Amsterdam, dated 5461, 4 vols. folio. Selections from it have also been published in Hebrew and English, with notes, by Bernard, in a book entitled, *The main principles of the Creed and Ethics of the Jews, exhibited in selections from the Yad Hachazakah of Maimonides, with a literal English translation, copious Illustrations from the Talmud*, &c. Cambridge, 1832, 8vo.

The Jews set so high a value on the Talmud as to place it generally above the inspired law. Hence we find in the *Massecth Sopherim* the saying, 'The Biblical text is like water, and the Mishna like wine, and the six orders (sedarim) like aromatic wine.' In another passage the following words occur—'The Law is like salt, the Mishna like pepper, but the six orders like fine spices.' Again, 'The words of the scribes are lovely, above the words of the Law; for the words of the Law are weighty and light, but the words of the scribes are all weighty.' 'He that shall say there are no phylacteries, transgressing the words of the law, is not guilty; but he that shall say, There are five totaphoth, adding to the words of the scribes, he is guilty' (*Hieros. Berac.* fol. 3. 2). Such extravagant praises of their oral traditions correspond with the Saviour's words, 'Making the word of God of none effect, through your tradition which ye have delivered' (Mark vii. 13). But they do not harmonize with the real nature of the Talmud itself; for the book contains many fabulous, trifling, absurd, and irreverent things. It unites the allegorizing propensity of the East with a childish prying into the most curious questions. It abounds with miraculous stories, and with sentiments derogatory to the majesty of God. Some, indeed, of the questions proposed are merely ludicrous, but others belong to the profane and impious. The following examples will justify the truth of our remarks.

A Rabbin was once in the midst of the ocean, and seeing a bird standing up to its thighs in the water, he said to his companions, 'We will bathe here.' But a voice from heaven was heard, saying, 'Do not so; for seven years ago a person let an axe fall from his hand into this water, and it has not yet reached the deep bottom.'

'Is it right to kill a flea on the Sabbath?'

'We were once carried,' says a Rabbin, 'in a great ship, and the ship went three days and three nights between the two fins of one fish. But perhaps the ship sailed very slowly? The Rabbi Dimi says, A rider shot an arrow, and the ship flew faster than the arrow; and yet it took so long time to pass between the two fins of this fish. It is called *Gildena*' (Pitman's *Preface to the octavo edition of Lightfoot's Works*, pp. 43-45; Allen's *Modern Judaism*; and M'Caul's *Old Paths*). Several parts of the Talmud, however, form an exception to the foolish and ridiculous passages with which the work abounds. Thus the treatise *Pirke Aboth*, containing the moral maxims and sentiments of the Jewish fathers, presents a favourable specimen of ethical philosophy.

The work before us has been applied to the illustration of the New Testament by Lightfoot, Schoettgen, and Meuschen; and in various instances it has served to throw light on the meaning, especially where there is a reference to Jewish customs and manners. Here, however, its utility has been over-estimated, as is apparent from the language of Lightfoot in the dedication prefixed to his Talmudical exercitations on Matthew, compared with the exercitations themselves: 'Christians, by their skill and industry, may render them (the Talmudic writings) most usefully serviceable to their studies, and most eminently tending to the interpretation of the New Testament' (Pitman's edition of *Lightfoot's Works*, vol. xi. p. 6, dedication).

The work has also been employed to illustrate the meaning of the Old Testament, especially by Gill, who has frequently cited it where it throws no light on the text. Nor is he alone in this respect; others have spent their time in the same unprofitable task.

The Talmud is more useful in the *criticism* of the Old Testament text, although most of its citations from the original agree with the Masoretic readings. Probably it has been conformed to the Masoretic standard by the Rabbins. Criticism, therefore, can derive extensive benefit from it only by consulting MS. copies, not the printed text, since it can scarcely be doubted that the latter has been altered. The instances in which the text of the work, even as printed, deviates from the Hebrew Masoretic text, afford a presumption that more of the same kind might be found, were MSS. carefully collated. Frommann collected fourteen various readings out of the Mishna; but Dr. Gill, when collating the Mishna and Gemara for Kennicott, found a thousand. Many of these, properly speaking, are not *various readings*, but words added by the Rabbins for the purpose of explanation; while not a few are of trifling consequence.

(See *the preface of Maimonides*, prefixed to Surenhusius's edition of the Mishna, and translated into Latin by Pocock; Buxtorf's *Recensio operis Talmudici*, in his *Liber de Abbreviaturis Hebraicis*; Wolfius' *Bibliotheca Hebræa*, ii. 657, sq.; Wotton's *Miscellaneous Discourses relating to the Traditions and Usages of the Scribes and Pharisees in our Saviour Jesus Christ's time*, i. 10, sq.; Sebelin's *Traditions of the Jews, or the Doctrines and Expositions contained in the Talmud and other Rabbinical writings*, &c., 2 vols. 8vo., London, 1743; Leusden's *Philologus Hebræo-mixtus*, p. 95, sq.; Prideaux's *Connection*, part i.; Basnage's *Histoire des Juifs*; Bodenschatz's *Aufrichtig deutschredender Hebräer*, Frankfurt and Leipzig, 1756; Lardner's *Grundsätze der biblischen Hermeneutik*, a. a. w., p. 297, sq.; Wagenseil's *Anfangsgründe Hebräerinnen*, i. 266, sq.; Aug. Pfeiffer's *Critica Sacra*, also printed in the second volume of his Works, Utrecht, 1704, 4to; Bartolocci's *Bibliotheca Rabbinica*, iv. 85, sq.; Reimann's *Einleit. in die Geschichte der Theologie*, p. 282, sq.; Zunz, *Gottesdienstlichen Vorträge der Juden*, p. 50, sq.)—S. D.

1. TAMAR (תָּמָר) has been universally acknowledged to denote the 'palm-tree,' sometimes called the 'date-tree.' Good says the radical meaning of the word is straight or upright. The date-tree is remarkable for its erect and cylindrical stem, crowned with a cluster of long and feather-like leaves, and is as much esteemed for its fruit, the 'date,' as for its juice, whether fermented or not, known as 'palm wine,' and for the numerous uses to which every part of the plant is applied. The Arabic name of the date is *tamr;* thus the tamarind is called the Indian date, *tamr hindee*. The name Tamar seems to have been applied to the city which Solomon built in the desert (1 Kings ix. 18; Ezek. xlvii. 19; xlviii. 28), probably on account of the palm-trees growing about it; and the name Palmyra, from palma, a palm, was no doubt applied to it by the Romans on the same account. Abulfeda, who flourished in the fourteenth century, expressly mentions the palm-tree as common at Palmyra in his time; and it is still called by the Arabs by the ancient name of Tadmr. The family of palms is characteristic of tropical countries, and but few of them extend into northern latitudes. In the old world, the species *P. dactylifera*, genus *Phœnix*, is that found furthest north. It spreads along the course of the Euphrates and Tigris across to Palmyra and the Syrian coast of the Mediterranean. It has been introduced into the south of Spain, and thrives well at Malaga; and is also cultivated at Bordaghière in the south of France, chiefly on account of its leaves, which are sold at two periods of the year, in Spring for Palm Sunday, and again at the Jewish Passover. In the south of Italy and in Sicily, Lady Callcott states, 'that near Genoa there is a narrow, warm, sandy valley full of palms, but they are diminutive in growth, and unfruitful, being cultivated only for the sake of the leaves, which are annually sent to the pope's chapel at Rome, where they are blessed and distributed to the cardinals and other dignitaries, in sign of the triumph of the church.'

The peculiarities of the palm-tree are such that they could not fail to attract the attention of the writers of any country where it is indigenous, and especially from its being an indication of the vicinity of water even in the midst of the most desert country. Its roots, though not penetrating very deep, or spreading very wide, yet support a stem of considerable height, which is remarkable for its uniformity of thickness throughout. The centre of this lofty stem, instead of being the hardest part, as in other trees, is soft and spongy, and the bundles of woody fibres successively produced in the interior are regularly pushed outwards, until the outer part becomes the most dense and hard, and is hence most fitted to answer the purposes of wood. The outside, though devoid of branches, is marked with a number of protuberances, which are the points of insertion of former leaves. These are from four to six and eight feet in length, ranged in a bunch round the top of the stem, the younger and softer being in the centre, and the older and outer series hanging down. They are employed for covering the roofs or sides of houses, for fences, frame-work, mats, and baskets. The male and female flowers being on different trees, the latter require to be fecundated by the pollen of the former before the fruit can ripen. The tender part of the spatha of the flowers being pierced, a bland and sweet juice exudes, which being evaporated, yields sugar, and is no doubt what is alluded to in some passages of Scripture: if it be fermented and distilled a strong spirit or *arak* is yielded. The fruit, however, which is yearly produced in numerous clusters and in the utmost abundance, is its chief value; for whole tribes of Arabs and Africans find their chief sustenance in the date, of which even the stony seeds, being ground down, yield nourishment to the camel of the desert.

515. [1. Cluster of dates; 2. flower; 3. a date; 4. section of the same.]

The palm-tree is first mentioned in Exod. xv. 27, when the Israelites encamped at Elim, where there were twelve wells and threescore and ten palm-trees. In the present day Wady Ghorendel is found the largest of the torrent beds on the west side of the Sinai peninsula, and is a valley full of date-trees, tamarisks, &c. Jericho was called the City of Palm Trees, no doubt from the locality being favourable to their growth. Mariti and Shaw describe them as still existing there, though in diminished numbers. The palm-tree was considered characteristic of Judæa, not so much probably because it was more abundant there than in other countries, but because that was the first country where the Greeks and Romans would meet with it in proceeding southward. Hence the coins of the Roman conquerors of Judæa have inscribed on them a weeping female sitting under a palm-tree, with the inscription 'Judæa capta' (vide Kempfer, *Amœnitates Exoticæ*, and Celsius, *Hierobot.* i. 444-579).

2. TAMAR, a Canaanitish woman, espoused successively to the two sons of Judah, Er and Onan; but as they both died childless, Judah hesitated to give her his third son Shelah, as patriarchal usage required. This set her upon the contrivance described in Gen. xxxviii.; and two sons, Pharez and Zarah, thus became the fruit of her criminal intercourse with Judah himself [Judah].

3. TAMAR, daughter of David by Maacah, who was also the mother of Absalom. The unhappy consequences of the criminal passion entertained for this beautiful damsel by her half-brother Amnon, brutally gratified by him, and terribly avenged by Absalom, formed the ground-

work of the family distractions which embittered the latter years of David's reign (2 Sam. xiii.) [Absalom; Amnon; David].

TAMMUZ (תַּמּוּז; Sept. Θαμμούζ), a Syrian deity, for whom the Hebrew idolatresses were accustomed to hold an annual lamentation (Ezek. viii. 14). This idol was the same with the Phœnician Adon or Adonis, and the feast itself such as they celebrated. Silvestre de Sacy thinks that the name Tammuz was of foreign origin, and probably Egyptian, as well as the god by whom it was borne. In fact, it would probably not be difficult to identify him with Osiris, from whose worship his differed only in accessories. The feast held in honour of Tammuz was solstitial, and commenced with the new moon of July, in the month also called Tammuz; it consisted of two parts, the one consecrated to lamentation, and the other to joy; in the days of grief, they mourned the disappearance of the god, and in the days of gladness, celebrated his discovery and return. Tammuz appears to have been a sort of incarnation of the sun, regarded principally as in a state of passion and sufferance, in connection with the apparent vicissitudes in its celestial position, and with respect to the terrestrial metamorphoses produced, under its influence, upon vegetation in advancing to maturity. See Lucian, *De Dea Syra*, § vii. 19; Selden, *De Diis Syris*, ii. 31; Creuzer, *Symbolik*, iv. 3; Fickenscher, *Erklär. d. Mythus Adonis*.

TAPPUACH (תַּפּוּחַ), translated 'apple' in the Authorized Version, has been the subject of considerable difference of opinion among authors on Biblical Botany. Most admit that *apple* is not the correct translation, for that fruit is indifferent in Palestine, being produced of good quality only on Mount Lebanon, and in Damascus. Many contend that 'quince' is the correct translation of Tappuach. Though somewhat more suitable than the apple, we think that neither the quince tree nor fruit is so superior to others as to be selected for notice in the passages of Scripture where *tappuach* occurs. This word would seem to have the same general signification as the Arabic *toph* or *toofa*, which it so closely resembles, and which is usually thought to be the apple; but the Arabs themselves are but little acquainted with that fruit. They no doubt use the word occasionally in a generic sense, for *tappuach-al-shuetan*, or 'devil's apple,' is one of the names of Mandragora. So the Greek μῆλον, and the Latin *pomum*, were used rather as generic than as specific terms. Dioscorides, for instance, gives the different kinds, under the heads of Mala vulgaria, Cotonea, Persica, Armeniaca, and Medica, sive Citria. The last, or citron, we think, has the best claim to be considered the *Tappuach* of Scripture, as it was esteemed by the ancients, and known to the Hebrews, and conspicuously different, both as a fruit and a tree, from the ordinary vegetation of Syria, and the only one of the orange tribe which was known to the ancients. The orange, lemon, and lime, were introduced to the knowledge of Europeans at a much later period, probably by the Arabs from India (Royle, *Himal. Bot.*). The citron, resembling the lemon in form, but distinguished by its thick rind, was the μῆλον Μηδικόν of Theophrastus, the Μηδικόν of Dioscorides, and for which he gives as a synonyme κεδρόμηλον; 'Malus Medica et Assyria dicitur, utroque nomine a regionibus ducto, ut habet Theoph. 4, *Hist.* 4. Citrus apud Medos et Persas in primis frequens, dein Paladii diligentia in Italiam translata fuit: postea in Hispania,' etc. (Bauhin. *Pinax.*) It was called citria and citromela by the Romans, though their citron wood was produced by Thuya articulata [Thyine Wood]. It is thus graphically described: 'Fert poma omnibus horis, aliis decidentibus, aliis subnascentibus, aliis maturescentibus.' That the citron was well known to the Hebrews we have the assurance in the fact mentioned by Josephus, that at the Feast of Tabernacles king Alexander Jannæus was pelted with *citrons*, which the Jews had in their hands; for, as he says, 'the law required that at that feast every one should have branches of the palm-tree and *citron*-tree' (*Antiq.* xiii. 13. 5). From this and other facts we conclude that the *Etz hadar* of Lev. xxiii. 40 has reference to the citron [Etz Hadar]. There is nothing improbable in the Hebrews having made use of boughs of the citron, as it was a native of Media, and well known to the Greeks at a very early period; and indeed on some old coins of Samaria, the citron may be seen, as well as the palm-tree; and it is not an unimportant confirmation that the Jews still continue to make offerings of citrons at the Feast of Tabernacles. Citrons, accordingly, are imported in considerable quantities for this purpose, and are afterwards sold, being more highly esteemed after having been so offered.

The *tappuach*, or citron-tree, is mentioned chiefly in the Canticles, ch. ii. 3, 'as the citron tree among the trees of the wood;' ver. 5, 'Comfort me with citrons, for I am sick of love;' vii. 8, 'The smell of thy nose like citrons;' so in viii. 5. Again, in Prov. xxv. 11, 'A word fitly spoken is like apples of gold (or rather golden citrons) in baskets of silver.' In Joel i. 12, it is enumerated with the vine, the fig-tree, the palm, and pomegranate, as among the most valuable trees of Palestine. The rich colour, fragrant odour, and handsome appearance of the tree, whether in flower or in fruit, are particularly suited to all the above passages of Scripture.—J. F. R.

TAPPUAH, or Beth-Tappuah, a city in the tribe of Judah, not far from Hebron (Josh. xv. 53). Robinson identifies it with an old village, called Teffuh, which he found upon the hills north-west of Hebron (*Bib. Researches*, ii. 428). 2. Another Tappuah lay in the plain of Judah, apparently in the vicinity of Zanoah, Jarmuth, Socoh, etc. (Josh. xv. 34): which of these was the place conquered by Joshua is not very clear (Josh. xii. 17; comp. x. 6). 3. Another place of the same name occurs on the confines of Ephraim and Manasseh (Josh. xvi. 8). 4. And in 1 Chron. ii. 43, a man of this name appears.

TARES. [Zizanion.]

TARGUMS. Different accounts of the origin of the Targums, or Chaldee paraphrases, have been given. Eichhorn and others endeavour to show that they are not so ancient as has been generally supposed, and that the earliest of them appeared about the same time as the Talmud, or the beginning of the third century. This point is in part connected with another, viz., the extinction of the Hebrew as a living language. Eichhorn

and others believe that it did not cease to be spoken during the Babylonish captivity, but that it was still used after the return, and gradually died away; while the Buxtorfs maintained that it then became entirely extinct as a living tongue. It is most probable that the people ceased to speak it in common before the termination of the Captivity, but that the learned and educated of the Jews retained it partially in conversation. The latter would naturally adhere to it longer than the mass of the people, not only from their perusal of the sacred books, but their stronger attachment to the usages of their fathers. The decision of the question rests upon the meaning assigned to the two words מפרש and יהודית in Nehemiah viii. and xiii. 24 respectively, as has been already remarked by another contributor [Hebrew Language]. Gesenius explains the former term *distinctly;* but Hengstenberg renders it *giving a version* or *translation*. The latter term is understood by Gesenius to mean the *Hebrew language*, while Hengstenberg refers it to the *Aramæan*, or that which the Hebrews commonly used. It is difficult to decide between these conflicting expositions. There is some reason for doubt in regard to the accuracy of the meaning assigned by Hengstenberg to מפרש. The entire verse, however, implies that the people generally did not understand the law when publicly read in the Hebrew language, so that the priests and Levites were obliged to adopt some expedient in order to make it intelligible. Hence it is most natural to conclude that they had ceased to speak the Hebrew tongue, and required explanatory comments in the Chaldee or Aramæan. Probably the priests and Levites gave a sort of running paraphrase on the words of the law as they were read before the people, putting these words into the Chaldee dialect with which the hearers were acquainted. Such was the origin of the Chaldee versions. At first they were given *orally*, but subsequently they were reduced to *writing*. The practice began in the time of Ezra, and was afterwards continued.

Great importance was attached to the office of *interpreter* or *translator* of the law. The Talmudic canon asserts that as the law was given by a *mediator*, so it could only be read and understood by a *mediator*. The custom of extempore paraphrase seems to have occasioned palpable abuses. Hence definite, hermeneutic rules were laid down, in conformity with which the interpretation of the law should be conducted. The licence of the paraphrast was curbed by canons, which came to be universally binding. It is easy to see how the value of written expositions would become apparent when the freedom of the interpreter was abridged by established regulations. The nature of the exposition required called for *written* interpretations. Hence *oral* gave rise to *written* explanations, the necessity of the latter becoming more visible when the liberty taken by the extempore translator was narrowed by rules to which he must rigidly adhere. The surest and safest method of giving the meaning was simply by reading a version that had been written for the use of the people.

External circumstances were also favourable to the existence of *written* explanations. The Hellenistic Jews were already in possession of the law in their own tongue; and in the first century the Syrians had translated the Holy Writings into their dialect. Greek versions, in opposition to the Alexandrine, also proceeded from the Jews themselves, and obtained much approbation. In the midst of so general a desire to have versions of the Old Testament in different languages, it is natural to suppose that the Jews who spoke Aramæan should wish to possess translations of the Scriptures in their living tongue. All the circumstances of the case conspire to show that there were written Targums of several Old Testament books in the time of the Maccabees. In various parts of the Talmud mention is made of a written Aramæan version of Job in the first century, and it is not likely that this was the first book rendered into the language of the people. Besides, there are also allusions to older Targums (Zunz, p. 62). The silence of the early fathers regarding such paraphrases is of no weight, because they were generally ignorant of Hebrew and Hebrew literature.

The language of the *older* Targums agrees substantially with that of the Chaldee sections in Daniel and Ezra, though the orthography is somewhat different. The *later* abound with foreign words. They depart much further from the ancient orthography, and sometimes from the grammatical principles, of the Chaldee. Their present punctuation is different from that found in the Biblical Chaldee. It is probable that they were written at first without the vowels. When the vocalisation of the Hebrew Bible was enlarged and perfected by the Jewish grammarians, the same attention was not given to the Targums. Subsequently the editors of these paraphrases endeavoured to bring the pointing of them nearer to that of Daniel and Ezra. Buxtorf laboured in this province with great success. The reputation of these Targums among the Jews has always been high, because amid other things they flatter their national pride, and abound with Rabbinic fables.

The word *Targum* is derived from a quadriliteral root, and signifies *interpretation* or *version*.

At present we know of eleven, three of which comprehend the five books of Moses. 1. The Targum of Onkelos. 2. That of the Pseudo-Jonathan. 3. The Jerusalem Targum. 4. That of Jonathan ben Uzziel on the Prophets. 5. That of Joseph the blind or one-eyed, on the Hagiographa (Job, Psalms, Proverbs). 6. A Targum on the five Megilloth, *i.e.* the books of Ruth, Esther, Ecclesiastes, Song of Solomon, and Lamentations of Jeremiah. 7. A Targum on 1st and 2nd Chronicles. 8, 9, and 10. Three on Esther. 11. The Jerusalem Targum on the Prophets.

Onkelos.—According to the Babylonian Talmud, Onkelos was a disciple of Hillel, who died 60 years B.C. This Hillel was grandfather of Gamaliel, Paul's instructor. Eichhorn, disregarding the Jewish tradition, places him much later.

His version, containing the Pentateuch alone, is incomparably the best of all the Targums. The style is pure, approaching that of Daniel and Ezra; it follows the original word for word, except where figures of speech are occasionally resolved in poetical passages, and anthropomorphic expressions removed or changed, lest corporeity should be attributed to the Supreme

Being. The work is particularly useful in criticism, because it is very literal, closely adhering to the original words. Wherever the translator deviates from the Masoretic text, he has almost always the countenance of other ancient versions. He refers only two passages to the Messiah (Gen. xlix. 10; Num. xxiv. 17). Onkelos's reputation among the Jews has always been great; his version is even used by them as a kind of dictionary giving the significations of Hebrew words; and they have composed a Masora on it like that upon the Hebrew Bible, called *Masora Hattargum*. This paraphrase is given in the Paris and London Polyglotts from Buxtorf's edition of 1618; the text, however, is not yet accurately printed after good MSS. Luzzato has recently attempted to revise it in his work entitled *Philoxenus, sive de Onkelosi paraphr. Chald.*, Wien. 1830, 8vo. (See the *Halle Literaturzeit.* for 1832.)

Jonathan Ben Uzziel on the Prophets and Historical Books.—The accounts of Jonathan's life are obscure. It is generally said that he was the most distinguished of Hillel's eighty disciples, and colleague of Simeon the Just; and thus he is represented as living a short time before the birth of Christ. The grounds assigned by Eichhorn and others in favour of a more recent period are unsatisfactory.

This Targum, like that of Onkelos, is frequently mentioned in the Talmud, and must have been well known when the latter was written. Some have supposed that in various places Jonathan made use of Onkelos's version; the contrary is as probable. Jonathan's version seems to have been made prior to Onkelos on the law. It is more likely that the Jews would first venture to translate the *prophetic* writings, in which freer scope might be taken, than undertake the difficult task of giving a version of the *Pentateuch*. In the latter case, greater literality was required and stricter injunctions were to be observed.

Some have erroneously looked upon this Targum as the composition of different authors, because it is more literal in the historical books than in the prophets; but external and internal evidence coincide in proving the unity of the whole.

It contains Joshua, Judges, Samuel, Kings, Isaiah, Jeremiah, Ezekiel, and the twelve minor prophets.

The style is inferior to that of Onkelos; it contains several Greek words, but no Latin terms, as Eichhorn affirms. We are aware that Hävernick, after Carpzov, asserts that the style agrees in the main with Onkelos's; but it is certainly less pure, freer, and more paraphrastical.

The utility of this Targum chiefly bears upon the critical history of the Hebrew text, and it generally harmonises with the Masoretic recension. It is printed in the Bibles of Bomberg and Buxtorf, as also in the London Polyglott.

Pseudo-Jonathan on the Pentateuch.—This paraphrase has been falsely ascribed to the same Jonathan who translated the prophets and historical books. Its language is much more impure, being mixed with foreign words, such as Persian, Greek, and Latin, a collection of which has been made by Petermann 'De indole Paraphraseos, quæ Jonathanis esse dicitur' (Berol. 1829, p. 65, sq.) The mode of rendering is entirely different; it contains numerous allegories, fables, and dialogues, unlike the manner of the real Jonathan. The dialect in which it is written is that of Jerusalem; and where the author abides by the Hebrew text, he uniformly follows the Rabbinical interpretation. Several circumstances, especially the character of the style and the mention of the Talmud, prove that it was made after the sixth century of the Christian era. Zunz, with great probability, assigns it to the latter half of the seventh century. It appears to have been compiled in part from former expositions.

The Jerusalem Targum on the Pentateuch.—This version is styled the *Jerusalem* Targum, either from having been made at Jerusalem, or rather from its being executed in the dialect of that place. It contains merely interpretations of select passages, and generally agrees with Pseudo-Jonathan. The fables of the Pseudo-Jonathan are repeated, and Hebrew words are inserted without any explanation. The language is impure and barbarous; whole chapters are occasionally omitted; and again, a series of successive explanations is attached to a single word. It consists of mere fragments.

Late investigations, conducted with great skill and industry, have fully established the fact that the Targum on the Pentateuch, falsely ascribed to Jonathan, existed much earlier under the name of *the Jerusalem Targum* or *the Targum of Palestine*. Thus the Pseudo-Jonathan is identified with the Targum of Jerusalem. They are merely *recensions* of the same work. There is also ground for believing that the Jerusalem Targum extended to the prophetic books, and even to the other parts of the Old Testament (Zunz, p. 77, sq.). Some of the Targums now existing on several books of the *Hagiographa* appear to belong to it. (See Zunz, *Gottesdienstliche Vorträge der Juden*, Berlin, 1832, 8vo., and Hävernick's *Einleitung.*)

These two Targums, which are substantially one and the same, furnish extremely little aid in the criticism of the Old Testament. They exhibit the doctrinal system of the later Jews; indeed, all the post-Talmudic versions were designed to furnish allegorical explanations agreeable to the rules laid down in the Talmud, and to embody current traditions, legends, and tales.

The paraphrases on Job, Psalms, and Proverbs possess a common character in regard to style and language, and probably proceeded from the same country, which Zunz conjectures to have been Syria; that on Proverbs, however, adheres closely to the Hebrew text, partaking more of the character of a *version* than a *paraphrase*, while those on Job and Psalms are loose and legendary, agreeably to the genius of the time in which they were made. It has been frequently noticed that the Targum on Proverbs has a remarkable agreement with the Syriac version, so that some have supposed the writer to have made use of that more ancient translation; this hypothesis, however, is not very probable. The dialects in which both are written were cognate; the country to which they owed their origin the same; it is not necessary, therefore, to conclude that the one was derived in part from the other. The paraphrases of the books of Psalms and Job appear to have been written by the same person, as far as we can judge from internal uniformity. Earlier Targums on

Job must have existed, as they are mentioned by some of the Rabbins.

The Targum on the Megilloth was probably written by the same person; it is exceedingly free and full of adventitious matter. The part upon Ruth is the best; that on Solomon's Song the most fabulous. The work must have been written a considerable time after the Talmud. In addition to the Targum on Esther, which forms a part of this Targum on the five Megilloth, and is also the oldest and best, there are two others on the same book. The second is an enlargement of this first, and was inserted in the London Polyglott; it had been previously published by Tayler in a Latin version, under the name of *Targum prius* (Lond. 1655, 4to.). The third is still longer and more full of fables; it was published in Latin by Tayler, under the title of *Targum posterius*, but the original has never been printed. These three are properly different recensions of one and the same work, which, having been comparatively brief and free from absurd stories, was subsequently enlarged at two different times.

It was long thought that there was no Targum on the books of Chronicles; Beck, however, found such a paraphrase in a MS. belonging to the library at Erfurt, and published it with learned annotations in 1680-83. The MS. has several chasms. It was afterwards published by Wilkins from the Erpenian MS. at Cambridge, in 1715; here the text is full and correct. This Targum resembles the later works of the same kind; and could not have been written before the ninth century, from its references to the Jerusalem Targum.

The Targum on Job, Psalms, and Proverbs, attributed to R. Joseph the Blind, is generally considered not to have been written by the reputed author.

In cod. 154 of Kennicott, there is a passage of some length quoted in the margin at Zechariah, xii. 10 (Bruns in Eichhorn's *Repertorium*, xv. 174). It is attributed to a Targum of Jerusalem on the prophets.

As far as our present knowledge reaches, there is no Chaldee version of Daniel, Ezra, and Nehemiah. The reason assigned in the Talmud for not translating Daniel into Chaldee is, because it reveals the exact time of Messiah's advent. But the true cause seems rather to have been the superstition of the Jews in supposing that if these books were translated into Chaldee, the holy text of the original should be mixed with that of the paraphrase, inasmuch as there are in them Chaldee sections. There are indeed no Chaldee pieces in Nehemiah; but it was taken along with Ezra as one book, and hence no Targum of either was made.

The Targums are of considerable use in a critical view. They show the integrity of the present Masoretic text. It is not denied that they contain readings different from some now current among the Jews, and that they appear to have been occasionally altered in order to be conformed to an altered original: neither should it be concealed that the MSS. vary from one another and from the printed copies. As to their having been assimilated to the Hebrew, it remains to be proved that this was done to any great extent, or that it was *uniformly* practised. After all reasonable deductions for probable deterioration, they still afford a considerable amount of testimony in favour of the general integrity of the Hebrew text. They may be advantageously used in a critical edition of the Bible, as suggesting readings of real importance and value. Onkelos on the law, and Jonathan on the prophets, because of their literality, will be most serviceable.

Besides the works referred to in the preceding article, the following may be mentioned: the *Introductions* of Eichhorn, Bertholdt, and De Wette; Winer, *De Onkeloso ejusque Paraphrasi Chaldaica*, 4to. Lips., 1819; Gesenius, *Comment. zu Jesaia*, tom. i.; Walton, *Prolegomena*; Jost, *Geschichte der Israeliten*, Berlin, 1824-9, tom. iii. and iv. Winer has published a grammar and Chrestomathy to facilitate the reading of the Targums, and Buxtorf's folio Lexicon is the best dictionary.—S. D.

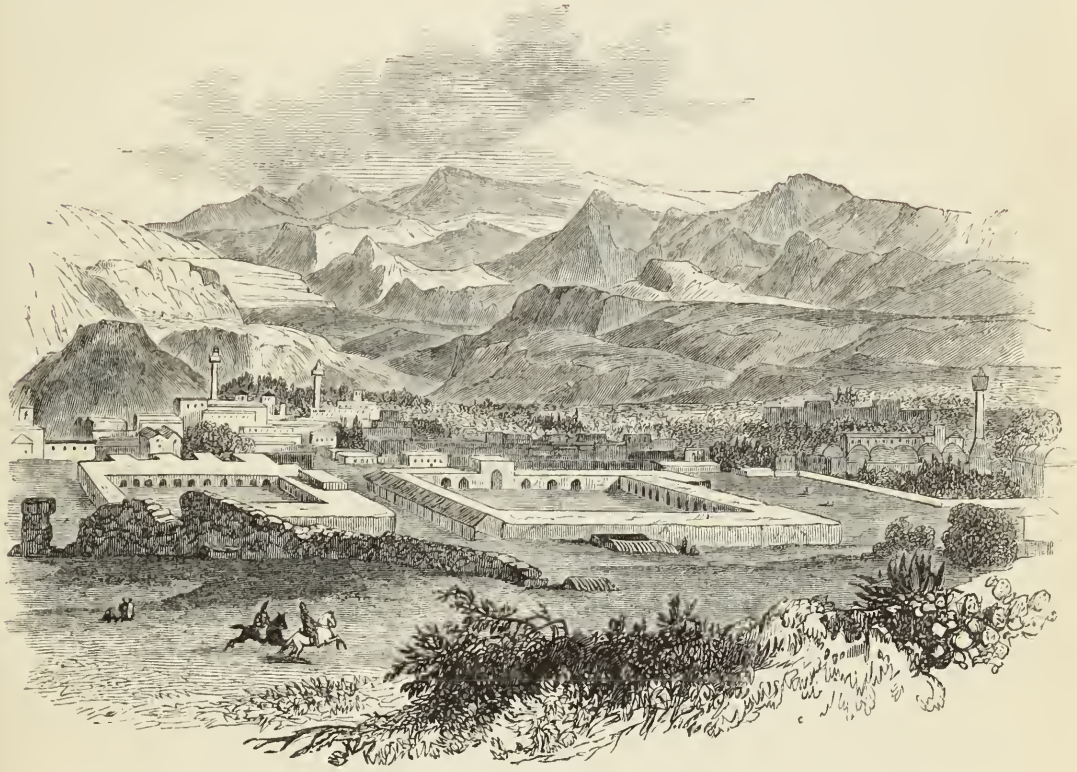
TARSHISH (תַּרְשִׁישׁ), a celebrated part of the ancient world, about the exact position of which opinions are much divided. In this case, however, as in many other Scriptural difficulties, that is clear which is important, while the doubtful or the hidden is of comparatively little moment. We may, or we may not, be able to fix with certainty the exact spot where Tarshish lay; but the particulars which Scripture supplies respecting it are too numerous and too definite to allow any doubt as to what was the character and condition of the place itself. Tarshish may be described, and, therefore, may be known, though we still remain in uncertainty on what point in the map the name should be inscribed. And while the exact locality is of small concern, the important details which the Bible presents may, nevertheless, render us aid in attempting to determine where Tarshish lay.

We will first give a summary of the notices which the Scriptures afford respecting Tarshish. In the great genealogical table (Gen. x. 4, 5) it is placed among the sons of Javan; 'Elishah and Tarshish, Kittim and Dodanim. By these were the islands of the Gentiles divided.' This refers the mind at once to the north-western parts of the Mediterranean. To a similar conclusion does other Scriptural language lead. In Ps. lxxii. 10 it is said, 'The kings of Tarshish and of the isles shall bring presents;' and in 2 Chron. ix. 21, we read, 'The king's (Solomon) ships went to Tarshish with the servants of Hiram; every three years once came the ships of Tarshish bringing gold and silver, ivory, and apes, and peacocks.' Now Hiram's city, Tyre, lay on the Mediterranean coast, and it is easy to see how Solomon's vessels might be associated with his in a voyage towards the west to fetch merchandise. In Isa. lxvi. 19, we find Tarshish mentioned in a way which confirms this view: 'And I will set a sign among them, and I will send those that escape of them unto the nations (or Gentiles); to Tarshish, Pul, and Lud, that draw the bow, to Tubal and Javan, to the isles afar off.' These passages make it clear that Tarshish lay at a distance from Judæa, and that that distance was in a north-westerly direction; and the mention of such names as Lud, Javan, and the isles, carries the mind to the extreme north-west, and suggests Spain as the place for Tarshish. But Tarshish must have been on the sea-coast, for it was famous for its ships. 'The ships of Tarshish' were celebrated under that designation, which may have been used in that wide sense in which we speak of an East Indiaman, reference

being made rather to the place whither the vessel traded, than to that where it was built; or the phrase may have come to denote a particular kind of vessel, *i. e.* trading or merchant ships, from the celebrity of Tarshish as a commercial port (1 Kings x. 22; Ps. xlviii. 7; Isa. ii. 16; xxiii. 1-14; lx. 9; Ezek. xxvii. 25). Some six times do we meet with the phrase, ships or navy of Tarshish; which of itself shows how noted a sea-port we have under consideration, if it does not prove also that in process of time the terms had come to describe vessels according to their occupation rather than their country, as we say 'a slaver,' denoting a ship engaged in the slave-trade (comp. Horat. 'sævis Liburnis,' *Carm.* i. 27; 'Bithyna carina', i. 35; 'trabe Cypria,' i. 1). In Ezek. xxvii. 12-25, the place is described by its pursuits and its merchandise:—'Tarshish (here again in connection with a western country, Javan, ver. 13) 'was thy (Tyre) *merchant*, in all riches, with silver, iron, tin, and lead, they traded in thy fairs. The ships of Tarshish did sing of thee in thy market, and thou wast replenished and made very glorious in the midst of the seas.' The last words are admirably descriptive of the south-western coast of Spain. How could a Hebrew poet better describe the locality where the songs of the sailors of Tarshish made the name of Tyre glorious? Let the reader turn to the map, and cast his eye on the embouchure of the Guadalquivir, and say if this spot is not pre-eminently, when viewed from Palestine, 'in the midst of the seas.' There is a propriety too in the words found in Ps. xlviii. 7 (comp. Ezek. xxviii. 26), 'Thou breakest the ships of Tarshish with an east wind,' if we suppose merchant vessels working eastwardly up the Mediterranean towards Tyre, encountering an east or rather north-east gale, which is a very violent and destructive wind to this day. Jeremiah (x. 9) tells us that 'silver spread into plates' was brought from Tarshish; and from the connection the silver appears to have been elaborately wrought; whence we infer that at one period there was in Tarshish the never-failing connection found between commerce, wealth, and art. An important testimony occurs in Ezek. xxxviii. 13, 'Sheba and Dedan, and the merchants of Tarshish, with all the young lions thereof, shall say unto thee, Art thou come to take a spoil? to carry away silver and gold? to take away cattle and goods, to take a great spoil?' whence it is clear that Tarshish was an opulent place, abounding in cattle and goods, in silver and gold. We are not sure that the words 'the young lions thereof' are intended to be taken literally. They may refer to the lion-hearted chiefs of the nation; but if they are understood as implying that lions were literally found in Tarshish, they only concur with other parts of Scripture in showing that the name is to be taken in a wide acceptation, as denoting, besides modern Andalusia, those parts of Africa which lay near and opposite to Spain. Nor is it impossible that a part of the trade of Tarshish lay in these and in other animals; for we certainly know that Solomon's ships brought that prince apes and peacocks: the lions may have been caught in Africa, and conveyed in ships of Tarshish to Tyre. Sheba and Dedan, however, are mentioned here in connection with Tarshish, and they were certainly eastern countries, lying probably on the western side of the Persian gulf in Arabia. But the object of the writer may have been to mention the countries placed at the extremities of the then known world—Tarshish on the west, Sheba and Dedan on the east. In Isa. xxiii. 1-14, we read, as a part of the burden of Tyre, that the ships of Tarshish are called on to howl at her destruction, because Tyre afforded them no longer a commercial port and a haven: words which entirely agree with the hypothesis which makes Tarshish a city on the sea-board of Spain, trading up the Mediterranean to Tyre. Nor are the words found in the sixth verse discordant: 'Pass ye over to Tarshish; howl, ye inhabitants of the isles.' Let us now turn to the book of Jonah (i. 1-3; iv. 2). The prophet was commanded to go and prophesy against Nineveh on the Tigris. For this he should, on quitting Jerusalem, have gone in an easterly direction; but he shunned the duty and fled. Of course he naturally fled in a direction the opposite of that in which the avoided object lay: he proceeded, in fact, to Tarshish. Tarshish then must have been to the west, and not to the east, of Jerusalem. In order to reach Tarshish he went to Joppa, and took ship for the place of his destination, thus still keeping in a westerly course, and showing that Tarshish lay to the west. In Tarshish, indeed, placed in the extreme north-west, he might well expect to be distant enough from Nineveh. It is also worthy of notice that, when he arrived at Joppa on the coast of Palestine, 'he found a ship going to Tarshish;' which fact we can well understand if Tarshish lay to the west, but by no means if it lay on the Red Sea.

Thus far all the passages cited agree, with more or less of evidence, in fixing Tarshish somewhere in or near Spain. But in 2 Chron. xx. 36, it is recorded that Jehoshaphat king of Judah joined himself with Ahaziah king of Israel, 'to make ships to go to Tarshish, and they made the ships in Ezion-geber,' that is, on the Elanitic gulf on the eastern arm of the Red Sea. If then these vessels, built at Ezion-geber, were to go to Tarshish, that place must lie on the eastern side of Palestine instead of the western; for we cannot suppose they circumnavigated Africa; not because such a voyage was impossible, but because it was long and tedious, and not likely to be taken when a nearer and safer way to Tarshish lay from the ports of the Palestinian coast. But in the parallel passage, found in 1 Kings xxii. 49, these vessels are described as 'ships of Tarshish' (merchant vessels), which were intended to go to *Ophir*, not to Tarshish. This removes the difficulty at once, for Ophir was in the east, and accounts for the fact that the fleet was built on the Red Sea, since it was an eastern not a western voyage which was intended. The reference appears to be to the same eastern trade of which mention is made in 1 Kings x. 22, where we find Hiram and Solomon importing from the East in ships of Tarshish or merchantmen, gold and silver, ivory, apes, and peacocks. We have not space to enter into the critical questions which this contrariety between the books of Kings and Chronicles suggests for consideration; but we may remark that in a case in which a diversity appears in the statements of these two authorities, no competently informed theologian could hesitate to give the preference to the former.

It appears then clear from this minute review



of the Scriptural accounts and allusions, that Tarshish was an old, celebrated, opulent, cultivated, commercial city, which carried on trade in the Mediterranean and with the sea-ports of Syria, especially Tyre and Joppa, and that it most probably lay on the extreme west of that sea. Was there then in ancient times any city in these parts which corresponded with these clearly ascertained facts? There was. Such was Tartessus in Spain, said to have been a Phœnician colony (Arrian, *Alex.* iii. 86), a fact which of itself would account for its intimate connection with Palestine and the Biblical narratives. As to the exact spot where Tartessis (so written originally) lay, authorities are not agreed, as the city had ceased to exist when geography began to receive attention; but it was not far from the Straits of Gibraltar, and near the mouth of the Guadalquivir, consequently at no great distance from the famous Granada of later days. The reader, however, must enlarge his notion beyond that of a mere city, which, how great soever, would scarcely correspond with the ideas of magnitude, affluence, and power that the Scriptures suggest. The name, which is of Phœnician origin, seems to denote the district of south-western Spain, comprising the several colonies which Tyre planted in that country, and so being equivalent to what we might designate Phœnician Spain. We are not however convinced that the opposite coast of Africa was not included, so that the word would denote to an inhabitant of Palestine the extreme western parts of the world. We seem, however, authorized by considerations, besides those which have been already elicited, in identifying the Hebrew Tarshish with the Spanish Tartessus, whatever may have been the extent of the neighbouring country over which the latter held dominion, or possessed immediate influence. Among these considerations we mention, 1st. that the two names are similar, if they are not the same; the Greek Ταρτησσός, with the Aramaic pronunciation, would be תַּרְתִּישׁ, a fact which would of itself seem to settle the question, in the absence of conflicting evidence and claims; 2nd. Spain was one of the chief seats of Phœnician colonization; and if we unite therewith the north-west of Africa, we shall have some idea of the greatness of the power of Tyre in these parts, for Tyre is reported to have founded not fewer than three hundred cities on the western coast of Africa, and two hundred in south-western Spain (Strabo, ii. 82). Here, then, was found the chief object of the Phœnician sea trade. These countries were to Tyre what Peru was to Spain. Confining our remarks to Spain, we learn from Heeren that the Phœnician colonies on the European side of the sea were situated in the south of the present Andalusia. Here, with other important places, lay Tartessus, a name which is borne by a river, an island, a town, and a region. Heeren distinctly says that to Orientalists the word indicated the farthest west generally, comprising, of course, many places. In the commercial geography of the Phœnicians, he adds, the word obviously meant the entire of their colonial dependencies in southern Spain. In the same general way we use the term West Indies; and thus arose the river, the town, the district of Tartessus, since the country included them all (Heeren, *Ideen*, ii. 44, sq.). 3rd. It does much to confirm our view that all the articles reported in Jeremiah and Ezekiel, to have been brought from Tarshish, might have come from south-western Spain. Here there were mines of gold and silver, and Tartessus is expressly named as affording the latter mineral (Strabo, iii. p. 147; Diod. Sic. v. 35). Tin was brought by the Phœnicians from Britain into Spain, and thence carried to the Oriental markets. According to Diodorus Siculus (v. 38), tin was procured in Spain also, as well as lead, according to Pliny (*Hist. Nat.* iii. 4). Pliny's words are forcible: 'Nearly all Spain abounds in the metals—lead, iron, copper, silver, gold.'

The view which has been taken in these observations was suggested to our mind by Winer's excellent article on the subject (*Real-wörterb.* ii. 700), and on his authority some of our statements rest; but we should not do justice to it, did we not add, that though suggested by Winer, it is the unprejudiced result of our own investigation of the several Scriptural passages which bear on the subject. We add one or two corroborations. Heeren (*Ideen*, ii. 64) translates Ezek. xxvii. 25, 'The ships of Tarshish,' &c., by 'Spanish ships were the chief object of thy merchandise; thou (Tyre) wast a full city, and wast honoured on the seas.' The Phœnicians were as eager in their quest of gold and gold countries as were the alchemists and the Europeans of the sixteenth century. The lust for gold urged them over the deserts of Arabia, and the cliffs of the Red Sea, as far as Yemen and Ethiopia; and the same passion carried them westwardly to the coasts of Spain and the pillars of Hercules. 'Spain,' says Heeren, 'was once the richest land in the world for silver; gold was found there in great abundance, and the baser metals as well. The silver mountains were in those parts which the Phœnicians comprised under the general name of Tartessus or Tarshish. The immeasurable affluence of precious metals which on their first arrival they found here, so astounded them, and the sight thereof so wrought on the imagination of the people, that fact called fable to its aid, and the story gained currency, that the first Phœnician colonists not only filled their ships with gold, but made thereof their various implements, anchors not excepted.'—J. R. B.

TARSHISH, a precious stone, so called as brought from Tarshish, as Ophir is also put for the gold brought from thence (Exod. xxviii. 20; xxxix. 13; Ezek. i. 16; x. 9; xxviii. 13; Cant. v. 14; Dan. x. 6). The Septuagint, followed by Josephus, makes it the 'chrysolite,' *i. e.* the topaz of the moderns, which is still found in Spain: so Braun, *De Vestitu Sacerd.* ii. 17. Others suppose it to be 'amber;' but this does not agree with the passages in Exodus, which make the Tarshish to have been one of the engraved stones of the high-priest's breast-plate. The word is translated 'beryl' in the Authorized Version.

TARSUS (Ταρσός), a celebrated city, the metropolis of Cilicia, in Asia Minor, on the banks of the river Cydnus, which flowed through it, and divided it into two parts. Hence it is sometimes by Greek writers called Ταρσοί in the plural, perhaps not without some reference to a fancied resemblance in the form of the two divisions of the city to the wings of a bird. Tarsus was a distinguished seat of Greek philosophy and literature, and from the number of its schools and learned

men, was ranked by the side of Athens and Alexandria (Strabo, xiv., pp. 673, 674). Augustus made Tarsus free (Appian, *Bell. Civ.* v. 7). This seems to have implied the privilege of being governed by its own laws and magistrates, with freedom from tribute; but did not confer the *jus coloniarum*, nor the *jus civitatis:* and it was not therefore, as usually supposed, on this account, that Paul enjoyed the privilege of Roman citizenship. Tarsus, indeed, eventually did become a Roman colony, which gave to the inhabitants this privilege; but this was not till long after the time of Paul (Deyling, *Observat. Sacr.* iii. 391, sq.; comp. Citizenship; Colony). We thus find that the Roman tribune at Jerusalem ordered Paul to be scourged, though he knew that he was a native of Tarsus, but desisted on learning that he was a Roman citizen (Acts ix. 11; xxi. 39; xxii. 24, 27). In the time of Abulfeda, that is, towards the end of the thirteenth and beginning of the fourteenth century, Tarsus was still large, and surrounded by a double wall, and in the occupation of Armenian Christians (*Tab. Syriæ*, p. 133). It is now a poor and decayed town, inhabited by Turks; but it is not so much fallen as many other anciently great towns of the same quarter, the population being estimated at 30,000. There are some considerable remains of the ancient city (Heumann, *De Claris Tarsenensib.*, Gott. 1748; Altmann, *Exerc. de Tarso.* Bern. 1731; Mannert, ii. 97, sq.; Rosenmüller, *Bib. Geog.* iii. 38; Beaufort, *Karamania;* Irby and Mangles, *Travels*, pp. 502-506; see also the articles Citizenship and Colony).

516. [Tarsus.]

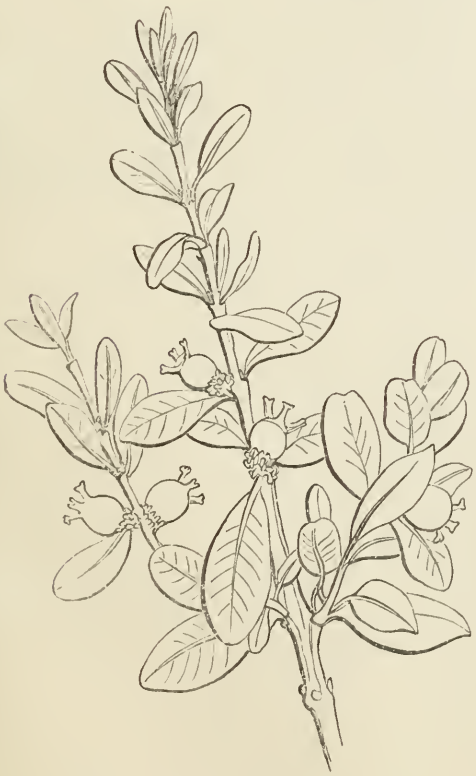
TARTAK (תַּרְתָּק; Sept. Θαρθάκ), an idol of the Avites, introduced by them into Samaria (2 Kings xvii. 31). In Pehlevi *Tar-thakh* might mean 'deep darkness' or 'hero of darkness.' Gesenius thinks that under this name some malign planet (Saturn or Mars) was worshipped (*Comment. in Jes.*, ii. 348); but we are too little acquainted with the Assyrian superstitions to be able to identify this idol with certainty.

TARTAN (תַּרְתָּן; Sept. Θαρθάν and Ταράθαν), an Assyrian general whom Sennacherib sent, accompanied by Rabsaris and Rabshakeh, to Jerusalem (2 Kings xviii. 17). It is not known whether this is the same officer who in a preceding reign besieged and took Ashdod for his master (Isa. xx. 1).

TATNAI (תַּתְנַי; Pers., perhaps *gift;* Sept. Θανθαναΐ), a Persian governor, who succeeded Rehum in the rule of Samaria, and probably of other provinces north of Judæa. He appears to have been a more just person, and more friendly to the Jews, than his predecessor. An adverse report of their proceedings at Jerusalem reached him; but he resolved to suspend his judgment till he had examined into the matter on the spot. He accordingly repaired thither, accompanied by another great officer, named Shethar-boznai, and their colleagues, and finding that the Jews alleged the authority of a royal decree for their proceedings, he sent to the supreme government a temperate and fair report, founded on the information he had obtained, suggesting that the statement made by the Jews as to the decree of Cyrus and other matters should be verified by reference to the archives at Babylon. Then, without one word to influence the decision or to prejudice the claim advanced, Tatnai concludes with intimating that he awaits the royal orders. This official letter of the Persian governor is quite a model of exactness, moderation, and truth, and gives a very favourable idea of the administrative part of the Persian government. This took place in the second year of Darius, B.C. 519. The rescript being

favourable to the claim of the Jews, whose statement had been verified by the discovery of the original decree of Cyrus, Tatnai and his colleagues applied themselves with vigour to the execution of the royal commands (Ezra v. and vi.).

TAVERNS, THE THREE (Τρεῖς Ταβέρναι; Vulg. Tres tabernæ). The name of a small place on the Appian way, mentioned Acts xxviii. 15. The word ταβέρνα is plainly the Latin *taberna* in Greek letters, and denotes a house made with boards or planks, quasi *trabena*. Wooden houses, huts, &c. are called tabernæ. Thus Horace, 'pauperum tabernas regumque turres,' *Carm.* i. 14, 13. Hence the word also means shops, as distinguished from dwelling houses. Horace uses it for a bookseller's shop (*Sat.* i. 4. 71), and for a wine shop (*Ep.* i. 14. 24). The shops at Pompeii are booths, connected in almost every case with dwellings behind, as they were in London three centuries ago. When eatables or drinkables were sold in a Roman shop, it was called taberna, tavern, victualling-house. The place or village called 'Three Taverns' probably therefore derived its name from three large inns, or eating-houses, for the refreshment of travellers passing to and from Rome. Zosimus calls it τριὰ καπηλεῖα (ii. 10). Appii Forum appears to have been such another place. Horace mentions the latter in describing his journey from Rome to Brundusium, as 'differtum nautis, cauponibus atque malignis'—stuffed with rank boatmen, and with vintners base (*Sat.* i. 5. 3). That the Three Taverns was nearer Rome than Appii Forum, appears from the conclusion of one of Cicero's letters to Atticus (ii. 10), which, when he is travelling *south-eastwards* from Antium to his seat near Formiæ, he dates 'Ab Appii Foro, hora quarta'—from Appii Forum, at the fourth hour; and adds, 'Dederam aliam paulo ante, Tribus Tabernis'—I wrote you another, a little while ago, from the Three Taverns. Grotius observes, that there were many places in the Roman empire at this time which had the names of Forum and Tabernæ, the former from having *markets* of all kinds of commodities, the latter from furnishing wine and eatables. The Itinerary of Antoninus places Appii Forum at forty-three Roman miles from Rome, and the Three Taverns at thirty-three. The place still remains, and is called Tre Taverne. In Evelyn's time (1645), the remains were 'yet very faire' (*Diarie*, vol. i. p. 134). The Roman Christians went in token of respect to meet St. Paul at these places, having been probably apprised of his approach by letters or express from Puteoli (Acts xxviii. 13-15)—one party of them resting at the Three Taverns, and the other going on to Appii Forum. When the apostle saw this unequivocal token of respect and zeal, he took fresh courage. In the fourth century there was a Bishop of Three Taverns, named Felix (Optatus, lib. i.).—J.F.D.



TAXES of some kind must have been coeval with the origin of civilized society. The idea of the one is involved in that of the other; since society, as every organization, implies expense, which must be raised by the abstraction of property from the individuals of which it consists, either by occasional or periodical, by self-imposed, or compulsory exactions.

Accordingly we find a provision of income made at the very commencement of the Mosaic polity. Taxes, like all other things in that polity, had a religious origin and import. As a ransom for his soul unto the Lord, every Israelite was to pay half a shekel yearly, from twenty years old and upward, the rich not giving more, the poor not giving less, for the service of the tabernacle (Exod. xxx. 12, sq.; 2 Chron. xxiv. 6). From the latter passage it appears that the law appointing this payment was in force in the days of Joash (B.C. 878). This half shekel was the tribute which our Lord was asked if he paid (Matt. xvii. 24). It is called in the Greek τὰ δίδραχμα, and was in value about fifteen pence. The way in which it is spoken of shows that it was an established and well-known payment—'they that received the didrachm'—in rendering which by 'tribute,' our translators have failed to give the force of the original (comp. Joseph. *De Bell. Jud.* vii. 6. 6). This offering was obligatory on Jews who lived in foreign countries no less than on those who lived at home, though frequently the native princes tried to divert the didrachm from the temple treasury to their own, in which effort they were more than once arrested by the Romans (Joseph. *Antiq.* xviii. 9. 1). From the Talmudical Tract Shekalim (*Mishna*, ii. 4), the time of payment appears to have been between the fifteenth and the twenty-fifth of the month Adar, that is, in March. After the destruction of the temple this didrachm was ordered by Vespasian to be paid into the capitol, as, says Josephus, 'they used to pay the same to the temple at Jerusalem' (*De Bell. Jud.* vii. 6. 6). A special provision seems to have been made, under peculiar circumstances, of one-third of a shekel yearly, 'for the service of the house of our God' (Neh. x. 32). The Jews, at times, found the taxes they had to pay very oppressive. The ten tribes complained that they had found David's yoke heavy, and entreated Rehoboam that he would lighten it. And the stoning to death of Adoram, who 'was over the tribute,' shows to what an extent the question of taxes entered into the causes of the revolt of the ten tribes (1 Kings xii. 4, 18). When the Romans became masters of Palestine the unhappy Jews had a double yoke to bear; while it appears from Josephus that the yoke of the native princes was anything but light. The income of Herod the Great seems to have been about 1600 talents, which has been estimated at 680,000*l.* sterling (Joseph. *Antiq.* xvii. 11. 4, note in Whiston's *Translation*). Agrippa II. had revenues which amounted to twelve millions of drachmæ, which may have equalled nearly half a million of our money. Nor was the recently removed house-tax an exclusive English imposition, for Herod Agrippa is recorded to have 'released the Jews from the tax upon houses, every one of whom paid it before' (Joseph. *Antiq.* xix. 6. 3; 8. 2).

Besides the regular half shekel there was a considerable income derived to the Temple from tithes, firstlings, &c. (2 Kings xii. 4). Considering the fertility of the land we cannot account these religious imposts as heavy. If we turn to the civil constitution, we find taxes first instituted at the time of the introduction of regal power, whose exactions are forcibly described by Samuel (1 Sam. viii. 10, sq.). They consisted partly in personal service, partly in tithe in kind. Occasionally a heavy poll-tax was imposed—'of

all the mighty men of wealth, of each man fifty shekels of silver' (2 Kings xv. 20). On other occasions an assessment was made, and a tax raised from the people of the land generally (2 Kings xxiii. 35). Both these last cases, however, were provisions for a special need. Presents constituted a source of abundant income, and can hardly be regarded in any other light than as a sort of self-imposed tax (1 Sam. x. 27; xvi. 20; 1 Kings x. 25; 2 Chron. xvii. 5). Royal demesnes supplied resources (1 Kings iv. 22, sq.). There was also a transit-tax 'of the merchantmen, and of the traffic of the spice-merchants, and of all the kings of Arabia, and of the governors of the country' (1 Kings x. 15). Ships and other public property belonged to the king (1 Kings x. 28; ix. 26; xxii. 49): the weight of gold that came to Solomon in one year (independently of several sources) was 676 talents (1 Kings x. 14).—J. R. B.

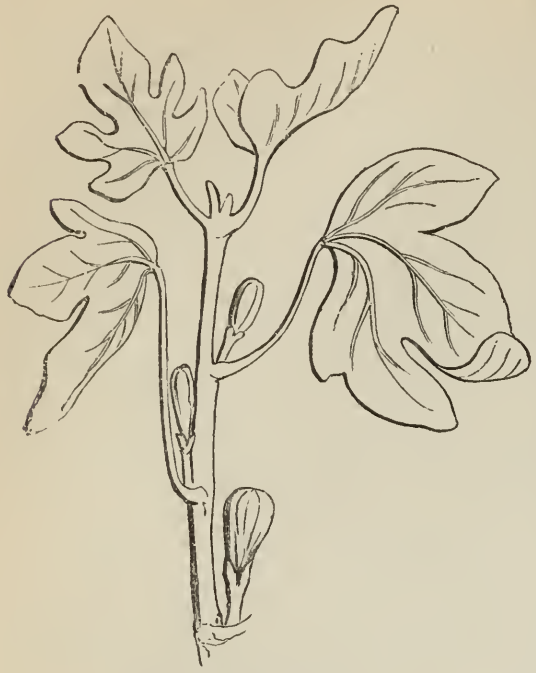
TEASHUR (תְּאַשּׁוּר) occurs in three places in Scripture, but great uncertainty has always existed respecting its true meaning (Cels. *Hierobot.* ii. 153); though it is now generally acknowledged to denote the *box-tree*. There is no philological proof of this conclusion, but yet there is nothing in the tree indicated unsuitable to the several contexts. Thus, with reference to the future temple, it is said (Isa. lx. 13), 'The glory of Lebanon shall come unto thee, the fir-tree, the pine-tree, and the box together;' and at xli. 19, 'I will set in the desert the fir-tree, and the pine, and the box together.' Further in Ezek. xxvii. 6, in the account of the arts and commerce of Tyre, we read, 'Of the oaks of Bashan have they made

517. [Buxus sempervirens.]

thine oars, and the benches of the rowers are made of *ashur-wood*, inlaid with ivory,' as it is now usually interpreted. The ashur-wood, moreover, is said to have been brought from the isles of Chittim, that is, of Greece.

The box (*buxus sempervirens*) is a native of most parts of Europe. It grows well in England, as at Boxhill, &c., while that from the Levant is most valued in commerce, in consequence of its being highly esteemed by wood-engravers. Turkey box is yielded by *buxus Balearica*, a species which is found in Minorca, Sardinia, and Corsica, and also in both European and Asiatic Turkey, and is imported from Constantinople, Smyrna, and the Black Sea. Box is also found on Mount Caucasus, and a species extends even to the Himalaya mountains. Hence it is well known to Asiatics, and is the *shumshad* of the Arabs. It is much employed in the present day by the wood engraver, the turner, carver, mathematical instrument maker, and the comb and flute maker. It was cultivated by the Romans, as described by Pliny. Virgil (*Æn.* x. 135) alludes to the practice of its being inlaid with ivory—

> Quale per artem
> Inclusum buxo, aut Oricià terebintho,
> Lucet ebur.



The box-tree, being a native of mountainous regions, was peculiarly adapted to the calcareous formations of Mount Lebanon, and therefore likely to be brought from thence with the coniferous woods for the building of the temple, and was as well suited as the fir and the pine trees for changing the face of the desert.—J. F. R.

TEBETH (טֵבֵת), the tenth month (Esth. ii. 16) of the sacred year of the Hebrews, commenced with the new moon in December, and terminated at the new moon in January. The Egyptians called it Τυβί or Τωβί, and it was their fifth month. Hieronymus has the following comment upon Ezek. xxix. 1: 'Decimus mensis, qui Hebræis appellatur Tebeth, et apud Aegyptios Τύβι, apud Romanos Januarius.' In Arabic it is called טובה, in Greek Τυβί or Τήβ, and in Sanscrit TAPAS.—C. H. F. B.

TEENAH (תְּאֵנָה) is universally translated *fig* and *fig-tree*, in both ancient and modern versions, and, no doubt, correctly so: it has from the earliest times been a highly esteemed fruit in the East, and its present, as well as ancient Arabic name, is *teen*. The fig-tree, though now successfully cultivated in a great part of Europe, even as far north as the southern parts of England, is yet a native of the East, and probably of the Persian region, where it is most extensively cultivated. The climate there is such that the tree must necessarily be able to bear some degree of cold, and thus be fitted to travel northwards, and ripen its fruit where there is a sufficient amount and continuance of summer heat. The fig is still extensively cultivated in the East, and in a dried state, strung upon cords, it forms an extensive article of commerce from Persia to India. Athenæus, as quoted by Rosenmüller, states that Amitrochates, an Indian king, in a letter, begged Antiochus to send him at his own expense, 'sweet wine, *dried figs*, and a sophist.'

The fig is mentioned in so many passages of Scripture, that our space will not allow us to enumerate them, but they are detailed by Celsius (*Hierobot.* ii. p. 368). The first notice of it, however, occurs in Gen. iii. 7, where Adam and Eve

are described as sewing fig-leaves together, to make themselves aprons. The common fig-leaf is not

518. [Ficus carica.]

so well suited, from its lobed nature, for this purpose; but the practice of sewing or pinning leaves together is very common in the East even in the present day, and baskets, dishes, and umbrellas, are made of leaves so pinned or sewn together. The fig-tree is enumerated (Deut. viii. 8) as one of the valuable products of Palestine, 'a land of wheat, and barley, and vines, and fig-trees, and pomegranates.' The spies, who were sent from the wilderness of Paran, brought back from the brook of Eshcol, clusters of grapes, pomegranates, and figs. The fig-tree is referred to as one of the signs of prosperity (1 Kings iv. 25), 'And Judah and Israel dwelt safely, every man under his vine and under his fig-tree.' And its failure is noted as a sign of affliction (Ps. cv. 33), 'He smote their fig-trees, and broke the trees of their coasts.' The very frequent references which are made in the Old Testament to the fig and other fruit trees, are in consequence of fruits forming a much more important article of diet in the warm and dry countries of the East, than they can ever do in the cold and moist regions of the North. Figs are also used medicinally, and we have a notice in 2 Kings xx. 7, of their employment as a poultice: 'And Isaiah said, Take a lump of figs; and they took and laid it on the boil, and he recovered.' The fig-tree is, moreover, mentioned in the New Testament by its Greek name συκῆ by all the Evangelists. The passages have been fully illustrated by the several commentators.—J. F. R.

TEIL-TREE is the linden-tree, or *Tilia Europæus* of botanists. It is mentioned in the Authorized Version, in Isa. vi. 13, 'as a teil-tree, and as an oak;' but as in the Hebrew the word *alah*, or turpentine tree, is used, there is no reason for giving it a different signification in this from what it has in other passages [Alah].

TEKEL. [Mene, &c.]

TEKOA (תְּקוֹעַ; Sept. Θεκωέ), a city south of Bethlehem, on the borders of the desert to which it gave name, and noted as the residence of 'the wise woman' who interceded for Absalom; as one of the towns fortified by Rehoboam; and as the birthplace of the prophet Amos (2 Sam. xiv. 2; 1 Chron. ii. 24; 2 Chron. xx. 20; Jer. vi. 1; Amos i. 1). The site has long been known; it lies six miles south of Bethlehem, on an elevated hill, not steep, but broad at the top, and covered with ruins to the extent of four or five acres. These consist chiefly of the foundations of houses built of squared stones, some of which are bevilled. The middle of the space is occupied by the ruins of a Greek church. The site commands extensive prospects, and towards the east is bounded only by the level mountains of Moab. Before and during the Crusades Tekoa was well inhabited by Christians; but in A.D. 1138 it was sacked by a party of Turks from beyond the Jordan, and nothing further is known of it till the seventeenth century, when it lay desolate, as it has ever since done (Robinson, *Bib. Researches*, ii. 182-184; Raumer, *Palästina*, p. 219; Turner, *Tour*, ii. 240; Irby and Mangles, p. 344).

TELEM (טֶלֶם), a city in Judah (Josh. xv. 24). According to Kimchi and others, it is the same which is called Telaim in 1 Sam. xv. 4.

TEMA (תֵּימָא; Sept. Θαιμάν), a tract and people in the northern part of the Arabian desert, adjacent to the Syrian desert, so called from Tema, the son of Ishmael (Gen. xxv. 15; Job vi. 19; Isa. xxi. 14; Jer. xxv. 23). This tract is still called تيما *Tema*, by the Arabs, and corresponds to the Θαῖμα of Ptolemy (*Geog.* vi. p. 179) [Arabia].

TEMAN (תֵּימָן; Sept. Θαιμάν), a grandson of Esau (Gen. xxxvi. 11, 15); also a city, region, and people on the east of Idumæa sprung from him (Gen. xxxvi. 42; Jer. xlix. 7; Ezek. xxv. 13; Amos i. 11, 12; Obad. 9). Like other Arabs (1 Kings v. 12), the Temanites were celebrated for wisdom (Jer. xlix. 7; Bar. iii. 22, 23; comp. Job ii. 11; xxi. 1).

TEMANITE, one belonging to the tribe or country of Tema (Job ii. 11; xxi. 1).

TEMPLE (הַהֵיכָל, or הֵיכָל קֹדֶשׁ יְהוָה, בֵּיתאֵל, בֵּית אֱלֹהִים, בֵּית יְהוָה). The word היכל is a participial noun from the root הכל, *capere, excipere*, and reminds us strongly of the Roman *templum*, from τέμενος, τέμνω, *locus liberatus et effatus*. When an augur had defined a space in which he intended to make his observations, he fixed his tent in it (*tabernaculum capere*), with planks and curtains. In the *arx* this was not necessary because there was a permanent *auguraculum*. The Septuagint translation usually renders היכל, 'temple,' by οἶκος or ναός, but in the Apocrypha and the New Testament it is generally called τὸ ἱερόν. Rabbinical appellations are בית המקדש, *the house of sanctuary*, בית הבחירה, *the chosen house*, בית העלמים, *the house of ages*, because the ark was not transferred from it, as it was from Gilgal after 24, from Shiloh after 369, from Nob after 13, and from Gibeon

after 50 years. It is also called מעון. After the Israelites had exchanged their nomadic life for a life in permanent habitations, it was becoming that they should exchange also their moveable sanctuary or tabernacle for a temple. There elapsed, however, after the conquest of Palestine, several centuries during which the sanctuary continued moveable, although the nation became more and more stationary. It appears that the first who planned the erection of a stone-built sanctuary was David, who, when he was inhabiting his house of cedar, and God had given him rest from all his enemies, meditated the design of building a temple in which the ark of God might be placed, instead of being deposited 'within curtains,' or in a tent, as hitherto. This design was at first encouraged by the prophet Nathan; but he was afterwards instructed to tell David that such a work was less appropriate for him, who had been a warrior from his youth, and had shed much blood, than for his son, who should enjoy in prosperity and peace the rewards of his father's victories. Nevertheless, the design itself was highly approved as a token of proper feelings towards the Divine King (2 Sam. vii. 1-12; 1 Chron. xvii. 1-14; xxviii.). We learn, moreover, from 1 Kings v., and 1 Chron. xxii., that David had collected materials which were afterwards employed in the erection of the temple, which was commenced four years after his death, about B.C. 1012, in the second month, that is, the month of Siv (compare 1 Kings vi. 1; 2 Chron. iii. 2), four hundred and eighty years after the Exodus from Egypt. We thus learn that the Israelitish sanctuary had remained moveable more than four centuries subsequent to the conquest of Canaan. 'In the fourth year of Solomon's reign was the foundation of the house of the Lord laid, in the month Siv: and in the eleventh year, in the month Bul, which is the eighth month, was the house finished throughout all the parts thereof, and according to all the fashion of it. So was he seven years in building it.'

The site of the temple is clearly stated in 2 Chron. iii. 1: 'Then Solomon began to build the house of the Lord at Jerusalem in Mount Moriah, where the Lord appeared unto David his father, in the place that David had prepared in the threshing-floor of Ornan (or Araunah) the Jebusite.' In south-eastern countries the site of the threshing-floors is selected according to the same principles which might guide us in the selection of the site of windmills. We find them usually on the tops of hills, which are on all sides exposed to the winds, the current of which is required in order to separate the grain from the chaff. It seems that the summit of Moriah, although large enough for the agricultural purposes of Araunah, had no level sufficient for the plans of Solomon. According to Josephus (*De Bell. Jud.* v. 5), the foundations of the temple were laid on a steep eminence, the summit of which was at first insufficient for the temple and altar. As it was surrounded by precipices it became necessary to build up walls and buttresses in order to gain more ground by filling up the interval with earth. The hill was also fortified by a threefold wall, the lowest tier of which was in some places more than 300 cubits high; and the depth of the foundation was not visible, because it had been necessary in some parts to dig deep into the ground in order to obtain sufficient support. The dimensions of the stones of which the walls were composed were enormous; Josephus mentions a length of 40 cubits. It is, however, likely that some parts of the fortifications of Moriah were added at a later period. The characteristics of the site of the Solomonic temple have undergone so many changes that it is at present scarcely possible to discern them. Niebuhr gave an accurate description of what he found, illustrated by a map, in the *Deutsches Museum*, 1784, vol. i. p. 448, sq.; ii. 137, sq.; and also in the third volume of his travels (comp. also Mishna, *Middoth*, ii. 4).

The workmen and the materials employed in the erection of the temple were chiefly procured by Solomon from Hiram, king of Tyre, who was rewarded by a liberal importation of wheat. Josephus states that duplicates of the letters which passed between Solomon and king Hiram were still extant in his time, both at Jerusalem and among the Tyrian records. He informs us that the persons employed in collecting and arranging the materials for the temple were ordered to search out the largest stones for the foundation, and to prepare them for use on the mountains where they were procured, and then convey them to Jerusalem. In this part of the business Hiram's men were ordered to assist.

Josephus adds, that the foundation was sunk to an astonishing depth, and composed of stones of singular magnitude, and very durable. Being closely mortised into the rock with great ingenuity, they formed a basis adequate to the support of the intended structure. Josephus gives to the temple the same length and breadth as are given in 1 Kings, but mentions 60 cubits as the height. He says that the walls were composed entirely of white stone; that the walls and ceilings were wainscoted with cedar, which was covered with the purest gold; that the stones were put together with such ingenuity that the smallest interstices were not perceptible, and that the timbers were joined with iron cramps.

The temple itself and its utensils are described in 1 Kings vi. and vii., and 2 Chron. iii. and iv.

Divines and architects have repeatedly endeavoured to represent the architectural proportions of the temple, which was 60 cubits long, 20 wide, and 30 high. Josephus, however (*Antiq.* viii. 3. 2), says, 'The temple was 60 cubits high and 60 cubits in length; and the breadth was 20 cubits; above this was another stage of equal dimensions, so that the height of the whole structure was 120 cubits.' It is difficult to reconcile this statement with that given in 1 Kings, unless we suppose that the words ἴσος τοῖς μέτροις, *equal in measures*, do not signify an equality in all dimensions, but only as much as equal in the number of cubits; so that the porch formed a kind of steeple, which projected as much above the roof of the temple as the roof itself was elevated above its foundations. As the Chronicles agree with Josephus in asserting that the summit of the porch was 120 cubits high, there remains still another apparent contradiction to be solved, namely, how Josephus could assert that the temple itself was 60 cubits high, while we read in 1 Kings that its height was

only 30 cubits. We suppose that in the book of Kings the internal elevation of the sanctuary is stated, and that Josephus describes its external elevation, which, including the basement and an upper story (which may have existed, consisting of rooms for the accommodation of priests, containing also vestries and treasuries), might be double the internal height of the sanctuary. The internal dimension of the 'holy,' which was called in preference היכל, was 40 cubits long, 20 cubits wide, and 30 cubits high. The holy was separated from the 'holy of holies' (דביר) by a partition, a large opening in which was closed by a suspended curtain. The holy of holies was on the western extremity of the entire building, and its internal dimensions formed a cube of 20 cubits. On the eastern extremity of the building stood the porch, אולם, *πρόναος*. At the entrance of this pronaos stood the two columns called Jachin and Boaz, which were 23 cubits high.

The temple was also surrounded by three יציע, *stories of chambers*, each of which stories was five cubits high, so that there remained above ample space for introducing the windows, requisite more for ventilation than for the admission of light into the sanctuary. Now the statement of Josephus, who says, that each of these stories of chambers (צלעות) was 20 cubits high, cannot be reconciled with the biblical statements, and may prove that he was no very close reader of his authorities. Perhaps he had a vague kind of information that the chambers reached halfway up the height of the building, and taking the maximum height of 120 cubits instead of the internal height of the holy, he made each story four times too high. The windows which are mentioned in 1 Kings vi. 4, consisted probably of lattice-work.

The lowest story of the chambers was five cubits, the middle six, and the third seven cubits wide. This difference of the width arose from the circumstance that the external walls of the temple were so thick that they were made to recede one cubit after an elevation of five feet, so that the scarcement in the wall of the temple gave a firm support to the beams which supported the second story, without being inserted into the wall of the sanctuary; which insertion was perhaps avoided not merely for architectural reasons, but also because it appeared to be irreverent. The third story was supported likewise by a similar scarcement, which afforded a still wider space for the chamber of the third story. These observations will render intelligible the following biblical statements:—'And against the wall of the house he built stories round about, both of the temple and of the oracle: and he made chambers round about: the nethermost story was five cubits broad, and the middle was six cubits broad, and the third was seven cubits broad: for without in the wall of the house he made narrowed rests (מגרעות, narrowings or rebatements) round about, so that the beams should not be fastened in the walls of the house. The house, when it was in building, was built of stone made ready before it was brought thither: so that there was neither hammer, nor axe, nor any tool of iron heard in the house while it was in building. The door of the middle story was in the right side of the house: and they went up with winding stairs into the middle story, and out of the middle into the third. So he built the house, and finished it; and covered the house with beams and boards of cedar. And then he built chambers against all the house, five cubits high: and they rested on the house with timber of cedar' (1 Kings vi. 7).

From this description it may be inferred, that the entrance to these stories was from without; but some architects have supposed that it was from within; which arrangement seems to be against the general aim of impressing the Israelitish worshippers with sacred awe by the seclusion of their sanctuary.

In reference to the windows it should be observed, that they served chiefly for ventilation, since the light within the temple was obtained from the sacred candlesticks. It seems from the descriptions of the temple to be certain that the דביר, *oracle*, or holy of holies, was an *adytum* without windows. To this fact Solomon seems to refer when he spake, 'The Lord said that he would dwell in the thick darkness' (1 Kings viii. 12).

The דביר, *oracle*, had perhaps no other opening besides the entrance, which was, as we may infer from the prophetic visions of Ezekiel (which probably correspond with the historic temple of Solomon) six cubits wide.

From 1 Kings vii. 10, we learn that the private dwellings of Solomon were built of massive stone. We hence infer, that the framework of the temple also consisted of the same material. The temple was, however, wainscoted with cedar wood, which was covered with gold. The boards within the temple were ornamented by beautiful carvings representing cherubim, palms, and flowers. The ceiling of the temple was supported by beams of cedar wood (comp. Eres; Pliny, *Hist. Nat.* xvi. 69). The wall which separated the holy from the holy of holies, probably consisted not of stone, but of beams of cedar. It seems, further, that the partitions partly consisted of an *opus reticulatum;* so that the incense could spread from the holy to the most holy. This we infer from 1 Kings vi. 21: 'So Solomon overlaid the house within with pure gold: and he made a partition by the chains of gold before the oracle; and he overlaid it with gold.'

The floor of the temple was throughout of cedar, but boarded over with planks of fir (1 Kings vi. 15). The doors of the oracle were composed of olive-tree; but the doors of the outer temple had posts of olive-tree, and leaves of fir (1 Kings vi. 31, sq.). Both doors, as well that which led into the temple as that which led from the holy to the holy of holies, had folding leaves, which, however, seem to have been usually kept open, the aperture being closed by a suspended curtain—a contrivance still seen at the church-doors in Italy, where the church-doors usually stand open, but the doorways can be passed only by moving aside a heavy curtain. From 2 Chron. iii. 5, it appears that the greater house was also ceiled with fir. It is stated in ver. 9, 'that the weight of the nails employed in the temple was fifty shekels of gold.' And also that Solomon 'overlaid the upper chambers with gold.'

The lintel and side posts of the oracle seem to have circumscribed a space which contained one-

fifth of the whole area of the partition; and the posts of the door of the temple one-fourth of the area of the wall in which they were placed. Thus we understand the passage, 1 Kings vi. 31-35, which also states that the door was covered with carved work overlaid with gold.

Within the holy of holies stood only the ark of the covenant; but within the holy were ten golden candlesticks, and the altar of incense (comp. the separate articles).

The temple was surrounded by an inner court, which in Chronicles is called the Court of the Priests, and in Jeremiah the Upper Court. This again was surrounded by a wall consisting of cedar beams placed on a stone foundation (1 Kings vi. 36): 'And he built the inner court with three rows of hewed stone, and a row of cedar beams.' This inclosure, according to Josephus (*Antiq.* viii. 3, 9), was three cubits high. Besides this inner court, there is mentioned a Great Court (2 Chron. iv. 9): 'Furthermore he made the court of the priests, and the great court, and doors for the court, and overlaid the doors of them with brass.' It seems that this was also called the Outward Court (comp. Ezek. xiv. 17). This court was also more especially called the court of the Lord's house (Jer. xix. 12; xxvi. 2). These courts were surrounded by spacious buildings, which, however, according to Josephus (*De Bell. Jud.* v. 5. 1), seem to have been partly added at a period later than that of Solomon. For instance (2 Kings xv. 35), Jotham is said to have built the higher gate of the house of the Lord. In Jer. xxvi. 10, and xxxvi. 10, there is mentioned a New gate (comp. also Ezek. xl. 5-47; xlii. 1-14). But this prophetic vision is not strictly historical, although it may serve to illustrate history (comp. also Joseph. *Antiq.* viii. 3. 9). The *third* entry into the house of the Lord mentioned in Jer. xxxviii. 14, does not seem to indicate that there were three courts, but appears to mean that the entry into the outer court was called the first, that into the inner court the second, and the door of the sanctuary the third. It is likely that these courts were quadrilateral. In the divisions of Ezekiel they form a square of four hundred cubits. The inner court contained towards the east the altar of burnt-offering, the brazen sea, and ten brazen lavers; and it seems that the sanctuary did not stand in the centre of the inner court, but more towards the west. From these descriptions we learn that the temple of Solomon was not distinguished by magnitude, but by good architectural proportions, beauty of workmanship, and costliness of materials. Many of our churches have an external form not unlike that of the temple of Solomon. In fact, this temple seems to have been the pattern of our church buildings, to which the chief addition has been the Gothic arch. Among others, the Roman Catholic church at Dresden is supposed to bear much resemblance to the temple of Solomon.

It is remarkable that after the temple was finished, it was not consecrated by the high priest, but by a layman, by the king in person, by means of extempore prayers and sacrifices. The temple remained the centre of public worship for all the Israelites only till the death of Solomon, after which ten tribes forsook this sanctuary. But even in the kingdom of Judah it was from time to time desecrated by altars erected to idols. For instance, 'Manasseh built altars for all the host of heaven in the two courts of the house of the Lord. And he caused his son to pass through the fire, and observed times, and used enchantments, and dealt with familiar spirits and wizards: he wrought much wickedness in the sight of the Lord to provoke him to anger. And he set a graven image of the grove that he had made in the house,' &c. Thus we find also that king Josiah commanded Hilkiah the high priest, and the priests of the second order, to remove the idols of Baal and Asherah from the house of the Lord (2 Kings xxiii. 4, 13): 'And the altars that were on the top of the upper chamber of Ahaz, which the kings of Judah had made, and the altars which Manasseh had made in the two courts of the house of the Lord, did the king beat down, and brake them down from thence, and cast the dust of them into the brook Kidron.' In fact, we are informed that in spite of the better means of public devotion which the sanctuary undoubtedly afforded, the national morals declined so much that the chosen nation became worse than the idolaters whom the Lord destroyed before the children of Israel (2 Kings xxi. 9)—a clear proof that the possession of external means is not a guarantee for their right use. It appears also that, during the times when it was fashionable at court to worship Baal, the temple stood desolate, and that its repairs were neglected (see 2 Kings xii. 6, 7). We further learn that the cost of the repairs was defrayed chiefly by voluntary contribution, by offerings, and by redemption money (2 Kings xii. 4, 5). The original cost of the temple seems to have been defrayed by royal bounty, and in great measure by treasures collected by David for that purpose.

There was a treasury in the temple, in which much precious metal was collected for the maintenance of public worship. The gold and silver of the temple was, however, frequently applied to political purposes (1 Kings xv. 18, sq.; 2 Kings xii. 18; xvi. 8; xviii. 15). The treasury of the temple was repeatedly plundered by foreign invaders. For instance, by Shishak (1 Kings xiv. 26); by Jehoash, king of Israel (2 Kings xiv. 14); by Nebuchadnezzar (2 Kings xxiv. 13); and lastly, again by Nebuchadnezzar, who, having removed the valuable contents, caused the Temple to be burned down (2 Kings xxv. 9, sq.), B.C. 588. The building had stood since its completion 417 or 418 years (Josephus has 470, and Ruffinus 370 years). Thus terminated what the later Jews called בית הראשון, *the first house.*

In many writers on the temple the biblical statements concerning the first, or Solomon's temple, are confounded not merely with the temple in the prophetic visions of Ezekiel, but also with descriptions of the temple erected by Zerubbabel, and even with the later structures of Herod. This confusion we have endeavoured to avoid in the foregoing statements.

THE SECOND TEMPLE.—In the year B.C. 536 the Jews obtained permission from Cyrus to colonise their native land. Cyrus commanded also that the sacred utensils which had been pillaged from the first temple should be restored, and that for the restoration of the temple assistance should be granted (Ezra i. and vi.; 2 Chr. xxxvi. 22, sq.). The first colony which returned under Zerubbabel and Joshua having collected the necessary means, and having also obtained the as-

sistance of Phœnician workmen, commenced in the second year after their return, B.C. 534, the rebuilding of the temple. The Sidonians brought rafts of cedar trees from Lebanon to Joppa. The Jews refused the co-operation of the Samaritans, who being thereby offended, induced the king Artasashta (probably Smerdis) to prohibit the building. And it was only in the second year of Darius Hystaspis, B.C. 520, that the building was resumed. It was completed in the sixth year of this king, B.C. 516 (compare Ezra v. and vi.; and Haggai i. 15). According to Josephus (*Antiq.* xi. 4. 7) the temple was completed in the ninth year of the reign of Darius.

This second temple was erected on the site of the former, and probably after the same plan. According to the plan of Cyrus, the new temple was sixty cubits high and sixty cubits wide. It appears from Josephus, that the height is to be understood of the porch, for we learn from the speech of Herod which he records, that the second temple was sixty cubits lower than the first, whose porch was 120 cubits high (comp. Joseph. *Antiq.* xv. 11. 1). The old men who had seen the first temple were moved to tears on beholding the second, which appeared like nothing in comparison with the first (Ezra iii. 12; Haggai ii. 3, sq.). It seems, therefore, that it was not so much in dimensions that the second temple was inferior to the first, as in splendour, and in being deprived of the ark of the covenant, which had been burned with the temple of Solomon. The temple of Zerubbabel had several courts (*αὐλαί*) and cloisters or cells (*πρόθυρα*). Josephus distinguishes an internal and external *ἱερόν*, and mentions cloisters in the courts. This temple was connected with the town by means of a bridge (*Antiq.* xiv. 4). During the wars from B.C. 175 to B.C. 163, it was pillaged and desecrated by Antiochus Epiphanes, who introduced into it idolatrous rites (2 Mac. vi. 2, 5), dedicating the temple to Jupiter Olympius, and the temple on Mount Gerizim, in allusion to the foreign origin of its worshippers, to Jupiter *Ξενιός*. The temple became so desolate that it was overgrown with vegetation (1 Macc. iv. 38; 2 Macc. vi. 4). Judas Maccabæus expelled the Syrians and restored the sanctuary, B.C. 165. He repaired the building, furnished new utensils, and erected fortifications against future attacks (1 Macc. iv. 43-60; vi. 7; xiii. 53; 2 Macc. i. 18; x. 3). Alexander Jannæus, about B.C. 106, separated the court of the priests from the external court by a wooden railing (Joseph. *Antiq.* xviii. 5). During the contentions among the later Maccabees, Pompey attacked the temple from the north side, caused a great massacre in its courts, but abstained from plundering the treasury, although he even entered the holy of holies, B.C. 63 (Joseph. *Antiq.* xiv. 4). Herod the Great, with the assistance of Roman troops, stormed the temple, B.C. 37; on which occasion some of the surrounding halls were destroyed or damaged.

III. Temple of Herod.—Herod, wishing to ingratiate himself with the church and state party, and being fond of architectural display, undertook not merely to repair the second temple, but to raise a perfectly new structure. As, however, the temple of Zerubbabel was not actually destroyed, but only removed after the preparations for the new temple were completed, there has arisen some debate whether the temple of Herod could properly be called the third temple.

The reason why the temple of Zerubbabel was not at once taken down, in order to make room for the more splendid structure of Herod, is explained by Josephus as follows (Joseph. *Antiq.* xv. 11. 2). The Jews were afraid that Herod would pull down the whole edifice, and not be able to carry his intentions as to its rebuilding into effect; and this danger appeared to them to be very great, and the vastness of the undertaking to be such as could hardly be accomplished. But while they were in this disposition, the king encouraged them, and told them he would not pull down their temple till all things were gotten ready for building it up entirely.

And as Herod promised them this beforehand, so he did not break his word with them, but got ready a thousand waggons, that were to bring stones for this building, and chose out ten thousand of the most skilful workmen, and bought a thousand sacerdotal garments for as many of the priests, and had some of them taught the arts of stonecutters, and others of carpenters, and then began to build; but this not till everything was well prepared for the work.

The work was commenced in the eighteenth year of the reign of Herod; that is, about the year 734-735 from the building of Rome, or about twenty or twenty-one years before the Christian era. Priests and Levites finished the temple itself in one year and a half. The outbuildings and courts required eight years. However, some building operations were constantly in progress under the successors of Herod, and it is in reference to this we are informed that the temple was finished only under Albinus, the last procurator but one, not long before the commencement of the Jewish war in which the temple was again destroyed. It is in reference also to these protracted building operations that the Jews said to Jesus, 'Forty and six years was this temple in building' (John ii. 20). The temple is described by Josephus (*Antiq.* xv. 11, and *De Bell. Jud.* v. 5). With this should be compared the Talmudic tract *Middoth* (Mishna, v. 10), which has been edited and commented upon by C. l'Empereur de Oppyck, Lugduni Bat. 1630, 4to. Compare also vols. viii. and ix. of *Antiquitates Hebraicæ*, by Ugolino, which contain, in addition to other dissertations, Mosis Maimonidis *Constitutiones de domo electa;* Abraham ben David *De Templo.* Compare also E. A. Schulze, *De variis Judæorum erroribus in descriptione templi secundi*, prefixed to his edition of Reland, *De spoliis templi Hierosolymitani.*

The whole of the structures belonging to the temple were a stadium square, and consequently four stadia (or half a Roman mile) in circumference. The temple was situated on the highest point, not quite in the centre, but rather to the north-western corner of this square, and was surrounded by various courts, the innermost of which was higher than the next outward, which descended in terraces. The temple, consequently, was visible from the town, notwithstanding its various high enclosures. The outer court was call הר הבית, *the mountain of the house*, *τὸ ὄρος τοῦ ἱεροῦ* (1 Macc. xiii. 52). According to *Middoth* (i. 3) this mountain of the house had five gates, two towards the south, and one towards

each of the other quarters. The principal gate was that towards the east: it was called the gate Susan, and a representation of the town of Susa, sculptured in relief, was affixed to it. This had been preserved from the days of Zerubbabel, when the Jews were anxious to express by all means their loyal submission to the Persian power. Most interpreters consider it the same which in Acts iii. 2 and 10 is called πύλη ὡραία, *the beautiful gate*. It seems, however, that besides these five principal gates there were some other entrances, because Josephus speaks of four gates on the west and several on the south. Annexed to the outer wall were halls which surrounded the temple, and were thirty cubits wide, except on the south side, where the βασιλικὴ στοά, *the royal hall*, seems to have been threefold, or three times wider than the other halls. The roofs of these halls were of cedar-wood, and were supported by marble columns twenty-five cubits high. The Levites resided in these halls. There was also a synagogue where the Talmudic doctors might be asked questions, and where their decisions might be heard (Luke ii. 46). These halls seem likewise to have formed a kind of lounge for religionists; they appear to have been spacious enough to afford opportunities for religious teachers to address knots of hearers. Thus we find that Jesus had there various opportunities for addressing the people and refuting cavillers.

Here also the first Christians could daily assemble with one accord (Acts ii. 46). Within this outer court money-changers and cattle-dealers transacted a profitable business, especially during the time of Passover. The priests took only shekels of full weight, that is, shekels of the sanctuary, even after the general currency had been deteriorated: hence the frequent opportunity of money-changers to accommodate for agio the worshippers, most of whom arrived from abroad unprovided with the right coin. The profaneness to which this money-changing and cattle-dealing gave rise caused the indignation of our Lord, who suddenly expelled all these sharks from their stronghold of business (Matt. xxi. 12, sq.; Mark xi. 15-17; Luke xix. 45, 46; John ii. 13-17).

The surface of this outer court was paved with stones of various colours. A stone balustrade, סורג, which according to some statements was three cubits high, and according to *Middoth* ten hands high, was several steps higher up the mountain than this outer court, and prevented the too near approach of the heathens to the next court. For this purpose there were also erected columns at certain distances within this balustrade, on which there were Greek and Latin inscriptions, interdicting all heathens, under penalty of death, to advance farther (Joseph. *De Bell. Jud.* vi. 2, 4; Philo, *Opera*, ii. 577). Compare Acts xxi. 28, where Paul is accused of having brought Greeks into the temple, and thus polluting the holy place.

Higher up than this balustrade was a wall of the court called חיל. This wall was from its foundation forty cubits high, but from within the court it appeared to be only twenty-five cubits high. To this higher court led a staircase and gate on the eastern side of the square. This staircase first led into the נשים, עזרת, γυναικωνῖτις, τὸ τῶν γυναικῶν περιτείχισμα, *the court of the women*, which was 135 cubits square. Again, fifteen steps higher up was the principal entrance to the עזרת ישראל, *the court of the Israelites*, *i. e.* the men, on the eastern side of the temple, On the other sides only five steps led up from the court of the women to that of the men. But the fifteen steps, each of which was lower than each of the five steps, seem to have terminated in the same level. Over the gates were structures more than forty cubits high, in which were rooms. Each of the gates was adorned with two columns, which were twelve cubits in circumference. In these gates were folding-doors, each of which was thirty cubits high and fifteen wide: they were plated with gold and silver. The gate towards the east, being the principal one, was of Corinthian brass, and was higher, larger, and more adorned with precious metal than the rest. Within the walls of this court were halls supported by beautiful columns. The court of the priests was separated from that of the Israelites by a low stone balustrade one cubit high. The whole space which was occupied by the court of the Israelites and that of the priests, together with the temple, was from east to west 187 cubits, and from north to south 135 cubits. Each of these courts was eleven cubits wide, in which measurement that of the halls seems not to have been included (comp. *Middoth*, ii. 6). The court of the priests surrounded the whole temple. On the northern and southern sides were magazines of salt, wood, water, &c., and on the south side also was the place of meeting for the Sanhedrin. Towards the east, with entrances from the court of the women, were two rooms in which the musical instruments were deposited; towards the north-west were four rooms in which the lambs for the daily sacrifices were kept, the shewbread baked, &c. (comp. 1 Chron. ix. 31, 32). In the four corners of the court of the women were lazarettos and quarantine establishments for the reception of persons suspected of leprosy and other infectious diseases: there was also a physician appointed to treat the priests who were unwell. There were several alms-boxes within the various courts, which had the shape of trumpets, and which sometimes are called γαζοφυλάκια, or also collectively τὸ γαζοφυλάκιον. All the courts were paved with flat stones. From the various statements concerning the court of the women, it is evident that this appellation did not mean a place exclusively devoted to the women, but rather a place to which even women were admitted, together with other persons who were not allowed to advance farther. The temple itself (ὁ ναός) was fifteen steps higher than the court of the Israelites, and stood, not in the middle, but rather towards the north-western corner of the court of the priests. In the usual plans of the temple the passage in Middoth (ii. 1) has been disregarded. This passage clearly states that the temple was not in the centre: 'The greatest space was from the south, the next greatest from the east, the third from the north, and the least from the west. The foundations of the temple consisted of blocks of white marble, some of which were forty-five cubits long, six cubits wide, and five cubits high. The porch measured externally a hundred cubits in width; the remaining part of the building sixty or seventy cubits.' Thus it appears that the porch projected on each side from fifteen to twenty cubits. The differ-

ence of measurement between Josephus and the Talmud may be accounted for by the difference of internal and external width. The projections of the porch were like shoulders (ὥσπερ ὦμοι). The whole building was a hundred or a hundred and ten cubits long, and a hundred cubits high. The internal measurement of the porch was fifty cubits by twenty, and ninety cubits in height. The holy was forty cubits by twenty, and sixty cubits high; the holy of holies was twenty cubits square and sixty cubits high. According to Middoth the porch was only eleven cubits, the holy forty cubits, the holy of holies twenty cubits, and behind this last there was a vestry of six cubits. The remaining twenty-three cubits were distributed among the diameters of the several walls, so that the whole was a hundred cubits long. In the eastern front, which was a hundred cubits square, was a proportionate gate, seventy cubits high and twenty-five cubits wide. Above the holy and holy of holies were upper rooms. On the summit of the temple (κατὰ κορυφὴν) were spikes (ὄβελοι), which resembled our conductors in shape, and were intended to prevent birds from settling on the temple. Middoth (iv. 6) calls these spikes, which were one cubit long, בולה עורב, *scare-crows*, or literally *scare-ravens*. It seems that the roof was flat, and surrounded by a balustrade three cubits high. On the north and south side of the temple were three stories of chambers, which were much higher than those of the Solomonic temple, but did not entirely conceal the temple itself, because it projected above them. The spaces on the north and south side of the porch contained the apparatus for slaughtering the sacrifices, and were called בית החילפות, *the house of knives*.

The holy of holies was entirely empty, ἔκειτο οὐδὲν ὅλως ἐν αὐτῷ (Joseph. *De Bell. Jud.* v. 5. 5); however, there was a stone in the place of the ark of the covenant, called אבן שתיה, on which the high-priest placed the censer. Before the entrance of the holy of holies was suspended a curtain, which was torn by the earthquake that followed after the crucifixion. The rabbis talk of two curtains, between which was a space of one cubit, suspended before the holy of holies. The folding doors between the porch and the holy were twenty cubits high and ten cubits wide; but the entrance itself, with its mouldings, was fifty-five cubits high and sixteen cubits wide. These doors stood open; there were, however, behind them some other doors which were shut, and before which a splendid Babylonian byssus curtain was suspended, in colours and workmanship similar to that of the Solomonic temple. The entrance to the porch was externally seventy cubits high and twenty-five cubits wide, with folding doors of forty cubits high and twenty cubits wide. These doors were usually kept open. This entrance to the porch was adorned by a colossal golden vine, נפן של זהב, whose grapes were as big as men (Jani, *De vite aurea templi Hierosolymitani*, in Ugolino, tom. ix.). This vine was a symbolical representation of the 'noble vine' (Jer. ii. 21; Ezek. xix. 10; Joel i. 7), and of the vineyard (Isa. v.), under which the prophets represent their nation. It is very likely that this vine also gave an opportunity to the parable of the vine (John xv.), and to the strange misconception of pagan scribblers that the Jews worshipped Bacchus. (Comp. Lakemacheri *Observat. Philolog.* i. 17, sq.; Rosenmüller's *Exegetisches Repertorium*, i. 166, sq.)

Within the porch were a golden and a marble table, on which the priest who entered the sanctuary daily deposited the old and the new shewbread. Before the porch, towards the south, were the כיור, brazier or fire-pan, and the altar for burnt-offerings; towards the north were six rows of rings attached to the pavement, to which the sacrifices to be killed were fastened; also eight low columns overlaid with cedar beams, from which the beasts that had been killed were suspended in order to be skinned. Between these columns stood שלחנות של שיש, *marble tables*, on which the flesh and entrails were deposited. On the western side of the altar stood a marble table, on which the fat was deposited, and a silver table, on which the various utensils were placed.

The temple was situated upon the south-eastern corner of Mount Moriah, which is separated to the east by a precipitous ravine and the Kidron from the Mount of Olives: the Mount of Olives is much higher than Moriah. On the south, the temple was bounded by the ravine which separates Moriah from Zion, or the lower city from the upper city. Opposite to the temple, at the foot of Zion, were formerly the king's gardens, and higher up in a south-westerly direction, the stronghold of Zion or the city of David, on a higher level than the temple. The temple was in ancient warfare almost impregnable, from the ravines at the precipitous edge of which it stood; but it required more artificial fortifications on its western and northern sides, which were surrounded by the city of Jerusalem; for this reason there was erected at its north-western corner the tower of Antonia, which although standing on a lower level than the temple itself, was so high as to overlook the sacred buildings with which it was connected, partly by a large staircase, partly by a subterraneous communication. This tower protected the temple from sudden incursions from the city of Jerusalem, and from dangerous commotions among the thousands who were frequently assembled within the precincts of the courts; which also were sometimes used for popular meetings. Under the sons of Herod, the temple remained apparently in good order, and Herod Agrippa, who was appointed by the Emperor Claudius its guardian, even planned the repair of the eastern part, which had probably been destroyed during one of the conflicts between the Jews and Romans of which the temple was repeatedly the scene (*Antiq.* xvii. 10). Many savants have adopted a style as if they possessed much information about the archives of the temple; there are a few indications from which we learn that important documents were deposited in the tabernacle and temple. Even in Deut. xxxi. 26, we find that the book of the law was deposited in the ark of the covenant. 2 Kings xxii. 8, Hilkiah rediscovered the book of the law in the house of Jehovah. In 2 Macc. ii. 13, we find a βιβλιοθήκη mentioned, apparently consisting chiefly of the canonical books, and probably deposited in the temple. In Josephus (*De Bell. Jud.* v. 5) it is mentioned that a book of the law was found in the temple. It appears that the sacred writings

were kept in the temple (*Antiq.* v. 1. 17). Copies of political documents seem to have been deposited in the treasury of the temple (1 Macc. xiv. 49).

This treasury, ὁ ἱερὸς θησαυρὸς, was managed by an inspector, γαζυφύλαξ, גזבר, and it contained the great sums which were annually paid in by the Israelites, each of whom paid a half shekel, and many of whom sent donations in money, and precious vessels, ἀναθήματα. Such costly presents were especially transmitted by rich proselytes, and even sometimes by pagan princes (2 Macc. iii. 3; Joseph. *Antiq.* xiv. 16. 4; xviii. 3. 5; xix. 6. 1; *De Bell. Jud.* ii. 17. 3; v. 13. 6; *c. Apion.* ii. 5; Philo, *Opp.* ii. 59, sq.; 569). It is said especially that Ptol. Philadelphus was very liberal to the temple, in order to prove his gratitude for having been permitted to procure the Septuagint translation (Aristeas, *De Translat. LXX.*, 109, sq.). The gifts exhibited in the temple are mentioned in Luke xxi. 5; we find even that the rents of the whole town of Ptolemais were given to the temple (1 Macc. x. 39). There were also preserved historical curiosities (2 Kings xi. 10), especially the arms of celebrated heroes (Joseph. *Antiq.* xix. 6. 1): this was also the case in the tabernacle.

The temple was of so much political importance that it had its own guards (φύλακες τοῦ ἱεροῦ), which were commanded by a στρατηγός.

Twenty men were required for opening and shutting the eastern gate (Joseph. *De Bell. Jud.* vi. 5. 3: *c. Apion.* ii. 9; *Antiq.* vi. 5. 3; xvii. 2. 2). The στρατηγός had his own secretary (*Antiq.* xx. 6. 2; 9. 3), and had to maintain the police in the courts (comp. Acts iv. 1 and v. 24). He appears to have been of sufficient dignity to be mentioned together with the chief priests. It seems that his Hebrew title was איש הר הבית, *the man of the mountain of the house*.

The priests themselves kept watch on three different posts, and the Levites on twenty-one posts.

It was the duty of the police of the temple to prevent women from entering the inner court, and to take care that no person who was Levitically unclean should enter within the sacred precincts. Gentiles were permitted to pass the first enclosure, which was therefore called the Court of the Gentiles; but persons who were on any account Levitically unclean were even not permitted to advance thus far. Some sorts of uncleanness, for instance that arising from the touch of a corpse, excluded only from the court of the men. If an unclean person had entered by mistake, he was required to offer sacrifices of purification. The high-priest himself was forbidden to enter the holy of holies under penalty of death on any other day but the day of atonement (Philo, *Opp.* ii. 591). Nobody was admitted within the precincts of the temple who carried a stick or a basket, and who wanted to pass merely to shorten his way, or who had dusty shoes (*Middoth*, ii. 2).

The various office-bearers in the temple were called στρατηγοὶ τοῦ ἱεροῦ, *captains* or *officers of the temple* (Luke xxii. 52), while their chief was simply designated στρατηγός.

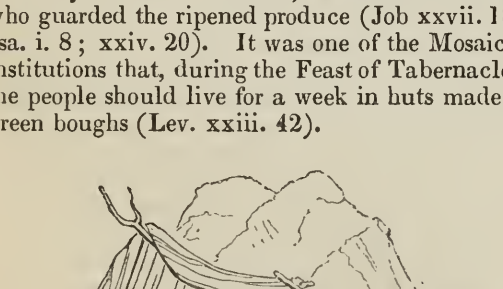
During the final struggle of the Jews against the Romans, A.D. 70, the temple was the last scene of the tug of war. The Romans rushed from the tower Antonia into the sacred precincts, the halls of which were set on fire by the Jews themselves. It was against the will of Titus that a Roman soldier threw a firebrand into the northern outbuildings of the temple, which caused the conflagration of the whole structure, although Titus himself endeavoured to extinguish the fire (Joseph. *De Bell. Jud.* vi. 4). 'One cannot but wonder at the accuracy of this period thereto relating; for the same month and day were now observed, as I said before, wherein the holy house was burnt formerly by the Babylonians. Now the number of years that passed from its first foundation, which was laid by King Solomon, till this its destruction, which happened in the second year of the reign of Vespasian, are collected to be one thousand one hundred and thirty, besides seven months and fifteen days; and from the second building of it, which was done by Haggai, in the second year of Cyrus the king, till its destruction under Vespasian, there were six hundred and thirty-nine years and forty-five days.'

The sacred utensils, the golden table of the shew-bread, the book of the law, and the golden candlestick, were displayed in the triumph at Rome. Representations of them are still to be seen sculptured in relief on the triumphal arch of Titus (comp. Fleck's *Wissenschaftliche Reise*, i. 1, plate i.-iv.; and Reland, *De spoliis Templi Hierosolymitani in arcu Titiano*, edit. E. A. Schulze, Traject. ad Rh. 1775. The place where the temple had stood seemed to be a dangerous centre for the rebellious population, until, in A.D. 136, the Emperor Hadrian founded a Roman colony, under the name Ælia Capitolina, on the ruins of Jerusalem, and dedicated a temple to Jupiter Capitolinus on the ruins of the temple of Jehovah. Henceforth no Jew was permitted to approach the site of the ancient temple, although the worshippers of Jehovah were in derision compelled to pay a tax for the maintenance of the temple of Jupiter. Comp. Dion Cassius (Xiphil.) lxix. 12; Hieron. *ad Jes.* ii. 9; vi. 11, sq.; Euseb. *Hist. Eccles.* iv. 6; *Demonstratio Evangelica*, viii. 18. Under the reign of Constantine the Great some Jews were severely punished for having attempted to restore the temple (comp. Fabricii *Lux Evangelii*, p. 124).

The Emperor Julian undertook, A.D. 363, to rebuild the temple; but after considerable preparations and much expense, he was compelled to desist by flames which burst forth from the foundations (comp. Ammianus Marcellinus, xxiii. 1; Socrates, *Hist. Eccles.* iii. 20; Sozomen, v. 22; Theodoretus, iii. 15; Schröckh, *Kirchen Geschichte*, vi. 385, sq.). Repeated attempts have been made to account for these igneous explosions by natural causes; for instance, by the ignition of gases which had long been pent up in subterraneous vaults (comp. Michaelis, *Zerstr. kl. Schrift.* iii. 453, sq.). A similar event is mentioned by Josephus (*Antiq.* xvi. 7. 1), where we are informed that Herod, while plundering the tombs of David and Solomon, was suddenly frightened by flames which burst out and killed two of his soldiers. Bishop Warburton contends for the miraculousness of the event in his discourse *Concerning the Earthquake and Fiery Eruption which defeated Julian's Attempt to rebuild the Temple of Jerusalem*. Comp. also J. G. Lotter, *Historia Instaurationis Templi Hierosolymitani sub Juliano*, Lips. 1728, 4to.; J. G. Michaelis (F. Holzfuss) *Diss. de Templi Hierosolymitani Juliani mandato per Judæos frustra tentato*

restitutione, Hal. 1751, 4to.; Lardner's *Collection of Ancient Jewish and Heathen Testimonies*, iv. p. 57, sq.; Ernesti, *Theol. Bibl.*, ix. 604, sq.). R. Tourlet's French Translation of the works of Julian, Paris, 1821, tom. ii. p. 435, sq., contains an examination of the evidence concerning this remarkable event. See also Jost's *Geschichte der Israeliten*, iv. p. 211 and 254, sq.; and Jost's *Allgemeine Geschichte des Jüdischen Volkes*, vol. ii. p. 158.

A splendid mosque now stands on the site of the temple. This mosque was erected by the caliph Omar after the conquest of Jerusalem by the Saracens, A.D. 636. It seems that Omar changed a Christian church, that stood on the ground of the temple, into this mosque, which is called El Aksa, *the outer*, or *northern*, because it is the third of the most celebrated mosques, two of which, namely those of Mecca and Medina, are in a more southern latitude.



Compare on the whole subject Ugolino, tom. viii. 9; Lightfoot, *Descriptio Templi Hierosolymitani*, Opp. i. p. 533, sq.; J. Bapt. Villalpando et Pradi, *in Ezechiel;* J. Jud. Leonis, libri quatuor, *De Templo Hicros. tam priori quam poster. ex Hebr. Lat. vers*, a J. Saubert, Helmst., 1665, 4to.; L. Capelli, Τρισάγιον, *sive Triplex Templi delineatio*, Amst. 1643, 4to. This is also inserted in the *Critici Anglicani*, tom. viii., and in the first volume of Walton's Polyglott. Harenberg, *in d. Brem. u. Verdisch. Biblioth.*. iv. 1. sq.; 573, sq.; 879, sq.; Bh. Lamy, *De tabern. foed., urbe Hieros. et de Templo*, Par. 1720, sq.; Hirt, *Der Tempel Salomons*, Berl. 1809, 4to. m. 3 Kpfrn.; Stieglitz, *Gesch. der Baukunst*, Nürmb. 1827, p. 125, sq.; and Less, *Beiträge zur Geschich. d. Ausbild. Baukunst*, Leipz. 1834, i. 63, sq.; V. Meyer, *Der Temple Salom.* Berl. 1830; inserted also in *Blätter f. höhere Wahrneue Folge*, i.; Grüneisen, *im Kunstblatt z. Morgenbl.* 1831, No. 73-75, 77-80. Some more works are mentioned by Meusel, *Biblioth. Histor.*, i. ii. 113, sq. The best works on the antiquities and history of the Jews contain also chapters illustrative of the temple. Among the biblical dictionaries, see especially Winer's *Real-Wörterb. sub* 'Tempel;' *Ezekiel's Temple, being an Attempt to delineate the Structure of the Holy Edifice, its Courts, Chambers, and Gates, as described in the last nine chapters of the Book of Ezekiel, with plates*, by Joseph Isreels, London, 1827.—C. H. F. B.

TEMPTATION OF OUR LORD (Matt. iv. 1-11; Mark i. 12, 13; Luke iv. 1-12). The popular view of this undoubted portion of our Saviour's history, is, that it is a narrative of outward transactions; that our Saviour immediately after his baptism was conducted by the Spirit into the wilderness—either the desolate and mountainous region now called Quarantania by the people of Palestine (*Kitto's Physical History*, pp. 39, 40), or the great desert of Arabia, mentioned in Deut. xxxii. 10; viii. 15; Hos. xiii. 5; Jer. ii. 6, &c.—where the devil tempted him in person, appeared to him in a visible form, spoke to him in an audible voice, removed him to the summit 'of an exceeding high mountain,' and to the top of 'a pinnacle of the temple at Jerusalem;' whereas the view taken by many learned commentators, ancient and modern, is, that it is the narrative of a *vision*, which was designed to 'supply that ideal experience of temptation or trial, which it was provided in the divine counsels for our Lord to receive, previously to entering upon the actual trials and difficulties of his ministry' (Bishop Maltby, *Sermons*, vol. ii., Lond. 1822, p. 276). Farmer also considers it a '*divine* vision,' and endeavours with much learning and ingenuity, to 'illustrate the wise and benevolent intention of its various scenes, as symbolical predictions and representations of the principal trials attending Christ's public ministry' (*Inquiry into the Nature and Design of Christ's Temptation*, 8vo., London, Preface). On behalf of the popular interpretation it is urged, that the accounts given by the evangelists convey no intimation that they refer to a vision; that the feeling of hunger could not have been merely ideal; that a vision of forty days' continuance is incredible; that Moses, who was a type of Christ, saw no 'visions,' and that hence it may be concluded Christ did not; that it is highly probable there would be a personal conflict between Christ and Satan, when the former entered on his ministry. Satan had ruined the first Adam, and might hope to prevail with the second (Trollope's *Analecta*, vol. i. Lond. 1830, p. 46). Why too, say others, was our Lord taken up into a mountain to see a vision? As reasonably might St. Paul have taken the Corinthians into a mountain to 'show them the more excellent way of charity' (1 Cor. xii. 31). On the contrary side, it is rejoined, that the evangelists do really describe the temptation as a vision. St. Matthew says, ἀνήχθη εἰς τὴν ἔρημον ὑπὸ τοῦ πνεύματος; St. Mark, τὸ πνεῦμα αὐτὸν ἐκβάλλει; and St. Luke, ἤγετο ἐν τῷ πνεύματι. Do these phrases mean no more than that Jesus went by the guidance or impulse of the Spirit to a particular locality? Do they not rather import, that Christ was brought into the wilderness under the full influence of the prophetic spirit, making suitable revelations to his mind? With regard to the hunger, the prophets are represented as experiencing bodily sensations in their visions (Ezek. iii. 3; Rev. x. 10). Further arguments, derived from an unauthorized application of types, are precarious—that the first Adam really had *no personal* encounter with Satan; that all the purposes of our Lord's temptation might be answered by a vision, for whatever might be the *mode*, the *effect* was intended to be produced upon his mind and moral feelings, like St. Peter's vision concerning Cornelius, &c. (Acts x. 11-17); that commentators least given to speculate allow that the temptation during the first forty days was carried on by mental suggestion only, and that the visible part of the temptation began 'when the tempter *came* to him' (Matt. iv. 3; Luke iv. 3; Scott, *in loc.*); that, with regard to Christ's being 'taken up into an exceeding high mountain,' Ezekiel says (xl. 2), 'in the visions of God, brought he me into the land of Israel, and set me upon a very high mountain,' &c.; and that St. John says, 'he carried me away in the spirit to a great and high mountain, and *showed* me that great city the holy Jerusalem' (Rev. xxi. 10). But certain *direct arguments* are also urged on the same side. Thus, is it consistent with the sagacity and policy of the evil spirit, to suppose that he appeared in his own proper person to our Lord, uttering solicitations to evil? Was not this the readiest mode to frustrate his own inten-

tions? Archbishop Secker says, 'certainly he did not appear what he was, for that would have entirely frustrated his intent' (*Sermons*, vol. ii. p. 114). Chandler says, 'The devil appeared not as himself, for that would have frustrated the effect of his temptation' (*Serm.* vol. iii. p. 178). Secker supposes that 'Satan transformed himself into an angel of light;' but was it likely that he would put on this form in order to tempt our Lord to idolatry? (Matt. iv. 9.) Chandler thinks he appeared as 'a good man;' but would it have served his purpose to appear as a good man promising universal dominion? The supposition that the devil disguised himself in any form might indeed constitute the temptation a trial of our Lord's understanding, but not of his heart. Besides, Christ is represented as addressing him as 'Satan' (ver. 10). It is further urged that the literal interpretation does but little honour to the Saviour, whom it represents as carried or conducted, 'by the devil at his will,' and therefore as accessory to his own temptation and danger; nor does it promote the consolation of his followers, none of whom could ever be similarly tempted. Our Lord indeed submitted to all the liabilities of the human condition; but do these involve the dominion of Satan over the body, to the extent thus represented? The literal interpretation also attributes miraculous powers to the devil, who, though a spiritual being, is represented as becoming visible at pleasure, speaking in an audible voice, and conveying mankind where he pleases—miracles not inferior to what our Lord's preservation would have been, had he cast himself headlong from the temple. Suppose we even give up the old notion, that 'the devil hurried Christ through the air, and carried him from the wilderness to the temple' (Benson's *Life of Christ*, p. 35), and say with Doddridge and others, that 'the devil took our Lord about with him as one person takes another to different places,' yet how without a miracle shall we account for our Saviour's admission to the exterior of the temple, unless he first, indeed, obtained permission of the authorities, which is not recorded? (Comp. Josephus *Antiq.* xv. 11, § iii. 5, and *De Bell. Jud.* v. 5.) The difficulty is solved by the supposition simply of a change in our Lord's perceptions. And how can we further understand, except by the aid of a vision or a miracle, that the devil 'showed our Lord all the kingdoms of the world and the glory of them in a moment of time' (*ἐν στίγμῇ χρόνου*), a phrase referring to the mathematical point, and meaning the most minute and indivisible portion of duration, that is, instantaneously; yet in this space of time, according to the literal interpretation, 'the devil showed our Lord all the kingdoms of the world and all the glory of them' *i. e.* whatever relates to their magnificence, as imperial robes, crowns, thrones, palaces, courts, guards, armies, &c. Scott and Doddridge resort to the supposition of 'an illusory show;' but it may be asked, if one of the temptations was conducted by such means, why not the other two? Macknight endeavours to explain 'all the kingdoms of the world, and the glory of them' as relating only to the land of promise (*Harmony of the Gospels*, Lond. 1822, p. 350, note). Farmer conceives that no mountain in Palestine commands so extensive a prospect. It is a further difficulty attending the literal interpretation, that Satan represents all the kingdoms of the world and their glory to be at his disposal; an assertion not denied by our Lord, who simply rejects the offer. It may readily be conceived that it would answer all purposes that Jesus should *seem* to have the proposal in question made to him. It is next observed, that many things are spoken of in Scripture as being done, which were only done in vision. See the numerous instances collected by Bishop Law (*Considerations of the Theory of Religion*, Lond. 1820, pp. 85, 86). The reader may refer to Gen. xxxii. 30; Hosea i. iii.; Jer. xiii. xxv. xxvii.; Ezek. iii. iv. v. St. Paul calls his being 'caught up into the third heaven and into Paradise' a vision and revelation of the Lord (2 Cor. xii. 1-4). It is plain from this instance in the case of Paul, and from that of St. Peter (Acts xii. 7-9), who had already experienced visions (x. 10, &c.), that neither of the apostles could at first distinguish visions from impressions made on the senses. In further illustration it is urged that the prophets are often said to be *carried about* in visions (Ezek. viii. 1-10; xi. 24, 25; xxxvii. 1; xl. 1, 2). The phrases 'by the spirit,' &c., are equivalent to 'the hand of God,' &c., among the prophets (1 Kings xviii. 46; 2 Kings iii. 15; Ezek. i. 3). A comparison of the parallel phrases in the Sept. of Ezekiel, and the evangelists in regard to Christ's temptation, casts much light upon the subject. The phrase 'the devil leaveth him,' is equivalent to the phrase, 'the vision I had seen went up from me' (Ezek. xi. 24). Farmer's theory respecting the intention of this prophetic vision may be thus summarily stated. The spirit of God was its sole author, making suitable revelations to the mind of Jesus, with a view to his future trials. It is called a temptation of the devil, because couched under the figure of Satan coming to him and offering him temptations. The first scene was probationary, serving to try the present turn and temper of the Saviour's mind; and also prophetical, having reference to his future ministry, through the whole course of which he was pressed with the same kind of temptations, and resisted them upon the same principles. This part of the vision conveyed this general instruction, that Christ, though the Son of God, was to struggle with hunger and thirst, and all other evils incidental to the lowest of the sons of men, and that he was never to exert his miraculous power for his own personal relief, but with resignation and faith wait for the interposition of God in his favour. The second scene, in which he was tempted to cast himself from the temple, though dazzling as a proposal to demonstrate his Messiahship by a mode corresponding to the notions of the Jewish people, was intended to teach him not to prescribe to God in what instances he shall exert his power, nor rush into danger uncalled in dependance upon divine aid, nor to dictate to divine wisdom what miracles shall be wrought for men's conviction. Upon these principles he resisted this suggestion, and accordingly we find him ever after exemplifying the same principles. He never needlessly exposed himself to danger in reliance upon miraculous interposition, he cautiously declined hazards, avoided whatever might exasperate his enemies, enjoined silence with regard to his miracles, when the publication of

them might have excited envy or commotion ; he opened his commission in Galilee, not in Jerusalem, courted privacy, avoided the great, conversed with the common people, &c. The third scene presignified the temptation to which he would be subject during the whole course of his ministry, to prostitute all his miraculous endowments to the service of Satan, for the sake of worldly honours, or for gratifying the mistaken apprehensions of the Jewish people. It is pleaded that this explanation obviates all difficulties, justifies the wisdom of God in this dispensation, and confirms our confidence in Christ's divine mission and character, since we thus learn that he was made acquainted with all he had to suffer, and nevertheless persevered, and with final success; and further, that through the various exercises thus afforded to his moral principles he learned 'to succour those that are tempted.' Farmer's inquiry throughout is recommended to the careful perusal of the student. For a comparison of the circumstances of the temptation and of the crucifixion, see *Encyclopædia Metropolitana*, vol. x., p. 604; for the coincidence between the petitions of the Lord's prayer and the temptation, p. 605, note ; and for the analogy between the temptation of our Lord in the wilderness and of Adam in Paradise, see Townsend's *Chronological Arrangement*, Lond. 1828, vol. i. p. 92.—J. F. D.

TENT. The patriarchal fathers of the Israelites were dwellers in tents, and their descendants proceeded at once from tents to houses. We therefore read but little of *huts* among them ; and never as the fixed habitations of any people with whom they were conversant. By huts we understand small dwellings, made of the green or dry branches of trees interwined, and sometimes plastered with mud. In Scripture they are called *booths*. Such were made by Jacob to shelter his cattle during the first winter of his return from Mesopotamia (Gen. xxxiii. 17). In after times we more frequently read of them as being erected in vineyards and orchards, to shelter the man who guarded the ripened produce (Job xxvii. 18; Isa. i. 8 ; xxiv. 20). It was one of the Mosaical institutions that, during the Feast of Tabernacles, the people should live for a week in huts made of green boughs (Lev. xxiii. 42).

519.

The Scriptures make us more familiar with *tents* than with huts. They were invented before the Deluge, and appear from the first to have been associated with the pastoral life, to which a moveable habitation was necessary (Gen. iv. 20). The practice of the pastoral fathers was to pitch their tents near wells of water, and, if possible, under some shady tree (Gen. xviii. 4; Judg. iv. 5). The first tents were undoubtedly covered with skins, of which there are traces in the Pentateuch (Exod. xxvi. 14); but nearly all the tents mentioned in Scripture were, doubtless, of goats' hair, spun and woven by the women (Exod. xxxv. 26; xxxvi. 14); such as are now, in Western Asia, used by all who dwell in tents ; hence their black colour (Sol. Song, i. 5). Tents of linen were, and still are, only used occasionally, for holiday or travelling purposes, by those who do not habitually live in them. The patriarchal tents were probably such as we now see in Arabia, of an oblong shape, and eight or ten feet high in the middle. They vary in size, and have, accordingly, a greater or less number of poles to support them—from three to nine. An encampment is generally arranged circularly, forming an enclosure, within which the cattle are driven at night, and the centre of which is occupied by the tent or tents of the Emir or Sheikh. If he is a person of much consequence, he may have three or four tents, for himself, his wives, his servants, and strangers, respectively. The two first are of the most importance, and we know that Abraham's wife had a separate tent (Gen. xxiv. 27). It is more usual, however, for one very large tent to be divided into two or more apartments by curtains. The Holy Tabernacle was on this model (Exod. xxvi. 31-37).

TERAH (תֶּרַח, Sept. Θάῤῥα), son of Nahor and father of Abraham, who, with his family, quitted Ur of the Chaldees to go to the land which God should show him, 'but tarried at Haran in Mesopotamia, and there died at the age of 205 years' (Gen. xi. 24-32 ; Acts vii. 2-4). From the latter text, it appears that the first call which prompted them to leave Ur was addressed to Abraham, not to Terah, as well as the second, which, after the death of his father, induced him to proceed from Haran to Canaan [ABRAHAM]. The order to Abraham to proceed to Canaan immediately after Terah's death seems to indicate that the pause at Haran was on his account. Whether he declined to proceed any further, or his advanced age rendered him unequal to the fatigues of the journey, can only be conjectured. It appears, however, from Josh. xxiv. 2, 14, that Terah was given to idolatry, or rather, perhaps, to certain idolatrous superstitions retained together with the acknowledgment and worship of Jehovah, such as existed in the family in the time of his great-grandson Laban (Gen. xxxi. 30). This may suggest that it was not in the Divine wisdom deemed proper that one who had grown old in such practices should enter the land in which his descendants were destined to exemplify a pure faith.

TERAPHIM (תְּרָפִים). The etymology and meaning of this word may be inferred from the various modes in which it is rendered by the Greek translators, such as Θεραφεῖν, Θεραφεῖν, or Θεραφίν, reminding us of the etymological relation of תרף טרף, *nutrivit*, to τρέφ-ειν. Its remote derivatives in modern languages, viz., the Italian *tarifa*, French *tarif*, and even the English *tripe*, throw a little light upon our subject.

According to its etymology the word Teraphim has been literally translated *nutritores*, *nourishers*. It seems that the plural form was used as a col-

lective singular for the personified combination of all nourishing powers, as the plural Teraphim signifies God, in whom all superior powers, to be revered with reverential awe, are combined (comp. the classical epithets of gods—Sol, Phœbus, Ceres, Venus, Cybele, Pales, Trivia, Fides, Sibylla, &c., *almus*, *ὄμπνιος*, *τρόφιμος*).

The word Teraphim signified an object or objects of idolatry, as we may learn from the renderings of the Septuagint, *εἴδωλον*, *γλυπτόν*; and that it was in meaning similar to the *Penates* is indicated by *κενοτάφιον*. Aquila renders it *μορφώματα*, *προτομαί*, *ἀνθυφαίρεσις*, *ἐπίλυσις*, *εἴδωλα*; Symmachus also translates it *εἴδωλα*. It seems therefore that תרפים, and the feminine which occurs in Rabbinical writers, תרפות, were tutelar household gods, by whom families expected, for worship bestowed, to be rewarded with domestic prosperity, such as plenty of food, health, and various necessaries of domestic life.

We have most remarkable proofs that the worship of Teraphim co-existed with the worship of Jehovah even in pious families; and we have more than one instance of the wives of worshippers of Jehovah, not finding full contentment and satisfaction in the stern moral truth of spiritual worship, and therefore carrying on some private symbolism by fondling the Teraphim. It seems, however, that this swerving from truth was comparatively innocent. It was never denounced and suppressed with the same rigour as the worship of Moloch.

We find in Gen. xxxi. 19, that Rachel stole the images (teraphim) belonging to her father without the knowledge of her husband, who, being accused by his father-in-law of having stolen his gods, answered, 'With whomsoever thou findest thy gods, let him not live.' Laban searched, but found not the images (teraphim).

It appears from Judg. xvii. 2-7, that the worship of the Lord, יהוה, was blended with that of a graven image of teraphim, as intimately as at present some forms of image-worship are blended with the worship of God in spirit and in truth. That such will-worship, however, was only comparatively innocent, and originated in an obstinate *pruritus* of improving rather than obeying God's revelation, Samuel clearly expressed in reproving Saul (1 Sam. xv. 23): 'Stubbornness is as iniquity and *idolatry*,' literally *teraphim*. We do not read that the stubbornness of Saul led him literally to worship teraphim. However, his daughter possessed teraphim as big as a man (1 Sam. xix. 13): Michal took *an image* (teraphim), and put it into the bed of David in order to conceal his flight: 'And behold an image (teraphim) in the bed' (ver. 16).

On every revival of the knowledge of the written revelation of God the teraphim were swept away together with the worse forms of idolatry (2 Kings xxiii. 24): 'The workers with familiar spirits, and the wizards, and the *images* (teraphim), and the idols, and all the abominations that were spied in the land of Judah and in Jerusalem, did Josiah put away, that he might perform the words of the law, which were written in the book that Hilkiah the priest found in the house of the Lord.'

As, however, the worship of teraphim, like that of the Penates and Lares among the Romans, was connected with nationality, it necessarily perished with the nationality itself (Hosea iii. 4): 'For the children of Israel shall abide many days without a king, and without a prince, and without a sacrifice, and without an image, and without an ephod, and (without) teraphim. Afterwards shall the children of Israel return and seek the Lord their God, and David their king, and shall fear the Lord and his goodness in the latter days.'

The teraphim were consulted by persons upon whom true religion had no firm hold, in order to elicit some supernatural *omina*, similar to the *auguria* of the Romans.

Zech. x. 2: 'For the idols (teraphim) have spoken vanity,' &c. In connection with the *haruspicia*, instituted by the king of Babylon, we read (Ezek. xxi. 21, 26) that he consulted images (teraphim).

According to the great Rabbi Eliezer, who was the son of Hyrcanus, and the brother-in-law of Gamaliel the Second, who seems to have been the tutor of St. Paul (in פרקי, and the Targum of Jonathan on Gen. xxxi. 19), the worship of teraphim was connected with atrocities. 'The makers of teraphim slaughtered a man who was a first-born, cut his head off and salted it, and cured it with spices and oil. After this, they wrote the name of an impure spirit, and sentences of divination on a golden plate, which they placed under the tongue of the head, which was fastened to the wall, and lighted lamps before it, and knelt down in adoration, upon which the tongue began to utter divinations.' Rabbi Salomo or Rashi (2 Kings xxiii. 24) says, 'the teraphim uttered divinations by magical and horoscopic arts.' On 1 Sam. xix. 13 sq., he adduces the opinion that the teraphim were horoscopic and astrological instruments made of brass; but he confesses that this opinion, to which he is himself much inclined, is not consistent with the account of Michal, from which it is evident that the teraphim had the shape of man. On Gen. xxxi. Aben Ezra adduces the opinion, that the teraphim were *automata*, made by astrologers so as to show the hours and to utter divinations. Hence the Persian Tawas in Gen. xxxi. translates اسطرلابها *astrolabia*. Aben Ezra also adduces the opinion, that Rachel stole the teraphim of Laban in order to prevent him from idolatry, and from asking the teraphim whither his children had fled. Rabbi Levi ben Gersom (on Genesis) states that the teraphim were human figures, by which the imagination of diviners was so excited, that they supposed they heard a low voice speaking about future events with which their own thoughts were filled, although the image did not speak, an operation which can only be performed by such natural organs as God has provided for that purpose. The book Zohar derives the name teraphim from תורף, *turpitude*, but mentions also that Rabbi Jehuda derives it from רפה, *to slacken*, because they slackened the hands of men in well-doing. The Rabbi adds, that they uttered a נבואה רפה, *prophetia laxa, inanis, vana, a loose sort of prediction*. Hence Rabbi Bechai says that תרפים are the same as רפים, *feeble*, objects not to be depended upon. But in Tanchuma the former etymology is produced, since the teraphim were מעשה טורף, *opus turpitudinis seu*

fœditatis (see Buxtorfii *Lex. Talmud. et Rabb.* sub תרף, which root occurs in the Latin *turpis*).

Onkelos renders Teraphim in Gen. xxxi. by צלמניא, and Jonathan in Judges xvii. and xviii. by רמאין, *images*. The Targum on Hosea iii. 4 has מחוי, *indicans, expounder of oracles*, where the Greek has δήλων; and the Targum on 1 Sam. xv. 23, טעותא, *idols*. Goussetius, under תרף, goes so far as to assert that the word ἄνθρωπος is formed from התרפים. Lud. de Dieu, and after him Spencer, in *Leg. Rit. Hebr. Dissert.* (vii. l. 3, c. 3, s. 7), urges the frequent interchange of the sounds T and S and SH, in order to show that Teraphim and Seraphim are etymologically connected. Hottinger in his *Smegma*, and Athanasius Kircher in the first volume of his *Œdipus Ægyptiacus*, exhibit the etymological progression thus: Sor Apis (σὼρ ἀπ, *ark of the ox*), Sarapis, Serapis, Terapis, Teraphim. The Arabic author, Aben Neph, also asserts the identity of Teraphim and Serapides. Others appeal to רפא, θεραπεύειν, *to heal* (compare Jo. Christ. Wichmannshausen, *Dissertatio de Teraphim;* Witsius, *Aegyptiac.* i. 8; Ugolino, *Thes.* tom. xii. p. 786).

Cöln, in his *Biblische Theologie*, derives teraphim from the Syriac ܛܪܦ, *percontari*. Michaelis, in *Commentationes Societati Gottingensi oblatæ*, Brem., 1763, p. 5, sq., compares the teraphim to the Satyri and Sileni, referring to the statement of Pausanias (vi. 24. 6), that there were graves of Sileni in the country of the Hebrews. Creuzer asserts 'Theraphimis asininum aliquid infuisse,' *that the Teraphim had something of asses in them* (*Commentationes Herod.* i. 277; *Symbolik*, iii. 208, sq.). Creuzer appeals also (*Symb.* ii. 340) to Gen. xxxi., in order to prove the fertilizing, or rather fecundizing power of the תרפים, which scarcely can be proved from ver. 19 (comp. here Rosenmülleri *Scholia;* Jahn, iii. 506, sq.) The dissertations of Wichmannshausen and of Pfeiffer, *De Teraphim*, are inserted in vol. xxiii. of Ugolini *Thesaurus*.—C. H. F. B.

TEREBINTHUS. [Alah.]

TERTIUS. We learn from Rom. xvi. 22 ('I Tertius, who wrote this epistle, salute you in the Lord'), that the Apostle Paul dictated that epistle to Tertius. Some writers say that Tertius was bishop of Iconium (see Fabricii *Lux Evangelii*, p. 117). F. Burmann and Lightfoot conjectured that Tertius and Silas were one and the same person; but this conjecture rests on an exceedingly feeble foundation, namely, the similarity merely of the consonants in the Hebrew numeral שלש, *three*, to the consonants in the name Silas, while Tertius signifies in Latin *the third*. However, Σίλας is the usual Greek contraction of the Roman name *Silvanus*, meaning nearly the same as the English name *Forester* or *Woodman*, just as Λουκᾶς is a contraction of *Lucanus*, the meaning of which is nearly the same as that of Silas, and may be compared with the English name *Groves*. The scantiness of our information about Tertius has been a fruitful source of learned pedantry and petulant conjecture, such as that of F. Stosch in his *Exercitatio de Tertio qua esse eum non alium ac ipsum Paulum probatur*, p. 23—in the *Fortges. nützl. Anmm. Samml.* Compare also N. D. Briegleb, *De Tertio, scriba epistolæ Pauli ad Romanos*, Jen. 1754, 4to. See the article Tertius in Winer's *Real-Wört.*—C. H. F. B.

TERTULLUS (Τέρτυλλος), the Roman orator or advocate employed by the Sanhedrim to sustain their accusation against Paul before the Roman governor (Acts xxiv. 1-8). The Jews, as well as the other peoples subject to the Romans, in their accusations and processes before the Roman magistrates, were obliged to follow the forms of the Roman law, of which they knew little. The different provinces, and particularly the principal cities, consequently abounded with persons who, at the same time advocates and orators, were equally ready to plead in civil actions or to harangue on public affairs. This they did, either in Greek or Latin, as the place or occasion required.

TESTAMENT. [Bible.]

TETRARCH (τετράρχης), a prince or sovereign who holds or governs a fourth part of a kingdom, without wearing the diadem, or bearing the title of king. Such was the original import of the word, but it was afterwards applied to any petty king or sovereign, and became synonymous with ethnarch. The titles of tetrarch and king were often used indiscriminately. The tetrarch was sometimes a prince who possessed a half or only a third part, and though a mere tetrarch, was from courtesy called a king. In the same manner what was only a tetrarchy was sometimes called a kingdom.

In the reign of Tiberius Cæsar Herod's kingdom of Judæa was divided into three parts, which were called tetrarchies, and the sovereigns tetrarchs. His sons were made the heirs to his kingdom. Archelaus became tetrarch of Judæa, Samaria, and Idumæa; Philip of Trachonitis and Ituræa; and Herod Antipas of Galilee and Peræa (Luke iii. 1). Herod Agrippa, the nephew of Herod Antipas, who afterwards obtained the title of king (Acts xxv. 13), was in the reign of Caligula invested with royalty, and appointed tetrarch of Abilene; to which was afterwards added Galilee and Peræa, Judæa and Samaria; until at length his dominion extended over the whole land of Palestine [Herodian Family]. The title of tetrarch was frequently conferred upon the descendants of Herod the Great by the Roman emperors (Joseph. *De Bell. Jud.* i. 33).—G. M. B.

THADDÆUS (Θαδδαῖος), a surname of the Apostle Jude, who was also called Lebbæus (Matt. x. 3; Mark iii. 18; comp. Luke vi. 16) [Jude].

THAMMUZ. [Tammuz.]

THEBES is a name borne by two of the most celebrated cities in the ancient world, Thebes in Bœotia, and Thebes in Egypt. Of the latter it is that we have here to speak in brief, referring those who wish for detailed information to the works of Wilkinson, especially his *Modern Egypt and Thebes*.

The name Thebes is corrupted from the Tápé of the ancient Egyptian language. In hieroglyphics it is written Ap, Ape, or with the feminine article, Tape, the meaning of which appears to be 'the head,' Thebes being the capital of the Thebais in Upper Egypt. By the Septuagint it is generally termed Διόσπολις, *Diospolis* (Magna), a name corresponding with that by which it is

spoken of in the Bible—as in Ezek. xxx. 14, 'I will make Pathros (Pathyris, the western division of the city) desolate, and will execute judgments in No' (the name of the city, as it lay on the eastern bank of the Nile); see verses 15, 16, and compare xxix. 14, 15. So in Jerem. xlvi. 25, 'I will punish the multitude of No, and Pharaoh, and Egypt, with their gods and their kings; and I will deliver them into the hands of Nebuchadnezzar.' Here Thebes is denominated by the term No; in Nahum iii. 8, the name is made more specific, becoming No Amon, that is, the abode of Amon or Amun, who may be roughly described as the Egyptian Jupiter. There was indeed another place bearing the same name in Lower Egypt, just above Mendes, whose position near the Mediterranean would correspond very well with the language of Nahum (iii. 8), who has been thought by some (Kreenen, *Nahumi Vaticinia Expos.*, 1808) to have intended this latter city; but the language employed by the prophet would answer equally well to the position of Thebes in Upper Egypt, situated as it was on both sides of the river Nile, still called el-Bahr, the sea, and having canals cutting the land in all directions, the waters of which (the Nile and its canals) would not only minister to the daily wants and to the affluence of the city, but form in case of attack a 'rampart' and a 'wall.' The Thebes of Upper Egypt, which lay on both the eastern and western banks of the Nile, was probably the most ancient city of Egypt, and the residence in very early ages of Egyptian kings who ruled the land during several dynasties. The plain was adorned not only by large and handsome dwellings for man, but by temples and palaces, of whose grandeur

520. [Thebes.—The palace-temple at Karnak.]

words can give but a faint conception. Of these edifices there are still in existence ruins that astound and delight the traveller. The most ancient remains now existing are in the immense temple, or rather cluster of temples, of Karnak, the largest and most splendid ruin of which either ancient or modern times can boast, being the work of a number of successive monarchs, each anxious to surpass his predecessor by increasing the dimensions of the part he added. Osirtasen I., the contemporary of Joseph, is the earliest monarch whose name appears on the monuments of Thebes. The wealth of these temples was as ample as their architectural pretensions were great. They were served by a numerous and learned priesthood. On the western shore the chief points of interest are the palace and temple of Rameses II., erroneously called the Memnonium; the temples of Medinet Habu, the statue of Memnon, and the tombs of the kings. On the eastern shore are the temple of Luksor, and the temple of Karnak, already mentioned. 'It is impossible,' says Robinson (*Bib. Researches*, i. 29), 'to wander among these scenes and behold these hoary yet magnificent ruins without emotions of astonishment and deep solemnity. Everything around testifies of vastness and of utter desolation. Here lay once that mighty city whose power and splendour were proverbial throughout the ancient world.' Yet, like all earthly things, Thebes had her period of death. She sprang up, flourished, declined, and sank. Memphis rose to be her rival when Thebes began to part with her glory. She was plundered by Cambyses, and destroyed by Ptolemy Lathyrus. In Strabo's time the city was already fallen; yet its remains then covered eighty stadia, and the inhabited part was divided into many separate villages, as the ruins now are portioned out between nine hamlets. Thebes is thus described by Homer:—

Not all proud Thebes' unrivalled walls contain,
The world's great empress on th' Egyptian plain,
That spreads her conquests o'er a thousand states,
And pours her heroes through a hundred gates,
Two hundred horsemen, and two hundred cars,
From each wide portal issuing to the wars.

But the countless generations of a city which well deserved to have Homer for its herald, have now passed for ever away, leaving their mighty works behind, to tell to wanderers from distant and unknown climes the story of her greatness and her fall. The desert hills around are filled with their corpses: on one spot Irby and Mangles counted in the side of the Libyan hills fifty mummy-pits, gaping with their open mouths, as if they would vomit forth their dusty contents, and showing how vain were the efforts which the Thebans made to preserve themselves from the dread decree—'Dust thou art, and to dust thou shalt return.' The period in which Thebes enjoyed the highest prosperity Robinson considers to have been coeval with the reigns of David and Solomon. This, however, appears too late a date. From the passage in Nahum (iii. 8, sq.), it would seem that in his day (according to Josephus, cir. 750 B.C.), the city had suffered a terrible overthrow—how long previously is not recorded, for we do not know what conquest or what conqueror was here intended by the prophet. The walls of all the temples at Thebes are covered with sculptures and hieroglyphics representing in general the deeds of the kings who founded or enlarged these structures. Many of these afford happy illustrations of Egyptian history. An interesting scene is thought to record the exploits of Sheshonk, the Shishak of the Scriptures, who made a successful expedition against Jerusalem in the fifth year of King Rehoboam, B.C. 971. These sculptures are on the exterior of the south-west wall of the great temple of Karnak.—J. R. B.

THEBEZ (תֵּבֵץ; Sept. Θήβης), a place near Shechem, where Abimelech met his death (Judg. ix. 50; 2 Sam. xi. 21). It seems to be the same with the place now called Tubas.

THEOLOGY, BIBLICAL. The historical contemplation of the Bible consists of three parts, namely, first, of an examination of the Biblical books themselves, or of what is called Introduction [INTRODUCTION]; secondly, of the interpretation of these writings [INTERPRETATION]; and lastly, of the system of religious doctrines contained in the Bible. We may define Biblical theology as the scientific form of the religious opinions contained in the Bible. Biblical theology belongs, therefore, entirely to the historical branch of divinity, and differs essentially from Biblical dogmatics by keeping clear from all doctrinal predilections. Biblical theology and Biblical dogmatics are, however, so nearly related that they have frequently been confounded. Biblical dogmatics, in developing the religious system of the Bible, assume the doctrine of inspiration. Biblical theology, however, does not consider inspiration to be an historical starting-point of a science, but rather an ecclesiastical attribute of the Bible to which a purely historical contemplation of the Bible may ultimately lead, but which ought not to be pre-supposed. The basis of the investigation in Biblical theology is nothing else but historical truth. The moral nature of man claims a purely historical contemplation of the Bible, although this is opposed by hierarchical narrow-mindedness.

The Bible itself consists of a variety of writings, the date of whose origin differs by centuries. Consequently, chronology is of great importance in Biblical theology. The mere division into the Old and New Testament does not suffice for the purposes of Biblical theology. In the history of Biblical literature before Christ, various periods are discernible, and the transition from the Old to the New Testament is such that we must suppose that there existed an intervening literature.

The great space of time to which the writings of the Old Testament belong is conveniently subdivided into the periods of HEBRAISM, MOSAISM, and JUDAISM. I. During the whole history before the exile, that is, as long as the Hebrews were an independent nation, we find no allusion to the existence of the Mosaical law as we have it in the Pentateuch. This is especially remarkable in the earlier prophets. For this reason the whole period of Hebrew national independence has been called the age of Hebraism, or the Hebraic age. II. Simultaneously with the loss of national independence the Mosaic law gradually makes its appearance, expelling the freer religious enthusiasm which before that time had prevailed in the nation in the form of Prophetism. This period of the prevalence of the Mosaical law is the period of Mosaism.

During this period of Mosaism a colony, chiefly from the tribe of Judah, gradually proceeded to Palestine; and in this colony the ancestral religion was further developed. This religion did not then seem the property of the whole nation, but to be restricted to the Jews alone.

The new phasis into which the religion of the Old Testament then entered is characterized by the extinction of prophetic inspiration. Consequently the period of Mosaism extends from the commencement of the exile to the times immediately after the latest prophets, Zechariah and Malachi, or to about the year B.C. 400.

III. The age of Judaism commences about the year B.C. 400. During this age the law and its interpretation remained paramount; but tradition took the place of the free inspiration of Jehovah. This tradition refers both to those writings which in the periods of Hebraism and Mosaism expressed the prevalence of the Divine Spirit, and also to some accounts said to be orally preserved. The oral tradition, following the spirit of the times, constantly imbibed new elements, and brought into subjection both the Mosaical law and the writings which were composed during the period of the prevalence of the Divine Spirit. The period of Judaism exhibits this new developement of the religion of the Old Testament, first, in its growth, and then in its maturity. There are no writings in the Old Testament canon which exhibit tradition in its maturity. The Old Testament canon contains a collection of the Mosaical laws, and of the books which were written under the Spirit of Jehovah. The Christian times, however, are directly connected with the formation of Judaism in its second stage, and the New Testament rests on the basis of this latter form of contemplation. The New

Testament presupposes, not so much the views and opinions of Hebraism and of Mosaism, but those of later Judaism, in which the canonical portion of the Bible leaves a gap, partly but imperfectly filled up by the Old Testament Apocrypha, and the writings of Philo and Josephus. Consequently we are frequently obliged to take from the New Testament itself the proofs requisite to convince us that certain opinions were prevalent in the Judaism of those times.

The New Testament, containing a collection of the writings of the Apostles, comprehends a much shorter period than the Old Testament; nevertheless, in these Christian writings also there is a twofold mode of viewing religion, namely, the particularistic or Judaizing, which chronologically preceded the more universal or catholic, which is embodied in the writings of St. Paul and St. John. In exhibiting the doctrines of the New Testament we ought to keep in view the difference of these particularistic and catholic tendencies. Consequently Biblical theology consists of the following parts, which may be historically distinguished—*Hebraism*, *Mosaism*, *Judaism*, *Judaizing Christianity*, and *Paulino-Johannic Christianity*. From the union of the two Christian tendencies proceeds the catholic and apostolic church, the maxims of which are in the New Testament only indicated.

It is the problem of Biblical Theology, first, to classify the Biblical books according to these periods or tendencies; secondly, to examine the writings of each author and of each tendency as much as possible in chronological succession—each by itself with reference to the religious doctrines contained therein—and also to sum up the results of each section, and thus to advance from Hebraism to Mosaism, and from Mosaism to Judaism, &c. In this generical developement of Biblical doctrines, the investigator ought to keep in view what is common to all Biblical books in all periods; also what is characteristic in each author and in each period; and finally, he ought to render prominent that in which all the authors of the New Testament agree, because this alone constitutes what is really essential in Christianity.

The science of Biblical theology, in this sense, is only in its infancy. Its principles were discovered after manifold errors and mistakes. A work comprehending the results of the historical investigation of the Bible, is still a desideratum. There exist, however, excellent preparatory works. The scientific description of Hebraism and Mosaism is further advanced than that of Judaism and the Biblical theology of the New Testament. The true cause of this fact is the greater internal definiteness of Hebraism and Mosaism.

Formerly, the expression *Theologia Biblica* implied the whole sphere of exegetical divinity. About the end of the seventeenth century the term *Theologia Biblica* was employed in preference in order to express the exegetical interpretation of the *dicta probantia*, or those Biblical passages by which divines defended their system. Spener and his followers introduced the habit of contradistinguishing Biblical theology and symbolical dogmatics. About this period Biblical theology consisted chiefly in strings of Biblical passages.

Towards the end of the eighteenth century a divine in Gottingen, Gotthilf Traugott Zachariæ, first attempted to bring Biblical theology into the form of a system (comp. G. T. Zachariæ, *Biblischer Theologus oder Untersuchung des biblischen Grundes der vornehmsten theologischen Lehren*, first published at Göttingen in 1771, in 2 vols. The third edition was published in 1786, in 4 vols., to which was added in the same year a fifth volume by Vollborth. Similar works are W. Fr. Hufnagel's *Handbuch der biblischen Theologie*, band i., Erlangen, 1782; band ii. Abtheilung i., 1789; Ammon's *Biblische Theologie*, Erlangen, 1792, band i. second edition, in 3 vols. 1801-1802; Storr's *Doctrinæ Christianæ pars theoretica, e sacris literis repetita*, Stuttgart, 1793, translated into German by T. Chr. Flatt, Stuttgart, 1803: a second, but incomplete edition, appeared in 1813. An English translation of this work, with additions, was published at Andover in America, by Dr. Schumacker, in 1836. The above works on Biblical Theology are too devoid of science, and do not rest upon the basis of a firm principle. F. Ph. Gabler, a pupil of Griesbach, first attempted to avoid these defects, in his *Oratio de justo discrimine Theologiæ Biblicæ et Dogmaticæ regundisque recte utriusque finibus*, Altorf, 1787; *Opuscula*, 1831, ii. 129, sq. In this work Biblical theology is established as a purely historical science. Gabler was followed by Georg Laurenz Baur and G. Ph. Chr. Kaiser, who, however, did not keep clear from mixing up with Biblical theology several not strictly historical, and therefore foreign, elements. Their works have been surpassed by those of De Wette and Baumgarten-Crusius. These writers, however, render history too much subservient to their philosophical opinions; comp. W. M. de Wette's *Biblischer Dogmatik des Alten und Neuen Testamentes*, Berlin, 1813, third edit. 1830; and Baumgarten-Crusius's *Grundzüge der Biblischen Theologie*, Jena, 1828.

The idea of Biblical theology has been best understood and executed by Dan. Georg. Conrad von Colln (*Biblische Theologie*), Leipzig, 1836, 2 vols. The second volume, which relates to the New Testament, is, however, much inferior to the first.

The following works refer to parts of Biblical theology: Gramberg's *Kritische Geschichte der Religions Ideen des Alten Testaments*, Berlin, 1822 and 1830, 2 vols; Vatke's *Biblische Theologie wissenschaftlich dargestellt*, Berlin, 1835. Of this work the first volume alone has been published, which refers to the Old Testament, and is not so much an historical as a strictly Hegelian book. G. Fr. Œhler's *Prolegomena zur Theologie des Alten Testamentes*, Stuttgart, 1845, is more an ecclesiastico-dogmatical than an historical book; Bertholdt, *Christologia Judæorum Jesu et Apostolorum ætate*, Erlangen, 1811; Aug. Gfrörer's *Philo und die Alexandrinische Theosophie*, Stuttgart, 1831, 2 vols.; A. F. Dähne's *Geschichtliche Darstellung der jüdisch Alexandrinischen Religions Philosophie*, Halle, 1834, 2 parts; Georgi, *Ueber die neuesten Gegensätze in der Auffassung der jüdischen Religion, philosophie*, in Illgen's *Zeitschrift für historische Theologie*, 1839, Heft 3 und 4; Usteri's *Entwickelung des Paulinischen Lehrbegriffes*, Zürich, 1824, 4th ed. 1832; Dähne, *Entwickelung des Paulinischen Lehrbegriffes*, Halle, 1834; Frommann, *Der Johanneische Lehrbegriff*, Leip-

zig, 1839; K. R. Köstlin, *Der Lehrbegriff des Evangelii und der Briefe des Johannis*, Berlin, 1843. This book also is rather too Hegelian. In Matthæi's *Religions-glaube der Apostel nach seinem Inhalte Ursprung und Werth*, Göttingen, 1826-1830, Hegelian ideas predominate.*—K. A. C.

THEOPHILUS (Θεόφιλος), a person of distinction, to whom St. Luke inscribed his Gospel and the Acts of the Apostles (Luke i. 3; Acts i. 1). The word means 'lover of God;' whence some have fancied that it was to be taken as a general name for any or every lover of God. But there seems no foundation for this opinion, as the circumstance and style of address point to a particular person of honourable station, with whom Luke was acquainted. The title — κράτιστος, translated 'most excellent,' is the same which is given to governors of provinces, as Felix and Festus (Acts xxiii. 26; xxvi. 25); whence he is conceived by some to have been a civil magistrate in some high office. Theophylact (*Argument. in Luc.*) supposes that he was of the senatorian order, and perhaps a nobleman or prince.

THESSALONIANS, EPISTLES TO THE. —First Epistle.—The authenticity and canonical authority of this epistle have been from the earliest ages admitted; nor have these points ever been called in question, either in ancient or modern times, by those who have received any of Paul's epistles. Besides two probable quotations from it by Polycarp (Lardner, ii. 96, 8vo. ed.), it is certainly cited, and cited as the production of the apostle Paul, by Irenæus (v. 6, § 1), by Clement of Alexandria (*Paed.* i. § 19, p. 109, ed. Potter), by Tertullian (*De Resur. Carnis*, c. 24), by Caius (ap. Euseb. *Hist. Eccles.* vi. 20), by Origen (*Cont. Cels.* lib. iii.), and by others of the ecclesiastical writers (Lardner, ii. *pl. locc.*).

This epistle has generally been regarded as the first written by Paul of those now extant. In the Acts of the Apostles (xvii. 5, sq.) we are told that Paul, after preaching the Gospel with success at Thessalonica, had to flee from that city in consequence of the malice of the Jews; that he thence betook himself to Berea, in company with Silas; that, driven by the same influence from Berea, he journeyed to Athens, leaving Silas and Timothy (the latter of whom had probably preceded him to Berea) behind him; and that after remaining in that city for some time, he went to Corinth, where he was joined by Timothy and Silas. It appears also from this epistle (iii. 1, 2, 5), that whilst at Athens he had commissioned Timothy to visit the infant church at Thessalonica; and from Acts xvii. 15, 16, we learn that he expected to be joined by Timothy and Silas in that city. Whether this expected meeting ever took place there, is a matter involved in much uncertainty. Michaelis, Eichhorn, De Wette, Koppe, Pelt, and others, are of opinion that, at least as respects Timothy, it did take place; and they infer that Paul again remanded him to Thessalonica, and that he made a second journey along with Silas to join the apostle at Corinth. Hug, on the other hand, supposes only one journey, viz., from Thessalonica to Corinth; and understands the apostle in 1 Thess. iii. 1, 2, as intimating, not that he had sent Timothy from Athens to Thessalonica, but that he had prevented his coming to Athens by sending him from Berea to Thessalonica. Between these two opinions, there is nothing to enable us to judge with certainty, unless we attach weight to the expression of Luke, that Paul had desired the presence of Timothy and Silas in Athens ὡς τάχιστα, 'as speedily as possible.' His desiring them to follow him thus, without loss of time, favours the conclusion that they did rejoin in Athens, and were thence sent to Thessalonica.

But whatever view we adopt on this point, it seems indisputable that this epistle was not written until Paul met Timothy and Silas at Corinth. The ancient subscription, indeed, testifies that it was written at Athens; but that this could not be the case is clear from the epistle itself. 1. In ch. i. 7, 8, Paul says that the Thessalonians had become 'ensamples to all that believe in Macedonia and Achaia: for from you (says he) sounded out the word of the Lord not only in Macedonia and Achaia, but also in every place your faith to God-ward is spread abroad.' Now, for such an extensive diffusion of the fame of the Thessalonian Christians, and of the Gospel by them, a much longer period of time must have elapsed than is allowed by the supposition that Paul wrote this epistle whilst at Athens; and besides, his reference particularly to Achaia seems prompted by the circumstance of his being, at the time he wrote, in Achaia, of which Corinth was the chief city. 2. His language in ch. iii. 1, 2, favours the opinion that it was not from Athens, but after he had left Athens, that he wrote this epistle; it is hardly the turn which one living at Athens at the time would have given his words. 3. Is it likely that, during the short time Paul was in Athens, before writing this epistle (supposing him to have written it there), he should have '*over and again*' purposed to revisit the Thessalonians, but have been hindered? And yet such purposes he had entertained before writing this epistle, as we learn from ch. ii. 18; and this greatly favours the later date. 4. Before Paul wrote this epistle, Timothy had come to him from Thessalonica with good tidings concerning the faith and charity of the Christians there (iii. 6). But had Timothy followed Paul to Athens from Berea, what tidings could he have brought the apostle from Thessalonica, except such hearsay reports as would inform the apostle of nothing he did not already know? From these considerations, it follows that this epistle was not written from Athens. It must, however, have been written very soon after his arrival at Corinth; for, at the time of his writing, Timothy had just arrived from Thessalonica (ἄρτι ἐλθόντος Τιμοθέου, iii. 6), and Paul had not been long in Corinth before Timothy and Silas joined him there (Acts xvii. 1-5). Michaelis contends for a later date, but his arguments are destitute of weight. Before Paul could learn that the fame of the Thessalonian church had spread through

* In the English language there are scarcely any works on Biblical Theology as defined in this article, except one or two which have been translated in America from the German. There are indeed several works of various merit on Biblical dogmatics, that is to say, doctrinal rather than historical, but they do not claim notice in this place.—Edit.

Achaia, and far beyond, it was not necessary, as Michaelis supposes, that he should have made several extensive journeys from Corinth; for as that city, from its mercantile importance, was the resort of persons from all parts of the commercial world, the apostle had abundant means of gathering this information even during a brief residence there. As little is it necessary to resort to the supposition that when Paul says, that over and again Satan had hindered him from fulfilling his intention of visiting Thessalonica, he must refer to shipwrecks or some such misfortunes (as Michaelis suggests); for Satan has many ways of hindering men from such purposes, besides accidents in travelling.

The design of this epistle is to comfort the Thessalonians under trial, and to encourage them to the patient and consistent profession of Christianity. The epistle may be conveniently divided into two parts. The former of these, which comprises the first three chapters, is occupied with statements chiefly of a retrospective character: it details the apostle's experience among the Thessalonians, his confidence in them, his deep regard for them, and his efforts and prayers on their behalf. The latter part of the epistle (iv. 5) is, for the most part, of a hortatory character: it contains the apostle's admonitions to the Thessalonians to walk according to their profession; to avoid sensuality, dishonesty, and pride; to cultivate brotherly love, to attend diligently to the duties of life, to take the comfort which the prospect of Christ's second coming was calculated to convey, but not to allow that to seduce them into indolence or idle speculations; to render due respect to their spiritual superiors; and, by attention to a number of duties which the apostle specifies, to prove themselves worthy of the good opinion he entertained of them. He concludes the epistle by offering fervent supplication on their behalf, and the usual apostolic benediction.

Second Epistle.—The apostle's allusion in his former epistle to the second coming of Christ, and especially his statement in ch. iv. 15-18, appear to have been misunderstood by the Thessalonians, or wilfully perverted by some among them, so as to favour the notion that that event was near at hand. This notion some inculcated as a truth specially confirmed to them by the Spirit; others advocated it as part of the apostolic doctrine; and some claimed for it the specific support of Paul in a letter (ii. 2). Whether the letter here referred to is the apostle's former epistle to the Thessalonians, or one forged in his name by some keen and unscrupulous advocates of the notion above referred to, is uncertain. The latter opinion has been very generally adopted from the time of Chrysostom downwards, and is certainly somewhat countenanced by the apostle's statement in the close of the epistle as to his autograph salutation being the mark of a genuine letter from him (iii. 17). At the same time, it must be admitted that the probability of such a thing being done by any one at Thessalonica, is, under all the circumstances of the case, not very strong.

On receiving intelligence of the trouble into which the Thessalonians had been plunged, in consequence of the prevalence among them of the notion (from whatever source derived) that the second coming of Christ was nigh at hand, Paul wrote to them this second epistle, in which he beseechingly adjures them by the very fact that Christ is to come a second time, not to be shaken in mind or troubled, as if that event were near at hand. He informs them that much was to happen before that should take place, and especially predicts a great apostacy from the purity and simplicity of the Christian faith (ii. 5-12). He then exhorts them to hold fast by the traditions they had received, whether by word or epistle, and commends them to the consoling and sustaining grace of God (ver. 15-17). The rest of the epistle consists of expressions of affection to the Thessalonians, and of confidence in them; of prayers on their behalf, and of exhortations and directions suited to the circumstances in which they were placed. As regards the disposition and arrangement of these materials, the epistle naturally divides itself into three parts. In the first (i. 1-12), the apostle mingles commendations of the faith and piety of the Thessalonians, with prayers on their behalf. In the second (ii. 1-17), he dilates upon the subject of the trouble which had been occasioned to the Thessalonians by the anticipation of the near approach of the day of the Lord. And in the third (iii. 1-16), he accumulates exhortations, encouragements, and directions, to the Thessalonians, respecting chiefly the peaceable, quiet, and orderly conduct of their lives, which he follows up with a prayer on their behalf to the God of peace. The epistle concludes with a salutation from the apostle's own hand, and the usual benediction (ver. 17, 18).

There is the strongest reason for believing that this second epistle was written very soon after the first, and at the same place, viz. Corinth. The circumstances of the apostle, while writing the one, seem very much the same as they were whilst writing the other; nor do those of the Thessalonians present any greater difference than such as the influences referred to in the second epistle may be supposed in a very short time to have produced. What seems almost to decide the question is, that whilst writing the second epistle, the apostle had Timothy and Silas still with him. Now, after he left Corinth, it was not for a long time that either of these individuals was found again in his company (Acts xviii. 18, compared with xix. 22); and with regard to one of them, Silas, there is no evidence that he and Paul were ever together at any subsequent period. At what period, however, of the apostle's abode at Corinth this epistle was written, we are not in circumstances accurately to determine.

'The genuineness of this epistle,' remarks Eichhorn, 'follows from its contents. Its design is to correct the erroneous use which had been made of some things in the first epistle; and who but the writer of that first epistle would have set himself thus to such a task? It however appears that the author of the first must also be the author of the second; and as the former is the production of Paul, we must ascribe the latter also to him. It was essential to the apostle's reputation that the erroneous consequences which had been deduced from his words should be refuted. Had he refrained from noticing the expectation built upon his words, of the speedy return of Christ, his silence would have confirmed the conclusion, that this was one of his peculiar doctrines; as such it would have passed to the succeeding genera-

tion; and when they perceived that in this Paul had been mistaken, what confidence could they have had in other parts of his teaching? The weight of this, as an evidence of the genuineness of this Second Epistle to the Thessalonians, acquires new strength from the fact, that of all the other expressions in the epistle, not one is opposed to any point either in the history or the doctrine of the apostle' (*Einleit. ins N. T.* iii. 69).

The internal evidence in favour of the genuineness of this epistle is equally strong with that which attests the first. Polycarp (*Ep. ad Philip.* § 11) appears to allude to ch. iii. 15. Justin Martyr, in his *Dialogue with Trypho* (p. 193, 32, ed. Sylburg. 1593), speaks of the reigning of the man of sin (*τὸν τῆς ἀνομίας ἄνθρωπον*), which seems to be an evident allusion to ch. ii. 3; and in a passage, quoted by Lardner (vol. ii. p. 125), he uses the phrase *ὁ τῆς ἀποστασίας ἄνθρωπος*. The eighth verse of this second chapter is formally cited by Irenæus (iii. c. 7. § 2), as from the pen of an apostle; Clement of Alexandria specially adduces ch. iii. 2, as the words of Paul (*Strom.* lib. v. p. 554, ed. Sylb.), and Tertullian also quotes this epistle as one of Paul's (*De Resurrec. Carnis*, c. 24).

Notwithstanding these evidences in its favour, the genuineness of this epistle has been called into doubt by the restless scepticism of some of the German critics. The way here was led by John Ernest Chr. Schmidt, who, in 1801, published in his *Bibliothek fur Kritik und Exegese*, a tract entitled *Vermuthungen über die Beiden Briefe an die Thessalonicher*, in which he impugned the genuineness of the first twelve verses of the second chapter. He afterwards, in his *Einleitung*, p. 256, enlarged his objections, and applied them to the whole epistle. De Wette took the same side, and, in his *Einleitung*, has adduced a number of reasons in support of his opinion, drawn from the epistle itself. His cavils are more than usually frivolous, and have been most fully replied to by Guericke (*Beiträge zur Hist. Krit. Einl. ins N. T.* s. 92-99, Halle, 1828), by Reiche (*Authentiæ Post. ad Thess. Epist. Vindiciæ*, Gött. 1829), and by Pelt in the *Prolegomena* to his *Commentary on the Epistles to the Thessalonians* (p. xxvii.).

THESSALONICA (Θεσσαλονίκη), now called Salonichi, is still a city of about sixty or seventy thousand inhabitants, situated on the present gulf of Salonichi, which was formerly called Sinus Thermaicus, at the mouth of the river Echedorus. It was the residence of a *præses*, the principal city of the second part of Macedonia, and was by later writers even styled *metropolis* (Liv. xlv. 29, sq.; Cic. *Pro Planc.* 41). Under the Romans it became great, populous, and wealthy (Strabo, vii. p. 323; Lucian, *Osir.*, c. 46; Appian, *Bell. Civ.*, iv. 118; Mannert, *Geographie*, vii. 471, sq.). It had its name from Thessalonice, wife of Cassander, who built the city on the site of the ancient Thermæ, after which town the *Sinus Thermaicus* was called (Strabo, vii. p. 330; Herod. vii. 121; Plin. *Hist. Nat.* iv. 17; *Schol. Thuc.* i. 61; comp. Steph. Byz. *s. v.* Thessalonica). Thessalonice is said to have been killed by her own son Antipater. Thessalonica was 267 Roman miles east of Apollonia and Dyrrachium, 66 miles from Amphipolis, 89 from Philippi, 433 west from Byzantium, and 150 south of Sophia. A great number of Jews were living at Thessalonica in the time of the apostle Paul, and also many Christian converts, most of whom seem to have been either Jews by birth or proselytes before they embraced Christianity by the preaching of Paul. Jews are still very numerous in this town, and possess much influence there. They are unusually exclusive, keeping aloof from strangers. The apostolical history of the place is given in the preceding article. The present town stands on the acclivity of a steep hill, rising at the north-eastern extremity of the bay. It presents an imposing appearance from the sea, with which the interior by no means corresponds. The principal antiquities are the propylæa of the hippodrome, the rotunda, and the triumphal arches of Augustus and Constantine.—C. H. F. B.

THEUDAS, a Jewish insurgent, who was slain, while a band of followers that he had induced to join him were scattered and brought to nought. This statement was made by Gamaliel at the meeting of the Sanhedrim held about A.D. 33, to consider what measures should be taken for the suppression of the Gospel now preached and recommended by the virgin zeal of Peter and the apostles (Acts v. 29, 34, sq.). Josephus (*Antiq.* xx. 5. 1) tells us of a Theudas who, under the procurator Phadus (A.D. 44), set up for a prophet, and brought ruin on himself and many whom he deluded. Now the Theudas of Gamaliel appeared before 'these days,' that is, before the speech was delivered, A.D. 33; and also before 'Judas of Galilee in the days of the taxing;' while the Theudas of Josephus arose not before A.D. 44. This difference of time would seem to show that the two were different persons; but an undue desire to draw from Josephus a corroboration of every fact mentioned in the New Testament led to the conversion of this simple diversity into a contradiction. Then came attempts at solution. Assuming that the two authorities referred to the same Theudas, expositors took two different ways of treating the difficulty: 1. they imputed an omission to Josephus; 2. they imputed an error to Luke. Supposing, however, that Josephus made no omission, and that he meant the same Theudas who is mentioned by Gamaliel, might not the Jewish historian be wrong in his chronology? If, however, his Theudas appeared in the defined time, might not the Theudas of Gamaliel have appeared before Gamaliel's days? Gamaliel, too, though 'a doctor of the law, held in reputation,' was not infallible. He might have mistaken the name. Religious insurgents were common. Several of them bore the not greatly dissimilar name of Judas. And if Gamaliel committed an error, surely it should not be charged on Luke, who was no more responsible for the erroneous history than for the lame argument of that learned doctor's speech, which seems to affect a display of knowledge not unlikely to lead into mistakes. If, however, any error is fairly imputable to the writer of the Acts

of the Apostles, it is too inconsiderable to occasion concern to the enlightened student of the New Testament.

These remarks have been made to meet the ordinary view of the case. But the name Theudas is an Aramaic form of the Greek Θεόδοτος, which is a literal translation of the Hebrew מַתִּתְיָה, Matthias or Matthew. It is, then, of a Matthew that Luke speaks; and in Josephus (*Antiq.* xvii. 6. 2-4) we find a detailed account of one Matthew, a distinguished teacher among the Jews, who, in the latter days of Herod the Great, raised a band of his scholars to effect a social reform in the spirit of the old Hebrew constitution, by 'destroying the heathen works which the king had erected contrary to the law of their fathers.' A large golden eagle, which the king had caused to be erected over the great gate of the Temple, in defiance of the law that forbids images or representations of any living creatures, was an object of their special dislike, which, on hearing a false report that Herod was dead, Matthias and his companions proceeded to demolish; when the king's captain, supposing the undertaking to have a higher aim than was the fact, came upon the riotous reformers with a band of soldiers, and arrested the proceedings of the multitude. Dispersing the mob he apprehended forty of the bolder spirits, together with Matthias and his fellow-leader Judas. Matthias was burnt.

Now, had we used the term Theudas for the term Matthias, the reader would at once have seen that what we have just given from the more minute narrative of Josephus, is only a somewhat detailed statement of the facts of which Gamaliel gave a brief summary before the Sanhedrim. This chronological difficulty then disappears. Matthias or Theudas appeared 'before these days,' before Judas of Galilee, and before the census; he appeared, that is, some four years anterior to the birth of our Lord.—J. R. B.

THIEF, PENITENT ON THE CROSS (Luke xxiii. 39-43). It has been assumed that this man had been very wicked; that he continued so till he was nailed to the cross; that he joined the other malefactor in insulting the Saviour; and that then, by a miracle of grace, he was transformed into a penitent Christian. But this view of the case seems to involve some misconception of the facts, which it may not be inexpedient to indicate. Whitby says, 'Almost all interpreters that I have read here say that this thief began his repentance on the cross.' With regard to his moral character, he is indeed styled by the Evangelist one of the 'malefactors (κακοῦργοι) who were led with Jesus to be put to death' (ver. 32); but the word is evidently used δοξαστικῶς, *i. e.* malefactors as they were considered. St. Matthew (xxvii. 44) and St. Mark (xv. 27) call them λῃσταί; but this word denotes not only robbers, &c., but also brigands, rebels, or any who carry on unauthorized hostilities, *insurgents* (Thucyd. iv. 53). Bishop Multby observes, in his sermon on the subject, that 'these κακοῦργοι were not thieves who robbed all for *profit*, but men who had taken up arms on a principle of resistance to the Roman oppression, and to what they thought an unlawful burden, the tribute-money; who made no scruple to rob all the Romans, and when engaged in these unlawful causes, made less difference between Jews and Romans than they at first meant to do' (*Sermons*, 1819-22, vol. i.). Insurrection was a crime, but it was a crime a person might have committed who had good qualities, and had maintained a respectable character. Again, this man's punishment was crucifixion, which was not in use among the Jews, and inflicted by the Romans not on mere thieves, but rebels. Barabbas had been one of these, and though he 'lay bound with them that had made insurrection with him, who had committed murder in the insurrection,' Mark (xv. 27) has the same word, λῃστής, 'robber,' which is applied to him by St. John (xviii. 40). It is most probable that these 'malefactors' were two of his companions. Our Lord was condemned under the same charge of insurrection (Luke xxiii. 2), and the man whose case we are considering says to his fellow-sufferer, 'thou art under the same *sentence*,' ἐν τῷ αὐτῷ κρίματι, and admits that they both were guilty of the charge, while our Lord was innocent of it (Luke xxiii. 40, 41). It is impossible then to determine the degree of his criminality, without knowing what provocations he had received under the despotic and arbitrary rule of a Roman governor such as Pilate, how far he had been active, or only mixed up with the sedition, &c. The notion that he was suddenly and instantaneously converted on the cross is grounded entirely upon the *general* statement of Matthew, 'the thieves also which were crucified with him cast the same in his teeth' (xxvii. 44), whereas St. Luke, in his relation of the incident, is more exact. Instances of St. Matthew's style of speaking, which is called *amplification*, abound in the Gospels, and in all writers. Thus, 'the soldiers brought him vinegar' (Luke xxiii. 36: John xix. 29), 'one of them did so' (Matt. xxvii. 48; Mark xv. 36). 'The disciples had indignation' (Matt. xxvi. 8), 'some of them' (Mark xiv. 4), 'one of them' (John xii. 4). So in Mark xvi. 5; Matt. xxviii. 2, there is mention of one angel only; but in Luke xxiv. 4; John xx. 12, there is mention of two. It is also far from certain that either his faith or repentance was the fruit of this particular season. He must have known something of the Saviour, otherwise he could not have said οὐδὲν ἄτοπον ἔπραξε, 'he hath done nothing amiss.' He may have been acquainted with the miracles and preaching of Jesus before he was cast into prison; he may have even conversed with him there. He was convinced of our Lord's Messiahship, 'Lord, remember me when thou comest into thy kingdom.' His crime possibly consisted of only one act of insubordination, and he might have been both a sincere believer, and, with this one exception, a practical follower of Christ. Koecher (ap. Bloomfield, *Recen. Synop.*) tells us that it is a very ancient tradition that the thief was not converted at the cross, but was previously imbued with a knowledge of the Gospel. See Kuinoel, Macknight, &c.—J. F. D.

THIGH, the part of the body from the legs to the trunk, of men, quadrupeds, &c. (Heb. יָרֵךְ; Sept. μηρός; Vulg. femur). It occurs in Gen. xxxii. 25, 31, 32; Judg. iii. 16, 21; Ps. xlv. 3; Cant. iii. 8. *Putting the hand under the thigh* appears to have been a very ancient custom, upon occasion of taking an oath to any one. Abraham required this of the oldest servant of his house, when he made him swear that he would not take a wife for Isaac of the daughters of the Canaanites (Gen. xxiv. 2-9). Jacob required it of his

son Joseph, when he bound him by oath not to bury him in Egypt, but with his fathers in the land of Canaan (xlvii. 29-31). The origin, form, and import of this ceremony in taking an oath, are very doubtful. Aben Ezra says, 'It appears to me that it was the custom in that age for a servant to place his hand on his master's thigh, at the command of the latter, to show that he considered himself subject to, and undertook his master's bidding; and such is at present the custom in India.' Grotius thinks that as the sword was worn upon the thigh (comp. Judg. iii. 16, 21; Ps. xlv. 3; Cant. iii. 8) this custom was as much as to say, If I falsify, kill me. Not a few commentators, ancient and modern, explain it of laying the hand on or near the *sectio circumcisionis*, to protest by that solemn covenant of God, whereof circumcision was the badge and type, in the Abrahamic family. So R. Eleazar says, 'Before the giving of the law, the ancient fathers swore by the covenant of circumcision' (*Pirke*, cap. 49). The Targum of Jonathan Ben Uzziel explains it בגזירת מהולתי, in sectione circumcisionis meæ: the Jerusalem Targum, תחות ירך קימי, sub femore fœderis mei. Dr. Adam Clarke adopts the former of these two explanations (*Commentary on Gen.* xxiv. 9). This interpretation supposes a *meiosis*, or metonymy, such as is supposed by some to attend the use of the word with regard to the effect of the *water of Jealousy* (Num. v. 21, 22, 27). Bochart adduces many similar instances (*Hierozoic.* p. 2, lib. v. cap. 15). We may also refer to the margin or Heb. of Gen. xlvi. 26; Exod. i. 5; Judg. viii. 30. No further allusion to this ceremony in taking an oath occurs in Scripture, unless the phrase 'giving the hand under' refer to it. See Hebrew or margin of 1 Chron. xxix. 24, and 'giving the hand,' 2 Chron. xxx. 8; Jer. l. 15; Ezek. xvii. 18. Our translation states that '*the hollow of Jacob's thigh* was out of joint by the touch of the angel who wrestled with him' (Gen. xxxii. 25). Some, however, prefer to render ותקע, *was sprained*, or *wrenched*, and adduce Jer. vi. 8; Ezek. xxiii. 17, 18. The Septuagint renders it καὶ ἐνάρκησε τὸ πλάτος τοῦ μηροῦ; the Vulg. tetigit nervum femoris ejus, et statim emarcuit. Some such sense better suits ver. 31, where we find Jacob *limping* on his thigh; see Gesenius on צלע The custom of Jacob's descendants, founded upon this incident, is recorded in ver. 32, which has been thus translated: 'Therefore the children of Yisrael eat not of the nerve Nashé, which is upon the hollow of the thigh, unto this day: because he struck the hollow of Yaäcob's thigh, on the nerve Nashé' (Sept. τὸ νεῦρον, Vulg. nervus). The true derivation of the word נשה is considered by Dr. Fürst, in his *Concordance*, to be still a secret; but, along with Gesenius, he understands the nerve itself to be the *ischiatic nerve*, which proceeds from the hip to the ancle. This nerve is still extracted from the hinder limbs by the Jews in England, and in other countries where properly qualified persons are appointed to remove it (*New Translation*, &c., by the Rev. D. A. De Sola, p. 333). The phrase '*hip and thigh*' occurs in Judg. xv. 8, in the account of Samson's slaughter of the Philistines. Gesenius translates על in this passage *with*, and understands it as a proverbial expression for 'he smote them all.' The Chaldee paraphrast interprets it, 'He smote both footmen and horsemen, the one resting on their legs (as the word שוק should be rendered), the other on their thighs, as they sat on their horses.' Others understand that he smote them both on the legs and thighs. Some give another interpretation. *Smiting on the thigh* denotes penitence (Jer. xxxi. 19), grief, and mourning (Ezek. xxi. 12). A few mistranslations occur. The word 'thigh' should have been translated 'leg' in Isa. xlvii. 2, שוק, *κνήμας*, *crura*. In Cant. vii. 1, 'The joints of thy thighs,' &c., the true meaning is, 'the *cincture of thy loins* (*i. e.* the drawers, trowsers) is like jewellery.' Lady Wortley Montagu describes this article of female attire as 'composed of thin rose-coloured damask, brocaded with *silver flowers*' (*Letters*, ii. 12; see Harmer, *On Solomon's Song*, p. 110). Cocceius, Buxtorf, Mercerus, and Junius, all adopt this explanation. In Rev. xix. 16, it is said 'the Word of God (ver. 13) hath on his vesture and *on his thigh a name written*, King of kings and Lord of lords.' Schleusner thinks the name was not written upon the thigh, but upon the sword. Montfaucon gives an account of several images of warriors having inscriptions *on the thighs* (*Antiquité Expliquée*, vol. iii. part ii. pp. 268-9; Grupter, iii. 1489; and see Zornii *Opuscula S.S.* ii. 759.)—J. F. D.

THISTLE. [Thorns.]

THOMAS (Θωμᾶς). The word תְּאוֹמָא is equivalent to the Greek Δίδυμος, *twin*. This name occurs also on Phœnician inscriptions, in a form which reminds us of the colloquial English abbreviation, viz. תְּאוֹם and תְּאֹם (Gesenii *Monumenta Phœnicia*, p. 356).

The Apostle Thomas (Matt. x. 3; Mark iii. 18; Luke vi. 15; Acts i. 13) has been considered a native of Galilee, like most of the other apostles (John xxi. 2); but according to tradition he was a native of Antiochia, and had a twin-sister called Lysia (*Patres Apost.* ed. Cotel. pp. 272, 501). According to Eusebius (*Hist. Eccles.* i. 13) the real name of Thomas was Judas; and he occurs under this name also in the *Acta Thomæ*. This Judas was deemed the same as Judas the brother of Jesus (Matt. xiii. 55). It would seem even that the surname Δίδυμος was understood to mean that Thomas was a twin-brother of Jesus (Philo, *ad Acta Thomæ*, p. 94, sq.).

In the character of Thomas was combined great readiness to act upon his convictions, to be faithful to his faith even unto death, so that he even exhorted his fellow-disciples, on his last journey to Jerusalem, 'Let us also go, that we may die with him' (John xi. 16), together with that careful examination of evidence which will be found in all persons who are resolved really to obey the dictates of their faith. Whosoever is minded, like most religionists who complain of the scepticism of Thomas, to follow in the common transactions of life the dictates of vulgar prudence, may easily abstain from putting his hands into the marks of the nails and into the side of the Lord (John xx. 25); but whosoever is ready to die with the Lord will be inclined to avail himself of extraordinary evidence for extraordinary facts, since nobody likes to suffer martyrdom by mistake. These remarks are directed against Winer and others, who find in the character of Thomas what they consider contradictory.

traits, viz., inconsiderate faith, and a turn for exacting the most rigorous evidence. We find that a resolute and lively faith is always necessarily combined with a sense of its importance, and with a desire to keep its objects unalloyed and free from error and superstition. Christ himself did not blame Thomas for availing himself of all possible evidence, but only pronounced those blessed who would be open to conviction even if some external form of evidence should not be within their reach (comp. Niemeyer's *Akademische Predigten und Reden*, p. 321, sq.).

Thomas preached the Gospel in Parthia (Origen, apud Euseb. *Hist. Eccles.* iii. 1; Socrat. i. 19; Clement, *Recogn.* ix. 29), and, according to Jerome, in Persia; and was buried at Edessa (Rufin. *Hist. Eccles.* ii. 5). According to a later tradition Thomas went to India, and suffered martyrdom there (Gregor. Naz. *Orat.* xxv. *ad Arian.* p. 438, ed. Par.; Ambrose, *in Ps.* xlv. 10; Hieron. *Ep.* 148 (59) *ad Marcell.*; Niceph. *Hist. Eccles.* ii. 40; *Acta Thomæ*, c. i. sq.; Abdiæ *Hist. Apost.* c. ix.; Paulin. A. S. Bartholomæo, *India Orient. Christiana*, Rom. 1794). This tradition has been attacked by Von Bohlen (*Indien*, i. 375, sq.). The ancient congregations of Christians in India who belong to the Syrian church, are called Thomas-Christians, and consider the Apostle Thomas to be their founder (Fabricii *Lux Evangelii*, p. 626, sq.: Assemani, *Biblioth. Orient.*, iii. 2. 435, sq.; Ritter's *Erdkunde*, v. i. 601, sq.). Against this tradition Thilo wrote in his edition of the *Acta Thomæ*, p. 107, sq. (comp. Augusti, *Denkwürdigkeiten*, iii. 219, sq.).

The fathers frequently quote an *Evangelium secundum Thomam*, and *Acta Thomæ*, the fragments of which have been carefully edited by J. C. Thilo, in his *Codex Apocryphus Novi Testamenti*, i. 275; and the *Acta Thomæ* separately, L. 1823; and see Winer's *Real-Wörterbuch*, under 'Thomas.'—C. H. F. B.

THORNS AND THISTLES. We have referred to this article the various words which, in the Authorized and other versions, have been considered to indicate brambles, briers, thorns, thistles. Rabbinical writers state that there are no less than twenty-two words in the Bible signifying thorny and prickly plants; but some of these are probably so interpreted only because they are unknown, and may merely denote insignificant shrubs. We shall enumerate them alphabetically, though not likely to throw any light upon what has already baffled so many inquirers. This does not arise from any deficiency of thorny plants to which the Biblical names might be applied, but from the want of good reasons for selecting one plant more than another; for, as Celsius has said, 'Fuerunt in Judæa haud pauca loca a spinis diversorum generum denominata, quod esset hæc terra non tantum *lacte et melle fluens*, sed herbis quoque inutilibus, et spinis multifariis passim infestata.' As examples we may mention the genera of which some of the species are thorny, such as Acacia, Astragalus, Acanthodium, Alhagi, Fagonia, Tribulus, Berberis, Prunus, Rubus, Cratægus, Solanum, Carduus, Cnicus, Onopordon, Eryngium, Rhamnus, Zizyphus; and of species which are named from this characteristic, Anabasis spinosissima, Paliurus aculeatus, Ruscus aculeatus, Forskalea tenacissima, Aristida pungens, Salsola Echinus, Echinops spinosus, Bunias spinosa, Lycium spinosum, Poterium spinosum, Atraphaxis spinosa, Prenanthes spinosa, Ononis spinosa, Smilax asper, Spartium spinosum, Zizyphus Spina Christi.

521. [Zizyphus Spina Christi.]

AKANTHA (ἄκανθα) occurs in Matt. vii. 16; xiii. 7, 22; xxvii. 27; and also in the parallel passages of Mark and Luke; and as forming the crown of thorns, in John xix. 2, 5. The word is used in as general a sense as 'thorn' is with us, and therefore it would be incorrect to confine it to any one species of plant in all the above passages, though no doubt some particular thorny plant indigenous in the neighbourhood of Jerusalem would be selected for plaiting the crown of thorns. Hasselquist says of the *Nabea Paliurus Athenæi* of Alpinus, now *Zizyphus Spina Christi*, 'In all probability this is the tree which afforded the crown of thorns put upon the head of Christ. It is very common in the East. This plant is very fit for the purpose, for it has many small and sharp spines, which are well adapted to give pain: the crown might easily be made of these soft, round, and pliant branches; and what in my opinion seems to be the greater proof is, that the leaves very much resemble those of ivy, as they are of a very deep glossy green. Perhaps the enemies of Christ would have a plant somewhat resembling that with which emperors and generals were crowned, that there might be a calumny even in the punishment.' Some have fixed upon *Paliurus aculeatus*, and others upon *Lycium horridum*.

ATAD, or ATHAD (אָטָד), occurs in Gen. l. 10; Judg. ix. 14, 15; Ps. lviii. 9. In the first passage it is said that 'they came to the threshing-floor,' or the place of Atad. In the fable in Judg. ix. 14, 15, the *atad*, or bramble, is called to reign over the trees. From Ps. lviii. 9, it is evident that the *atad* was employed for fuel: 'Before your

pots can feel the thorns.' *Athad* is so similar to the Arabic عوسج *ausuj*, that it has generally been considered to mean the same plant, namely, a species of buckthorn. This is confirmed by *atadmi* being one of the synonymes of *rhamnus*, as given in the supplements to Dioscorides. A species of *rhamnus* is described both by Belon and by Rauwolf as being common in Palestine, and by the latter as found especially in the neighbourhood of Jerusalem. It has been described by Prosp. Alpinus as having an abundance of long branches, on which are found many long and very sharp thorns. So Rauwolf: 'It puts forth long, slender, crooked switches, on which there are a great many long, strong, and acute thorns.' As above mentioned, this has been supposed by some to be the true Christ's thorn, *Rhamnus*, now *Zizyphus Spina Christi*.

BESHA and BESHIM, translated *weed* and *thistles* in Auth. Vers. [BESHA].

BARKANIM (בַּרְקָנִים), translated *briers* in the Auth. Vers., occurs in Judg. viii. 7, 16, where Gideon is described as saying, 'then I will tear your flesh with the *thorns* (*kozim*) of the wilderness, and with *briers* (*barkanim*).' The Seventy in their version retain the original name. There is no reason for believing that *briers*, as applied to a rose or bramble, is the correct meaning; but there is nothing to lead us to select any one preferably from among the numerous thorny and prickly plants of Syria as the *barkanim* of Scripture. Rosenmüller, however, says that this word signifies 'a flail,' and has no reference to thorny plants.

BATOS (*βάτος*). [SENEH.]

CHARUL, 'nettle.' [CHARUL.]

CHEDEK (חֶדֶק) occurs twice in Scripture; in Prov. xv. 19: 'The way of the slothful is as a hedge of *thorns*' (*chedek*); and in Micah vii. 4: 'The best of them is as a *brier* (*chedek*), and the most upright like a thorn-hedge.' *Chedek* is generally supposed to be as little known as the other thorny and prickly plants, but there is an Arabic word, حدق *chadak* or *hudak*, which is applied in the East to a species of *solanum*. This is supposed by Rosenmüller and others not to be suitable to the above passages; but some species of *solanum* grow to a considerable size; others are among the most prickly plants of the East, and very common in dry arid situations. *S. sanctum*, the *S. spinosum* of others, is found in Palestine. Dr. Harris is of opinion that *chedek* is the *colutea spinosa* of Forskal, which is called *heddad* in Arabic, and of which there is an engraving in Russell's *Nat. Hist. of Aleppo*, tab. 5.

CHOACH (חוֹחַ) is found in several places, and is in the Auth. Vers. translated *thistle* in 2 Kings xiv. 9; Job xxxi. 40; and *thorns* in Job xli. 2; Prov. xxvi. 9; Isa. xxxiv. 13, &c. From the context of the several passages, it is evident that *choach* must have been some useless plant or weed of a thorny nature. Prov. xxvi. 9: As a *thorn* (*choach*) goeth into the hand of a drunkard, &c. The Septuagint translates it by *ἄκανθα*, and *ἄκαν*, that is, words which signify thorny plants in general, and also by *κνίδη*, 'a nettle.' But it is difficult in this, as in other instances, to ascertain what particular plant is intended, and hence *choach* has been variously translated. Celsius has pointed out that the Arabic خوخ *khokh* is similar in nature and origin to the Hebrew word, and is employed as its synonyme, and that *chucho* is the Syriac version. *Khookh* is applied in Arabic to the peach, and *bur khookh*, whence we have apricock, &c. to the apricot. *Choach* may therefore be considered as a generic term applied to the plum tribe; and some of these, as the common sloe, *Prunus spinosa*, are well known to be of a thorny nature: 'Sylvestris prunus, humilis, ac solidis spinis munitus est.' Some kindred species, as a thorny Cratægus, may supply its place in Syria. Bové says of Mesteh, not far from the Jordan, 'Les arbustes qui y croissent m'ont paru des Rhamnées ou des Rosacées du genre Prunus.'

DARDAR (דַּרְדַּר), translated *thistles* in the Auth. Vers., occurs in Gen. iii. 18, 'Thorns also and *thistles* shall it bring forth to thee;' and again in Hosea x. 8; in both of which passages *dardar* is conjoined with *koz*. The Rabbins describe it as a thorny plant which they also call *accobita*. The *accub* of the Arabs is a thistle or wild artichoke. The Septuagint, however, renders *dardar* by the Greek word *τρίβολος* in both passages, and this will answer as well as any other thorny or prickly plant. See below, TRIBULUS.

KIMOSH, translated 'nettles' [KIMOSH].

KOTZ or KOZ (קוֹץ) occurs in several passages of Scripture; in two of which it is mentioned along with *dardar*, where *koz* and *dardar* may be considered equivalent to the English *thorns* and *thistles*. The Septuagint translates it in all the passages by *ἄκανθα*, and it probably was used in a general sense to denote plants which were thorny, useless, and indicative of neglected culture or deserted habitations, growing naturally in desert situations, and useful only

522. [Ononis spinosa.]

for fuel. But if any particular plant be meant, the *Ononis spinosa* or 'Rest-harrow,' mentioned by Hasselquist, may be selected as fully charac-

teristic. 'Spinosissima illa et perniciosa planta, campos integros tegit Ægypti et Palestinæ. Non dubitandum quin hanc indicaverint in aliquo loco scriptores sacri.'

NAAZUZ or NAATZUTZ, supposed to be a species of *Zizyphus* [NAAZUZ].

SALLONIM. [SILLON.]

SEREBIM (Ezek. ii. 6), supposed to be the 'gadfly' or something of the kind.

SENEH. [SENEH.]

SHAIT (שַׁיִת) occurs in several passages of Isaiah: v. 6; vii. 23, 24, 25; ix. 18; x. 17; xxvii. 4, in all of which it is associated with *shamir*, the two being translated *thorns* and *briers* in the Authorized Version. From the context of all the passages it is evident that some weed-like plants are intended, either of a thorny or prickly nature, or such as spring up in neglected cultures and are signs of desolation, and which are occasionally employed for fuel. Nothing has, however, been ascertained respecting the plant intended by *shait*, and consequently it has been variously translated in the several versions of the Scriptures.

SHAMIR (שָׁמִיר) occurs in all the same passages as the word *shait*, with the addition also of Isa. xxxii. 13: 'Upon the land of my people shall come up thorns (*kozim*) and *briers*' (*shamir*). Being associated with *koz*, it has been inferred that *shamir* must also mean some thorny plant.

سمر *samir*, in Arabic, according to Celsius (*Hierobot.* xi. p. 188), from Abulfeda, is a thorny plant, said to be a species of *sidri*, which does not bear fruit. *Sidr* is another name of *Nabca*, a species of *Zizyphus*. No plants are more common in the warm and dry uncultivated parts of the East than prickly species of *Zizyphus*, which impede the path and choke up vegetation, and are therefore very suitable for the illustration of the passages in which *shamir* occurs. This kind of *sidri* not bearing fruit may be the *Paliurus aculeatus* of botanists.

533. [Zizyphus Paliurus.]

SILLON (סִלּוֹן) occurs in Ezek. xxviii. 24: 'And there shall be no more a pricking *brier* (*sillon*) unto the house of Israel, nor any grieving *thorn*' (*koz*). As *sillon* is here mentioned with *koz*, it has been inferred that it must mean something of the same kind. Several Arabic words resemble it in sound; as *seel*, signifying a kind of wormwood; *silleh*, the plant *Zilla Myagrum*; *sillah*, the τράγος of the Greeks, supposed to be *Salsola kali* and *S. tragus*; *sulal* or *sulalon*, which signifies the *thorn* of the date-tree, while the Chaldee word *silleta* signifies a thorn simply. It is probable, therefore, that *sillon* has something of the same meaning, as also *sallonim* or *sillonim*, which occurs in Ezek. xi. 6 along with *serebim*; but we are unable to fix upon any particular plant of Syria as the one intended.

SIKKIM (שִׁכִּים) is another of the words which is considered to indicate thorny plants, as in Num. xxxiii. 55: 'Those which ye let remain of them shall be *pricks* (*sikkim*) in your eyes and *thorns* (*zinnim*) in your sides.' It occurs in the feminine form *sykkoth* (שִׁכּוֹת) in Job xli. 7, where it is translated 'barbed irons.' *Sikkim* has been variously translated, but its resemblance to the Arabic شوك *shok*, *thorns*, sufficiently indicates the probability of its meaning something of the same kind, though it has not been ascertained whether it is used in a general sense, as is probable, or applied to some particular plant.

SIRIM (סִירִים) occurs in several passages, *e. g.* in Eccles. xii. 6, 'as the crackling of thorns (*sirim*) under a pot,' &c.; Isa. xxxiv. 14, 'And thorns (*sirim*) shall come up in her palaces,' &c.; Hosea xi. 6; Amos iv. 2: Nahum i. 10. The Seventy and other translators have employed words signifying thorns, as conveying the meaning of *sirim*, but nothing has been advanced to lead us to select one plant more than another.

SIRPAD (סִרְפָּד) is mentioned only once by Isaiah (lv. 13), 'And instead of the brier (*sirpad*) shall come up the myrtle.' Though this has generally been considered a thorny and prickly plant, it does not follow from the context that such a plant is necessarily meant. It would be sufficient for the sense that some useless or insignificant plant be understood, and there are many such in desert and uncultivated places. In addition to *Paliurus Carduus*, *Urtica*, *Conyza*, species of *Polygonum*, *of Euphorbia*, &c., have been adduced; and also *Ruscus aculeatus*, or 'butcher's broom.'

TRIBOLOS or TRIBULUS (τρίβολος) is found in Matt. vii. 16, 'Do men gather figs of thistles' (τριβόλων)? and again, in Heb. vi. 8, 'But that which beareth thorns and briers (τρίβολοι) is rejected.' The name was applied by the Greeks to two or three plants; one of which was, no doubt, aquatic, *Trapa natans*; of the others *Tribulus terrestris* is undoubtedly one, and *Fagonia cretica* is supposed to be the other. Both, or nearly allied species, are found in dry and barren places in the East; and as both are prickly and spread over the surface of the ground, they are extremely hurtful to tread upon. The word τρίβολος is further interesting to us, as being employed in the Septuagint as the translation of *dardar*. The presence of species of *Tribulus* and of *Fagonia*

indicates a dry and barren uncultivated soil, covered with prickly or thorny plants.

524. [Tribulus terrestris.]

Zinnim (צִנִּים) and Zenenim (צנינים) occur in several passages of Scripture, as in Num. xxxiii. 55; Josh. xxiii. 13, where they are mentioned along with Sikkim; also in Job v. 5, and Prov. xxii. 5. The Septuagint has *τρίβολος* in Prov. xxii. 5, and *βολίδες* in Num. xxxiii. 55, and Josh. xxiii. 13. It has been supposed that *zinnim* might be the *Rhamnus Paliurus*, but nothing more precise has been ascertained respecting it, than of so many other of these thorny plants; and we may therefore, with Michaelis, say, 'Nullum simile nomen habent reliquæ linguæ Orientales; ergo fas est sapienti, Celsio quoque, fas sit et mihi, aliquid ignorare. Ignorantiæ professio via ad inveniendum verum, si quis in Oriente quæsierit.'—J. F. R.

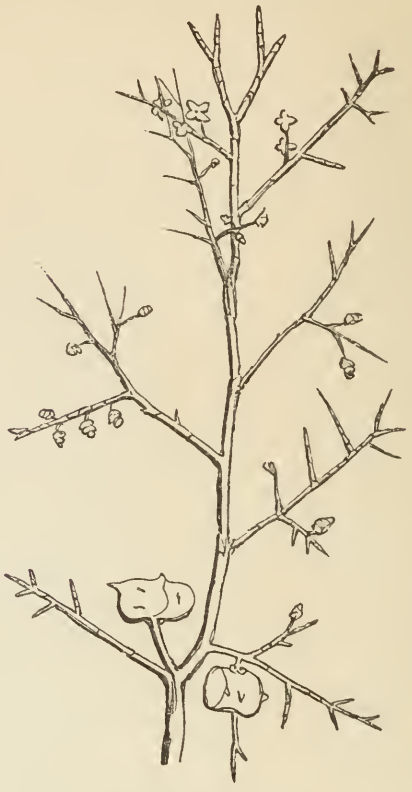
THREE. שָׁלֹשׁ, שָׁלוֹשׁ, &c., occur frequently as cardinal numbers; thus, שלש שנים, *three* years (Lev. xix. 23); as ordinals, בשנת־שלש, in the *third* year (2 Kings xviii. 1); in combination with other numbers, as שלש עשרה, thirteen; and they are also used in the plural as ordinals for thirty, שלשים (1 Kings xvi. 23). For other forms and uses of the words, see Lexicons. The nouns שלש, שלישׁ, and שלוש, literally, according to *one* derivation, a *third man*, are used in the sense of a commander or general, sometimes as connected with war-chariots or cavalry. Thus (Exod. xiv. 7), 'Pharaoh took all the chariots of Egypt and captains (שלשם, *third men*), over all this armament' (על כלו), *not* as in our translation, 'over every one of them.' Sept. *τριστάτας ἐπὶ πάντων*, *tristatæ* over all; Vulg. *duces totius exercitus*. So it is said (xv. 4), that 'the choice of all Pharaoh's captains' (שלשי), or third men, were drowned; Sept. *ἀναβάτας τριστάτας*; Vulg. *principes*. The Septuagint word seems chosen upon the assumed analogy of its etymology to the Hebrew, *quasi τριτοστάτης*, 'one who stands third.' According to Origen, *tristates* has this meaning, because there were three persons in each chariot, of whom the first fought, the second protected him with a shield, and the third guided the horses. Wilkinson, however, says, 'there were seldom three persons in an Egyptian war-chariot, except in triumphal processions. In the field, each one had his own car with a charioteer' (*Manners and Customs of the Ancient Egyptians*, vol. i. p. 335). Jerome, on Ezekiel xxiii., says, '*Tristatæ* among the Greeks is the name of the *second* rank after the royal dignity.' But it is possible that the *ideal* meaning of the verb שׁלשׁ, may be to *rule* or *direct*, as appears from its share in such words as שׁלשׁים, 'excellent things,' or rather 'rules and directions' (Prov. xxii. 20), and מׁשׁל, 'a proverb,' from מׁשׁל, 'to rule,' hence an *authoritative* precept. According to this sense, our translation renders the word שׁלישׁ, 'lord:' 'a *lord* on whose hand the king leaned' (2 Kings vii. 2; comp. v. 17, 19). If the latter derivation of the Hebrew word be admitted, it will cease to convey any allusion to the number three; of which allusion Gesenius speaks doubtingly of any instance, but which he decidedly pronounces to be unsuitable to the first passage, where the word evidently stands in connection with war-chariots (see Gesenius, *s. v.* שׁלישׁ). *Three days and three nights.* 'For as Jonas was three days and three nights in the whale's belly, so shall the Son of man be three days and three nights in the heart of the earth.' The apparent difficulty in these words arises from the fact that our Lord continued in the grave only one day complete, together with a part of the day on which he was buried, and of that on which he rose again. The Hebrews had no word expressly answering to the Greek word *νυχθήμερον*, or natural day of twenty-four hours, an idea which they expressed by the phrases *a night and a day* and *a day and a night*. Thus (Dan. viii. 14), 'Unto two thousand and three hundred *evening mornings* (i. e. days, as it is in our translation), then shall the sanctuary be cleansed.' Thus, also, what is called 'forty days and forty nights' in Gen. vii. 12, is simply 'forty days' in ver. 17; wherefore, as it is common in general computations to ascribe a whole day to what takes up only a part of it, when this was done in the Jewish language, it was necessary to mention both *day* and *night;* hence a part of three days was called by them three days and three nights. Another example we have in 1 Sam. xxx. 12, where the Egyptian, whom David's men found in the field, is said to have *eaten no bread, nor drunk any water, three days and three nights.* Nevertheless, in giving an account of himself, the Egyptian told them that his master had left him, 'because three days ago I fell sick;' in the Hebrew it is, *I fell sick this third day*, that is, this is the third day since I fell sick. Indeed, among the Hebrews, things were said to be done *after three days*, which were done on the third day (comp. 2 Chron. x. 5 with ver. 12; Deut. xiv. 28 with xxvi. 2). Agreeably to these forms of speech, the prophecy of our Lord's resurrection from the dead is sometimes represented as taking place *after three days*, sometimes *on the third day* (see Whitby, Macknight, Wakefield, Dr. Adam

Clarke, in loc.). The phrase, 'three and four,' so often repeated (Amos i.), means *abundance*, anything that goes on toward excess. It finds its parallel in Virgil's well-known words, O terque quaterque beati—'Oh three and four times happy' (*Æn.* i. 94; see also *Odyss.* v. 306). Three has also been considered, both by Jews and Christians, as a distinguished or *mystical number*, like 'seven.' Ainsworth, on Gen. xxii. 4, has collected many such instances, but they all appear to us to be fanciful.—J. F. D.

THRESHING. [Agriculture.]

THRONE. The Hebrew word כִּסֵּא is generally thought to have for its root-meaning the idea of covering; hence it denotes a covered seat, or throne. Fürst, in his admirable Hebrew *Concordance*, holds it to convey the notion of an arched or curved body, and so to have come to signify a seat of dignity, having the elegance given to it which curved lines can easily impart. Whatever the original import of the term may have been, כסא, or rather כסא המלכות, denoted the ornamented seat on which royal personages gave audience on state occasions among the Hebrews (1 Kings ii. 19; xxii. 10; comp. Esth. v. 1). It was originally a decorated arm-chair, higher than an ordinary seat, so as to require a foot-stool (הדום) to support the feet. Sometimes the throne was placed on a platform ascended by steps (Isa. vi. 1). Solomon made a throne of ivory overlaid with gold, which had six steps, with six lions on each side (1 Kings x. 18). Archelaus addressed the multitude from 'an elevated seat and a throne of gold' (Joseph. *De Bell. Jud.* ii. 1. 1). A throne became the emblem of regal power (Gen. xli. 40); whence the phrases, 'to sit on the throne of his kingdom' (Deut. xvii. 18), that is, to rule as a monarch; and 'to sit on the throne of a person' (1 Kings i. 13; 2 Kings x. 30), which signifies, to be his successor.—J. R. B.

THUMMIM. [Urim and Thummim.]



THUNDER (רַעַם; Sept. Βροντή, passim; also קוֹל, φωνή). This sublimest of all the extraordinary phenomena of nature is *poetically* represented as the voice of God, which the waters obeyed at the creation (Ps. civ. 7; comp. Gen. i. 9). For other instances see Exod. ix. 28 (Hebrew, or margin); Job xxxvii. 4, 5; xl. 9; Ps. xviii. 13; and especially Ps. xxix., which contains a magnificent description of a thunder storm. Agreeably to the popular speech of ancient nations, the writer ascribes the effects of lightning to the thunder: 'The voice of the Lord breaketh the cedars' (ver. 5; comp. 1 Sam. ii. 19). Thunder is also introduced into the poetical allusion to the passage of the Red Sea in Ps. lxxvii. 18. The plague of hail on the land of Egypt is very naturally represented as accompanied with 'mighty thunderings,' which would be *literally* incidental to the immense agency of the electric fluid on that occasion (Exod. ix. 22-29, 33, 34). It accompanied the lightnings at the giving of the law (xix. 16; xx. 18). See also Ps. lxxxi. 7, which probably refers to the same occasion: 'I answered thee in the secret place of thunder,' literally, 'in the covering of thunder,' בסתר רעם, *i. e.* the thunder-clouds. It was also one of the grandeurs attending the divine interposition described in 2 Sam. xxii. 14; comp. Ps. xviii. 13. The enemies of Jehovah are threatened with destruction by thunder; perhaps, however, lightning is included in the mention of the more impressive phenomenon (1 Sam. ii. 10). Such means are represented as used in the destruction of Sennacherib's army (Isa. xxix. 5-7; comp. xxx. 30-33). Bishop Lowth would understand the description as metaphorical, and intended, under a variety of expressive and sublime images, to illustrate the greatness, the suddenness, the horror of the event, rather than the manner by which it was effected (New Translation, and notes *in loc.*). Violent thunder was employed by Jehovah as a means of intimidating the Philistines, in their attack upon the Israelites, while Samuel was offering the burnt-offering (1 Sam. vii. 10; Ecclus. xlvi. 17). Homer represents Jupiter as interposing in a battle with thunder and lightning (*Iliad*, viii. 75, &c.; xvii. 594; see also Spence's *Polymetis*, Dial. xiii. p. 211). Thunder was miraculously sent at the request of Samuel (1 Sam. xii. 17, 18). It is referred to as a natural phenomenon subject to laws originally appointed by the Creator (Job xxviii. 26; xxxviii. 25; Ecclus. xliii. 17); and introduced in *visions* (Rev. iv. 5; vi. 1; viii. 5; xi. 19; xiv. 2; xvi. 18; xix. 6; Esther (Apoc.) xi. 5). In Rev. x. 3, 4, 'seven thunders' [Seven]. It is adopted as a *comparison*. Thus 'as lightning is seen before the thunder is heard, so modesty in a person before he speaks recommends him to the favour of the auditors' (Ecclus. xxxii. 10; Rev. xix. 6, &c.). The sudden ruin of the unjust man is compared to the transitory noise of thunder (Ecclus. xl. 13); but see Arnald, *in loc.* One of the sublimest *metaphors* in the Scriptures occurs in Job xxvi. 14, 'Lo, these are parts of his ways; but how little a portion is heard of him (שָׁמֻץ, a mere whisper); but the *thunder* of his power who can understand?' Here the whisper and the thunder are admirably opposed to each other. If the former be so wonderful and overwhelming, how immeasurably more so the latter? In the sublime description of the war-horse (Job xxxix.) he is said to perceive the battle afar off 'by the thunder of the captains, and the shouting' (ver. 25). That part of the description, however (ver. 19), 'hast thou clothed his neck with thunder?' appears to be a mistranslation. The word רעמה from רעם, 'to be agitated,' 'tremble,' refers rather to the *mane*: 'Canst thou clothe his neck with the trembling mane?' To the class of mistranslations must be referred every instance of the word 'thunderbolts' in our version, a word which corresponds to no reality in nature. Thus 'hot thunderbolts' (Ps. lxxviii. 48, רשפים) means 'lightnings,' τῷ πυρί, *igni*. 'Then shall the right-aiming thunderbolts go abroad' (Wisd. v. 21), βολίδες ἀστραπῶν, 'flashes' or 'strokes of lightning.' 'Threw stones like thunderbolts' (2 Macc. i. 16), συνεκεραύνωσαν. The word conveys an allusion to the mode in which *lightning strikes the earth*. Thunder enters into the appellative or surname given by our Lord to James and John—Boanerges; ὅ ἐστιν, υἱοὶ βροντῆς, says St. Mark, 'sons of thunder' (iii. 17). Schleusner here understands, the thunder of eloquence, as in Aristoph. (*Achar.* 530). Virgil applies a like figure to the two Scipios: 'Duo fulmina belli' (*Æn.* vi. 842). Others understand the allusion to be to the energy and courage, &c. of the two apostles (Lardner's *Hist. of the Apostles and Evangelists.*

ch. ix. § 1; Suicer, *Thesaurus*, s. v. Βροντή). Theophylact says they were so called because they were great preachers and divines, ὡς μεγαλοκήρυκας καὶ θεολογικοτάτους. Others suppose the allusion to be to the proposal of these apostles to call fire from heaven on the inhospitable Samaritans (Luke ix. 53, 54). It is not certain *when* our Lord so surnamed them [BOANERGES].

The word קוֹל, simply 'voice,' is often used for thunder, as in Exod. ix. 23; Ps. xxix. 3; lxxvii. 18; Jer. x. 13. In the last of these passages the production of rain by lightning is referred to: 'When he uttereth his voice, there is a multitude of waters in the heavens, he maketh lightnings with (or for) rain.' It is related (John xii. 28) that Jesus said, 'Father, glorify thy name. Then came there a voice from heaven, saying, I have both glorified it, and will glorify it again.' Some of the people that stood by, but had not heard the words distinctly, said it had 'thundered,' for the voice came from heaven; others who had caught the words, supposed that God had spoken to Jesus by an angel, conformably to the Jewish opinion that God had never spoken but by the ministry of angels. Perhaps, however, thunder attended the voice, either a little before or after; comp. Exod. xix. 16, 19; Rev. iv. 5; vi. 1 [BATH KOL].—J. F. D.

THYATIRA (Θυάτειρα, τά), a city on the northern border of Lydia, about twenty-seven miles from Sardis, the seat of one of the seven Apocalyptic churches (Rev. i. 11; ii. 18). Its modern name is Ak-hissar, or *the white castle*. According to Pliny, it was known in earlier times by the names Pelopia and Euhippa (*Hist. Nat.* v. 29). Strabo asserts that it was a Macedonian colony (xiii. p. 928). The Roman road from Pergamus to Sardis passed through it. It was noted for the art of dyeing, as appears from Acts xvi. 14. Luke's account has been confirmed by the discovery of an inscription in honour of Antonius Claudius Alphenus by the corporation of dyers, which concludes with the words οἱ βαφεῖς. It still maintains its reputation for this manufacture, and large quantities of scarlet cloth are sent weekly to Smyrna. The town consists of about two thousand houses, for which taxes are paid to the government, besides two or three hundred small huts; of the former 300 are inhabited by Greeks, 30 by Armenians, and the rest by Turks. The common language of all classes is the Turkish; but in writing it, the Greeks use the Greek, and the Armenians the Armenian characters. There are nine mosques and one Greek church.—J. E. R.

THYINE WOOD (ξύλον θύϊνον) is mentioned as one of the articles of merchandise which would cease to be purchased in consequence of the fall of Babylon (Rev. xviii. 12). This wood was in considerable demand by the Romans, being much employed by them in the ornamental wood-work of their villas, and also for tables, bowls, and vessels of different kinds. It is noticed by most ancient authors, from the time of Theophrastus. It was the citron-wood of the Romans; thus Salmasius: 'Θύα Theophrasti est illa citrus, quæ *citreas mensas* dabat Romanis inter lautissima opera' (Cels. *Hierobot.* vol. ii. p. 25). It was produced only in Africa, in the neighbourhood of Mount Atlas, and in Granada: 'citrum, arborem Africæ peculiarem esse, nec alibi nasci.' It grew to a great size: 'quarum amplitudo ac radices æstimari possunt ex orbibus' (Plin. *Hist. Nat.* xiii. 15).

525. [Callitris quadrivalvis.]

This cedar or citron-wood was most likely produced by *Callitris quadrivalvis*, the *Thuja articulata* of Linnæus, which is a native of Mount Atlas, and of other uncultivated hills on the coast of Africa. In the kingdom of Morocco, according to Broussouel, this tree produces the Sandarach resin of commerce. Capt. S. E. Cook, in his *Sketches in Spain* (vol. ii.), brought to light the fact that the wood-work of the roof of the celebrated mosque, now the cathedral of Cordova, built in the 9th century, is of this wood; it had previously been thought to be that of the larch, from the resemblance of the Spanish word *alerce*, which is applied to the wood of *Callitris quadrivalvis* in Spain and Barbary, to the Latin word *larix*. After carefully examining the wood in question, Capt. Cook came to the conclusion that the timber of the mosque was not of any Spanish, or even European tree. 'By a singular coincidence, the subject had been undergoing investigation about the same time in Africa. Mr. D. Hay, the British Consul at Tangiers, had, by tracing the Arabic etymology of the word *alerce* (no doubt *al arz* or *eres*), by availing himself of the botanical researches of the Danish Consul in Morocco, and by collating the accounts of the resident Moors, made out that the *alerce* was the *Thuja articulata*, which grows on Mount Atlas. In corroboration of his views, a plank of its timber was sent to London. This plank, which is in the possession of the Horticultural Society, is 1 foot 8 inches in diameter. Capt. Cook says he is perfectly satisfied of its identity with the parts of the timber of the mosque at Cordova which he examined. It is highly balsamic and odoriferous, the resin, no doubt, preventing the ravages of insects, as well as the influence of the air.' (Lou-

Thomas Stothard, R.A. pinx.

W. Ensom Sculpt.

TIRESIAS.

don's *Arboret.* iv. 2463). This, no doubt, was also the citron or thyine-wood of the ancients, and therefore that of the above cited passage of the Revelation.—J. F. R.

TIBERIAS (Τιβεριάς; Talm. טבריא; Arab. طبرية) is a small town situated about the middle of the western bank of the lake of Gennesareth. Tiberias was chiefly built by the Tetrarch Herodes Antipas, and called by him after the Emperor Tiberius (Joseph. *Antiq.* xviii. 2. 3). According to the *Life of Josephus* (§ 65), Tiberias was 30 stadia from Hippo, 60 from Gadara, and 120 from Scythopolis; according to the Talmud, it was 13 Roman miles from Sepphoris; and Joliffe, in his *Travels*, states that it is nearly 20 English miles from Nazareth, and 90 miles from Jerusalem. Others find it above two days' journey from Ptolemais.

From the time of Herodes Antipas to the commencement of the reign of Herodes Agrippa II., Tiberias was the principal city of the province (see Joseph. *Vita*, § 9). Justus, son of Pistus, when addressing the inhabitants of Tiberias, stated that 'the city Tiberias had ever been a city of Galilee'; and that in the days of Herod the Tetrarch, who had built it, it had obtained the principal place; and that he had ordered that the city Sepphoris should be subordinate to the city Tiberias; that they had not lost this pre-eminence even under Agrippa, the father, but had retained it until Felix was procurator of Judæa; but he told them that now they had been so unfortunate as to be made a present of by Nero to Agrippa; and that upon Sepphoris's submission of itself to the Romans, that city was become the capital of Galilee, and that the royal treasury and the archives were now removed from them.' Tiberias was one of the four cities which Nero added to the kingdom of Agrippa (*De Bell. Jud.* xx. 13. 2). Sepphoris and Tiberias were the largest cities of Galilee (Joseph, *Vita*, § 65). In the last Jewish war the fortifications of Tiberias were an important military station (*De Bell. Jud.* ii. 20, 6; iii. 10, 1; *Vita*, § 8, sq.).

According to Josephus (*Vita*, § 12), the inhabitants of Tiberias derived their maintenance chiefly from the navigation of the lake of Gennesareth, and from its fisheries. After the destruction of Jerusalem Tiberias was celebrated during several centuries for its famous Rabbinical academy (see Lightfoot's *Horae Heb.* p. 140, sq.).

Not far from Tiberias, in the immediate neighbourhood of the town of Emmaus, were warm mineral springs, whose celebrated baths are sometimes spoken of as belonging to Tiberias itself (Joseph. *De Bell. Jud.* ii. 21, § 6; *Antiq.* xviii. 2. 3; *Vita*, § 16; Mishna, *Sabb.* iii. 4; and other Talmudical passages in Lightfoot's *Horae Heb.* p. 133, sq. Compare also Wichmannshausen, *De Thermis Tiberiensibus*, in Ugolini *Thesaur.* tom. vii.) These springs contain sulphur, salt, and iron; and were employed for medicinal purposes. Compare the *Travels* of Volney and Scholz.

There is a tradition that Tiberias was built on the site of the town כנרת *Kinnereth*. Compare Hieronymi *Onomasticon*, sub voc. 'Chennereth:' 'Oppidum, quod in honorem Tiberii Cæsaris Herodes rex Judææ postea instauratum appellavit Tiberiadem, ferunt hoc primum appellatum nomine.' Against this tradition it has been urged that, according to Joshua (xix. 35), Chinnereth belonged to the tribe of Naphthali. Compare Reland (*Palæstina*, p. 161). It has also been said that this tradition is contradicted by the following statement of Josephus (*Antiq.* xviii. 2. 3):—'Herod the tetrarch, who was in great favour with Tiberius, built a city of the same name with him, and called it Tiberias. He built it in the best part of Galilee, at the lake of Gennesareth. There are warm baths at a little distance from it, in a village named Emmaus. Strangers came and inhabited this city; a great number of the inhabitants were Galileans also, and many were necessitated by Herod to come thither out of the country belonging to him, and were by force compelled to be its inhabitants; some of them were persons of condition. He also admitted poor people, such as those that were collected from all parts to dwell in it. He was a benefactor to these, and made them free in great numbers, but obliged them not to forsake the city by building them very good houses at his own expense, and by giving them land also; for he was sensible that to make this place a habitation was to transgress the Jewish ancient laws, because many sepulchres were to be here taken away, in order to make room for the city Tiberias, whereas our law pronounces that such inhabitants are unclean for seven days.'

Others have identified Tiberias with Chamath; but it also belonged to the tribe of Naphthali, and the graves mentioned by Josephus militate against it as much as against Chinnereth. According to the Rabbins, Tiberias was situated on the site of Rakkath (*Hieros. Megil.* fol. 701). Compare Othonis, *Lex. Rabb.* p. 755; but it too was in the territory of Naphthali, and if the graves mentioned by Josephus are any objection they must militate against this assumption likewise (Lightfoot, *Chorog. Cent.* cap. 72-74).

According to Joliffe (*Travels*, pp. 48, 49, sq.) the modern Tabaria has about four thousand inhabitants, a considerable part of whom are Jews. The hot springs are about thirty-five minutes from Tabaria, and about twenty paces from the lake. Compare the *Travels* of Mariti, Hasselquist, Buckingham, Burckhardt, and Richter. The site of the present town does not fill the area of the ancient Tiberias, of which there are still some insignificant vestiges. Tabaria suffered greatly by an earthquake on New Year's day, 1837. Almost every building, with the exception of the walls and some part of the castle, was levelled to the ground. The inhabitants were obliged to live for some time in wooden booths (Schubert, in *d. München. Gelehrt. Anzeig.* 1837, No. 191, p. 505; Winer's *Real-Wörterb.*).—C. H. F. B.

TIBERIUS (Τιβέριος), the third Emperor of Rome. He is mentioned by name only by St. Luke, who fixes in the fifth year of his reign the commencement of the ministry of John the Baptist, and of Christ (Luke iii. 1). The other passages in which he is mentioned under the title of Cæsar, offer no points of personal allusion, and refer to him simply as the emperor (Matt. xxii. 17, sq.; Mark xii. 14, sq.; Luke xx. 22, sq.; xxiii. 2, sq.; John xix. 12, sq.).

TIBNI (תִּבְנִי, *building of God*; Sept. Θαμνί), one of those factious men who took a prominent

part in the troubles which followed the violent death of Elah. He disputed the throne of Israel with Omri, and the civil war which was thus kindled between the two factions lasted for about three years with varying success, till the death of Tibni left his adversary master of the crown, B.C. 929 (1 Kings xvi. 21-23).

TIDAL (תִּדְעָל, *veneration;* Sept. Θαργάλ), one of the allies who with Chedorlaomer invaded Palestine in the time of Abraham (Gen. xiv. 1). Tidal bears the somewhat singular title of 'king of nations' or 'Gentiles' (גּוֹיִם *goyim*). Some make it almost a proper name here, as in Josh. xii. 23, where we read of a 'king of the Gentiles, (*goyim*) of Gilgal.' Le Clerc and others take it for Galilee, because in Isa. viii. 23, we meet with 'Galilee of the nations.' But there were reasons for its having then acquired that name, which did not exist in the time of Abraham, when all Palestine and the neighbouring countries were as much Gentile as Galilee. In fact, we cannot tell who these Goyim were over whom Tidal ruled; but it seems probable that he was a chief of several confederated tribes, whose military force he contributed to the expedition of Chedorlaomer.

TIDHAR (תִּדְחָר) is twice mentioned in Scripture (Isa. xli. 19, and lx. 13), in both of which places it is enumerated along with the BEROSH and TEASHUR, or cypress and box-tree, and is translated *pine-tree* in the Authorized Version. But it has been variously interpreted, and even by the same translator in the two passages. Thus it is rendered *elm* in one passage, and *box* or *pine* in the other. In the Chaldee paraphrase, the word *murneyan*, commonly thought to mean the elm, is used as the synonyme of *tidhar*. But no similar name having been discovered in any of the cognate languages, no proofs can be adduced in favour of one more than another. The name *tidhara*, meaning 'three-cornered,' is applied in India to a species of Euphorbia (E. antiquorum); but this is not likely to be the plant alluded to in Scripture. Gesenius is of opinion that *tidhar* signifies a durable tree, or one that yields durable wood. It is difficult, therefore, to select from among the trees of Lebanon that which is specially intended.—J. F. R.

TIGLATH-PILESER, the Assyrian king who subjected the kingdom of Israel in B.C. 747. [See ASSYRIA, ISRAEL.]

TIGRIS (חִדֶּקֶל; Sept. Τίγρις), one of the four rivers of Paradise, twice mentioned in Scripture under the name of HIDDEKEL (Gen. ii. 14; Dan. x. 4). In Aramæan it is called ܕܩܠ *Digla*, in Arabic دجلة *Diglat*, in Zend *Teger*,

526. [The Tigris at its junction with the Euphrates. Korna.]

in Pehlvi *Tegera*, 'stream;' whence have arisen both the Aramæan and Arabic forms, to which also we trace the Hebrew *Dekel* divested of the prefix *Hid.* This prefix denotes activity, rapidity, vehemence, so that Hid-dekel signifies 'the rapid Tigris.' From the introduction of the prefix, it would appear that the Hebrews were not entirely aware that *Teger*, represented by their דקל *Dekel*, by itself signified velocity; so in the language of Media, Tigris meant an *arrow* (Strabo, ii. 527; Plin. *Hist. Nat.* vi. 27; comp. Pers. تیر *teer*, 'arrow;' Sanscrit *tigra*, 'sharp,' 'swift'): hence arose such pleonasms as 'king Pharaoh' and 'Al-coran.'

The Tigris rises in the mountains of Armenia, about fifteen miles south of the sources of the Euphrates, and pursues nearly a regular course south-

east till its junction with that river at Korna, fifty miles above Basrah (Bassorah). The Tigris is navigable for boats of twenty or thirty tons' burden as far as the mouth of the Odorneh, but no further; and the commerce of Mosul is consequently carried on by rafts supported on inflated sheep or goats' skins. These rafts are floated down the river, and when they arrive at Bagdad, the wood of which they are composed is sold without loss, and the skins are conveyed back to Mosul by camels. The Tigris, between Bagdad and Korna, is, on an average, about two hundred yards wide; at Mosul its breadth does not exceed three hundred feet. The banks are steep, and overgrown for the most part with brushwood, the resort of lions and other wild animals. The middle part of the river's course, from Mosul to Korna, once the seat of high culture and the residence of mighty kings, is now desolate, covered with the relics of ancient greatness in the shape of fortresses, mounds, and dams, which had been erected for the defence and irrigation of the country. At the ruins of Nimrod, eight leagues below Mosul, is a stone dam quite across the river, which, when the stream is low, stands considerably above the surface, and forms a small cataract; but when the stream is swollen, no part of it is visible, the water rushing over it like a rapid, and boiling up with great impetuosity. It is a work of great skill and labour, and now venerable for its antiquity. The inhabitants, as usual, attribute it to Nimrod. It is called the Zikr-ul-Aawaze. At some short distance below there is another Zikr (dyke), but not so high, and more ruined than the former. The river rises twice in the year: the first and great rise is in April, and is caused by the melting of the snows in the mountains of Armenia; the other is in November, and is produced by the periodical rains. See Gesenius, *Thesaurus*, p. 448; Kinneir, *Geog. Mem. of Pers. Empire*, pp. 9, 10; Rich's *Koordistan*, which includes a minute and accurate account of observations made in a voyage down the river from Mosul to Bagdad, and of another voyage up the river from Basrah to the same place; being in fact a survey of the greater and more interesting part of the Tigris.

TIMBRELS. [Musical Instruments.]

TIMNA (תִּמְנָע, *restraint;* Sept. Θαμνά), a concubine of Eliphaz, the son of Esau (Gen. xxxvi. 12-22; 1 Chron. i. 36). From her the name passed over to an Edomitish tribe (Gen. xxxvi. 40; 1 Chron. i. 51).

TIMNAH (תִּמְנָה; Sept. Θαμνά), or TIMNATH (תִּמְנַת), an ancient city of the Canaanites (Gen. xxxviii. 12), first assigned to the tribe of Judah (Josh. xv. 10-57), and afterwards to Dan (Josh. xix. 43); but it long remained in the possession of the Philistines (Judg. xiv. 1; 2 Chron. xxviii. 18; comp. Joseph. *Antiq.* v. 8. 5). It is chiefly noted as the abode of Samson's bride, and the place where he held his marriage feast. It is probably represented by a deserted site now called Tibneh, which is about one hour's journey south-west of Zerah, the residence of Samson. Another Timnah lay in the mountains of Judah (Josh. xxv. 57; Gen. xxviii. 12-14).

TIMNATH-HERES. [Timnath-serah.]

TIMNATH-SERAH (תִּמְנַת־סֶרַח, *portion of abundance*, i. e. *remaining portion;* Sept. Θαμνασαράχ), a town in the mountains of Ephraim, which was assigned to Joshua, and became the place of his residence and burial (Josh. xix. 50; xxiv. 30). In Judg. ii. 9, it is called Timnath-heres (*portion of the sun*); but the former is probably the correct reading, since a possession thus given to Joshua after the rest of the land was distributed (Josh. xix. 49), would strictly be a portion remaining. This was probably the same with the Timnah (Θαμνά) of Josephus (*Antiq.* iv. iv. 11. 12; *De Bell. Jud.* iii. 3. 5), the head of a toparchy lying between those of Gophna and Lydda; which seems to be recognised in a place called Tibneh, lying north-west of Gophna on the Roman road to Antipatris (*Bibliotheca Sacra*, i. 483). The choice of Joshua was certainly not in the best of the land. Jerome relates that Paula, when travelling in these parts, marvelled that the distributor of the possessions of the children of Israel should have chosen for himself a situation so rough and mountainous (*Epitaph. Paulæ*, fol. 99).

TIMOTHY (Τιμόθεος), a young Christian of Derbe, grandson of Lois, and son of Eunice, a Jewess, by a Greek father, who was probably a proselyte (Acts xvi. 1; xx. 4). He seems to have been brought up with great care in his family, and to have profited well by the example of the 'unfeigned faith' which dwelt in the excellent women named in 2 Tim. i. 5; iii. 15. The testimonials which Paul received in Lycaonia in favour of this young disciple, induced the apostle to make him the companion of his journeys and labours in preaching the Gospel (Acts xvi. 2, 3; 1 Tim. iv. 12). He became his most faithful and attached colleague; and is frequently named by Paul with truly paternal tenderness and regard. He calls him 'son Timothy' (1 Tim. i. 18); 'my own son in the faith' (1 Tim. i. 2); 'my beloved son' (1 Cor. iv. 17); 'my workfellow' (Rom. xvi. 21); 'my brother' (which is probably the sense of Τιμόθεος ὁ ἀδελφός in 2 Cor. i. 1). Timothy appears to have been with the apostle at Rome, and to have been, like him, a prisoner there, though liberated before him (Heb. xiii. 23). His subsequent history is, however, unknown. It appears from 1 Tim. i. 3, that when Paul went into Macedonia he left Timothy in charge of the church at Ephesus, and there are indications that he was still at Ephesus when the apostle was (as usually understood) a second time captive at Rome, and without hope of deliverance (1 Tim. iii. 14). The tradition is, that Timothy retained the charge of the church at Ephesus till his death, and eventually suffered martyrdom in that city.

TIMOTHY, EPISTLES TO. The common authorship of these two epistles has seldom been denied; nor, if denied, could the denial be successfully maintained, so marked and so numerous are the points of resemblance between the two, except upon the assumption that the one has been made up from the other. When, however, we proceed to inquire, By *whom* were they written? the question is one which has occasioned in more recent times no small controversy.

If we defer to the testimony of the early ecclesiastical writers, no doubt will remain upon the

point. For the high antiquity of these epistles, the allusions to passages in them by Barnabas, Clement of Rome, Polycarp, and Ignatius, sufficiently vouch (Lardner, ii. 20, 38, 79, 96). That they are also to be regarded as genuine productions of the apostle whose name they bear, is attested by Irenæus (*Adv. Hær.* lib. i., *sub init.* iii. 3. 3); by Theophilus of Antioch, who quotes 1 Tim. ii. 1, 2, along with Rom. xiii. 7, 8, as part of 'the divine word' (*Ad Autol.* iii. 14); by Clement of Alexandria (*Strom.* ii. 383); *ibid.* p. 448); by Tertullian (*De Præscr. Hæret.* c. 25); by Caius (ap. Euseb. *Hist. Eccles.* vi. 20); by Origen, &c. (comp. Lardner, vol. ii. To this weighty mass of external evidence, there is nothing to oppose of the same kind, for the omission of these epistles by Marcion from his *Apostolicon*, is a fact, to which, from the well-known caprice and prejudice of that heretic, no weight can be attached. Unless, therefore, difficulties of an insurmountable nature are presented by the epistles themselves to our regarding them as the productions of Paul, we must hold their claim to rank as his to be unimpeachable.

That such difficulties are presented by these epistles has been confidently maintained by Eichhorn (*Einleit.* iii. ff. 317), and De Wette (*Einleit.* s. 283, ff.), as well as by some other scholars of less note. The learned and acute Schleiermacher has also assailed the genuineness of the first epistle in his *Kritisches Sendschreiben an J. C. Gass* (Berlin, 1807); but that of the second he admitted, and not only so, but was wont to censure the attempts of those who rejected it and that to Titus, as 'removing the occasion and the means for the criticism of the first' (Lücke, *Theol. Stud. und Krit.*, 1834, s. 766). To examine all the cavils which these eminent men, in the exercise of that micrologistic criticism, in which it seems characteristic of their nation to delight, would be a task altogether incompatible with the limits within which we are confined. A succinct survey of the more weighty of their objections we shall, however, attempt to supply; beginning with those which are common to both epistles, and proceeding to such as are peculiar to each.

1. It is objected that the general style of these epistles is not Pauline. 'Has Paul's language in general,' asks Eichhorn, 'the clearness and ease of expression which we find in these pastoral epistles? Is it not much more unpolished, careless, and allied to a prose which has been thrown together, rather than carefully elaborated?' &c. 'The force of such an objection,' Eichhorn adds, 'it is very difficult to make apparent to those who have not the natural gift of discerning modes of writing.' A most convenient difficulty! enabling the critic to retort the charge of incapacity upon all who do not see the characteristics of Paul's style in exactly the same light as they are viewed by him. We shelter ourselves behind the ample authority of Hug, who says of the latter part of the objection, that it 'is absolutely false,' and who replies to the former by asserting for a letter, written by the apostle to a friend so intimate as Timothy, the right to exhibit a more free and flowing style than would be proper in a letter addressed to a church (*Introd.* Fosdick's transl. p. 569).

2. Much stress is laid by all who have impugned the Pauline origin of these epistles on the occurrence in them of ἅπαξ λεγόμενα, and forms of expression not elsewhere usual with Paul. But to this it may be replied that the same objection might be offered against many of the unquestioned writings of the apostle, such, *e. g.*, as the epistle to the Galatians, in which 57 ἅπαξ λεγόμενα occur, and the epistle to the Philippians, in which we find 54, &c.; from which it appears but fair to infer that the occurrence of such is, so far as it can prove anything, an evidence for rather than against the Pauline origin of these epistles. All such reasonings, however, appear to rest upon too precarious a basis to be allowed much weight. When it is remembered how much the style of a writer is affected by his subject, by his design, by the state of his mind at the time of writing, by the circumstances of the parties for whom his composition is intended, as well as how much in the course of a few years the style of even a very careful writer alters, we shall cease to be much moved by the occurrence in the epistles of such a writer as Paul, of unexpected varieties and peculiarities of expression. The only valid argument that can be urged against the genuineness of a writing from such facts is, when it can be shown that the writer has used phrases or words, which it is historically impossible that the party to whom the writing is ascribed could have employed; as has been done so successfully in several instances by Bentley, in his work on the Epistles ascribed to Phalaris. No attempt of this sort, however, is made by those who have impugned the authenticity of the Epistles to Timothy; 'not one word has been adduced which can be shown to be foreign to the age of Paul; not a single phrase has been pointed out, of which either the outward form or the conception on which it is based, belongs to a later age' (Planck, *Bemerkungen, u. s. w.* s. 17). So far from this, Eichhorn himself admits 'that they have in their language much that is Pauline,' and that the allusion to the apostle's persecuting zeal before his conversion (1 Tim. i. 13), the principles asserted respecting both the substance and the form of Christianity, and the proofs adduced, are highly Pauline (p. 318).

Besides these objections, which apply to both epistles alike, there are some which affect each epistle separately.

To the first epistle it is objected: 1. That it presents Timothy in a light in which it is inconsistent with other notices of him in Paul's epistles to regard him. Here he appears as little better than a novice, needing instruction as to the simplest affairs of ecclesiastical order; whereas, in the first epistle to the Corinthians, written earlier than this, we find him (iv. 17) described by Paul as 'My beloved son, and faithful in the Lord, who shall bring you into remembrance of my ways which be in Christ, as I teach everywhere in every church;' and in 1 Thess. i. 1-3, we are told that the apostle had sent him to Thessalonica to establish the believers there, and to comfort them concerning their faith. If Timothy was so well able to regulate the churches at Corinth and Thessalonica, how, it is asked, can it be supposed that a short while afterwards he should require such minute instructions for his conduct as this epistle contains? To this it may be replied, (1) that in visiting Corinth and Thessalonica Timothy acted as the apostle's delegate, and had,

doubtless, received from him minute instructions as to how he should proceed among those to whom he was sent; so that the alleged difference in the circumstances of Timothy when sent to Corinth, and when left in Ephesus, disappears; (2) that it does not necessarily follow, from the injunctions given to Timothy in this epistle, that the writer regarded him as a novice; for they rather respect the application of general principles to peculiar local circumstances, than set forth instructions such as a novice would require; and (3) it is not to be forgotten that the apostle designed through Timothy to present to the church at large a body of instruction which should be useful to it in all ages of its existence.

2. It is objected that after the church at Ephesus had enjoyed the apostle's instructions and presidency for three years, it could not have been, at the time this epistle is supposed to have been written by Paul, in such ignorance of ecclesiastical arrangements as the injunctions here given would lead us to suppose. But what is there in the epistle that necessitates such a supposition? It contains many directions to Timothy how he should conduct himself in a church, some of which are certainly of an elementary character, but there is nothing that leads to the conclusion that they were *all* intended for the benefit of the church at Ephesus, or that the state of that church was such as to require that injunctions of this kind should be given for its sake alone. Timothy's sphere of evangelistic effort extended greatly beyond Ephesus; and this epistle was designed at once to guide him as to what he was to do in the churches which he might be called to regulate, and to supply his authority for so doing. Besides, does it not naturally occur that such minute injunctions are just such as a person forging this epistle at a later period in Paul's name, would be most likely to avoid?

3. The absence of allusions to events in Timothy's history has been alleged against the Pauline origin of this epistle. A strange objection!—and as untenable as strange! This may be seen by a reference to the following passages: i. 18; iv. 14; v. 23; vi. 12.

4. It is alleged that the writer of this epistle has made such a mistake as Paul could not have made when he classes Alexander with Hymenæus (1 Tim. i. 20) as a false Christian, whereas we know from 2 Tim. iv. 14, that he was not a Christian at all. But where is the shadow of evidence that the Alexander mentioned in 1 Tim. i. 20, is the same person with the Alexander mentioned in 2 Tim. iv. 14? Was this name so uncommon in Ephesus that we must needs suppose a blunder, where a writer speaks of one so called as a heretic, simply because in other passages mention is made of one so called who was not a heretic? Nothing can be more obvious than that there were two Alexanders, just as there might have been twenty, known to the apostle and Timothy; and that of these two one was a heretic and troubler of the church at Ephesus, and the other probably a heathen and an enemy of the apostle.

5. In 1 Tim. i. 20, mention is made of Hymenæus as a heretic, whom the writer makes Paul say he had excommunicated; but this is a mistake, for in 2 Tim. ii. 17, we find Hymenæus still a member of the church at Ephesus, and such a mistake could not have been made by Paul. Here, however, it is assumed without proof, (1) that the Hymenæus of the one epistle is the same as the Hymenæus of the other; (2) that being the same, he was still a member of the same church; and (3) that it was impossible for him, though excommunicated, to have returned as a penitent to the church, and again to have become a plague to it. Here are three hypotheses on which we may account for the fact referred to, and until they be all excluded it will not follow that any blunder is chargeable upon the writer of this epistle.

6. In 1 Tim. vi. 13, the writer refers to our Lord's good confession before Pontius Pilate. Now of this we have a record in John's Gospel; but as this was not written in Paul's time, it is urged that this epistle must be ascribed to a later writer. It is easy to obviate any force that may appear to be in this remark by the consideration that all the prominent facts of our Lord's life, and especially the circumstances of his death, were familiarly known by oral communication to all the Christians before the Gospels were written. Though, then, John's Gospel was not extant in Paul's time, the facts recorded by John were well known, and might therefore be very naturally referred to in an epistle from one Christian to another. Of our Lord's confession before Pilate we may readily suppose that Paul, the great advocate of the spirituality of the Messiah's kingdom, was especially fond of making use.

7. The writer of this epistle, it is affirmed, utters sentiments in favour of the law which are not Pauline, and teaches the efficacy of good works in such a way as to be incompatible with Paul's doctrine of salvation by grace. This assertion we may safely meet with a pointed denial. The doctrine of this epistle concerning the law is, that it is good if it be used *νομίμως*, as a law, for the purposes which a moral law is designed to serve; and what is this but the doctrine of the epistles to the Romans and Galatians, where the apostle maintains that in itself and for its own ends the divine law is holy, just, and good, and becomes evil only when put out of its proper place, and used for purposes it was never designed to serve? (Rom. vii. 7-12; Gal. iii. 21, &c.) What the writer here teaches concerning good works is also in full harmony with the apostle Paul's teaching in his acknowledged epistles (comp. Rom. xii., Ephes. v. and vi., &c.); and if in this epistle there is no formal exposition of the Gospel scheme, but rather a dwelling upon practical duties, the reason may easily be found in the peculiar character of this as a pastoral epistle—an epistle of official counsels and exhortations to a minister of Christianity.

8. De Wette asserts that 1 Tim. iii. 16, bears marks of being a quotation from a confession or symbol of the church, of which there were none in Paul's day. But what marks of this does the passage present? The answer is, the use of the word *ὁμολογουμένως*, a technical word, and the word used by the ecclesiastical writers to designate something in accordance with orthodox doctrine. This is true; but as technical words are first used in their proper sense, and as the proper sense of *ὁμολογουμένως* perfectly suits the passage in question, there is no reason for sup-

posing any such later usage as De Wette suggests. Besides, his argument tells both ways, for one may as well assert that the ecclesiastical usage arose from the terms of this passage, as affirm that the terms of this passage were borrowed from ecclesiastical usage.

9. The writer of this epistle quotes *as a part of Scripture* a passage which occurs only in Luke x. 7; but as Luke had not written his Gospel at the time Paul is supposed to have written this epistle, and as it is not the habit of the New Testament writers to quote from each other in the way they quote from the Old Testament, we are bound to suppose that this epistle is the production of a later writer. But *does* this writer quote Luke x. 7, in the manner alleged? The passage referred to is in ch. v. 18, where we have first a citation from Deut. xxv. 4, introduced by the usual formula, 'The Scripture saith;' and then the writer adds, as further confirmatory of his position, the saying of our Lord, which is supposed to be quoted from Luke's Gospel. Now we are not bound to conclude that this latter was adduced by the writer as a part of Scripture. It may be regarded as a remark of his own, or as some proverbial expression, or as a well-known saying of Christ's, by which he confirms the doctrine he is establishing. We are under no necessity to extend the formula with which the verse is commenced so as to include in it *all* that the verse contains. The καὶ by itself will not justify this; indeed we may go further, and affirm that the use of καὶ alone rather leads to an opposite conclusion, for had the writer intended the latter clause to be regarded as a quotation from Scripture as well as the former, he would probably have used some such formula as καὶ πάλιν (comp. Heb. ii. 13).

10. De Wette maintains that the injunction in ch. v. 23, is so much beneath the dignity of an apostle, that we cannot suppose it to have proceeded from such a writer as Paul. But what is there in such an injunction less dignified than in many injunctions of an equally familiar nature scattered through Paul's epistles? And in what is it incompatible with the apostolic character that one sustaining it should enjoin upon a young, zealous, and active preacher, whom he esteemed as his own son, a careful regard to his health; the more especially when, by acting as is here enjoined, he would vindicate Christian liberty from those ascetic restraints by which the false teachers sought to bind it.

Such are the principal objections which have of late been urged against the Pauline authorship of the first epistle to Timothy. Let us now turn to glance with equal brevity at those which have been urged against the second. Of these the most weighty are founded on the assumption that this epistle must be viewed as written during the apostle's first imprisonment at Rome; and as, for reasons to be subsequently stated, we do not regard this assumption as tenable, it will not be necessary to occupy space with any remarks upon them. We may leave unnoticed also those objections to this epistle which are mere repetitions of those urged against the first, and which admit of similar replies.

1. In ch. iii. 11, the writer enumerates a series of persecutions and afflictions which befell him at Antioch, Iconium, and Lystra, of which he says Timothy knew. Would Paul, it is asked, in making such an enumeration, have committed the mistake of referring to persecutions which he had endured *before* his connection with Timothy, and have said nothing of those which he endured *subsequently*, and of which Timothy *must* have known, whilst of the former he *might* be ignorant? But there is no mistake in the matter. Paul has occasion to refer to the knowledge Timothy had of his sufferings for the Gospel. Of these some had occurred before Timothy's connection with him, whilst others had occurred while Timothy was his companion and fellow-sufferer. Of the latter, therefore, Paul makes no specific mention, feeling that to be unnecessary; but of the former, of which Timothy could know only by hearsay, but of which he no doubt did know, for we cannot conceive that any interesting point in Paul's previous history would be unknown to his 'dear son in the faith,' he makes specific enumeration. This fully accounts for his stopping short at the point where Timothy's personal experience could amply supply the remainder.

2. The declaration in ch. iv. 7, &c. is incompatible with what Paul says of himself in Phil. iii. 12, &c. But respect must be had to the very different circumstances in which the apostle was when he wrote these two passages. In the one case he viewed himself as still engaged in active work, and having the prospect of service before him; in the other he regards himself as very near to death, and shortly about to enter into the presence of his master. Surely the same individual might in the former of these cases speak of work yet to do, and in the latter of his work as done, without any contradiction.

3. In ch. i. 6, and ii. 2, there are allusions to ecclesiastical ceremonies which betray a later age than that of Paul. This is said without reason. The laying on of hands in the conferring of a χάρισμα was altogether an apostolic usage; and the hearing of Paul's doctrines was what Timothy, as his companion in travel, could easily enjoy, without our needing to suppose that the apostle is here represented as acting the part of professor in a school of theology.

A survey of these objections, to say nothing of the petty cavils with which De Wette has crowded his pages, and which one can only wonder that such a man should for a moment have deemed worthy of notice, will amply show that no real and insuperable objection lies in the way of our yielding full assent to the claims of these two epistles to Timothy to rank among the productions of the apostle Paul. On the contrary, the entire spirit, tone, character, and contents of these epistles are so truly Pauline, that they carry the evidence of their authenticity with them, and set at defiance the idle ingenuity of men to whom scepticism has become a habit, and who, indifferent to all consequences, seek only to display their learning or acuteness in their assaults upon the sacred writings.

(Comp. the *Introductions* of Hug, Haerlium, Michaelis, Eichhorn, De Wette, Bertholdt, Guericke, Schott, &c.; Schleiermacher, *Ueb. den sogenannten ersten Brief des Paulos an den Timotheos, ein Kritisches Sendschreiben an J. C. Gass*, Berlin, 1807, 12mo.; Planck, *Bemerkungen über d. ersten Paulin. Brief an d. Tim.*, Gött. 1808, 8vo.; Beckhaus, *Specimen Obss.*

crit. exeget. de vocabulis ἅπαξ λεγομένοις in I. ad Tim. Ep. Paulina obviis, authentia ejus nihil detrahentibus, Lingæ, 1810, 8vo.; Curtius, *De tempore quo prior Pauli ad Tim. Epist. exarata sit*, Berol. 1828, 8vo., &c.)

Assuming that these epistles were written by Paul, the question next to be considered respects the *time* when each of them was composed.

With regard to the first, it is clear that it was written not long after Paul had left Ephesus for Macedonia (ch. i. 3). Now from Acts xx. 1, we learn that Paul left Ephesus after the uproar caused by Demetrius, and went into Macedonia. Shall we suppose, then, that it was at this time this epistle was written? Many excellent critics reply in the affirmative; and upon the whole we think this opinion the one to be preferred. It is not, however, without difficulties; the chief of which lies in the fact that Timothy, to whom this epistle is addressed, appears to have been with Paul in Macedonia at this time (comp. 2 Cor. i. 1). To obviate this objection, it has been suggested that Paul might have written this epistle immediately after leaving Ephesus, and the second to the Corinthians not before the concluding period of his stay in Macedonia; so that Timothy might have visited him in the interval. This appears to remove the difficulty, but it does so by suggesting a new one; for how on this supposition are we to account for the apostle's delaying so long to write to the Corinthians after the arrival of Titus, by whose intelligence concerning the state of the Corinthian church Paul was led to address them? [Second Epistle to the Corinthians.] It may be asked also if it be likely that Timothy, after receiving such a charge as Paul gives him in this epistle, would so soon have left Ephesus and followed the apostle. Pressed by these difficulties, many critics of note have resorted to the hypothesis that this epistle must have been written at a later period, subsequent to the apostle's first imprisonment at Rome, and upon a journey undertaken by him during the interval between that and his final imprisonment. As the evidence that the apostle took such a journey is purely hypothetical and inferential, it must be admitted that the hypothesis built upon it as to the date of this epistle rests at the best on somewhat precarious grounds. This hypothesis, besides, seems to assume the possibility of churches remaining in and around Ephesus in a state of defective arrangement and order for a greater length of time than we can believe to have been the case. It is opposed also by what Paul says, ch. iv. 12, from which we learn that at the time this epistle was written Timothy was in danger of being despised as a youth; but this could hardly be said of him *after* Paul's first imprisonment, when he must on the lowest computation have been thirty years of age. And, finally, this hypothesis is directly opposed to the solemn declaration of Paul to the elders of the church at Ephesus when he met them at Miletum: 'I know that ye all shall see my face no more' (Acts xx. 25), for it assumes that he did see them again and preached to them. These difficulties in the way of the hypothesis of a later date for this epistle seem to us weightier than those which attach to the other supposition.

With regard to the second epistle, it is certain that it was written at Rome, and whilst Paul was a prisoner there (i. 8, 16; ii. 9; i. 17; iv. 21); but the question arises, was it during his first or his second imprisonment that this took place?

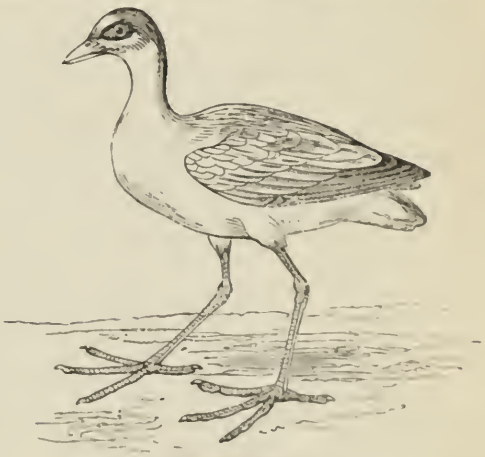
In favour of the first, the most weighty consideration arises out of the fact that the apostle appears to have had the same individuals as his companions when he wrote this epistle, as he had when he wrote the epistles to the Ephesians, Philippians, and Colossians, and that to Philemon, which we know were written during his first imprisonment at Rome. 'At the beginning of the imprisonment,' says Hug, who has very forcibly stated this argument in favour of the earlier hypothesis, 'when the epistle to the Ephesians was written, Timothy, who was not one of Paul's companions on the voyage to Italy (Acts xxvii. 2), was not with him at Rome; for Paul does not add his name in the address with which the epistle commences, as he always did when Timothy was at his side. Timothy afterwards arrived; and accordingly, at the outset of the epistles to the Colossians and Philemon, his name appears with the apostle's (Col. i. 1; Phil. 1); secondly, Luke was in Paul's company (Col. iv. 14; Phil. 24); thirdly, Mark was likewise with him (Col. iv. 10; Phil. 24); fourthly, Tychicus was then Paul's διάκονος and letter-bearer, and, in particular, was sent to Asia (Ephes. iv. 21; Col. iv. 7, 8). All these circumstances are presented to view in the second epistle to Timothy. Timothy was not with Paul at first, but was summoned to his side (2 Tim. iv. 9, 21); secondly, Luke was with him (iv. 11); thirdly, he wishes Mark to come with Timothy, so that he must have been with him in the course of his imprisonment (iv. 11); fourthly, Tychicus was with him in the capacity of letter-bearer, and, in particular, was sent to Asia (iv. 12). Now, in order to suppose that Paul wrote this epistle to Timothy during a second imprisonment at Rome, we must assume that the circumstances of both were exactly the same, &c. We must also assume that Paul at both times, even in the latter part of Nero's reign, was permitted to receive friends during his confinement, to write letters, dispatch messengers, and, in general, to have free intercourse with everybody' (*Introduction*, p. 556, &c., Fosdick's transl.).

The case, as here stated, it must be admitted, is strongly in favour of our assigning the composition of this epistle to the time of Paul's first imprisonment at Rome. On the other hand, the difficulties lying in the way of this seem insuperable. Hug's reasoning assumes that the epistle must have been written in the *early* part of the apostle's imprisonment, else Timothy could not have been absent at the time of its composition. But that this is utterly inadmissible the following considerations show:— 1. When Paul wrote to the Colossians, the Philippians, and Philemon, Demas was with him; when he wrote this epistle to Timothy, Demas had forsaken him, having loved this present world and gone to Thessalonica (iv. 10). 2. When Paul wrote to the Ephesians, Colossians, Philippians, and Philemon, he was in good hopes of a speedy liberation from his imprisonment; when he wrote this epistle to Timothy he had lost all these hopes, and was anticipating death as near at hand (iv. 6-8). 3. At the time this epistle was written Paul had been, if not oftener, at least

once before the bar of the emperor, when he had offered his apology (iv. 16). 4. Tychicus, the bearer of the letters to the Colossians, had been despatched from Rome *before* this epistle to Timothy was written (iv. 12). 5. At the time the epistles to the Colossians and Philemon were written, Aristarchus was with Paul; by the time this was written Aristarchus had left Paul (iv. 11). All these circumstances forbid our supposing that this Second Epistle to Timothy was written before the epistles above named, that is, in the early part of Paul's first imprisonment at Rome. Shall we then assign the epistle to a later period of that same imprisonment? Against this also lie difficulties. Before we can admit it we must suppose that Timothy and Mark, who did not accompany Paul to Rome, had shortly after followed him thither, and, after remaining awhile, left Paul, and were again requested by him in this epistle to return; that during the interval of their absence from Rome, Paul's first trial had occurred; and that, yet even before he had so much as appeared before his judges, he had written to his friends in terms intimating his full confidence of a speedy release (Phil. i. 25; ii. 24; Philem. 22). These circumstances may perhaps admit of explanation; but there are others which seem to present insuperable difficulties in the way of the supposition, that this epistle was written at any period of Paul's first imprisonment at Rome. 1. Paul's imprisonment, of which we have an account in the Acts, was of a much milder kind than that in which he was at the time he wrote this epistle. In the former case he was permitted to lodge in his own hired house, and to receive all who came to him, being guarded only by a single soldier; in the latter he was in such close confinement that Onesiphorus had no small difficulty in finding him, he was chained, he suffered evil even unto bonds as a malefactor, his friends had mostly deserted him, and he had narrowly escaped destruction from the Roman tyrant (i. 16-18; ii. 9; iv. 6, 7, 8, 18). 2. In ch. iv. 13, he requests Timothy to bring with him from Troas some books, parchments, &c., which he had left at that place. If we suppose the visit here referred to the same as that mentioned in Acts xx. 5-7, we must conclude that these documents had been allowed by the apostle to lie at Troas for a space of seven or eight years, as that length of time elapsed between the visit to Troas, mentioned by Luke, and Paul's first imprisonment at Rome. This is surely very unlikely, as the documents were plainly of value to the apostle; and if by φαιλόνης, in this passage, he meant a *cloak* or *mantle*, the leaving of it for so long a time unused, when it might have been of service, and the sending so anxiously for it, when it could be of little or none, as the apostle's time of departure was at hand, must be allowed to be not a little improbable. 3. In ch. iv. 20, Paul speaks of having left Trophimus sick at Miletus. Now this could not have been on the occasion referred to in Acts xx. 15; for subsequent to that Trophimus was with Paul at Jerusalem (Acts xxi. 29). It follows that Paul must have visited Miletus at a subsequent period; but he did not visit it on his way from Jerusalem to Rome on the occasion of his first imprisonment; and this, therefore, strongly favours the hypothesis of a journey subsequent to that event, and immediately antecedent to the writing of this epistle. The attempt to enfeeble the force of this by translating ἀπέλιπον, '*they* left' &c., and understanding it of messengers from Ephesus coming to visit Paul, is ingenious, but can hardly be admitted, as no sound interpreter would forcibly supply a subject to a verb where the context itself naturally supplies one. 4. In ch. iv. 20, the apostle says 'Erastus abode in Corinth.' Such language implies that shortly before writing this epistle the apostle had been at Corinth, where he left Erastus. But before his first imprisonment Paul had not been at Corinth for several years, and during the interval Timothy had been with him, so that he did not need to write to him at a later period about that visit (Acts xx. 4). Hug contends that ἔμεινε simply expresses the fact that Erastus was then residing at Corinth, without necessarily implying that Paul had left him there; but would the apostle in this case have used the aorist?

On these grounds the hypothesis has been adopted, that Paul, after his first imprisonment, was set at liberty, resumed his missionary labours, was again apprehended, and wrote this epistle during his second imprisonment. Whichever hypothesis we adopt we shall encounter difficulties; but the latter seems, upon the whole, the preferable (comp. the *Introductions* of Horne, Hug, Michaelis, Eichhorn; Hemsen's *Leben Pauli;* Paley's *Horæ Paulinæ*, &c.).

The *design* of the first epistle is partly to instruct Timothy in the duties of that office with which he had been intrusted, partly to supply him with credentials to the churches which he might visit, and partly to furnish through him guidance to the churches themselves. It may be divided into *three* parts, exclusive of the introduction (i. 1, 2), and the conclusion (vi. 20, 21). In the *first* of these parts (i. 3-20) the apostle reminds Timothy generally of his functions, and especially of the duties he had to discharge in reference to certain false teachers, who were anxious to bring the believers under the yoke of the law. In the *second* (ii.-vi. 2) he gives Timothy particular instructions concerning the orderly conducting of divine worship, the qualifications of bishops and deacons, and the proper mode of behaving himself in a church. In the *third* (vi. 3-19) the apostle discourses against some vices to which the Christians at Ephesus seem to have been prone.



The design of the Second Epistle is partly to inform Timothy of the apostle's trying circumstances at Rome, and partly to utter a last warning voice against the errors and delusions which were corrupting and disturbing the churches. It consists of an inscription (i. 1-5); of a series of exhortations to Timothy, to be faithful in his zeal for sound doctrine, patient under affliction and persecution, careful to maintain a deportment becoming his office, and diligent in his endeavours to counteract the unhallowed efforts of the false teachers (i. 6; iv. 8); and a conclusion in which Paul requests Timothy to visit him, and sends the salutations of certain Christians at Rome to Timothy, and those of the apostle himself to some believers in Asia Minor.

TIN (בְּדִיל *bedil;* Sept. *κασσίτερος*). If this substance be really intended by the Hebrew word, which seems somewhat doubtful, it is first mentioned among the metals which were to be purified by fire found among the prey taken from the Midianites (Num. xxxi. 22). It is also named among the articles of commerce which the Tyrians received from Tarshish (Ezek. xxvii. 12); and a levelling instrument of *bedil* used by builders is noticed in Zech. iv. 10. The Hebrew word also denotes the *alloy* of lead, tin, and other inferior metals, combined with silver in the ore and separated from it by smelting (Isa. i. 25).

TINSHEMETH (תִּנְשֶׁמֶת). This name has already been referred to the 'chamæleon,' but there is no doubt that it also denotes a bird; for it occurs in the enumeration of unclean species which the law forbade to be eaten, and we are not at liberty to presume that a lizard could be meant, where all the others are positively flying creatures (Lev. xi. 18; Deut. xiv. 16). Bochart, with his usual learning, endeavours to prove it to be a species of owl; but in that case not less than three species of owls would be enumerated in the series, while many other birds that cannot well be assumed to be clean would be omitted. The Sept. and the Vulgate understand a water-fowl to be meant, the first rendering it *πορφυρίων*, and the second, not comprehending the meaning of this designation, rendering it 'swan.' Giggeius wavered between these two; and Dr. Mason Harris, seemingly not better informed, and confounding the American red species with the white one of Africa, guessed that *porphyrion* must mean the 'flamingo.' The swan, for which some recent scholars contend, asserting that it was held sacred in Egypt, does not occur, so far as we have ascertained, in any Egyptian ancient picture, and is not a bird which, in migrating to the south, even during the coldest seasons, appears to proceed further than France or Spain, though no doubt individuals may be blown onwards in hard gales to the African shore. We recollect only two instances of swans being noticed so far to the south as the sea between Candia and Rhodes: one where a traveller mentions his passing through a flock reposing on the sea during the night; the other recorded by Hasselquist, who saw one on the coast of Egypt; but we conjecture that they mistook pelicans for swans, particularly as the last mentioned are fresh-water birds, and do not readily take to the true salt sea. Parkhurst, deriving the word from נשם *nasam*, 'to breathe,' was inclined to render Tinshemeth by 'goose;' but as this bird is not by the present Jews deemed unclean, it may be confidently assumed that no mistake in this matter can have occurred during any period, and consequently that the goose cannot have been marked unclean by the law, and afterwards admitted among the clean birds, with its name transferred to another species. The Hebrew dictionary by Selig Newman, it is true, renders Tinshemeth 'swan;' but the Polyglotts show the great uncertainty there is in several of the names of both the chapters in question. We prefer the rendering of the Sept., because the porphyrion, or purple gallinula, cannot have been unknown to the translators, as it was no doubt common in the Alexandrian temples, and was then, as it is now, seen both in Egypt and Palestine. The circumstance of the same name being given to the chamæleon may have arisen from both having the faculty of changing colours, or being iridescent; the first when angry becoming green, blue, and purple—colours which likewise play constantly on the glossy parts of the second's plumage. The porphyrion is superior in bulk to our water-hen or gallinula, has a hard crimson shield on the forehead, and flesh-coloured legs; the head, neck, and sides are of a beautiful turquoise blue, the upper and back parts of a dark but brilliant indigo.

527. [The Porphyrion.]

The porphyrion is a remarkable bird, abounding in the southern and eastern parts of Europe and Western Asia, feeding itself standing on one leg, and holding its food in the claws of the other. It was anciently kept tame in the precincts of pagan temples, and therefore perhaps was marked unclean, as most, if not all, the sacred animals of the heathens were. When in the decline of idolatry the dog, peacock, ibis, the purple bird in question, and other domesticated ornaments of the temples, had disappeared, Gesner's researches show how early and long the writers of the middle ages and of the revival of literature were perplexed to find again the porphyrion of the ancients, although modern naturalists have not the shadow of a doubt upon the subject, the species being, moreover, depicted upon Egyptian monuments. We subjoin a figure of *porphyrio hyacinthinus*, the species most common in Europe, although there are several others in Asia and Africa; *porphyrio erythropus*, abundant on the south-east coast of Africa, appears to be that which the pagan priests most cherished.—C. H. S.

TIPHSAH (תִּפְסַח; Sept. *Θαψά*), a large and opulent city on the western bank of the Euphrates. It is doubtless the same as the Thapsacus of the Greeks and Romans. The name means 'ford;' and the town was, in fact, situated at the lowest fording-place of the Euphrates; whence it became the point of trading-communication between the natives east and west of the river. On

this account, and as commanding the ford, the possession of the place was deemed of great importance by the ruling powers of the day (Xenoph. *Anab.* i. 4-11; Arrian, ii. 13; iii. 7; Strabo, xvi. p. 1082; Q. Curtius, x. 1-9). This circumstance explains the contentions of the kings of Syria and Egypt respecting Carchemish, which was a strong place a little lower down the river, at the junction of the Chaboras. Solomon obtained possession of Tiphsah (1 Kings iv. 24), probably in connection with the series of operations (of which the building or fortification of Tadmor was one) adopted by him for the purpose of drawing the Eastern trade into his own dominions [Solomon; Tadmor]. Nothing remains of Tiphsah at the present day except the name; but the site is supposed to be marked by the village of Ed-Deyr. The Tiphsah of 2 Kings xv. 16, is usually identified with the above by Jewish writers; but it seems rather to have been in the land of Israel, and not far from Tirzah.

TIRHAKAH, king of Cush (Ethiopia in the Common Version), who in the days of Hezekiah came out against Sennacherib when he was making war on Judah (2 Kings xix. 9; Isa. xxxvii. 9). He is the Ταρακός of Manetho, the third king of the twenty-fifth dynasty, and the Τεαρκών of Strabo (xv. 687), with whom the twenty-fifth Ethiopic dynasty came to an end. According to Strabo, he made his way victoriously as far as the pillars of Hercules. The length of his reign is fixed by Syncellus at eighteen, and by Eusebius at twenty years. According to the first statement, the period of his reign falls in the years 714-696 B.C. His successful opposition to the power of Assyria is recorded on the walls of a Theban temple, for at Medinet Habu are the figure and the name of this king and the captives he took. That Tirhakah ruled at Napata, now Gebel Berkel, and in the Thebaid at the same period, is proved by the additions he made to the temples of Thebes, and by the monuments he built in Ethiopia. That he was a very potent monarch is evident from his defeat of Sennacherib, as well as from the monuments he has left both in Egypt and Ethiopia, and his maintenance of the Egyptian possessions in Asia; and although Strabo may have exaggerated his power when he affirms that he extended his conquests like Sesostris into Europe, yet his authority is of use, as it leads to the conclusion that Tirhakah ruled Lower as well as Upper Egypt [Sennacherib].—J. R. B.

TIRSHATA (תִּרְשָׁתָא; Sept. *ἀθερσασθά*), a title borne by Zerubbabel and Nehemiah as Persian governors of Judæa (Ezra ii. 63; Neh. vii. 65, 70; viii. 9; x. 2). It seems to come from the Persic ترش *torsh*, 'severe,' and, in that case, would be equivalent to 'your severity:' comp. 'dread sovereign,' and the German 'gestrenger Herr,' a title formerly borne by the magistrates of the free and imperial German states.

TIRZAH (תִּרְצָה) is mentioned only once in Scripture, namely in Isa. xliv. 14. 'He (that is, the carpenter, ver. 13) heweth him down cedars, and taketh the cypress (*tirzah*), for the purpose of making an idol. There is no doubt but the wood must have been of a texture fit to be worked, as well as to retain the shape given to it. Though translated 'cypress,' we have no proof that this tree was intended, but it is well suited for the purpose indicated [Berosh]. The Greek translators, Aquila and Theodotion, have employed a word which denotes the wild or forest oak (*ἀγριοβάλανος*). The oldest Latin version renders the Hebrew word by *ilex*, 'the evergreen oak' (Rosenmüller, p. 317). As the wood of this species is well-fitted for being worked into images, and was so employed by the ancients, it is possible that it may be that intended, though we have no satisfactory proof of its being so.

TIRZAH (תִּרְצָה; Sept. Θερσά), an ancient Canaanitish city (Josh. xii. 24), pleasantly situated (Cant. vi. 4), which Jeroboam made the capital of his kingdom, and which retained that rank till Samaria was built by Omri (1 Kings x.; xv. 21; xvi. 24; 2 Kings xv. 4). It is nowhere stated to what tribe this town belonged; but Adrichomius (*Theat. T. S.*, p. 74) and others place it in Manasseh. Lightfoot (*Chorograph. Cent.* c. 88) seems to suspect that Tirzah and Shechem were the same; for he says that 'if Shechem and Tirzah were not one and the same town,' it appears that Jeroboam had removed when his son died from where he was when he first erected his idols (comp. 1 Kings xii. 25; xiv. 17). It is not very probable that Shechem and Tirzah were the same; but it would seem that they were not very distant from each other. The site is, however, entirely unknown.

TISHBITE (תִּשְׁבִי; Sept. Θεσβίτης), the Gentile name of Elijah—'Elijah the Tishbite' (1 Kings xvii. 1, 2; xxi. 17)—derived from a town called Tishbi in the tribe of Naphtali, the name of which occurs only in Tob. i. 2, Θίσβη (see Reland, *Palæstina*, p. 1035).

TISRI (תִּשְׁרִי, from a root which denotes *to begin*) was the first month of the civil, and the seventh month of the ecclesiastical year, in which fell the Festival of Atonement and that of Tabernacles. In 1 Kings viii. 2, it is termed the month of Ethanim, that is, the month of streaming rivers, which are filled during this month by the autumnal rains. It corresponds with our September—October. Tisri is one of the six names of months found in Palmyrene inscriptions; which, with other evidence, renders it very probable that the Jewish names of months form a member in a great series of names of months, which were extensively in use in the eastern parts of the world (see *Ueber die Monatsnamen einiger alter Völker* von T. Benfey und M. A. Stern, Berlin, 1836).—J. R. B.

TITHE, &c. (מַעֲשֵׂר, Lev. xxvii. 30, 31, 32, &c.; Sept. *δεκάτη, scil. μοῖρα*, 'a part;' Vulg. *decimæ*). The Hebrew word is plainly derived from עשׂר, 'ten,' which also means 'to be rich;' hence ten is the *rich* number, because *including* all the units under it. The same idea is retained in the Greek; thus, *δέκω, δέχομαι*, 'to receive,' 'hold,' &c. *δέκα*, 'ten,' because the ten fingers hold everything; and in the Latin, *teneo;* French, *contenir;* English, *contain, ten.* Pythagoras speaks of the Decade, which is the sum of all the preceding numbers 1+2+3+4, as *comprehending* all musical and arithmetical proportions. For a view of his doctrine of numbers, and the probability of its Egyptian origin, see Wilkinson's *Manners and Customs of*

the Ancient Egyptians, vol. iv. pp. 193-200. For Aristotle's similar ideas of the number ten, see *Probl.* iii. 15. This number seems significant of completeness or abundance in many passages of Scripture. Jacob said unto Laban, 'Thou hast changed my wages these ten times' (Gen. xxxi. 41); 'Am not I better to thee than ten sons' (1 Sam. i. 8)? 'These ten times have ye reproached me' (Job xix. 3); 'Thy pound hath gained ten pounds' (Luke xix. 16), &c. This number, as the end of less numbers and beginning of greater, and as thus signifying perfection, sufficiency, &c., may have been selected for its suitableness to those Eucharistic donations to religion, &c., which mankind were required to make probably in primeval times. Abraham gave to Melchizedec, 'priest of the most high God,' a tenth of all the spoils he had taken from Chedorlaomer (Gen. xiv. 20; Heb. vii. 4). The incidental way in which this fact is stated, seems to indicate an established custom. Why should Abraham give tithes of the spoils of war, and not of other things? For instances of the heathen dedicating to their gods the tenth of warlike spoils see Wetstein on Heb. vii. 4. Jacob's vow (Gen. xxviii. 22) seems simply to relate to *compliance* with an established custom; his words are, literally, 'And all that thou shalt give me, I will assuredly tithe it unto thee' עשר אעשרנו לך. On the practice of the heathen, in various and distant countries, to dedicate tithes to their gods, see Sir Henry Spelman, *On Tithes*, ch. xxvi.; Selden, c. iii.; Lesley's *Divine Right of Tithes*, § 7; Wetstein on Heb. vii. 2. The Mosaic law, therefore, in this respect, as well as in others, was simply a reconstitution of the patriarchal religion. Thus, the tenth of military spoils is commanded (Num. xxxi. 31). For the law concerning tithes generally, see Lev. xxvii. 30. &c., where they are first spoken of as things already known. These tithes consisted of a tenth of all that remained after payment of the first-fruits of seeds and fruits, and of calves, lambs, and kids. This was called the first tithe, and belonged to God as the sovereign and proprietor of the soil (Lev. xxvii. 30-32; 2 Chron. xxxi. 5, 6). The proceeds of this rent, God, as king, appropriated to the maintenance and remuneration of his servants the Levites, to be paid to them in their several cities (Num. xviii. 21-24). A person might redeem or commute in money his tithes of seeds and fruits, by adding the value of a fifth part to them (Lev. xxvii. 31). Out of this tithe the Levites paid a tenth to the priests, called the tithe of tithes, or tithe of holy things (Num. xviii. 26-28); and another tithe of the produce of the fields belonging to their cities (ver. 29). The first tithe being paid, the proprietor had to set apart out of the remainder a second tithe, to be expended by him in the courts of the tabernacle, in entertaining the Levites and his own family, &c. (Deut. xii. 18). If the trouble and expense of transporting this second tithe in kind to the tabernacle were too great, he might turn it into money, but this he must take in person, and expend there for the appointed purpose (ver. 24-28). Some have supposed that in addition to the first and second tithe, there was another, to be paid every third year to the poor, &c. (Deut. xiv. 28, 29), and that it is referred to in Tobit i. 6-8 (τρίτην δεκάτην, 'the third tithe);' but others understand the meaning to be, that every third year, called שנת־המעשר, 'the year of tithes,' the people made a feast of the second tithes in their *own houses* for the Levite, the stranger, the fatherless, and the widow (Deut. xii. 26; Jahn, *Bibl. Arch.* § 390), and that from being put to this use every third year, it was called 'the third tithe,' and 'poor man's tithe.' Josephus, however, speaks positively of a third tithe every third year to those in want (*Antiq.* iv. 8. 8, 22). It seems that the people were left to their own consciences in regard to the just payment of their tithes, subject, however, to the solemn declaration 'before the Lord,' which they were required to make concerning it every third year (Deut. xxvi. 12-16). Possibly the Levites were not prohibited from taking due care that they received their rights, inasmuch as in later times, at least, they paid their own tithes to the priests under sacerdotal supervision (Neh. x. 38). Upon examination it will be found that the payments required by Moses of the Jewish people were exceedingly moderate, and were no doubt easily borne till they chose to incur the additional expenses of a regal establishment. It pleased God, while sustaining the relation to them of sovereign and proprietor of the land, to require the same quit-rent of one-tenth which was usually paid to the kings in other nations (1 Sam. viii. 14, 15, 17; comp. 1 Macc. ii. 35). Aristotle speaks of it as παλαιὸς νόμος, 'an ancient law' at Babylon (*Œconomic.* lib. ii. sub fin.). In Egypt one-fifth was paid to the king, which was more than the first-fruits and first and second tithes put together. This quit-rent God appointed to be paid to the Levites for their subsistence, since their festive share in the second tithes can hardly be accounted part of their income. They had, as a tribe of Israel, an original right to one-twelfth of the land, for which they received no other compensation than the tithes, subject to the sacerdotal decimation, their houses, and glebes. In return for these, they consecrated their time and talents to the service of the public [LEVITES]. The payment of tithes, &c. was re-established at the restoration of religion by Hezekiah (2 Chron. xxxi. 5, 6, 12), and upon the return from the captivity by Nehemiah (x. 37; xii. 44; xiii. 5). The prophet Malachi reproves the people for their detention of the tithes, &c., for which they had brought a divine chastisement by famine upon themselves, and promises a restoration of plenty upon their amendment (iii. 8-12; comp. iii. 9; Ecclus. xxxv. 9). In our Saviour's time the Pharisees scrupulously paid their tithes, but neglected the weightier matters of the law. His comment on their conduct conveys no censure on their punctiliousness on this point, but on their neglect of more important duties. 'These *ought ye to have done*, and not to leave the other undone' (Matt. xxiii. 23; Luke xviii. 12). For an illustration of St. Paul's reasoning on Abraham's payment of tithes to Melchizedec (Heb. vii. 4, &c.), see Stuart, *On the Hebrews;* Professor Wilson, *On the Priesthood of Christ.* On the Jewish tithes, see Hottinger, *De decimis Judæorum*, Lugdun. Batav. 1713; Michaelis, *On the Laws of Moses*, by A. Smith, Lond. 1814, vol. iii. pp. 141-146; and *On the Heathen Tithes;* Rose's *Inscriptiones Græcæ*, Lond. 1825, p. 215.—J. F. D.

TITUS (Τίτος), a Christian teacher, and companion and fellow-labourer of St. Paul. He was of Greek origin, but was converted by the apostle, who therefore calls him his own son in the faith (Gal. ii. 3; Tit. i. 4). He was one of the persons sent by the church of Antioch to Jerusalem to consult the apostles, and it was not judged necessary that he should receive circumcision (Acts xv. 2; Gal. ii. 1). After a time we find him in company with Paul at Ephesus, whence he was sent to Corinth (2 Cor. xii. 18), where he was well received, discharged with discretion the task confided to him, and declined to suffer the church to defray his expenses (2 Cor. viii. 13, sq.; xii. 18). He then proceeded to Macedonia, and at Philippi rejoined his master, who had vainly been expecting him at Troas (2 Cor. vii. 6; ii. 12, 13). He was then employed by Paul in preparing the collection for the poor saints in Judæa, and, as an incident of this mission, became the bearer of the second epistle to the Corinthians (2 Cor. viii. 16, 17, 23). On a subsequent journey, Titus was left by the apostle in Crete, to establish and regulate the churches in that island (Tit. i. 5), and he was still there when he received the epistle from St. Paul which bears his name (Tit. iii. 12). He is therein desired to join the apostle at Nicopolis; and it is presumed that he did so, and afterwards accompanied him in his last journey to Rome, whence he was sent into Dalmatia (2 Tim. iv. 10). Tradition states that Titus eventually returned to Crete, and died there at an advanced age.

TITUS, EPISTLE TO. The genuineness of this Epistle is attested by a large body of evidence, and seems never to have been questioned, except by the heretic Marcion, and that upon the most frivolous grounds (Tertullian, *Adv. Marcion.* v. 21), until, in recent times, it was attacked by Eichhorn and De Wette. It is manifestly quoted by Clement of Rome (*Ep. ad Cor.* cap. 2); and it is referred to as the production of Paul by Irenæus (iii. 3. § 4); as part of the divine word by Theophilus (*Ad Antol.* iii. § 14); as Paul's, by Clement of Alexandria (Strom. lib. i. p. 299, and in many other places); by Tertullian (*De Præser. Hær.* c. 6); and by Origen, in many places (Lardner, *Works*, vol. ii. 8vo.). The objections of the German critics are founded chiefly upon the difficulty of ascertaining the proper date of this Epistle, and upon minute peculiarities in its style and sentiments. The latter class of objections are so much identical with those already considered in reference to the Epistles to Timothy, that it is unnecessary to enter upon any examination of them here. To the former the best reply will be furnished by ascertaining, if possible, when and where the Epistle was written; but even should we fail in this, it would be strange were we to relinquish our conviction of the authenticity of an ancient writing simply because, possessing very imperfect information as to many parts of the alleged author's history, we were unable to say with certainty when he was in circumstances to compose it.

It is evident from the Epistle itself, that at the time it was written Paul had recently visited Crete (ch. i. 5); that he was about to spend the winter in Nicopolis (ch. iii. 12); and that Apollos was about to visit Crete, on his way to some other place (ch. iii. 13). These points may serve, in some measure, if not as indices to the exact time when this Epistle was written, at least as criteria by which to test the truth of any hypothesis that may be suggested on this subject.

We learn from the Acts of the Apostles that Paul visited Crete on his voyage to Rome (ch. xxvii. 7); but the shortness of his visit at that time, the circumstances under which it was made, and the improbability of his expecting to spend the ensuing winter at Nicopolis, place it out of the question to suppose that it was to this visit he refers in this Epistle. As this is, however, the only visit recorded by Luke, in rejecting it we are forced to suppose another visit, and to find some period in the apostle's life when it was probable that such a visit was paid.

It has been suggested by Henry that the period referred to in Acts xviii. 18, 19 admits of our placing this visit to Crete within it. Paul, at that time, was on his journey from Corinth to Palestine, but on some account or other landed at Ephesus. This leads to the suggestion that the apostle must either voluntarily have departed from the usual course in order to visit some place lying between Corinth and Ephesus; or that he must have been driven by stress of weather from the course he meant to pursue. In either case the probability of his visiting Crete at that time is strong. We find, from the mention made by Paul in this Epistle of Apollos, that he, on his way from Ephesus to Corinth (Acts xviii. 24; xix. 1), was to touch at Crete; which renders it not improbable that it was customary for ships sailing between these two ports to call at Crete by the way; and Paul may have availed himself of this practice in order to visit Crete before going to Palestine. Or he may have sailed in a ship bound directly from Corinth to Palestine, and have been driven out of his course, shipwrecked on Crete, and obliged to sail thence to Ephesus as his only remaining method of getting to his original destination—a supposition which will not appear very improbable when we remember that Paul must have suffered several shipwrecks of which Luke gives no account (2 Cor. xi. 25, 26); and that his getting to Ephesus on his way from Corinth to Palestine is a fact for which, in some way or other, we are bound to account.

It was whilst staying on this occasion at Ephesus that Henry supposes Paul to have written this Epistle. As confirmatory of this may be adduced the two other facts above referred to as mentioned in the Epistle itself, viz. the visit of Apollos to Crete, and Paul's intention to winter at Nicopolis. From Acts xix. 1 we learn that during the time Apollos was residing at Corinth, whence he had gone from Ephesus, Paul was engaged in a tour through the upper coasts (viz. Phrygia and Galatia; comp. Acts xviii. 23), which ended in his return to Ephesus. This tour was commenced after the apostle had been at Jerusalem and Antioch (ch. xviii. 22). It appears, therefore, that Paul left Antioch much about the same time that Apollos reached Corinth. But Apollos went to Corinth from Ephesus, Paul went to Jerusalem from Ephesus. At this city, therefore, they must have met; and before leaving it Paul probably wrote this Epistle, and gave it to Apollos to deliver to Titus at Crete, on his way to Corinth.

Further, Paul went up to Jerusalem to keep the feast; after which he visited Antioch, and then

travelled for some considerable time in Upper Asia. He, therefore, probably spent the winter somewhere in Asia Minor. Now there was a town named Nicopolis, between Antioch and Tarsus, near to which, if not through which, Paul must pass on his way from Antioch to Galatia (Strabo, lib. xiv. p. 465, ed. Casaubon, fol. 1587). May not this have been the very place referred to in Tit. iii. 12? In such a locality it was quite natural for Paul to desire to spend the winter; and as Titus was a native of Asia it would be well known to him, especially if he knew what route the apostle designed to pursue. All this supports the hypothesis that Paul wrote this Epistle before leaving Ephesus to go to Syria.

Another circumstance in favour of this hypothesis is the close resemblance in sentiment and phraseology between this Epistle and the first Epistle to Timothy. This resemblance is so close, and in some particulars so peculiar, that we are naturally led to conclude that both must have been written whilst the same leading ideas and forms of expression were occupying the apostle's mind. Now the first Epistle to Timothy was most probably written after Paul had left Ephesus the second time to go into Macedonia [TIMOTHY, EPISTLES TO], that is, about two years and a half after the period when Henry supposes the Epistle to Titus to have been written. To some this may appear too long a time to justify any stress being laid upon the similarity of the two epistles in this question of their respective dates; but when it is remembered that during the interval Paul had been dealing at Ephesus with very much the same class of persons, to whom a great part of both Epistles refer, and that both are addressed to persons holding the same peculiar office, the force of this objection will be weakened.

Such is Henry's hypothesis. To us it appears worthy of all respect. The only one which can compete with it is that which Benson, Paley, Pearson, and several other British scholars have adopted, viz. that this Epistle was written after Paul's first imprisonment at Rome, and whilst he was residing probably at Nicopolis in Macedonia. As this hypothesis, however, is formed solely *out of the Epistle itself*, it can be legitimately resorted to only when no other, supported by external authority, can be found. If Henry's hypothesis be not untenable, it must on this account claim the preference.

The task which Paul had committed to Titus, when he left him in Crete, was one of no small difficulty. The character of the people was unsteady, insincere, and quarrelsome; they were given to greediness, licentiousness, falsehood, and drunkenness, in no ordinary degree; and the Jews who had settled among them appear to have even gone beyond the natives in immorality. Among such a people it was no easy office which Titus had to sustain when commissioned to carry forward the work Paul had begun, and to set in order the affairs of the churches which had arisen there, especially as heretical teachers had already crept in among them. Hence Paul addressed to him this Epistle, the main design of which is to direct him how to discharge with success the duties to which he had been appointed. For this purpose the apostle dilates upon the qualifications of elders, and points out the vices from which such should be free (ch. i.). He then describes the virtues most becoming in aged persons, in the female sex, in the young, in servants, and in Christians generally (ch. ii.). From this he proceeds to enjoin obedience to civil rulers, moderation, gentleness, and the avoidance of all idle and unprofitable speculations (iii. 1-11). He then invites Titus to join him at Nicopolis, commends to him certain brethren who were about to visit Crete, and concludes with the apostolic benediction (ver. 12-15).

Commentaries. Most of those who have written commentaries on the Epistles to Timothy have written also on that to Titus. The following works are on Titus alone: Taylor, *Commentary on the Epistle of St. Paul written to Titus*, Cambridge, 4to., 1612, fol., 1658; P. von Haven, *Commentatio Analyt. in Ep. Pauli ad Titum*, Hamb. 4to. 1742.—W. L. A.

TOB (טוֹב; Sept. Τώβ), a region or district beyond the Jordan into which Jephthah withdrew when expelled from Gilead (Judg. xi. 5). As the name occurs nowhere else, some doubt has arisen in determining its position. *Tob* signifies 'good,' and the Targum and Abarbanel render what we translate 'land of Tob' by 'good land;' while Kimchi and Ben Gerson look upon *Tob* as the name of the lord or owner of the land. It is, however, more usually regarded as the name of a city or country, and some conjecture it to be the same with Ish-tob, which was not far from the land of the Ammonites, seeing that they sent thither for assistance (2 Sam. x. 6). Jerome makes it a country, but says nothing of its situation. Junius places it on the border of Arabia Deserta; which is likely, if Tob be the same with the Τούβιον or Τώβιον of 1 Macc. v. 13.

TOBIAH, a base Samaritan, who, having raised himself from a state of slavery to be a trusted favourite of Sanballat, did his utmost to gratify his master by resisting the proceedings of Nehemiah in rebuilding the walls of Jerusalem. With an affectation of scorn, he, after the manner of Remus in the Roman legend, looked on the constructions of the now hopeful and thriving Jews, and contemptuously said, 'Even if a fox go up he will break down their stone wall' (Neh. iv. 3). This insult was the more disgraceful to Tobiah, because his own conduct quickly exposed the insincerity which lay at the bottom of it, for he took a prominent and active part with Sanballat in his unworthy courses against Nehemiah. In these treachery had its share; which Tobiah was enabled to carry on the more easily because he had allied himself with the chief men of Judah, having married the daughter of Shechaniah, the son of Arah, while his son Johanan had taken to wife the daughter of Meshullam, the son of Berechiah (Neh. vi. 17, sq.; comp. xiii. 4). These dishonest practices and the use of threats alike proved nugatory. Nehemiah, however, was obliged to leave Jerusalem. By this absence Tobiah profited, in order, with the aid of his relative Eliashib, the priest, to get himself comfortably and splendidly established in 'a great chamber in the house of God' (ch. xiii. 4). But his glory was short-lived. Nehemiah returned and caused him and his household-stuff to be ignominiously cast out of the temple. This is the last that we know of this member of that vile class who are ready and unscrupulous tools in the

hands of their superiors for any dishonourable undertaking.—J. R. B.

TOBIT, BOOK OF (Sept. Τωβίτ, Τωβήτ, Vulg. *Tobias, Tobis*) [Apocrypha], one of the deutero-canonical books, containing the private history of a venerable and pious old man of this name, who was carried captive into Assyria by Shalmaneser. The following is an abstract of the narrative.

At the time of the destruction of Samaria and the exile of the ten tribes [B.C. 734-678], there lived a pious Israelite, of the tribe and city of Naphtali in Galilee, named Tobit, or, according to the Vulgate, Tobias, who was distinguished above his compatriots for his piety and his strict observance of the law. Instead of following their example in sacrificing to the golden calves (1 Kings xii. 30), he went regularly to Jerusalem to the feasts, paid his tithes and first-fruits, and was distinguished by his charities. Upon the conquest of Samaria by Shalmaneser, here called Enemessar (Ἐνεμέσσαρος), he was carried away captive to Nineveh,* where he was intrusted by that monarch with the high office of purveyor to the court. Having amassed considerable wealth, he employs a portion of it in relieving the wants of his fellow-exiles, and deposits ten talents of silver with his kinsman Gabael (Γαβαήλος) who resided at Rages, in Media. Shalmaneser is succeeded at his death by Sennacherib, the oppressor of the Israelites, who displaces Tobit, and puts to death several of the exiles, especially after the failure of his unfortunate expedition against Hezekiah, King of Judah. Tobit still devotes himself to the protection of his unhappy countrymen, feeding the hungry, clothing the naked, and burying the dead. The circumstance of his performing the last office for one of his murdered compatriots having reached the ears of the irritated monarch, Tobit conceals himself from his fury by flight, until Sennacherib's assassination by his own two sons, when he returns to Nineveh under the protection of his kinsman Achiacharus, keeper of the signet and cup-bearer to Esar-haddon. His property meantime is taken away from him, and nothing left him but his wife Anna, and his son Tobias. He still perseveres in burying the dead, and upon one occasion having rendered himself unclean by burying a strangled Israelite, he lies all night outside the walls of his house, when he has the misfortune to be deprived of the sight of both his eyes by the hot dung of some swallows, who had chanced to nestle over his head. He is now maintained by Achiacharus until the departure of the latter for Elymais, and his wife is forced to support herself by manual labour. His scrupulous honesty during his state of poverty draws down upon him the unjust reproaches of his wife, who, like Job's, upbraids him with his integrity and his misfortunes. Tobit can endure no more, and prays for death.

It happened on the same day that Tobit's kinswoman Sara, the daughter of Raguel, an exile at Ecbatana,† in Media, had to sustain an equally unmerited and cruel reproach under the following singular circumstances. She had been betrothed at various times to seven different men, each of whom was destroyed on the day of his nuptials by the demon Asmodeus. Having punished one of her female slaves, the latter reproaches Sara with being herself the murderess of her seven husbands. Sara's indignation at these unmerited taunts at first suggests to her the idea of putting an end to her existence, but her filial duty sustains her, and she prays for death or the vindication of her honour. She descends from her chamber, where she had been praying at her window, and at the same moment Tobit enters his own house. It appears from the sequel that the prayers of both are heard.

Tobit, under the apprehension of death, sends his son Tobias to Rages for the ten talents which he had deposited with Gabael. A young stranger of his kindred, named Azarias, offers himself as his companion, and he sets out accompanied by his dog. While bathing in the Tigris he is rescued, by the help of Azarias, from the jaws of an enormous fish (supposed by Bochart to be a shark). He drags the fish to shore, and by the advice of his companion takes out the gall and liver to preserve them for medicinal purposes. Upon arriving at Rages, they proceed to the house of Raguel, where Azarias brings about a marriage between Tobias and his fair cousin Sara, and teaches him to expel the demon by the fumes arising from the heart and liver of the fish. Asmodeus now flees, and is bound in the deserts of Egypt. Azarias meantime proceeds to Rages, and receives the ten talents from Gabael, who accompanies him to Ecbatana. Upon the conclusion of the festivities the bride and bridegroom return to Nineveh, Tobias having received as his marriage dower half the wealth of his father-in-law Raguel. Tobias is now anxiously and hourly expected by his parents. Their approach is first announced by the appearance of the dog, who, according to the Vulgate, shows his joy by fawning and wagging his tail (blandimento suæ caudæ gaudebat). Tobias greets his venerable father, and at the same moment, by the advice of the faithful Azarias, anoints his eyes with the gall of the fish, by which his sight is restored. The joy of all is now complete. Tobit proposes to reward Azarias by giving him half the amount of the deposit, when he concludes a beautiful admonition on the advantages of prayer and almsgiving by the unexpected announcement, 'I am Raphael, one of the seven holy angels, which present the prayers of the saints, and which go in and out before the glory of the Holy One.' Tobit and Tobias burst out into a sublime song of thanksgiving, and the former concludes with reiterating the prophecy of Jonah respecting the destruction of Nineveh, and adds a prediction of the destruction of Jerusalem, of the Babylonish exile, and of the rebuilding of the second temple, to be succeeded by the universal return of the Jews from all places of their captivity, the rebuilding of Jerusalem in splendour, and of a glorious temple. Tobit dies at Nineveh, at the advanced age of 158, according to the Greek, or 102 according to the Vulgate, having seen six grandchildren; and Tobias, who

* The tribe of Naphtali was, however, carried away captive by Tiglath-pileser (2 Kings xv. 29), nearly twenty years before. Tobit must therefore have remained behind his tribe, or an historical inaccuracy be acknowledged.

† So the Greek, old Latin, and Hebrew of Fagius. The Vulgate here, instead of Ecbatana, reads Rages.

survives the destruction of Nineveh (Sept. xiv. 15), dies at Ecbatana, at the age of 127, or of 99 years according to the Vulgate, wherein it is also stated that he saw his children's children as far as the fifth generation (Vulg., xiv. 15).

Character of the Narrative.—The question has been first raised in modern times, whether this book is a true history or a moral fiction. All ancient writers looked upon it as historical and authentic. As far as we have been able to ascertain, Luther was the first who doubted its historic truth. He does not at the same time conceal his admiration of its contents. 'What we have said of Judith,' he observes (*Pref. to Tobit*), 'may be equally applied to Tobias. If it be a history, it is a fine holy history; if it be a fiction, it is a fine holy fiction. But if a fiction, it is indeed a right beautiful, wholesome, profitable fiction, the play of a poet rich in fancy.' And again, 'Would God the Greeks had learned from the Jews their method of comedies and tragedies as well as much of their other wisdom and godliness, for Judith furnishes a good, serious, gallant tragedy; Tobit a fine, pleasant, devout comedy. As Judith teaches . . . . . that blustering tyrants often meet with an ignominious end, so Tobit shows that however ill it fares with a pious burgher or peasant, who has much to endure in the married state, God is ever at hand to bring to a joyful issue the case of such as, with prayer and good works, patiently support their sufferings.'

Paul Fagius agreed with Luther in representing the history of Tobit as a moral fiction, but Eichhorn observes that he had but few followers. Most of the moderns, among whom are Eichhorn, Jahn, and Bertholdt, have, however, adopted this view, to which, it has been observed, not only its resemblance to the book of Job, but also its historical and geographical difficulties, and the significancy of its names, not a little contribute (De Wette, *Einleitung*). In this last particular those writers have also Luther as their precursor. 'The Greek text,' observes this distinguished reformer and commentator, 'shows that it is a drama, for it makes Tobit speak in the first person. Subsequently a master reduced it to a regular narrative. The names are a further evidence of its being a fiction, for Tobias signifies "a pious man" (טוביה, *goodness of God*), from whom proceeds a second Tobias. . . . . As misfortunes do not come alone, he becomes blind, is at variance with his dear Anna . . . . Anna means "graceful." . . . The devil, Asmodeus, means the "destroyer," and is the house-devil, who spoils everything, so that all goes wrong with children and servants. . . . . Sarah means "heroine." . . . Raphael signifies a "physician" (רפא, see Gen. l. 2), also called Azarias, that is, "helper," son of the great Ananias, that is, the chief helper or God. Without his help all goes wrong through the power of Asmodeus.'

Luther adds, that this book is, although the work of a fine Hebrew poet, as profitable to the Christian as it was to the Jew. Bertholdt, Eichhorn, Jahn, and others, who consider the work a pure fiction, do not entirely agree upon its main object, although they lean to the opinion that the moral is contained in the words of Raphael (xii. 6-10). Seiler (§ 218, Wright's *Translation*, p. 312), supposes that the book of Tobit is designed to convey, in the form of a moral tale, the following truth,—that the pious, notwithstanding all their zeal in good works, have often many sufferings to undergo, but will be finally rewarded by God.' The author probably intended to imitate the book of Job.

Others have maintained that the book is partly historical and partly mythical. Among these is Ilgen (*Die Geschichte Tobis nach 3 verschied. Originalen*, 1830), who supposes that Tobit is a true but poetically adorned history, interspersed with beautiful and edifying discourses. Calmet, although he does not go the length of these writers (who consider the miraculous portions to be designed merely as ornaments to the plot), supposes that the narrative has been embellished by various writers; but it is amusing to hear him, by way of supporting the historic truth of the narrative, attaching some degree of credit to the report that a monstrous serpent, which is still said to reside in a cavern in Egypt, is no other than the demon Asmodeus. Gutmann, a modern Jewish Rabbi, in his learned work (*Die Apokryphen des Alten Test.*, Alton. 1841), adopts the opinion that the book of Tobit is a fiction founded on facts. Under any view he conceives the moral of the book to be of a pure and exalted character, and the book itself on this account to be one of the most important among the Apocrypha. Alber maintains (as might be expected) the literal historical truth of the whole book.

Author, Age, and Language.—The author of the book is unknown. The old writers considered it to have been the work of Tobit and his son Tobias (Huet, *Demonst. Evang.*). But this opinion has no other authority than the fact that Tobit (in the Greek) speaks in the first person in the first three chapters, and that in xii. 20, Raphael says to Tobit, 'Write all things which are done in a book.' Calmet supposes that the memoirs left by Tobias and his son were edited by some later writer, who composed the history; but he does not attempt to determine in what age he lived. Eichhorn (*Einleitung*) maintains that the angelology of Tobit proves that it could not have been written before the time of Darius Hystaspes, and that the notice of the seven holy angels (xii. 15) was derived from the practice introduced in that monarch's reign, of having seven counsellors round the Persian throne. He also maintains that the narrator presupposes an acquaintance with the philosophy of good and evil, guardian and national angels, which was first introduced under the Persian rule during and after the exile. Jahn (*Introd.*) maintains that the Magian notions regarding Asmodeus, whom he conceives to be the same with Ahriman (the destroyer) points to the Persian period. Professor Stuart, however, who does not appear to hold that the angelology and demonology of the book of Tobit, 'one of the earliest, most simple, and attractive of all the apocryphal books' (*Comment. on the Apocalypse*),* differ in kind from those of the Old Testament, ascribes the book to an early period of the exile (*Biblioth. Sacra*, vol. i.). The name Raphael, which first

* This new work contains a more recent treatise on the *names of the beast* than that referred to in p. 650 of this vol. Prof. Stuart conceives the Emperor Nero to be the person indicated.

occurs in Tobit, is said in the Talmud (*Beres. Rabba*, and *Jer. Talm.*) to have been derived from the exile. De Wette, Gutmann, and most modern critics conceive that the age of Tobit is negatively determined by the mention of the city of Rages (Ragæ, see MEDES), which, according to Strabo (*Geog.* p. 524), was founded by Seleucus Nicator B.C. 300, and Jahn, in order to allow a reasonable time for the name of the founder to have been forgotten, supposes that the author lived B.C. 150 to 200. No nearer conjecture can be formed. Seiler (*ut supra*) says that the author 'seems to have lived among the Greek Jews after the time of Alexander the Great.' Eichhorn and Jahn suppose that the work was written by a Greek, but Ilgen, on the other hand, with whom are De Wette and Gutmann, are satisfied, from internal evidence, that the author was a Jew of Palestine, who wrote in the Hebrew or Aramaic language, but that the original text has been lost. Ilgen ascribes the present contradictions to the ignorance of the Greek translator, and is of opinion that the book in its pristine state was written by Tobit himself.

Authority of Tobit.— Although this book is never cited by Josephus (to whom, however, its existence must have been known), and although the first writer who gives it the character of *canonical* was Augustine, at a time that, according to De Wette (*Einleitung*), this term had acquired the notion of an ecclesiastical decision, its authority in the early Christian church is beyond question. It is cited by Clemens Alexandrinus (*Strom.* ii. p. 503), 'The Scripture says, *do that to no man which thou hatest*' (Tob. iv. 15), and '*prayer is good with fasting*' (Tob. xii. 8). Polycarp also (*ad Phil.*) cites the words 'alms doth deliver from death' (Tob. xii. 9); but some suppose them to be a citation from Prov. xxi. 12. Tob. iv. 15 is also cited in the Apostolical Constitutions—according to Ilgen, in a Greek translation from the Vulgate of Jerome (but comp. Lev. i. 18; Matt. v. 44–47; Mark xii. 32). Cyprian also (xii. 9) cites Tobit xiv. 14, 'The Holy Spirit says in the Scriptures, "alms shall purge away all sin"—Eleemosynis et fide purgantur delicta,' or as in the Vulg. 'Eleemosyna purgat peccata.' Some, however, refer this citation to Prov. xvi. 6: ἐλεημοσύναις καὶ πίστεσιν ἀποκαθαίρονται ἁμάρτιαι. It is also cited by Ambrose (*Hexaëmeron*, vi. 4. p. 88, Paris, 1614—Talis canis viator et comes angeli est, quem Raphael in *Libro Prophetico* non otiose sibi et Tobiæ filio adjungendum putavit), who considers Tobit a Prophet, no doubt because of his allusion to the future destruction of Nineveh (xiii. 14), or his prediction of the rebuilding of Jerusalem (xiii. 16) according to the Greek, for in the Vulgate it is *liberavit Jerusalem civitatem suam* (xiii. 19). Origen (*De Orat.* p. 47) says that the Jews reject this book (τῇ δὲ τοῦ Τωβὴτ βίβλῳ ἀντιλέγουσιν οἱ ἐκ περιτομῆς). In the work attributed to Augustine, entitled *Speculum Scripturæ*, it is asserted that the Jews reject Tobit, but that it is received by the Church of the Saviour (Non sunt omittendi et hi, quos quidem ante Salvatoris adventum constat esse conscriptos, sed eos non receptos a Judæis recipit tamen ejusdem Salvatoris ecclesia). Tobit has been at all times a favourite book in the church, and its influence is still manifest in the Anglican liturgical forms, as in the Offertory (Tobit iv. 7, 8); also in the Litany, 'ne vindictam sumas de peccatis meis, neque reminiscaris delicta mea, vel parentum meorum.' In the preface to the marriage service there is also a manifest allusion to Tob. vi. 17, according to the Vulgate: 'Hi qui conjugium ita suscipiunt, ut Deum a se et a suâ mente excludant, et suæ libidini ita vacent, sicut equus et mulus, quibus non est intellectus.' Chaps. i., ii., vii., and viii., are read in the course of lessons. It has been supposed from a comparison of Rev. xxi. 18 with Tobit xiii. 21, 22, that the author of the Apocalypse must have been acquainted with the book of Tobit.

Texts of Tobit.—There have descended to us no less than six different texts of the book of Tobit.

1. *Jerome's Latin text.*—This is a translation from the lost Chaldæan. 'I do not cease to wonder at your urgency,' says Jerome (*Pref. to Tobit*); 'you require of me to translate into Latin a book written in Chaldee, the book of the two Tobiases.... I have done so at your request, but not of my own wish, for the zeal of the Jews reproaches us for translating for Latin ears what is opposed to their canon. But preferring to displease the Pharisees rather than to decline the command of my bishop, I have done as well as I could; and as the Chaldee is nearly allied to the Hebrew, I found a man perfectly acquainted with both tongues, and giving one day to the task, I procured the aid of an amanuensis, who wrote down from my dictation in Latin what the other uttered in Hebrew.' It would seem from this that Jerome considered the Chaldee to be the original, for he says nothing of the Greek text, with which, however, he must necessarily have been acquainted. The Chaldee text has not since been heard of, but judging from the hurried work of Jerome, it must have differed widely in several of its details from the present Greek.

2. *The Greek text.*—This is the text of the Septuagint, from which the English version has been made. Eichhorn, Jahn, and many others consider the Greek as the original; while this text is more copious in the moral, the Latin of Jerome is more detailed in the historical parts (comp. chaps. i., ii., iii., iv., viii., ix., xi., and xiv.).

3. *The Antehieronymian Latin Version*, published by Sabatier. This is from the Greek, and Ilgen maintains that it was partly employed by Jerome in his version. It differs however considerably from the Greek, both in omissions (see chaps. v., vi., vii., viii., ix., x., xi.) and additions (see i., vii., xi., xiv.).

4. *The Syriac Version.*— This too is made from the Greek, but is also distinguished by several additions and omissions after chaps. vii., xi.

5. *The Hebrew text of Sebastian Munster.*— This was first published at Basel in 1542, and again in Walton's Polyglott. Nothing certain is known respecting the history of this text. De Wette considers it a free recension of the original Hebrew. Ilgen thinks it the work of an Italian Jew, who lived at latest in the 5th century. He makes use of it to correct the Greek.

6. *The Hebrew text of Paul Fagius.*—Published first at Constantinople in 1517, and afterwards by this learned Reformer in 1542. It is

not properly a translation from the Greek, as some have supposed, but rather a mixed text formed from the Greek, Italic, and other sources. It altogether omits chapters xii. and xiii.—W. W.

TOGARMAH (תּוֹגַרְמָה, תּוֹגָרְמָה, or in some Codices transposed תרגמה), is the Hebrew name of Armenia, which in the Septuagint translation is called Θοργαμά, Θεργαμά, Θυργαμά, and Θυργαβά. According to Moses Chorenensis, the Armenians consider themselves to be descended from Gomer, through Torgom, and therefore they call themselves the *house of Torgom*. The sons of Gomer were Ashkenaz, Riphath, and Togarmah (Gen. x. 3; 1 Chron. i. 6). The name תוגר, for *Turk* and *Turkoman*, reminds us of תוגרמה.

Armenia was, according to Strabo (xi. 13. 9, p. 529), distinguished by the production of good horses (comp. Xenoph. *Anab.* iv. 5. 24; Herod. vii. 40). This account harmonizes with the statement that the house of Togarmah traded in the fairs of Tyre in horses, and horsemen, and mules (Ezek. xxvii. 14). The situation of Togarmah was north of Palestine: 'Gomer and all his bands; the house of Togarmah of the north-quarters' (Ezek. xxxviii. 6). The countries of אררט and מני (Μινυάς), and also חול, were contiguous to Togarmah (Joseph. *Antiq.* i. 1. 6; compare the articles Ararat, Armenia; see also Moses Chorenensis, *Historiæ Armen.* lib. iii., *Armen. edidit, lat. vert. notisque illustr.* W. et G. Whistonii, Lond. 1736; Heeren, *Ideen*, i. 1, 305; D. Michaëlis, *Spicilegium Geographiæ*, tom. i. 67-78; Klaproth's *Travels*, ii. 64). — C. H. F. B.

TOMB. [Burial.]

TONGUE (לָשׁוֹן; Sept. γλῶσσα, φωνή; Vulg. *lingua, os*), is used, 1. *literally*, for the human tongue. 'Every one that lappeth the water with his tongue, as a dog lappeth' (Judg. vii. 5; Job xxvii. 4; Ps. xxxv. 28; xxxix. 1, 3; li. 14; lxvi. 17; Prov. xv. 2; Zech. xiv. 12; Mark vii. 33, 35; Luke i. 64; xvi. 24; Rom. iii. 13; 1 Cor. xiv. 9; James i. 26; iii. 5, 6, 8; 1 Pet. iii. 10; Rev. xvi. 10; Ecclus. xvii. 6; Wisd. x. 21; 2 Macc. vii. 4; for the tongue of the dog, Ps. lxviii. 23; of the viper, Job xx. 16; of idols, Baruch vi. 8; the tongues of the seven brethren cut out, 2 Macc. vii. 4, 10; comp. Prov. x. 20). Various explanations have been offered, why Gideon's three hundred followers should have been selected because they lapped water out of their hands, standing or perhaps moving onward, while they who stayed and 'bowed down to drink' were rejected. Josephus says, that the former thereby showed their timorousness and fear of being overtaken by the enemy, and that these poor-spirited men were chosen on purpose to illustrate the power of God in the victory (*Antiq.* v. 6. 3.) On Mark vii. 33, 35, Dr. A. Clarke offers the interpretation, that it was the deaf and stammering man himself who put his own fingers into his ears to intimate his deafness; spat or emptied his mouth, that the Saviour might look at his tongue; touched his own tongue to intimate that he could not speak; looked up to heaven as imploring divine aid; and groaned to denote his distress under his affliction; and that our Saviour simply said 'be opened' (*Commentary*). This explanation certainly clears the passage of some obscurities. James iii. 8, Dr. Macknight translates, 'But the tongue of men no one can subdue,' that is, the tongue of other men, for the apostle is exhorting the Christian to subdue his own (comp. ver. 13). He observes that Œcumenius read the passage interrogatively, as much as to say, Wild beasts, birds, serpents, marine animals, have been tamed by man, and can no man tame the tongue? 2. It is *personified*. 'Unto me every tongue shall swear,' that is, every man (Isa. xlv. 23; comp. Rom. xiv. 11; Phil. ii. 11; Isa. liv. 17). The tongue is said to rejoice (Acts ii. 26); to meditate (Ps. lii. 2); to hate (Prov. xxvi. 28); to be bridled (James i. 26); to be tamed (James iii. 8; comp. Ecclus. xxviii. 18, &c.). It is apostrophized (Ps. cxx. 3). 3. It is used by *metonymy* for speech generally. 'Let us not love in tongue only' (1 John iii. 18; comp. γλώσσῃ φίλος, Theogn. lxiii. 13; Job vi. 30; xv. 5; Prov. vi. 24); 'a soft tongue,' *i. e.* soothing language (xxv. 15). 'Accuse not a servant to his master,' literally, 'hurt not with thy tongue' (Prov. xxx. 10); 'the law of kindness is in her tongue,' *i. e.* speech (xxxi. 26; Isa. iii. 8; l. 4; Wisd. i. 6). 4. For a *particular language* or dialect, spoken by any particular people. 'Every one after his tongue' (Gen. x. 5, 20, 31; Deut. xxviii. 49; Esth. i. 22; Dan. i. 4; John v. 2; Acts i. 19; ii. 4, 8, 11; xxvi. 14; 1 Cor. xii. 10; xiii. 1; xiv. 2; Rev. xvi. 16). 5. For the *people* speaking a language (Isa. lxvi. 18; Dan. iii. 4, 7, &c.; Rev. v. 9; vii. 9; x. 11; xi. 9; xiv. 6; xvii. 15). 6. It is used *figuratively* for anything resembling a tongue in shape. Thus, 'a wedge of gold,' literally a 'tongue' (Josh. vii. 21, 24; γλῶσσα μία χρυσῆ; Vulg. *regula aurea.*) The French still say *un lingot d'or*, 'a little tongue of gold,' whence, by corruption, our word 'ingot.' 'The bay that looketh southward,' literally 'tongue' (xv. 2; xviii. 19); 'a tongue of fire' (Isa. v. 24; comp. Acts ii. 3; Isa. xi. 15). 7. Some of the Hebrew *idioms, phrases*, &c., formed of this word are highly expressive. Thus, 'an evil speaker' (Ps. cxl. 11; איש לשון, literally, 'a man of tongue;' comp. Ecclus. viii. 3, and see Eccles. x. 11, Hebrew, or margin); 'a froward,' or rather 'false tongue' (Prov. x. 31; לשון תהפכות, 'a tongue of revolvings'); 'a wholesome tongue' (Prov. xv. 4; מרפא לשון, literally, 'the healing of the tongue,' reconciliation, &c.; Sept. ἴασις γλώσσης, *lingua placabilis*); 'a backbiting tongue' (Prov. xxv. 23; סתר, 'secret;' 'slow of speech' (Exod. iv. 10; כבד לשון, literally, 'heavy of tongue,' unfit to be an orator; βραδύγλωσσος; contrast Ecclus. iv. 29); 'the tongue of the stammerer' (Isa. xxxii. 4), *i. e.* rude, illiterate (comp. xxxv. 6; on Isa. xxviii. 11, see Lowth). In xxxiii. 19, it means a foreign language, which seems gibberish to those who do not understand it (comp. Ezek. iii. 5); 'the tongue of the learned' (Isa. l. 4), *i. e.* of the instructor. The lexicons will point out many other instances. 8. Some *metaphorical* expressions are highly significant. Thus, Hos. vii. 16, 'the rage of the tongue,' *i. e.* verbal abuse; 'strife of tongues' (Ps. xxxi. 20); 'scourge of the tongue' (Job v. 21 [Execration]; comp. Ecclus. xxvi. 6; xxviii. 17); 'snare of the slanderous tongue' (li. 2); on the phrase 'strange tongue' (Isa. xxviii. 11), see Lowth, notes on ver.

9-12, and afterwards the vivid rendering of the Vulg.; 'to slip with the tongue' (Ecclus. xx. 18; xxv. 8), *i. e.* use inadvertent or unguarded speech; 'they bend their tongues, their bows, for lies' (Jer. ix. 3), *i. e.* tell determined and malicious falsehoods; 'they sharpen their tongues' (Ps. civ. 3), *i. e.* prepare cutting speeches (comp. lvii. 4); 'to smooth the tongue' (Jer. xxiii. 31), employ flattering language; 'to smite with the tongue' (Jer. xviii. 18), *i. e.* to traduce—if it should not be rendered, '*on* the tongue,' alluding to a punishment for false witness; 'to lie in wait with the tongue' (Ecclus. v. 14); 'to stick out the tongue (Isa. lvii. 4), *i. e.* to mock; 'against any of the children of Israel shall not a dog move his tongue' (Exod. xi. 7), *i. e.* none shall hurt them; but both Sept. and Vulg. have, 'not a dog belonging to the children of Israel shall howl, which, as opposed to the 'great cry' in Egypt over the first-born, means, not one of the children of Israel shall have cause to wail (Josh. x. 21; Judith xi. 9). 'To hide under the tongue,' means, to have in the mouth, whether spoken of hidden wickedness (Job xx. 12; comp. Ps. x. 7), or delicious language (Cant. iv. 11); 'the word of God in the tongue,' denotes inspiration (2 Sam. xxiii. 2); 'to divide the tongues of the wicked,' is to raise up dissensions among them (Ps. lv. 9; comp. 2 Sam. xv. 34; xvii. 14, 15). 'The tongue cleaving to the palate,' signifies profound attention (Job. xxix. 10), or excessive thirst (Lam. iv. 4; comp. xxii. 16): 'to cause the tongue to cleave to the palate,' is to inflict supernatural dumbness (Ezek. iii. 26; Ps. cxxxvii. 6). 9. Some beautiful *comparisons* occur. 'An evil tongue is a sharp sword' (Ps. lvii. 4); 'the tongue of the wise is health' (Prov. xii. 18); 'like choice silver' (x. 20), *i. e.* his words are solid, valuable, sincere. 10. The *vices* of the tongue are specified in great variety: flattery (Ps. v. 9; Prov. xxviii. 33); backbiting (Ps. xv. 3), literally, 'run about with the tongue' (Prov. xxv. 23); deceit (Ps. l. 19); unrestrained speech (lxxiii. 9); lying (cix. 2); 'a lying tongue hateth those that are afflicted by it' (Prov. xxvi. 28; comp. Tac. (*Agr.* 42) Proprium humani ingenii est, odisse, quem læseris). 'They have taught their tongue to speak lies, and weary themselves to commit iniquity' (Jer. ix. 5)—words which beautifully illustrate the fact, that falsehood and vice are not natural, but are a restraint and compulsion upon nature: 'double-tongued' (1 Tim. iii. 8), δίλογος, saying one thing to this man and another to that (comp. Ecclus. v. 9, 14; xxviii. 13). The retribution of evil speakers brought on themselves (Ps. lxiv. 8). 11. The *virtuous* uses of the tongue are specified: 'keeping the tongue' (Ps. xxxiv. 13; 1 Pet. iii. 10; Prov. xxi. 23); 'ruling the tongue' (Ecclus. xix. 6; James i. 26); the origin of the right and wrong use of the tongue traced to the heart (Matt. xii. 34). 12. Mistranslations: as 'holding the tongue;' the Hebrews had no such idiom (Ps. xxxix. 2; comp. the Bible and prayer-book version of Habak. i. 13). In Ezra iv. 7, 'the Syrian tongue,' literally, 'in Syriac' (Esth. vii. 4; Ecclus. xx. i. 7). Our mistranslation of Prov. xvi. 1, has misled many: 'The preparations of the heart in man, and the answer of the tongue, is from the Lord,' literally, 'Of man are the dispositions of the heart, but a hearing of the tongue is of the Lord.' 13. The miraculous *gift of tongues*, as well as its corresponding gift of interpretation, has been the subject of two opinions. It was promised by Christ to believers: they shall speak γλώσσαις καιναῖς (Mark xvi. 17); and fulfilled at Pentecost, when the apostles and their companions 'began to speak ἑτέραις γλώσσαις' (Acts ii. 4, 11; comp. Acts x. 46; xix. 6; 1 Cor. xii. 30; xiv. 2, 39). In the last passage we have 'to pray in a tongue' (ver. 14), 'to speak words in a tongue' (ver. 19); 'tongues' (1 Cor. xii. 10, 28; xiii. 8; xiv. 22, 26). The obvious explanation of most of these passages is, to speak in *other living languages*, the supernatural acquisition of which demonstrated the truth of the Gospel, and was a means of diffusing it. But some verses in 1 Cor. xiv. have given rise to the notion of a *strange*, exstatic, inspired, unearthly language; but these all admit of a different solution. In ver. 2, 'he who speaketh in a tongue' evidently means, he who speaks some foreign living language; the supplied word 'unknown' in the Auth. Vers. is needless, and misleads the English reader. It is further said that 'he edifieth himself' (which, as Macknight justly pleads, required that he should understand himself), and edifieth the church also if an interpreter were present (ver. 28). The apostle says (ver. 14), 'If I pray in a tongue, my spirit prayeth, but my understanding is unfruitful,' which words in English seem to intimate that the speaker might not understand himself; but the words ὁ δὲ νοῦς μου signify, 'my *meaning*' (comp. 1 Cor. ii. 16; Vulg. sensum domini), or, as Hammond and Schleusner say, 'my faculty of thinking upon and explaining to others the meaning of what I utter' (comp. vers. 15, 19), though in ver. 15 some take τῷ νοΐ as a dativus commodi, and render, 'that others may understand.' The key to the difficulties of this subject is the supposed absence of an inspired interpreter (ver. 28), in which case the gift would not be *profitable* to the hearers. The gift of tongues was to cease (1 Cor. xiii. 8). See Macknight's notes on 1 Cor. xiv.; Olshausen's *Comment. on Acts* ii. 4; Neander's *Hist. of the Apostolic Age*, and in *Bibl. Repos.*, iv. p. 249, &c.; Stosch, *Archæol. Œcon. N. T.*, p. 93; Gataker, *ad M. Anton.*, p. 120; and Ernesti, *Lex. Techn. Gr. Rhet.*, p. 62.—J. F. D.

TONGUES, CONFUSION OF. We have already touched upon this subject in the articles Babel (vol. i. p. 266, col. 2), and Nations, Dispersion of (vol. ii. pp. 393-395). Trusting to the favour of our readers to peruse those passages, we shall now first cite the part of the primeval history which relates the fact, so remarkable and influential upon the subsequent fortunes of mankind; and then we propose to offer observations and opinions upon the narrative.

'And all the earth was [in the use of] the same language and the same words. And it was in their migrating from the east that they discovered a plain in the land of Shinar, and they settled there. And they spake each to other, Come, let us make bricks, and let us burn them completely. And the brick was to them for stone, and the asphalt [bitumen] was to them for cement. And they spake, Come, let us build for ourselves a city and a tower, and its top in the sky, and let us make for ourselves a name [a designation of eminence, and which may well denote a sign, land-mark, or rallying point, as in Isa. lv. 13], that we may not be dispersed over the face of the

whole earth. And Jehovah descended to inspect the city and the tower which the sons of men were building. And Jehovah spake, Behold the people is one, and the language one to the whole of them; and this is their beginning for doing [*i. e.*, according to their own self-will], and now nothing whatever which they may take into their heads to do will be prevented them. Come, let us descend, and there put confusion into their speech, so that they shall not understand the speech of each other. And Jehovah dispersed them thence over the face of the whole earth; and they ceased from building the city. For that reason its name was called BABEL, because there Jehovah put confusion into the speech of the whole earth, and thence Jehovah dispersed them over the face of the whole earth' (Gen. xi. 1-10).

Obs. Verse 1: As the Hebrew word for *one* has a plural, used in the second member of this sentence, but which we cannot imitate, we have rendered it in both cases *the same*, which sufficiently expresses the idea.—Verse 3: Literally, if we might coin an English cognate verb, *Let us brick-make bricks*. The existence of such a verb in Hebrew pretty clearly indicates that this simple and early art was in previously common use.—Verse 4: 'Top in the sky;' *i. e.*, their intention was to carry their tower to a great height. So the cities of the Canaanites were described as 'walled up to heaven.' Also the expression indicates pride and impiety.—Verse 6: The exact sense of the verb *zamam* is expressed by the common phrase of *taking into the head*—an arbitrary fancy, an irrational resolution.

I. This narration is given in the extreme style of anthropopathic and anthropomorphic description (see vol. i. pp. 66, 161, 267; vol. ii. p. 394). Not only was this style the best adapted, rather we must say, the *only one* adapted, to the comprehension of mankind in the infantile state of our race, but it awakens our minds to a deeper meaning: it conveys the most explicit and expressive idea of a *communion* of the creature with the Creator, an *intercourse* of man with God, a REVELATION of the Supreme Will as to purpose and authority. Let it be expunged, and we have no hold of the all-momentous reality of a manifestation from the Lord of the universe to the mind of man, which shall be sure in its principle and safe in its effects—the combination of moral desert and invincible power in the Highest Being, and of holiness and love in his administration. Let it be expunged, and any assignable revelation upon the duty and prospects of the creature would be indistinguishable from the products of the mind itself, the mere fabric of its own reasoning powers. The mental picture of a celestial palace, of the Deity coming down from it, of his exploring and inspecting, of his deliberating and weighing contingencies, of his concluding and acting,—these form the first and most childlike form of an exhibition of God's perfections, truth, and dominion. This is the representation which reigns in the earliest Scriptures; and though, in the subsequent records of revelation, we can trace a very perceptible advancement, still the principle remains in all its gradations of ascent to the very last and highest forms of communication from God to man. The style is ever, 'Thus saith the Lord—the Lord spake—the Lord appeared—God spake unto the fathers by the prophets, and unto us by his Son—He who sitteth upon the throne, saith.' We add a passage from a German essay, which, we humbly think, can scarcely be too strongly recommended: 'The languages of men, in the first ages of the world, comprised, of natural necessity, but very few words. Those words did not reach to the expression of that which is not cognizable by the senses; they for the most part expressed only such objects as present themselves to our organic perceptions, or are felt in our inward experience. When, then, it pleased God to impart to men the instruction which they needed, by *appearances*, whether visions or manifestations, his wisdom saw fit, in order to convey the knowledge of invisible things, to avail itself of terms derived from sensible objects and sensible perceptions. And, as men cannot pass beyond the sphere of themselves and the things which surround them, it was *not possible* to bring within their comprehension a representation of the exalted nature of the Deity in any other way than that GOD *should speak of himself as if he were a human being*, and thought, and felt, and acted like a human being. Only by means of this wise condescension of God, placing his own attributes and counsels in a constant comparison with the faculties and mental operations of men, could mortals arrive at the necessary, though as yet very feeble, knowledge of the invisible and eternal Creator' (Seiler, in Pye Smith's *Script. Testimony to the Messiah*, vol. iii. Append. ii.).

Upon this principle of Bible interpretation, in itself most important and incontrovertible, while its application to any particular case must be specially judged of, we conceive that the passage before us may be resolved into a statement to this effect:—

An orderly and peaceful distribution and migration of the families descended from Noah had been directed by divine authority, and carried into general effect (see p. 393 of this volume). But there was a part of mankind who would not conform themselves to this wise and benevolent arrangement. This rebellious party, having discovered a region to their taste, determined to remain in it. They built their houses in contiguity, and proceeded to the other method described for guarding against any further division of their company. This was an act of rebellion against the divine government. The omniscient and righteous God therefore frustrated it, by inflicting upon them a remarkable affection of the organs of speech, which produced discord and separation.

At the same time, we cannot dogmatically affirm that this infliction was absolutely and visibly miraculous. It is an undeniable character of the Scriptural idiom, especially in the Old Testament, that verbs denoting *direct* efficiency are used when only *mediate* action is to be understood, or permission, or declaration. Instances are numerous: *e. g.*, 'God caused me to wander' (Gen. xx. 13); 'I have made—given—sustained' (xxvii. 37); the 'hardening of wicked men's hearts' (Exod. vii.; Isa. vi., &c.); 'I will come up into the midst of them' (Exod. xxxiii. 5). See many examples in Mr. Hartwell Horne's *Introd.*, 7th ed., vol. ii. p. 459. And all such declarations are perfectly true. The Infinitely Wise and Holy and Powerful worketh all

things according to the counsel of his own will, as much when his operation is through the instrumentality of rational creatures and the free exercise of their own faculties, as when there is a miraculous intervention. Mr. Shuckford inclines, at least, to the opinion that the whole was the result of natural and moral second causes, fulfilling the purposes of the Most High. 'The builders of Babel were evidently projectors; their designed tower is a proof of it. And if they had one project, and that an idle one, why might not they have others? Language was but one, until they came to multiply the tongues; but that one was without doubt scanty, fit only to express the early thoughts of mankind, who had not yet "subdued" the world (Gen. i. 28), nor arrived at a large and comprehensive acquaintance with the things of it. Men now began to build towers, to open to themselves views of a larger fame, and consequently of greater scenes of action than their ancestors had pursued. And why may not the thought of finding new names for the things which their enlarged notions offered to their consideration, have now risen? God is said to have "come down and confounded their language;" but it is usual to meet with things spoken of as immediately done by God which were effected, not by extraordinary miracle, but by the course of things permitted by him, to work out what he would have done in the world. Language was without doubt enlarged at some particular time; and if a great deal was attempted at once, *confusion* would naturally arise. The men of Shinar were got away from their ancestors, and their heads were full of innovations; and the projectors being many, the projects might be different, and the leading men might make up several parties amongst them. If we were to suppose the whole number of them to be no more than a thousand, twenty or thirty persons, endeavouring to invent new words and spreading them amongst their companions, might in time cause a deal of confusion. It does indeed look more like a miracle to suppose the Confusion of Tongues effected instantly, in a moment; but the text does not oblige us to think it so sudden a production. From the beginning of Babel to the dispersion of the nations might be several years; and perhaps all this time a difference was growing up, until at length it came to such a height as to cause them to form different companies, and so to separate' (*Connect. of Hist.* i. 133-135).

II. The date of this event we cannot satisfactorily place so early as at 100 years after the flood, as it is in the commonly received chronology. Every view that we can take of the previous history inclines us to one of the larger systems, that of the Septuagint, which gives 530 years, or that of Josephus, adopted with a little emendation by Dr. Hales, which gives 600 years; and thus we have at least five centuries for the intervening period. Professor Wallace, in his elaborate work, makes it more than eight centuries (*Dissertation on the True Age of the World, and the Chronology to the Christian Era*, 1844, p. 298).

III. Upon the question, Whether all of mankind were engaged in this act of concerted disobedience, or only a part? we confess ourselves unable to adduce irrefragable evidence on either side, but we think that there is a great preponderance of argument on the part of the latter supposition. The simple phraseology of the text wears an appearance of favouring the former; but the extreme brevity and insulated character of these primeval fragments forbid our arguing from the mere juxtaposition of the first and the second sentence. It is a common idiom in Hebrew, that a pronoun, whether separate or suffixed, stands at the introduction of a new subject, even when that subject may be different and remote from the nearest preceding, and requires to be supplied by the intelligence of the reader. Instances: Ps. ix. 13 (12); xviii. 15 (14); xliv. 3 (2); lxv. 10 (9); cv. 37. So far as the grammatical structure is concerned, we may regard the two sentences as mutually independent; and that, therefore, the question is open to considerations of reason and probability. It is difficult to suppose that Noah (who, according to the Hebrew chronology, lived 350 years beyond the time of the deluge; but this we do not urge, for we embrace a longer series of years), and Shem, and all others of the descendants of Noah, were confederates in this proceeding. Hence the opinion has been maintained, more or less definitely, by many critics and expositors, that it was perpetrated by only a part of mankind, chiefly if not solely the posterity of Ham, and upon the instigation and under the guidance of Nimrod, who (ch. x. 10) is declared to have had Babel for the head place of his empire. The latter part of this position is asserted by Josephus, and the whole by Augustine and other ancients. Of modern writers who have maintained this opinion, we may specify Luther, Calvin by apparent implication, Cornelius à Lapide, Bonfrere, Poole in his English Annotations, Patrick, Wells, Samuel Clarke the annotator, Henry, by implication; narratives derived from Arabian and Hindoo sources, in Charles Taylor's *Illustrations of Calmet, Fragm.* 528; and the late Jacob Bryant, who, though too imaginative and sanguine a theorist, and defective in his knowledge of the Oriental tongues, often gives us valuable collections of facts and sound reasonings from them (see the passages quoted from him in p. 395 of this volume). A considerable part of his celebrated work, the *Analysis of Ancient Mythology*, is occupied with tracing the historical vestiges of the builders of Babel, whom, on grounds of high probability at least, he regards as Cuthites (assumed to be a dialectic variety for Cushites), the descendants of Cush, the son of Ham, but with whom were united many dissatisfied and apostate individuals of the branches of Japheth. Dr. Doig, in the article 'Philology,' in the *Encyclopædia Britannica* (seventh edition, 1842), has entered at some length into this question, and arrives at the following conclusion: 'From these circumstances, we hope it appears that the whole mass of mankind was not engaged in building the tower of Babel; that the language of all the human race was not confounded upon that occasion, and that the dispersion reached only to a combination of Hamites, and of the most profligate part of the two other families who had joined their wicked confederacy.'

IV. Admitting, however, our inability to determine, with absolute certainty, on which side of this alternative the truth lies, no difference accrues to the subject of this article, What were

the phenomena of the case? In WHAT did the Confusion of Tongues *actually consist?* For the answer a considerable variety of opinions has been promulgated.

1. Some have supposed that the operation, produced either by a positively miraculous intervention, or in the ordinary way of natural causes under the divine direction, was not upon the words or the modes of speech at all, but upon the tempers of the men concerned; a discordance of minds, an irreconcilable contradiction of opinions and counsels, upon the operations and various circumstances of the building, and consequently an angry abandonment of the work and disruption of the confederacy. Such a judgment upon the minds of wicked men is expressed in Ps. lv. 10: 'Swallow up [*i. e.* demolish, frustrate] and divide [*palag*] their tongues.' But the declaration of verse 1 stands in apparent opposition to this interpretation, and in verse 6, the unanimity of the people and the identity of their language are distinguished. The learned and pious Vitringa explains and defends it at great length. He places it in juxtaposition with the hypothesis of a sudden impulse to new habits of *pronunciation*, though the language remained the same. He regards either of these interpretations as perfectly accordant with the sacred narrative, but he seems to give the preference to the former (*Observ. Sacræ*, tom. i. Diss. i. cap. 9). The quotation above from Shuckford supports this opinion.

2. Others suppose it to have referred to opinion about religion and worship; applying the word *saphah*, 'lip,' to signify *confession* as a religious act, and affirming this meaning to be supported by Ps. lxxxi. 6 (5); Isa. xix. 18, &c. But that interpretation of those passages is, to say the least, very disputable: also, the secondary use of *saphah* to denote *speech* or *language* as a mode or system of speaking, is abundantly established in the Hebrew Scriptures; and the connection with the term *words* in the case before us (verse 1) determines that signification.

3. By many, probably most, learned and eminent men, it is supposed that there was a miraculous infusion into the minds and the practical habit of the Babel-builders, of *languages* absolutely new and possessing no affinity to each other; or of divergence into *varieties of dialect*, radically indeed the same, but mutually unintelligible; or of mere alterations in the *pronunciation*, by permutation of the labial letters (for instance) with the palatal. Some, among whom was the distinguished divine Vitringa, conceive the effect to have been transient, and to have gradually worn away after the design was answered by the dispersion; others, that it was permanent, producing a certain number of great stems of language, from each of which others branched out according to the ordinary laws of vocal derivation. 'The great affinity that still reigns among the kindred dialects of the east and the remoter of the west, leads us to suspect that the Confusion of Tongues consisted rather in diversity of pronunciation of the same words, than in the introduction of new words expressing the same ideas' (Hales's *Analysis of Chronology*, vol. i. p. 365). For Mr. Bryant's opinion, see this volume, p. 395.

The hypothesis of a change in the pronunciation leading to diversified results, some of which might be of persistent influence, appears to us to have the most of probability and reason on its side.

But perhaps we need not lose ourselves in the invention of conjectural modes, of greater or less probability, and in which imagination may perform a principal part. We will offer only two lines of consideration, as what we think applicable to the inquiry.

1. The all-comprehensive providence of God, —the great chain of dependent causes and effects, each cause being an effect of a preceding cause, and each effect being in its turn a new cause: in a word, the universal government of the Supreme Cause, is the product of infinite wisdom and rectitude, and can never stand in need of being helped out, corrected, or remedied. Supernatural events—*miracles*—are such only to our limited perceptions; they are not so to God. In his purposes and their executive performance there is no deviation from the pre-established, all-harmonious course. They are signs and wonders *to men*, inasmuch as they stand forth in prominent distinction from the habitual appearance and sequence of things; but they are not so to 'HIM who worketh all things according to the counsel of his own will—with whom there is no darkness at all—no variableness nor the shadow of turning.'

It follows, that we are not lightly to assume the occurrence of supernatural events. Right views of the divine perfections, the analogies of nature and providence, and the current evidence of Scripture, forbid our doing so. The whole sum of events, supernatural (as, from our feeble faculties, we will call them) equally with the so-called natural, is but the unfolding of the latent energies infused by the Creator into the system of his works when he gave them existence, and continually operating under his all-pervading and Almighty activity. It follows, also, that in any instance, we are not warranted to assume an amount of deviation from the regular order of things beyond that which is *necessary* to the effect.

Therefore, in the case of the *Confusion of Tongues*, it was not necessary to the end designed that any new language or languages should be introduced into the mental conceptions or the organic expressions of the persons affected: for all that was requisite would be accomplished by some differences in pronunciation, or by a few further divergencies of meaning and shades of meaning, like what we find in the provincialisms and dialects of all living languages. The occurrence of such a condition of things between the rulers and the ruled, the directors and the labourers, and that aggravated by consequent mutual irritations, would be quite sufficient to derange their plans, inflame their animosities, and drive them to separation and mutual avoidance.

2. To some such conclusion as this we are led by the meaning of the verb, which occurs here twice, בָּלַל *balal*, 'confound.' Its signification is to *mingle* things together so as to produce compounds or heterogeneous masses. It occurs nearly forty times in the Books of Exodus, Leviticus, and Numbers, where prescriptions are given for the *compounding* of various substances (flour, wine, and animal flesh) for the sacrificial rites.

There are only two other places of its occurrence in the Old Testament, and in them it is used metaphorically. 'I shall be *anointed* [adverting probably to the ceremonial mixtures] with fresh oil' (Ps. xcii. 10). 'Ephraim, he hath *mixed* himself with the [heathen and idolatrous] nations' (Hosea vii. 8). In those passages, we have the whole evidence from the usage of the Hebrew Scriptures; and it appears to the writer of this article that the expression describes the condition of men speaking different *dialects* of the same original language; and that it by no means requires any further extension.

The case, however, is one in which we cannot presume to expect positive evidence. The following positions are what appear to the writer to possess the higher degrees of probability.

1. That the whole scheme was an act of rebellion against the plan of a well-regulated dispersion of families, or peaceful parties variously organized—the plan which had been directed by wisdom and benevolence, to accelerate the occupation and culture of the earth, and the many advantages consequent. Upon the urgent motives for speedy occupation, see p. 393 of this volume. To counteract this beneficent arrangement the lofty edifice was to be a *signal-house*, a rallying-point; and probably on the site had been already built, and around it speedily would be built, groups of habitations, not mere tents, but houses with brick walls; so that the adventurers had both 'a city and a tower.'

2. That the persons engaged in the project were not the whole of mankind, but a body, probably numerous but certainly powerful, of the descendants of Ham, with an intermixture of some other parties.

3. That Nimrod was their chief instigator, that he became their leader and commander, that some of them remained after the dispersion, or returned to the spot when their embarrassments had in a measure subsided, and that thus originated the most ancient kingdom of Babylon. This is strongly intimated in Gen. x. 9-11, where Nimrod is expressly said to have been the founder of Babel.

4. That—still speaking under an humble sense of difficulty, and disclaiming presumption and dogmatism—we have not sufficient reason to believe that the differences in the LANGUAGES which exist among mankind originated in this event. This is a field of inquiry far too vast to be attempted in such an article as this; and, in addition to its extent, it abounds with entangled thickets and dark places, which we cannot expect to penetrate and enlighten. We venture only upon a few observations.

1. It cannot with any show of reason be doubted that the antediluvian world possessed only one language, and that that language passed through the family of Noah to his descendants, and continued in their line down to the times of sacred and profane history.

2. We think it more probable than any other hypothesis, that this original language of men was essentially the same as what modern scholars generally call the *Semitic*, or *Shemitic*, a term comprehending the three divisions of the Hebrew, the Aramaic (Chaldee and Syriac), and the Arabic, which includes the Ethiopic. Of these three, we judge the Hebrew to be the closest representative of the primeval language. Its radical words are few, yet fully adequate to the wants of mankind in a state of such knowledge and happiness as involved moral goodness unalloyed by sin; and it was adapted, by its expansive applications, to assist and sustain the course of improvement, and for the progress of discovery in the cultivation of agricultural and other arts, which would continually augment usefulness and delight. Those radical words are, to a large extent, the offspring of an effort to produce, by the *action* of utterance, or by the *sound* itself uttered (*onomatopœia*), some resemblance to the signification. The letters are all consonants, vowels being supplied in speaking. Very many of those primitive words were originally formed by only two letters; and those which had three (the third being usually a subsequent annexation) were made monosyllables in pronunciation (see Nordheimer's *Hebrew Grammar*, i. 74, 75, and Ewald's *Heb. Gramm.* by Nicholson, § 10). All the proper names in the antediluvian history are personally and historically descriptive, and the verb or appellative which forms the name *really* and *always* gives the sound and meaning wanted; which could not be if the compositions which we have were a translation from a prior document in a different language. Thus: '*Ishah*, because she was taken from *Ish*' (Gen. ii. 23). 'Adam called the name of his *Ishah*, *Havah*, because she was the mother of all *Hai*' (iii. 20). '*Cain* [obtained], because *canithi* [I have obtained] a man from Jehovah' (iv. 1). 'She called his name *Sheth* [set, put, laid down instead of something else], for God *shath* [hath set] for me another seed' (ver. 20). 'He called his name *Noach* [rest, quiet, comfort], saying, this *jenachamenu* [shall give us rest; the verb lies in the second syllable, and if expressed alone would be *nuach*] on account of our toils' (ver. 29). It must be remembered that, in the early times of probably all nations, the names of infants were often modified or wholly changed, to be expressive of some fact of personal or family interest. Of the instances which lie here before us, *Nod* signifies *wandering*, *banishment*, and *grief*; *Enoch* (better written *Hanoch*), *cramming* as of food into an infant's mouth, and thence, making a beginning to *train up*, *instructing*, *educating*; *Irad*, *ornament of the city*, mentioned in the preceding sentence as having been founded by Cain; *Meehujael*, *smitten by God*, perhaps with some deformity or some personal affliction; *Methushael*, *weakness from God*, possibly having some reference to his father, the last-mentioned, or it may denote *man of God*, as one peculiarly favoured, in contrast to his father's calamity; *Lamech*, *strong young man*, probably to intimate his fighting and murdering disposition (ver. 23), for which his son *Tubal-cain* had provided him with a sword (?); *Adah*, *greatly adorned*, *very beautiful*; *Zillah*, *shade*, or *tone* in music; *Jabal*, *cattle-drover* (see ver. 20); *Jubal*, *lively music*, *musician*, he being the inventor or most distinguished improver of both the classes of musical instruments; *Tubal-cain*, *the man of progress in obtaining*, but Dr. Fürst (*Concordant. Hebr.* p. 1293, Leipzig, 1840) gives *iron-smith*; *Naamah*, *lovely*. These examples are all that occur in the account of the descendants of Cain, in regard to most of whom there is an intimation of the character or history. In the line of Seth, and the genealogy descending from

Noah, as all the names are significant, we should undoubtedly find them the echo of some historical description, if we had any such fragments of narration. In a few cases there does remain some hint of exposition: 'God will *japhet* [*enlarge, cause to spread out far and wide*] Japheth; and will dwell [*i. e.* God will dwell] in the tents of Shem' (vii. 27). This is the plain grammatical construction, and we regard it as a prophecy that the true God would be worshipped and honoured by distinguished branches of the posterity of Shem, when all other nations would have apostatized to polytheism and its attendant impieties; and as this was an effect of God's special grace and mercy, it is, by a frequent Hebraistic phrase, called his *dwelling with* the person so favoured. It is worthy of observation, that here we have the first instance in the volume of revelation of the Infinite One being called 'the God of' any special person or persons; a testimony both to the exemplary piety of Shem, and to that heavenly condescension which is so wondrously manifested in the subsequent promises of the Bible. The word *Shem* [*name, celebrity*] thus expresses that favour and honour, in meaning, though not in similarity of sound, and therefore we do not adduce it as an instance parallel to the others; but it merits our especial observation as an anticipation of that line of Shem's posterity in which all the families of the earth shall be blessed. In this view, also, we mention *Ham, warm, dark-complexioned*, even *black* (Fürst, p. 1276), the chief of whose posterity, and probably himself, moved into the hottest regions then known. So *Nimrod, rebel*, from *marad, to rise up against*. We have already referred to *Peleg*, whose name commemorates the *division* of the earth. The word *Babel* itself has propagated its *onomatopœitic* representatives to a wide extent among ancient and modern languages; in βαβάζω, βαμβαίνω, βαμβαλίζω, βάρβαρος, balbutio, baldordd (Welsh), babble (English), bobbel and bibbel (Dutch), babiller (French); and no doubt in other tongues and dialects. The more we scrutinise this branch of argument, the more its solidity appears.

In a word, we think that all the positive evidence goes to substantiate the opinion, that the primitive and universal language of mankind was one of which the *Shemitic*, in its Hebrew form, is *the closest representative*. We venture to suppose that the primitive language bore a relation to the successive stages of the biblical Hebrew, analogous to that of the Latin of the Twelve Tables compared with the Roman classics. It might not be a mere work of fancy to place the parallelism thus: Moses and Job with Lucretius, David with Horace, Isaiah with Virgil, and the prophets who flourished about the times of the exile with the Latin authors from Quintilian to Claudian.

3. From the history of Abraham, Isaac, and Jacob, it appears that no difference of language obstructed their conversation with the inhabitants of Egypt, Philistia, and Syria; and the proper names of the family are all Hebrew and significant. But, in the latter part of this period, the Syriac degradation of Hebrew had gained some currency in parts far to the east (Gen. xxxi. 47); and, in the next generation, the Hebrews and the Egyptians spoke widely different languages.

V. If we now turn our attention to the vast field of the known languages of the ancient world —freely confessing its appalling difficulties, many of them probably insuperable—we are led to put them into three primary divisions, which we may call classes. Let the first be that of all the cultivated languages of which we have any historical knowledge or documentary specimens; or we may describe them as the languages of nations who had a considerable degree of science and art, and a literature. The second shall be the group of languages possessed by tribes or nations whose abode lay to the east of the Noachian settlements, and of which ancient history gives us scarcely any information. The third must comprehend those which lay at and beyond the outskirts of civilization.

The first divides itself into two branches, the *Shemitic* and the *Sanscritic*.

The Shemitic (or, as some write, Semitic), a term brought into use by the late J. G. Eichhorn, to express the relation of the Hebraistic family of languages to the patriarch Shem. The term is generally acquiesced in, though it is not strictly applicable; for it is undoubted that, besides the posterity of Shem, other families and nations used this language in one or other of its varieties. One incontrovertible and very striking exception is, that the Canaanitish tribes, descendants of Ham by his worst son, spoke it, and, we have good grounds of belief, in its primitive and purest form. Dr. Prichard prefers, for this distinction, the term Syro-Arabian; but that has the disadvantage of throwing into the shade the most important branch of all; it seems not logical to merge the Hebrew in the Syriac. Our opinion, but not dogmatical assertion, is, that this primitive Shemitic was the universal language of men before the flood, and for some ages after; and that its best and most unaltered form came forth in the speech and writings of Job and Moses. Of this language, the distinguished philologist Ewald has said, that 'it stands one degree nearer [than the Sanscrit] to the simplicity of nature and antiquity; but it possesses, on the other hand, the warmest feeling, the most enchanting and childlike truthfulness, with the most delightful naturalness and clearness. That primitive and natural artlessness can be recognised in it more easily than in any other language' (*Heb. Gramm.*, transl. by Nicholson, § 16, 17). We see its early state of majestic simplicity in the books of Moses, its most polished condition in the period which includes David and Isaiah, and its decline in the century before the captivity; after which humiliating and depressing event it ceased to be the spoken language of the people; and the last compositions that we have in it are the narratives of Ezra and Nehemiah, the prophecies of Daniel, Haggai, Zechariah, and Malachi, and probably a number of the Psalms. In this period of twelve hundred years, notwithstanding the course at which we have hinted of advancement and decay, the difference is more in the genius and spirit than in the grammatical forms. The uniformity of the language is preserved far more than in the history of any European living language. Compare it, for example, with the changes in English, German, Dutch, or French, within only the last four hundred years. But this high degree of fixedness is a property of the Asiatic languages. The classical Chinese of the present day is the very same as that of Confucius twenty-three centuries ago.

In the countries north of Palestine, the Shemitic developed itself, or more probably degenerated, into the harsh, impoverished, and clumsy Aramaic; and this again separated into two dialects, the Eastern, usually called Chaldee, and the Western, or Syriac. 'But,' says Professor Ewald, 'in the south, among the never-conquered Arabs, it preserved greater purity and sweetness, and a greater richness of formations and words; many of which excellences are found in the Ethiopic language, a very old daughter of the Arabic' (*Heb. Gramm.*, § 1).

Our second division of cultivated languages we venture to denominate *Sanscritic*, in order to include both that most remarkable phenomenon, the Sanscrit, a language whose very existence was scarcely known seventy years ago, whose origin is concealed in remotest antiquity, and which possesses the perfections of language, natural and artificial, in a degree almost unrivalled; and the *Zend*, supposed to be allied to the Sanscrit, and to be the mother-form of the most ancient Persian. To this division the late Professor Gesenius gave the name of *Indo-Germanic*, which others have improved into *Indo-European*. The researches of that able philologist, and the not less distinguished Professors A. W. Schlegel (treading in the path opened by Carey and the other Serampore missionaries), Bopp, Rask, Burnouf, Bohlen, Lassen, Wilson, and other honoured names, have established the fact that the principal languages of India on this side the Ganges, the Persian, the Armenian, and the stems of the great European languages, Celtic, Gothic, Sclavonic, Greek, and Latin, have been derived from this amazingly fertile root.

A British nobleman, deservedly honoured for his attainments and his services in science and literature, has given the following summary of the relations of the Sanscrit: 'This language,' says Lord Francis Egerton, 'will be found to interest the philologer of every country in Europe. The subjects of every government in Europe are writing and speaking living derivatives of that language—every university is occupied in teaching its two noblest extinct varieties; and philology must cease to exist as a study and a science, when interest ceases to attach to the exploration of a connection so curious and so extensive as that which binds together the members of the Indo-Germanic family. In this point of view, the Sanscrit claims an indisputable preference, as a subject of European research, over the two other great streams of language which seem to have descended from the Caucasus—the Semitic, and the monosyllabic system which has pervaded China' (*On the Study of Sanscrit*, in the *Classical Museum*, Oct. 1844, p. 248).

The question arises, Was there any affinity, or other connection, between the Shemitic and the Sanscrit, in their earliest stage of existence? To this inquiry we fear that a satisfactory answer cannot be given. The existence and the extraordinary characters of the Sanscrit literature form a problem which we do not hope to see resolved. That there was some primeval affinity we can scarcely doubt; but the vestiges of it have probably been obscured and obliterated in the wonderful process of philosophical elaboration to which the Sanscrit has been subjected, it is supposed under the influence of the court of Benares and the great poets who there flourished a little before the Christian era. The following sentences from Ewald indicate his opinion that there really was an original affinity: 'We learn, from the investigation of the primitive elements of the Semitic language, that its beginnings or *roots*, like those of all other languages, were short monosyllabic words. Hence arises the great connection which these roots have with Indo-Germanic roots; a connection the less astonishing, as the territories of both these families afterwards also bordered on one another in Asia. *Formation* has become the predominant principle of the Semitic language. In this [system of] formation, the Semitic language has, it is true, more simplicity and freshness, and much that is finer and more regular, than the Indo-germanic family; but in general it has not reached the high degree of perfection which distinguishes the latter. To the power of *composition* [as in the Greek], a chief ornament of the Sanscrit family of language, the Semitic has not advanced. Like the whole genius of the Semitic nations, like their poetry and religion, their language also, as opposed to the Indo-Germanic, possesses rather keen sensibility of heart and spirit, than rest and extended scope of thought and fancy; more lyric and poetical, than epic and oratorical elements. It is the business of Hebrew grammar everywhere to point out this central position of the Hebrew, between the most unformed, *e. g. Chinese*, and the most perfectly developed language, *e. g.* the *Indo-Germanic*' (*Heb. Gramm.* § 13-17).

The Chinese spoken language (for the written is only a rude system of picture-signs of ideas, not of vocal sounds) has a striking character of deficiency and powerlessness. It consists of a few more than 300 monosyllables, each being a consonant followed by a vowel. One might conjecture that, by combining some of these radicals, compound words would be formed; but this is not the case. The multiplication of words is only by varying the tone; and of such variations there are at least ten or twelve, some of which are with difficulty perceivable by a foreign ear. The endurance of so miserable a method of intercourse, for above three thousand years, however consistent with the surprising fixedness of manners and habits which characterizes the millions of China, cannot but astonish us. Whence could be derived that strange immutability, hostile to the most rational interests of our nature, checking every tendency to improvement, and debasing the soul of man to wretched servility? Is it not a striking proof of a hateful usurpation, the dominion of the prince of darkness, 'the spirit which even now worketh in the children of disobedience?' The same system subsists in other tribes and nations bordering upon China properly so called, the inhabitants of Cochin-China, Siam, Japan, &c. But the origin of such a language is as difficult to account for as its retention. Mr. Shuckford has raised the hypothesis, and he is followed by the authors of the *Ancient Universal History*, that before or at the time of the Shinar revolt, Noah with a party of his descendants, most probably voluntary separatists from different families, removed themselves eastwards; and that from them the whole population of which we are speaking was derived. He adduces no contemptible reasons in support of this hypothesis.

The Chinese traditions concerning Fohee, the alleged founder and first monarch of their nation, or, as Sir John Barrow deduces from the Chinese traditions, the third, have remarkable points of coincidence with the history of Noah. Shuckford places the residence of the great patriarch, after the deluge, in Thibet or Tartary, north of the Coosh and the Himalaya mountains, and supposes that his offspring spread down southward to India, and eastward to China; 'and so,' he adds, 'it is probable that they also peopled Scythia [meaning no doubt Tartary], and afterward the more northern continent; and, if America be anywhere joined to it, perhaps all that part of the world came from these originals' (*Connection*, vol. i. p. 104). In Mr. Shuckford's time, Behring's Straits were unknown; nor could he know much of the 'traits of resemblance in the manners, laws, arts, and institutions of the two nations [Chinese and Peruvians], which, in our opinion, are too numerous, striking, and peculiar, to be the effect of chance' (Mr. Charles Maclaren, in the *Encyclop. Brit.*, vol. ii. p. 626, 7th ed.).

But there are languages, of unknown number and variety, which cannot be reduced to any of the classes and kinds of which we have been writing. Such are those of the inhabitants of India before the arrival of the Hindoo nations, supposed to be now represented by mountain-tribes in the Himalayas, the Singalese, the inhabitants of the extreme north-east of Asia, the people of Southern Africa, those of America, from the frozen ocean of the north to the southern extremity, and the Australian tribes. With regard to these, we know most concerning the American tribes or nations. They and their languages form a very great number, probably not fewer than four hundred, though many of these may be dialects at a second or third stage of derivation from an earlier form of speech. The materials of which they are made (the sounds of the radical words) differ much; but they resemble each other in the extreme complication of their forms. 'In America, from the country of the Esquimaux to the banks of the Orinoko, and again from those torrid banks to the frozen climate of the Straits of Magellan, mother-tongues, entirely different with regard to their roots, have, if we may use the expression, the same physiognomy. Striking analogies of grammatical construction have been recognised, not only in the more perfect languages, as that of the Incas, the Aymara, the Guarani, the Mexican, and the Cora, but also in languages extremely rude. Idioms, the roots of which do not resemble each other more than the roots of the Sclavonian and the Biscayan, have resemblances of internal mechanism, similar to those which are found in the Sanscrit, the Persian, the Greek, and the German languages' (William von Humboldt, in Dr. Prichard's *Nat. Hist. of Man*, 1843, p. 358). 'Amidst that great *diversity* of American languages, considered only in reference to their vocabularies, the *similarity* of their structure and grammatical forms has been observed and pointed out by the American philologists. The result appears to prove that all the languages, not only of our own [North American] Indians, but of the native inhabitants of America, from the Arctic Ocean to Cape Horn, have, as far as they have been investigated, a distinct character common to all, and apparently differing from any of those of the other continent with which we are most familiar' (Gallatin's *Archæol. Amer.*, quoted by Dr. Prichard). 'There exist, in both Americas, *linguistic formulæ*, which Balbi refers to a Semitic and even Hebrew affinity; and many words in the Carib tongue, particularly among the trading, vagrant, and fighting Accawas, have striking resemblances to the languages of ancient Syria and Carthage' (Col. Hamilton Smith, *On the Original Population of America*, in the *Edinb. Philos. Journal*, Jan. 1845, p. 11).

We have reason also to believe that there are a few scattered fragments of tribes, situated in fastnesses of hardly accessible regions in other parts of the world, whose languages are little known, and are therefore as yet incapable of being brought into any classification.

We now shall conclude this disquisition by a brief statement of the inferences which to us appear to possess the greatest degree of probability; premising that there are obscurities and difficulties in almost every part of the subject, which we do not pretend or hope to remove.

1. The original language of mankind was a form of that which was preserved in the post-diluvian world, principally in the line of Shem; a form to which the subsequent Hebrew bore, and, with its necessary changes and improvements, still bears, the closest resemblance.

2. This was the universal language till many centuries after the flood.

3. Deflections from it arose, in various modes and degrees, after the general separation and wide dispersion of clans and tribes; the causes and occasions of those alterations were natural and human, arising from physical and historical causes, such as climate, peculiar conformation of individuals, imitation of those erratic examples, caprice, and the intercourse of tribes after separation.

4. The variety of languages existing, or having existed, among mankind, may be traced back, with approximation to probability, to one source, the family of Noah, as the representative of the antediluvian world.

5. The dispersion of the Babel-builders was attended by circumstances of discord and violence. Some of them gained the mastery, and, under the government of Nimrod, retained possession of the city and the unfinished tower. The rest migrated, probably in hostile parties, to different regions. Whether the change in their speech affected the substance of language, or consisted only in the pronunciation, and whether it was temporary or permanent, cannot be with certainty determined.

6. The greatest degree of alteration from any assumed primeval standard, attaches to the American branches. Perhaps the *conjecture* might not be dismissed as absurd, that the fugitives from Shinar, or their early descendants, were the first settlers in America; whether by making their way to the north-east coast of Asia, or upon isthmuses or chains of islands which have been since submerged (not impossible nor improbable; and the old traditions of Atlantis may have originated in some fact of this kind), or by drifted canoes. Hence a reason might be given for the monstrously entangled forms of those languages.

7. The whole question runs parallel to that

concerning the derivation of all mankind from a common ancestry, the family of Noah. The range of argument and difficulty is nearly if not entirely equal; and we humbly think that the resulting problems are insoluble by mortals in the present state.

The following are the principal passages of ancient authors, rescued from the wreck of time by the quotations of Josephus and Eusebius. It scarcely need be said that we do not adduce these fragments as authorities, in any other sense than that they repeat the traditional narratives which had descended from the remotest antiquity among the people to whom they relate. The 'Sibyl' cited by Josephus is the fictitious appellation of some unknown author, probably about the second century B.C. Alexander Cornelius Polyhistor flourished about one hundred years before Christ. Eupolemus was probably an Asiatic Greek, two or three centuries earlier. Abydenus (if he was Palæphatus) lived in the middle of the fourth century B.C.

'Concerning this tower, and the discordance of language among men, the Sibyl also makes mention, saying thus: "All men having one language, some of them built a very high tower, as if they proposed by means of it to climb to heaven: but the gods, by sending storms of wind, overthrew the tower, and gave to each person a peculiar language; and on this account the city came to be called Babylon"' (Joseph. *Antiq.* i. 4. 3).

The Sibyl here quoted may be that very ancient anonymous authority, to which we have obscure references (in the discourse of Theophilus to Autolycus) in Plutarch's *Morals*, in Virgil's *Pollio*, and in the *Stromata* of Clemens Alexandrinus.

'Alexander Polyhistor—a man of the highest celebrity for talents and attainments, in the estimation of those Greeks who are the most profoundly and accurately learned—has the following passage: "Eupolemus, in his book concerning the Jews of Assyria, says that the city of Babylon was first built by those who had been preserved from the deluge; that they were giants [the Greeks used this word to signify, not so much men of enormous stature, as their mythological heroes, of great prowess, and defying the gods]; that they also erected the tower of which history gives account; but that it was overthrown by the mighty power from God, and consequently the giants were scattered abroad over the whole earth" (Euseb., *Præpar. Evang.*, Col. 1688).

'Further, with respect to the narrative of Moses concerning the building of the tower, and how, from one tongue, they were confounded so as to be brought into the use of many dialects, the author before mentioned [Abydenus], in his book concerning the Assyrians, gives his confirmation in these words: "There are some who say that the first men sprung out of the earth; that they boasted of their strength and size; that they contemptuously maintained themselves to be superior to the gods; that they erected a lofty tower, where now is Babylon; then, when it had been carried on almost up to heaven, the very winds came to assist the gods, and overthrew the vast structure upon its builders. Its ruins were called Babylon. The men, who before had possessed one tongue, were brought by the gods to a many-sounding voice; and afterwards war arose between Cronus [Saturn] and Titan. Moreover, the place in which they built the tower is now called Babylon, on account of the confusing of the prior clearness with respect to speech; for the Hebrews call confusion Babel"' (Euseb., *Præpar. Evang.* ix. 14).

Abydenus, the Grecian historian of Assyria, is known to us only by citations in Eusebius, Cyril of Alexandria, and Syncellus; but they confirm his respectability as a writer.—J. P. S.

TOOTH, TEETH (שֵׁן; Sept. *ὀδούς*, quasi *ἐδούς*, from *ἔδω*, 'to eat;' Vulg. *dens*, quasi edens, 'eating'). The Hebrew word is usually derived from שנה, 'to change' or 'repeat,' because the teeth are changed, or replaced by others. It occurs first, with reference to the literal member itself in man, the loss of which, by violence, is specified by Moses, in illustration of his law concerning taliones, 'tooth for tooth' (Exod. xxi. 24). This outrage occurring between freemen (or between an Israelite and a foreigner, Lev. xxiv. 22) admitted, like other cases of maiming, most probably of a pecuniary compensation, and under private arrangement, unless the injured party proved exorbitant in his demand, when the case was referred to the judge, who seems addressed in Deut. xix. 21. The Targum of Jonathan renders the words, 'the price of a tooth for a tooth,' in Exod. xxi. 24; Lev. xxiv. 20; and Deut. xix. 21 (comp. Josephus, *Antiq.* iv. 8. 35, and the article PUNISHMENT in this work); but if a master inflicted this irreparable damage upon a servant, *i. e.* slave, of either sex, he was punished by the absolute loss of his slave's services (Exod. xxi. 27). The same law applied, if the slave was a Gentile, notwithstanding the national glosses of the Jewish doctors (Selden, *De Jure Nat. et Gent.* iv. 1, p. 468). Our Lord's comment upon the law (Matt. v. 38), which was much abused in his time (Horne's *Introd.* vol. ii. p. 377, 6th ed.), prohibits no more than *retaliation* upon the *injurer* (*τῷ πονηρῷ*), not such a defence of our innocence as may consist in words, but *private revenge*, and especially with such a disposition as actuated the aggressor, with impetuous rage or hatred. His exhortations relate rather to those injuries which cannot be redressed by the magistrate, or by course of law: these we should bear, rather than resort to revenge (see Rosenmuller, Grotius, and Whitby, *in loc.*). Indeed the hermeneutics of our Lord's precepts in his Sermon on the Mount require much knowledge, care, and discrimination, in order to avoid a *primâ facie* interpretation of them, which has often been given, at variance with his intention, subversive of the principles of natural justice, and productive of false ideas of Christian duty.

In Ps. iii. 7, we have לחי שני, for the human jawbone; for that of an ass, Judg. xv. 15-17, *σιαγόνα*, 'maxillam, *i. e.* mandibulam' (which becomes מכתש in ver. 19, *τὸν λάκκον τὸν ἐν τῇ σιαγόνι*, 'molarem dentem in maxilla asini') [SAMSON]; and for that of leviathan, Job xl. 14, *τὸ χεῖλος*, *maxillam*. A 'broken (or rather 'bad,' רעה, that is, decayed; Vulg. *dens putridus*) tooth,' is referred to in Prov. xxv. 19, as furnishing an apt similitude of 'confidence in an unfaithful man in the time of trouble.' 'The teeth of beasts,' or rather 'tooth,' שן, is a phrase expressive of devastation by wild animals: thus, 'I will send the tooth of beasts upon them' (Deut. xxxii. 24), שן־בהמת, *ὀδόντας*

θηρίων, *dentes bestiarum* (comp. 2 Kings xvii. 25). The word is sometimes metaphorically used for a sharp cliff or summit of a rock (Job xxxix. 28): thus, 'The eagle dwelleth and abideth upon the tooth of the rock;' על-שן-סלע, ἐπ' ἐξοχῇ πέτρας, *inaccessis rupibus*. So also (1 Sam. xiv. 4): 'a sharp rock on the one side and a sharp rock on the other side;' שן־הסלע, ὀδοὺς πέτρας, *quasi in modum dentium scopuli*: these eminences were named Bozez and Seneh.

Teeth, שנים, ὀδόντες, *dentes*, is found in the dual number only, referring to the two rows, yet used for the plural (1 Sam. ii. 13). The word occurs first with reference to the literal organs in man (Gen. xlix. 12): 'His teeth shall be white with milk,' which the Sept. and Vulg. understand to mean 'whiteness greater than milk,' ἢ γάλα, *lacte candidiores* (Num. xi. 33; Prov. x. 26; Cant. iv. 2; vi. 6). Although שנים be the general word for teeth, yet the Hebrews had a distinct term for the molares or jaw teeth, especially of the larger animals; thus, מתלעות, Job xxix. 17; Ps. lvii. 4; Prov. xxx. 14; Joel i. 6; and by transposition מלתעות, Ps. lviii. 6, μύλαι, *molæ* and *molares*. The *apparent* teeth of the leviathan, *gyrus dentium*, are however called שנים (Job xli. 14). Ivory, 'elephants' teeth,' 1 Kings x. 22, is simply שנים; in Sept. deest; Vulg. *dentes elephantorum: dens* in Latin is sometimes so used. In 2 Chron. ix. 21, the word is שנהבים, ὀδόντες ἐλεφάντινοι, *ebur*, where שן evidently denotes a tooth; but the signification of the latter part, הבים, is unknown, and Gesenius thinks that the form of the word may be so corrupted as to disguise its original meaning. May it not be of foreign origin, imported with the material from Ophir? [Ivory]. In other passages the reference to teeth is metaphorical; thus, 'a flesh-hook with three teeth,' that is, prongs (1 Sam. ii. 13) [Hooks]. 'The teeth of lions' is a symbol of the cruelty and rapacity of the wicked (Job iv. 10). 'To take one's flesh into one's teeth,' signifies to gnaw it with anguish (Job xiii. 14; comp. Rev. xvi. 10. 'The skin of his teeth,' with which Job says he had 'escaped' in his affliction, is understood by the Vulgate, of the lips—'derelicta sunt tantummodo labia circa dentes meos;' but Gesenius understands it as a proverbial expression, meaning, I have scarcely a sound spot in my body. 'To smite upon the jaw-bone' and 'to break the teeth,' mean to disgrace, and to disable (Ps. iii. 7: comp. Mic. vi. 13; 1 Kings xx. 35; Lam. iii. 30). The teeth of calumniators, &c., are compared to 'spears and arrows' (Ps. lvii. 4; comp. 1 Sam. xxiv. 9). To break the teeth of such persons, means to disable them (Ps. lviii. 6). To escape the malice of enemies, is called an 'escape from their teeth' (Ps. cxxiv. 6; Zech. ix. 7). Oppression is compared to 'jaw-teeth like swords, and grinders like knives' (Prov. xxx. 14). Beautiful teeth are compared to 'sheep newly shorn and washed' in Cant. iv. 2; vi. 6; but the remaining part of the comparison, 'whereof every one beareth twins, and none is barren among them,' is much better rendered by Le Clerc, 'all of them twins, and none hath lost his fellow.' To 'break the teeth with gravel stones,' is a most hyperbolical metaphor for inflicting the harshest disappointment (Lam. iii. 16). 'Iron teeth' are the symbol of destructive power (Dan. vii. 7, 19). A nation having the teeth of lions, and the cheek-teeth of a great lion, denotes one which devours with irresistible force (Joel i. 6; comp. Ecclus. xxi. 2; Rev. ix. 8). 'Prophets who bite with their teeth, and cry Peace,' are greedy and hypocritical prophets (Mic. iii. 5). 'To take away blood out of the mouth, and abominations from between the teeth,' means, to rescue the intended victims of cruelty (Zech. ix. 7). 'Cleanness of teeth,' is a periphrasis for hunger, famine (Amos iv. 6); Sept. γομφιασμὸν ὀδόντων; Symmachus and Theodotion, καθαρισμόν. *Gnashing of teeth* means properly grinding the teeth with rage or despair. The Hebrew word so rendered is חרק (Job xvi. 9; Lam. ii. 16; Ps. xxxv. 16; xxxvii. 12; cxii. 10): it is invariably rendered in the Sept. βρύχω, and in the Vulg. infremo, fremo, frendo (see also Acts vii. 54; Ecclus. li. 2). In the New Testament it is said of the epileptic child (Mark ix. 18), τρίζει τοὺς ὀδόντας, *stridet dentibus*. The phrase, ὁ βρυγμὸς τῶν ὀδόντων, is in the Vulgate 'stridor dentium' (Matt. viii. 12; xiii. 42, 50; xxii. 13; xxiv. 51; xxv. 30; Luke xiii. 28). Suidas defines βρυγμός· τρισμὸς ὀδόντων. Galen, ὁ ἀπό τῶν ὀδόντων συγκρουομένων ψόφος. The phrase 'lest thou gnash thy teeth' (Ecclus. xxx. 10), is γομφιάσεις τοῦς ὀδόντας σοῦ. 'To cast in the teeth,' is an old English phrase (for the Hebrew has no such idiom), signifying *to reproach;* thus 'the thieves who were crucified with Jesus cast the same in his teeth,' ὠνείδιζον αὐτόν (Matt. xxvii. 44); Vulg. *improperabant ei;* compare also the Bible and Prayer Book version of Ps. xlii. 11. פיפיות, 'a sharp threshing instrument having teeth,' literally 'edges' (Is. xli. 15). The action of acids on the teeth is referred to in the proverb, 'the fathers have eaten sour grapes, and the children's teeth are set on edge' (Ezek. xviii. 2); ἐγομφίασαν, *obstupuerunt* (Prov. x. 26).—J. F. D.

TOPAZ. [Pitdah.]

TOPHET (תֹּפֶת; Sept. Ταφέθ; Vulg. *Topheth*), a place very near to Jerusalem, on the south-east, in the valley of the children of Hinnom, where the ancient Canaanites, and afterwards the apostate Israelites, made their children to pass through the fire to Moloch (comp. Ps. cvi. 38; Jer. vii. 31). It is first mentioned, in the order of time, by Isaiah, who alludes to it as deep and large, and having an abundance of fuel (ch. xxx. 33). He here evidently calls the place where Sennacherib's army was destroyed (B.C. 710) Tophet, by a metonymy; for it was probably overthrown at a greater distance from Jerusalem, and quite on the opposite side of it, since Nob is mentioned as the last station from which the king of Assyria should threaten Jerusalem (ch. x. 32), where the prophet seems to have given a very exact chorographical description of his march in order to attack the city (Lowth's Translation, Notes on xxx. 33). In the reformation of religion by King Josiah (B.C. 624), he caused Topheth to be defiled in order to suppress idolatry (2 Kings xxiii. 10). The means he adopted for this purpose are not specified, whether by throwing all manner of filth into it, as well as by overthrowing the altars, &c., as the Syriac and Arabic versions seem to understand it. The prophet Jeremiah was ordered by God to announce

from this spot (ch. xix. 14) the approaching captivity, and the destruction, both by the siege of the city and by famine, of so many of the people, whose carcases should be here buried, as that it should 'no more be called Tophet, nor the valley of the son of Hinnom, but the valley of slaughter' (ch. vii. 31, 32; xix. 6, 11-14). The name of this place is generally derived from תף, 'a drum,' because, it is said, the rites of Moloch were accompanied with the sound of that instrument; but, in the absence of any other evidence, this assertion must be considered a mere Rabbinical conjecture, derived from the etymon. Some, with more probability, derive the word from Chald. תוף, 'to spit out,' or 'vomit;' hence תפת, 'that which causes loathing or abhorrence' (comp. Job xvii. 16, Hebrew). Others derive it from the *fire-stove* (תפת) in which the children were burnt to Moloch (2 Chron. xxviii. 3). The place might be called, even by the idolaters themselves, תפתה, 'the place of burning.' With regard to its locality, Jerome, on Jer. vii. 31, remarks, 'Tophet signifies that place which is watered by the streams of Siloam; it is pleasant and woody, affording horticultural pleasures.' Eusebius, in his *Onomasticon*, under the word Θαφέθ, says, 'In the suburbs of Ailah is still shown the place so called, to which is adjacent the fuller's pool and the potter's field, or the parcel of ground Acheldamach.' For an account of the modern aspect of the place, see Kitto's *Physical History of Palestine* (pp. 122, 123). After the return from the captivity, the Jews resumed the ancient name for the whole valley, viz., the valley of Hinnom, called in our Lord's time by the Greek name Ge Hinnom, by corruption Γέεννα [GEHENNA]; and in order to perpetuate the disgrace of idolatry, they made it the common receptacle of the filth, &c., of the city, in which 'fires' were *continually* kept burning, to consume the carcases of animals, executed criminals, &c., the unconsumed portions of which, as well as the offscourings in general, became the nidus of insects, whose larvæ, or 'worms,' revelled in the corruption. These circumstances furnished the most *apt* representation to the Jewish mind of future punishment (comp. Judith xvi. 17; Ecclus. vii. 17; see also Chaldee Par. on Isa. xxxiii. 4, where מוקדי עלם, 'everlasting burnings,' is rendered 'the Gehenna of everlasting fire'). Some writers, however, restrict our Lord's allusions to Gehenna (Matt. v. 22) entirely to temporal punishments. Thus, 'whosoever is *angry* with his brother without a cause,' *i. e.* captious, peevish, arbitrary, irascible, 'shall be in danger of the judgment,' that is, by indulging such an unreasonable disposition shall be in danger of committing some act for which he shall be cited before ἡ κρίσις, 'the judgment,' an inferior court, consisting of seven presidents—taken before the magistrate for an assault, as we should say: 'and whosoever shall *say* to his brother, Raca,' *i. e.* worthless, dissolute! 'shall be in danger of the council,' or Sanhedrim —shall render himself liable, by the indulgence of such a rancorous disposition, and by the use of such injurious language, to be called to trial for slander—cited before the spiritual court, as we should say, for defamation: 'but whosoever shall say, Moreh,' 'thou atheistic wretch!' ἔνοχος ἔσται εἰς τὴν γέενναν τοῦ πυρός, will betray a likelihood of incurring capital punishment—come to the gallows, as we say—through violence of disposition, and of his body being cast into Gehenna, and exposed to its 'fire' and 'worm.' Our Lord's object in the use of these several figures is simply to *exemplify* the danger of unrestrained anger. So also his *illustration* of the evil of unrestrained concupiscence, &c. (Matt. v. 27-31) is to be understood. The principle on which he reasons is no doubt applicable to future punishment; namely, that self-denial, at any cost, is preferable to the evils incurred by the neglect of it.—J. F. D.

TOWNS. We use the term in its general signification, so as to embrace any assemblage of inhabited human dwellings of larger size than a hamlet or a village, the only way in which we can speak with correctness and advantage.

Towns are a natural result of the aggregative principle in human nature. Necessity led the early races of men to build their towns on lofty spots, where, with the aid of the natural advantages of the ground, they could easily protect themselves against beasts of prey and human foes. A town, and a stronghold or fort, would thus be originally identical. As population increased and agriculture spread, so some degree of security came, which permitted the inhabitants of the castle to diffuse themselves over the hill-side, and take up their abode in the valley, and by the side of the stream that lay nearest their acropolis; still the inhabitants kept at no great distance from the centre of strength, in order not to be deprived of its protection. The town, however, would thus be enlarged, and as the necessity for self-defence still existed, so would the place soon be surrounded with walls. Thus would there be outer and inner bulwarks, and in some sort two species of community—the townspeople, who tilled the ground and carried on trade, and the soldiers, whose business it was to afford protection: these two, however, in the earliest stages of civilization were one, the peasant and tradesman taking arms when the town was put in danger. How early towns were formed cannot be determined by any general principle: they were obviously a work of time. The primary tendency in population was to diffuse itself. Aggregation on particular spots would take place at a later period. When then Cain is said to have built a city (Gen. iv. 17), the first city (Enoch, so called after Cain's son), we have evidence which concurs with other intimations to show that it is only a partial history of the first ages that we possess in the records of the book of Genesis. In the time of the Patriarchs we find towns existing in Palestine which were originally surrounded with fortifications, so as to make them 'fenced cities.' In these dwelt the agricultural population, who by means of these places of strength defended themselves and their property from the nomad tribes of the neighbouring desert, who then, as they do now, lived by plunder. Nor were works of any great strength necessary. In Palestine at the present day, while walls are in most parts an indispensable protection, and agriculture can be advantageously prosecuted only so far as sheltered by a fortified town, erections of a very slight nature are found sufficient for the purpose, the rather because the most favourable localities offer themselves on all sides, owing to the natural inequality of the ground. The ensuing ex-

tract (*Travels in Egypt and the Holy Land*, &c., by Rev. S. Olin, New York, 1843, vol. ii. 423, 424) throws light on the subject:—'Continuing our route over a well-wooded limestone ridge, we came in sight of a large village which occupied a hill directly before us, while farther to the right, and upon a still loftier summit, was a ruinous castle of great extent, and from its commanding position, of very imposing appearance. The intervening region and that to the right of the castle, was undulating, fertile, and cultivated. We were nearly an hour in reaching the base of the isolated mount, which we passed to the right through a deep ravine that divides it from another lofty hill on the east, which is also surmounted with what appeared to be a ruined fortress. We passed round the acropolis to the north side, where we obtained a good view of this ancient stronghold. It embraces the entire summit of the mountain within a massive wall, which, as well as the several towers by which it was strengthened, is in a very dilapidated state. A little further west another summit is occupied by ruinous bulwarks and towers. The large village, called from the castle, Tibinin, or Chibinin, lies in a valley between these two fortified hills. East of the principal works is another elevation surmounted with ruins, and farther in the same direction, beyond the narrow valley we had just traversed, is a fourth summit, the one I have already referred to as having ruins upon its top.' From this striking passage, an illustration may be gathered of the force of our Lord's language, when he describes his disciples as a city set on a hill, that cannot be hid (Matt. v. 14). Jesus has been thought to refer in this description to some particular city, and the modern Safet has been fixed on and is still traditionally regarded as the place which he had in view. This town, now in a ruinous state,—one of the four cities—Hebron, Tiberias, Jerusalem, Safet, regarded as especially holy—occupies the summit of the highest mountain in Galilee, and one of the highest in the Jewish territories. It is conspicuously seen from a great distance in all directions but the north. The town does not occupy the precise summit of the rounded mountain, but rather the sloping ground immediately below it, a military castle or citadel having been erected upon the highest point. The hilly position of towns sometimes caused the dwellings to be curiously placed relatively to each other. Thus, in Safet, the traveller, as he sits on his horse in the midst of the town, finds the smoke of a kitchen rise from the earth near him, and by a little survey ascertains that the smoke issues from the mouth of a chimney standing a few inches above the ground at his horse's feet: that he and his animal are in reality on the flat roof of a house; and that, as the hill-side is nearly perpendicular, the inhabitants have judged it the easiest mode of building to place the houses one upon another.

Of the ancient method of building in towns and cities we have no accurate knowledge, any farther than we may gather information from the ruins which still lie on the soil of Palestine. But these ruins can afford only general notions, as, though they are numerous, and show that the Land of Promise was thickly peopled and highly flourishing in its better days, the actual remains of ancient towns are to be ascribed to different and very distant periods of history. The crusades left many strongholds which are now in a state of dilapidation; but the crusades are of modern days compared with the times of the Saviour, which themselves are remote from the proper antiquity of the nation. The law of sameness, however, which prevails so rigidly in Eastern countries, gives us an assurance that a modern town in Palestine may be roughly taken as a type of its ancient predecessors.

At the gates of the town, which were frequented as the court of justice, the town's market, the rendezvous for loungers, newsmongers, pleasure-seekers, there were wide open places of greater or less dimensions, where on important occasions the entire population assembled for consultation or for action (Neh. viii. 1, 16; 2 Chron. xxxii. 6; 2 Sam. xxi. 12; Job xxix. 7; 2 Kings vii. 1). The streets were not so narrow as streets generally are in modern Oriental towns. Their names were sometimes taken from the wares or goods that were sold in them: thus in Jer. xxxvii. 21, we read of 'the bakers' street.' The present bazaars seem to be a continuation of this ancient custom. The streets of Jerusalem at least were paved (Joseph. *Antiq.* xx. 9. 7); but the streets of most cities of Palestine would not need paving, in consequence of the rocky nature of the foundations on which they lay. Herod the Great laid an open road in Antioch with polished stone (Joseph. *Antiq.* xvi. 5. 3; comp. 1 Kings xx. 34). In regard to the earlier periods, we find only a notice to the effect that Solomon caused the fore-court of the temple to be laid with flags. Besides paved streets, Jerusalem before the exile had an extensive system of watercourses or aqueducts, which seems to have been rendered necessary by the natural supply having been limited to one or two spots in the immediate vicinity. This subject has been handled by Robinson, and more fully by Olin (ii. 139, sq.: see Isa. vii. 3; xxii. 9; 2 Kings xx. 20; Joseph. *Antiq.* xviii. 3. 2). Other cities were contented with the fountains whose existence had probably led to their formation at the first.

Palestine underwent constant changes in regard to its towns, from the earliest ages; one consequence of which is, that there are names of towns that belong exclusively to certain eras. The period of the Roman domination gave existence, as to structures of great splendour, so to many towns and fortified places. Gal'ee was especially rich in towns and villages, which, according to Josephus (*Vita*, § 45), amounted in all to the number of 204. The names of the Palestinian cities, for the most part, have meaning, reference being made to the nature of the locality, as Rama, Ain, Jericho, Bethlehem, Gibeon, Mizpah. Many are compounds formed with the aid of one of the following words, בית (house), עיר or קרית (city), חצר (court), עמק (valley), אבל (a grass plot), באר (well), עין (fountain), כפרי (hamlet). To distinguish cities that bore the same name, the name of the tribe was added. In 'the latter days,' especially under the Herods, it was the fashion to give to ancient towns new Greek names, as Diospolis, Neapolis, Sebaste, Caesarea, Tiberias. Jerusalem, at a later period, was denominated Ælia Capitolina. These innovations indicated the slavish disposition of the age, and were tokens of the bondage in which the nation was held; as

much as the incorporation of the name בעל (Baal), at a much earlier era, pointed out the Canaanitish origin of a place, and gave reason to think that it was originally addicted to idolatrous worship. The population of towns cannot now be ascertained with any degree of accuracy, for the materials are not only scanty and disconnected, but in a measure uncertain. Respecting the government of towns, we have no detailed information relating to the ante-exilian periods, though it was probably in the hands of the elders; and in Deut. xvi. 18, Moses commands, 'Judges (Hengstenberg translates the word 'scribe' or 'writer,' *Authentie des Pent.* i. 450) and officers shalt thou make thee in all thy gates, and they shall judge the people with just judgment.' In the post-exilian era magistrates occur under the name of Council (Joseph. *Vita*, § 14, 34, 61, 68), at whose head was a president or mayor (Joseph. *Vita*, § 27; *De Bell. Jud.* ii. 21. 3).—J. R. B.

TRACHONITIS (Τραχωνῖτις; טרכון) was, in the days of the Herodian dynasty, the name of the country situated between the Antilibanus and the Arabian mountains south of Damascus and west of the provinces of Batanæa, Gaulonitis, Ituræa, and Auranitis, under about the thirty-third degree of northern latitude. Eusebius, in his *Onomasticon*, *s. v.*, Ituræa, places Trachonitis between Bostra and Damascus Plin. (*Hist. Nat.* v. 16; Strabo, xvi. pp. 755, 756). This country had its name from the Greek τραχών = τραχὺς καὶ πετρώδης τόπος, *a rough and rocky place*. Josephus sometimes uses the term Τράχων, instead of Trachonitis (*Antiq.* xiii. 16. 5; *De Bell. Jud.* iii. 3. 5). Strabo mentions two Τραχῶνες, which, according to Burckhardt (*R. I.* 115), are the summits of two mountain-ranges on the road from Mecca to Damascus, near the village El Kessue. Trachonitis is at present called *Ledja*. The eastern range of mountains is now called *Dshebel Manai*, and contains great caverns in chalk rocks. The southern portions of the ancient Trachonitis, or the present Ledja, consist chiefly of basalt rocks. A Greek inscription found at the modern Missema, one league and a half from Shaara, proves that the surrounding country was part of Trachonitis (Burckhardt's *R. I.* 204, 510; comp. Berghaus, *Annalen*, i. 556, ii. 453). The inhabitants of Trachonitis are called by Ptolemy (v. 15) οἱ Τραχωνῖται Ἄραβες, *the Trachonite Arabians*, and are described by Josephus (*Antiq.* xv. 10. 1) as much addicted to robbery. A very famous commander of banditti named Zenodorus is mentioned by Strabo and Josephus. Under him the robbers gave so much trouble, and made the country so unquiet, that Augustus was induced to put Trachonitis under the authority of Herod the Great; who forthwith took such vigorous and decided measures as soon brought the district into a state of security.

After the death of Herod the Great, Trachonitis belonged to the tetrarchy of his son Philip (Joseph. *Antiq.* xvi. 4. 6, and 9. 1; xviii. 5. 6; *De Bell. Jud.* ii. 6. 3). At a later time it belonged to Herod Agrippa (*Antiq.* xx. 6. 1; *De Bell. Jud.* iii. 3. 5; Philo, *Opp.* ii. 593; comp. Raumer's *Palästina*, p. 158, sq.; Winer's *Real-Wörterbuch*, under Trachonitis.—C. H. F. B.

TRANCE (תַּרְדֵּמָה; Sept. ἔκστασις, Vulg. *sopor;* Gen. ii. 21, &c.), a supernatural state of body and mind, the nature of which has been well conjectured by Doddridge, who defines it—'Such a rapture of mind as gives the person who falls into it a look of astonishment, and renders him insensible of the external objects around him, while in the meantime his imagination is agitated in an extraordinary manner with some striking scenes which pass before it and take up all the attention.' He refers to some extraordinary instances of this kind mentioned by Gualtperius in his note on Acts x. 10 (*Family Expositor*, in loc., note g.) Stockius also describes it as 'A sacred ecstasy, or rapture of the mind out of itself, when the use of the external senses being suspended, God reveals something in a peculiar manner to prophets and apostles, who are then taken or transported out of themselves.' The same idea is intimated in the English word trance, from the Latin '*transitus*,' the state of being carried out of oneself. The Greek word, ἔκστασις, denotes the effect of any passion by which the thoughts are wholly absorbed. In the Sept. it corresponds to שמה, 'a wonderful thing' (Jer. v. 30); and תמהון, 'astonishment' (Deut. xxviii. 28). In the New Testament it represents the absorbing effects of admiration (Mark v. 42; Luke v. 26; Acts iii. 10); of terror, Mark xvi. 8. The Hebrew word is used to denote the prophetic ecstasy. Thus 'the deep sleep' which fell upon Adam during the creation of Eve (Gen. ii. 21), and during which, as appears from the narrative, he was made aware of the transaction, and of the purport of the attendant circumstances (21-24) [Marriage]. It is applied again to the 'deep sleep' which fell upon Abraham (xv. 12, ἔκστασις, *sopor*), during which the bondage of his descendants in Egypt was revealed to him. Possibly all the accounts recorded in that chapter occurred in 'vision' (1-12), which ultimately deepened into the trance (12-21). Compare verses 5, 12, where he is said to have seen the stars, though the sun was not gone down. The apparent objection, that Abraham was 'brought forth abroad' to see the stars, is only of the same nature with others explained in the Art. Temptation of our Lord. Some, perhaps many things recorded in Scripture, belong to this supernatural state of trance, which are not expressly referred to it. See the long list of such supposed instances in Bishop Law's *Consideration of the Theory of Religion* (pp. 85, 86, Lond., 1820). Elsner includes in this list the star seen by the wise men (*Comment. on Matt.* ii. 9, 10, &c.). In the narrative which Balaam gives of himself our translators have rightly added the words 'into a trance' after the word 'falling.' The incident of the ass speaking to him, &c., is also understood by many learned Jews and Christians to have occurred in a vision (Bishop Law, *u. s.*). To the same mode of divine communication must be referred the magnificent description in Job iv. 13-21. Persons receiving it often fall to the earth. 'Abraham fell on his face, and God talked with him' (Gen. xvii. 3, &c.; 1 Sam. xix. 24, Hebrew, or margin; Ezek. i. 28; Dan. viii. 18; x. 15, 16; Rev. i. 10, 17). It is important to observe that in all these cases the visions beheld are also related; hence such cases are distinguished from a mere deliquium animi. We find cases of prophetical trance in the New Testament as that of St. Peter: 'he fell into a trance' (or rather a 'trance fell upon him,'

ἐπέπεσεν ἐπ' αὐτὸν ἔκστασις), *during* which he 'saw a vision,' which is therefore distinguished from the trance (Acts x. 10; comp. St. Paul's trance, xxii. 17; 2 Cor. xii. 2, &c.). The reality of the vision is established by the correspondence of the *event*. The nearest approach we can make to such a state is that in which our mind is so occupied in the contemplation of an object as to lose entirely the consciousness of the body—a state in which the highest order of ideas, whether belonging to the judgment or imagination, is undoubtedly attained. Hence we can readily conceive that such a state might be supernaturally induced for the higher purpose of revelation, &c. The *alleged* phenomena of the Mesmeric trance and clairvoyance, if they serve no higher purpose, may assist our conceptions of it.—J. F. D.

TRANSFIGURATION. One of the most wonderful incidents in the life of our Saviour upon earth, and one so instructive that we can never exhaust its lessons, is the Transfiguration. The apostle Peter, towards the close of his life, in running his mind over the proofs of Christ's majesty, found none so conclusive and irrefragable as the scenes when he and others were with him in the holy mount, as eye witnesses that he received from God the Father honour and glory, when there came such a voice to him from the excellent glory, 'This is my beloved Son, in whom I am well pleased.' If we divide Christ's public life into three periods—the first of miracles to prove his divine mission, the second of parables to inculcate virtue, and the third of suffering, first clearly revealed and then endured, to atone for sin—the transfiguration may be viewed as his baptism or initiation into the third and last. He went up the mount of transfiguration on the eighth day after he had bidden every one who would come after him take up his cross, declaring that his kingdom was not of this world, that he must suffer many things, and be killed, &c.

The mount of transfiguration was long thought to have been Mount Tabor; but as this height is fifty miles from Cæsarea Philippi, where Jesus last taught, it is now supposed to have been a mountain much less distant, namely, Mount Hermon. It may have been neither of them, and nothing forbids us to imagine that it was that exceeding high mountain where the devil showed our Saviour the kingdoms of the world and the glory of them in a moment of time. The only persons thought worthy to ascend this mount of vision were Peter, James, and John, three being a competent number of witnesses, or they being more faithful and beloved than any others. Whatever the reason was, these three disciples appear on more than one other occasion as an elect trimvirate—as at the raising of Jairus's daughter, and during our Lord's agony in the garden. The disciples, in all probability, ascended the mountain anticipating nothing more than that Jesus, as at other times (Luke vi. 12), would continue all night in prayer to God. When the curtains of night closed around them, they were so worn out by their labours as to sink down in sleep, till startled from their slumbers by the glory of the Lord shining round about them; for as Jesus prayed, the fashion of his countenance was altered, 'and his face did shine as the sun, and his raiment was white as the light.' And behold there talked with him two men, which were Moses and Elias, who appeared in glory, and spake of his decease, which he should accomplish at Jerusalem. Peter's words, 'Master, it is good for us to be here,' are a natural expression of rapture; and his proposal to build three tabernacles indicated his desire both to keep his Lord from going down to Jerusalem to die there, and to prolong the blessedness of beholding with open face the glory of God. Such is at least a plausible interpretation of his language, while 'he wist not what to say.' It is worthy of remark that Peter had no thought of tents for himself and his companions, his only desire being that the beatific vision might endure for ever. While he yet spake, behold, a bright cloud overshadowed them—not a black cloud, such as that which rested on Mount Sinai, but a cloud glistening as the Shechinah, when the glory of the Lord filled the tabernacle, or as the cloud that filled the house of the Lord when the priests were come out of the holy place. 'And behold a voice out of the cloud'—that is, out of the long-established symbol of Jehovah's presence—'which said, This is my beloved Son, in whom I am well pleased: hear ye him. And when the disciples heard it, they fell on their face, and were sore afraid'—like Daniel and all others who have felt themselves entranced by revelations of God. 'And Jesus came and touched them, and said, Arise, and be not afraid,'—showing such gentleness as proved him to be fitly named the Lamb of God. How long the glorification of our Saviour continued it were vain to inquire; but it appears from the narrative of Luke that he did not lead down his disciples till the day following that on which they had ascended the height. As they descended he bade his disciples keep what they had seen a secret till after his resurrection,—doubtless because the whole vision, to those who had not seen it, would have been a rock of offence, appearing as an idle tale. He also opened their eyes to see that Elias whom they looked for in the future was to be sought in the past, even in John the Baptist, who was clothed with his spirit and power.

The final causes of the transfiguration, although in part wrapped up in mystery, appear to be in part plain. Among its intended lessons may be the following:—First, to teach that, in spite of the calumnies which the Pharisees had heaped on Jesus, the old and new dispensations are in harmony with each other. To this end the author and the restorer of the old dispensation talk with the founder of the new, as if his scheme, even the most repulsive feature of it, was contemplated by theirs, as the reality of which they had promulgated only types and shadows. Secondly, to teach that the new dispensation was superior to the old. Moses and Elias appear as inferior to Jesus, not merely since their faces did not, so far as we know, shine like the sun, but chiefly because the voice from the excellent glory commanded to hear *him*, in preference to them. Thirdly, to gird up the energies of Jesus for the great agony which was so soon to excruciate him; as in Gethsemane itself an angel appeared unto him strengthening him; as the Holy Ghost descended upon him in the likeness of a dove before his temptation in the wilderness; and as when the devil left him angels came and minis-

tered unto him. Fourthly, to comfort the hearts of the disciples, who, being destined to see their master, whom they had left all to follow, nailed to a cross, to be themselves persecuted, and to suffer the want of all things, were in danger of despair. But by being eye-witnesses of his majesty they became convinced that his humiliation, even though he descended into the place of the dead, was voluntary, and could not continue long. Gazing at the glorified body of their Master, they beheld not only a proof but an express and lively image of his resurrection, ascension, and exaltation above the heavens. As in a prophetic vision, they beheld him seated upon clouds, and seen by every eye as the Judge of the quick and the dead, or enthroned in heaven amid the host of his redeemed. Henceforth they ceased not questioning one another, what the rising from the dead should mean. Fifthly, to teach that virtue will not allow supine contemplation, but demands the exercise and exertion of our several powers. To some this lesson may seem a refinement, but it is ingeniously deduced by Schleiermacher from the fact that while Peter yet spake in his extasy, the vision in which he longed to wear out his life vanished away: as if the aim were to teach us that when we have ascended the mount of vision on the cherub-wings of contemplation, even if we burn to dwell there in a perpetual sweetness, yet we must shun all monastic seclusion, that we may mingle among men and do them good; even as the great Exemplar would not let his chosen repose in rapturous musings, and had scarcely come down from the mountain of his glory before he recommenced his works of usefulness.

The transfiguration is so fine a subject for the painter that we are not surprised to learn that it employed Raphael's best hours, and that his portraiture of it is confessedly the highest of all efforts of pictorial genius. The original work, still unfaded, though more than three centuries have passed over it, hangs in the Vatican. A copy of it in mosaic, on a colossal scale, and which might pass with most men for the original, fills the head of the left aisle in St. Peter's at Rome. The design is as simple as the artless narrative of the Evangelists. In the centre, and in raiment white as the light, is He, the fashion of whose countenance was altered. On either hand, and floating on the air, appear in glory Moses and Elias. Beneath, the disciples, overshadowed by a bright cloud, their hands shielding their dazzled eyes, are fallen on their faces, sore afraid of the voice proceeding out of the cloud, but catching glimpses of Jesus transfigured before them. Then, just below the brow of the hill, the only son torn by a spirit, foaming, gnashing his teeth, and pining away, is brought to the disciples that they may cure him, and they cannot. The scribes are cavilling—physicians close the books they have consulted in vain—the disciples confess their impotence—the mother and sister of the possessed are half frantic—and the multitude have no hope; but the vision above is on the point of bursting upon them, to amaze them all at the mighty power of God. Some say that the wild eyes of the boy, rolling in agony, are already catching a glimpse of his Redeemer transfigured in glory on high.

If, as is often said, no picture is worth seeing which can be copied in language, what infatuation were it to think of sketching the attitude, grouping, colouring, and expression of the figures in a painting which shines unrivalled and inimitable!—J. D. B.

TRIAL. [PUNISHMENT.]

TRIBES (מַטּוֹת, שְׁבָטִים; φυλαὶ, *tribus*) is the name of the great groups of families into which the Israelitish nation, like other Oriental races, was divided. The modern Arabs, the Bedouins, and the Berbers, and also the Moors on the northern shores of Africa, are still divided into tribes. The clans in Scotland are also analogous to the tribes of the ancient Israelites. The division of a nation into tribes differs from a division into castes, since one is a division merely according to descent, and the other superadds a necessity of similar occupations being prevalent among persons connected by consanguinity. There occurs, however, among the Israelites a caste also, namely, that of the Levites. In Gen. xlix. the tribes are enumerated according to their progenitors; viz., 1, REUBEN, the first-born; 2, SIMEON, and 3, LEVI, instruments of cruelty; 4, JUDAH, whom his brethren shall praise; 5, ZABULON, dwelling at the haven of the sea; 6, ISSACHAR, the strong; 7, DAN, the judge; 8, GAD, whom a troop shall overcome, but who shall vanquish at last; 9, ASHER, whose bread shall be fat; 10, NAPHTALI, giving goodly words; 11, JOSEPH, the fruitful bough; 12, BENJAMIN, the wolf; all these were originally the twelve tribes of Israel. In this enumeration it is remarkable that the subsequent division of the tribe of Joseph into the two branches of Ephraim and Manasseh, is not yet alluded to. After this later division of the very numerous tribe of Joseph into the two branches of Ephraim and Manasseh had taken place, there were, strictly speaking, thirteen tribes. It was, however, usual to view them as comprehended under the number twelve, which was the more natural, since one of them, namely, the caste of the Levites, did not live within such exclusive geographical limits as were assigned to the others after they exchanged their nomadic migrations for settled habitations, but dwelt in towns scattered through all the other twelve tribes. It is also remarkable that the Ishmaelites as well as the Israelites were divided into twelve tribes; and that the Persians also, according to Xenophon (*Cyropædia*, i. 2, 4 sq.), were similarly divided. Among other nations also occur ethnological and geographical divisions, according to the number twelve. From this we infer that the number twelve was held in so much favour that, when possible, doubtful cases were adapted to it. An analogous case we find even at a later period, when the spiritual progenitors of the Christian δωδεκάφυλον, or the apostles, who were, after the death of Judas, the election of Matthias, and the vocation of Paul, really thirteen in number, but were nevertheless habitually viewed as twelve; so that wherever, during the middle ages, any division was made with reference to the apostles, the number twelve, and not thirteen, was adopted, whether applied to the halls of theological libraries, or to the great barrels of costly wines in the cellar of the civic authorities at Bremen. Concerning the arrangement of these tribes on their march through the wilderness, in their encampments around the

ark, and in their occupation of the land of Canaan, see the cognate articles, such as EXODUS, ENCAMPMENT, GENEALOGIES, LEVITES, WANDERING, and the names of the several tribes. We confine ourselves here to a few words about that inexhaustible source of theologico-historical charlatanism, the LOST TRIBES, on which there have been written so many volumes that it would be difficult to condense the contradictory opinions advanced in them within the limits of a moderate article. Suffice it to say, that there is scarcely any human race so abject, forlorn, and dwindling, located anywhere between the Chinese and the American Indians, who have not been stated to be the ten tribes which disappeared from history during and after the Babylonian captivity. If the books written on the Ten Tribes contained much truth it would be difficult to say WHERE THEY ARE NOT. And although these books, according to our opinion, generally bear stronger evidence of their writers' activity of imagination than the strength of their judgment, they lead, not individually but collectively, to some truth, if they only impress us with the fact that it is difficult to say where the ten tribes are not. This result the author of *Coningsby* should have borne in mind, when he lately tracked rather than traced Hebrew-Arabian blood in all men of European celebrity.

However, among the various works about the lost tribes, the following, although written diffusely, contains quite as much probability as any: *Our Israelitish Origin; or, British Christians a Remnant of the true Israelites; with a Reply to the Objections of the Rev. E. Bickersteth*, by J. Wilson, a witness of the word of Prophecy; London, 1844. We refer here especially to the ninth and tenth lectures contained in this book, in which the author endeavours to show that the Saxons proceeded from Central Asia to the west of Europe, and that in them the promises given to Israel are fulfilling.

The truth, however, of the matter seems rather to be as follows. After the division of the Israelites under Jeroboam and Rehoboam into the two kingdoms of Judah and Israel, the believers in whom the feelings of ancient theocratic legitimacy and nationality predominated, and especially the priests and Levites, who were connected by many ties with the sanctuary at Jerusalem, had a tendency to migrate towards the visible centre of their devotions; whilst those members of the tribes of Judah and Benjamin who had an individual hankering after the foreign fashions adopted in Samaria, and the whole kingdom of Israel, had a tendency externally to unite themselves to a state of things corresponding with their individuality. After the political fall of both kingdoms, when all the principal families connected with the possession of the soil had been compelled to emigrate, most Israelites who had previously little feeling for theocratic nationality gradually amalgamated by marriages and other connections with the nations by which they were surrounded; while the former inhabitants of the kingdom of Judah felt their nationality revived by the very deprivation of public worship which they suffered in foreign lands. Many of the pious members of those tribes which had formerly constituted the kingdom of Israel, undoubtedly joined the returning colonies which proceeded by the permission of the Persian monarchs to the land of their fathers. However, these former members of the other tribes formed so decidedly a minority among the members of the tribe of Judah that henceforth all believers and worshippers of Jehovah were called יְהוּדִים, Ἰουδαῖοι, JUDÆI, JEWS. Thus it came to pass that the best, although smaller, portion of the ten tribes amalgamated with the Jews, some of whom preserved their genealogies till after the destruction of Jerusalem; while the larger proportion of the ten tribes amalgamated with the Gentiles of Central Asia, to whom they probably imparted some of their notions and customs, which again were, in a state more or less pure, propagated to distant regions by the great national migrations proceeding from Central Asia. We are glad to find that this our historical conviction has also been adopted by the most learned among the Jews themselves. We may refer to *Allgemeine Geschichte des Israelitischen Volkes*, by Dr. J. M. Jost, Berlin, 1832, vol. i. p. 407 sq., 416 sq.

That the name of THE JEWS became general for all Israelites who were anxious to preserve their theocratic nationality was the more natural, since the political independence of the Ten Tribes was destroyed long before that of the kingdom of Judah.—C. H. F. B.

TRIBUTE (מַס *mas*, from *masas*, 'to melt' or 'liquify;' Gr. *φόρος*), a tax which one prince or state agrees, or is compelled, to pay to another, as the purchase of peace, or in token of dependence.

The Hebrews acknowledged no other sovereign than God; and in Exodus xxx. 12, 15, we find they were required to pay tribute unto the Lord, to give an offering of half a shekel to 'make an atonement for their souls.' The native kings and judges of the Hebrews did not exact tribute. Solomon, indeed, at the beginning of his reign levied tribute from the Canaanites and others who remained in the land and were not of Israel, and compelled them to hard servitude (1 Kings ix. 21-23; 2 Chron. viii. 9); but the children of Israel were exempted from that impost, and employed in the more honourable departments and offices of his kingdom. Towards the end of his reign, however, he appears to have imposed tribute upon the Jews also, and to have compelled them to work upon the public buildings (1 Kings v. 13, 14; ix. 15; xi. 27). This had the effect of gradually alienating their minds, and of producing that discontent which afterwards resulted in open revolt under Jeroboam, son of Nebat. 'Thy father made our yoke grievous,' said the Israelites to Rehoboam; 'now, therefore, make thou the grievous service of thy father and his heavy yoke which he put upon us lighter, and we will serve thee' (1 Kings xii. 4).

The Israelites were at various times subjected to heavy taxes and tributes by their foreign conquerors. After Judæa was reduced to a Roman province, a new poll of the people and an estimate of their substance were taken by command of Augustus, in order that he might more correctly regulate the tribute to be exacted (Joseph. *Antiq.* xvii. 15). This was a capitation-tax levied at so much a head, and imposed upon all males from 14, and all females from 12 up to 65 years of age (Ulpian, *Digest. de Censib.* lib. iii.; Fischer, *De Numism. Census*).

To oppose the levying of this tribute Judas the Gaulonite raised an insurrection of the Jews, asserting that it was not lawful to pay tribute to a foreigner, that it was a token of servitude, and that the Jews were not allowed to acknowledge any for their master who did not worship the Lord. They boasted of being a free nation, and of never having been in bondage to any man (John viii. 33). These sentiments were extensively promulgated, but all their efforts were of no avail in restraining or mitigating the exactions of their conquerors.

The Pharisees who sought to entangle Jesus in his talk, sent unto him demanding whether it was lawful to give tribute unto Cæsar or not; but knowing their wicked designs he replied, 'Why tempt ye me, ye hypocrites?' 'Render unto Cæsar the things which are Cæsar's, and unto God the things that are God's.'

The apostles Peter and Paul severally recommended submission to the ruling powers, and inculcated the duty of paying tribute, 'tribute to whom tribute is due' (Rom. xiii. 1-8; 1 Peter ii. 13).—G. M. B.

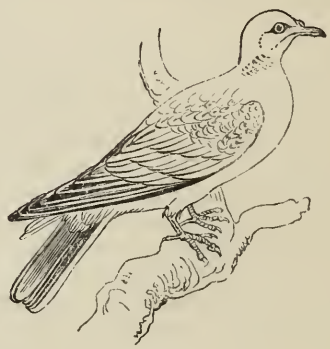
TRIBUTE-MONEY. The money collected by the Romans in payment of the taxes imposed upon the Jews. The phrase may apply to money of any description, coined or uncoined. The piece shown to our Saviour at his own request was a Roman coin, bearing the image of one of the Cæsars, and must have been at that time current in Judæa, and received in payment of the tribute in common with other descriptions of money. There is no reason to suppose that the tribute was collected exclusively in Roman coins, or that the tribute-money was a description of coin different from that which was in general circulation [Money].—G. M. B.

TROAS (Τρωάς), more fully Alexandria-Troas, a city of northern or Lesser Mysia, in Asia Minor, situated on the coast at some distance southward from the site of Troy upon an eminence opposite the island of Tenedos (Strabo, xiii. p. 593; Plin. *Hist. Nat.* v. 33). Paul was twice at this place (Acts xvi. 8, 9; xx. 6; 2 Cor. ii. 12; 2 Tim. iv. 13). The name Troas, or Troad, strictly belonged to the whole district around Troy. Alexandria-Troas is represented by the present Eski-Stamboul, and its ruins are now concealed in the heart of a thick wood of oaks, with which the country abounds (Pococke, pt. iii. 153; Richter, *Wallfahrten*, p. 462).

TROGYLLIUM (Τρωγύλλιον), a town and promontory on the western coast of Asia Minor, opposite Samos, at the foot of Mount Mycale (Strabo, xiv. p. 636). It is mentioned in Acts xx. 15.

TROPHIMUS (Τρόφιμος), a disciple of Ephesus, who accompanied St. Paul into Judæa, and was the innocent cause of the dangers which the apostle there encountered; for having been recognised by some Jews of Asia Minor, and seen in company with Paul, they took occasion to accuse Paul of having brought Greeks into the temple (Acts xx. 4; xxi. 29). His name does not again occur till after, seemingly, the first imprisonment of Paul. In one of the ensuing journeys he remained behind at Miletus sick (2 Tim. iv. 20). This circumstance is regarded as furnishing a strong fact to show that Paul was twice imprisoned at Rome; for Trophimus, in the first passage to Miletus (Acts xx. 15), was not left behind, but proceeded to Judæa; after which we do not lose sight of Paul for one day, and know that he was not again at Miletus *before* his first imprisonment at Rome.

TRUMPET. [Musical Instruments.]



TRUMPETS, FEAST OF. [Festivals.]

TRYPHENA and TRYPHOSA (Τρύφαινα καὶ Τρυφῶσα), female disciples at Rome, who laboured to extend the Gospel and to succour the faithful (Rom. xvi. 12). Their history is unknown; but, from their names, they were probably sisters.

TUBAL (תּוּבַל; Sept. Θοβέλ), a son of Japhet, and a people descended from him (Gen. x. 2; Isa. lxvi. 19; Ezek. xxvii. 13; xxxii. 26; xxxviii. 2, 3; xxxix. 1), supposed to have been settled in Asia Minor near the Euxine [Nations, Dispersion of.]

TUBAL-CAIN (תּוּבַל קַיִן, *scoriarum faber;* Sept. Θόβελ), son of Lamech and Zillab, to whom the invention of the art of forging metals is ascribed in Gen. iv. 22 [Smith].

TURTLE-DOVE (תּוֹר *Tur*, or *Thor;* Gr. τρυγών; Lat. *Turtur*) occurs in Gen. xv. 9; Lev. i. 14; v. 7, 11, &c.; Luke ii. 24.

528.

The birds of this subgenus are invariably smaller than pigeons properly so called; they are mostly marked with a patch of peculiarly coloured scutelated feathers on the neck, or with a collar of black, and have often other markings on the smaller wing-covers. The species *Columba Turtur*, with several varieties merely of colour, extends from the west of Europe through the north of Africa, to the islands south of China. The turtle-dove of Palestine is specifically the same; but there is also a second, we believe local: both migrate further south in winter, but return very early; when their cooing voice in the woods announces the spring. In the rites of the Hebrew law, full-grown or old turtle-doves might be offered in pairs, but only גּוֹזָל (*gozal*) the young of pigeons not full grown. They were the usual offering of the poor, a circumstance, Bochart remarks, indicating the humble station of the Virgin Mary, since at her purification she offered a pair of turtle-doves instead of a lamb. This, however, was the usual practice on that and sundry other occasions: indeed, so constantly was either one or other species wanted, that dealers in doves and turtle-doves abounded within the precincts of the temple, and had an overseer appointed to superintend what concerned them.—C. H. S.

TYCHICUS (Τυχικὸς·ὁ Ἀσιανὸς) is the name of an assistant and companion of the Apostle Paul. The name has nearly the same signification which we find in the Hebrew Gad, and in the Latin *Felix*, or *Fortunatus*. Tychicus was a native of Asia, who accompanied Paul on his third missionary journey (Acts xx. 4), and was, at a later period, the bearer of Paul's letter from Rome to the Colossians. Paul styled him a beloved brother, faithful minister, and fellow-servant in the Lord, who should declare all his state unto the Colossians, to whom he was sent that he might know their estate and comfort their hearts (Col. iv. 7, 8). For a similar purpose Tychicus was sent to the Ephesians also (Eph. vi. 21, 22; 1 Tim. iv. 12), and employed in various missionary journeys (Tit. iii. 12). According to tradition, Tychicus was made bishop of Chalcedon.—C. H. F. B.

TYPE (Gr. τύπος), *derivatively* signifies the print or mark which is made by beating Thus, in John xx. 25, τὸν τύπον τῶν ἥλων, which, literally translated, is 'the *type* of the nails.'

Again, it denotes a model or example, placed before us for imitation (see Phil. iii. 17; 1 Thess. i. 7; 2 Thess. iii. 9; 1 Tim. iv. 12; Titus ii. 7; 1 Pet. v. 3; ii. 21; Acts xxiii. 25; Rom. vi. 17).

The word is used also by physicians to designate the particular form which diseases assume: hence Galen wrote a work entitled Περὶ τῶν τύπων. But in its *theological* sense the best definition perhaps is that which Heb. x. 1 supplies: *a type is a shadow of good things to come*, or, as the apostle elsewhere expresses it (Col. ii. 17), 'a shadow of things to come; but the body is of Christ.' Adopting this definition as the correct one, we proceed briefly to point out the different *types* by which God was pleased in various ages to adumbrate the *person* and *work* of the Redeemer. It would be beside our present purpose to inquire as to the reasons why Jehovah developed his plan of human redemption in a gradually progressive form—by visions, dreams, voices, inspirations, impulses of his spirit, and by miracle. It is enough for us to know that he actually did speak (Heb. i. 1) 'at sundry times and in divers manners to the fathers.'

In tracing out *who* and *what* typified or shadowed forth Christ and his salvation under the antediluvian, patriarchal, and Mosaic dispensations, we must be careful not to substitute the suggestions of our own imaginations for the intimations of Scripture. We must endeavour to learn the mind of God as to what actually constitutes a type, either by the express declarations of Scripture, or by the obvious analogy which subsists between things under the Gospel and its antecedent dispensations. *Thus guarding ourselves*, we may notice the various types by which God was pleased, at all times, in a sense, to preach the Gospel to mankind. 1. Before the law, Adam, Enoch, Noah, Melchizedec, Abraham, Isaac, and Joseph were eminently typical of Christ. Again, under the law, Moses, Joshua, Samson, David, Solomon, Elijah, Elisha, Jonah, Zerubbabel, and Joshua the high priest, were, *in many points*, singularly types of Christ.

2. The first-born, the Nazarites, prophets, priests, and kings, were *typical orders of persons*.

3. Under the head of *things typical* may be noticed: Jacob's ladder, the burning-bush, the pillar of cloud and fire, the manna, the rock, and the brazen serpent.

4. *Actions typical* were: the deliverance out of Egypt, passage of the Red sea, sojourn in the wilderness, passage over the Jordan, entrance into Canaan, and restoration from Babylon.

5. *Rites typical* were: circumcision, various sacrifices, and sundry purifications.

6. *Places typical* were: the land of Canaan, the cities of refuge, the tabernacle, and the temple.

The above types were designed to shadow forth Christ and the blessings of his salvation; but there were others also which pointed at our miseries without him. There were ceremonial uncleannesses; the *leprosy*, for instance, was a type of our natural pollution; and Hagar and Ishmael a type of the covenant of works.

As there must be a similarity or analogy between the type and the antitype, so there is also a disparity or dissimilitude between them.

It is not in the nature of type and antitype that they should agree *in all things;* else, instead of similitude, there would be *identity*. Hence the apostle, whilst making Adam a type of Christ, yet shows how infinitely the latter excelled the former (1 Cor. xv. 47). So the priests of old were types of Christ, though he infinitely excelled them both as to his own person and as to the character of his priesthood (see Heb. vii., viii., ix., and x.). Chrysostom observes (*Hom.* 61, *in Gen.*) that there must be more in the type than in the antitype. Hence the distinction must be observed between *total* and *partial* types. This distinction Œcumenius also draws, in commenting on vii. Heb. p. 829. He says: 'Ο τύπος οὐ κατὰ πάντα ἶσος ἐστὶ τῇ ἀληθείᾳ (ἐπεὶ καὶ αὐτος ἀλήθεια εὑρίσκεται, καὶ ταυτότης μᾶλλον, ἢ τύπος), ἀλλ' εἰκόνας ἔχει τινὰς καὶ ἰνδάλματα:—'A type does not express that which it represents in every minute particular, for then instead of similitude there would be identity, but it contains certain outlines and assimilations of the antitype.'

Cyril of Alexandria in cap. vi. *Amos* p. 315, also observes on this subject: 'Ο τύπος οὐκ ἀλήθεια, μόρφωσιν δὲ μᾶλλον τῆς ἀληθείας εἰσφέρει:—A type is not the very truth itself, but its representation.

Did the confined limits of this article permit, it would be at once both easy and interesting to trace out how conspicuously the wisdom and goodness of God are displayed in adapting different modes of instruction to the state and condition of his creatures in all ages; and how his divine purposes, dimly portrayed by types, were gradually developed from the moment the first promise of salvation was given till the advent of that Messiah, who was the theme of all the prophets, and the substance of all the shadows under each successive dispensation (See on this interesting subject *Tropologia*, by Rev. B. Keach, pp. 225—237; Suicer, *Thesaur.* vol. ii. p. 1337; *Types of the Old Testament*, by Sam. Mather; *Christ Revealed*, by J. Taylor, D.D.; also M'Ewen, *On the glory and fulness of Christ revealed.*—J. W. D.

TYRANNUS (Τύραννος), a sophist or rhetorician of Ephesus, who kept one of those schools of philosophy and eloquence so common at that period. St. Paul preached for two years daily in his school after quitting the synagogue (Acts xix. 9). This proves that the school was Greek,

not Jewish. It does not appear whether Tyrannus was himself a convert or not; for it may be that he let to the apostle the house or hall which he used: but it is more pleasant to suppose that he was a convert, and that the apostle was hospitably entertained by him and obtained the use of the hall in which he himself taught.

TYRE. Besides its antiquity, manufactures, colonies, and commerce, the city of Tyre claims attention as frequently mentioned in biblical history, and still more on account of the prophecies of its overthrow, and their exact fulfilment. Its Hebrew name, צור *Tsôr* or *Tsur*, which means a *rock*, was probably derived from its being at first founded for purposes of defence on a rocky hill. Our word Tyre and its Latin form Tyrus, which are used interchangeably (indifferently) in the English version of the Scriptures, as well as its Greek form Τύρος, are only slightly changed from טרא, the Aramæan form of the original Hebrew name.

The original position of Tyre was on the eastern coast of the Mediterranean, about midway between Egypt and Asia Minor, near the northwestern frontier of Palestine. As it was a colony of Zidon, Isaiah, by a well-known Hebraism, styles it (xxiii. 12) '*daughter of Zidon*,' and as it was founded before the records of history, or, as some say, 240 years before the building of Solomon's temple, Isaiah also speaks (xxiii. 7) of its '*antiquity of ancient days*.' A defensible location, which was also favourable to commerce, combined with other circumstances to make the daughter surpass the mother city, becoming the metropolis of Phœnicia, a mart of nations, and the planter of colonies.

As early as the eleventh century before the advent of Christ, the Tyrians had become famous for skill in the arts. Apart from the statement that the territory of Asher extended to theirs (Josh. xix. 29), the first notice of them in the Scriptures is, that about 1142 B.C. (2 Sam. v. 11), their king Hiram sent cedar-trees to Jerusalem, and workmen who built David a house. A generation later, when Solomon, preparing to build the temple, sent to the same monarch for similar assistance, he said to him (1 Kings v. 6), 'Thou knowest that there is not among us any that can skill to hew timber like unto the Sidonians.' He also (1 Kings vii. 13) sent and fetched Hiram out of Tyre, a widow's son, filled with cunning to work all works in brass. At nearly the same period, the Sidonians, of whom the Tyrians were a branch, were often alluded to in Homer as artists of everything elaborate and beauteous. In subsequent ages, every king coveted a robe of Tyrian purple, and Ezekiel (xxvii. 16) speaks of 'the multitude of wares of its making,'—emeralds, purple, and broidered work, and fine linen, and coral, and agate.

The commerce of Tyre was commensurate with its manufactures. Situate at the entry of the sea, it became a merchant of the people for many isles. It was inhabited by seafaring men, and was styled by way of eminence 'the merchant-city,' whose merchants were princes, whose traffickers were the honourable of the earth (Isa. xxiii. 8). When the ships of Solomon sailed away to Ophir (1 Kings ix. 27), 'Hiram sent in the navy his servants, ship-men that had knowledge of the sea, with the servants of Solomon.' The Tyrians already adventured three years' voyages to Tarshish beyond the pillars of Hercules. In its vicinity they afterwards built Cadiz. Among their other colonies, whither 'their own feet carried them afar off to sojourn,' were Cyprus, Utica, and Carthage —the last so long the most formidable rival of Rome, the founding of which, so poetically treated by Virgil, is placed by antiquarians in the year B.C. 869. In the 27th chapter of Ezekiel, Syria, Persia, and Egypt, Spain, Greece, and every quarter of the ancient world, are portrayed hastening to lay their most precious things at the feet of Tyre, who sat enthroned on ivory, covered with blue and purple from the isles of Elishah; while the Gammadims were in her towers, hanged their shields upon her walls round about, and made her beauty perfect.

Near the close of the eighth century before the Christian era, Shalmaneser, the king of Assyria who captured Samaria, was led by cupidity to lay siege to Tyre. He cut off its supplies of water which aqueducts had furnished, but wells within the walls supplied their place; and at the end of five years he gave up his blockade as hopeless. At this crisis, or even earlier, an island half a mile from the shore was made a stronghold for the riches of the city: the water, to a nautical people, being the best bulwark against the Assyrians, who had no maritime power. The original city on the mainland was subsequently named Palaio-Tyrus, or Old Tyre.

The Tyrians were naturally proud of having successfully done battle with the mightiest king of the East, and for a time played a part in the ancient world like that which Venice played in the middle ages. Each was insular, colonial, and continental—its borders in the midst of the seas—the builders had perfected its beauty—every precious stone was its covering. Each was not only commercial and opulent, but a joyous city, a pleasant place of all festivity—dance, song, and harp.

It was against a city such as this, so confident, and to all appearance so justifiably confident, of sitting a queen for ever, that several prophets, particularly Isaiah and Ezekiel, fulminated the denunciations which Jehovah dictated. They prophesied that it should be overthrown by Nebuchadnezzar, that it should revive, but at length be destroyed and never rebuilt.

Before a generation had passed away, according to Josephus, Philostratus, and Seder Olam, Nebuchadnezzar came up, as had been predicted (Ezek. xxvi. 7-13), making a fort, casting a mount, and lifting up the buckler. At the end of thirteen years (about A.M. 3422) he took the city, at least that on the mainland, and Tyre was forgotten seventy years, as had been foretold by Isaiah (xxiii. 15). In the year B.C. 332 Tyre, which had again become a flourishing emporium for all the kingdoms of the world upon the face of the earth, 'and heaped up silver as the dust, and fine gold as the mire of the streets,' was assailed by Alexander the Great in the midst of his Oriental career of conquest. It is doubtful whether the city on the mainland had been rebuilt; if so, it yielded at once to the youthful conqueror. But the insular city sustained a siege of seven months, and was at length taken only by means of a mole, by which the island was turned into a peninsula, and rendered ac-

cessible by land forces. In constructing this mole Alexander made use of the ruins of the old city, and thereby fulfilled two prophecies. One was (Ezek. xxvi. 12), 'And they shall lay thy stones and thy timber and thy dust in the midst of the water.' The other was (ver. 21), 'And thou shalt be no more: though thou be sought for, yet shalt thou never be found again, saith the Lord God.' So utterly were the ruins of old Tyre thrown into the sea, that its exact site is confessedly undeterminable, although the ruins of nearly fifty cities near Rome, which perished almost 2500 years ago, testify that the extinction of every trace of a city is a sort of miracle. Moreover, Alexander laid Tyre in ashes: thus accomplishing the prediction of Zechariah (ix. 4), 'She shall be devoured with fire.' Besides, as ships from Tyre, out on a three years' voyage, returned to find that city razed to the ground which they had left and looked to find once more in the perfection of beauty, there is a significance in the prophecy of Isaiah not at first obvious (xxiii. 1, 14): 'Howl, ye ships of Tarshish; for it is laid waste, so that there is no house, no entering in. Howl, ye ships of Tarshish, for your strength is laid waste.'

The mole of Alexander has prevented Tyre from becoming insulated again. The revival of the city was long retarded by the rivalship of the newly-founded Alexandria, and by other causes, so that, although a ship in which Paul sailed was there to unlade her burden (Acts xxi. 3), Pliny, who wrote in the first century, after relating how great it had been, and that its ruins were nineteen miles in circuit, adds, 'at this day all its nobility consists in oysters and purple' (v. 17). But in the time of Jerome, the latter half of the fourth century, it had so far revived that he was embarrassed in commenting on Ezek. xxvi. 14, 'Thou shalt be built no more;' and at last interprets the meaning to be, that it should not again become an independent state, but remain subject to the Macedonian, Selencian, Roman, or some other power. But time was a better commentator, or has now made Sabbath-school children better commentators than St. Jerome.

The possession of Tyre was often afterwards contested as if it were a key to unlock a kingdom; it was beleaguered more than once during the crusades, was the burial-place of the German Emperor Barbarossa, and, remaining in European hands till 1291, was almost the last place in Asia which the chivalry of the West yielded to the Moslems. Its fortifications, which were almost impregnable, were demolished, and it has never since been a place of consequence. Travellers of every succeeding century describe it as a heap of ruins, broken arches and vaults, tottering walls and towers, with a few starveling wretches housing amid the rubbish. A chief of the Druses, indeed, attempted to rebuild it two hundred years ago, but in vain. Maundrell, in 1694, found 'not so much as one entire house left.' In Pococke's day (1738) it was a place of export for grain, but contained only two or three Christian families and a few other inhabitants. In 1766 a part of the peninsula was walled, and a town named Sûr founded, which still exists, and exports tobacco, cotton, wool, and wood. Yet its population has never exceeded three thousand souls. It cannot compete with its neighbour Beirût; its harbour is navigable only by boats, and becomes more and more shallow every year. It was half ruined by an earthquake in 1837. One of the best accounts of its present appearance is given by the American traveller Robinson, who spent a Sabbath there in 1838 (*Biblical Researches*, iii. 395): 'I continued my walk,' says he, 'along the shore of the peninsula, part of which is now unoccupied, except as "a place to spread nets upon," musing upon the pride and fall of ancient Tyre. Here was the little isle, once covered by her palaces and surrounded by her fleets: but alas! thy riches and thy fame, thy merchandise, thy mariners and thy pilots, thy caulkers, and the occupiers of thy merchandise that were in thee,—where are they? Tyre has indeed become like "the top of a rock." The sole tokens of her more ancient splendour—columns of red and grey granite, sometimes forty or fifty heaped together, or marble pillars—lie broken and strewed beneath the waves in the midst of the sea; and the hovels that now nestle upon a portion of her site present no contradiction of the dread decree, "Thou shalt be built no more."

The downfall and permanent desolation of Tyre is one of the most memorable accomplishments of prophecy which the annals of the world exhibit. The sins which sealed its ruin were, in the words of the sacred writers, these: 'Because that Tyrus hath said against Jerusalem, Aha, she is broken that was the gates of the people; she is turned unto me; I shall be replenished now she is laid waste' (Ezek. xxvi. 2). 'Because thy heart is lifted up, and thou hast said, I am a God, I sit in the seat of God, in the midst of the seas' (xxviii. 2). 'The children also of Judah and the children of Jerusalem have ye sold unto the Grecians that ye might remove them far from their border' (Joel iii. 6).—J. D. B.

TZAPHTZAPHA (צַפְצָפָה) occurs only in Ezek. xvii. 5, and is usually translated 'willow-tree:' 'He took also of the seed of the land, and planted it in a fruitful field; he placed it by great waters, and set it as a *willow-tree*.' Celsius, however, thinks that the word means *locus planus*, *planities*, although he at the same time gives all the evidence for the former meaning. First, the Rabbins consider it to mean a tree, 'et quidem *salix*;' R. Ben Melech says it is 'species salicis, Arabibus *Tziphtzaph* dicta;' while 'Avicenna hoc tit. dicit *Tziphtzaph* esse *Chilaf*.' Travellers, also, give us similar information. Thus Paul Lucas: 'Les Arabes le nomment *safsaf*, qui signifie en Arabe *saule*.' Rauwolf (*Travels*, i. ch. 9), speaking of the plants he found near Aleppo, remarks, 'There is also a peculiar sort of willow-trees, called *safsaf*, &c.: the stems and twigs are long, thin, weak, and of a pale yellow-colour; on their twigs here and there are shoots of a span long, like unto the Cypriotish wild fig-trees, which put forth in the spring tender and woolly flowers, like unto the blossoms of the poplar-tree, only they are of a more drying quality, of a pale colour, and a fragrant smell. The inhabitants pull of these great quantities, and distil a very precious and sweet water out of them.' This practice is still continued in Eastern countries as far as Northern India, and was, and probably still is, well known in Egypt. The species which is called *chilaf* by the Arabs is

called *Salix Ægyptiaca* by botanists; and it is probable that it is also found in Syria, and may be the above *safsaf*. Indeed, it was found by Hasselquist on his journey from Acre to Sidon, as he mentions it as S. Egyptiaca, *v.* S. Safsaf [Orebim].—J. F. R.

529. [Salix Ægyptiaca.]

TZEBI (צְבִי; Sept. Δορκάς). Dorcas is applicable to the whole group of Gazelles properly so called. We may here notice that Ant. Subgutturosa may have been the typical animal whence Thisbe, in the Babylonian legend of Pyramus and Thisbe, took her name; and that the Cervus Dama, or fallow-deer, said to have been seen in Palestine by Hasselquist, was the same species, or Cervus barbarus, which, when young, has horns slightly palmated, and a speckled livery [Antelope].—C. H. S.

TZERI (צֳרִי), or Zeri, also Zori, translated *balm*, occurs in Gen. xxxvii. 25; xliii. 11; and in both passages is mentioned along with *lot* and *necoth*, with the addition in the second of *botnim* and *shekadim*. In Gen. xliii. 11, Jacob thus addresses his sons: 'Take of the best fruits in the land in your vessels, and carry down the man a present: a little balm (*tzeri*), and a little honey (*debash*), spices (*tragacanth*) [Necoth] and myrrh [*ladanum;* Lot], nuts [Botnim] and almonds' [Shekadim]. In the separate articles on these substances some general observations have been made, which will equally apply to *tzeri*. This, therefore, like the other substances intended as presents, or forming articles of commerce, must have been a produce of Gilead, or of the northern parts of Syria, and would thus be suitable for conveying to Egypt on the occasion referred to. Balm or balsam [Basam; Baal-shemen], we have seen, was an Arabian and Abyssinian plant cultivated in one or two places of Palestine, but at a later period than the transactions recorded in the book of Genesis. As we have before said, 'It is probable, therefore, that some other tree producing a balsamic secretion is intended in the above passages, where the word *balm* has been considered the equivalent of *tzeri*.' But it is difficult to determine exactly what substance is intended: we may, however, adduce the other passages in which the word is found. Ezekiel (xxvii. 17) mentions *tzeri* along with 'wheat of Minnith, and Pannag, and honey, and oil,' as merchandise which Judah brought to the market of Tyre. That it was possessed of medicinal properties appears from Jer. viii. 22: 'Is there no *balm* in Gilead?' 'Go up into Gilead and take *balm*' (xlvi. 11). 'Take *balm* for her pain, if so she may be healed' (xli. 8). It has been variously translated—cera, theriaca, cedri resina, stacti unguenta, medicamenta, resina, colophonia. Celsius and others state that *zuroo* in Arabic signifies *mastic*, and that *tzeri* therefore is this resin: in which he is followed by Sprengel. In the Arabic and English Dictionary

فرو

is translated the gum of an Arabian tree, which is called *kamkam*, and said to be found in the mountains of Yemen. In the writer's MS. Materia Medica, *khushkhush*, one of the names of the poppy, is given as the synonyme of *zuroo;* but this may be a mistake of transcribers. It is curious, however, that Avicenna mentions *zuroo* as a well-known gum brought to Mecca, as being odorous, and having the power of laudanum.

فري *zuree*, moreover, means 'bleeding profusely,' as a vein, or according to Rosenmüller, 'fluid or liquid in general, which equally applies to oil of every kind.'

We are unable, however, distinctly to connect any of the above names with any product of Gilead. But there is a product which, though little known to Europeans, is highly esteemed by the Arabs, according to the testimony of several travellers. This is the oil of the *zackum* tree, sometimes called the Jericho plum-tree, also the Jerusalem willow, oleaster or wild olive-tree, or Elæagnus angustifolius of Linnæus. The fruit of one species is much esteemed in Persia, and known by the name of *zinzyd*. The Syrian fruit is ovoid, but oblong, fleshy, having an olive-shaped nut with a kernel containing oil. The oil is separated by pressure and floating it on water, and a further portion by boiling. The Arabs are described by Maundrell and Mariti as holding it in high esteem, and as preferring it to the balsam of Mecca, because they found it very efficacious against contusions and wounds. 'Formerly, if not now, when the Christian caravan advanced towards Jericho it used to be met by crowds of Arab women, offering the salutary oil for sale to the pilgrims, in small leather bottles' (Kitto, *Palestine*, ccxxiii.). This is supposed by some to be the Myrobalanus of Pliny and other ancient writers; but by some the fruit of Melia azadirachta, and by others again that of Hyperanthera Moringa, or H. aptera, are considered the true Myrobalanus of the ancients. Of the last it is said, 'Oleum, e cotyledonibus expressum, in omni oriente usitatum, ea propter prædicatur, quod non facile rancorem contrahat.' But, as we are unable to

connect any of these with the *tzeri* of Scripture, we need not further pursue this subject [Agrielaia].—J. F. R.

TZIYIM (צִיִּים). Bochart, inclined to recognise this word as a general term denoting cats, or any kind of wild beasts that frequent dry places, discovered an incongruity when it is opposed to a single species, אִיִּים *Iyim*, which he translates 'Thoes' (Isa. xxxiv. 14, and Jer. l. 39). Both words are meant, it seems, to imitate the cry of animals; and if he be right in regarding the first as expressive of the mewing or screaming of wild cats, with such other animals as the ancients included in the feline tribe, and we now class among viveridæ and mustelidæ, each including several genera, more or less represented by species residing in and around Palestine; we then find the opposition of the two words strikingly just, provided that, instead of the single *Thoes* of Bochart, we make *Iyim* include also the various wild canidæ (dogs) of the same region, amounting to at least twelve species, without including two hyænas [Weasel].—C. H. S.

U.

ULAI (אוּלַי; Sept. Οὐβάλ), a river which flowed by Susa [Shushan] into the united stream of the Tigris and Euphrates. It is mentioned in Dan. viii. 2. It is called by Pliny Eulæus (*Hist. Nat.* vi. 81), but is described by Greek writers under the name of Choaspes (Herodot. v. 49; Strabo, xv. p. 728), and is now known by the name of Kerah, called by the Turks Karasu. This river is formed by the junction of many streams in the province of Ardelan, in Kurdistan. It runs through the plain of Kermanshah, and being greatly increased in magnitude by the junction of two small rivers, proceeds with a furious course towards Khuzistan, receiving numerous tributaries in its passage. It passes on the west of the ruins of Shus [Susa: see Shusan], and enters the Shat-ul-Arab about twenty miles below Korna (Kinneir, *Geog. Mem. of the Persian Empire*, pp. 96, 97).

UNCLEAN BIRDS. The species which the law forbade the Israelites to use for food (Levit. xi. and Deut. xiv.) include bats, because in the most ancient classifications of animals, all flying animals were considered to belong more to birds than quadrupeds; in other respects the list is confined nearly to the same genera and species as are at the present day rejected in all Christian countries. There are only twenty named; but in the text the additional words 'of the like kind' clearly imply sometimes even more than genera, and the explanations of the law superadded by human authority indicate several which do not occur in either list. Such are, for example (as stated in the Chaldee Paraphrase), all long-legged waders or stilters, and cursorial birds that have the hind-toe or hallux wanting: no doubt an extension of the prohibition of the ostrich; but in this roamer including most bustards, plovers, &c., and giving rise to nice distinctions 'among those gallinaceæ which are nearly allied to partridges, whose hind-toe is found gradually to be higher up the leg, and very much reduced in size, till it becomes altogether wanting. This gradation proceeds from the grouse species through the pterocles or gangas, until its total absence is observed in the turnix, as in the Andalusian or Spanish and the Gibraltar, which nevertheless are in other respects partridges or quails according to the systems of Linnæus and Latham:—

1.	נֶשֶׁר	*Neser*	Eagles.
2.	פֶּרֶס	*Peres*	Gypæta, or bearded Vulture.
3.	עָזְנִיָּה	*Ozniya*	Osprey—Bacha.
4.	דָּאָה, רָאָה	*Daah, Raah*	Glede—Black Kite.
5.	אַיָּה, דַּיָּה	*Ayah, Dayah*	Vulture—Merlin and allied species.
6.	עֹרֵב	*Oreb*	Raven—Crow and Congeners.
7.	יַעֲנָה	*Yaanah*	Ostrich.
8.	תַּחְמָס	*Tachmas*	Night Hawk, or Goat-sucker.
9.	שַׁחַף	*Shacaph*	Cuckoo—Gull.
10.	נֵץ	*Netz*	Hawk and congeners.
11.	כּוֹס	*Chos*	Owl.
12.	שָׁלָךְ	*Shalach*	Caspian and Nilotic Tern.
13.	יַנְשׁוּף	*Yanshuph*	Owl (?), Night Heron.
14.	תִּנְשֶׁמֶת	*Tinshemeth*	Porphyrio.
15.	קָאַת	*Kaath*	Pelican.
16.	רָחָם	*Racham*	White Carrion Vulture Neophron.
17.	חֲסִידָה	*Chasidah*	Stork.
18.	אֲנָפָה	*Anaphah*	Heron—Plover and allied species.
19.	דּוּכִיפַת	*Dukiphah*	Hoopoo.
20.	עֲטַלֵּף	*Ataleph*	Bat.

We confess that if it were not for the influence which Rabbinical decisions have so long exercised upon the opinion of Christian Hebraists, we should have been greatly inclined to regard most of the names here enumerated as arranged in greater order of consimilarity than our versions admit, and as more typical of what we now would denominate families and genera than they appear to show. Every ornithologist who reviews this question with care will feel with Winer (*Biblisch. Real-Wörterbuch*), that, with certain exceptions, the proposed identifications cannot be regarded as claiming entire confidence.—C. H. S.

UNICORN. [Reem.]

UPHAZ (אוּפָז; Sept. Ὠφάζ), a country from which gold was obtained (Jer. x. 9; Dan. x. 5). It is generally supposed to be a corruption of אוֹפִר Ophir, which would require the change of only one letter, and there are other cases in which ר and ז are interchanged.

UPPER-ROOM. [House.]

UR, of the Chaldees, was the native place of the family of Abraham, whence he migrated first to Haran and then to Canaan (Gen. xi. 28, 31; xv. 7; Neh. ix. 7; Acts vii. 4). The Biblical narratives supply only indirect implications as to the locality intended. From these we conclude that it was land lying to the East of Canaan, and affording suitable pasture-grounds for a nomade race that had made some considerable progress in

civilization. And as the Chaldees were originally a tribe of mountaineers in the high lands of Armenia, in those parts must we look for Ur of the Chaldees. With this view the most recent geographical researches are substantially in agreement. Ritter, in the last volume of his profound, comprehensive, and invaluable work (*Erdkunde*, vii. 320, sq.), after a review of all that has been ascertained respecting the countries covered by the Euphrates and the Tigris, from their sources to their mouths, gives it as his opinion that Ur was a district identical with the modern pachalic of Urfa, to which there belong several districts, among others Rouha, which is the ancient Edessa. —J. R. B.

URBAN (Οὐρβανός), a disciple at Rome, and one of Paul's companions in labour (Rom. xvi. 9). Nothing is known of him; but his name shows him to have been a Roman.

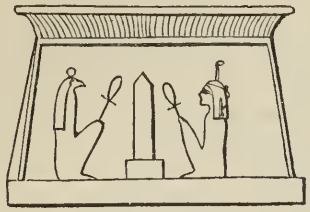
URIAH (אוּרִיָּה, *flame of Jehovah;* Sept. Οὐρίας), a Hittite, and therefore a descendant of the ancient inhabitants of Palestine, whose name occurs in the list of the 'worthies' or champions of king David, in whose army he was an officer. He was the husband of Bathsheba; and while he was absent with the army before Rabbah, David conceived and gratified a criminal passion for his wife. The king then directed Joab to send him to Jerusalem, but failing to make his presence instrumental in securing Bathsheba from the legal consequences of her misconduct, he sent him back with a letter directing Joab to expose him to the enemy in such a manner as to ensure his destruction. This the unscrupulous Joab accomplished; and David then took the widow into his own harem (2 Sam. xi.; xxiii. 39) [David; Bathsheba].

1. URIJAH (אוּרִיָּהוּ, *flame of Jehovah;* Sept. Οὐρίας), high priest of the Jews in the time of king Ahaz. He received from this young prince, who was then at Damascus, the model of an altar which had there engaged his attention, with orders to make one like it at Jerusalem. It was his duty to refuse compliance with this dangerous order; but he made such haste in his obedience that the altar was completed by the time Ahaz returned; and he afterwards went so far in his subservience as to offer upon this new and unauthorized altar the sacrifices prescribed by the law of Moses (2 Kings xvi. 10-12). He was probably not so fully aware as he ought to have been of the crime and danger involved in this concession to a royal caprice, being a transgression of the law which fixed the form of the Mosaical altar (Exod. xxvii. 1-8; xxxviii. 1-7): for he appears to have been in intention a good man, as he is one of the 'faithful witnesses' chosen by Isaiah (viii. 2) to attest one of his prophecies.

2. URIJAH, a prophet, son of Shemaiah of Kirjath-jearim in Judah, who, in the time of Jehoiakim, uttered prophecies against Judæa and Jerusalem of the same tenour as those which Jeremiah was commissioned to deliver. Menaced with death by the king, Urijah sought refuge in Egypt; but Judæa was at that time subject to Pharaoh-Necho, who had no interest in protecting a proscribed fugitive who foretold the conquests of the Babylonians. He was therefore delivered up on the demand of Jehoiakim, who put him to death, and ordered him to be buried dishonourably in one of the graves of the meanest of the people (Jer. xxvi. 20, 21).

URIM and THUMMIM (אוּרִים וְתֻמִּים; Sept. δήλωσις καὶ ἀλήθεια, &c.; Vulg., Doctrina et Veritas). The Hebrew words are generally considered to be plurales excellentiæ, denoting *light* (*i. e.* revelation) and *truth;* and as used by a metonymy for the things or modes whereby the revelation was given, and truth declared. They may, however, be *duals.* A similar view of their construction and meaning pervades the Sept. and Vulg. renderings, under some varieties of expression. There are two principal opinions respecting the Urim and Thummim. One is, that these words simply denote the four rows of precious stones in the breastplate of the high-priest, and are so called from their brilliancy and perfection; which stones, in answer to an appeal to God in difficult cases, indicated his mind and will by some supernatural appearance. Thus, as we know that upon each of the stones was to be engraven the name of one of the sons of Jacob, it has been conjectured that the letters forming the divine response became some way or other distinguished from the other letters. It has been conjectured by others that the response was given by an audible voice to the high-priest arrayed in full pontificals, and standing in the holy place with his face turned towards the ark. The other principal opinion is, that the Urim and Thummim were two small oracular images, similar to the Teraphim, personifying *revelation* and *truth,* which were placed in the cavity or pouch formed by the folds of the breastplate, and which uttered oracles by a voice. [Priest, *the breastplate;* Teraphim.] We propose simply to lay before the reader a statement of the facts connected with this obscure but interesting subject. It is remarkable that the first time the Urim and Thummim are mentioned in Scripture, they are referred to *as things already known.* After a *minute* description of the breastplate, which, as we have shown in Priest, was to differ in several particulars from that worn by the Egyptian priests, it is simply added, 'And thou shalt put in the breastplate of judgment, the Urim and the Thummim' (Exod. xxviii. 30). So indefinite, however, is the preposition אֶל, here translated 'in,' that it may also mean 'on' or 'near' (Sept. reads ἐπί). The Urim and Thummim are, however, here clearly distinguished from the breastplate itself, or from the four rows of gems, unless we can imagine that the breastplate should be so called before the gems, the essential part of it, were put into their place. We observe the like distinction made in the account of Aaron's consecration (Lev. viii. 8; comp. Ecclus. xlv. 10), and by Josephus (*Antiq.* viii. 3. 8), where he distinguishes the τὸ λογεῖον, or oracle, from the precious stones. So does the Samaritan text, which also states the Urim and Thummim to have been *made* on the occasion. We think the distinction indicated in these passages of Scripture sufficiently clear to withstand the inference which has been derived from comparing Exod. xxviii. 29, with 30, and Exod. xxxix. 8, &c., with Lev. viii. 8; namely, that the Urim and Thummim were identical with the gems in the breastplate. In Num. xxvii. 21, the word האורים

alone is used in a brief recapitulatory manner, and, no doubt, including the Thummim, or else, in the general sense of divine revelations, answers, &c., by this method (Sept. ἡ κρίσις τῶν δήλων ἔναντι κυρίου; comp. 1 Sam. xxviii. 6; Sept. ἐν τοῖς δήλοις; Vulg. *per sacerdotes*). The usual order is reversed in Deut. xxxiii. 8, where it is Thummim and Urim. The last mention of them occurs after the return of the captivity, when 'the Tirshatha' decreed that certain claimants to the rights of the priesthood, but who could not produce their ecclesiastical pedigree, should wait 'till there stood up a priest with Urim and with Thummim,' by whom their claim might be infallibly decided (Ezra ii. 63; Sept. τοῖς φωτίζουσι καὶ τοῖς τελείοις; Vulg. *sacerdos doctus atque perfectus;* Neh. vii. 65, ἱερεὺς φωτίσων, *sacerdos doctus et eruditus*). From these obscure statements of Scripture we naturally turn to Josephus, the professed antiquarian of his nation. He says, when intending to treat of the subject, that 'God declared beforehand by those twelve stones which the high-priest bore on his breast, and which were inserted into the breastplate, when they should be victorious in battle; for so great a splendour shone forth from them before the army began to march, that all the people were sensible of God's being present for their assistance, and that the breastplate left off shining two hundred years before he composed that book' (*Antiq.* iii. 8. 9; see Whiston's *Notes in loc.*). On the contrary, Philo, the learned contemporary of Josephus, represents the Urim and Thummim as two images of the two virtues or powers—δήλωσίν τε καὶ ἀλήθειαν. The full quotation is: 'Τὸ δὲ λογεῖον (the pectoral or breastplate); τετράγωνον, διπλοῦν κατεσκευάζετο, ὡσανεὶ βάσις, ἵνα δύο ἀρετὰς ἀγαλματοφορῇ (that they might carry the image of the two powers); δήλωσίν τε καὶ ἀλήθειαν' (*De Vita Mosis*, lib. iii. p. 152, t. 2, ed. Mangey). He also uses the following words (*De Monarch.* lib. ii. p. 821; *Opp.* vol. ii. p. 226), Ἐπὶ τοῦ λογείου διττὰ ὑφάσματα καταποικίλλει, προσαγορεύων τὸ μὲν δήλωσιν, τὸ δ' ἀλήθειαν. Of the two statements, that of Philo is best supported by certain external evidence, which will now be produced. It had been noticed by all the old commentators, that a remarkable resemblance existed between the Urim and Thummim of the Jewish high-priest, and the custom recorded by Ælian of the Egyptian archjudge, who was always a priest venerable for age, learning, and probity, and who opened judicial proceedings by suspending, by a gold chain hung round his neck (comp. Gen. xli. 42), an image made of a sapphire stone, which was called Ἀλήθεια, *i. e.* 'truth,' and with which Diodorus Siculus says he touched (προσθεῖτο) the party who had gained the cause. Certain traces of a similar custom among the Romans had also been adverted to, namely, that among the Vestal Virgins, at least she that was called Maxima, and who sat in judgment and tried causes, as the Pontifex Maximus did, wore a similar antepectorale (Lipsius, *De Vestal. et Vestal; Syntagma Ant. ap. Plant.* 1603, cap. ult.). But these resemblances among the Egyptians were considered to have been derived by them from the Jews, in consequence of their correspondence with them after Solomon's marriage with Pharaoh's daughter (Patrick on Exod. xxviii. 30). Subsequent discoveries, however, among the antiquities of Egypt lead to the conclusion that these resemblances belong to a much earlier period. Sir G. Wilkinson says the figure of Truth which the Egyptian arch-judge suspended from his neck, was, in fact, a representation of the goddess who was worshipped under the *dual* or double character of Truth and Justice, and whose name, Thmei, the Egyptian or Coptic name of Justice or Truth (compare the Greek θέμις), appears to have been the *origin* of the Hebrew Thummim—'a word,' he remarks, 'according to the Sept. translation, implying truth, and bearing a further analogy in its plural termination.' He also remarks that the word Thummim, being a plural or dual word, corresponds to the Egyptian notion of the '*two* Truths,' or the double capacity of this goddess. 'This goddess,' he says, 'frequently occurs in the sculptures in this double capacity, represented by two figures exactly similar, as in No. (530). It is,' he adds, 'further observable that the chief-priest of the Jews, who, before the election of a king, was also the judge of the nation, was alone entitled to wear this honorary badge. Does the *touch* of the successful



530. [Goddess of Truth and Justice.]

531. [Goddess of Truth and Justice.]

litigant with the figure, by the Egyptian arch-judge, afford any illustration of such passages as Isa. vi. 7, Jer. i. 9, Est. v. 2, or of those numerous instances in which touching is represented as the emblem or means of miraculous virtue? Our authority

for these Egyptian antiquities adds, that according to some the Urim and Thummim signify 'lights and perfections,' or 'light and truth'—which last presents a striking analogy to the two figures of Rê, *the sun*, and Thmei, *truth*, in the breastplate worn by the Egyptians (No. 532). Here Thmei

532. [Breastplate.]

is represented, as she is frequently, as a single figure wearing two ostrich feathers, her emblem, because all the wing-feathers of this bird were considered of equal length, and hence meant true or correct' (*Manners and Customs of the Ancient Egyptians*, ii. 27, &c.; v. 28, &c. London, 1842. See also other remarks on the dual offices of Thmei, in *Gallery of Antiquities*, selected from the British Museum by F. Arundale and J. Bonomi). Upon a view of the preceding facts, we incline to Mr. Mede's opinion, that the Urim and Thummim were 'things well known to the patriarchs,' as divinely appointed means of inquiring of the Lord (Gen. xxv. 22, 23), suited to an infantine state of religion; that the originals were preserved, or the real use, at least, among the Abrahamidæ, and at the reformation under Moses, were simply recognised; that the resemblances to them among the Egyptians were but imitations of this primeval mode of divine communication, as were the heathen auspices of similar means originally connected with the sacrifice of animals [Cain; Abel; Liver]. The speculations of learned Jews and Christians connected with this subject, may be seen in Winer's *Biblisch. Real-Wörterbuch*, Leips. 1835, art. 'Urim und Thummim;' or in Robinson's *Theological Dictionary*, London, 1816; and some of them in Cruden's *Concordance*. Dr. Prideaux maintains that the divine answer was given by an audible voice to the high-priests arrayed, and standing opposite to the ark (*Connection*, i. 123. &c.); but when David consulted the oracle by Abiathar (1 Sam. xxiii. 9, 11; xxx. 7, 8), the ark was at Kirjath-jearim, whereas David was in the one case at Ziklag, and in the other in the forest of Hareth. Jahn supposes that the answer was given by the words *yes* and *no* inscribed on two stones (a third being left blank for *no answer*) which the high-priest carried on his breastplate; and consequently that the Urim and Thummim was the sacred lot referred to in Prov. xvi. 33. The lot is cast (בחיק) into the *bosom;* but the whole judicial decision is of the Lord (comp. xviii. 18; *Archæol.* § 370). Michaelis also considers it as a lot, which was used in criminal cases to discover, not *convict* the criminal; for the confessions of the guilty are recorded in the only two instances of this kind mentioned in Scripture (Josh. vii. 14-18, and 1 Sam. xiv. 37-45). Observe the Hebrew or margin of ver. 41, in the last reference. He remarks that the discovery of an unknown murder was not left to these means (*Notes on Exod.* xxviii. 30, and *Laws of Moses*, art. 304). Braunius maintains the notion of Josephus as to the mode of the divine answer (*De Vestitu Sacer. Heb.*, ii. 20). Spencer maintains that of Philo (*De Legib. Heb.* lib. iii. Diss.ult.); but is opposed by Pocock (*On Hosea* iii. 4, p. 149). See also Buxtorf, *Historia Urim et Thummim*, in *Exercitt. ad Hist.* Basileæ, 1659; Jennings, *Jewish Antiquities*, i. 233; Witsius, *Ægyptiaca*, c. 10, &c. Winer also refers to Norris's *Archæologia*, or *Miscell. Tracts relating to Antiquity*, iv. No. 19; Schroeder, *Diss. de Urim et Thymmim*, Marb. 1744; Bellarmann, *Urim u. Thummim die ältesten Gemmen*, Berl. 1824; Stiebriz, *Diss. de Variis de Urim et Thummim Sententt.* Hal. 1753-4.—J. F. D.

USURY, an unlawful contract for the loan of money, to be returned again with exorbitant increase. By the laws of Moses the Israelites were forbidden to take usury from their brethren upon the loan of money, victuals, or anything else, not, it has been observed by Michaelis, as if he absolutely and in all cases condemned the practice, for he expressly permitted interest to be taken from strangers, but only out of favour to the poorer classes. In other words, he did not mean to represent that the taking of interest for the loan of money was in itself sinful and unjust; but as at that period the Israelites were comparatively a poor people and strangers to commerce, they borrowed, not with a view to profit but from poverty, and in order to procure the common necessaries of life. It would therefore have been a hardship to have exacted from them more than was lent. The Israelites were, however, permitted to take usury from strangers, from the Canaanites, and other people devoted to subjection. This was one of the many means they adopted for oppressing and ruining the Canaanites who remained in the land. After the return of the Jews from captivity, they were required by Nehemiah to 'leave off this usury,' and to restore to their brethren what they had exacted from them—'their lands, their vineyards, their olive-yards, and their houses; also the hundredth part of the money, and of the corn, the wine, and the oil' (Neh. v. 10, 11). Our Saviour denounced all extortion, and promulgated a new law of love and forbearance:—'Give to every man that asketh of thee, and of him that taketh away thy goods, ask them not again.' 'Love ye your enemies, and do good, and lend, hoping for nothing again' (Luke vi. 30, 35).

The practice of exacting an exorbitant rate of interest for the loan of money is condemned by all laws divine and human. It was first prohibited in England during the reign of Edward the Confessor; but that law is considered to have become obsolete, as in 1126 usury was forbidden only to the clergy, and in 1138 it was decreed by the Council, that 'such of the clergy as were usurers and hunters after sordid gain, and for the public employment of the laity, ought to be degraded.' In 1199, the last year of the reign of Richard I., the rate of interest for money was restricted to 10 per cent., which continued to be the market rate until the reign of Henry VIII. In 1311, Philip IV. fixed the interest that might be exacted in the fairs of Champagne at 20 per cent. James I. of Arragon, in 1242, fixed it at 18 per cent. In 1490 the rate of interest in Placentia was 40 per cent. Charles V. fixed

the rate of interest in his dominions at 12 per cent. In 1546 the rate in England was fixed at 10 per cent; in 1624 it was reduced to 8; in 1651 to 6; and in 1714 to 5 per cent., at which it remained until 1833. By 3 and 4 Will. IV., c. 98, bills not having more than three months to run were exempted from the operation of the laws against usury; and by the 1 Vic. c. 80, the exemption was extended to bills payable at twelve months. By the 2 and 3 Vic., c. 37, it was enacted that bills of exchange and contracts for loans or forbearance of money above 10*l.* shall not be affected by the usury laws. Five per cent. is still left as the legal rate of interest for money, unless it shall appear that any different rate was agreed upon between the parties.—G. M. B.

UZ (עוּץ; Sept. Αὐσίτις), a region and tribe named in Job i. 1; Jer. xxv. 20; Lam. iv. 21, now generally supposed to have been situated in the south of Arabia Deserta, between Idumæa, Palestine, and the Euphrates, called by Ptolemy (*Geog.* v. 19) Αἰσίται, unless the reading Ἀώσιται is to be restored [NATIONS, DISPERSION OF]. The tribe seems to have been descended from Uz, the son of Aram (Gen. x. 23), although it has been sometimes doubted whether its origin might not rather be referred to Huz, the son of Nahor (Gen. xxii. 21), or to Uz, the Horite, son of Dishan (Gen. xxxvi. 28).

UZAL (אוּזָל; Sept. Αἰβήλ), a descendant of Joktan, founder of one of the numerous tribes of Joktanidæ in Yemen (Gen. x. 27) [NATIONS, DISPERSION OF].

UZZAH (עֻזָּה, *strength;* Sept. Ὀζά), son of Abinadab, a Levite, who, with his brother Ahio, conducted the new cart on which the ark was taken from Kirjath-jearim to Jerusalem. When the procession reached the threshing-floor of Nachon, the oxen drawing the cart became unruly, and Uzzah hastily put forth his hand to stay the ark, which was shaken by their movements. For this the anger of the Lord smote him, and he died on the spot. This judgment appeared to David so severe, or even harsh, that he was much distressed by it, and becoming afraid to take the ark any farther, left it there, in charge of Obed-edom, till three months after, when he finally took it to Jerusalem (2 Sam. vi. 1-11). The whole proceeding was very irregular, and contrary to the distinct and far from unmeaning regulations of the law, which prescribed that the ark should be carried on the shoulders of the Levites (Exod. xxv. 14), whereas here it was conveyed in a cart drawn by oxen. The ark ought to have been enveloped in its coverings, and thus wholly concealed before the Levites approached it; but it does not appear that any priest took part in the matter, and it would seem as if the ark was brought forth, exposed to the common gaze, in the same manner in which it had been brought back by the Philistines (1 Sam. vi. 13-19). It was the duty of Uzzah, as a Levite, to have been acquainted with the proper course of proceeding: he was therefore the person justly accountable for the neglect; and the judgment upon him seems to have been the most effectual course of ensuring attention to the proper course of proceeding, and of checking the growing disposition to treat the holy mysteries with undue familiarity. That it had this effect is expressly stated in 1 Chron. xv. 2, 13.

UZZEN-SHERAH (אֻזֶּן שְׁאֵרָה; Sept. Ὀζὰν Σεηρά), a small city, founded by Sherah, the daughter of Ephraim (1 Chron. vii. 24).

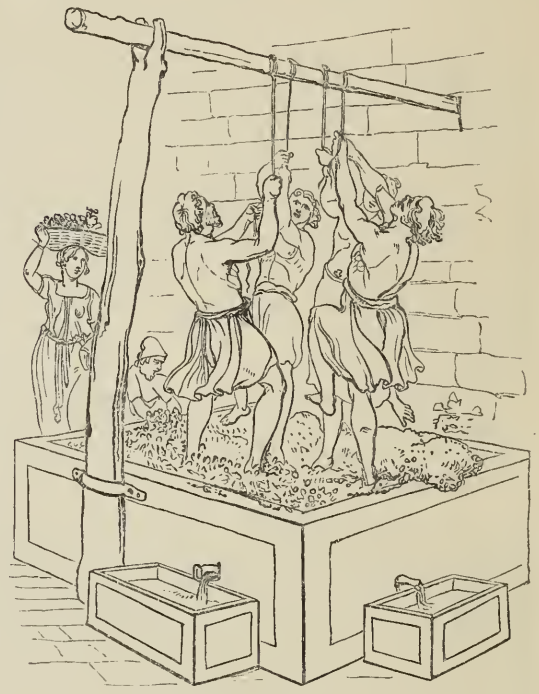
UZZIAH (עֻזִּיָּה, *might of Jehovah;* Sept. Ὀζίας), otherwise called AZARIAH, a king of Judah, who began to reign B.C. 809, at the age of sixteen, and reigned fifty-three years, being, with the sole exception of Manasseh's, the longest reign in the Hebrew annals. Uzziah was but five years old when his father was slain. He was sixteen before he was formally called to the throne: and it is disputed by chronologers, whether to count the fifty-two years of his reign from the beginning or from the end of the eleven intervening years. In the first half of his reign, Uzziah behaved well, and was mindful of his true place as viceroy of the Divine King. He accordingly prospered in all his undertakings. His arms were successful against the Philistines, the Arabians, and the Ammonites. He restored and fortified the walls of Jerusalem, and planted on them engines for discharging arrows and great stones; he organized the military force of the nation into a kind of militia, composed of 307,500 men, under the command of 2600 chiefs, and divided into bands liable to be called out in rotation; for these he provided vast stores of all kinds of weapons and armour,—spears, shields, helmets, breastplates, bows, and slings.

Nor were the arts of peace neglected by him: he loved and fostered agriculture; and he also dug wells, and constructed towers in the desert, for the use of the flocks. At length, when he had consolidated and extended his power, and developed the internal resources of his country, Uzziah fell. His prosperity engendered the pride which became his ruin. In the twenty-fourth year of his reign, incited probably by the example of the neighbouring kings, who united the regal and pontifical functions, Uzziah, unmindful of the fate of Dathan and Abiram, dared to attempt the exercise of one of the principal functions of the priests, by entering the holy place to burn incense at the golden altar. But, in the very act, he was smitten with leprosy, and was thrust forth by the priests. He continued a leper all the rest of his life, and lived apart as such, the public functions of the government being administered by his son Jotham, as soon as he became of sufficient age (2 Kings xv. 27, 28; 2 Chron. xxvi.).

V.

VALE; VALLEY. [PALESTINE; PLAIN.]

VASHTI (וַשְׁתִּי; Pers. *beauty;* Sept. Ἀστίν), the wife of Ahasuerus, king of Persia, whose refusal to present herself unveiled before the compotators of the king led to her degradation, and eventually to the advancement of Esther (Esth. i. 9-12) [AHASUERUS; ESTHER].



VAT. The three Hebrew words translated *wine-fat*, *wine-press*, and *vat*, are not well discriminated in the common version of the Bible; nor indeed, owing to their comparatively infre-

quent occurrence, are their original distinctions very obvious.

1. יקב *yekeb* or *yekev*, seems to denote *the fruit-house and wine-press* as a whole, including the press-vat and the receptacle for grapes intended to be preserved; just as 'barn' includes both the corn-heap and the threshing-floor. The word occurs sixteen times, in most of which it evidently denotes the entire building appropriated to vintage and orchard fruit (Deut. xvi. 13; Judges vii. 25; Isa. v. 2; Hos. ix. 2; Hag. ii. 16; Zech. xiv. 10). In Joel iii. 13; iv. 13, 'the *press* (gath) is full, the *fruit-vats* (yekeb) overflow.' This term is clearly distinguished from the *press*-vat in which the grapes were trodden. The apparent exceptions are Prov. iii. 10; Joel ii. 24; but these texts are capable of a better rendering. We translate the former—'Thy fruit-vats shall be heaped up with vintage-fruit.' Gesenius observes that 'neither the wine-press nor wine-vat can be said to burst from the quantity of wine made, the figure applying only to a cask or wine-skin' (*Lex.* by Prof. Robinson, p. 879); hence he considers פרץ, translated 'overflow,' as a verb of abundance—metaph. '*to be redundant with.*' The latter text is explained under Fruits. Olearius, in his *Persian Travels*, 1637, says, 'they have a way to keep grapes by wrapping them up in green reeds and hanging them up in the roof of their chambers' (lib. vi. p. 310). It is a mistake to suppose that the *yekeb* would be needed only during the vintage, since the grapes are capable of preservation all the year round, and it would therefore be useful as a store-house. Ellis W. Delesser, Esq., of Florence, thus describes to us the mode of keeping grapes adopted in Italy: 'The grapes are preserved in the state in which they are cut from the vine, from the time of the vintage till the month of March, by spreading them out on hurdles, taking care to leave sufficient space between the bunches, in lofty and dry outhouses' (*Private Letter*, 1844). Gesenius considers that the *yekeb* was 'the vat or receptacle into which the *must*, or new wine, flowed from the press גת;' probably impressed with the affinity between *yekev* and the root of '*excavate.*' But the fact is, that in the rudest and original states of society amongst the Orientals it was common to form storehouses by excavating, in which they kept their grain, grapes, and other fruit. The name *yekeb* might originally have referred to this, and would afterwards be retained in its application to more civilized methods and structures. By this interpretation Gesenius is compelled to give two distinct meanings to the word—1, the *wine-vat;* 2, the *grape-vat;* whereas, by adopting our more generic but inclusive definition, these and other difficulties are obviated.

2. פורה *poorah*, occurs but twice (Isa. lxiii. 3; Hag. ii. 16). It is derived from פור 'to break,' and hence is applied to the vat in which the grapes are crushed or broken. The vats were generally large and deep, requiring several persons to tread the grapes in them together. Hence to 'tread the *wine-press* alone' indicated extreme distress and desolation. Probably this term was applied only to the *wine*-vat, as distinguished from *Gathshemen*, the oil-press.

3. גת *gath*, occurs in five passages. It denotes *the vat* (ληνός) in which grapes and olives were trodden with the feet. These were either formed with stones and covered with insoluble cement, or were, in favourable localities, hewn out of the rock, forming raised reservoirs, into which the picked grapes were cast and trodden upon by men to press out the *must*, or new wine, which flowed out through gratings or spouts into large vessels placed outside (ὑπολήνιον). In the Egyptian paintings these vats are represented as having a temporary beam extended over them, with short ropes hanging down, by which the treaders held fast, and which greatly helped them in their labour, inasmuch as the beam acted as a lever in its rebound, lifting them up from the mass of grapes into which they sank.

533. [Wine-press.]

This work, although laborious, was performed with great animation, accompanied by vintage-songs, and with a peculiar shout or cry, and sometimes by instrumental music (Isa. xvi. 9, 10; Jer. xxv. 30; xlviii. 32, 33).

The ὑπολήνιον referred to in Mark xii. 1, was a vessel placed below the ληνός, or vat, as a receptacle for the new wine or oil. A place was digged for holding it, as well as sometimes for the vat in which the fruit was trodden (Mark xxi. 33).—F. R. L.

VEIL. There are several words denoting veil in the Hebrew Scripture, showing that, as at present, there were different kinds of this essential article of an Eastern female's attire. These are essentially of two descriptions. The first, and which alone offer any resemblance to the veils used among us, are those which the Eastern women wear in-doors, and which are usually of muslin or other light texture, attached to the head-dress and falling down over the back. They are of different kinds and names, some descending only to the waist, while others reach nearly to the ground. These are not used to conceal the face.

The veils mentioned in Scripture were, no doubt, mostly analogous to the wrappers of dif-

ferent kinds in which the Eastern women envelop themselves when they quit their houses. These

534. [In-door Veils.]

are of great amplitude, and, among the common people, of strong and coarse texture, like that in which Ruth carried home her corn (Ruth iii. 15). The word here is מטפחת *mitpachat*, and is rightly rendered 'veil' by our translators, although some lexicographers, not understanding Eastern veils, have considered it a mantle or cloak. The cuts will show how sufficient the out-door 'veils' of the Eastern women are for such a use. The word which indicates Ruth's ample and strong veil is that which also occurs in Isa. iii. 22, and is there translated 'mantle.' In the same verse we find רדיד *radid*, which denotes another kind of veil, probably of finer materials, from the manner in which it is mentioned in this text and in Cant. v. 7. The latter passage shows that it was an out-door veil, which the lady had cast around her when she went forth to seek her beloved. In Isa. iii. 22, this word is rendered by the old English and now obsolete term 'wimple,' which means a kind of hood or veil in use at the time the translation was made, and was not a

535. [Dress Veils, &c. In-door.]

bad representative of the original. The word occurs in Spenser:—

'For she had laid her mournful stole aside,
And widow-like sad *wimple* thrown away.'

'But (she) the same did hide
Under a veil that *wimpled* was full low;
And over all a black stole she did throw,
As one that inly mourned.'

Another kind of veil, called צמה *tzamah*, is named in Cant. iv. 1, 3; vi. 7, and Isa. xlvii. 2, in which places the word is rendered 'locks' in the Auth. Vers.; but in these texts, according to the best critics, we should read, 'Thou hast dove's eyes within thy veil;' not 'within thy locks.' 'Thy temples within thy veil;' not 'within thy locks.' 'Raise thy veil;' not 'uncover thy locks.' And as these passages refer mostly to the effect of the veil as connected with the head-dress, it may perhaps have been one of those veils which have been already described as a part of in-door dress; although it must be admitted that the expressions are almost equally applicable to some kind of street-veil. Of this the reader can judge from the engravings.

536. [Out-door Veils.]

Another veil, called צעיף *tzaiph*, is mentioned in Gen. xxiv. 65; xxxviii. 14, 19, under circumstances which show that it was one of those ample wrappers which women wore out of doors. The etymology, referred to the Arabic لَفَّ, *sub duplicavit*, suggests that it was 'doubled' over the shoulders, or folded about the body, in some peculiar manner which distinguished it from other veils. It is clear that it concealed the face, as Judah could not recognise Tamar when she had wrapped herself in a *tzaiph*.

VEIL OF THE TABERNACLE AND TEMPLE. [Tabernacle; Temple.]

VERMILION. [Purple.]

VERSE (פָּסוּק; στίχος, κόμμα; *cæsum*, *incisum*, *versus*, *versiculus*). An inquiry into the origin of the verses into which the printed text of the Bible in every language is at present divided, will not, we trust, prove uninteresting to the lovers of Biblical literature. As there was no distinct work on the subject of these divisions, the writer of this article attempted to supply the deficiency in a series of papers published in the year 1842 in the *Christian Remembrancer*, but the subject was discontinued, as not being found adapted to the present circumstances of that periodical. We shall here give the results of our inquiries, which are not fully developed in the papers referred to.

We shall first treat of the versicular divisions in *manuscripts* of the Bible, viz.:—

1. Members of rhythmical passages.
2. Logical divisions in the prose books, peculiar to the versions.
3. Logical divisions in the original texts.

The term *verse* (*versus*, from *verto*, 'to turn'), like the Greek στίχος, was applied by the Romans to lines in general, whether in prose or verse, but more particularly to the rhythmical divisions which generally commenced the line with a capital letter. The custom of writing poetical books in stanzas was common to the Greeks, Romans, Arabians, and Hebrews. The poetical books (viz. Job, Psalms, Proverbs, Ecclesiastes, and Canticles), in the oldest Hebrew MSS., as the Paris, Bodleian, Cassel, and Regiomontanus, are also thus divided, and the poetical passages in the historical books are still given in this form in our printed Hebrew Bibles. The Alexandrian MS., and those of the Italic version, are equally so written, and this division is found in the Psalterium Turicense, the Verona and St. Germain Psalters, and in Martianay's edition of Jerome. Athanasius applied the term στίχος to the passage in Ps. cxix. 62: 'I arose at midnight to praise thee for the judgment of thy righteousness;' and Chrysostom observes, on Ps. xlii., that 'each stich (στίχος) suffices to afford us much philosophy.' He also uses the term ῥῆσις in the same sense. The poetical books are called by Epiphanius the five στιχηρεῖς.

The following example is from the Alexandrian MS. (Brit. Mus.):—[Job iii.]

Απολοιτο η ημερα εν η εγεννηθην εν αυτῃ
Και η νυξ εν η ειπον ιδου αρσεν
Απενεγκοιτο αυτην σκοτος
Μη ειη εις ημερας ενιαυτου
Μηδε αριθμηθειη εις ημερας μηνων.

Let the day perish wherein I was born,
And the night wherein it was said, There is a man-child conceived.
As for that night, let darkness seize upon it;
Let it not be joined to the days of the year;
Let it not come into the number of the months.

It is not improbable that this division may have come from the original authors, which the nature of the subject, and especially the parallelism of the sentences, seems to require (Jebb's *Sacred Literature*). In the Cod. Alex. are equally divided in this manner the songs of Moses and of Hannah, the prayers of Isaiah, of Jonah, of Habakkuk, Hezekiah, Manasses, and Azarias; the Benedicite; and the songs of Mary (*theotokos*), Simeon, and Zachariah, in the New Testament, to which is added the Morning Hymn, or Gloria in Excelsis.

A similar metrical division is found in the Latin version. Jerome (*Ep. ad Sunn. et Fret.*) applies the term *versiculus* to the words 'grando et carbones ignis' (Ps. xviii. 13), assigning as a reason why the Greeks had not this versicle after the interposition of two verses, that it had been inserted in the Sept. from the Hebrew and Theodotion's version (with an asterisk). He also observes that it was not easy to reply to the question, why St. Paul, in citing the 13th Psalm, added eight verses not found in the Hebrew. Martianay remarks that these eight verses, which form but three divisions in the Latin Psalters, are thus found in an ancient Psalter of the κοινή and the Italic, in the Abbey of St. Germain des Pres:

Sepulchrum patens est guttur eorum
Linguis suis dolose agebant [Ps. v. 9].
Venenum aspidum sub labris eorum [Ps. cxl. 3].
Quorum os maledictione et amaritudine plenum est [Ps. x. 7].
Veloces pedes eorum ad effundendum sanguinem
Contritio et infelicitas in viis eorum
Et viam pacis non cognoverunt [Isa. lix. 7, 8].
Non est timor Dei ante oculos eorum [Ps. xxxvi. 1].

We need scarcely add that these eight stichs, although found in Justin Martyr, in the Vatican MS., and in the Vulgate, Arabic, and Ethiopic versions, are an early interpolation from Rom. iii. 15-18. They are wanting in the Cod. Alex.

Jerome observes (*Pref. to Job*) that the book of Job commences with prose, glides into verse, and again ends with a short *comma* in prose from the verse 'Idcirco me reprehendo, et ago pœnitentiam in cinere et favilla' (the form assumed also by the text of the oldest Hebrew MSS.). He adds that there were 700 or 800 verses wanting in the old Latin version of this book, and makes mention of 'three short verses' in Ezek. xxi. and Isa. lxiii. That a stichometrical arrangement pervaded the whole Latin Bible is further evident from the *Speculum Scripturæ*, attributed to Augustine, which contains extracts from Psalms, Canticles, Ecclesiastes, Job, Hosea, Amos, Micah, Zephaniah, Malachi, Isaiah, Jeremiah, Ezekiel, Wisdom, Ecclesiasticus, the four Evangelists, 2 Corinthians, Philippians, Timothy, 1 John, and Hebrews. All these passages will be found extracted in the *Christian Remembrancer* (*ut supra*, vol. iii. pp. 676-683); and although the first editors of the *Speculum* seem to have misunderstood Augustine's meaning (Simon's *Hist. Critique*), it is beyond a doubt that the verses in the *Speculum* (one of which was, 'Populus ejus et oves pascuæ ejus'), were of the character which we are now describing. Jerome has not followed any of the divisions of the present Hebrew text, except in those passages where he could not well have avoided it, viz., the alphabetical division in the book of Lamentations, and the alphabetical Psalms, but even here he differs from the present divisions (Morini *Exerc. Bibl.** pars ii. cap. 2).

Jerome introduced a similar division into the prophetical books and the books of Chronicles. To this division he, in the prophetical books, applies the terms *cola* and *commata* (or 'stanzas' and 'hemistichs'), while in the Chronicles he only employs the colon, or longer period. 'No one,' he observes, 'when he sees the Prophets divided into verses (*versibus*), must suppose that they are bound by metrical lines, or that in this respect they resemble the Psalms and the books of Solomon; but as the works of Demosthenes and Tully are divided into colons and commas, although written in prose and not verse, we have, for the

* Of this learned work the only copy in any public institution in London is that in Mr. Darling's Clerical Library.

convenience of the reader, also distinguished our new version by a new species of writing.' The Chronicles, he says, he divided into members of verses (*per versuum cola*) in order to avoid an 'inextricable forest of names.'

The following specimens of Jerome's divisions are from Martianay :—

[Job iii.]

'Pereat dies in qua natus sum
et nox in qua dictum est : Conceptus est homo.
Dies illa vertatur in tenebras
non requirat eum Deus desuper
et non illustretur lumine.'

[Isaiah xl.]

'Consolamini, Consolamini, populo meus,
dicit Deus vester.
Loquimini ad cor Jerusalem, et advocate eam :
Omnis vallis exaltabitur,
et omnis mons et collis humiliabitur,
Et erunt prava in directa,
et aspera in vias planas.
Et revelabitur gloria Domini,
et videbit, &c.
Vox dicentis : Clama.
Et dixi :
Quid clamabo?
Omnis caro fœnum,
et omnis gloria ejus quasi flos agri.'

[1 Chron. xiv.]

'Misit quoque Hiram rex Tyri nuntios ad David, et ligna cedrina, et artifices parietum, lignorumque, ut ædificarent ei domum.
Cognovitque David quod confirmasset eum Dominus in regem super Israel, et sublevatum esset regnum suum super populum ejus Israel.
Accepit quoque David alias uxores in Jerusalem : genuitque filios, et filias.'

A division of the prophetical books into *cola*, or stichs, has been considered by some to have had its origin before the time of Jerome. Eusebius acquaints us (*Hist. Eccles.* vi. 16) that Origen, in his *Hexapla*, divided the Greek and other versions into κῶλα, which, however, Bishop Christopherson (in Euseb. *Eccles. Hist.*) supposes to be the columns containing the different texts into which Origen's *Polyglott* was divided. Hesychius, who died in A.D. 433, also published his στιχηρεῖς of the twelve prophets, which he calls an invention of the Fathers, in imitation of David and Solomon, who had thus divided their rhythmical compositions. He observes that he had found a similar division in the apostolical books. In this case such division must have been anterior to the stichometrical edition of Euthalius, if the date assigned to his publication be correct, viz., A.D. 450 [Holy Scripture]. It is not improbable that the work of Hesychius was but an adaptation of Jerome's *cola* and *commata* to the Greek text. This is also the opinion of Martianay. Epiphanius (*De Orth. Fid.* iv.) adds the two books of Wisdom to the poetical books thus arranged.

We have seen that Jerome imitates the mode of writing the works of Demosthenes and Cicero in his divisions of Chronicles. This custom of writing κατὰ στίχους appears to have been usual among profane writers. Josephus observes that his own Antiquities consisted of sixty thousand στίχοι, although in Ittigius's edition there are only forty thousand broken lines. Diogenes Laertius, in his *Lives of the Philosophers*, recounts the number of stichs which their works contained. There have, however, existed doubts as to what the στίχοι really were; some supposing them to be simply lines, or lines consisting of a certain number of words or letters, as in our printed books, while others have maintained them to be lines of varied length regulated by the sense, like the *cola* and *commata* of Jerome. The fact is that there are MSS. written in both kinds of verses or stichs, with the number of the stichs placed at the end of each book; and this is what is called *stichometry*, or the enumeration of lines. The introduction of lines regulated by the sense into the New Testament is supposed to have been a rude substitute for punctuation. The second mode, resembling our printed books, is also common; it is that adopted in the Charlemagne Bible, at the close of each book of which will be found the number of verses, that is, lines of equal length, but without any regard to the number of words or letters.

We are not aware at what time or by whom stichometry was adapted to the Gospels, but not long after the time of Euthalius we find it in common use. The Cod. Bezæ (C) and the Clermont MS. (D) are thus written. The following is from C :—[John i.]

Εν αρχῃ ην ὁ λογος και ὁ λογος ην προς τον Θεον
Και Θεος ην ὁ λογος. ουτος ην εν αρχῃ προς τον Θεον
Παντα δι αυτου εγενετο και χωρις αυτου
Εγενετο ουδε ἑν ὁ γεγονεν· εν αυτῳ
Ζωη ην και ἡ ζωη ην το φως των Ανθρωπων
Και το φως εν τῃ σκοτια φαινει
Και ἡ σκοτια αυτο ου κατελαβεν
Εγενετο ανθρωπος απεσταλμενος
Παρα θεου, ονομα αυτου Ιωαννης.

The following is from Acts xiii. 16, in Greek and Latin :—(Kipling, p. 747).

Αναστας δε ὁ Παυλος—Cum surrexisset Paulus
Και κατασεισας τῃ χειρι ειπεν—Et silentium manu postulasset, dixit,
Ανδρες Ισταηλιται, και οι φοβουμενοι τον Θεον—Viri Istraheliti, et qui timetis Deum
Ακουσατε—Audite.
Ο Θεος του λαου τουτου, κ. τ. λ.—Deus populi hujus, &c.

Afterwards, in order to save parchment, it became usual to write the stichometrical books continuously, separating the stichs by a point, but still placing their numbers at the end of each book. The following is a specimen from the Cod. Cypr. :—Ο δε εγερθεις. παρελαβε το παιδιον. και την μητερα αυτου. και ηλθεν εις γην Ισραηλ. ακουσας δε. ὁτι Αρχηλαος βασιλευσε επι της Ιουδαιας. αντι Ηρωδου του πατρος αυτου. εφοβηθη εκει απελθειν.

Sometimes, instead of the point, the stichs commenced with a capital, as in the Cod. Boerner., which, however, seems to have been written by an ignorant Irish scribe, unacquainted with the languages in which the MS. was written [Vulgate].

Ut non quasi ex necessitate tem bonum tuum
Ινα. μη ως καταναγκην το αγαθον σου.
sit. Sed voluntarium forsitan enim ideo
η. Αλλα κατεκουσειον. Ταχα γαρ. Δια

t propterea. Ad horam t ad tempus ut

προσοφιλεις. Ναι. Ναι αδελφε. Εγω σου. οναιμην.
in dn̄o.
εν. κ̄ω. [Philem. 14—20.]

The stichs were sometimes very short, as in Cod. Laud. (E), in which there is seldom above one word in each. The Clermont MS. (D) contains a list of the stichs in all the Greek books of the Old and New Testaments, and the *Stichometry* of Nicephorus contains a similar enumeration of the Canonical books,—the Antilegomena of the Old and New Testament,—and of the Apocryphal books, as Enoch, the Testaments of the Patriarchs, &c. &c.

Hug (*Introd.*) observes that the Codex Alexandrinus might be easily mistaken for the copy of a stichometrical manuscript, from the resemblance of its divisions to the *στίχοι*, as, *ηκουσα δε φωνης λεγουσης μοι. αναστας Πετρε. θυσον και φαγε.* but these occur only in occasional passages.

Instances occur in other MSS. in which the stanzas are numbered in the margin, as in the Song of Moses, in Greek and Latin in the Psalter of Sedulius of Ireland, who flourished in the ninth century. The song consists of forty-two commas or stichs, comprised in seven colons or stanzas, with a Roman numeral prefixed to each—all in the handwriting of Sedulius. The Latin is Ante-hieronymian (Montfaucon, *Palæogr. Græc.;* also *Christ. Rememb.* ut supra, p. 687).

There is a Greek Stichometrical manuscript of Isaiah, probably of the ninth century, in the Bibliothèque du Roi (1892), in which the stichs do not commence with the line, but there is a Greek numeral letter attached in the margin opposite each stich, the enumeration recommencing at the end of every hundred lines, in this form:—

1. The vision of Isaiah, the son of Amoz, which
   he saw concerning Judah and Jerusalem, in
   the days of Uzziah, Jotham, Ahaz, and
   Hezekiah, kings of
2. Judah. Hear, O heavens, and
3. give ear, O earth: for the Lord hath spoken.
4. I have nourished and brought up children,
   and they
5. have rebelled against me. The ox knoweth
6. his owner, and the ass his master's crib:
7. but Israel doth not know, my people
8. doth not consider. O sinful nation,
9. a people laden with iniquity, a seed
10. of evil-doers, children that are corrupters;
    they have forsa
11. ken the Lord, they have provoked the ho
    ly one of Israel to anger; they are gone away
    backward. Ye will revolt more and more, &c.
12. Why should ye be stricken any more?

Hug is of opinion that the Stichometrical system gave rise to the continuous and regular grammatical punctuation. Attempts at interpunction for the sake of the sense were, however, of much greater antiquity in profane authors than the era of Stichometry. Grammatical points are said to have been first introduced by Aristophanes of Byzantium about two centuries before the Christian era. We have already seen that interpunction was in use in MSS. of the New Testament before Euthalius, as in the Cod. Alex. Isidore of Spain acquaints us that the only note of division in his time was a single point, which, to denote a *comma*, or short pause, was placed at the bottom; to denote a *colon*, or larger pause, in the middle; and to denote a full pause, or period, was placed at the top of the final letter of the sentence. Manuscripts of the New Testament, as the Zürich Cod. Bas. E., have come down to us thus pointed. In others, as the Cod. Alex. and Cod. Ephrem., the point is placed indifferently at the top, bottom, or middle of the letter (Tischendorf, *Cod. Ephrem.*). Others, as L., use a cross for the purpose of marking a period, and Colb. 700 makes use of no other mark. Hupfeld, however, (*Stud. u. Krit.*), doubts whether the points in Cod. Cyprius are notes of the stichs, and denies any distinction between grammatical and other interpunction.

Originally there were no spaces between the words, but in the eighth or ninth century they began to be separated either by spaces* or by points. About the same period the present marks of punctuation began to be gradually and imperceptibly adopted, and had become universal in the tenth century. Michaelis (*Introd.* ch. xiii.) says, 'that Jerome introduced the comma and colon;' but this was not for the purpose of dividing sentences [VULGATE]. Cod. V., however, in Matthæi, of the eighth century, has the comma and the point, and Cod. Vat. 351, the colon. The Greek note of interrogation came into use in the ninth century. After the invention of printing, the Aldine editions fixed the punctuation, which was, however, varied by Robert Stephens in his different editions of the Bible. It is scarcely necessary to observe that the punctuation of the Bible possesses no authority, and that no critic hesitates to dissent from it. The accents, or the writing *κατὰ προσῳδίαν*, which were already in use in the Old Testament, were added by Euthalius to his edition, but were not in general use before the tenth century.

The Hebrew MSS. all contain a versicular division, marked with the accent called *silluk*, and the *soph pasuk* (end of the verse). The word *pasuk*, פסוק, is found in the Talmud, where it denotes some division of this kind; but whether the Talmudical *pesukim* are identical with those in the manuscripts, has been strongly contested.

---

* In the Cod. Alex. blank spaces are found at the end of the commas or sections, but nowhere else (Marsh's *Michaelis*).

It is said in tract *Kiddushun* (30, c. 1), 'Our rabbins assert that the law contains 5888 (or, according to Morinus, 8888) *pesukim*,' while, according to the division in our Bibles, there are 5845 verses. 'The Psalms have 8 more.' There are at present 2527. 'The Chronicles 8 less.' This division rather resembles the *στίχοι* in the Sept., of which the Psalms contain 5000. In the Mishna (*Megilla*, iv. 1) it is said, 'He who reads the law must not read less than three *pesukim*. Let not more than one be read by the interpreter, or three in the Prophets.' The passage in Isa. lii. 3-5 is reckoned as three *pesukim*. In *Taen* (iv. 3), a precept is given for reading the history of the creation according to the Parashes and the verses in the law; and in the Bab. Talmud (*Baba Bathra*, xiv. c. 2) the passage in Deut. xxxiv. 5-12 is called 'the last eight verses (*pesukim*) in the law.' It is evident, therefore, that some at least of our present verses correspond with the Talmudical. The term פיסוקים *pisukim* is also applied in the Gemara, as synonymous with טעמים, to reading lessons in general, and sometimes to short passages or half verses. But no marks appear to have existed in the text to distinguish these divisions, which were doubtless preserved by oral teaching. The first notice of such signs is found in *Sopherim* (iii. 7), in these words: 'Liber legis, in quo incisum est, et in quo capita incisorum punctata sunt, ne legas in illo.' No such marks occur in the synagogue rolls. The Sept. and Vulg. differ both from the Hebrew and from each other in divisions of this character. (Ps. xliii. 11, 12; xc. 2; Lam. iii. 5; Jon. ii. 6; Obad. 9; *Vulg.* Cant. v. 5; Eccles. i. 5.). The *pesukim* of the Talmud, which are said there to have descended from Moses, may have been possibly separated by spaces. From a *Targum* on Cant. v. 13, it appears that the decalogue was originally written in ten lines (*tammim*). All the pointed or Masoretic MSS. contain the present verses, divided by the *soph pasuk* (׃). We have already referred to the practice of the Masorites in numbering these verses, which was done at the end of each book. Thus at the end of Genesis: 'Genesis has 1534 verses,' &c.; and at the end of the Pentateuch: 'The number of verses (*pesukim*) in the book of Deuteronomy is 955,' its sign הנין (which represents the same number); the middle verse is, "And thou shalt do according to the sentence" (xvii. 10); the number of parashes is 10, and of *sidarim* 27; and the number of verses in the entire Pentateuch is 5245 [5845?] . . . . . The number of verses in the Psalms is 2527, the sign אאכזך; the middle verse, "Nevertheless they flattered thee with their mouth" [lxxviii. 36]; the number of *sidarim* 19, and the number of Psalms 150.' The Venice edition of Ben Chaijim, from which these divisions are taken, omits them in Chronicles, but they are supplied by two MSS. In the Pentateuch the number of verses in the greater sections, or those marked by פ פ פ and ס ס ס, is also indicated at the end of each section, thus: 'Bereshith has 146 verses, sign אמציה; Noah has 153 verses, &c. The entire number of verses is 23,206.' Before the Concordance of Rabbi Nathan in the fifteenth century [Holy Scriptures], the Jews made their references by citing in the Pentateuch the two first words of the Sabbath lessons, making no use of the shorter *sidarim*, or of the open or shut parashes. Of these, which are confined to the Pentateuch, there are 290 open and 379 shut. Of the larger parashes, or Sabbath lessons, Genesis contains 12, Exodus 11, Leviticus, Numbers, and Deuteronomy 10 each. Of the lesser *sidarim* Genesis contains 42, &c. These always commence in the Pentateuch with an open or closed section. From the time of Cardinal Hugo's Concordance citations began to be made by chapter and letter [Scripture, Holy]. All MSS. of the Vulgate after this period began to be thus marked, and we find Nicholas de Lyra in the fourteenth century frequently citing them in this manner. The citation of chapter and verse was a Jewish improvement of the succeeding century.*

The ancient Greek MSS. which have descended to our times also contain a division into short sentences, which have been sometimes called *στίχοι* and *verses*. They are regulated by the sense, and each constitutes a full period. They are frequently double or treble the length of the verses in our present New Testament, although sometimes they are identical with them. The Alexandrian, Vatican, Cambridge, Dublin, and other ancient MSS., all contain similar divisions. The following is from the Cod. Ephremi:—[1 Tim. iii. 12-16].

Διακονοι εστωσαν μιας γυναικος ανδρες· τεκνων καλως προϊσταμενοι και των ιδιων οικιων· οἱ γαρ καλως διακονησαντες· βαθμον ἑαυτοις καλον περιποιουνται· και πολλην παρρησιαν εν πιστει τῃ εν Χω. Ιῦ·

Ταυτα σοι γραφω ελπιζων ελθειν προς σε εν ταχει· εαν δε βραδυνω· ἱνα ειδης πως δει εν οικῳ θου αναστρεφεσθαι· ειτις εστιν εκκλησια θου ζωντος· στυλος καὶ ἑδραιωμα της αληθειας·

Καὶ ὁμολογουμενως μεγα εστιν το της ευσεβειας μυστηριον· ος[?]εφανερωθη εν σαρκι· εδικαιωθεν πνι· ωφθη αγγελοις· εκηρυχθη εν εθνεσιν· επιστευθη εν κοσμῳ· ανελημφθη εν δοξῃ·

Versicular divisions in the printed Bibles.—These, together with the numerical notation, are generally attributed to Robert Stephen. or Stephens (*Etienne*). Their origin is, notwithstanding, involved in obscurity. Even those who attribute the invention to Stephens are not agreed as to their date. 'We are assured,' observes Calmet (*Pref. to the Bible*), 'that it is Robert Stephens who, in his edition of 1545, has divided the text by verses, numbered as at present.' This division passed from the Latins to the Greeks and Hebrews. 'Robert Stephens,' says Du Pin (*Proleg.*), 'was the first who followed the Masorites in his edition of the Vulgate in 1545.' 'Verses,' says Simon (*Hist. Critique*), and after him Jahn (*Introd.*), 'were first introduced into the Vulgate and marked with figures by Robert Stephens in 1548. Morinus (*Exercit. Bibl.*), who is followed by Prideaux (*Connection*), attributes the verses to Vatablus, without naming a date, while Chevillier (*Hist. de l'Imprimerie*) and Maittaire (*Historia Stephanorum*) assert that Stephens di-

* Mr. Gresly (*Forest of Arden*, ch. i.) is guilty of an anachronism in making Latimer, in 1537, cite for his text the *twentieth verse* of the tenth chapter of Matthew. The New Testament was not referred to by verses until long after this period.

vided the chapters into verses, placing a figure at each verse, in the New Testament in 1551, and in the Old in 1557. Chevillier adds that James Faber of Estaples had introduced the practice in his edition of the Psalms printed in 1509 by Henry, father of Robert Stephens; and he is followed by Renouard (*Annales des Etienne*, Paris, 1843), in supposing that Stephens took his idea from this very work. But, not to multiply instances, Mr. Horne (*Introd.* vol. ii. p. i. ch. ii. s. iii. § 1) gives the following account of their introduction: 'Rabbi Mordecai Nathan . . . . undertook a similar Concordance [to that of Hugo] for the Hebrew Scriptures [SCRIPTURE, HOLY], but instead of adopting the marginal letters of Hugo, he marked every fifth verse with a Hebrew numeral, thus, א 1, ה 5, &c.; retaining, however, the cardinal's divisions into chapters. . . . The introduction of verses into the Hebrew Bible was made by Athias, a Jew of Amsterdam [1661], . . . with the figures common in use, except those which had been previously marked by Nathan with Hebrew letters in the manner in which they at present appear in the Hebrew Bibles. By rejecting these Hebrew numerals, and substituting for them the corresponding figures, all the copies of the Bible in other languages have since been marked.' 'The verses into which the New Testament is now divided are much more modern [than the *στίχοι*], and are an imitation of those invented for the Old Testament by Rabbi Nathan in the fifteenth century. Robert Stephens was the first inventor.' In another place (§ 2), Mr. Horne has observed that the Masorites were the inventors of verses, but without intimating that they are the same with those now in use. Doubts were entertained on this subject so early as the sixteenth century. 'Who first,' observes Elias Levita, 'divided the books of the Old and New Testament into *στίχοι*? There are even some who entertain doubts respecting a matter but recently come into use, viz., who the person was who introduced the division of verses into the Greek and Latin Bibles.' Serrarius (*Proleg.*) makes the following allusion to the circumstance: 'I strongly suspect that it is far from certain who first restored the intermitted division into verses. Henry Stephens, indeed, having once come to Wurzburg, would fain have persuaded me that his father Robert was the inventor of this distinction in the New Testament; and I afterwards observed this same statement in his preface to his *Greek Concordance*, with the addition that it was on his way from Paris to Lyons that he made the division, a great part of it while riding on horseback' (*inter equitandum*). 'This may, after all, be an empty boast; but supposing it true, as Catholics have used the versions of Aquila, Symmachus, and Theodotion, who were apostates or heretics, so may we use this division of Robert Stephens;' and, not able to conceal his mortification that the honour should belong to a Protestant, he significantly observes that Seneca had found the best scribes (*notarii*) among the vilest slaves. Henry Stephens, in the preface to his *Concordance*, thus expatiates on his father's invention: 'As the books of the New Testament had been already divided into the sections (*tmemata*) which we call chapters, he himself subdivided them into those smaller sections, called by an appellation more approved of by others than by himself, *versicles*. He would have preferred calling them by the Greek *tmemata*, or the Latin *sectiunculæ*; for he perceived that the ancient name of these sections was now restricted to another use. He accomplished this division of each chapter on his journey from Paris to Lyons, and the greater part of it *inter equitandum*. A short time before, while he thought on the matter, every one pronounced him mad, for wasting his time and labour on an unprofitable affair which would gain him more derision than honour: but lo! in spite of all their predictions, the invention no sooner saw the light, than it met with universal approbation, and obtained such authority that all other editions of the New Testament in Greek, Latin, German, and other vernacular tongues, which did not adopt it, were rejected as unauthorized.' Henry Stephens had already stated the same fact, in the dedication to Sir Philip Sydney, prefixed to his second edition of the Greek Testament (1576). We now proceed to Stephens's own statements.

Upon leaving the church of Rome, and embracing Calvinism in 1551, in which year he took refuge in Geneva, he published his fourth edition of the Greek Testament, containing also the Vulgate and the Latin version of Erasmus, with the date in the title MDLXI., an evident error for MDLI. The x has been, in consequence, erased in nearly all the copies. In the preface, he observes: 'As to our having numbered this work with certain versicles, as they call them, we have herein followed the most ancient Greek and Latin manuscripts of the New Testament, and have imitated them the more willingly, that each translation may be made the more readily to correspond with the opposite Greek.' Bishop Marsh (notes to *Michaelis*), and after him Mr. Horne (*ut supra*), asserts that 'Beza split the Greek text into the verses invented by Robert Stephens;' but the bishop is evidently mistaken, as Stephens's fourth edition is divided into these breaks as well as Beza's (see fac-simile in *Christ. Remembr.*, ut supra). Each verse commences the line with a capital, the figures being placed between the columns.

The fourth edition of the Greek Testament was followed, in 1555, by the seventh of the Latin Vulgate, in 8vo., containing the whole Bible, having the present verses marked throughout with numerals, and the following address to the reader: 'Here is an edition of the Latin Vulgate, in which each chapter is divided into verses, according to the Hebrew form of verses, with numerals prefixed, corresponding to the number of the verse which has been added in our new and complete Concordance, after the marginal letters A, B, C, D, E, F G, that you may be relieved from the labour of searching for what these figures will point out to you as with the finger.' The title-page bears Stephens's olive; and the name of the printer, Conrad Badius, the son-in-law of Stephens, with the date, 8 *idibus Aprilis*, 1555, shows where and when it was printed. It was the first edition of the entire Bible printed by Stephens since he left the church of Rome. The text is continuous, the verses being separated by a ¶, with the figures in the body of the text.

The next edition of the Bible by Stephens is that of 1556-7, in three vols. fol., containing the

Vulgate, the version of Pagninus, and Beza's Latin version of the New Testament, now first published. The notes are those commonly ascribed to Vatablus, with those of Claude Badwell in the Apocryphal books. The text is broken up into divisions, and there is a notice to the reader, apprising him that this edition contains the text divided into verses, as in the Hebrew copies.

Again, in the preface to Stephens' Latin and French New Testament, published at Geneva in 1552, which is also thus divided, but which we have never seen cited, he observes: 'Et a fin de plus aisement pouoir faire la dicte collation et confrontement, avons distingue tout icelny Nouveau Testament comme par vers, a la façon et manière que tout le Vieil a este escript et distingué, soit par Moyse et les prophetes compositeurs et antheurs, ou par scavans Hebrieux succedans, pour la conservation des dictes Escriptures, suyuans aussi en ce en partie la manière de ceux qui ont escript les premières exemplaires Grecs, et les vienlx escripts de la vielle tralation Latine du dict Testament, qui de chasque sentence, ou chasque moitié de sentence, voire de toutes les parties d'nne sentence en faisoyent comme des versets. Et en la fin de chasque livre mettoyent le nombre d'iceulx versets: possible a fin que par ce moyen on n'en peust rien oster, car on l'eust apperceu en retrouvant le contenu du nombre des dicts versets.' Stephens adds that he has also given references to the verses in indexes and concordances, not omitting the letters (lettrines) by which the chapters had been divided by his predecessors into four or seven parts, according to their length, for the purpose of a concordance. He makes reference to the chapters and verses in his *Harmonia Evangelica*, taken from the work of Leo Judah, and placed at the end of his edition of the New Testament (1551).

Henry Stephens, in his preface to his *Concordance*, states that it was this division which first suggested to his father's fertile mind the idea of a Greek and Latin concordance to the New Testament, in imitation of his Latin concordance, *Concordantiae Bibl., utriusque Testamenti* VII Cal. Feb. 1555, fol.; in the preface to which he says that he has followed the Hebrew mode of numbering the verses. In the title-page he makes an appeal to his brother printers not to 'thrust their sickle into his harvest,' not that he 'feared such plagiary from well-educated printers, but from the common herd of illiterate publishers, whom he considered as no better than highway robbers, no more capable of Christian integrity than so many African pirates.' 'Whether his apprehensions were well founded,' continues his son, 'let the experience of others tell.' Owing to Stephens's death, in 1559, his *Concordance* was published by Henry Stephens, in 1594.

But it is far from being true that Stephens, as has been commonly believed, was the first who either followed the Masorites, or divided the chapters into verses, or attached figures to each verse. This had been done, not only in regard to the Psalms, by James le Fevre, in his *Psalterium Quincuplex* in 1509, but throughout the *whole Bible* by Sanctes Pagninus in 1528. The *Psalterium* was beautifully printed by Henry, father of Robert Stephens, each verse commencing the line with a red letter, and a number prefixed; and we may here observe, that the Book of Psalms was the first portion of the Scriptures to which numbers were attached, by designating each separate Psalm by its number. Some ascribe this numeration to the Seventy; it is, we believe, first referred to by St. Hilary (*Pref.*), and is found in the manuscripts of the Sept. Whether they were so numbered at the Christian era, is somewhat doubtful. In Acts xiii. 33, the *second* Psalm is cited by its number, but in some of the best manuscripts the reading here is the *first* Psalm. In ver. 35 'in another' is said, without reference to its number; and Kuinoel is of opinion that the true reading in ver. 33 is simply ἐν ψαλμῷ,—'in a psalm.'

In the year 1528 the Dominican Sanctes Pagninus of Lucca published at Lyons, in quarto, his accurate translation of the Bible into Latin from the Hebrew and Greek. This edition is divided throughout into verses marked with Arabic numerals in the margin, both in the Old and New Testament. The text runs on continuously, except in the Psalms, where each verse commences the line. There was a second edition, more beautifully executed, but without the figures and divisions, published at Cologne in 1541. The versicular divisions in the Old Testament are precisely the same with those now in use,—viz., the Masoretic. Each verse is separated by a peculiar mark (◖).

Masch (*Biblioth. Sac.*), in reference to Stephens' statement that he had followed the oldest Greek manuscripts, says that this assertion was made by Stephens to conciliate those who were taking all methods of blackening him, for that the ancient divisions were quite different. The reader will judge from Stephens' preface to his French translation above cited, whether this assertion is borne out. Stephens there asserts that the authors of the ancient (stichometrical) division reckoned by whole books, and he only professes to imitate them *in part*, as well as the Hebrew copies; which he did by making a versicular division of each chapter, and prefixing a figure to each verse (as in Nathan's *Concordance*), instead of adding the amount at the end of each book. Hug observes that it is really true that ancient MSS. of the New Testament are sometimes divided into smaller sections, which have some analogy to our verses, instancing the Alexandrine, Vatican, and others. We have already given an example of this in C, to which we shall here add one more instance—viz., V. in Matthæi (Appendix to vol. ix. p. 265), who observes that 'this MS. is stichometrically arranged.' His fac-simile contains eight of the nine first verses of St. Mark's Gospel, each of which commences the line with a capital. All but one are identical with those in Stephens, whose first two verses form but one in the Moscow MS.

It is, however, only in the canonical books of the Old Testament that Stephens follows Pagninus. In St. Matthew's Gospel, Pagninus has 577 verses, and Stephens 1071. The number of verses in each chapter in Stephens is often double, frequently treble that in Pagninus. In John v., for instance, Pagninus has 7 and Stephens 22 verses. In the deutero-canonical books, into which no Masoretic distinction had found its way, Stephens has also a different division; thus, in Tobit he has 292 verses, while Pagninus has but 76; and the same proportion prevails throughout the other books, only Pagninus has not the third and

fourth books of Esdras, the Prayer of Manasses, nor the addenda to Daniel.

There are two editions of the Bible containing this division, stated by Le Long to have been published this year in Lyons, one by John Frellon, the other by Antony Vincent. The former is entitled *Biblia Sacro-Sancta Veteris et Novi Testamenti*, Lugdun., apud Joannem Frellonium, 1556, 8; the colophon of which has 'Lugduni, ex officinâ typographicâ Michaelis Sylvii, MDLV.,' which, doubtless, induced Le Long to assign to it the latter date. We have at present a copy of this rare edition before us, and there was a second, which exactly represented it, published in 1566, of which there is a copy in the Brit. Museum. Masch, the continuator of Le Long, observes of this edition (vol. iii. p. 202), that the publisher did not venture to ascribe the division of verses to Stephens, but refers it to Pagninus. Le Long places Stephens' edition and Vincent's together among the Protestant versions; thus:

'*Biblia Latina.* Charactere minutissimo. R. Stephanus lectori. En tibi Bibliorum Vulgata &c. (ut sup. p. 910).) in 8vo. Olivâ Rob. Stephani, 1555.

'*Biblia Latina.* Minutioribus characteribus, versibus numerorum distinctione notatis, in 8vo., Lugduni, Ant. Vincentii, 1555. 1556. Eadem est prorsus editio. Ex monitione typographi: "Biblia Sacra quum jam non semel variis tum typis tum formis emiserim, sicque passis ulnis accepta, ut ne unum quidem aut alterum nobis superesset exemplar . . . . . id operis minutioribus quam antea unqam excudi placuit characteribus. . . . . Deinde quæ ad sacrarum sensum literarum pertinere visa sunt non omissurus, Hebræorum secutus morem, versos quoslibet notandos curavi . . . . . quo sensa ipsa certis distincta versibus clarius innotescerent, et minori negotio linguæ sanctæ candidati concordantias, commentaria, &c., consulere possent." . . . . . utraque editio prima est his distincta versibus,' &c.

According to this statement of Le Long, it would appear that the edition of Robert Stephens and that of Antony Vincent were the same. Masch, however, who places Stephens' edition of 1555 in its chronological order (p. 209), and does not transfer it to the Protestant editions, notices Vincent's thus:—

'Biblia utriusque Testamenti, Lugduni, in ædibus Antonii Vincentii, MDLV., &c.

Biblia ... MDLVI. versibus distinct. Eadem est prorsus editio . . . . . *utraque est* (ut supra).' Now, whatever the word *utraque* or *eadem* here refers to, the very extract from the preface given by Le Long as Vincent's (whose edition we have never seen), commencing with 'Biblia Sacra quum jam non semel,' forms part of the preface to Frellon's edition, of which Masch had observed that the publisher did not venture to assign the invention of the verses to Stephens, but ascribed them to Pagninus. It was this circumstance which led us to turn to this preface, which also contains the identical assertion: 'Et ne quem sua frustratum a nobis laude quispiam clamitet, aut peculatus arguet, et etiam ut institutum hoc nostrum plus ponderis obtineat, ultro fatemur nos imitatos Santem illum Pagninum Heb. linguæ peritissimum, qui et hoc ipsum ceu necessarium magnopere probans, eo modo sua imprimenda curavit.' Now it seems clear that Frellon, whom, from the evidence before us, we must believe to have been the true author of this preface, wishes to take credit to himself for the introduction of the division of verses into his Bible, and from his declaration that he takes Pagninus for his model, in order that none should complain of being defrauded, we think it by no means improbable that he meant this observation as a sly insinuation against Robert Stephens, who had, in the preface to his *Concordance* just published, not only protested against such frauds on the part of his brother printers, but had himself adopted Pagninus's figures without acknowledgment, while it is equally evident that Frellon adopts not Pagninus' but Stephens' division, both in the New Testament and in the deutero-canonical books of the Old; for we presume from the dates that Stephens' edition was the earliest printed; and his *Concordance*, as we have seen, was published so early as the month of January in the same year. The verses in Frellon's edition are divided into breaks, with the figures on the left margin.

The next edition containing this division into verses is Stephens's eighth and last edition of the Vulgate, 1556-1557, 3 vols. fol. This is one of the editions called Vatablus' Bibles, of which there are three, viz., Stephens' nonpareil (1545), his eighth edition of which we are now treating, and the triglott edition published at Heidelberg in 1599. It is the Bible which Morinus (*Exercit. Bibl.*), Prideaux (*Connect.* vol. i.), and so many others, conceived to have been the first containing the division of verses. Prideaux observes that Vatablus *soon after* published a Latin Bible after this pattern, viz., that of Rabbi Nathan (1450), with the chapters divided into verses. 'Soon' after, however, meant about a century; Vatablus died 16th March, 1547. It is evident also, from Prideaux' note, that he was not aware that Vatablus' Bible was no other than Stephens' eighth edition.

There was a beautiful edition of the *Psalter* published in 1555 by Robert Stephens, containing the Latin of Jerome, with that of Pagninus, the numerals attached to each verse being placed in the centre column between perpendicular rubricated lines. It is entitled *Liber Psalmorum Davidis, Tralatio duplex, vetus et nova. Hæc posterior Santis Pagnini, partim ab ipso Pagnino recognita partim et Francisco Vatablo, in prælectionibus emendata et exposita.* The title bears the date MDLV., but in the colophon is the subscription: 'Imprimebat Rob. Stephanus, in suâ officinâ, Anno MDLVII., Cal. Jan.'

The form of printing the Bible in verses, with numerals, now became established. It appeared in 1556 in Hamelin's French version. It found its way the next year into the Geneva New Testament (English), printed by Conrad Badius, of which a beautiful fac-simile has lately issued from the press of Mr. Bagster. It was adopted, by marking every fifth verse with a Hebrew numeral, into the Hebrew Pentateuch, printed this same year (1557) at Sabionetta [SCRIPTURE, HOLY]. In 1559 Hentenius introduced Stephens's division and figures* into his correct

* 'Biblia, etc., in quibus capita singula ita

Antwerp edition of the Vulgate; which was followed by that of Plantin in 1569-1572, and passed into the Antwerp Polyglott (1569).

The Sixtine edition of the Vulgate (1590) having adopted this division, it was continued in the Clementine (1592), and has been ever since used in all editions and translations in the Roman Catholic Church. Hentenius, however, having printed the text continuously, with the figures in the margin, and a mark (thus, ℣) at the commencement of each verse, this plan was followed in the Clementine * and Sixtine editions, in which the verses are marked with an asterisk, capitals being used only at the commencement of a period, while the Protestant Bibles of Basle and Geneva commence the verse with the line, and with a capital letter. In the Roman editions, the only exceptions are the metrical books of Psalms, Job, and Proverbs, from the tenth chapter.

This division appeared in the Geneva (English) Bible in 1560 and 1562, the Bishops' Bible (1568), and passed into the Authorized Version in 1611. Some of the Protestant editions followed the Roman in adopting a continued text, of which it will be sufficient to name the beautiful Zürich edition of Osiander, in which each verse is distinguished by an obelus in the body of the text; and it is to be regretted that this practice has not been generally continued either in Protestant or Roman Catholic Bibles. We may add that Pagninus, Stephens, Frellon, and the Roman editions, all slightly vary among each other, both in the divisions and the placing of the figures. Nor do the chapters, owing to a diversity in the manuscripts, invariably coincide, as the versicular divisions of the Psalms in the Sept. and Vulgate are not always the same with the Hebrew; Stephens' figures sometimes occur in the middle of a verse in the Roman editions.

The Roman edition of the Sept. (1587 and 1589) was printed without any division or figures; and the present notation first appeared in Plantin's edition of the deutero-canonical books, Antwerp, 1584, from Tobit iv. 21 (the commencement, to ch. iv. 23, being marked by decades). The Frankfort edition of the Sept. (1597) has the present numeration throughout, but without any notice of the fact by the editors. The numbers are placed in the margin, but each verse commences with a capital, while in Plantin they are separated by spaces only.

From what has been said, the reader will, we presume, be satisfied of the great inaccuracies and misconceptions which have hitherto prevailed on this subject. It will no longer be doubtful that the figures were not introduced by Robert Stephens into his edition of 1545, as asserted by Calmet, nor of 1548, as stated by Father Simon and Jahn (in which latter year there was no edition published). It is equally untrue that they first appeared in Stephens' edition of 1556-7, as stated by Chevillier, Maittaire, and Prideaux. Neither is it altogether correct, as stated in Mr. Horne's Introduction, that the verses in the New Testament were an imitation of those invented by Rabbi Nathan, as Rabbi Nathan only referred in his *Concordance* by numerals to the Masoretic verses. Nor was it from the Hebrew Bible of Athias, in 1662, that this notation came into the copies of the Bible in other languages (Horne, *l. c.*), as they had been in use in all editions for above a century before. Equally far from the truth is the statement of Du Pin, that Stephens was the first who followed the distinction of the Masoretes in his Latin Bibles, as this had been done by Pagninus many years before Stephens published any one of his numerous editions.

Having now succeeded in detecting the errors of former writers, we are arrived at the more difficult task of eliciting the truth out of so many contradictory statements. Our limits will not allow us, however, to do more than offer the following view as the result of our inquiries.

Rabbi Nathan having in his *Concordance* (in 1450) commenced the practice of referring to a versicular division of each of the Latin chapters by the number of each masoretic verse in the chapter, Arabic figures were, after the example of Le Fevre's edition of the Psalms, affixed to each verse by Pagninus in his Latin Bible in 1528. Pagninus introduced a somewhat similar division into the New Testament and Apocryphal books. His system was adopted by Robert Stephens in the New Testament in 1551, and in the whole Bible in 1555, with scarcely any alteration except in the deutero-canonical books and the New Testament, wherein he introduced a different division. This division was partly founded on the practice of ancient manuscripts, and was partly his own. But as his object was to adapt his division to his *Concordance*, without any reference to the sense, he unfortunately introduced a much worse division than he found in any of his models. And it is to be lamented that his 'wild and indigested' system of breaking up, the text into what appear to the eyes of the learned and to the minds of the unlearned as so many detached sentences (Michaelis' *Introd.*), has had a deleterious effect on the sense of Scripture, and perhaps given rise to some heresies* (See *Pref. to Bishop Lloyd's Greek Testament*). Michaelis supposes that the phrase 'inter equitandum' does not mean that Stephens accomplished his task whilst actually riding on horseback, but that during the intervals of his journey he amused himself by doing it at his inn. If his division was a mere modification of that of Pagninus (see Bible in Taylor's ed. of Calmet's *Dict.*), it might easily have been done 'inter equitandum:' a phrase which, however we understand it, not inaptly represents the post-haste expedition with which his work was executed. Whether Pagninus himself adopted his division in the New Testament from manuscripts, or what his design was in

versibus distincta sunt ut numeri prefixi lectorem non remorantur, et loca quaesita tanquam digito demonstrant.'

* Maittaire and Chevillier are both mistaken in asserting that the Sixtine and Clementine adopted the division immediately from Stephens' ed. of 1557.

* Tholuck (see Robinson's *Bibl. Sacra*, 1844, vol. i. p. 354) conceives the omission of the verses to be a defect in Lachmann's edition; but Lachmann has inserted Stephens's figures in the body of the text, and has properly discarded the use of capitals, except at the commencement of a period.

introducing it, must be the result of an investigation which we cannot now enter upon. Stephens, it is true, never once refers to Pagninus' system; but we could hardly suppose that he was unacquainted with it, even had we no evidence to this effect. The evidence, however, does exist, for we discovered, after the greater portion of this article was written, that Stephens, in 1556, had in his possession two copies of Pagninus' Bible. The preface to his edition of 1557 contains the following words: 'In exteriori autem parte interpretationem Sanctis Pagnini (quam potissimum, ut maxime fidam, omnes uno ore laudant), crassioribus litteris excusam damus: sed hanc quidem certe multis partibus ea quam in aliis editionibus habes, meliorem. *Nacti enim sumus duo ex primâ illius editione exemplaria*, in quibus non solum typographica errata non pauca, nec levia, manu propria ipse author correxerat, sed multos etiam locos diligentius et accuratius quam antea examinatos, recognoverat.'

Croius (*Observat.*) states that he had seen very ancient Latin MSS. containing Stephens's division, with the first letter of each verse rubricated, but he does not designate his MSS. We believe this was a biassed assertion. We have ourselves seen Latin MSS. with periods so marked; but they are not the same with Stephens' verses. There is in the British Museum also a MS. of part of the Sept. (Harl. 5021), dated in 1647, which is versiculated throughout, and marked with figures; but the verses are much longer than those of Stephens's. Latin MSS. are found divided in the same manner as the Greek, one of which is the Cod. Bezae, which was collated by Stephens for his edition of 1550. Dr. Laurence's book of Enoch is divided into verses, with numbers attached, as well as into chapters called *Kefel*. Dr. Laurence says that these divisions into verses are arbitrary, and vary in the different Ethiopic MSS. of Enoch. The numbers, we presume, were added by the translator. By a letter from Dr. Bandinel, keeper of the Bodleian Library, we learn that that Library possesses an Ethiopic MS. of the New Testament divided into sections and paragraphs entirely different from ours, not numbered, but separated by a peculiar mark. The verses in the Gospel of the Templars [Gospels, Spurious], instead of spaces or figures, are separated by a horizontal line [—] (Thilo, *Cod. Apoc.*).

The MS. of the Syriac New Testament in the British Museum (No. 7157), written at Bethkuko, A.D. 768 (see Wright's *Seiler*, p. 651, note), contains a numerical division in the Gospels, with the numbers in rubric inserted by a coeval hand into the body of the text. Attached to each number is another in green, referring to a canon of parallel passages on the plan of that of Eusebius, but placed at the foot of each page. The sections, which are called *versiculi* in the Catalogue, and have been mistaken for verses, are more numerous than the Ammonian, Mathew containing 426, Mark 290, Luke 402, and John 271. There is a complete capitulation also throughout all the books, the chapters being separated in the text by a peculiar ornament, with the number in the margin: of these chapters Matthew has 22, Mark 13, Luke 22, John 20, Acts 25; of the Catholic Epistles, James 1, and [i.] John 6, and the Pauline have 54. After the first Gospel there is a double number, by which the former are recapitulated, and a treble number from the Acts to the end.

The numerical divisions into chapters and verses were first adapted to liturgical use in the Anglican Church—the chapters in Edward VI.'s first Book of Common Prayer (1549), and the verses in the Scotch Liturgy (1637), from whence they were adopted into the last revision (1662).—W. W.

VERSIONS. In the present article we propose to give some account of such versions as are not noticed in other places of this work. In doing so, it is not deemed necessary to mention all that ought to be adduced, were a *complete* enumeration attempted. We shall first describe *ancient* versions; and, secondly, *modern English* versions of the Bible.

I. *Greek versions.*—1. *Aquila.*—Aquila was a Jew of Pontus, who lived in the reign of Adrian, and undertook a Greek version of the Old Testament about A.D. 160. It appears from Jerome (*in Ezek.* iii.) that there were two editions of this version, the second more literal than the first. It was very highly prized by the Jews, and much preferred to the Septuagint, because the latter was employed as an authorized and genuine document by the early Christians in their disputations with the Hebrew opponents of the new religion. The very circumstance of its being adopted and valued by the Jews would tend to create a prejudice against it among the Fathers, independently of all perversion of Messianic passages. Irenæus, the earliest writer who mentions Aquila, pronounces an unfavourable opinion respecting his translation (*Advers. Hæres.* iii. 24, p. 253, ed. Grabe). So also Eusebius (*Ad Psalm.* xc. 4) and Philastrius. Jerome speaks of him in various parts of his writings, sometimes disparagingly, and again in terms of commendation: the former, in allusion to his doctrinal prepossessions; the latter, in reference to his knowledge of the Hebrew language and exceeding carefulness in rendering one word by another. He was early accused of distorting several passages relating to the Messiah, and Kennicott, in modern times, has re-echoed the censure. There is some ground for the charge, but certainly not so much as Kennicott imagines. A polemic tendency may be detected in the work, but not to a greater degree than in most translations.

The version before us is extremely, and even unintelligibly, literal. It adheres most rigidly to the original. So highly did the Jews esteem it, that they called it the *Hebrew verity*. Its use in *criticism* is considerable, but in *interpretation* it is comparatively worthless.

2. *Symmachus.*—Symmachus appears to have been an Ebionite (Euseb, *Hist. Eccles.* vi. 17; *Demonstr. Evang.* vii. 1, Jerome, *Præf. in Ezram*; Assemani, *Bibl. Orient.* ii. 278; iii. 1, 17). His Greek version of the Old Testament was made after that of Theodotion, as may be inferred from the silence of Irenæus, and the language of Jerome in his commentary on the xxxviii. chapter of Isaiah. The style of the work is good, and the diction perspicuous, pure, and elegant (Thieme, *De puritate Symmachi*; Hody, *De Bibl. text. Original.*). It is of less benefit in *criticism* than that of Aquila, but of greater advantage in *interpretation*. It would seem from Jerome, that there

was a second edition of it (*Comment in Jerem.* xxxii.; *in Nah.* iii.).

3. *Theodotion.*—Theodotion, like Symmachus, was an Ebionite. Irenæus states (*Advers. Hæres.* iii. 21) that he belonged to Ephesus, and was a Jewish proselyte. His Greek version of the Old Testament appeared during the first half of the second century, and is first mentioned by Irenæus. He follows the Septuagint very closely, so that he appears to have intended to make a revision of its text, rather than a new version. He is not so scrupulously literal as Aquila, nor so free as Symmachus. He was certainly not well acquainted with Hebrew, as the numerous errors into which he has fallen demonstrate. It is probable, if credit can be given to Jerome, that there were two editions of the translation (*in Jerem.* xxix. 17). His translation of Daniel was very early adopted by the Christians in place of that belonging to the Septuagint. The Jews do not seem to have had much regard for this castigated edition of the Seventy, although Von Lengerke inclines to the opposite opinion.

4, 5, 6. When Origen travelled into Eastern countries collecting materials for his Polyglott, he discovered three other Greek versions not extending to the entire Old Testament, but only to several books. These are usually designated the *fifth*, *sixth*, and *seventh*. The authors were unknown to Origen himself. As far as we can judge, they appear to have translated the original somewhat freely and paraphrastically. The *fifth* comprehended the Pentateuch, Psalms, Song of Solomon, and the twelve Minor Prophets, besides the books of Kings. Jerome says that the author was a Jew, meaning probably a Jewish Christian. The sixth version contained the same books as the fifth, except those of the Kings. The author appears to have been a Jewish Christian also. This inference has been drawn from his rendering of Habak. iii. 13. The *seventh* embraced the Psalms and minor prophets. Perhaps the author was a Jew. The three translations in question were made subsequently to those of Aquila, Symmachus, and Theodotion. Very few fragments of them remain. (See Epiphanius, *De Pond. et Mens.* cap. 17; Eusebius, *Hist. Eccles.* vi. 16; Jerome, *Comment. in Tit.* cap. 3; *Apolog. contra Rufin.* ii. 34; Hody, p. 590, et sq.)

4. *Græco-Veneta.*—In a MS. belonging to St. Mark's Library at Venice, there is a Greek version of several Old Testament books. Its internal character proves that the translation was made directly from the Hebrew. It is more literal than any other ancient version, even that of Aquila, adhering with slavish scrupulosity to the original words. In the Chaldee portions of Daniel, the Attic dialect is changed for the Doric. The style, however, is a singular compound. Attic elegancies occur along with barbarous expressions; high-sounding words used by the best Greek writers, by the side of others contrary to the genius of the Greek language. The origin of the version cannot be placed higher than the ninth century; the MS. itself was written in the fourteenth. It is uncertain whether the author was a Jew or a Christian. Gesenius adduces several particulars in favour of the former supposition (*Geschichte der Heb. Sprache*). It is probable that it was made at Byzantium for private use. The text seldom differs from the Masoretic, and the translator consulted the Septuagint and other Greek versions, besides adhering, as he generally does, to the current exegetical tradition of the Jews. Criticism can never derive much use from this version. Extracts from it are given in Holmes's edition of the Septuagint. The Pentateuch was published by Ammon, in three volumes, at Erlangen, in the years 1790-91. Different parts of the Pentateuch had been previously published, along with Proverbs, Ecclesiastes, Ruth, Lamentations, Daniel, and Canticles, by Villoison, at Strasburg, 1784. (See Eichhorn's *Allgem. Biblioth.* iii. p. 371, et sq.; v. p. 743, et sq.; vii. p. 193, et sq.; Dahler, *Animadverss. in versionem Græcam Proverbb.*, Argentor. 1786; the Introductions of Eichhorn, Bertholdt, De Wette, and Hävernick; and Davidson's *Lectures on Bib. Crit.*)

II. *Egyptian versions.*—After the death of Alexander the Great, the Greeks multiplied in Egypt, and obtained important places of trust near the throne of the Ptolemies. The Greek language accordingly began to diffuse itself from the court among the people, so that the proper language of the country was either forced to adapt itself to the Greek, as well in construction as in the adoption of new words, or was entirely supplanted. In this way originated the Coptic, compounded of the old Egyptian and the Greek. There is a version in the dialect of Lower Egypt usually called the *Coptic*, or better the *Memphitic* version; and there is another in the dialect of Upper Egypt, termed the *Sahidic*, and sometimes the *Thebaic*.

1. The *Memphitic* version of the Bible.—The Old Testament in this version has been taken from the Septuagint, and not the original Hebrew. It would appear from Münter (*Specim. verss. Dan. Coptic.* Romæ, 1786), that the original was the *Hesychian recension* of the Seventy, then current in the country. There is little doubt that all the Old Testament books were translated into the Coptic dialect, although many of them have not yet been discovered. The Pentateuch was published by Wilkins (London, 1731, 4to.); the Psalms at Rome (1744 and 1749) by the Propaganda Society. A small part of Jeremiah (ix. 17, to xiii.) was published by Mingarelli at Bologna (1785), and the ninth chapter of Daniel, in Münter's work already quoted. Gregory Bar Hebræus quotes the version in the book of Psalms; and it seems to have been well known to the Syrians. (Wiseman's *Horæ Syriacæ*, pp. 144-5.) The New Testament, made from the original Greek, was published by Wilkins, at Oxford, with a Latin translation, A.D. 1716. Its readings, as may be inferred from the place where it was made, coincide with the Alexandrine family, and deserve the attention of the critic. Unfortunately, however, the version is not yet correctly edited. It belongs to the third century.

2. The *Thebaic.*—This version was also made from the Greek, both in the Old and New Testaments, and probably too in the third century. Only some fragments of the Old Testament part have been printed by Münter, Mingarelli, and Zoega. In the New Testament it agrees generally, though not uniformly, with the Alexandrine family. Not a few readings, however, are peculiar; and some harmonize with the Latin versions.

Fragments of it have been published by Woide and Ford.

3. The *Bashmuric* or *Ammonian.*—Only some fragments of such a version in the Old and New Testaments have been published, and very little is known concerning it. Scholars are not agreed as to the nature of the dialect in which it is written; some thinking that it does not deserve the name of a dialect, while others regard the Bashmuric as a kind of intermediate dialect between those spoken in Upper and Lower Egypt. Hug and De Wette are inclined to believe that it is merely the version of Upper Egypt transferred into the idiom of the particular place where the Bashmuric was spoken. The origin of this version belongs to the third or fourth century.

III. *Æthiopic version.*—The sacred language of the Æthiopians is called the Geez, in which they have a translation of the entire Bible from the Septuagint in the Old Testament, and from the original in the New. The oldest allusion to it of which we have any knowledge is by Chrysostom, in his second homily on John. Its antiquity cannot be referred farther back than the fourth century, during which Christianity was diffused among the people. Nothing certain is known about the author, although there have been various conjectures respecting him. It was made by Christians, although the Æthiopian Jews have also used it. The Old Testament portion is extant in an entire state in various MSS. throughout Europe, of which Ludolf has given a list in his *Commentary on the History of the Æthiopians.* With this work may be compared T. Pell Platt's *Catalogue of the Ethiopic Biblical MSS. in various Libraries,* published at London, A.D. 1823. Some specimens only have been printed, such as the Psalms, Canticles, Ruth, Jonah, Joel, Malachi, and the first four chapters of Genesis.

The different parts of the New Testament are very unequal. The Gospels are the best executed. Hug thinks that various *versions*, rather than Greek MSS., were used in translating the Gospels, though he does not deny that the latter were also consulted. It is certain that it agrees frequently with the *Peshito* and the *Vetus Itala.* Its character is literal. The New Testament has not yet been correctly printed. It was first published at Rome in 1548-9, 2 vols. 4to., and was afterwards inserted in the London Polyglott, but from a faulty MS. If it were edited in a more correct form, it would be of considerable utility in the criticism of the New Testament. It generally agrees with the Alexandrine family and the quotations of Origen.

IV. *Persian versions.*—The Bible seems to have been translated at an early period into the Persian language. Both Chrysostom (*Second Hom. on John*) and Theodoret (*De curand. Græc. Affect.*) speak of a Persian translation; and, according to Maimonides, the Pentateuch was translated many centuries before Mohammed into this language (Zunz's *Gottesdienstlichen Vorträge*, p. 9, note *a*). A Persian version of the Pentateuch was first printed at Constantinople, in Hebrew characters, A.D. 1546, as part of a Polyglott Pentateuch; and afterwards inserted by Walton in the London Polyglott, in the proper Persian character. It was made after the time of the false prophet, and must have been later than the eighth century. The text follows the Hebrew very closely, according to the Masoretic recension, retaining many of the original terms, from the translator's inability to render them into Persian. Both Onkelos's and Saadias's versions appear to have been consulted by the author.

If credit is to be given to the inscriptions, it was made by Jacob, the son of Joseph Tawus, for the use of the Persian Jews. Critics are, however, not agreed about the meaning of Tus or Tawus. Rosenmüller (*De Vers. Pentat. Pers.* Lips. 1813, 4to.) assigns it to the ninth century; Lorsbach (*Jena Allgem. Lit. Zeit.* 1816, No. 58), with less probability, brings it down to the sixteenth. Walton, in his *Prolegomena* (ed. Dathe, p. 694), speaks of two MS. copies of the Psalms which he had, but both were very recent, and taken from the Vulgate, not the Hebrew. Not long since, Hassler discovered an immediate version of Solomon's writings existing in Parisian MSS. (*Studien und Kritiken* for 1829, p. 469, et sq.).

There are two Persian versions of the Gospels, one of which is printed in the London Polyglott, from a MS. belonging to Pocock, written in the year of our Lord 1341. Its source is the *Peshito*, as internal evidence abundantly shows. The other version was made from the original Greek. Wheloc, Professor of Arabic in the University of Cambridge, began to print it with a Latin translation. After his death it was edited by Pierson, London, 1652-57. The editors made use of the Syro-Persian MS. of the Gospels from which that in the Polyglott was printed. In consequence of the confusion arising from their procedure, the version is of little use either in the criticism or interpretation of the text.

V. *The Georgian version.*—This translation comprehends the entire Bible, made from the Septuagint in the Old Testament, and from Greek MSS. of the Constantinopolitan family in the New. It belongs to the sixth century. The author or authors are not known. The edition published at Moscow, A.D. 1743, folio, was interpolated by the Georgian princes, Arcil and Wacuset, from the Slavonic version. This circumstance detracts from its authority and value, since it is now impossible to separate the original from the interpolated readings.

VI. *The Slavonic version.*—This translation, embracing the Old and New Testaments, was made by Cyril of Thessalonica and his brother Methodius, who invented the Slavic alphabet. In the Old Testament the Septuagint was followed; and in the New the original Greek, in MSS. belonging to the Constantinopolitan family. According to Alter, the Old Testament portion was originally made from the *Vetus Itala*, and altered in the fourteenth century from Greek MSS. Perhaps the entire text of the version has been revised after the Latin. The translation is very literal, so that the idiom of the Slavonic is often violated for the sake of retaining the Greek construction. Of the readings adopted by Griesbach, this version has at least three-fourths. In consequence of its excellence, it is considered of great value in the criticism of the Greek Testament. The edition of the entire Bible published at Ostrog, 1581, is the basis of all succeeding impressions.

VII. *The Gothic version.*—The Mœso-Goths were a German tribe which settled on the borders of the Greek empire, and their language is essentially a German dialect. Their version of the Bible was made by Ulphilas, in the fourth century, after Greek MSS. in the New Testament, and after the Seventy in the Old. The author is generally regarded as an Arian; but his peculiar doctrinal sentiments do not seem to have influenced his translation. Of the Old Testament portion, nothing but a fragment of Nehemiah has been printed, although parts of other books have been discovered. A great part of the New has been published at different times in fragments. The four Gospels exist in the very celebrated MS. called the *Codex Argenteus*, now preserved in the library of the university at Upsal, and minutely described by Dr. E. D. Clarke and others. This MS., however, has considerable chasms. The Gospels have been several times printed from it, but not very correctly. Knittel discovered fragments of Paul's Epistle to the Romans in a *codex rescriptus* belonging to the Wolfenbüttel library, which he published in 1762, 4to., and which were republished by Zahn in the complete edition of the Gospels issued in 1808, 4to. In 1817, Angelo Mai discovered important parts of the Gothic version among five *codices rescripti* in the Ambrosian library at Milan. They contain for the most part the Pauline Epistles, with the exception of that to the Hebrews; and two fragments of Matthew. Various portions were printed by Mai in conjunction with Castillionæus, in 1819. In 1829 the latter published the fragments of Paul's Second Epistle to the Corinthians. This version has been altered from the Vulgate.

VIII. *The Armenian version.*—Armenian literature begins with Miesrob, the inventor of the Armenian alphabet, at the commencement of the fifth century. Before that time, the Armenians employed the Syriac letters. After making an alphabet, Miesrob, assisted by two of his pupils, undertook a translation of the Bible, which he completed in A.D. 410. The Old Testament part was made from the Greek; in the book of Daniel, from Theodotion; and the text of the Seventy which it follows appears to have been a mixed one, for it agrees with none of the leading recensions. It is said to have been interpolated in the sixth century from the Peshito; but this is doubtful. Gregory Bar Hebræus gives it as a mere conjecture. (Wiseman, *Horæ Syriacæ*, p. 142.) La Croze, Michaelis, and Bredenkamp think that it was altered from the Vulgate in the thirteenth century; but Alter and Holmes are opposed to that idea. The probability is on the side of the former. In the New Testament it was made from the original; but here too it is said to have been adapted to the Peshito. It is likely that it has been, at least in this part, conformed to the Vulgate by Haitho or Hethom, who reigned over the lesser Armenia and Cilicia from A.D. 1224 till 1270. This entire version was first published by Bishop Uscan or Osgan, at Amsterdam, in 1776, 4to., who is also accused of interpolating it. The best edition is that of Dr. Zohrab, published at Venice, A.D. 1805, 4to., for which he consulted sixty-nine MSS. This edition was collated for the Greek Testament prepared by Scholz, who thinks that if we possessed the genuine version, we should find its text to be a compound of the Constantinopolitan and Alexandrian families.

(See the various Introductions to the Scriptures, especially those of Eichhorn, Hävernick, and De Wette; and the references there given. Compare also Davidson's *Lectures on Biblical Criticism.*)

We shall now very briefly notice the principal English versions of the Bible. Translations of a portion of the Bible, or of separate books, must be omitted.

1. *Wycliffe's* version of the entire Bible is generally regarded as the first which was made into the English language. This work, which must have occupied him for many years, was finished about the year of our era 1380.

The author of it, although a zealous reformer, as well as an enlightened theologian and a man of learning in his own time, was ignorant of the Hebrew and Greek languages, and therefore not qualified for the task of translation from the originals. Latin, however, was all but universal in the fourteenth century; and the Latin Bible or Vulgate was the only document which constituted *the word of God* in the estimation of men. There are indications of his having had assistance in the work, perhaps from various individuals. The version is remarkable for its fidelity and the propriety of the words selected. Still it is but the translation of a translation, and therefore more important as illustrative of the state of our language in the fourteenth century than as contributing to the criticism or interpretation of the Bible.

The Old Testament has not yet been published, but it is now in course of publication under the editorial care of Sir Frederick Madden and the Rev. J. Forshall, of the British Museum. The general opinion is that the New Testament portion was published so long ago as the year 1731, and it is from this that our idea of Wycliffe as a translator is formed. The subject, however, is involved in considerable obscurity; and he that trusts to the common accounts given of this early reformer as a translator of the Bible may probably be misled in his opinions. According to Baber, another version was made in the fourteenth century, posterior to Wycliffe's, with which it is frequently confounded. The author of it is said to have been the writer of 'Elucidarium Bibliorum, or Prologue to the Bible.' But this is a questionable statement.

It may be doubted whether Wycliffe's version has yet been published even as regards the New Testament, although it is generally supposed that it was first printed by Lewis in 1731, folio, and afterwards by Baber (1810, 4to.) and Bagster. A version of the New Testament is now being published by Mr. Pickering of London from a MS. in the possession of Lea Wilson, Esq., which is apparently the *early* Wycliffite version. That already published is a *later* version, in which Wycliffe could have had no concern, as it was not made till after his death. It thus appears that if the reformer had any concern in either of the two versions of the New Testament ascribed to him, it is to the earlier of them, and not to the later, that this honour must be assigned. Both are now being printed, as the Old Testament has already been, in parallel columns, under the

superintendence of Sir F. Madden, by whom, doubtless, some light will be thrown on their comparative claims. The writer is indebted for the information now communicated to the same eminent antiquarian scholar.

2. *Tyndale's* translation.

William Tyndale, having printed at Hamburg an edition of the Gospel by Matthew and an edition of Mark, committed to the press at Cologne the first edition of his New Testament in 4to., with a prologue and glosses. In consequence, however, of the exertions of Cochlæus, a violent and crafty enemy to the printing of the Scriptures, the edition was interrupted before it was printed off. A precious fragment of it is now in the library of the Right Hon. Thomas Grenville. (Facsimiles are given by Mr. Anderson, in his 'Annals of the English Bible' (vol. i. p. 64.) At Worms, whither he proceeded on leaving Cologne, he commenced another edition of the New Testament in 8vo. without the prologue and glosses belonging to the 4to. A third edition was printed at Antwerp in 1526, a fourth at the same place in 1527, a fifth in 1529, a sixth in 1534, and three editions in 1535. In 1536, the year in which he was strangled at Vilvorde, there were ten or twelve editions. He also printed at different times the five books of Moses; and in 1531, the book of Jonah, with an admirable prologue respecting the state of his country. In addition to the Pentateuch, he translated other parts of the Old Testament, at least as far as the end of Chronicles. The Old Testament was made from the original, not from Luther's German version; for there is no evidence to show that Tyndale was acquainted with German, or indeed that he ever saw Luther, though there is abundant testimony of his skill in Hebrew. Besides, its internal character proves that it was made from the original Hebrew and Greek.

The excellence of this version, the basis of all subsequent English Bibles, has never been called in question by candid and competent judges, notwithstanding the severe opposition it encountered during the life of the honoured Tyndale, and the peculiar circumstances in which he was placed. The language is pure, appropriate, and perspicuous. It is an astonishing monument of the indomitable zeal and great learning of the author. The New Testament part was printed in Bagster's *Hexapla*.

3. *Myles Coverdale.* The English version of the whole Bible made by COVERDALE, is dated 1535, in folio. Where it was printed is matter of conjecture. In the title-page it professes to be faithfully and truly translated out of the 'Douche (German) and Latyn.' This Bible was imported into England in 1536, and various expedients were tried in the way of altering the title-page and the dedication, or of affixing a new title-page, in order to procure it the royal approbation. Another edition, in 4to., was issued in 1550, and again in the same form reissued in 1553. This Bible certainly owed its origin to Lord Cromwell's patronage. Coverdale states, that he had five translations before him 'to help him herein.' Although the author had the benefit of Tyndale's, his work must be reckoned inferior. In addition to the culpable obsequiousness of Coverdale, he was not so well skilled in the original languages of the Scriptures, and had therefore to rely more on the German and Latin (Anderson, vol. i. p. 587). This translation was recently reprinted by Bagster.

4. *Matthew's Bible.* Although this version is the same as Tyndale's previously described, yet it deserves to be separately spoken of. John Rogers, an intimate friend of Tyndale, set about the superintendence of a new edition, soon after the incarceration of the latter at Vilvorde. Where it was printed cannot now be ascertained. Hamburg, Marburg, Paris, Antwerp, and Lubeck, have all been named. When Rogers had proceeded with the printing as far as Isaiah, Richard Grafton and Edward Whitchurch, the celebrated printers, undertook to bring out the work as a matter of trade. The New Testament entire, and the Old as far as the end of Chronicles, are Tyndale's; the remainder of the Old Testament was done by Rogers himself, with the assistance perhaps of Coverdale's sheets. The whole was finished in 1537. Why it bears the name of Thomas Matthew is not clear. It has been conjectured, however, that it may have been commenced at the request of a person of that name. Archbishop Cranmer, without any previous connection with the undertaking, was applied to by Grafton to procure it royal patronage, which he happily effected through Lord Cromwell.

In the year 1538, another edition was begun at Paris, edited by Coverdale, which was interrupted by an order of the Inquisition. It was finished in London, in April, 1539. This book was set forth and enforced by the highest authority in England.

5. *Taverner's Bible.* Richard Taverner, the editor of this work, was a learned layman. His Bible was published in London, 1539, folio. Two other editions of it were issued in quarto. It is not a new version, but a correction of Matthew's.

6. *Cranmer's Bible.* The first great Bible, with a prologue, by Cranmer, was published in 1540, folio, printed by Whitchurch. Three subsequent editions had the archbishop's name affixed to the title-page. The New Testament is printed in Bagster's *Hexapla*.

7. *Geneva Bible.* The New Testament, in duodecimo, printed at Geneva by Conrad Badius, in 1557, is properly a revision of Tyndale's from the Greek, by William Whittingham. It was merely preparatory, however, to the revision of the entire Bible by Whittingham and other exiles, which appears to have been begun by January, 1558, and to have been continued till the 10th April, 1560. Whittingham had for his associates in the undertaking Anthony Gibby and Thomas Sampson. Its size is quarto. This was the first Bible printed in Roman letter, and the first in verses. A patent relative to it was issued by Elizabeth in favour of John Bodeleigh. The work is a new translation from the original, not simply a revision of any former version. It is faithful and literal. The New Testament portion was reprinted by Bagster in his *Hexapla*.

8. *Archbishop Parker's*, or *the Bishops' Bible.* This Bible was published in 1568, at London, in one folio volume. It was superintended by Parker, Archbishop of Canterbury, the text being carefully revised after the originals, by upwards of fifteen scholars, eight of whom were bishops. Different portions were assigned to different in-

dividuals, the initials of whose names are placed at the end of their several parts. It was not, as is commonly supposed, undertaken at the royal command. The text of this translation is much better than that of any preceding one.

9. *Anglo-Romish version.*—An English translation of the New Testament was published at Rheims in 1582, in a quarto volume. It is made from the Latin Vulgate, not from the original, and is accompanied by annotations. In 1609-10 the Old Testament was translated from the Vulgate, and published at Douay in two quarto volumes, also with notes. These three volumes contain the standard version of Roman Catholics. Many of the original Hebrew and Greek words are retained, so that simplicity and perspicuity are sacrificed. It has been conjectured that this was done to render it as obscure as possible to the common people. The New Testament has been lately reprinted in Bagster's *Hexapla.*

10. *King James's Bible.*—The proposal for this new translation of the Bible originated with Dr. John Rainolds, of Corpus Christi College, Oxford. Forty-seven persons were engaged upon it, doubtless the most eminent men for learning that could then be procured. They met in companies at different places, having their respective tasks assigned them. According to the ordinary account, fourteen rules were given to the translators for their guidance; but another account states that only seven were finally prescribed. The whole was revised by twelve men together, two having been chosen out of each of the six companies. The ultimate revision was made by Dr. Miles Smith, who wrote the Preface, and Dr. Bilson. It was first published, in a folio volume, in 1611. The whole expense was defrayed by Barker, the patentee. In order to judge of the real character of this work, which has continued to be *the authorized* version down to the present day, it is necessary to consider two of the rules given to the editors or translators, viz. *the first* and *the fourteenth*:—'The ordinary Bible read in the church, commonly called the Bishops' Bible, to be followed, and as little altered as the original will permit.' Again:—'These translations to be used when they agree better with the text than the Bishops' Bible: viz. 1. Tyndale's; 2. Matthew's; 3. Coverdale's; 4. Whitchurche's (Cranmer's); 5. The Geneva.' From these instructions it may be inferred that the Authorized Version is a revision of the Bishops' Bible, by a careful collation of the originals and a comparison of existing translations. It was not a new and independent work, but a laborious compilation from existing works of the same kind, regulated in every case by the Greek and Hebrew.

It is needless to pronounce a formal encomium on our authorized version. The time, learning, and labour expended on it were well bestowed. It far surpasses every other English version of the entire Bible in the characteristic qualities of simplicity, energy, and purity of style, as also in uniform fidelity to the original.

A revision of it, however, is now wanted, or rather, a new translation from the Hebrew and Greek, based upon it. Since it was made, criticism has brought to light a great mass of materials, and elevated itself in the esteem of the fundamental theologian as an important science. Hermeneutics too have been cultivated, so as to assume a systematic, scientific form. We require, in consequence, a new English version, suited to the present state of sacred literature. It need scarcely be stated that King James's translators have failed to apprehend the true meaning in many passages. Of the merit attaching to their version a considerable share belongs to Tyndale. Parker's Bible was the professed basis, and *that* was a revision of Cranmer's. Cranmer's Bible was chiefly a correction of Matthew's, or, in other words, of Tyndale's, as far as Tyndale had translated. Thus King James's translation resolves itself at last, in no small measure, into Tyndale's; and when we consider the adverse circumstances continually pressing upon that noble-minded man, with the little assistance he could obtain, the work which he produced assumes a pre-eminent position amid the immortal monuments of human learning and skill.

Few men have since attempted an English version of the entire Bible. They have contented themselves with separate books, either of the Old or New Testament. In point of style and diction Lowth's translation of Isaiah is the best. Dr. Campbell translated the Gospels, and Macknight the Epistles; but the former scarcely equals the expectations which a reader of the *Preliminary Dissertations* would form, while the latter has not commended itself to competent judges.

(See Johnson's *Account of the several English translations of the Bible*, Lond. 1730, 8vo., reprinted in Bp. Watson's *Theological Tracts;* Bp. Marsh's *History of the Translations which have been made of the Scriptures, from the earliest to the present age*, Lond. 1812, 8vo.; Lewis's *History of the principal Translations of the Bible*, Lond. 1739, 8vo.; Newcome's *Historical View of the English Biblical translations*, Dublin, 1792, 8vo.; Cotton's *List of Editions of the Bible, from the year* 1505 *to* 1820, Oxford, 1821, 8vo.; Walter's *Letter on the Independence of the Authorized Version of the Bible*, Lond. 1823, 8vo.; Todd's *Vindication of our Authorized Translation*, &c., Lond. 1819, 8vo.; Whittaker's *Historical and Critical Inquiry into the Interpretation of the Hebrew Scriptures, &c.*, Lond. 1819, 8vo., and Supplement, 1820; Townley's *Illustrations of Biblical Literature*, Lond. 1821, 3 vols. 8vo.; and especially Anderson's *Annals of the English Bible*, Lond. 1845, 2 vols. 8vo., which must now be regarded as *the standard work* on the subject. —S. D.

VINE, THE (גֶּפֶן *gephen*), with its fruit, the Grape, עִנָּב *anab*, or יַיִן *yayin*, as well as Wine, is very frequently mentioned in Scripture, as might be expected from its being a native of the East, well known to ancient nations, and highly esteemed for its various natural and artificial products. Homer and Herodotus mention the vine; Theophrastus and Dioscorides treat of it in several chapters. But long before these times it was known to the Egyptians: representations of the careful culture of the vine, of the treading of the grapes and squeezing out its juice, and of the storing of the wine in jars, being all discovered in the paintings within their tombs. Though cultivated at such early periods, the vine was not a native of Egypt, nor probably of Syria;

but both European and Asiatic writers mention it as a native of the hilly region on the southern shores of the Caspian, and in the Persian province of Ghilan. In the districts of the Caucasus, as well as in the elevated valley of Cashmere, the vine climbs to the tops of the loftiest trees, and the grapes are of fine quality and large size in many places of the intermediate country. Every part of the vine was and still continues to be highly valued. The sap was at one time used in medicine. Verjuice expressed from wild grapes is well known for its acidity. The late Sir A. Burnes mentions that in Caubul they use grape powder, obtained by drying and powdering the unripe fruit, as a pleasant acid. When ripe, the fruit is everywhere highly esteemed, both fresh, and in its dried state as raisins. The juice of the ripe fruit, called *must*, is valued as a pleasant beverage. By fermentation, wine, alcohol, and vinegar are obtained; the lees yield tartar; an oil is sometimes expressed from the seeds; and the ashes of the twigs were formerly valued in consequence of yielding a salt, which we now know to be carbonate of potash.

537.

It is not surprising, therefore, that the vine is so frequently mentioned both in the Old and in the New Testament, for it was one of the most valuable products of Palestine, and of particularly fine quality in some of the districts. Those of Eshcol, Sorek, Jibmah, Jazer, and Abel, were particularly distinguished. The men sent from Kadesh-barnea to explore the Promised Land brought back as a sign of its fertility, what would be sure to be appreciated by men who had been sojourning in the desert, a bunch of grapes from Eshcol, near Hebron, which they carried between them on a stick, probably to prevent its being bruised, but no doubt also on account of its great size. Modern travellers, as Dandini, Mariti, and Laborde, have described some of the grapes of Palestine as being of large size. Nau affirms that in Syria he had seen clusters ten or twelve pounds in weight; and Schulz states that he supped under a vine whose stem was about a foot and a half in diameter, its height about thirty feet, while its branches and branchlets, which had to be supported, formed a tent of upwards of thirty feet square. But this will appear nothing extraordinary to those who have seen the vine at Hampton Court, which covers a space of 2200 square feet. And we have it on record that, even in our own country, a bunch of *Syrian* grapes was produced at Welbeck, which weighed nineteen pounds, and measured in length twenty-three inches, and nineteen and a half inches in its greatest diameter. It was sent as a present from the Duke of Portland to the Marquess of Rockingham, and conveyed a distance of twenty miles, on a staff, by four labourers, two of whom bore it in rotation, thus affording a striking illustration of the proceeding of the spies (Kitto, *Physic. Geog. of Palestine*, p. cccxxx.).

A fruitful vine is often adduced as an emblem of the Hebrew nation, and also the vine that was brought out of Egypt. A period of security and repose is figured by every one sitting under his own vine and fig-tree; and prosperity by 'Judah, a lion's whelp, binding his foal to the vine, and his ass's colt to the choice vine:' both indications of Eastern manners, where sitting in the shade is most pleasant, and tying cattle in similar situations a common practice. Of the vine there were no doubt several varieties, as of all cultivated plants, but that of Sorek is especially distinguished (Gen. xlix. 11; Jer. xi. 21). Rosenmüller supposes this to be the variety called *serik* or *sorik*, which is cultivated not only in Syria, but also in Arabia and in the north of Africa. It appears to be the variety called *kishmish*, or the Persian *bedana*, which signifies 'without seed.'

The vine must have been cultivated in very early times, as we are informed in Gen. ix. 20, that Noah planted the vine immediately after the deluge; and bread and wine are mentioned in Gen. xiv. 18. In Egypt also we have early notice of it (Gen. xl. 9, 10), as Pharaoh's chief butler saw in a dream a vine with three branches; and the Israelites complain (Num. xx. 5) that Moses and Aaron had brought them out of Egypt into that dry and barren land, where there were neither figs nor vines. The wines of Syria were in early times also highly esteemed; and though the growth of the vine has much decreased, from the diminished population and the Mohammedan rule, yet travellers still speak with enthusiasm of some of the wines, as of the vino d'oro of Lebanon. As space will not permit us to notice all the passages in which the vine, the grape, and wine are mentioned, we must refer to Celsius, *Hierobot.* vol. i. pp. 400-444; Calmet's *Dictionary;* Rosenmüller's *Biblical Bot.* p. 220; and to Kitto's *Physical History of Palestine*, p. cccxxiv., in all of which the subject is amply discussed and clearly elucidated.—J. F. R.

VINEGAR. [Wine.]

VIOL. [Musical Instruments.]

VIPER. [Serpent.]

VIRGIN (בְּתוּלָה, עַלְמָה; Vulg. *virgo*). The word בתולה occurs fifty times in the Old Testament, and is translated by *παρθένος* in

the Sept., except in two instances. It is rendered once by *νεᾶνις* (1 Kings i. 2), and once by *νύμφη* (Joel i. 8). See Gen. xxiv. 16; Exod. xxii. 15, 16, 17; Lev. xxi.; Deut. xxii., xxxii.; Judg. xxi., &c. עלמה occurs seven times, in four of which it is rendered *νεᾶνις*, *puella* (Exod. ii. 8; Ps. lxviii. 25; Cant. i. 3; vi. 8); in one (Prov. xxx. 19) *νεότης*, and in two (Gen. xxiv. 43; Isa. vii. 14) *παρθένος*.* The same word is also rendered *virgo* in the Vulgate in these two passages; in Exod. ii. 8, *puella*; in Ps. lxviii. 26, *juvencula*; in Cant. i. 3, and vi. 8, *adolescentula*; and in Prov. xxx. 19, *adolescentia*, after the Sept. The Syriac follows the Seventy in Isa. vii. 14, but in all the other passages agrees with Aquila, Symmachus, and Theodotion, who translate עלמה by *νεᾶνις*, not only in Ps. lxviii. 26; Gen. xxxiv. 43; Exod. ii. 8; Prov. xxx. 19 (in which they agree with the Sept.), but also in Isa. vii. 14. Justin Martyr (*Dial. c. Tryph.*) complains of the partiality of the Greek translators in rendering עלמה here by *νεᾶνις* (a term which does not necessarily include the idea of virginity), accusing these Jewish writers of wishing to neutralize the application to the Messiah of this passage, which the Jews of his time referred to Hezekiah. Gesenius (*Comm. in Isa.*) maintains, notwithstanding, that *νεᾶνις*, not *παρθένος*, is the correct rendering in Isa. vii. 14, while he at the same time agrees with Justin that the prediction cannot possibly refer to Hezekiah, who was born nine years before its delivery. Fürst (*Concordance*) explains עלמה by puella, virgo, nubilis illa vel nupta, tenera et florens ætate, valens ac vegeta; but Hengstenberg (*Christology*), although admitting that עלמה does not necessarily mean a virgin (which he conceives is plain from Prov. xxx. 19), maintains that it is always applied in Scripture to an *unmarried* woman. St. Matthew (i. 23), who cites from the Seventy, applies the passage (Isa. vii. 14) to the miraculous birth of Jesus from the blessed Virgin. Professor Robinson (*Gr. and Eng. Lexicon*) considers *παρθένος* here to signify a bride, or newly married woman, as in Homer (*Il.* ii. 514):

> Οὓς τέκεν Ἀστυόχη, ... *παρθένος* αἰδοίη·
> ('Them bore Astyoche, a virgin pure'
> COWPER);

and considering it to refer apparently to the youthful spouse of the prophet (see Isa. viii. 3, 4; vii. 3, 10, 21), holds that the sense in Matt. i. 23 would then be: Thus was fulfilled in a strict and literal sense that which the prophet spoke in a wider sense and on a different occasion. Jerome says that the Punic for virgo is *alma*, although the word עלמה is but twice so rendered in the Vulgate.

The early Christians contended also for the *perpetual* virginity of Mary against the Jews, who objected the use of the term ἕως (*until*, Matt. i. 25) as implying the contrary; but the Fathers triumphantly appealed against the Jewish interpretation to Scripture usage, according to which this term frequently included the notion of perpetuity (comp. Ps. cx. 1; Gen. viii. 7; Isa. xlvi. 4; Ps. lxi. 7; Matt. xxviii. 20; and see Suicer's *Thesaurus*, and Pearson, *On the Creed*, Art. iii.). Although there is no proof from Scripture that Mary had other children [JAMES; JUDE], the Christian Fathers did not consider that there was any impiety in the supposition that she had (Suicer, *ut supra*). But, although not an article of faith, the perpetual virginity of Mary was a constant tradition of both the Eastern and Western church. The most distinguished Protestant theologians have also adopted this belief, and Dr. Lardner (*Credibility*) considered the evidence in its favour so strong as to deserve that assent which he himself yielded to it.

The word *παρθένος*, *virgin*, occurs in Matt. i.; xxv.; Luke i.; Acts xxi.; 1 Cor. vii.; 2 Cor. xi. 2; and Apoc. xiv. 14. In 1 Cor. and Apoc. it is applied to both sexes, as it frequently is by the Fathers, who use it in the sense of *cœlebs*. It is sometimes metaphorically used in the Old Testament for a country, and in the New to denote a high state of moral purity.—
W. W.

VOW (נֶדֶר) is represented by a Hebrew word which signifies to 'promise,' and may therefore be defined as a religious undertaking, either, 1. Positive, to do or perform; 2. or Negative, to abstain from doing or performing a certain thing. The morality of vows we shall not here discuss, but merely remark that vows were quite in place in a system of religion which so largely consisted of doing or not doing certain outward acts, with a view of pleasing Jehovah and gaining his favour. The Israelite, who had been taught by performances of daily recurrence to consider particular ceremonies as essential to his possessing the divine favour, may easily have been led to the conviction which existed probably in the primitive ages of the world, that voluntary oblations and self-imposed sacrifices had a special value in the sight of God. And when once this conviction had led to corresponding practice, it could not be otherwise than of the highest consequence that these sacred promises, which in sanctity differed little from oaths, should be religiously and scrupulously observed. Before a vow is taken there may be strong reasons why it should not be made; but when it is once assumed, a new obligation is contracted, which has the greater force because of its voluntary nature: a new element is introduced, which strongly requires the observance of the vow, if the bonds of morality are not to be seriously relaxed. The writer may be of opinion that total abstinence is in itself not a virtue nor of general obligation, but he cannot doubt that 'breaking the pledge,' when once taken, is an act of immorality that cannot be repeated without undermining the very foundations of character: whence it obviously appears that caution should be observed, not only in keeping, but also in leading men to make, pledges, vows, and promises.

* In Rose's edition of Parkhurst's *Lexicon of the New Testament* (1839), *παρθένος* is said to 'answer to עלמה in several passages in the Sept.' We can discover but these two instances. There are *four* passages cited in the same edition and in its reprint in 1845 (Gen. xxiv. 14, 16; xxxv. 3; and Isa. vii. 4 [14?]), in not one of which does the word עלמה occur. In the three first it is נערה.

Vows, which rest on a human view of religious obligations, assuming as they do that a kind of recompense is to be made to God for good enjoyed, or consideration offered for good desiderated, or a gratuity presented to buy off an impending or threatened ill, are found in existence in the antiquities of all nations, and present themselves in the earliest Biblical periods (Gen. xxviii. 20; Judg. xi. 30; 1 Sam. i. 11; 2 Sam. xv. 8). With great propriety the performance of these voluntary undertakings was accounted a highly religious duty (Judg. xi. 35; Eccles. v. 4, 5). The words of the last vow are too emphatic, and in the present day too important, not to be cited: 'Better is it that thou shouldest not vow, than that thou shouldest vow and not pay' (comp. Ps. lxvi. 13, sq.; lxxvi. 11; cxvi. 18). The views which guided the Mosaic legislation were not dissimilar to those just expounded. Like a wise lawgiver, Moses, in this and in other particulars, did not attempt to sunder the line of continuity between the past and the present. He found vows in practice; he aimed to regulate what it would have been folly to try to root out (Deut. xxiii. 21, sq.). The words in the 22nd verse are clearly in agreement with our remarks: 'If thou shalt forbear to vow, it shall be no sin in thee.'—J. R. B.

VULGATE (*Vulgata; κοινή*), the name generally given to the Latin translation of the Bible used in the Western Church.

Old Testament Version. There have been Latin translations of the Bible from the first ages of the Christian Church. Of these Augustine observes (*De Doct. Christ.* ii. 11): 'Those who have translated the Bible into Greek can be numbered, but not so the Latin versions. For in the first ages of the Church, whoever could get hold of a Greek codex ventured to translate it into Latin, however slight his knowledge of either language.' Of these he prefers the *Itala*, as the most literal. Bentley (see his *Life* by Monk) supposed that Itala was an error for *illa*, others (as Bishop Potter) for *usitata*. But there seems no sufficient reason for rejecting the common reading (Sabatier's *Preface, ut inf.*). Augustine wrote to Jerome (*Ep.* 88) to acquaint him that he would confer a great benefit by translating the version of the Seventy, inasmuch as the readings of the Latin manuscripts were so various that it was doubted if any thing could be proved by them, observing that 'there are as many texts as there are copies.' Eichhorn is of opinion that all the quotations of writers before Jerome belong to the same text, which he conceives to have been made in the first century, and in Africa. He founds this opinion chiefly on the badness of the Latin, as well as on the fact that Greek was too well understood in Italy to render a Latin version necessary. In this view he has been followed by Dr. Wiseman (*Letters on* 1 *John* v. 7), and by Lachmann (*Preface to his edition of the New Testament*). De Wette, however, is of opinion that there is no proof of the African origin of this version. Some fragments of it still exist, which show it to have been most literal, and made from the *κοινή*, or the text of the Septuagint which existed before Origen's Hexapla, whose defects it preserves, agreeing very closely with the Cod. Vaticanus. It is therefore of the greatest use towards restoring the text of the Seventy. The parts extant are the Psalms, Job, Ecclesiastes, and Tobit, with fragments of Jeremiah, Ezekiel, Daniel, and Hosea. These fragments are found in citations from the Fathers, in ancient manuscripts, and in psalters, missals, and breviaries, from which they have been collected with much care by Flaminius Nobilius (*Vet. Text. esc. LXX. Lat. redd.*, 1588), who has endeavoured to supply the omissions; Sabatier (*Bibl. Sac. Lat. verss. antiq.* 1749); Jac. Faber Stapulensis (*Psalterium Quincuplex*, 1509) [VERSE]; Blanchini (*Psalter. Duplex, ex insigni Cod. Græco-Lat. Veron. uncial. ante 7m. sæc.*); and Münter (*Fragm. Antehieron. e cod. rescript. Wirceburg.* Hafn. 1809). In the year 382 Jerome undertook a revision of this text. He first corrected the Psalms, producing what is called the *Roman Psalter*, which is still used in the church of the Vatican, and in St. Mark's at Venice.* Afterwards, finding this work corrupted by transcribers, he undertook a second revision. This is the *Gallican Psalter*, and is that contained in the Vulgate, and used generally in the Church since its introduction by Pope Paul IV. Jerome made this correction with the aid of Origen's Hexapla, adding asterisks, obelisks, commas, and colons [VERSE]. From the obelisk or asterisk to the colon was contained something added from the Hebrew by Theodotion, and the same with the comma denoted that the Septuagint contained here more than Jerome's Version. He afterwards revised in the same way the rest of the Old Testament. 'Rejoice,' he says, 'that you receive the blessed Job safe and sound, who formerly, among the Latins, lay prostrate in filth and worms; and as after his trial and triumph all his possessions were restored to him double, I have, in our own language, restored to him what he had lost.' The book of Chronicles he corrected with the help of a learned Jew of Tiberias. To these he added Proverbs, Ecclesiastes, and Canticles: the rest of his labours perished by fraud. Of this work the only parts printed are the two Psalters and the book of Job. It acquired Jerome great fame and not a little obloquy, especially on the part of his quondam friend Rufinus.

Jerome next, at the request of his friends, undertook a new version from the Hebrew, between the years 385 and 405. This version was occasioned by the controversies with the Jews, who constantly appealed to the original, which the early Christians did not understand. Jerome commenced with Samuel, then proceeded to the Psalms, the books of Solomon, Ezra, and Nehemiah, the Pentateuch, Joshua, Judges, Ruth, and Chronicles—together with Tobit and Judith from the Chaldee. He afterwards translated Daniel, Esther, and Jeremiah, with their apocryphal additions. It is to be lamented that he used too much haste in some parts of his work, having finished Proverbs, Ecclesiastes, and Canticles in three days, and Tobit in one. Notwithstanding this, and his own observation that his

* There is a Psalter different from both, used in Milan. Mr. Bagster's *Hexaplar Psalter* contains the Roman and the Gallican Psalters, together with Jerome's version from the Hebrew, that of the Seventy, the original Hebrew, and the two authorized versions of the Anglican Church.

work would have been superfluous but for the corruptions of the Septuagint, he produced the best and noblest work of the kind of which antiquity can boast. He proceeded on the soundest principles, and studied the Hebrew language under some learned Jews. 'From the reading of Quinctilian and Cicero,' he acquaints us, 'I entered upon the irksome task of shutting myself up in the mill of the Hebrew language, and endeavouring to pronounce its panting and creaking sounds; when, at length, like one walking in a dungeon, I discerned a faint light glimmering from above.' His Hebrew copy was procured from the Synagogue. His labours now procured him only the most cutting railleries from his friends. His teacher's name being Barhanina, he was accused of having been taught by Barabbas. He did not translate too literally, lest he should not convey the sense, and occasionally made use of other versions, when they did not materially differ from the Hebrew, lest he should alarm his readers by too much novelty; but he adhered to it in general very closely, lest, contrary to his conscience, he should 'forsake the foundation of truth, and follow the streamlets of opinions.'

His work at first met with no flattering reception. It was by many condemned as heretical, and even his friend Augustine feared to make use of it, lest it might offend by its novelty, introduce variety between the Greek and Latin Churches, and distract the minds of Christians who had received the Septuagint from the Apostles. In one instance, where an African bishop caused the book of Jonah to be read in church in this version, the people were panic-struck at hearing the word *hedera* (Jon. iv. 6, 9) in place of the old reading *cucurbita*. Augustine afterwards entertained a more favourable opinion of it, although he has not cited it in any of his acknowledged works [JOHN, EPISTLES OF].

About two hundred years after Jerome's death his work had acquired an equal degree of respect with the ancient Vulgate, and in the year 604 we have the testimony of Gregory the Great to the fact, that 'the Apostolic see made use of both versions.' It afterwards became by degrees the only received version, and this by its intrinsic merits, for it received no official sanction before the Council of Trent. Baruch, Ecclesiasticus, Wisdom, and Maccabees, were retained from the old version.

Jerome's version soon experienced the fate of its predecessor; it became sadly corrupted by a mixture with the old version, and by the uncritical carelessness of half-learned ecclesiastics, as well as by interpolations from liturgical writings and from glosses. In fact the old and new versions were blended into one, and thus was formed the Vulgate of the middle ages.

In the ninth century an attempt was made, but not on the soundest principles, to correct the Vulgate. This was done by command of Charlemagne, who intrusted the task to Alcuin. The amended Vulgate was now introduced by royal authority into all the churches of France. It is still doubtful whether the correction was made from the Hebrew original, or from ancient copies of the Vulgate.

In the eleventh century a new revision was undertaken by Lanfranc, Archbishop of Canterbury, and another in the succeeding century (at which period Roger Bacon says that it was horribly corrupted), by Cardinal Nicolaus the Deacon, a good Hebrew scholar. About the same period appeared in France the *Epanorthotæ*, or *Correctoria Biblica*, which were attempts to establish the true text on the part of Abbot Stephen, Cardinal Hugo, and others. From these corrections, however, it appears that the corruptions were so numerous as to render it almost vain to expect to recover the true text. 'Every reader and preacher,' says Roger Bacon (*Epist. to Clem. IV.*), 'changes what he does not understand: their correction is the worst of corruptions, and God's word is destroyed.' This was the state of the text at the time of the invention of printing, by which its variations were more clearly brought to light, and critical attempts made to amend it.

The earliest printed editions are without a date. The first which has a date was published at Mayntz in 1462, by Fust and Schoiffher. It was afterwards printed in 1471, 1475, and 1476. Critical editions appeared in 1496, 1497, 1501, 1504, 1506, 1511, and 1517—the last that of the Complutensian Polyglott, done with great care. This was followed by the Antwerp Polyglott, and the critical editions of Colinæus, Rudel, Benoist, Isidore Clarius, and Robert Stephens. The variations of the text now appeared more plainly than ever. Isidore Clarius (1542) corrected more than 8000 errors (which some have exaggerated into 80,000). Stephens' beautifully executed and amended text (1527) was condemned to be burned. This learned printer afterwards collated several manuscripts, and published editions in 1532, 1533, and 1540. This last (the 4th) is called by Father Simon a master-piece. Stephens' edition of 1545 (the nonpareil) contained a new version, that of the Old Testament being made by Leo Judah, Bibliander, and Peter Cholin. This is one of those called Vatable's Bibles. The translator of De Wette's *Einleitung* observes that Stephens's sixth and seventh editions (1546 and 1555) contain no important improvements. The accurate De Wette, however, was aware that the seventh edition contained the division into verses. Benoist (1541) made an unsuccessful attempt to restore Jerome's text. Stephens's eighth and last edition has been already noticed [VERSE].

In the mean time the Council of Trent passed its famous decree (A.D. 1546, Sess. 4, Decret. 2) respecting the Vulgate: 'The most holy Synod, considering that no small advantage will accrue to the church of God, if from all the Latin editions of the sacred books which are in circulation, it should determine which is to be received as authentic, decrees and declares that the ancient Vulgate version, which has been approved in the church by the use of so many ages, should be used in public readings, disputations, sermons, and expositions, as authentic, and that none is to presume to reject it under any pretence whatsoever.' De Wette (*Einleitung*) conceives that this decree shuts the door against any exegetical inquiry into the doctrines of the church. Moehler (*Symbolik*, p. 1, ch. v. § xlii.), however, maintains that there could be no such thing as an exegetical inquiry into the doctrines of the church, which declares her dogmas by her infallible authority independently of Scripture, although she may

apply and even misapply testimonies from Scripture to this purpose, being infallible in the former case, but not in the latter.* The most learned Roman Catholics differ materially as to the sense of the word authentic, some considering, as Morinus (*Exercit. Bibl.*), that the Vulgate is hereby pronounced to be an inspired version, others (as Suarez) that the version is placed above all existing texts of the originals. Many contend that it was only meant to give it a preference to any other Latin version then in use (Bellarmin,† *De Verbo Dei;* Calmet's *Dissert.;* Jahn's and Hug's *Introdd.*). Some of the Roman theologians hold it to be infallible only so far as faith and morals are concerned (Dens, *Theologia*). Hug considers the meaning of the decree to be, that 'as in civil affairs an authentic instrument is valid evidence, so in public religious matters the Vulgate is a document from which valid arguments may be drawn, without prejudice, however, to other documents [viz. the originals]; but this is not a prescription of doctrine, and from its nature it could not be; it is a temporary decree of discipline.' In fact few Roman Catholics have maintained its exemption from error, and the most learned and judicious Protestants (Mill, *Proleg.;* Bengel, *Apparatus;* Lachmann, *Preface*) justly conspire in holding it in a high degree of veneration. Jahn observes that the Oriental Christians in communion with Rome still use their own versions, the Greek, Armenian, Syriac, and Arabic.

The Council of Trent not having declared any particular manuscript or edition to contain the true text of the Vulgate, a committee of six was appointed to prepare a new edition, but the pope prevented them from proceeding. The Louvain theologians, seeing the confusion which prevailed in the printed editions, as well as the persecutions to which Robert Stephens was exposed for his laudable undertakings, now undertook to correct the text, and Hentenius was chosen to prepare an edition. For this purpose he collated several of the former ones, including Stephens's of 1540, and about twenty manuscripts, the most modern of which was of the fourteenth century. His edition appeared in 1547, and after his death a still more valuable one was prepared by the same theologians under the care of Lucas Brugensis and others, which was printed by Plantin in 1573. The papal chair now resolved on an edition, and thus the Sixtine and Clementine Bibles, the variations between which amounted to above 2000, gave rise to the well-known attack of James (*Bellum Papale*). Sixtus laboured on his own edition, which was founded on the principle, that wherever the most ancient manuscripts and printed editions agreed, their reading should be preferred. It appeared in 1590. By the decree of Sixtus, whoever approved of any other edition, if of the degree of a bishop, was to be excluded from entering a church; if of inferior rank, was to be excommunicated—with other more dreadful anathemas. Notwithstanding this, Pope Urban VII. found it so inaccurate that he attempted to suppress it. His successor, Gregory XIV., prepared a new revision, with the aid of some eminent scholars, including Bellarmin and Flaminius Nobilius. This was first issued under the papacy of Clement VIII. in 1592, and although more modestly put forth, was founded on much better principles than the former. But there was a great difficulty to be overcome in attempting to reconcile the discrepancies of the two editions with the authority of the papal chair. 'In this dilemma Bellarmin is said to have found a middle course, by proposing that all the blame should be laid upon the printer' (Hug's *Introd.*). In the preface Bellarmin states, that 'Sixtus, having perceived the errors which had crept into the press, ordered the edition to be cancelled,' (an assertion which Van Ess, *Pragmatisch-Geschicht. der Vulgat.*, declares to be false), 'but from the execution of this order both Sixtus and his successors, Urban VII. and Innocent IX. were prevented by death.' It is further stated that 'although in this revision no small labour was employed in collating manuscripts of the Hebrew and Greek, and the writings of the Fathers, some things are nevertheless designedly altered, and others, which seemed to require alteration, designedly left unchanged.' This preface is said to have led to Bellarmin's beatification (Hug, *ut sup.*). The Clementine edition is the basis of all subsequent ones, from those of Plantin, 1599-1650, to that of Leander van Ess, published by authority of Leo XII. in 1826. The present printed Vulgate of the Old Testament is thus a mixed text, consisting partly of the old Latin, partly of Jerome's revision of the same, and partly of his new version from the Hebrew.

Descendants of the Vulgate. There is still extant an Anglo-Saxon version, published by Thwaites (*Heptateuchus*, 1698), of the Pentateuch, Joshua, Job, and a fragment of Judith. This was the work of Ælfric, in the tenth century, and was formerly thought, but on insufficient grounds, to have been done from the Sept. Ælfric also translated Esther, Maccabees, and Kings. There was an earlier translation by Adhelm, in the beginning of the eighth century (Lingard's *Anglo-Saxon Church*). Bede is said to have translated the entire Bible about the same period. At the close of the thirteenth century it was again translated by some one whose name has not reached us. Wickliffe's translation appeared in 1380 [VERSIONS].

The New Testament. The old Latin version was made immediately from the Greek, and its dead literality is such as to render it in some places quite barbarous, as where, for instance, the Greek ὅτι is 'almost uniformly, in defiance of grammar and common sense, rendered quia or quoniam' (*e.g.* magister, scimus quia verax es. Matt. xxii. 16'; see Campbell, *On the Gospels*). Campbell refers to the phrase *panem nostrum supersubstantialem*, in the Lord's Prayer, as an instance of an etymological barbarism. These

* 'Even a Scriptural proof in favour of a decree held to be infallible, is not itself infallible, but only the dogma as defined.'

† Bellarmin defends the use of the Vulgate, from the ignorance of the original languages which prevailed in the Church, instancing the Council of Ariminum, where, out of 400 bishops, not one knew the meaning of ὁμοούσιος, all exclaiming 'not Homoousios, but Christ.' Mr. Scrivener (*ut infra*) agrees with those who maintain that the Council of Trent 'raised the Vulgate to that paramount authority which only belongs to the original text.'

remarks include the Old Testament as well as the New.

Manuscripts and editions of the Italie. There are some very ancient manuscripts of the old Latin version of the New Testament still extant, which are described by Blanchini (*ut supra*); Iricus, Milan, 1749; Dobrowsky (*Fragments of St. Mark's Autograph*, Prag. 1798); Alter (*Gold and silver purple MSS. in the Imperial Library*, containing fragments of Luke and Mark); Fleck (*Wissensch. Reise*); Matthæi (*Nov. Test.*); and Sabatier (*Evang. Quadr.*). The oldest of these is probably the *Cod. Vereellensis*, published by Sabatier, supposed to have been written by the hand of Eusebius. This version is also contained in the Græco-Latin MSS., the most ancient of which is the *Cod. Bezæ* [MANUSCRIPTS]. The *Codex Boernerianus*, (G) published by Matthæi, at Meissen, in 1791 (reprinted 1818), is a Græco-Latin MS. of the ninth century, preserved at Dresden, and was first used by Bengel. It contains St. Paul's Epistles (omitting Hebrews). The interlinear Latin is written in what some have supposed to be the Anglo-Saxon, but is in reality that modification of the Latin called the Irish character. It has been often desired by critics that some Irishman would explain the words at the bottom of fol. 23. We have therefore endeavoured to decipher them (with the assistance of our friend Mr. J. O'Donovan), and here present an attempt at a translation of what appears to be a fragment of a religions poem:—

Téicht do nóim mór raido. beic conbaid.
Nuí chondaigi. ṅ. hiforr. manimbeda lacc
ni fagbai.
Món báir, mor bai'e móu coll ceille móu mine
o laid ain chenn teicht do écaib.
beich fo écoil maic. maine.

Coming to Rome, great wisdom, little profit;
THe King your Saviour you will not find, unless you take him with you.
Great folly, great madness, great breach of sense, great phrenzy,
When you set out to meet death,
To be under the displeasure of the Son of Mary.

From the notes in the margin it appears that this manuscript had been in the possession of Johannes Scotus of Ireland, for whom it was probably written [VERSE]. The *Cod. Sangallensis* of the Gospels, of the same age and character, (Δ) has been also published by Rettig, Turici, 1836.

The *editions* are those by Sabatier (*ut sup.* vol. iii.) and Blanchini (*Evang. Quadr.*). Martianay (*Opp. Hieron.*) gives the Gospel of St. Matthew and the Epistle of St. James only. The only descendant of this version is the Anglo-Saxon, which is probably older than the translation of the Old Testament.

Jerome's recension. Jerome did not translate the New Testament from the Greek, but at the request of Damasus, bishop of Rome, he amended the old Latin, by comparing its corruptions and various readings with the best Greek manuscripts, making, however, no alteration, unless the sense absolutely required it; but in his Commentary he often departs from this text. The Vulgate of the New Testament generally agrees with the oldest MSS. of the Italic, and is one of the best critical helps towards restoring the true text of the Greek. The text has undergone the same fate, and suffered the same corruption as that of the Old Testament, and the various readings, though numerous (Michaelis speaks of 80,000) are of the same character with those of the Greek, having crept in through the negligence of transcribers, and 'very few of them bearing the marks of having been made to serve a purpose' (*Prefaee to Mr. Bayster's Hexapla*). Dr. Campbell (*On the Gospels*) considers that as the last part of the Vulgate was completed 1400 years ago, and from MSS. older probably than any now extant, and at a time when there was no bias from party zeal, at a time too when the modern controversies were unknown, the Council of Trent acted rightly in giving the preference to this, which he designates 'a good and faithful version, remarkable for purity and perspicuity, and by no means calculated to support Roman views;' but valuable as this text is, it is to be lamented that the ambiguity of the phrase 'authentic' should have furnished an occasion to some Roman polemics of the last century, when criticism was not so well understood as at present, to depreciate the original text. What, however, an accomplished Roman Catholic divine has said respecting Collins (see *Scripture, Holy*) may be equally applied here: 'he took advantage of the differences between Mill and Whitby about some passages, and about the value of various readings in general, to conclude that the entire New Testament was thereby rendered doubtful. He was soon, however, chastised by the heavy lash of Bentley, who thoroughly exposed the fallacy of Collins's assertions, and vindicated the condition of the inspired text. .....Nothing has been discovered, not one single various reading which can throw doubt upon any passage before considered certain, or decisive in favour of any important doctrine.' (Wiseman, *Leetures*, Lect. x.)

A pure text of the Vulgate is a great desideratum. Lucas Brugensis (*Letter to Bellarmin*) pointed out no less than 4000 mistakes in the Clementine edition. An edition of this text, in the New Testament, was published in 1840 by F. F. Fleck, who has added to it the various readings of the Florentine uncial stichometrical MS. of the sixth century, containing the Old and New Testaments. This MS. was used by the Clementine editors, but they differ from it in many instances, one of which is 1 John v. 7, which is not in the Florentine. Lachmann, also, in his recent edition of the New Testament, has furnished the text of the Vulgate from the oldest MSS. written before the tenth century, especially the Fulda MS. But it can serve no critical use to correct the entire of the Greek text by conforming to the Vulgate, as has been recently done, at the request of the Archbishop of Paris, by Tischendorf (*Nov. Test.*, Gr. et Lat., Paris, 1842), wherever a single MS., however worthless or modern, was found to support the reading. (See *The Book of Revelation in Greek*, by Samuel Prideaux, Tregelles, 1844.)

Manuscripts. For an account of the MSS. of the Vulgate, we must refer the reader to Le Long's *Bibliotheca Saera*, as well as to the various editions already named. We shall here only notice the most ancient in the British Islands.

There is a mutilated Latin MS. of the Gospels in Ireland, described by Mr. Petrie in the 19th vol. of the *Transactions of the Royal Irish Academy*, which that able antiquary assigns to the fifth century. The Kells MS. of the Gospels, preserved in Trinity College, Dublin, the writing and illuminations of which are of incomparable beauty, was written in Ireland in the sixth century. This has been confounded by Dr. O'Conor (*Rerum Hib. Script.*) with the Book of Durrow, preserved in the same College. The beautiful Lindisfarne book of the Gospels (Nero D. 4) is a stichometrical uncial MS. of the seventh century, with an interlinear Anglo-Saxon version by Aldred in the tenth. There are two MSS. of the Gospels (the same to which allusion is made in the *Life of St. Augustine*, by the Rev. F. Oakeley) said to have been brought to England by St. Augustine. One of these is preserved in C. C. College, Cambridge, and the other in the Bodleian Library. To these is to be added St. Cuthbert's MS. of St. John's Gospel, and the gospels of St. Mullin, Dimma, Mac Durnan, Mac Regol, and St. Chad. The *Codex Armachanus*, written by an Irish scribe in the eighth century, now in private hands, contains the entire New Testament, with Pelagius's prefaces. This MS. wants 1 John v. 7. The *Cod. Augiens.* (F), a Græco-Latin MS. containing St. Paul's Epistles (that to the Hebrews in Latin only) now in Trin. Coll. Cambridge, is probably an Irish MS. of the ninth century (see Dr. O'Conor's *Rer. Hib. Script.*; Sir W. Betham's *Antiq. Researches*; Petrie's *Essay on the Ecclesiastical Antiquities of Ireland*; O'Donovan's *Irish Grammar*; and Westwood's *Palæog. Sac. Pictoria*).

Modern versions of the Vulgate. The versions used in the Church of Rome have been all made from the Vulgate, of which the first German translation was printed in 1466, the Spanish in 1478, and the Italian in 1471. Our limits will allow us only to refer to that in use in this country, of which the Old Testament was printed at Douai in 1609, and the New at Rheims in 1582. This is greatly inferior in strength and elegance of expression to the Authorized Version of 1611, but is highly commendable for its scrupulous accuracy and fidelity, which cannot be predicated of all translations from the Vulgate in other languages. It was altered and modernized by Bishop Challoner in 1749, when the text was conformed to that of the Clementine edition. It has since undergone various alterations under the care of the Irish Roman-catholic hierarchy, and has been in some respects conformed to the Authorized Version, even in passages which controversialists of a bygone age had stigmatized as heretical. But this has been done without any departure from the text. The original translators, however, adhered so servilely to this, as to employ such barbarous words and phrases as sindon (Mark xv. 46), zealators (Acts xx. 20), præfinition (Eph. iii. 11), contristate (iv. 30), agnition (Philem. 16), repropitiate (Heb. ii. 17), with such hosts God is promerited (xiii. 16), &c. 'Yet in justice it must be observed, that no case of wilful perversion of Scripture has ever been brought home to the Rhemish translators'* (Scrivener's *Supplement to the Authorized Version*). Mr. Scrivener adds that 'the Rhemish divines [who were evidently men of learning and ability], may occasionally do us good service by furnishing some happy phrase or form of expression which had eluded the diligence of their more reputable predecessors.' (*ib.*)

The translators observe in their preface, that they religiously keep the phrases word for word, 'for fear of missing or restraining the sense of the Holy Ghost to the fantasie;' in proof of which they refer to such phrases as τί ἐμοὶ καὶ σοὶ, γύναι (John ii. 4), which they render, 'What to me and thee, woman?' explaining it in the note by the phrase, 'What hast thou to do with me?' But in some of the modern editions of the Rhemish version this rule has been departed from, and the text altered into, 'What is *that* to me or thee?' (Dublin ed. 1791, 1824), or, 'What is *it* to me and thee?' (Dublin, 1820); a reading inconsistent with the translation of the same words in Luke viii. 28. The interpolation has been removed in Dr. Murray's edition of 1825. In the '*New Version of the Four Gospels*, by a Catholic' [Dr. Lingard], the words are rendered, 'What hast thou to do with me?' The whole passage is thus rendered and commented on by Tittmann (*Meletemata Sacra*): '*Missum me fac, o mea*, "Leave that to my care, good mother." It is not the language of reproof or refusal, but rather of consolation and promise. This appears from the words which follow, "mine hour is not yet come." For in these words he promises his mother that at the proper time he will gratify her wish. ..... But our Lord purposely delayed his assistance, that the greatness of the miracle might be the better known to all. The appellation γύναι, which was employed by our Lord on other occasions also (John xix. 26; xx. 15), was very honourable among the Greeks, who were accustomed to call their queens by this title, and may be rendered "my beloved."'

Professor Moses Stuart (*Commentary on the Apocalypse*, vol. i. p. 119) conceives that 'in the translation of μετανοεῖτε by *agite pœnitentiam* (Matt. iii. 2), the same spirit was operating which led one part of the Church in modern times to translate μετανοεῖτε by *do penance*.' But the Latin phrase 'agere pœnitentiam,' which is also found in the old Italic, is evidently synonymous with μετανοεῖν, 'to repent.' 'Agite pœnitentiam,' says Campbell, 'was not originally a mistranslation of the Greek μετανοεῖτε.' Dr. Lingard (*ut supra*) renders it 'repent.'

We shall refer to one passage more, often objected to as proving that the Vulgate was altered to serve a purpose. In Heb. xi. 21, the Vulgate reads, as the translation of προσεκυνησεν επι το ακρον της ραβδου αυτου: adoravit fastigium virgae ejus: 'worshipped the top of his (Joseph's) rod.' If the present pointing of the Hebrew מִטָּה (Gen. xlvii. 31) be correct, the Seventy, who read it מַטֶּה, 'a staff' or 'sceptre,' must have been

* Some grave accusations against the Rhemish version, which appeared in the seventh edition of Mr. Horne's *Introduction* on the authority of an anonymous writer (*Brief Hist.* Dublin, 1830), were shown to be without foundation (see Wright's translation of Seiler's *Hermeneutics*, pp. 404-407); they are omitted in Mr. Horne's eighth edition.

in an error, wherein they were followed by the Syriac. Tholuck (*Comm. on Hebr.*) is of opinion that the Latin translators did not (as some suppose) overlook ἐπί, 'upon,' and he considers that this preposition with the accusative might easily lead to the acceptation in which it is taken by the Vulgate, which is also that adopted by Chrysostom and Theodoret, who explain the passage as if Jacob had foreseen Joseph's sovereignty, and gave a proof of his belief in it by the act of adoration in the direction of his sceptre. This is in Tholuck's opinion further confirmed by the generally spread reading αὐτοῦ (his), not αὑτοῦ (his own), and he doubts if the inspired writer of the epistle did not himself so understand the passage in the Sept., as being the more significant. But should it be admitted, with Tholuck, that 'the Protestant controversialists have very unjustly designated this passage of the Vulgate as one of the most palpable of its errors,' it must be borne in mind that Onkelos, Jonathan, Symmachus, and Aquila, follow the present reading; to which Jerome also gives a decided preference, observing (on Gen. xlvii. 31), 'In this passage some vainly assert that Jacob adored the top of Joseph's sceptre; . . . for in the Hebrew the reading is quite different. Israel adored at the head of the bed (adoravit Israel ad caput lecturi).'

It has been erroneously assumed that the translators of the English Bible followed invariably Beza's third edition. They acted independently, sometimes following Stephens where his text differed from Beza's, and sometimes the Vulgate in opposition to both (Scrivener, *ut supra*). The translators of King James's Bible have been sometimes reproached with having adopted readings in opposition to the authority of all texts, and of the former English translations, as in 1 Cor. xi. 27, where the translation is, 'whosoever shall eat this bread, *and* drink this cup,' &c., while the Greek text reads ἤ, '*or* drink.' But they were here preceded by the Geneva translators, who have '*and*,' and this was supported not only by some copies of the Vulgate, but by the Syriac version (published in 1555), and by the Clermont MS. (E) which has καί, as well as by Clemens Alexandrinus, Cassiodorus, and others. This reading had at a subsequent period the additional testimony of the *Cod. Alexandrinus*. Bengel, also, whom all unite with Dr. Wiseman in considering 'an amiable and profound scholar,' and whom Dr. Wiseman himself calls 'a noble model of the principles in action which he has been striving to inculcate through the course of his Lectures' (Wiseman, *Lectures, ut supra*), was so satisfied of the truth of this reading, that he would have introduced it into the text, but for his canon above referred to [Scripture, Holy]. The reading ἤ, '*or*,' however, being supported by the best authority, has been retained by all other editors, including Beza, Griesbach, Scholz, Lachmann, Tischendorf, and Schott, while the last named writer, with many others, still considers 'and' to be the true rendering.—W. W.

VULTURE (דָּאָה, *daah*). Notwithstanding the assignation of the Hebrew *daah* to 'glede' and 'black kite,' it is clear that in various texts דאה, ראה, איה, and ריה, also translated 'merlin,' all indicate raptorial birds of inferior powers, that have been mixed up with notions strictly belonging to the vulture; while the *vulturidæ* in Egypt alone amount at least to three species, exclusive of *peres* (the bearded vulture), and *racham* (the white carrion vulture, or *neophron*); and in other passages, again, we find *neser* (eagle) under circumstances leading to a belief that vultures are meant, or, at least, are not excluded. This intermixture of the distinctive attributes of genera, which by scientific classification can now be readily discriminated, was far from being understood by the ancients, and is still incomprehensible to Oriental writers, who, as well as the ancient Greeks, were so unacquainted with these characters, that they notice as 'a terrible species of eagle' a bird which is now believed to be nothing more than *tetrao urogallus*, 'the cock of the woods,' or *caperkalsie*. Late Western commentators, anxious to distinguish eagles from vultures, have assumed that the first mentioned never feed on carcasses; and judging the whole family of vultures by the group of carrion-eaters alone, have insinuated that the latter do not attack a living prey. In both cases they are in error: with some exceptions, eagles follow armies, though not so abundantly as vultures; and vultures attack living prey provided with small means of defence or of little weight; but their talons having no means of grasping with energy, or of seriously wounding with the claws, they devour their prey on the spot, while the eagle carries it aloft, and thence is more liable to be stung by a serpent not entirely disabled, than the vulture, who crushes the head of all reptiles it preys upon.

The species of vulture, properly so called, have the head naked or downy, the crop external, and very long wings; they have all an offensive smell, and we know of none that even the scavenger-ants will eat. When dead they lie on the ground untouched till the sun has dried them into mummies. Those found in and about the Egyptian territory are *Vultur fulvus*, *V. gyps* (Savigny), *V. Ægyptius* (Savigny), *V. monachus* (Arabian vulture), *V. cinereus*, *V. Nubicus*, and a black species, which is often figured on Egyptian monuments as the bird of victory, hovering over the head of a national hero in battle, and sometimes with a banner in each talon. It is perhaps the *gypactus barbatus (peres)*, or *lammer geyer*, by the Arabs called *nesr;* for though neither a vulture nor an eagle, it is the largest bird of prey of the old continent, and is armed like the eagle with formidable claws. The head is wholly feathered; its courage is equal to its powers, and it has a strength of wing probably superior to all raptorians, excepting the condor; it is consequently found with little or no difference from Norway to the Cape of Good Hope, and from the Pyrenees to Japan. Most of the above-named species are occasionally seen in the north of Europe. The voice varies in different species, but those of Egypt, frequenting the Pyramids, are known to bark in the night like dogs. Excepting the *percnopterine* or carrion vultures, all the other species are of large size; some superior in bulk to the swan, and others a little less. The Nubian species has been figured in Kitto's *Palestine;* the *fulvus* in Harris's *Dict. of the Nat. Hist. of the Bible*.

W.

WAGES. The word rendered in the English Version by this term, signifies primarily 'to purchase,' to obtain by some consideration on the part of the purchaser; thence to obtain on the part of the seller some consideration for something given or done, and hence to hire, to pay, or receive wages. Wages, then, according to the earliest usages of mankind, are a return made by a purchaser for something of value—specifically for work performed. And thus labour is recognised as property; and wages as the price paid or obtained in exchange for such property. In this relation there is obviously nothing improper or humiliating on the side either of the buyer or the seller. They have each a certain thing which the other wants, and in the exchange which they in consequence make, both parties are alike served. In these few words lies the theory, and also the justification of all service. The entire commerce of life is barter. In hire, then, there is nothing improper or discreditable. It is only a hireling, that is, a mercenary, a mean sordid spirit, that is wrong. So long as a human being has anything to give which another human being wants, so long has he something of value in the great market of life; and whatever that something may be, provided it does not contribute to evil passions or evil deeds, he is a truly respectable capitalist, and a useful member of the social community. The Scriptural usage in applying the term translated 'wages' to sacred subjects—thus the Almighty himself says to Abraham (Gen. xv. 1), 'I am thy exceeding great reward'—tends to confirm these views, and to suggest the observance of caution in the employment of the words 'hire' and 'hireling,' which have acquired an offensive meaning by no means originally inherent in themselves, or in the Hebrew words for which they stand (Gen. xxx. 18, 32, 33).

Property, in all ages, has in practice disowned the truth, that it has its duties as well as its rights. This Jacob found in his dealings with Laban. But in the iron age of the Jewish state, injustice towards those who had no property but such as their labour supplied, became very common, and conduced, with other crimes, to call down the divine wrath—'I will be a swift witness against those that oppress the hireling in his wages' (Mal. iii. 5).—J. WALLS. [Fortifications; Towns.]

WANDERING. In our office of tracing the steps of the Israelites from Goshen to Palestine, we have conducted them across the Red Sea to their first great station on its eastern bank, and thence onward along the shore and over the cliffs of that sea till, following them up Wady Hebron, we placed and left them before Mount Horeb, in the capacious plain Rahah, which, having its widest part in the immediate front of that immense mass of rock, extends as if with two arms, one towards the north-west, the other towards the north-east. The review of the plain by so competent a person as Robinson, is of great consequence for the interests of scientific geography and the yet more important interests of religious truth; the rather because a belief prevailed, even among the best informed, that there was no spot in the Sinaitic district which answered to the demands of the Scriptural narrative. Even the accurate Winer (*Real-Wört.* in art. 'Sinai,' not 'Horeb' as referred to by Robinson, i. 17; ii. 550) says, 'Whichever mountain may be considered as the place for the promulgation of the law, the common representation still remains false—that at the foot of the hill there spreads out a great plain, on which the people of Israel might assemble' (comp. Rosenmüller, *Alterth.* iii. 129). We shall therefore transcribe Robinson's words in extenso: 'We came to Sinai with some incredulity, wishing to investigate the point, whether there was any probable ground, beyond monkish tradition, for fixing upon the present supposed site. We were led to the conviction that the plain er Râhah is the probable spot where the congregation of Israel were assembled; and that the mountain impending over it, the present Horeb, was the scene of the awful phenomena in which the law was given. We were surprised as well as gratified to find here in the inmost recesses of these dark granite cliffs, this fine plain spread out before the mountain, and I know not where I have felt a thrill of stronger emotion than when, in first crossing the plain, the dark precipices of Horeb rising in solemn grandeur before us, we became aware of the entire adaptedness of the scene to the purposes for which it was chosen by the great Hebrew legislator. Moses, doubtless, during the forty years in which he kept the flocks of Jethro, had often wandered over these mountains, and was well acquainted with their valleys and deep recesses, like the Arabs of the present day. At any rate, he knew and had visited the spot to which he was to conduct his people—this *adytum* in the midst of the great circular granite region; a secret holy place, shut out from the world amid lone and desolate mountains' (i. 175, sq.). We subjoin what Robinson reports of the climate: 'The weather, during our residence at the convent (of Sinai), as, indeed, during all our journey through the peninsula (March and April), was very fine. At the convent the thermometer ranged only between 47° and 67° F. But the winter nights are said here to be cold; water freezes as late as February; and snow often falls upon the mountains. But the air is exceedingly pure, and the climate healthy, as is testified by the great age and vigour of many of the monks. And if in general few of the Arabs attain to so great an age, the cause is doubtless to be sought in the scantiness of their fare, and their exposure to privations, and not to any injurious influence of the climate' (p. 175).

After having been about a year in the midst of this mountainous region, the Israelites broke up their encampment and began their journey in the order of their tribes, Judah leading the way with the ark of the covenant, under the guidance of the directing cloud (Num. ix. 15, sq.; x. 11, sq.). They proceeded down Wady Seikh, having

the wilderness of Paran before them, in a north-westerly direction; but having come to a gorge in the mountains they struck in a north-north-easterly direction across a sandy plain, and then over the Jebel et-Tih, and came down Wady Zulakah, to the station Taberah. It took the army three days to reach this station. Whatever name the place bore before, it now received that of Taberah (fire), from a supernatural fire with which murmurers, in the extreme parts of the camp, were destroyed as a punishment for their guilt. Here, too, the mixed multitude that was among the Israelites not only fell a-lusting themselves, but also excited the Hebrews to remember Egyptian fish and vegetables with strong desire, and to complain of the divinely supplied manna. The discontent was intense and widely spread. Moses became aware of it, and forthwith felt his spirit misgive him. He brings the matter before Jehovah, and receives divine aid by the appointment of seventy elders to assist him in the important and perilous office of governing the gross, sensuous, and self-willed myriads whom he had to lead to Canaan. Moreover, an abundance of flesh meat was given in a most profuse supply of quails. It appears that there were now 600,000 footmen in the congregation.

The next station was Kibroth-hattaavah, near which there are fine springs and excellent pasturage. This spot, the name of which signifies 'graves of lust,' was so denominated from a plague inflicted on the people in punishment of their rebellious disposition (Num. xi. 33; 1 Cor. x. 6). Thence they journeyed to Hazeroth, which Robinson, after Burckhardt, finds in el-Hudhera, where is a fountain, together with palm-trees. 'The determination of this point,' says Robinson, 'is perhaps of more importance in Biblical history than would at first appear; for if this position be adopted for Hazeroth, it settles at once the question as to the whole route of the Israelites between Sinai and Kadesh. It shows that they must have followed the route upon which we now were to the sea, and so along the coast to Akabah (at the head of the eastern arm of the Red Sea), and thence, probably, through the great Wady el-'Arabah to Kadesh. Indeed, such is the nature of the country, that having once arrived at this fountain, they could not well have varied their course so as to have kept aloof from the sea, and continued along the high plateau of the western desert' (i. 223). At Hazeroth, where the people seem to have remained a short time, there arose a family dissension to increase the difficulties of Moses. Aaron, apparently led on by his sister Miriam, who may have been actuated by some feminine pique or jealousy, complained of Moses on the ground that he had married a Cushite, that is, an Arab wife, and the malcontents went so far as to set up their own claims to authority as not less valid than those of Moses. An appeal is made to Jehovah, who vindicates Moses, rebukes Aaron, and punishes Miriam (Num. xii.).

'And afterward the people removed from Hazeroth, and pitched in the wilderness of Paran,' at Kadesh (Num. xii. 16; xiii. 26). In Deut. i. 19-21, we read, 'And when we departed from Horeb we went through all that great and terrible wilderness which ye saw by the way of the mountain of the Amorites, as the Lord our God commanded us; and we came to Kadesh-barnea. And I said unto you, Ye are come unto the mountain of the Amorites, which the Lord our God doth give unto us. Behold, the Lord thy God hath set the land before thee: go up and possess it; fear not, neither be discouraged.' Accordingly, here it was that twelve men (spies) were sent into Canaan to survey the country, who went up from the wilderness of Zin (Num. xiii. 21) to Hebron; and returning after forty days brought back a very alarming account of what they had seen. Let it, however, be remarked that the Scriptures here supply several local data to this effect: Kadesh-barnea lay not far from Canaan, near the mountain of the Amorites, in the wilderness of Zin, in the wilderness of Paran. It is evident that there is here a great *lacuna*, which some have attempted to fill up by turning the route a little to the west to Rithmah, on the borders of Idumæa, and then conducting it with a sudden bend to the west and the south, into what is considered the wilderness of Paran (*Relievo Map of Arabia Petræa*, published by Dobbs, London). In this view, however, we cannot concur. Both Robinson and Raumer are of a different opinion. At the same time it must be admitted that so great a gap in the itinerary is extraordinary. If, however, we find ourselves in regard to the journey from Horeb to Kadesh possessed of fewer and less definite materials of information, we have also the satisfaction of feeling that no great Scriptural fact or doctrine is concerned. It is certain that the narrative in the early part of Numbers goes at once from Hazeroth to Kadesh; and although the second account (in Num. xxxiii.) supplies other places, these seem to belong properly to a second route and a second visit to Kadesh. The history in the book of Numbers is not, indeed, a consecutive narrative; for after the defeat of the Israelites in their foolish attempt to force an entrance into Canaan contrary to the will of God (Num. xiv. 45), it breaks suddenly off, and leaving the journeyings and the doings of the camp, proceeds to recite certain laws. Yet it offers, as we think, a clear intimation of a second visit to the wilderness of Zin and to Kadesh. Without having said a word as to the removal of the Israelites southward, and therefore leaving them in the wilderness of Zin, at Kadesh, it records in the twentieth chapter (ver. 1), 'Then *came* the children of Israel, the whole congregation, into the desert of Zin, in the first month, and the people abode in Kadesh.' And this view appears confirmed by the fact that the writer immediately proceeds to narrate the passage of the Israelites hence on by Mount Hor southward to Gilgal and Canaan. Robinson's remarks (ii. 611) on this point have much force: 'I have thus far assumed that the Israelites were twice at Kadesh; and this appears from a comparison of the various accounts. They broke up from Sinai on the twentieth day of the second month in the second year of their departure out of Egypt, corresponding to the early part of May; they came into the desert of Paran, whence spies were sent up the mountain into Palestine, "in the time of the first ripe grapes;" and these returned after forty days to the camp at Kadesh. As grapes begin to ripen on the mountains of Judah in July, the return of the spies is to be placed in August or September. The people now murmured at the report of the spies, and received the sentence from Jehovah

that their carcasses should fall in the wilderness, and their children wander in the desert forty years. They were ordered to turn back into the desert "by the way of the Red Sea," although it appears that they abode "many" days in Kadesh. The next notice of the Israelites is, that in the first month they came into the desert of Zin and abode again at Kadesh; here Miriam dies; Moses and Aaron bring water from the rock; a passage is demanded through the land of Edom, and refused; and they then journeyed from Kadesh to Mount Hor, where Aaron dies in the fortieth year of the departure from Egypt, in the first day of the fifth month, corresponding to a part of August and September. Here, then, between August of the *second* year and August of the *fortieth* year, we have an interval of thirty-eight years of wandering in the desert. With this coincides another account. From Mount Hor they proceeded to Elath on the Red Sea, and so around the land of Edom to the brook Zered, on the border of Moab; and from the time of their departure from Kadesh (meaning, of course, their first departure) until they thus came to the brook Zered, there is said to have been an interval of thirty-eight years.

In this way the Scriptural account of the journeyings of the Israelites becomes perfectly harmonious and intelligible. The eighteen stations mentioned only in the general list in the book of Numbers as preceding the arrival at Kadesh, are then apparently to be referred to this eight and thirty years of wandering, during which the people at last approached Ezion-geber, and afterwards returned northwards a second time to Kadesh, in the hope of passing directly through the land of Edom. Their wanderings extended, doubtless, over the western desert; although the stations named are probably only those head-quarters where the tabernacle was pitched, and where Moses and the elders and priests encamped; while the main body of the people was scattered in various directions.

Where, then, was Kadesh? Clearly, on the borders of Palestine. We agree with Robinson and Raumer in placing it nearly at the top of the Wady Arabah, where, indeed, it is fixed by Scripture, for in Numbers xii. 16 we read, 'Kadesh, a city in the uttermost of thy (Edom) border.' The precise spot it may be difficult to ascertain, but here, in the wilderness of Zin, which lay in the more comprehensive district of Paran, is Kadesh to be placed. Raumer, however, has attempted to fix the locality, and in his views Robinson and Schubert generally concur. Raumer places it south from the Dead Sea, in the low lands between the mountain of the Edomites and that of the Amorites. The country gradually descends from the mountains of Judah southward, and where the descent terminates Raumer sets Kadesh. With this view the words of Moses entirely correspond, when, at Kadesh, he said to the spies, '*Get you* UP *southward*, and *go up* into the mountain' (Num. xiii. 17). The ascent may have been made up the pass es-Sufah; up this the self-willed Hebrews went, and were driven back by the Canaanites as far as to Hermah, then called Zephath (Num. xiii. 17; xiv. 40-45; Judg. i. 17). The spot where Kadesh lay Robinson finds in the present Ain el-Weibeh. But Raumer prefers a spot to the north of this place—that where the road mounts by Wady el-Khurar to the pass Sufah. It ought, he thinks, to be fixed on a spot where the Israelites would be near the pass, and where the pass would lie before their eyes. This is not the case, according to Schubert, at Ain el-Weibeh. Raumer, therefore, inclines to fix on Ain Hasb, which lies near Ain el Khurar. This is probably Kadesh. The distance from the pass Sufah to Ain Hasb is little more than half the length of that from the same pass to Ain el-Weibeh. According to the Arabs, there is at Ain Hasb a copious fountain of sweet water, surrounded by verdure and traces of ruins, which must be of considerable magnitude, as they were seen by Robinson at a distance of some miles. These may be the ruins of Kadesh; but at Ain el-Weibeh there are no ruins.

By what route, then, did the Israelites come from Hazeroth to Kadesh? We are here supplied with scarcely any information. The entire distance, which is considerable, is passed by the historian in silence. Nothing more remains than the direction of the two places, the general features of the country, and one or two allusions.

The option seems to lie between two routes. From Hazeroth, pursuing a direction to the north-east, they would come upon the sea-coast, along which they might go till they came to the top of the Bahr Akabar, and thence up Wady Arabah to Kadesh, nearly at its extremity. Or they might have taken a north-western course and crossed the mountain Jebel et-Tih. If so, they must still have avoided the western side of Mount Araif, otherwise they would have been carried to Beer-sheba, which lay far to the west of Kadesh. Robinson prefers the first route; Raumer, the second. 'I,' says the latter, 'am of opinion that Israel went through the desert et-Tih, then down Jebel Araif, but not along Wady Arabah.' This view is supported by the words found in Deut. i. 19, 'When we departed from Horeb we went *through all that great and terrible wilderness* which ye saw by the way of the mountain of the Amorites, and we came to Kadesh-barnea.' This journey from Horeb to Kadesh-barnea took the Hebrews eleven days (Deut. i. 2).

At the direct command of Jehovah the Hebrews left Kadesh, came down the Wady Arabah, and entered the wilderness by the way of the Red Sea (Num. xiv. 25). In this wilderness they wandered eight and thirty years, but little can be set forth respecting the course of their march. It may in general be observed that their route would not resemble that of a regular modern army. They were a disciplined horde of nomades, and would follow nomade customs. It is also clear that their stations as well as their course would necessarily be determined by the nature of the country, and its natural supplies of the necessaries of life. Hence regularity of movement is not to be expected. How, except by a constant miracle, two millions of people were supported for forty years in the peninsula of Sinai, must, under the actual circumstances of the case, ever remain inexplicable; nor do we conceive that such scanty supplies as an occasional well or a chance oasis do much to relieve the difficulty. In the absence of detailed information, any attempt to lay down the path pursued by the Israelites after their emerging from Arabah can be little better than conjectural. Some authorities carry them quite over to the eastern bank of the Red Sea; but the

expression 'by the way of the Red Sea' denotes nothing more than the western wilderness, or the wilderness in the direction of the Red Sea.

The stations over which the Israelites passed are set down in Num. xxxiii. 18, sq. (comp. Deut. x. 6, 7), and little beyond the bare record can be given. Only it seems extraordinary, and is much to be regretted, that for so long a period as eight and thirty years our information should be so exceedingly small. Raumer, indeed, makes an effort (*Beiträge*, p. 11) to fix the direction in which some of the stations lay to each other, but we cannot find satisfaction in his efforts, and do not, therefore, bring them before the reader. It may be of more service to them to subjoin the following table of the stations of the Israelites, from the time of their leaving Egypt, which we take from Robinson's *Researches in Palestine* (ii. 678, 679).

1. *From Egypt to Sinai.*

Exodus xii.-xix.	Numbers xxxiii.
From Rameses, xii. 37.	From Rameses, ver. 3.
1. Succoth, xii. 37	Succoth, ver. 5
2. Etham, xiii. 20	Etham, ver. 6
3. Pi-hahiroth, xiv. 2	Pi-hahiroth, ver. 7
4. Passage through the Red Sea, xiv. 22; and three days' march into the desert of Shur, xv. 22	Passage through the Red Sea, and three days' march in the desert of Etham, ver. 8
5. Marah, xv. 23	Marah, ver. 8
6. Elim, xv. 27	Elim, ver. 9.
7.	Encampment by the Red Sea, ver. 10
8. Desert of Sin, xvi. 1	Desert of Sin, ver. 11
9.	Dophkah, ver. 12
10.	Alush, ver. 13
11. Rephidim, xvii. 1	Rephidim, ver. 14
12. Desert of Sinai, xix. 1	Desert of Sinai, ver. 15

2. *From Sinai to Kadesh the second time.*

Numbers x.-xx.	Numbers xxxiii.
From the Desert of Sinai, x. 12.	From the Desert of Sinai, ver. 16.
13. Taberah, xi. 3; Deut. ix. 22

50. Mattanah, xxi. 18	
51. Nahaliel, xxi. 19	
52. Bamoth, xxi. 19	
53. Pisgah, put for the range of Abarim, of which Pisgah was part, xxi. 20	Mountains of Abarim, near to Nebo, ver. 47
54. By the way of Bashan to the plains of Moab by Jordan, near Jericho, Num. xxi. 33; xxii. 1	Plains of Moab by Jordan, near Jericho, ver. 48

There are a few events which must be recorded in order to preserve, in a measure, the uniformity of the narrative designed to trace the passage of the Hebrews from the land of bondage to the Promised Land.

When we begin to take up the thread of the story at the second visit to Kadesh, we find time had, in the interval, been busy at its destructive work, and we thus gain confirmation of the view which has been taken of such second visit. No sooner has the sacred historian told us of the return of the Israelites to Kadesh, than he records the death and burial of Miriam, and has, at no

great distance of time, to narrate that of Aaron and Moses. While still at Kadesh a rising against these leaders takes place, on the alleged ground of a want of water. Water is produced from the rock at a spot called hence Meribah (strife). But Moses and Aaron displeased God in this proceeding, probably because they distrusted God's general providence and applied for extraordinary resources. On account of this displeasure it was announced to them that they should not enter Canaan. A similar transaction has been already spoken of as taking place in Rephidim (Exod. xvii. 1). The same name, Meribah, was occasioned in that as in this matter. Hence it has been thought that we have here two versions of the same story. But there is nothing surprising, under the circumstances, in the outbreak of discontent for want of water, which may well have happened even more than twice. The places are different, very wide apart; the time is different; and there is also the great variation arising out of the conduct and punishment of Moses and Aaron. On the whole, therefore, we judge the two records to speak of different transactions.

Relying on the ties of blood (Gen. xxxii. 8) Moses sent to ask of the Edomites a passage through their territory into Canaan. The answer was a refusal, accompanied by a display of force. The Israelites, therefore, were compelled to turn their face southward, and making a turn round the end of the Elanitic gulf reached Mount Hor, near Petra, on the top of which Aaron died. Finding the country bad for travelling, and their food unpleasant, Israel again broke out into rebellious discontent, and was punished by fiery serpents which bit the people, and much people died, when a remedy was provided in a serpent of brass set on a pole (Num. xxi. 4, sq.). Still going northward, and probably pursuing the caravan route from Damascus, they at length reached the valley of Zared (the brook), which may be the present Wady Kerek, that runs from the east into the Dead Sea. Hence they 'removed and pitched on the other side of Arnon, which is in the border of Moab, between Moab and the Amorites' (Num. xxi. 13). Beer (the well) was the next station, where, finding a plentiful supply of water, and being rejoiced at the prospect of the speedy termination of their journey, the people indulged in music and song, singing 'the song of the well' (Num. xxi. 17, 18). The Amorites being requested, refused to give Israel a passage through their borders, and so the nation was again compelled to proceed still in a northerly course. At length having beaten the Amorites, and Og, king of Bashan, they reached the Jordan, and pitched their tents at a spot which lay opposite Jericho. Here Balak, king of the Moabites, alarmed at their numbers and their successful prowess, invited Balaam to curse Israel, in the hope of being thus aided to overcome them and drive them out. The intended curse proved a blessing in the prophet's mouth. While here the people gave way to the idolatrous practices of the Moabites, when a terrible punishment was inflicted, partly by a plague which took off 24,000, and partly by the avenging sword. Moses, being commanded to take the sum of the children of Israel, from twenty years upwards, found they amounted to 600,730, among whom there was not a man of them whom Moses and Aaron numbered in the wilderness of Sinai (Num. xxvi. 47, 64). Moses is now directed to ascend Abarim, to Mount Nebo, in the land of Moab, over against Jericho, in order that he might survey the land which he was not to enter on account of his having rebelled against God's commandment in the desert of Zin (Num. xxvii. 12; Deut. xxxii. 49). Conformably with the divine command, Moses went up from the plains of Moab unto the mountain of Nebo, to the top of Pisgah, and there he died, at the age of 120 years: 'His eye was not dim, nor his natural force abated' (Deut. xxxiv.). Under his successor, Joshua, the Hebrews were forthwith led across the Jordan, and established in the Land of Promise.

Thus a journey, which they might have performed in a few months, they spent forty years in accomplishing, bringing on themselves unspeakable toil and trouble, and in the end, death, as a punishment for their gross and sensual appetites, and their unbending indocility to the divine will (Num. xiv. 23; xxvi. 65). Joshua, however, gained thereby a great advantage; inasmuch as it was with an entirely new generation that he laid the foundations of the civil and religious institutions of the Mosaic polity in Palestine. This advantage assigns the reason why so long a period of years was spent in the wilderness.

WAR. The Hebrew nation, so long as it continued in Egyptian bondage, might be regarded as unacquainted with military affairs, since a jealous government would scarcely permit so numerous and dense a population as the pastoral families of Israel, which retained their seat in Goshen, certainly were, to be in possession of the means of resistance to authority; but placed as this portion of the people was, with the wanderers of the wilderness to the south, and the mountain robbers of Edom to the east, some kind of defence must have been provided to protect its cattle, and in a measure to cover lower Egypt itself from foreign inroads. Probably the labouring population, scattered as bondsmen through the Delta, were alone destitute of weapons, while the shepherds had the same kind of defensive arms which are still in use, and allowed to all classes in eastern countries, whatever be their condition. This mixed state of their social position appears to be countenanced by the fact that, when suddenly permitted to depart, the whole organization required for the movement of such a multitude was clearly in force; yet not a word is said about physical means to resist the pursuing Egyptians, although at a subsequent period it does not appear that they were wanting to invade Palestine, but that special causes prevented them from being immediately resorted to. The Israelites were, therefore, partly armed; they had their bows and

arrows, clubs and darts, wicker or ox-hide shields, and helmets (caps) of skins, or of woven rushes, made somewhat like our bee-hives.

These inferences are borne out by the fact, that the Egyptian offensive weapons were but little better, and that the materials, being readily accessible and in constant use, could be manufactured by the cattle-herds and dwellers in tents themselves. From their familiar knowledge of the Egyptian institutions, the Israelites doubtless copied their military organization, as soon as they were free from bondage, and became inured to a warlike life during their forty years' wandering in the desert; but with this remarkable difference, that while Egypt reckoned her hundred thousands of regulars, either drawn from the provinces or nomes by a kind of conscription, such as is to be seen on the monuments, or from a military caste of hereditary soldiers, the Hebrew people, having preserved the patriarchal institution of nomades, were embodied by families and tribes, as is plainly proved by the order of march which was preserved during their pilgrimage to the Land of Promise. That order likewise reveals a military circumstance which seems to attest that the distribution of the greatest and most warlike masses was not on the left of the order of movement, that is, towards their immediate enemies, but always to the front and right, as if even then the most serious opposition might be expected from the east and north-east—possibly from a reminiscence of past invasions of the giant races, and of the first conquerors, furnished with cavalry and chariots, having come from those directions.

At the time of the departure of Israel, horses were not yet abundant in Egypt, for the pursuing army had only 600 chariots, and the shepherd people were even prohibited from breeding or possessing them. The Hebrews were enjoined to trust, under Divine protection, to the energies of infantry alone, their future country being chiefly within the basin of high mountains, and the march thither over a district of Arabia where to this day horses are not in use. We may infer that the inspired lawgiver rejected horses because they were already known to be less fit for defence at home than for distant expeditions of conquest, in which it was not intended that the chosen people should engage.

Where such exact order and instruction existed, it may not be doubted that in military affairs, upon which in the first years of emancipation so much of future power and success was to depend, measures no less appropriate were taken, and that, with the Egyptian model universally known, similar institutions or others equally efficient were adopted by the Israelites. Great tribal ensigns they had, and thence we may infer the existence of others for subordinate divisions. Like the Egyptians, they could move in columns and form well ordered ranks in deep fronts of battle, and they acted upon the best suggestions of human ingenuity united with physical daring, except when expressly ordered to trust to Divine interposition. The force of circumstances caused in time modifications of importance to be made, where doctrine had interfered with what was felt to hinge on political necessities; but even then they were long and urgently wanted before they took place, although the people in religion were constantly disregarding the most important points, and forsaking that God who, they all knew and believed, had taken them out of bondage to make them a great nation. Thus, although from the time the tribes of Reuben and Manasseh received their allotment east of the Jordan, the possession of horses became in some measure necessary to defend their frontier, still the people persisted for ages in abstaining from them, and even in the time of David would not use them when they were actually captured; but when the policy of Solomon had made extensive conquests, the injunction was set aside, because horses became all-important; and from the captivity till after the destruction of Jerusalem, the remnant of the eastern tribes were in part warlike equestrian nomades, who struck terror into the heart of the formidable Persian cavalry, won great battles, and even captured Parthian kings. When both the kingdoms of Judah and Israel were again confined to the mountains, they reduced their cavalry to a small body; because, it may be, the nature of the soil within the basin of the Libanus was, as it still is, unfavourable to breeding horses. Another instance of unwillingness to violate ancient institutions is found in the Hebrews abstaining from active war on the Sabbath until the time of the Maccabees.

There are, however, indications in their military transactions, from the time Assyrian and Persian conquerors pressed upon the Israelite states, and still more after the captivity, which show the influence of Asiatic military ideas, according to which the masses do not act with ordered unity, but trust to the more adventurous in the van to decide the fate of battle. Later still, under the Maccabees, the systematic discipline of Macedonian importation can be observed, even though in Asia the Greek method of training, founded on mathematical principles, had never been fully complied with, or had been modified by the existence of new circumstances and new elements of destruction; such, for example, as the use of great bodies of light cavalry, showering millions of arrows upon their enemies, and fighting elephants introduced by the Ptolemies.

But all these practices became again modified in Western Asia when Roman dominion had superseded the Greek kingdoms. Even the Jews, as is evident from Josephus, modelled their military force on the Imperial plan; their infantry became armed, and was manœuvred in accordance with that system which every where gave victory by means of the firmness and mobility which it imparted. The masses were composed of cohorts or their equivalents, consisting of centuriæ and deceniæ, or subdivisions into hundreds, fifties, and tens, similar to modern battalions, companies, and squads; and the commanders were of like grades and numbers. Thus the people of Israel, and the nations around them, cannot be accurately considered, in a military view, without taking into account the successive changes here noticed; for they had the same influence which military innovations had in Europe between the eras of Charlemagne and the Emperor Charles V., including the use of cannon—that invention for a long time making no greater alteration in the constitution of armies, than the perfection of war machines produced upon the military institutions of antiquity.

The army of Israel was chiefly composed of

infantry, as before remarked, formed into a trained body of spearmen, and, in greater numbers, of slingers and archers, with horses and chariots in small proportion, excepting during the periods when the kingdom extended over the desert to the Red Sea. The irregulars were drawn from the families and tribes, particularly Ephraim and Benjamin, but the heavy armed derived their chief strength from Judah, and were, it appears, collected by a kind of conscription, by tribes, like the earlier Roman armies; not through the instrumentality of selected officers, but by genealogists of each tribe, under the superintendence of the princes. Of those returned on the rolls, a proportion greater or less was selected, according to the exigency of the time; and the whole male population might be called out on extraordinary occasions. When kings had rendered the system of government better organised, there was an officer denominated השׁוטר *hashoter*, a sort of muster-master, who had returns of the effective force, or number of soldiers ready for service, but who was subordinate to the הסופר *hasopher*, or scribe, a kind of secretary of state. These officers, or the שׁטרים *shoterim*, struck out, or excused from service:—1st, those who had built a house without having yet inhabited it; 2nd, those who had planted an olive or vineyard, and had not tasted the fruit—which gave leave of absence for five years; 3rd, those who were betrothed, or had been married less than one year; 4th, the *faint-hearted*, which may mean the constitutionally delicate, rather than the cowardly, as that quality is seldom owned without personal inconvenience, and where it is no longer a shame, the rule would destroy every levy.

The levies were drilled to march in ranks (1 Chron. xii. 38), and in column by fives (חמשׁים, *chamushim**) abreast (Exod. xiii. 18); hence it may be inferred that they borrowed from the Egyptian system a decimal formation, two fifties in each division making a solid square, equal in rank and file: for twice ten in rank and five in file being told off by right hand and left hand files, a command to the left hand files to face about and march six or eight paces to the rear, then to front and take one step to the right would make the hundred a solid square, with only the additional distance between the right hand or unmoved files necessary to use the shield and spear without hindrance; while the depth being again reduced to five files, they could face to the right or left, and march firmly in column, passing every kind of ground without breaking or lengthening their order. The Pentastichous† system, or arrangement of five men in depth, was effected by the simple evolution just mentioned, to its own condensation to double number, and at the same time afforded the necessary space between the standing files of spearmen or light infantry for handling their weapons without obstacle, always a primary object in every ancient system of training. Between the fifth and sixth rank there was thus space made for the ensign bearer, who, as he then stood precisely between the companies of fifty each, had probably some additional width to enable his ensign being stationed between the four middlemost men in the square, having five men in file and five in rank before, behind, and on each side; there he was the regulator of their order, coming to the front in advancing, and to the rear in retreating; and this may explain why *στίχος*, a file, and the Hebrew *deghel* and *nes*, an ensign, are in many cases regarded as synonymous. Although neither the Egyptian depth of formation, if we may judge from their pictured monuments, nor the Greek phalanx, nor the Roman legion, was constructed upon decimal principles, yet the former was no doubt so in its origin, since it was the model of the Israelites, and the tetrastichal system, which afterwards succeeded, shows that it was not the original, since even in the phalanx, where the files formed, broke, and doubled by fours, eights, sixteens, and thirty-twos, there remained names of sections which indicated the first-mentioned division: such was the pentacontarchy, denoting some arrangement of fifty, while in reality it consisted of sixty-four, and the decany and decurio, though derived from a decimal order, signified an entire file or a compact line in the phalanx, without reference to number.

With centuries thus arranged in masses, both moveable and solid, a front of battle could be formed in simple decimal progression to a thousand, ten thousand, and to an army at all times formidable by its depth, and by the facility it afforded for the light troops, chariots of war, and cavalry, to rally behind and to issue from thence to the front. Archers and slingers could ply their missiles from the rear, which would be more certain to reach an enemy in close conflict, than was to be found the case with the Greek phalanx, because from the great depth of that body missiles from behind were liable to fall among its own front ranks. These divisions were commanded, it seems, by קצינים *ketsinim*, officers in charge of one thousand, who, in the first ages, may have been the heads of houses, but in the time of the kings were appointed by the crown, and had a seat in the councils of war; but the commander of the host שׂר על הצבא *sar hat-tzaba*, such as Joab, Abner, Benaiah, &c., was either the judge, or under the judge or king, the supreme head of the army, and one of the highest officers in the state. He, as well as the king, had an armour-bearer, whose duty was not only to bear his shield, spear, or bow, and to carry orders, but above all, to be at the chief's side in the hour of battle (Judg. ix. 54; 1 Sam. xiv. 6; xxxi. 4, 5). Beside the royal guards, there was, as early at least as the time of David, a select troop of heroes, who appear to have had an institution very similar in principle to our modern orders of knighthood, and may have originated the distinctive marks already pointed out as used by the Romans; for it seems they strewed their hair with gold dust [Arms.].

In military operations, such as marches in

* If this term could be satisfactorily shown to mean fifty, it would still contain the decimal system, and equally necessitate the above formation; but no army, except for a short manœuvre before battle, could march in column with a front of fifty, though the companies were of fifty men; they must always have been doubled for simplifying every efficient manœuvre. There was thus also an officer to command the front, and another the rear.

† Taking *στίχος* in its confined sense of a file or row of men arranged behind each other.

quest of, or in the presence of, an enemy, and in order of battle, the forces were formed into three divisions, each commanded by a chief captain or commander of a corps, or third part, שְׁלִישִׁי or שְׁלִשִׁי *shelish*, as was also the case with other armies of the east; these constituted the centre, and right and left wing, and during a march formed the van, centre, and rear. The great camp in the wilderness was composed of four of these triple bodies disposed in a quadrangle, each front having a tribal great central standard, and another tribal one in each wing.

The war cry of the Hebrews was not intonated by the ensign bearers, as in the West, but by a Levite; for priests had likewise charge of the trumpets, and the sounding of signals; and one of them, called 'the anointed for war,' who is said to have had the charge of animating the army to action by an oration, may have been appointed to utter the cry of battle (Deut. xx. 2). It was a mere shout (1 Sam. xvii. 20), or, as in later ages, *Halelujah!* while the so-called mottoes of the central banners of the four great sides of the square of Judah, Reuben, Ephraim, and Dan, were more likely the battle-songs which each of the fronts of the mighty army had sung on commencing the march or advancing to do battle (Num. x. 34, 35, 36; Deut. vi. 4). These verses may have been sung even before the two books wherein they are now found were written, and indeed the sense of the text indicates a past tense. It was to these we think Jehoshaphat addressed himself when about to engage the Moabites: he ordered 'the singers before the Lord' to chant the response (2 Chron. xx. 21), 'Praise the Lord, for his mercy endureth for ever.' With regard to the pass-word, the sign of mutual recognition occurs in Judg. vii. 18, when, after the men had blown their trumpets and shown light, they cried 'The sword of the Lord and of Gideon'—a repetition of the very words overheard by that chief while watching the hostile army.

Before an engagement the Hebrew soldiers were spared fatigue as much as possible, and food was distributed to them; their arms were enjoined to be in the best order, and they formed a line, as before described, of solid squares of hundreds, each square being ten deep, and as many in breadth, with sufficient intervals between the files to allow of facility in the movements, the management of the arms, and the passage to the front or rear of slingers and archers. These last occupied posts according to circumstances, on the flanks, or in advance, but in the heat of battle were sheltered behind the squares of spearmen; the slingers were always stationed in the rear, until they were ordered forward to cover the front, impede an hostile approach, or commence an engagement, somewhat in the manner of modern skirmishers. Meantime, the king, or his representative, appeared clad in holy ornaments, הֲדְרֵי קֹדֶשׁ, *hadri kodesh* (in our version rendered 'the beauties of holiness,' Ps. cx. 3; 2 Chron. xx. 21), and proceeded to make the final dispositions for battle, in the middle of his chosen braves, and attended by priests, who, by their exhortations, animated the ranks within hearing, while the trumpets waited to sound the signal. It was now, with the enemy at hand, we may suppose, that the slingers would be ordered to pass forward between the intervals of the line, and, opening their order, would let fly their stone or leaden missiles, until, by the gradual approach of the opposing fronts, they would be hemmed in and recalled to the rear, or ordered to take an appropriate position. Then was the time when the trumpet-bearing priests received command to sound the charge, and when the shout of battle burst forth from the ranks. The signal being given, the heavy infantry would press forward under cover of their shields, with the רֹמַח *romach* protruded direct upon the front of the enemy: the rear ranks might then, when so armed, cast their darts, and the archers, behind them all, shoot high, so as to pitch their arrows over the lines before them, into the dense masses of the enemy beyond. If the opposing forces broke through the line, we may imagine a body of charioteers reserve, rushing from their post, and charging in among the disjointed ranks of the enemy, before they could reconstruct their order; or wheeling round a flank, fall upon the rear; or being encountered by a similar manœuvre, and perhaps repulsed, or rescued by Hebrew cavalry. The king, meanwhile, surrounded by his princes, posted close to the rear of his line of battle, and in the middle of showered missiles, would watch the enemy and strive to remedy every disorder. Thus it was that several of the sovereigns of Judah were slain (2 Chron. xviii. 33; xxxv. 23), and that such an enormous waste of human life took place; for two hostile lines of masses, at least ten in depth, advancing under the confidence of breastplate and shield, when once engaged hand to hand, had difficulties of no ordinary nature to retreat; because the hindermost ranks not being exposed personally to the first slaughter, would not, and the foremost could not, fall back; neither could the commanders disengage the line without a certainty of being routed. The fate of the day was therefore no longer within the control of the chief, and nothing but obstinate valour was left to decide the victory. Hence, with the stubborn character of the Jews, battles fought among themselves were particularly sanguinary; such, for example, as that in which Jeroboam king of Israel was defeated by Abijah of Judah (2 Chron. xiii. 3-17), wherein, if there be no error of copyists, there was a greater slaughter than in ten such battles as that of Leipsic, although on that occasion three hundred and fifty thousand combatants were engaged for three successive days, provided with all the implements of modern destruction in full activity. Under such circumstances defeat led to irretrievable confusion, and where either party possessed superiority in cavalry and chariots of war it would be materially increased; but where the infantry alone had principally to pursue a broken enemy, that force, loaded with shields and preserving order, could overtake very few who chose to abandon their defensive armour, unless they were hemmed in by the locality. Sometimes a part of the army was posted in ambush, but this manœuvre was most commonly practised against the garrisons of cities (Josh. viii. 12; Judg. xx. 38). In the case of Abraham (Gen. xiv. 15), when he led a small body of his own people, suddenly collected, and falling upon the guard of the captives, released them, and recovered

the booty, it was a surprise, not an ambush; nor is it necessary to suppose that he fell in with the main army of the enemy. At a later period there is no doubt the Hebrews formed their armies, in imitation of the Romans, into more than one line of masses, and modelled their military institutions as near as possible upon the same system.

Such were the instruments and the institutions of war, which the Hebrew people, as well as the nations which surrounded them, appear to have adopted; but in the conquest of the promised land, as regarded their enemies, the laws of war prescribed to them were, for purposes which we cannot now fully appreciate, more severe than in other cases. All the nations of antiquity were cruel to the vanquished, perhaps the Romans most of all: even the Egyptians, in the sculptures of their monuments, attest the same disposition—the males being very generally slaughtered, and the women and children sold for slaves. With regard to the spoil, except in the special case just referred to, the Hebrews divided it in part with those who remained at home, and with the Levites, and a portion was set apart as an oblation to the Lord (Num. xxxi. 50). This right of spoil and prey was a necessary consequence of military institutions where the army received no pay. שלל *shalal*, that is, the armour, clothes, money, and furniture, and מלקוח *malkoch*, prey, consisting of the captives and live stock, were collected into one general mass, and then distributed as stated above; or, in the time of the kings, were shared in great part by the crown, which then, no doubt, took care to subsist the army and grant military rewards. [Arms; Armour; Encampment; Engines; Fortifications; Standards.]—C. H. S.

WARS OF THE LORD. [Scripture.]

WASHING. [Ablution.]

WASHING OF FEET. The custom of washing the feet held, in ancient times, a place among the duties of hospitality, being regarded as a mark of respect to the guest, and a token of humble and affectionate attention on the part of the entertainer. It had its origin in circumstances for the most part peculiar to the East.

In general, in warm Oriental climes, cleanliness is of the highest consequence, particularly as a safeguard against the leprosy. The East knows nothing of the factitious distinctions which prevail in these countries between sanatory regulations and religious duties; but the one, as much as the other, is considered a part of that great system of obligations under which man lies towards God. What, therefore, the health demands, religion is at hand to sanction. Cleanliness is in consequence not next to godliness, but a part of godliness itself.

As in this Oriental view may be found the origin and reason of much of what the Mosaic law lays down touching clean and unclean, so the practice of feet-washing in particular, which considerations of purity and personal propriety recommended, hospitality adopted and religion sanctioned.

In temperate climes bathing is far too much neglected; but in the East the heat of the atmosphere and the dryness of the soil would render the ablution of the body peculiarly desirable, and make feet-washing no less grateful than salutary to the weary traveller. The foot, too, was less protected than with us. In the earliest ages it probably had no covering; and the sandal worn in later times was little else than the sole of our shoe bound under the foot. Even this defence, however, was ordinarily laid aside on entering a house, in which the inmates were either barefoot or wore nothing but slippers.

The washing of the feet is among the most ancient, as well as the most obligatory, of the rites of Eastern hospitality. From Gen. xviii. 4, xix. 2, it appears to have existed as early as the days of the patriarch Abraham. In Gen. xxiv. 32, also, 'Abraham's servant' is provided with water to wash his feet, and the men's feet that were with him. The same custom is mentioned in Judg. xix. 21. From 1 Sam. xxv. 41, it appears that the rite was sometimes performed by servants and sons, as their appropriate duty, regarded as of a humble character. Hence, in addition to its being a token of affectionate regard, it was a sign of humility.

The most remarkable instance is found in the 13th chapter of John's Gospel, where our Saviour is represented as washing the feet of his disciples, with whom he had taken supper. Minute particulars are given in the sacred narrative, which should be carefully studied, as presenting a true Oriental picture. From ver. 12, sq., it is clear that the act was of a symbolical nature; designed to teach, *à fortiori*, brotherly humility and goodwill. If the master had performed for his scholars an act at once so lowly yet so needful, how much more were the disciples themselves bound to consider any Christian service whatever as a duty which each was to perform for the other. The principle involved in the particular act is, that love dignifies any service; that all high and proud thoughts are no less unchristian than selfish; and that the sole ground of honour in the church of Christ is meek, gentle, and self-forgetting benevolence.

It was specially customary in the days of our Lord to wash before eating (Matt. xv. 2; Luke xi. 38). This was also the practice with the ancient Greeks, as may be seen in *Iliad*, x. 577. From Martial (*Epig.* iii. 50, 3, Deposui soleas), we see it was usual to lay aside the shoes, lest they should soil the linen. The usage is still found among the Orientals (Niebuhr, b. 54; Shaw, p. 202). But Jesus did not pay a scrupulous regard to the practice, and hence drew blame upon himself from the Pharisees (Luke xi. 38). In this our Lord was probably influenced by the superstitious abuses and foolish misinterpretations connected with washing *before* meat. For the same reason he may purposely have postponed the act of washing his disciples' feet till *after* supper, lest, while he was teaching a new lesson of humility, he might add a sanction to current and baneful errors [Ablution].

Vessels of no great value appear to have been ordinarily kept and appropriated to the purpose. These vessels would gain nothing in estimation from the lowly, if not mean, office for which they were employed. Hence, probably, the explanation of Ps. lx. 8, 'Moab is my wash-pot.' Slaves, moreover, were commonly employed in washing the feet of guests. The passage, then, in effect declares the Moabites to be the meanest of God's instruments.

The union of affectionate attention and lowly service is found indicated by feet-washing in 1 Tim. v. 10, where, among the signs of the widows that were to be honoured—supported, that is, at the expense of the church—this is given, if any one 'have washed the saints' feet.'

Feet-washing (pedilavium) became, as might be expected, a part of the observances practised in the early Christian church. The real signification, however, was soon forgotten, or overloaded by superstitious feelings and mere outward practices. Traces of the practice abound in ecclesiastical history, and remnants of the abuse are still to be found, at least in the Romish church. The reader, who wishes to see an outline of these, may consult Siegel, *Handbuch der ch. Alterthümer*, ii. 156, sq.—J. R. B.

WATCH, in Hebrew שָׁמַר, denoting 'to cut into,' thence 'to impress on the mind,' 'to observe,' 'to watch;' or צָפָה, the original meaning of which is 'to look out,' thence 'to watch;' as in English, 'to keep a look out,' is a nautical phrase for 'to watch.' Watching must have been coeval with danger, and danger arose as soon as man became the enemy of man, or had to guard against the attacks of wild animals. Accordingly we find traces of the practice of watching in early portions of the Hebrew annals. Watching must have been carried to some degree of completeness in Egypt, for we learn from Exod. xiv. 24, that the practice had, at the time of the Exodus, caused the night to be divided into different watches or portions, mention being made of the 'morning watch.' Compare 1 Sam. xi. 11. In the days of the Judges (vii. 19) we find 'the middle watch' mentioned. See Luke xii. 38. At a later period Isaiah plainly intimates (xxi. 5, 6), that there was a watch-tower in Jerusalem, and that it was customary on extraordinary occasions to set a watchman. Watchmen were, however, even at an earlier day, customarily employed in the metropolis, and their post was at the gates (2 Sam. xviii. 24, sq.; 2 Kings ix. 17, sq.; Ps. cxxvii. 1; Prov. viii. 34), where they gave signals and information, either by their voice or with the aid of a trumpet (Jer. vi. 17; Ezek. xxxiii. 6). At night watchmen were accustomed to perambulate the city (Cant. iii. 3; v. 7). In the New Testament we find mention made of the second, the third, and the fourth watch (Luke xii. 38; Matt. xiv. 25). The space of the natural night, from the setting to the rising of the sun, the ancient Jews divided into three equal parts of four hours each. But the Romans, imitating the Greeks, divided the night into four watches (*vigiliæ*), and the Jews, from the time they came under subjection to the Romans, following this Roman custom, also divided the night into four watches, each of which consisted of three hours: these four periods Mark (xiii. 35) has distinguished by the terms ὀψέ, μεσονύκτιον, ἀλεκτροφωνία, πρωΐ (Buxtorf, *Lex. Talmud*; Fischerus, *Prolus. de Vittis Lex. N. Test.*). The terms by which the old Hebrew division of the night was characterized are, 1. the first watch, אַשְׁמֹרֹת רֹאשׁ, beginning of the watches (Lam. ii. 19); 2. 'the middle watch,' אַשְׁמֹרֶת הַתִּיכוֹנָה (Judg. vii. 19); 3. 'the morning watch,' אַשְׁמֹרֶת הַבֹּקֶר (Deut. xiv. 24; 1 Sam. xi. 11). The first extended from sun-set to our ten o'clock, the second from ten at night till two in the morning, and the third from that hour till sun-rise (Ideler, *Chronol.* i. 486).—J. R. B.

WATER. No one can read far in the sacred Scriptures without being reminded of the vast importance of water to the Hebrews in Palestine, and indeed in every country to which their history introduces us; and more particularly in the deserts in which they wandered on leaving Egypt, as well as those into which they before or afterwards sent their flocks for pasture. A subject of such importance necessarily, therefore, claims considerable attention in a Biblical Cyclopædia. The natural waters have already been disposed of in the articles Palestine and River; and in Cistern and Jerusalem notice has been taken of some artificial collections. It now remains to complete the subject, under the present head, by the addition of such details as may not have been comprehended under the articles referred to.

It has been shown that the absence of small rivers, through the want of rain in summer, renders the people of the settled country, as well as of the deserts, entirely dependent upon the water derived from wells, and that preserved in cisterns and reservoirs, during the summer and autumn; and gives an importance unknown in our humid climate to the limited supply thus secured.

With respect to reservoirs, the articles to which reference has been made, will supply all the information necessary, except that we may avail ourselves of this opportunity of noticing the so-called Pools of Solomon, near Bethlehem, which being supplied from fountains, furnish some characteristics which distinguish them from cisterns, and deserve attention as ancient works of probably Hebrew art. The tradition which ascribes them to Solomon seems to be founded on the passage in which the writer of Ecclesiastes (usually supposed to be Solomon) speaks of his undertakings: 'I made me gardens and orchards, and I planted in them trees of all kinds of fruits; I made me *pools of water*, to water therewith the wood that bringeth forth trees' (Eccles. ii. 5, 6). To these allusion is also supposed to be made in Canticles (iv. 12): 'A garden enclosed is my sister, my spouse; a spring shut up, a fountain sealed.' In short we have here a small secluded valley, obviously the site of an ancient garden, with reservoirs of water supplied by a 'shut up' fountain. Hence the valley itself goes among old travellers by the name of Hortus Conclusus. It is also conceived to be the spot mentioned by Josephus, who says: 'There was about fifty furlongs from Jerusalem a certain place called Etham, very pleasant in fine gardens, and abounding in rivulets of water, whither Solomon was wont to go forth in the morning, sitting on high in his chariot' (*Antiq.* 8. 7). Maundrell (p. 86) thinks that the pools were very probably made by Solomon; but 'for the gardens,' he says, 'one may safely affirm that if Solomon made them in the rocky ground which is now assigned for them, he demonstrated greater power and wealth in finishing his design, than he did wisdom in choosing the place for it.' But Hasselquist (p. 145), a better judge, says: 'The place will well admit that Solomon might have formed a garden here, though it is not by nature an agreeable situation, being in a bottom; but perhaps this great

prince might choose to improve nature by art, as many other potentates have done.' The fact is, that a valley kept always verdant by the singular abundance of water, afforded peculiar advantages in this country for a pleasure-ground. Mariti remarks (*Voyage*, ii. 388): 'Nature has still preserved its original fertility to the valley of *Hortus Conclusus*. Although but little cultivated, the soil still produces a tolerable quantity of cotton and various kinds of grain. There are also seen fine plantations of fruit-trees, affording the most juicy fruits of the country. Various flowers and many fragrant plants grow there naturally at all seasons, among which are thyme, rosemary, marjorum, sage, absinthium, persil, rue, ranunculuses, and anemones.' De Breves (*Voyage*, p. 180) long bore similar testimony, though he was there in the very unfavourable month of July; he describes the valley as 'always green,' and, besides the plants just named, cultivated by nature's own kindly hand, he adds oranges, citrons, and pomegranates to the fruits which grow there. Zuallart (*Voyage*, iv. 3) says that several species of rare plants were found in the valley, and seems to insinuate the probability that they had been propagated from exotic plants which Solomon introduced into his gardens.

Of the pools a very good description is given by Dr. Wilde (*Narrative*, ii. 420): 'At the extremity of the valley we arrived at three enormous tanks, sunk in the side of a sloping ground, and which from time immemorial have been considered to be the workmanship of Solomon; and certainly they are well worthy the man to whom tradition has assigned their construction. These reservoirs are each upon a distinct level, one above the other, and are capable of holding an immense body of water. They are so constructed, both by conduits leading directly from one another, and by what may be termed anastamosing branches, that when the water in the upper one has reached to a certain height, the surplus flows off into the one below it, and so on into the third. These passages were obstructed and the whole of the cisterns were out of repair when we visited them, so that there was hardly any water in the lowest, while the upper one was nearly full of good pure water. Small aqueducts lead from each of these cisterns to a main one that conducts the water to Jerusalem. They are all lined with a thick layer of hard whitish cement, and a flight of steps leads to the bottom of each, similar to some of those in the holy city. Where the lowest cistern joins the valley of Etham it is formed by an embankment of earth, and has a sluice to draw off the water occasionally. A short distance from the upper pool I descended into a narrow stone chamber, through which the water passes from the neighbouring spring on its course to the cisterns. This likewise has a traditionary tale to tell; it is said to be the sealed fountain to which allusion is made in the 4th and 5th chapters of the Canticles. From an examination of this place, it appeared to me that several springs empty themselves into these reservoirs, which are partly cut out of the solid rock, and partly built with masonry.

'Nigh to the upper part there is a large square castle, apparently of an order of architecture belonging to the Christian era; and in all probability so placed to guard these waterworks during the period of the holy war, for we know to what extremities some of the early crusaders were reduced from the different wells being poisoned by the enemy upon their approach to Jerusalem.

'These fountains having been already described by Maundrell, Pococke, and others, I shall not dwell longer upon them, except to mention two circumstances, that it appears extraordinary they have not been adverted to by former travellers; the first is, their great similarity to the fountains assigned to Solomon at Ras-el-Ain, near Tyre; and the fact of both being natural springs, that were pent up so as to raise the water they contained to the level of its final destination. The second is, that these springs were originally collected into one stream, which must then have formed a considerable rivulet, and running through this valley, finally discharged its waters into the Asphaltine lake.

'On our return to the city we followed the track of the aqueduct as far as Bethlehem, and afterwards crossed it in several places on the road. It is very small, but the water runs in it with considerable rapidity, as we could perceive by the open places left in it here and there. From the very tortuous course that this conduit takes in following the different sinuosities of the ground, being sometimes above and sometimes beneath the surface, it is difficult to persuade oneself that it does not run up hill, as many have supposed. Finally, it crosses over the valley of Rephaim, on a series of arches, to the north of the lower pool of Gihon, and winding round the southern horn of Zion, is lost to view in the ruins of the city. It very probably supplied the pool of Bethesda, after having traversed a course of certainly not less than from thirteen to fifteen miles.'

To this very clear description we have only to add the measurements of Dr. Robinson (*Bibl. Researches*, ii. 165):—

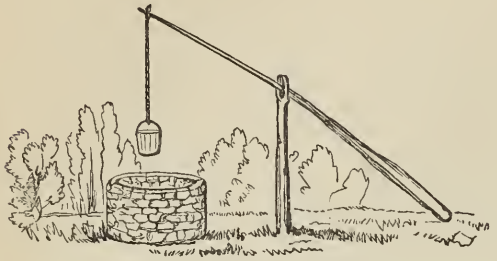
Lower Pool.—Length, 582 feet; breadth at the east end, 207 feet; at the west end, 148 feet; depth at the east end, 50 feet, of which 6 feet water (in the month of May).

Middle Pool.—Distance above lower pool, 248 feet; length, 423 feet; breadth at the east end, 250 feet; at the west end, 160 feet; depth at the east end, 39 feet, of which 14 feet water.

Upper Pool.—Distance above middle pool, 160 feet; length, 380 feet; breadth at the east end, 236 feet; at the west end, 229 feet; depth at east end, 25 feet, of which 15 feet water.

Lord Nugent (*Lands Classical and Sacred*, ii. 11) makes the pools a few feet larger each way, but admits that Robinson's measurement may probably have been more exact than his own.

With respect to wells, their importance is very great, especially in the desert, where the means of forming them are deficient, as well as the supply of labour necessary for such undertakings, which, after all, are not always rewarded by the discovery of a supply of water. Hence in such situations, and indeed in the settled countries also, the wells are of the utmost value, and the water in most cases is very frugally used (Num. xx. 17-19; Deut. ii. 6, 28; Job xxii. 7). It is, however, not merely the value of the well itself, but certain other considerations that explain the contests about wells which we find in the histories of Abraham and Isaac (Gen. xxi. 25-31; xxvi. 15-22). Here we see that the people of the country



strenuously contested the right of the patriarchs to the wells which they digged, and even went so far as to fill up again (instead of leaving open for their own use) the wells which Abraham had opened. The fact is, however, that, at the present day, to dig a well at a station remote from a supply of water, is the most difficult and arduous operation which the chief of a tribe or clan undertakes; and the benefits of such a work are so highly appreciated, that the property in the well becomes vested in him and in his heirs for ever. While his clan is encamped near it, no persons not belonging to it can draw water from the well without his leave. This right exists, however, only on the understanding that the well is maintained in good condition; for if it gets out of repair, or is choked up, and remains in this state for any length of time, the property in it lapses to the person or tribe by whom it is restored to a serviceable condition. This is the law of the desert; but as its application to the Scriptural questions respecting the property of wells is important, we may be allowed to introduce from the *Pictorial History of Palestine* (p. 61) a passage bearing strongly on the subject: 'Abraham had digged a well near his encampment, and of the use of this the "servants" (probably the herdsmen) of Abimelech had violently deprived him. As men seldom act without some reason, or show of reason, which is deemed satisfactory to themselves, it may seem likely that Abimelech's people doubted the right of Abraham to apply the law of the desert to the common-lands of an appropriated territory, and to claim the exclusive possession of the well he had dug in such a land. If their view had been just, however, it could only have entitled them to a share of the water, and not have justified them in assuming that exclusive possession which they

538. [Solomon's Pools.]

denied to the party at whose expense the benefit had been secured. But taking into account some transactions of rather later date, we incline to think that the cause of all the differences about wells which we read of in the history of Abraham and of Isaac, lay deeper than this account supposes, and must be sought in a country more similarly circumstanced, than the open deserts, to that in which the patriarch was at this time sojourning. The best analogy is offered in Persia. There all waste lands—that is, all lands which are uncultivable from wanting the means of irrigation—are called 'God's lands;' and although the king is regarded as the general proprietor of the soil, such lands are free for any uses to which they can be applied; and whoever procures the means of irrigation becomes the proprietor of the land which he thus renders cultivable. Now, as among the immemorially ancient usages of the East, none are more ancient than those which relate to the occupation of land, it is not too much to suppose that a similar usage to this existed in the time of Abraham; and, if so, it is easy to conclude that the anxiety of the Philistines about the wells dug by Abraham arose from the apprehension that by the formation of such wells he would be understood to create a lien on the lands in which they lay, and would acquire an indefeasible right of occupation, or rather of possession; and it might seem to them inconvenient that so powerful a clan should acquire such a right in the soil of so small a territory as that which belonged to them. Hence their care, when Abraham afterwards left their part of the country, to fill up the wells which he had digged; and hence, also, the renewed and more bitter strife with Isaac when he, on arriving there, proceeded to clear out those wells and to dig new ones himself. That Isaac also pursued cultiva-

tion to some extent in the lands for which he had thus secured the means of irrigation, is a remarkable corroboration of the view we now take, as he certainly might, in this way, but we know not how he could otherwise acquire such a proprietary right as could alone entitle him to cultivate the soil.

539. [Well and Bucket at Jaffa.]

'Abimelech, in reply to the complaint of Abraham respecting the well, declared that the conduct of his servants had not been sanctioned by him, and that, indeed, this was the first time he had heard anything of the matter; and he made no objection to the proposal of Abraham, that the recognition of his (the patriarch's) right to the well should form a part of the proposed covenant. This proposal, thus represented as the sole matter for which Abraham himself took care to provide in a solemn engagement with the king of the Philistines, is, perhaps, as striking an indication of the supreme importance of water in those Eastern countries as can anywhere be found. Both parties then swore to the covenant, the terms of which have thus been stated; and as a memorial of the transaction, and in particular of his acknowledged right to the well, the patriarch gave it the name of Beer-sheba, *the well of the oath*. This imposition of commemorative names upon places was the principal of various methods which were resorted to in these earliest ages to perpetuate the memory of events and contracts, in the absence of those written documents which were afterwards found more suitable for such purposes.'

It appears in Scripture that the wells were sometimes owned by a number of persons in common, and that flocks were brought to them for watering on appointed days, in an order previously arranged. A well was often covered with a great stone, which being removed, the person descended some steps to the surface of the water, and on his return poured into a trough that which he had brought up (Gen. xxiv. 11-15; xxix. 3-10; Exod. ii. 16; Judg. v. 11). There is, in fact, no intimation of any other way of drawing water from wells in Scripture. But as this could only be applicable in cases where the well was not deep, we must assume that they had the use of those contrivances which are still employed in the East, and some of which are known from the Egyptian monuments to have been very ancient. This conclusion is the more probable as the wells in Palestine are mostly deep (Prov. xx. 5; John iv. 11). Jacob's well near Shechem is said to be 120 feet deep, with only fifteen feet of water in it (Maundrell, *Journey*, March 24); and the labour of drawing from so deep a well probably originated the first reluctance of the woman of Samaria to draw water for Jesus: 'Sir, thou hast nothing to draw with, and the well is deep.' From this deeper kind of well the water is drawn by hand in a leathern bucket not too heavy, sometimes by a windlass, but oftener, when the water is only of moderate depth, by the *shadoof*, which is the most common and simple of all the machines used in the East for raising water, whether from wells, reservoirs, or rivers. This consists of a tapering lever unequally balanced upon an upright body variously constructed, and from the smaller end of which is suspended the bucket by a rope. This when lowered into the well, is raised full of water by the weight of the heavier end. By this contrivance the manual power is applied in lowering the bucket into the well, for it rises easily, and it is only necessary to regulate the ascent. This machine is in use under slight modifications from the Baltic to the Yellow Sea, and was so from the most remote ages to the present day. The specimen in the annexed woodcut occurs in the neighbourhood of Jaffa. The water of wells, as well as of fountains, was by the Hebrews called 'living water,' translated 'running water,' and was highly esteemed (Lev. xiv. 5; Num. xix. 17). It was thus distinguished from water preserved in cisterns and reservoirs.

WEAPONS. [Arms.]

WEASEL (חֹלֶד *choled*). Although, under the head Mole, we have given *choled* as its Hebrew synonyme, yet such is the vagueness of Oriental denominations, and the necessity of noticing certain species which, from their importance, cannot well be supposed to have been altogether disregarded in the Bible, that in this place a few words descriptive of the species of *Viverridæ* and *Mustelidæ*, known to reside in and near Palestine, and supposed to be collectively designated by the term *tzigim*, may not be irrelevant. They appear, both anciently and among ourselves, collected into a kind of group, under an impression that they belong to the feline family; hence we, like the ancients, still use the words civet-cat, tree-cat, pole-cat, &c.; and, in reality, a considerable number of the species have partially retractile claws, the pupils of the eyes being contractile like those of cats, of which they even bear the spotted and streaked liveries. All such naturally have arboreal habits, and from their low lengthy forms are no less disposed to burrow; but many of them, chiefly in other hemispheres, are excellent swimmers. One of these species, allied to, if not the same as, *genetta barbara*, is the *Thela Ælan*, by Bochart described as having 'various colours, and as being spotted like a pard. In Syria it is called *sephka*, in Arabia *zebzeb*, and lives by hunting birds and shaphans. There are besides, in the same region, the *nimse*, ferret or polecat (*putorius vulgaris*), for these two are not specifically distinct; *fert-el-heile*, the weasel (*mustela vulgaris Africana*), differing from ours chiefly in its superior size and darker colours. A *paradoxurus*, identical with or nearly allied to *P. typus*, occurs in Arabia; for it seems these animals are found wherever there are *palmiferæ*, the date-palm in particular being a favourite residence of the species. Two or three varieties, or perhaps species, of *nems* occur in Egypt solely; for the name is again generical in the Arabian dialects, and denotes the *ichneumon*. Arabia Proper has several other animals, not clearly distinguished, though belonging to the families here noticed; but which of these are the *sungiab* and the *simur*, or the *alphanex* of Ibn

Omar-ben-Abdulbar, quoted by Bochart, is undetermined; albeit they evidently belong to the

540. [Paradoxurus Typus—the Palm-Martin.]

tribes of vermin mammals of that region, excepting as regards the last mentioned, now known to be a kind of miniature fox (*megalotis zerda*, Ham. Smith), or *fennec* of Bruce, who nevertheless confounded it with *paradoxurus typus*, or an allied species which equally frequents palm-trees; but the *fennec* does not climb. It is equally impossible to point out the cats, tree-cats, and civet-cats noticed by the poet Nemesianus, who was of African birth; or by the Arabian Damir, who makes no further distinctive mention of them [Cat].—C. H. S.

WEAVING is too necessary an art not to have existed in the early periods of the world. It appears, indeed, to have in all nations come into existence with the first dawnings of civilization. The Egyptians had, as might be expected, already made considerable progress therein when the Israelites tarried amongst them; and in this, as well as in many other of the arts of life, they became the instructors of that people. Textures of cotton and of flax were woven by them; whence we read of the 'vestures of fine linen' with which Pharaoh arrayed Joseph (Gen. xli. 42); terms which show that the art of fabricating cloth had been successfully cultivated. Indeed Egypt was celebrated among the Hebrews for its manufacturing skill. Thus Isaiah (xix. 9) speaks of 'them that work in fine flax, and them that weave net-works.' That these fabrics displayed taste as well as skill, may be inferred from Ezekiel xxvii. 7, 'Fine linen with broidered work from Egypt.' So in Prov. vii. 16, 'I have decked my couch with coverings of tapestry, with fine linen of Egypt.' If, however, the Hebrews learnt the art of weaving in Egypt, they appear to have made progress therein from their own resources, even before they entered Palestine; for having before them the prospect of a national establishment in that land, they would naturally turn their attention to the arts of life, and had leisure, as well as occasion, during their sojourn of forty years in the wilderness, for practising those arts; and certainly we cannot but understand the words of Moses to imply that the skill spoken of in Exod. xxxv. 30, sq., came from a Hebrew, and not a foreign impulse. Among the Israelites, weaving, together with spinning, was for the most part in the hands of females (Prov. xxxi. 13, 19); nor did persons of rank and distinction consider the occupation mean (Exod. xxxv. 25; 2 Kings xxiii. 7). But as in Egypt males exclusively, so in Palestine men conjointly with women, wove (Exod. xxxv. 35). From 1 Chron. iv. 21, it may be inferred, that there were in Israel a class of master-manufacturers. The loom, as was generally the case in the ancient world, was high, requiring the weaver to stand at his employment.

Connected with the loom, are 1. ארג, the shuttle (Job vii. 6); 2. מנזר ארגים, the weaver's beam (1 Sam. xvii. 7; 2 Sam. xxi. 19); 3. יתד הארג, a weaver's pin (Judg. xvi. 14). The degree of skill to which the Hebrews attained, it is difficult to measure; probably, as Egypt and Babylon already supplied the finer specimens of workmanship, the Hebrews would content themselves with a secondary degree of excellence; but many passages conduce to prove that art presided over their weaving, as well as that the employment was very common (Lev. xiii. 48); Judg. xvi. 13; Isa. xxxviii. 12). The stuffs which they wove were of linen, flax, and wool. Among the latter must be reckoned those of camels' and goats' hair, which were used by the poor for clothing, and for mourning (Exod. xxvi. 7; xxxv. 6; Matt. iii. 4). Garments woven in one piece throughout so as to need no making, were held in high repute: whence the Jews have a tradition, that no needle was employed on the clothing of the high-priest, each piece of which was of one continued texture. This notion throws light on the language used by John xix. 23—'the coat was without seam,'—words that are explained by those which follow, and which Wetstein regards as a gloss—'woven from the top throughout.' This seamless coat, χιτὼν ἄρραφος, which has lately given occasion to the great religious reformatory movement begun by the priest Ronge, would seem to indicate that our Lord, knowing that his time was now come, had arrayed himself in vestments suitable to the dignity of his Messianic office.—J. WEEKS, FEAST OF. [Pentecost.]

WEIGHTS AND MEASURES. This is a subject on which our knowledge is by no means complete and satisfactory. The notices respecting it which the Bible supplies are fragmentary and scattered; and though the Jewish authorities and Josephus afford us useful aids, and though the topic has received full and very careful investigation, still difficulties remain, and there are points on which we must be content either with probable conjecture, or an approximation to the truth.

So long, indeed, as the subject was insulated from its natural connections, and Hebrew weights and measures were studied apart from those of other ancient nations, the difficulty and uncertainty might well be considerable. Of late, however, a juster method of treatment has been originated in Germany. The Roman measures came from Greece, the Grecian from Phœnicia, the Phœnician from Babylon. Accordingly each system will throw light on the other, and all may be made to contribute something to the elucidation of the Hebrew weights and measures. This method of viewing the subject, and the satisfactory lessons which have been hence deduced, are to be ascribed to Böckh (*Metrologischen Untersuchun-*

gen, Berlin, 1838), who, availing himself of the results ascertained by English, French, and German scholars, and of the peculiar facilities afforded by a residence in the midst of the profound and varied erudition of the Prussian capital, has succeeded, by the application of his unwearied industry and superior endowments, in showing that the system of weights and measures of Babylon, Egypt, Palestine, Phœnicia, Greece, Sicily, and Italy, formed one great whole, with the most intimate relationships and connections. Our limited space permits only a very brief notice of the results which the inquiries of Böckh and his school seem to have ascertained. We will first advert to the names of the Hebrew weights or coins. 1. כִּכָּר is derived from a root signifying 'round,' so that the word denotes a circular-shaped mass of metal. Thus, etymologically, it may be rendered 'the circle.' In 2 Kings v. 22 it is translated 'talent;' the more exact determination of its import is fixed by the addition of another noun, as 'talent of silver' (2 Kings v. 22, 23), and 'talent of gold' (1 Kings ix. 14). 2. מָנֶה is a word of Shemitic origin, the Greek μνᾶ. It occurs in the Coptic New Testament in the forms *amna* and *emna*. In 1 Kings (x. 17) it is rendered 'pound.' 3. שֶׁקֶל, weight in the abstract, the usual weight among not only the Hebrews, but the Persians also—σίκλος. It varies in its import, and is rendered *shekel* by our translators, who have thus merely preserved the original word. 4. בֶּקַע, 'a *bekah*' (Exod. xxxviii. 26), is from a root which signifies 'to divide;' hence a moiety or half, 'half a shekel' (Gen. xxiv. 22). The word in this application is found only in the Pentateuch. 5. גֵּרָה, properly a grain, or, in particular, the bean, or St. John's bread, *carob;* hence, the smallest weight. The word is retained in the English translation; thus in Exod. xxx. 12, 'a shekel is twenty gerahs.' It is obvious that no determinate and satisfactory unit in a system of weights can be gained from a changeable object like a grain. This difficulty, however, is not peculiar to the Hebrews. We have our *grains*, and the Greeks had their *oboli*.

In order to determine the relations which the כִּכָּר, talent, bore to the smaller weights and coins, we may have recourse to those passages which speak of the formation of the sanctuary. According to Exod. xxx. 13, every Israelite above twenty years of age had to pay the poll-tax of half a shekel as a contribution to the sanctuary. Exod. xxxviii. 26, tells us that this tax had to be paid by 603,550 men. The sum amounted to 100 talents and 1775 sacred shekels (Exod. xxxviii. 25), which are equal to 603,550 half, or 301,775 sacred shekels. Accordingly the talent contained 3000 sacred shekels; for by deducting

from	301.775 shekels
	1,775 shekels
we get	300,000 shekels

to be divided among 100 talents, making each talent equal to 3000 sacred shekels.

The value of the sacred shekel in regard to the *gerah* is determined by Exod. xxx. 13; Lev. xxvii. 25; Num. iii. 47; Ezek. xlv. 20, to be twenty gerahs; the half-shekel, *bekah*, is equal to ten gerahs.

The determination of the relative value of the *maneh* is not easy, for it depends on a passage which in the Hebrew cannot be understood (Ezek. xlv. 12), 'Twenty shekels, five and twenty shekels, fifteen shekels shall be your maneh,' but which in the Septuagint (*Cod. Alex.*) seems to state that a maneh was equal to fifty sacred shekels. Thus there ensues this table:—

Kikkar	1				
Maneh	60	1			
Shekel	3000	50	1		
Bekah	6000	100	2	1	
Gerah	60,000	1000	20	10	1

The use of the precious metals as a medium of exchange in commerce, dates back at a very early period of history. A common, recognised, and invariable standard of value, by means of which goods, instead of being exchanged in barter, might be bought and sold, is indispensable in any but a primitive state of trade. Accordingly Abraham buys a field by the intervention of silver. But this silver or gold must have an acknowledged value, else it cannot answer its purposes; there must also be a means of ascertaining easily that the professed and ostensible is the real value of any particular portion. Hence coins which bear 'the image and superscription of Cæsar,' or some token to assure traders that the piece of money is right both in quality and in quantity. In early periods these tokens would obviously be imperfect. The quantity was ascertained by weight, the quality by inspection. If now we inquire how soon the Hebrews possessed money of a fixed value, we find Abraham himself buying a field for 'four hundred shekels of silver current with the merchant,' which value was ascertained by weight. Here the shekel is a recognised ordinary unit. This, at least, is clear. The passage may also imply that the purchase-money was paid, not in silver bars, but in silver pieces, shekels; the weighing being intended to ascertain that the shekels were of the proper value, which was not guaranteed by the fixed and invariable characters of a coin. If we pass on to the time of Moses, we find pieces of money of a fixed and recognised value in circulation among the Israelites, and are led to see that the amount of the circulating medium must have been very considerable. In the historical and prophetic writings of a later period mention is made of the shekel and of other pieces of money, so that their use in commerce before the Babylonish captivity is placed beyond a doubt. To term these pieces of money coin might be to mislead, since the word coin refers the mind to the operations of a government mint; but it is clear that as pieces of money of a fixed and recognised value they must have been of a certain size, and borne some distinctive marks. Hence the only difference between those pieces of money and coin lies in the quarter whence they came—private or public,—and in the sanction and authority which they accordingly carried with them. The Talmud refers coin, strictly so called, to the ante-exilian period. What the circulating medium among the Hebrews was made up of, may be inferred from what has gone before: there was the shekel; also the sacred shekel, if this latter is to be distinguished from the former; then the half-shekel, or bekah, which may be a name for the ordinary shekel; there was also a quarter-shekel, 'the fourth part of a shekel of

silver' (1 Sam. ix. 8); and, finally, the smallest silver coin, namely the gerah. From the passage in Samuel just cited it appears clear that those pieces of money were used in the ordinary commerce of life, and we have previously seen that money was demanded in the service of religion. In 1 Sam. ii. 36, a word occurs (אגורה) disguised in the English Version, under the phrase 'a piece of silver,' which may have been the current name for the coin that, from its weight, was called a gerah. It is thus evident that there prevailed among the Hebrews at an early period, a very considerable and much employed metallic circulating medium.

Of these coins the shekel is worth twenty gerahs; but there are three shekels mentioned in the Old Testament—the ordinary shekel, the shekel of the sanctuary (Exod. xxx. 13), and the shekel after the king's weight (2 Sam. xiv. 26). Are these three different kinds? or are they different descriptions for the same coin?—thus, is the first, shekel, the common name? the second, sacred shekel, the coin according to the ecclesiastical standard? the third, king's shekel, the same according to the regal standard, the function having passed from the priests to the monarch? No satisfactory answer to these questions presents itself, and our space forbids more discussion.

But how are we to gain a unit for estimating the worth of the ante-exilian coins, of which not one has come down to us? Let us notice one or two facts connected with the Jewish post-exilian coins. During the exile the Israelites became intimately acquainted with the money-system which prevailed in Babylon. After their return home, and during the Persian dominion, we find mention made of a Persian coin, דרכמון, the *darick* (Ezra ii. 69; viii. 27; Neh. vii. 70), which is Englished by 'drachm,' in the Greek δραχμή. The coin was so named after Darius, son of Hystaspes. These coins were made according to a foot, which was nearly the same as the Attic, and the standard weight of each was 1644 Parisian grains. In the Greek period, under the Ptolemies and Seleucidæ, the Jews used the coins of these princes (1 Macc. xv. 5, 6); but when they gained a short national independence under the Maccabees, they coined many of their own, as, for instance, in the first year of Simon Maccabæus. Coins of Simon and his followers are in existence, and have been carefully studied. Confining our remarks to the coins of Simon Maccabæus, we mention the following ascertained facts: they bear the old Hebrew or Samaritan characters, and not the square letter of the modern Hebrew, which is derived from the former under the influence of tachygraphy and calligraphy. These coins are exclusively of silver. The shekels and half-shekels belong to the first and second years of Simon's reign. Doubts prevail as to the genuineness of the coins bearing date the third and fourth years of his rule, but the shekels of his third year are admitted to be genuine. The coins of the first year bear the inscription ירושלם קדשה, 'Holy Jerusalem.' The weight of the shekel varies somewhat. The heaviest weighs 271¾ Parisian grains; the greater part from 266 to 268 Parisian grains. The standard may approximatively be taken at 274 Parisian grains, to which Böckh is led by comparison with other systems. Here, then, we have the weight of the shekel; though we cannot say with certainty that it remained the same in every period of the earlier history, yet this becomes very probable when the retentiveness of customs which characterizes the East is taken into account. Besides, the change introduced by the Maccabees was a restoration of the old constitution under influences which would cause the past to be rigidly reproduced. The shekel in the Pentateuch and Ezekiel is found equal to twenty gerahs. What shekel? The inscription 'Holy Jerusalem' makes it likely that it was the sacred shekel. We thus, then, arrive at these conclusions:—

Gerah	=	13·7	Par. grains.
Bekah, or common shekel	,,	137	,,
Sacred shekel	,,	274	,,
Maneh	,,	13,700	,,
Talent	,,	822,000	,,

These conclusions find corroboration by being compared with the weights of other Eastern nations, and the whole inquiry authorizes the inference that one general system prevailed in the more civilized nations, being propagated from the East, from an early period of history.

In the New Testament (Matt. xvii. 24) the Temple-tax is a didrachm; from other sources we know that this 'tribute' was half a shekel; and in verse 27 the stater is payment of this tax for two persons. Now the stater—a very common silver Attic coin, the tetradrachm—weighed 328·8 Parisian grains: thus not considerably surpassing the sacred shekel (274 Parisian grains). Are we, then, to hold the stater of the New Testament for an Attic tetradrachm? If so, its agreement with the sacred shekel is striking. There is reason in the passage of Matthew and in early writers for regarding the two as the same. And the Attic tetradrachm sank from its original weight of 328·8 to 308 and 301. This approximation must have gone on increasing, for under the empire a drachm was equal to a Roman denarius, which in the time of Tiberius weighed 69·8 Parisian grains. Four denarii were equal to 279 Parisian grains; so that, if the denarius is regarded as an Attic drachm, the sacred shekel may be correctly termed a tetradrachm. With this Josephus agrees (*Antiq.* iii. 8. 2), who says that the shekel (σίκλος), a Hebrew coin, contains four Attic drachms.

Names of measures of length are for the most part taken from members of the human body, which offered themselves, so to say, naturally for the purpose, and have generally been used in all times and places in instances where minute accuracy was not demanded. And though, within certain limits, these measures have approached to sameness—for the human foot, to take it as an example, may have been slightly over or somewhat under twelve inches, while it never in any generation extended to twenty-four inches—yet was there scope also for considerable latitude and diversity, and nothing like a system of normal measures can hence be gained, unless means are found for determining the average length of any one of these measures, or for fixing the length which it was intended to represent.

At the basis of the Hebrew system of measures of length lies אמה, cubit, the fore arm, or the distance from the point of the elbow to the tip of the third finger. This is a word supplied by no

Hebrew root, but derived from the Egyptian Mahe, signifying 'cubit,' which, with the same meaning, is found in the Coptic in the form Mahi, and with the prefix, Ammahi.

A longer measure, applied in measuring buildings, was the קנה (Ezek. xli. 8; Apoc. xxi. 15), rendered in the common version 'reed,' more properly 'rod.' In Judg. iii. 16, Ehud's sword (not 'dagger') is said to have been in length גמד. As he wore this weapon under his mantle, the length of this measure may be approximatively conjectured.

Smaller measures of length were, 1. זרת, from a root meaning to expand (the hand), hence a 'span.' This word is found in the Egyptian, which seems to have borrowed it from the Shemitic. 2. טפח, the breadth of the hand (1 Kings vii. 26; Exod. xxv. 25). 3. אצבע, the finger (Jerem. lii. 21), the denomination of the smallest measure of length. Thus we have the breadth of the finger, of the hand, of the span—the length from the tip of the little finger to the point of the thumb,—and the cubit.

In order to ascertain the length of these, we take the cubit as our standard. The longer measure, reed or rod, consists, in Ezek. xli. 8, of six great cubits, that is, of six such cubits as were a hand's breadth longer than the common cubit (Ezek. xl. 5; xliii. 13). The relation of zereth, span; tepach, hand's breadth: and ezba, finger, is not given in the Old Testament. By comparing together Exod. xxv. 10, with Josephus (*Antiq.* iii. 6. 5), we find the span equal to half a cubit, for the length, which Moses terms two cubits and a half, Josephus designates five spans. The relation of tepach (hand's breadth) and ezba (finger) to ammah (cubit) appears from their several names and their import in other systems. The hand's breadth is four fingers; the span contains three times the breadth of the hand, or twelve fingers. This is the view which the Rabbins uniformly take. We find a similar system among the Greeks, who reckoned in the cubit twenty-four fingers, six hands' breadths, and two spans. The same was the case with the Egyptians.

But the ammah itself is not a fixed unit, for in Ezekiel we have found a cubit which was a hand's breadth longer than the common cubit. The subject has been amply discussed, and opinions are various [Cubit]. We may conclude that there were two cubits, the sacred of seven, the common of six hands' breadth; and thus these two cubits were to each other as seven to six, that is, the sacred cubit held seven hands' breadths of the ordinary cubit of six hands' breadth. There is no reason, however, to think that the sacred cubit was divided into seven parts. It was the older, and would be divided according to the duodecimal method which prevails in this matter, and accordingly would contain six palms and twenty-four fingers, only that its fingers and palms were greater than those of the ordinary cubit. This is proved by the express statements of the Talmud, according to which the sacred, as well as the common cubit, contained six hands' breadths.

As we have no unit of measure given us in the Scriptures, nor preserved to us in the remains of any Hebrew building, and as neither the Rabbins nor Josephus afford the information we want, we have no resource but to apply for information to the measures of length used in other countries. We go to the Egyptians. The longer Egyptian cubit contained about 234·333 Parisian lines, the shorter about 204·8. According to this, the Hebrew measures of length were these:—

Sacred cubit	234·333	Parisian lines.
The span	117·166	,,
The palm	39·055	,,
The finger	9·7637	,,
Common cubit	204·8	,,
The span	102·4	,,
The palm	34·133	,,
The finger	8·533	,,

The two sets of measures, one for dry, another for liquid things, rest on the same system, as appears from the equality of the standard for dry goods, namely the ephah, with that for liquids, namely bath. The difference in the names is merely accidental. חמר (homer), denoting a heap, is the name for the largest measure of dry goods (Lev. xxvii. 16; Num. xi. 32; Ezek. xlv. 11). In later times the homer was replaced by the cor (Ezek. xlv. 14), which is found among the Hellenists in the form *κόρος*. In Hosea iii. 2, the לתך, 'half homer,' is mentioned, which the Seventy render by *ἡμιόκορος*, and the Vulgate by 'corus dimidius.' Another measure is איפה, which comes from an Egyptian root denoting 'to measure.' סאה, found in the Septuagint, the New Testament, and Josephus, under the form *σάτον*, is of uncertain origin. The Seventy translate it sometimes by simply *μέτρον*, 'measure' (Gen. xviii. 6), and the dual form by *δίμετρον* (2 Kings vii. 1). עמר, in its derivation and meaning resembles חמר, but denotes a much smaller mass. קב (cab), the hollow, the bowl, was adopted by the Greeks as *κάβος*. These are measures for dry goods. We now pass on to liquid measures. 1. בת, is from a root which denotes 'to determine,' 'to measure.' It is put in relation to the homer in Ezek. xlv. 11, 14; whence we learn that the bath was applied to fluids. 2. הין, is retained by the Seventy in the forms *εἶν*, *ἴν*, *ὖν*. The word is of Egyptian origin. 3. לג (log), is a word found only in the Mosaic law regarding the cleansing of the leper (Lev. xv. 12, 'the log of oil'). It is referable to an Arabic root which denotes 'to press into.' The feminine form is found in the Syriac, with the meaning of bowl. Log had the same import as cab.

In order to determine the relations between these measures, we take the ephah and bath, which, in Ezek. xlv. 11, are declared to be of one measure. They each contained the tenth part of a homer (Ezek. xlv. 11, 14); thus the relation of the homer to the bath and the ephah belongs to a decimal division (Exod. xvi. 36).

The Seah, *μέτρον*: the translation given by the Septuagint of the Hebrew in Exod. xvi. 36, is as follows:—*τὸ δὲ γομὸρ τὸ δέκατον τῶν τριῶν μέτρων ἦν*,—'the homer is the tenth part of three *measures*' ($\frac{3}{10}$). With the Septuagint and the Targum the ephah was equal to three seahs (comp. Matt. xiii. 33, *σάτα τρία*, with Gen. xviii. 6, and Jerome on the former place). The same relation is derived from a passage in Josephus (*Antiq.* ix. 4. 5), where the contents of the seah are

given as one Italian modius and a half, for the modius held sixteen sextarii, and the ephah, according to Josephus, twenty-two sextarii; a modius and a half is, therefore, the third part of the ephah. The Rabbins entirely concur in these views. The cab, according to Josephus (*Antiq.* ix. 4. 4; comp. 2 Kings vi. 25), is equal to four xestæ, for one-fourth of a cab he translates by ξέστης, seventy-two of which make a μετρητής, a measure; eighteen cabs then make an ephah, and six a seah. In the same way the Rabbins determine the proportion of the cab to the seah (comp. the passage in Leusden, *Phil. Mixtus*, p. 205). There remain the hin and the log. The hin, according to Josephus (*Antiq.* iii. 9. 4), is an old Hebrew mass, which contained two Attic χόες, of which twelve went to the Attic metretes; therefore the hin is the sixth part of the bath. The log, according to the Rabbins, is the twenty-fourth part of the seah, consequently the seventy-second part of the bath, and the twelfth part of the hin (comp. Leusden, *Phil. Mixtus*, p. 207).

There are two divisional systems found in these measures: 1. A decimal; and 2. A duodecimal, thus:—

Homer . .	1		
Bath and ephah	10	1	
Gomer . .	100	10	1

By putting together the measures for dry and those for liquid articles, we obtain the duodecimal division:—

Ephah or Bath	1				
Seah . .	3	1			
Hin . . .	6	2	1		
Cab . . .	18	6	3	1	
Log . . .	72	24	12	4	1

Here all the numbers are divisible either by twelve or by multiples of twelve. Such a duodecimal arrangement is found in the cubic measures of the Greeks and Romans. Hence the three systems give and receive support.

We will now exhibit all these measures in relation to the greatest, the homer:—

Homer . . .	1					
Bath and Ephah	10	1				
Seah . . .	30	3	1			
Hin . . .	60	6	2	1		
Gomer . . .	100	10	$3\frac{1}{3}$	$1\frac{2}{3}$	1	
Cab . . .	180	18	6	3	$1\frac{1}{3}$	1
Log . . .	720	72	24	12	$7\frac{1}{3}$	4	1

The duodecimal is the original principle, the decimal system being introduced only to bring the two methods into harmony. The homer did not at first form a part of the Hebrew system (Ezek. xlv. 11).

For the actual size of these measures we must refer to Josephus, of whom Theodoret (*In Exod.* xxix.) says: πιστευτέον δὲ ἐν τούτοις τῷ Ἰωσήπῳ ἀκριβῶς τοῦ ἔθνους τὰ μέτρα ἐπισταμένῳ,—'follow in these things Josephus, who well understood the measures of the nation' (comp. *Antiq.* viii. 3. 8). To the homer or cor Josephus ascribes (*Antiq.* xv. 9. 2) twelve Attic medimni, where the reading should be metretæ. Bath and Ephah are the same. Josephus (*Antiq.* viii. 2. 9) determines each at seventy-two xestæ, and makes them equal to an Attic metretes. The saton is twenty-four sextarii; the hin is twelve sextarii; the gomer, the tenth part of the ephah, must hold seven and one-fifth sextarii; the cab is equal to four xestæ. On the log Josephus gives no information; as the fourth part of the cab, it held a xestes. The Attic metretes, which corresponded with the Hebrew bath and ephah, contains 739,800 Parisian grains of rain-water, which would fill a space of about 1985 Parisian cubic inches. Thus we come to the following table:—

	Size.	Weight in Water.
	Par. cub. in.	Par. gr.
Homer	19857·7	7398000
Ephah	1985·77	739800
Seah	661·92	246600
Hin	330·96	123300
Gomer	198·577	73980
Cab	110·32	41100
Log	27·58	10275

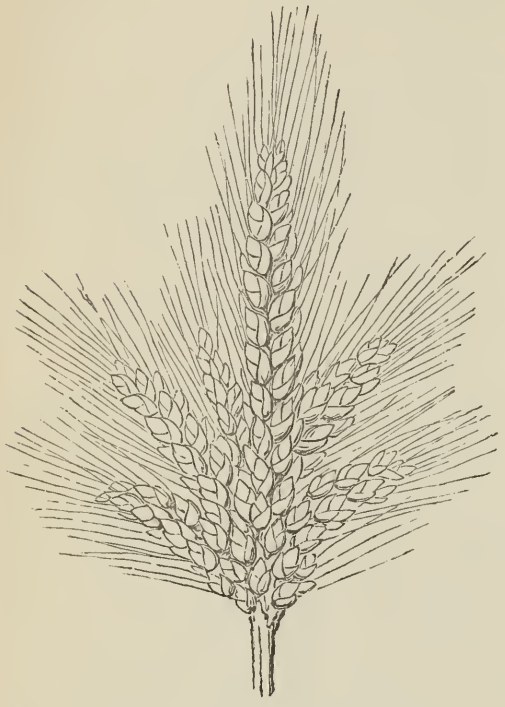
Böckh has proved that it is in Babylon we are to look for the foundations of the metrological systems of the ancient world; for the entire system of measures, both eastern and western, must be referred to the Babylonish foot as to its basis. Here is the root of the original system, and of the individual systems which sprang from the original one. This important fact, ascertained and established by Böckh, has been investigated and confirmed by an independent inquirer of the highest authority, namely, K. O. Müller. Not only the metrological system, but with it other knowledge went westward from Babylon. This metrological system bears traces of having proceeded from the hands of Babylonian astronomers. The ancient world was dependent for its astronomy on Babylon. Herodotus (ii. 101) says that the Greeks borrowed the division of the day into twelve parts from the Babylonians, calling to mind the duodecimal division which we have spoken of. The Zodiac too is of Asiatic, Ideler holds of Babylonian origin; but recent investigations have shown a striking agreement between the astronomy of the Babylonians and the Chinese, to say nothing of other nations in the farther east (Ideler, *Ueber die Zeitrechnung der Chinesen*, &c., Berlin, 1839; Biot, *Journal des Savans*, Dec. 1839, Jan. and May, 1840; *Göttingen Gel. Anzeigen*, 1840, p. 201, sq.). Of this common knowledge several considerations concur in referring the origin, not to the Chinese, but to the Babylonians. Hence Babylon appears as the land which was the teacher of the east and the west in astronomical and mathematical knowledge, standing as it were in the middle of the ancient world, and sending forth rays of light from her two extended hands. Palestine could not be closed against these illuminations, which in their progress westward must have enlightened its inhabitants, who appear to have owed their highest earthly culture to the Babylonians and the Egyptians.

The following works may be consulted:—J. D. Michaelis, *Supplem. ad Lex. Hebr.*, p. 1521; Hussey, *Essay on the Ancient Weights, Money*, &c., Oxford, 1836; F. P. Bayer, *De Nummis Hebræo-Samaritanis*, Valentiæ Edetanorum, 1781, written in reply to *Die Unächtheit der Jud. Münzen*, Bützow, 1779; Hupfeld, *Betrachtung dunkler Stellung der A. T. Textgeschichte*, in the *Studien und Kritiken*, 1830,

2nd heft, pp. 247-301 ; G. Seyffarth, *Beiträge zur Kenntniss der Literatur, Kunst, Mythol. und Gesch. des alten Aegypten;* see especially Bertheau, *Zur Geschichte der Israeliten*, Göttingen, 1842; Cumberland, *Essay on Weights and Measures ;* Arbuthnot, *Tables of Ancient Coins*, &c. Hussey's work, referred to above, labours under the disadvantage of having been compiled apart from any acquaintance with the best German writers ; and though it is a meritorious survey of much that has been written in English and Latin on the subject, yet for want of comprising the views of Böckh—as glanced over in this article—it has little scholarlike value. A thorough work on the subject in the English language, embracing what has been recently accomplished on the Continent, is a desideratum.—

J. R. B.

WELL. [Water.]



WEST (מַעֲרָב, בּוֹא הַשֶּׁמֶשׁ, יָם, אָחוֹר). The Shemite, in speaking of the quarters of the heavens, &c., supposes his face turned towards the east; so that the east is before him, קֶדֶם, strictly what is before, or in front; the south on his right hand, תֵּימָן, strictly what lies to the right ; the north on his left hand, שְׂמֹאל, the left side ; and the west behind him, אָחוֹר, literally the hinder side. The latter Hebrew word, though never translated 'west' in our version, means so: as in Isa. ix. 12, 'the Philistines behind,' opposed to the Syrians, קֶדֶם ; Sept. ἀφ' ἡλίου δυσμῶν ; Vulg. ab occidente ; and in Job xxiii. 8. The words (Deut. xi. 24), 'the uttermost sea,' הַיָּם הָאַחֲרוֹן, are rendered in Sept. ἕως τῆς θαλάσσης τῆς ἐπὶ δυσμῶν ; Vulg. ad mare occidentale (comp. xxxiv. 2 ; Joel ii. 20). The more general use of the word אחור for the west, was doubtless superseded among the inhabitants of Palestine by יָם, literally 'the sea,' that is, the Mediterranean Sea, which lay to the west, and which, as a more palpable object, became to them the representative of the west generally, and chiefly associated with their ideas of it. Accordingly this word יָם, and its derivatives יָמָּה, &c., are thirty-two times rendered by θάλασσα, in the Sept., and only once by δυσμαί: in the Vulgate, by occidens and mare. It is used to signify a quarter of the heavens, or of the earth (Gen. xxviii. 14 ; Deut. xxxiii. 23 ; 1 Kings vii. 25 ; 1 Chron. ix. 24 ; 2 Chron. iv. 4 ; Isa. xi. 14; xlix. 12; Ezek. xlviii. 1 ; Hos. xi. 10 ; Zech. xiv. 4). It is used adjectively in the same sense ; as, west border (Num. xxxiv. 6 ; Josh. xv. 12; Ezek. xlv. 7); western (Num. xxxiv. 6) ; west quarter (Josh. xviii. 14) ; west side (Exod. xxvii. 12; xxxviii. 12 ; Num. ii. 18 ; xxxv. 5; Ezek. xlviii. 3-8, 23, 24) ; westward (Gen. xiii. 14; Num. iii. 23; Deut. iii. 27; Ezek. xlviii. 18 ; Dan. viii. 4) ; west wind (Exod. x. 19). Those words of Moses, ' Naphtali, possess thou the west and the south' (Deut. xxxiii. 23), seem to contradict the statement of Josephus, that this tribe possessed the east and the north in Upper Galilee (*Antiq.* v. 1. 22); but Bochart interprets 'the south,' not with regard to the whole land of Canaan, but to the Danites, mentioned in ver. 22; and by 'the west' he understands the lake of Tiberias, otherwise called the *sea* of Tiberias, or Galilee, or Gennesaret ; for the portion of Naphtali extended from the south of the city called Dan or Laish, to the Sea of Tiberias, which was in this tribe. So all the Chaldee paraphrasts expound the word יָם, here translated *west;* Sept. θάλασσαν καὶ Λίβα ; Vulg. mare et meridiem. (*Hierozoic.* pt. i. lib. iii. c. 18). In some passages the word signifies the coasts of the Mediterranean Sea, and 'the islands of the sea' denotes the western parts of the world, or European nations. Thus, in regard to the future restoration of the Jews to their own land, it is said (Hosea xi. 10), 'when the Lord shall roar, then the children shall tremble (that is, hasten ; an allusion to the motion of a bird's wings in flying) from the west' (see ver. 11, and comp. Isa. xxiv. 14, 15, with Isa. xi. 11 ; xxiv. 14). In the account given of the removal of the plague of locusts from Egypt, we are told (Exod. x. 19), 'the Lord turned a mighty strong west wind,' רוּחַ־יָם, ἄνεμον ἀπὸ θαλάσσης. Supposing that these were the very words of Moses, or a literal rendering of his words, it follows that the Egyptians made a similar reference to the Mediterranean, since Moses, an Egyptian, would no doubt use the language of his country in describing an event which occurred in it. If his words do not refer to the Mediterranean, they must refer to the far distant Atlantic, which, however, according to Herodotus, was not known to the Egyptians till many ages afterwards. Moses also represents God as saying to *Abram, in the land*, ' Lift up thine eyes and look northward, and southward, and eastward, and westward,' יָמָּה (Gen. xiii. 14). The allusion to the sea in the latter passage may be accounted for, upon the supposition that the very words of God to Abram had been preserved, and were inserted by Moses in his history. In two passages (Ps. cvii. 3; Isa. xlix. 12) מִיָּם stands opposed to מִצָּפוֹן, but ought still to be rendered 'the west :' comp. Amos viii. 12 ; Deut. xxxiii. 23. The west is also indicated by the phrase אֶרֶץ מְבוֹא הַשֶּׁמֶשׁ, ἀπὸ γῆς δυσμῶν, de terra occasus solis. These words are translated 'the west country' in Zech. viii. 7, literally, the country of the going down of the sun, and are fully translated in Ps. l. 1 ; cxiii. 3 ; Mal. i. 11 ; comp. Deut. xi. 30 ; Josh. i. 4 ; xxiii. 4. Another word by which the west is denoted, is מַעֲרָב, from עָרַב, to remove, pass away, disappear as the sun does ; hence the quarter of the heavens, &c., where the sun sets, the west. The same idea is conveyed in the Greek word δυσμαί, from δύω. It occurs in 1 Chron. xii. 15 ; Ps. lxxv. 6 ; ciii. 12 ; cvii. 3 ; Isa. xliii. 5 ; xlv. 6 ; lix. 19 : Sept. δυσμαί ; Vulg. occidens. In Dan. viii. 5, Λίψ, occidens. It is used to denote the west quarter of the heavens or earth. In the Apocrypha and New Testament the word translated 'west' invariably corresponds to δυσμαί (Judith ii. 19 ; Matt. viii. 11 ; xxiv. 27 ; Luke xii. 54; xiii. 29 ; Rev. xxi. 13 ; Vulg. occidens, occasus. Our Lord's memorable words, 'They shall come from the east and the west,' &c. (Matt. viii. 11), to which Luke adds ' and from the north and the south' (xiii. 29), signify all the regions of the world ; as in classical writers also (Xen. *Cyr.* i. 1. 3). Grotius thinks that this passage refers to the promise to Jacob (Gen. xxviii. 14). In our Lord's prediction of the destruction of Jerusalem by the Romans (Matt. xxiv. 27)—' For as the lightning cometh out of the east and shineth even unto the west, so also shall the coming of the son of man be'—he is supposed to have intimated the precise direction in

which the Roman army conducted the invasion. His reference to *the* cloud, *τὴν νεφέλην*, rising out of the west, as the precursor of a shower (comp. 1 Kings xviii. 43-46), still corresponds to the weather in Palestine. Volney says, *L'ouest* et le *soud-ouest*, qui règnent (*en Syrie et Palestine*) de Novembre en Février, sont, pour me servir de l'expression des Arabes, les pères des pluies :— 'The west and south-west winds, which in Syria and Palestine prevail from November to February, are, to borrow an expression of the Arabs, "*the fathers of showers.*"' (*Voyage en Syrie*, tom. i. p. 297; Shaw's *Travels*, p. 329.)—J. F. D.

WHALE (תַּן *than*, and תַּנִּין *thannin;* Sept. and Matt. xii. 40, *κῆτος*), occurs in several places of the Old Testament, and once in the New Testament. In the passages where scales and feet are mentioned as belonging to *than*, commentators have shown that the crocodile is intended, which then is synonymous with the leviathan; and they have endeavoured also to demonstrate, where *thannin* draw the dugs to suckle their young, that seals are meant, although cetacea nourish theirs in a similar manner. It may be doubted whether, in most of the cases, the poetical diction points absolutely to any specific animal, particularly as there is more force and grandeur in a generalized and collective image of the huge monsters of the deep, not inappropriately so called, than in the restriction to any one species, since all are in Gen. i. 26 made collectively subservient to the supremacy of man. But criticism is still more inappropriate when, not contented with pointing to some assumed species, it attempts to rationalise miraculous events by such arguments; as in the case of Jonah, where the fact of whales having a small gullet, and not being found in the Mediterranean, is adduced to prove that the huge fish דָּג *dag* was not a cetacean, but a shark! Now, if the text be literally taken, the transaction is plainly miraculous, and no longer within the sphere of zoological discussion; and if it be allegorical, as some, we think, erroneously assume, then, whether the prophet was saved by means of a kind of boat called *dagh*, or it be a mystical account of initiation where the neophite was detained three days in an ark or boat, figuratively denominated a fish, or Celtic *avanc*, the transaction is equally indeterminate; and it assuredly would be derogating from the high dignity of the prophet's mission, to convert the event into a mere escape, by boat, or into a pagan legend such as Hercules, Bacchus, Jemsheed, and other deified heroes of the remotest antiquity, are fabled to have undergone, and which all the ancient mysteries, including the Druidical, symbolized. It may be observed, besides, of cetaceous animals, that though less frequent in the Mediterranean than in the ocean, they are far from being unknown there. Joppa, now Jaffa, the very place whence Jonah set sail, displayed for ages in one of its pagan temples huge bones of a species of whale, which the legends of the place pretended were those of the dragon monster slain by Perseus, as represented in the Arkite mythus of that hero and Andromeda; and which remained in that spot till the conquering Romans carried them in triumph to the great city. Procopius mentions a huge sea-monster in the Propontis, taken during his præfecture of Constantinople, in the 36th year of Justinian, (A.D. 562), after having destroyed vessels at certain intervals for more than fifty years. Rondoletius enumerates several whales stranded or taken on the coasts of the Mediterranean: these were most likely all *orcas*, *physeters*, or *campedolios*, i. e. toothed whales, as large and more fierce than the *mysticetes*, which have balein in the mouth, and at present very rarely make their way farther south than the Bay of Biscay; though in early times it is probable they visited the Mediterranean, since the present writer has seen them within the tropics. In the Syrian seas, the Belgian pilgrim Lavaers, on his passage from Malta to Palestine, incidentally mentions a 'Tonynvisch,' which he further denominates an 'oil-fish,' longer than the vessel, leisurely swimming along, and which the seamen said prognosticated bad weather. On the island of Zerbi, close to the African coast, the late Commander Davies, R.N., found the bones of a cachalot on the beach. Shaw mentions an orca more than sixty feet in length, stranded at Algiers; and the late Admiral Ross Donelly saw one in the Mediterranean near the island of Albaran. There are, besides, numerous sharks of the largest species in the seas of the Levant, and also in the Arabian Gulf and Red Sea, as well as cetacea, of which *balæna bitan* is the largest in those seas, and two species of *halicore* or *dugong*, which are herbivorous animals, intermediate between whales and seals.—C. H. S.

WHEAT (חִטָּה *chittah*) occurs in various passages of Scripture, as enumerated by Celsius: Gen. xxx. 14; Exod. ix. 32; xxix. 2; xxxiv. 22; Deut. viii. 8; xxxii. 14; Judg. vi. 11; xv. 1; Ruth ii. 23; 1 Sam. vi. 13; xii. 17; 2 Sam. iv. 6; xvii. 28; 1 Kings v. 11; 1 Chron. xxi. 20, 23; 2 Chron. ii. 15; xxvii. 5; Job xxxi. 40; Ps. lxxxi. 16; cxlvii. 14; Cant. vii. 2; Isa. xxviii. 25; Jer. xii. 13; xli. 8; Ezek. iv. 9; xxvii. 17; xlv. 13; and Joel i. 11. There can be no doubt that *chittah*, by some written *chittha*, *chetteth*, *cheteh*, &c., is correctly translated 'wheat,' from its close resemblance to the Arabic, as well to the names of wheat in other languages. Celsius says, 'חִטָּה, *chittha*, occultato נ in puncto dagesch, pro חִנְטָה *chintha* dicitur ex usu Ebræorum.' This brings it still nearer to the Arabic name of wheat, حنطة, which in Roman characters is variously written, *hinteh*, *hinthe*, *henta*, and by Pemplius in his translation of Avicenna, *hhinttha;* and under this name it is described by the Arabic authors on Materia Medica. As the Arabic ح *ha*, is in many words converted into خ *kha*, it is evident that the Hebrew and Arabic names of wheat are the same, especially as the Hebrew ח has the guttural sound of ح. Different derivations have been given of the word *chittah:* by Celsius it is derived from 'חָנַט *chanath*, protulit, produxit, *fructum*, ex Cant. ii. 13;' or the Arabic 'حنط, rubuit, quod triticum rubello sit colore' (*Hierobot.* ii. 113). The translator of the *Biblical Botany* of Rosenmüller justly observes that 'the similarity in sound between the Hebrew word *chittah* and the English *wheat* is obvious. Be it remembered that the *ch* here is identical in sound with the Gaelic

guttural, or the Spanish x. It is further remarkable, that the Hebrew term is etymologically cognate with the words for *wheat* used by every one of the Teutonic and Scandinavian nations (thus we have in Islandic *hveiti*, Danish *hvede*, Swedish *hvete*, Mæsogoth. *hwaite*, German *weizen*); and that, in this instance, there is no resemblance between the Scandinavian and Teutonic terms, and the Greek, Latin, and Slavonic (for the Greek word is πυρος, the Latin *frumentum* or *triticum*, the Russian *psienitsa*, Polish *pszenica*); and yet the general resemblance between the Slavonic, the Thracian, and the Gothic languages is so strong, that no philologist now doubts their identity of origin' (*l. c.* p. 75).

541. [Triticum compositum—Egyptian Wheat.]

Rosenmüller further remarks that in Egypt and in Barbary قمح *kamich* is the usual name for wheat (quoting *Descrip. de l'Egypte*, t. xix. p. 45; Höst's *Account of Maroko and Fez*, p. 309); and also, that in Hebrew, קֶמַח *kemach* denotes the flour of wheat (Gen. xviii. 6; Num. v. 15). This, it is curious to observe, is not very unlike the Indian name of wheat, *kunuk*. All these names indicate communication between the nations of antiquity, as well as point to a common origin of wheat. Thus in his *Himalayan Botany*, the author of this article has stated: 'Wheat having been one of the earliest cultivated grains, is most probably of Asiatic origin, as no doubt Asia was the earliest civilized, as well as the first peopled, country. It is known to the Arabs under the name of *hinteh*, to the Persians as *gundoom*, Hindu *gehoon* and *kunuk*. The species of barley cultivated in the plains of India and known by the Hindu and Persian name *juo*, Arabic *shaeer*, is *houmd hexaerstichum*. As both wheat and barley are cultivated in the plains of India in the winter months, where none of the species of these genera are indigenous, it is probable that both have been introduced into India from the north, that is, from the Persian, and perhaps from the Tartarian region, where these and other species of barley are most successfully and abundantly cultivated' (p. 419). Different species of wheat were no doubt cultivated by the ancients, as *tritieum compositum* in Egypt. *T. æstivum*, *T. hibernum* in Syria &c.; but both barley and wheat are too well known to require further illustration in this place.—J. F. R.

WHIRLWIND. [Winds.]
WIDOW. [Woman.]
WIFE. [Marriage; Woman.]
WILDERNESS. [Deserts.]
WIMPLE. [Veil.]

WIND, &c. (רוּחַ; Sept. πνεῦμα, ἄνεμος; Vulg. *spiritus*, *ventus*). The Hebrew word signifies *air in motion* generally, as breath, wind, &c. Both the Septuagint words occur in the following definition of wind by Aristotle (*De Mundo*, c. 4): Ἄνεμος οὐδὲν ἐστι πλὴν ἀὴρ πόλυς ῥέων, ὅστις ἅμα καὶ πνεῦμα λέγεται.—'Wind is nothing else but a large quantity of air flowing, which is called πνεῦμα.' So also Plato has μεγάλῳ τινί πνεύματι for a high wind (*Phædon*, § 24, edit. Forster). Josephus also uses πνεῦμα βιαῖον for a violent wind (*Antiq.* xiv. 2. 2), as Lucian also does, βιαίῳ πνεάματι (*Ver. Hist.* lib. i. tom. i. p. 714). The Vulgate word *spiritus*, from *spiro*, 'to breathe,' 'blow,' is applied in like manner in Latin, as by Virgil (*Æn.* xii. 365): 'Boreæ cum spiritus alto Insonat Ægæo,'—'When the northern blast roars in the Ægean.' The Hebrew word is used, 1. for the wind as *a natural phenomenon* (Gen. iii. 8; Job xxi. 18; xxx. 15, 22; xxxvii. 21; Ps. i. 4; ciii. 16; Prov. xxx. 4; Eccles. i. 6; xi. 4; Isa. vii. 2; xvii. 13; xl. 7; Jer. x. 13; li. 16; Amos xiv. 13.) It is poetically ascribed to the immediate agency of God (Ps. cxxxv. 7; cxlvii. 18; comp. Baruch vi. 61). In the New Testament it occurs in Matt. xi. 7; xiv. 24; Mark iv. 39; John iii. 8; Acts xxvii. 4; Eph. iv. 14; James i. 6; Rev. vi. 13; vii. 1). Throughout the New Testament the word is ἄνεμος, except in our Lord's illustration. John iii. 8. In the Apocrypha ἄνεμος occurs in Wisdom v. 14; xiii. 2, &c.; but πνεῦμα in xvii. 18; Ecclus. v. 9; xxii. 18; Song of the Children xxvi. 42). We might perhaps attribute the exclusion of the word πνεῦμα, for 'the wind,' from the New Testament, to its having become almost entirely appropriated to 'heavenly things.' In Acts ii. 2, we have πνοή, translated 'wind;' Vulg. *spiritus*. It means the same in Homer (*Il.* v. 697), πνοιή for πνοή βορέαο, 'the breath or blast of Boreas;' comp. Job xxxvii. 10, Sept. In Gen. iii. 8, 'the cool of the day,' or rather '*wind* of the day,' indicates the evening, since in the East a refreshing breeze arises some hours before sunset; Vulg. *ad auram post meridiem*. Comp. Cant. ii. 17; iv. 6; where the words 'until the day break and the shadows flee away' should be rendered 'until the day *breathe* or *blow*' (*i.e.* till evening); Heb. שִׁיפוּחַ; Sept. διαπνεύσῃ; Vulg. *aspiret*. The evening breeze is still called, among the Persians, 'the breeze of the day' (Chardin, *Voyage*, t. iv. p. 48). In Amos iv. 13, God is said to 'create the wind.' Although this idea is very conformable to the Hebrew theory of causation, which does not recognise second causes, but attributes every natural

phenomenon immediately to the divine agency, yet the passage may perhaps be directed against the *worship* of the winds, which was common among ancient nations. Comp. Wisdom xiii. 2. Herodotus relates it of the Persians (i. 131). The words of our Saviour, 'a reed shaken with the wind' (Matt. xi. 7), are taken by some in the natural, and by others in a metaphorical sense. The former view is adopted by Grotius, Beza, Campbell, Rosenm., Schleusner, and Wetstein; and is confirmed, as Rosenmuller observes, by the antithesis of the rich man, whose magnificence all gladly survey. The comparison is adopted to reprove the fickleness of the multitude (comp. ver. 15, and Eph. iv. 14). 2. The wind occurs as the *medium of the divine interposition*, or *agency* (Gen. i. 2; viii. 1; Ex. xv. 10; Num. xi. 31; 1 Kings xviii. 45; xix. 11; Job i. 19; Isa. xi. 5; Jonah i. 4). In the New Testament, the wind was supernaturally employed at the day of Pentecost, like the 'sound' and 'fire' (Acts ii. 3). Indeed our Lord's illustration (John iii. 8), and the identity of the Hebrew and Greek words signifying breath, wind, and spirit, lead to the inference, that the air in motion bears the nearest resemblance of any created object to divine influence, and is therefore the most appropriate medium of it. The idea is finely embodied by Thomson:

> 'To Him, ye vocal gales,
> Breathe soft, whose spirit in your freshness breathes.'

[Spirit.] To this class of instances we refer Gen. i. 2, 'and the Spirit of God moved upon the face of the waters.' Along with Patrick and Rosenmüller, we construe the phrase, 'a wind of God,' a wind employed as the medium of divine agency. Rosenmüller compares Ps. civ. 30; cxlvii. 8; Isa. xl. 7. Dr. Lee refers to 1 Kings xviii. 12; 2 Kings ii. 16; and Ps. xxxiii. 6; Isa. xi. 4. In the two latter passages, he observes that the word is equivalent to *power*, &c. The commotions of the elements, &c., through means of which the petulance of Elijah was reproved (1 Kings xix. 11), are best understood as having occurred in vision (comp. Dan. ii. 35; Zech. v. 9). 3. The wind is used *metaphorically* in the following instances: 'The wings of the wind' denote the most rapid motion (2 Sam. xxii. 11), where the phrase may be a poetical representation also of the incident recorded (2 Sam. v. 24; Ps. civ. 3). The onomatopœia in the two former passages, in Hebrew, is remarkable. Anything light or trifling is called wind (Job vii. 7; Isa. xli. 29; Ps. lxxviii. 39; comp. Eph. iv. 14; Ecclus. v. 9). Violent yet empty speech is called 'a strong wind,' or a mere tempest of words (Job viii. 2). 'Vain knowledge' is called דעת־רוח, knowledge of wind (Job xv. 2); 'vain words,' words of wind (xvi. 3). Many expressive *phrases* are formed with this word. 'To inherit the wind,' denotes extreme disappointment (Prov. xi. 29); 'to hide the wind,' impossibility (xxvii. 16); to 'labour for the wind,' to labour in vain (Ecc. v. 16); 'to bring forth wind,' great patience and pains for no purpose (Isa. xxvi. 18; comp. Hos. viii. 7; xii. 1); 'to become wind,' to result in nothingness (Jer. v. 13). 'The four winds' denote the four quarters of the globe (Ezek. xxxvii. 9); 'to scatter to all winds,' to disperse completely (Ezek. v. 10; xii. 14; xvii. 21); 'to cause to come from all winds,' to restore completely (xxxvii. 9). 'The wind hath bound her upon her wings,' means deportation into a far country (Hos. iv. 19); 'to sow the wind and reap the whirlwind,' unwise labour and a fruitless result (viii. 7); 'to feed on the wind,' to pursue delusory schemes (xii. 1); 'to walk in wind,' to live and act in vain (Micah ii. 11); 'to observe the wind,' to be over cautious (Eccles. xi. 4); to 'winnow with every wind,' to be credulous, apt to receive impressions (Eccles. v. 9). *Comparisons.*—Disappointment, after high promise or pretension, is 'as wind without rain' (Prov. xxv. 14); the desperate speeches of an afflicted person, are compared to wind (Job vi. 26). *Symbolically.*—Empires are represented as having wings, and 'the wind in their wings,' denotes the rapidity of their conquests (Zech. v. 9). The wind is often used as the symbol or emblem of calamities (Isa. xxxii. 2; xli. 16; lvii. 13; lxiv. 6); destruction by the Chaldæan army (Jer. iv. 11, 12; comp. Wisd. iv. 4; v. 23; xi. 20). 'The windy storm' (Ps. lv. 8) denotes Absalom and his party. The wind is the frequent emblem of the divine chastisements (Isa. xxvii. 8; Jer. xxii. 22; li. 1, &c.). *Beautiful expressions* occur, as in Isa. xxvii. 2, 'He stayeth his rough wind in the day of the east wind;' that is, God doth not aggravate the misfortunes of mankind by his chastisements; to 'make a weight for the winds' (Job xxviii. 25). *Mistranslations.* — In Ps. lxxviii. 39, 'He remembered that they were but flesh, a wind that passeth away and cometh not again,' should probably be rendered, 'a *spirit* going away and not returning.' All the versions make the words relate to the soul of man. Homer has a very similar description of death (*Il.* ix. 408). In Eccles. i. 5, 6, the translation is faulty, and the sense further obscured by a wrong division of verses. The passage should be read: 'The sun also ariseth and the sun goeth down, and hasteth to his place where he ariseth, going to the south and circulating to the north. The wind is continually whirling about, and the wind returneth upon its whirlings.' All the versions give this rendering; our version alone mistakes the meaning. The phrase 'brought forth wind,' is understood by Michaelis as an allusion to the female disorder called empneumatosis, or windy inflation of the womb (*Syntagma, Comment.* vol. ii. p. 165). The Syriac translator also understood the passage in this way: 'enixi sumus ut illæ quæ ventos pariunt.' 4. The east wind רוח־קדים, ἄνεμος νότος, ἄνεμος καύσων, νότος, ventus ureus, spiritus vehemens, ventus auster. קדים, καύσων, ardor, æstus, ventus ureus. Both terms denote the natural phenomenon (Gen. xli. 6, 23; Job xxxviii. 24; Ps. xlviii 7; lxxviii. 26; Jonah iv. 8). Considerable indefiniteness attends the use of these words. Dr. Shaw remarks, that every wind is called by the Orientals קדים, an east wind, which blows from any point of the compass between the east and north, and between the east and south (*Travels*, p. 285). Accordingly the Sept. often understands this word to mean the south, as in Exod. x. 13; xiv. 21 (see Bochart, *Hierozoicon*, pt. ii. lib. i. cap. 15). If the east wind happens to blow a few days in Palestine during the months of May, June, July, and August, it occasions great destruction to the vines and harvests on the land, and also to the vessels at sea on the Mediterranean (Hos. xiii. 15; Jonah iv. 8;

Job xiv. 2; xv. 2; Is. xl. 7; Gen. xli. 6, 23; Ezek. xvii. 10, xix. 12; xxvii. 26; Ps. xlviii. 7; ciii. 5). In Jonah iv. 8, the phrase occurs, קדים חרישית רוח, a still or sultry east wind. For testimonies to the destructiveness of this wind in Egypt and Arabia, see Niebuhr (*Beschreib. von Arabien*, p. 8); Thevenot (*Voyages*, pt. i. liv. ii. c. 34). It is accordingly often used to denote *any* pernicious wind, as in Ps. xlviii. 7, where it is rendered by Sept. *πνεῦμα βίαιον*, Vulg. spiritus vehemens. It is used *metaphorically* for pernicious speech, a storm of words (Job xv. 2); calamities, especially by war (Isa. xxvii. 8; Jer. xviii. 17; Ezek. xvii. 10; xix. 12; xxvii. 26; Hos. xiii. 15). In this latter passage the east wind denotes Shalmaneser king of Assyria; in Ezek. xxvii. 26, it denotes the Chaldæans. Tyre is there represented under the beautiful allegory of a ship towed into deep waters, and then destroyed by an east wind. A very similar representation is given by Horace (*Carm.* i. 14). The east wind denotes divine judgment (Job xxvii. 21). *Phrases.*—'To follow the east wind,' is to pursue a delusory and fatal course (Hos. xii. 1). 5. West wind, רוח ים, *ἄνεμος ἀπὸ θαλάσσης*, ventus ab occidente [West]. 6. North wind, רוח צפון (Prov. xxv. 23), *ἄνεμος βορέας*, ventus Aquilo [North]. 7. South wind, דרום (Job xxxvii. 17), תימן (Ps. lxxviii. 26), *λίψ*, ventus Africus (Luke xii. 55), *νότος* (Sirocco), Acts xxvii. 13) [South]. 8. The *four winds*, ארבע רוחות, *τὰ τέσσαρα πνεύματα*, *οἱ τέσσαρες ἄνεμοι*, quatuor venti. The Hebrews speak only of four winds; and so Josephus (*Antiq.* viii. 3. 5). This phrase is equivalent to the four quarters of the world (Ezek. xxxvii. 9; 2 Esdras xiii. 5), the several points of the compass, as we should say (Dan. viii. 8). *Phrases.*—'Striving of the four winds,' is great political commotions (Dan. vii. 2; comp. Jer. iv. 11, 12; li. 1); to 'hold the four winds,' is by contrary to secure peace (Rev. vii. 1); 'to be divided to the four winds,' implies utter dispersion (Dan. xi. 4; Jer. xlix. 32; Ezek. v. 10, 12; xvii. 2). So also the phrase, *ἐκ τῶν τεσσάρων ἀνέμων* (Matt. xxiv. 31) means from all parts of the world (Mark xiii. 27). 9. The Hebrews, like other ancient nations, had but few *names of winds*. Homer mentions only *βορέας*, *νότος*, *ζέφυρος*, and *εὖρος*. Aul. Gellius, indeed, complains of the infrequency of names of winds in ancient writers (*Noct. Att.* ii. 22). The same indefiniteness appears in Herodotus (see Larcher's notes on i. 188). In the course of time the Greeks and Romans added eight other winds to the original four, but that appearing too minute a division, they reduced the additional ones to four, thus making only eight in all. The names of these may be seen in Larcher (*ut supra*), or Pliny (*Hist. Nat.*, xviii. 34). Further information may be found in Coray's *Translation of Hippocrates, De Aeribus, Aquis et Locis*, Paris, 1800; *Discours Préliminaire;* and see index. For a comparative table of the English, Latin, and Greek divisions of the winds, and their names, amounting to more than thirty, see Beloe's Herodotus (*Polymnia*, notes, vol. iii. p. 293, Lond. 1791). One Greek name of a wind occurs in Acts xxvii. 14, *Εὐροκλύδων*, *Euroclydon*, a tempestuous wind in the Mediterranean, now called a *Levanter*. The Alexandrian M.S has *Εὐρακύλων*; Vulg. *Euroaquilo*; Syriac אורקידון. The common reading, *Εὐροκλύδων*, seems derived from *Εὖρος*, *Eurus*, 'east wind,' and *κλύδων*, 'a wave,' quasi an eastern tempest. Other MSS. read *Εὐρυκλύδων*, *Euryclydon*, from *εὐρύς*, 'broad,' and *κλύδων*, 'a wave,' or rough wavy sea; and then the word would mean the wind which peculiarly excites the waves. Shaw defends the common reading, and describes the wind as blowing in all directions from the N.E. round by the N. to the S.E. (*Travels*, p. 330, &c. 4to.; see Bowyer's conjectures, and Doddridge, *in loc.*). The Hebrews had no single terms indicating the relative velocity of the air in motion, like our words breeze, gale, &c. Such gradations they expressed by some additional word, as 'great,' רוח־גדולה, 'a great wind' (Jonah i. 4), 'rough,' קשה, &c. Nor have we any single word indicating the destructive effects of the wind, like their verbs סער and שׁעה, as ואסערם (Zech. vii. 14, &c.), and answering to the Greek word *ἀνεμόφθορος* (see Sept. of Gen. xli. 6, 23). Our *metaphorical* use of the word *storm* comes nearest. The phrase רוח סערה, 'stormy wind,' *πνεῦμα καταιγίδος*, *spiritus procellæ*, occurs in Ps. cvii. 25; cxlviii. 8. It is metaphorically used for the divine judgments (Ezek. xiii. 11, 13). The word סערה is usually translated 'whirlwind;' it means, however, more properly a storm (2 Kings ii. 1, 11; Job xxxviii. 1; xl. 6; Zech. ix. 14; Sept. *συσσεισμός*, *λαῖλαψ*, *νέφος*; Vulg. *turbo;* Ecclus. xliii. 17; *συστροφὴ πνεύματος*, xlviii. 9; *λαίλαπι πυρός*. The Hebrew word is used metaphorically for the divine judgments (Isa. xl. 24; xli. 16); and to describe them as sudden and irresistible (Jer. xxiii. 19; xxv. 32; xxx. 23). 'A whirlwind out of the north' (Ezek. i. 4) denotes the invasion from Babylon. Another word, סופה, is also translated 'whirlwind,' and properly so. It occurs in Job xxxvii. 9; Isa. xxi. 1. It is used as a simile for complete and sudden destruction (Prov. i. 27); and for the most rapid motion, 'wheels of war-chariots like a whirlwind' (Isa. v. 28; Jer. iv. 13). Total defeat is often compared to 'chaff scattered by a whirlwind' (Isa. xvii. 13). It denotes the rapidity and irresistibleness of the divine judgments (Isa. lxvi. 5). The *phrase* 'to reap the whirlwind' denotes useless labour (Hos. viii. 7); 'the day of the whirlwind,' destruction by war (Amos i. 14). 'The Lord hath his way in the whirlwind,' is probably an allusion to Sinai (Nahum i. 3). A beautiful comparison occurs in Prov. x. 25: 'As the whirlwind passeth, so is the wicked no more: but the righteous is an everlasting foundation.'—J. F. D.

WINDOW. [House.]

WINE. The Bible furnishes the earliest authentic account concerning wine (Gen. ix. 21; xix. 32). The instances of its use by the patriarchs Noah and Lot, with its deplorable effects, have given rise to numerous conjectures from the earliest periods; and both the Rabbins and the Christian Fathers indulge in much apologetic criticism on these points. Theodoret alleged that the drunkenness of Noah came from *inexperience*, for, being the first who *pressed grapes*, he was ignorant of its properties, having been used for 600 years to drink water only (*Quæst.* § 65). This seems to be the most probable opinion, and is adopted and elucidated by the contributor of the article Noah, p. 426 of this volume. The

difficulty presented in the case of Lot is well stated by an old writer. 'Whilst the daughters sinned in giving him wine unto drunkenness, what is to be thought of him for drinking so liberally thereof? Some conjecture that it was mingled with something apt to make him drunken, although he took but a little, and so excuse him' (Dr. Mayer's *Comment.* Lond. 1653, vol. i. p. 246). This conjecture is well illustrated by a narrative of adulterous intercourse, recorded by Linschoten (1584), and effected by means of drugged wine administered to the husband:—'They had caused him to drinke of a certaine wine that was mingled with the hearbe *deutroa* [datura], thereby to bereave poore Francis of his wittes, and so to effect their accursed device' (*Voyages*, b. i. p. 158). That the incest of Lot was performed in an unconscious state, such as is induced by many species of drugged drinks, may be inferred from the repetition of the act. In another part, again referring to such as had drunk of this drugged wine, Linschoten says, that 'when the time cometh that he reviveth out of his trance, he knoweth nothing what was done, but thinketh that hee had slept' (p. 109).

On no point is the remark of the *Encyclopædia Britannica* concerning the Authorized Version of the Bible more just than in reference to wine:—'One of its greatest faults is, that the translation of the same original word is often improperly varied at the expense of perspicuity; while, on the other hand, ambiguity is sometimes occasioned by the rendering of two original words in the same sentence by only one English word, which, however, is used in different meanings' (vol. iv. p. 619). Not only two, but thirteen distinct Hebrew and Greek terms, are translated by the word 'wine,' either with or without the adjectives 'new,' 'sweet,' 'mixed,' and 'strong.' If the first rule for a translation, as laid down by Dr. George Campbell, be correct—that 'the translation should give a complete transcript of the ideas of the original'—the common version must, on this point, be deemed exceedingly defective. We propose, therefore, in the present article, to attempt an elucidation of the various Biblical terms translated 'wine,' and to indicate what we regard as their most probable meanings and distinctions.

1. יַיִן *yayin*, *οἶνος*, wine, occurs in 141 instances; 21 times in connection with שֵׁכָר *shechar* [Drink, Strong]. Its root was probably יָן *yavan*, or *yanah*, the primary idea of both being that of turbidness, or boiling up, so characteristic of the appearance of the grape-juice as it rushes foaming into the wine-vat. The able writer of the article 'Wine' in the *Penny Cyclopædia*, observes, that 'the juice of grapes, or vegetable juices in general, become turbid when in contact with air, before fermentation commences, and this turbidity is owing to the formation of an insoluble precipitate of the same nature as ferment' (vol. xxvii. p. 455). *Yayin*, in Bible use, is a very general term, including every species of wine made from grapes (*οἶνος ἀμπέλινος*), though in later ages it became extended in its application to wine made from other substances. (*a.*) It is frequently used in the same comprehensive sense as the *vinum* of the Latins. Cato (*De Re Rustica*, cxlvii.) speaks of the hanging wine (*vinum pendens*). So in Num. vi. 4, *yayin* stands for *vine*—the grape-vine. In Deut. xxviii. 39, it is ranked amongst things to be sucked, gathered, or eaten. In Isa. xvi. 10, it is used for the *grapes* to be trodden. In Isa. lv. 1, it probably signifies thick grape-syrup, or honey (see Isa. vii. 22). The word *syrup*, it may be here remarked, is derived from an Oriental term for wine; hence, in Turkey, *shirab*-jee signifies '*wine*-seller' (see *Turkey and the Turks*, p. 197). This species of wine is still called 'honey' in the East, and it is by the prophet appropriately connected with milk, as a thing to be eaten. *Yayin* is also used for 'grapes,' or for 'wine in the cluster,' in Jer. xl. 10, 12; xlviii. 33; and probably also in Deut. xiv. 26. In this sense Josephus (*De Bell. Jud.* vii.) employs the Greek equivalent, when he enumerates amongst the stores in the fortress of Massada, *σῖτος*, *οἶνος*, and *ἔλαιον*, and adds, that the Romans found the remains of *these fruits* (*τὸν καρπόν*) uncorrupted. (*b.*) *Yayin* signifies also 'the blood of the grape' freshly expressed, as in Gen. xlix. 2 (comp. with Isa. lxiii. 1-3), reference being there had to the juice of the claret grape—'His eyes shall be more beautiful than wine, and his teeth whiter than milk.' In this sense *yayin* denoted what the Greeks specifically called *γλεῦκος* (sweet wine), the term used by Josephus in speaking of the grape-juice expressed into Pharaoh's cup (Gen. xl. 11). In Cant. v. 1 (compared with vii. 9), it seems to refer to a sweet innocent wine of this sort, which might be drunk abundantly. In Ps. civ. 15, as illustrated by Judg. ix. 13; Exod. xxii. 29 (28), *yayin* probably designates the first 'droppings' or tears of the gathered grapes, which were to be offered fresh—without 'delay.' (*c.*) In Prov. ix. 2, 5, *yayin* refers to a *boiled* wine, or syrup, the thickness of which rendered it necessary to mingle water with it previously to drinking. Wine preserved in this way was sometimes introduced into the offerings for the use of the priests (Num. xviii. 11), as appears from this passage in the Mishna:—'Wine of the heave-offering must not be boiled, because it *lessens* it' (Tr. *Teroomah*, perek xi.). Bartenora, in a note, says, 'because people *drink less* of boiled wine'—which is true of it when drunk unmingled, since boiling renders the wine more rich and cloying. But the Mishna adds—'Rabbi Yehuda permits it, because it *improves* it.' Such a wine Wisdom is aptly represented as mingling for her feast, because such was esteemed the richest and the best wine. (*d.*) *Yayin* also comprehends a mixed wine of a very different character; a wine made strong and inebriating by the addition of drugs, such as myrrh, mandragora, and opiates. 'Such,' observes Bishop Lowth, 'were the exhilarating, or rather, stupefying ingredients which Helen mixed in the bowl together with the wine for her guests oppressed with grief, to raise their spirits; the composition of which she had learned in Egypt.' (Hom. *Odyss.* iv. 220.) And how much the Eastern people to this day deal in artificial liquors of prodigious strength, may be seen in a curious chapter of Kempfer upon that subject (*Amæn. Exot.* Fasc. iii. obs. 15). Thus the drunkard is properly described (Prov. xxiii. 30) as one 'that seeketh *mixed* wine,' and is 'mighty to *mingle* strong drink' (Isa. v. 22). And hence the Psalmist took that highly poetical and sublime image of the cup of God's wrath, called by Isaiah

(li. 17) 'the cup of trembling,' causing intoxication and stupefaction (see Chappelow's note on *Hariri*, p. 33); containing, as St. John (Rev. xiv. 10) expresses in Greek this Hebrew idea with the utmost precision, though with a seeming contradiction in terms, κεκερασμένον ἄκρατον, *merum mixtum*' (*Comment.* on Isa. i. 22). (*e.*) *Yayin* also includes every species of fermented grape-wine. The characteristics of fermentation are well marked in Prov. xxiii. 31, where the wine is first described as appearing turbid, in consequence of the subsidence of the gluten; that, absorbing air, becomes ferment, or yeast, communicating its own decay to the sugar of the grape, and which is then converted into carbonic acid gas and alcohol, the former rising up as a bubble or 'eye,' and thus producing an upward movement of the liquid.

'Look not thou upon the wine when it is turbid,
When it giveth its bubble in the cup, moving itself upward:
At the last it biteth like a serpent,
And stingeth like a basilisk.'

Yayin, then, is a general term for 'all sorts of wine' (Neh. v. 18).

2. עָסִיס *ausis*, occurs only in five texts; Cant. viii. 2; Isa. xlix. 26; Joel i. 5; iii. (iv.) 18; Amos ix. 13. The name is derived from עָסַס *asas*, 'to tread down,' and denotes the expressed juice of the grape or other fruit. By the Greeks it is called γλεῦκος, by the Latins *mustum*, from the Hebrew מָצִיץ, 'fresh,' 'sweet,' 'pure,' by transposition of letters, as *stum* from *must*.

3. סֹבֶא *sobhe* or *saba*, from סָבָא *sabho*, 'to drink freely,' because the inspissated wine which it denoted was enticing, and might be freely drunk when mingled with water. The term occurs but thrice, probably because this sort of wine is often expressed by the general term '*yayin*,' or by '*debhash*' [Honey]. It is the Latin *sapa*, and the French *sabe*, '*vin cuit*,' baked or boiled wine. *Syreon*, *hepsema*, and *defrutum*, according to Pliny, were species of it (*Hist. Nat.* xiv. 9): indeed, *syreon*, σίρινος οἶνος, and *seria*, 'a wine-jar,' most likely derived their name from the *syr* or caldron of the Jews (Nahum i. 10), in which the *sobhe* was prepared. As boiling would confer an additional sweetness on the juices of fruits, the *syr* has probably some connection with the Oriental term *shir* or *sir*, expressing 'sweet juice,' and from which the words *sherab*, *sirob*, and *syrup* are derived. The process of boiling appears to have been employed for the preservation of vegetable juices, from the earliest times, and is founded on a correct chemical principle. 'The property of organic substances,' says Liebig, 'to pass into a state of decay, is annihilated in all cases by heating to the boiling point' (*Lett. on Chemistry*, ii. lett. xi.). We have shown above, that it was understood by the ancient Jews, and it is yet very extensively practised in the East in the preparation of *sherob*, or '*rob* of grapes.' Baron Tavernier, speaking of Shiraz, says—'Of the wine there are many vessels full, which are *burnt* for the benefit of the poor travellers and carriers, who find it a great refreshment to drink it with water' (*Persian Travels*, b. v. c. xxi. p. 248, Lond. 1684). The same traveller, speaking of the Christians of St. John around Basrah, affirms, that 'in the Eucharist they make use of meal kneaded up with wine and oil. To make this wine they take grapes dried in the sun, which they call in their language *zebibes* [*zaba* or *saba*], and casting water upon them let them steep for so long a time' (b. ii. c. viii. p. 91). This raisin-wine was the *passum* of the Romans.*

The three texts in which *sobhe* occurs, answer to the preceding description of it. In Isa. i. 22, we read—'Thy silver is become dross, thy *sobhe* (or boiled wine, is become) a thin wine mingled with water.' Professor Stuart justly observes, that *mahool*, 'here rendered mixed, means cut, cut round, circumcised.' Varro uses a phrase exactly parallel, applying to wine of the second pressing the term '*circumcised wine*,' which, being mixed with water, yields *lora*, the drink of the labourer in winter (*De Re Rust.* i. 54). Hence the force of the text is this:—'Thy silver is become like dross; thy *sobhe* (the rich drink of thy nobles) is become like *mahool*, even as circumcised wine mixt with water, common *lora*, the drink of a peasant.' Rabbi D. Kimchi has this comment—'The current coin was adulterated with brass, tin, and other metals, and yet circulated as good money. The wine also was adulterated with water in the taverns, and sold, notwithstanding, for pure wine.'

In Hosea iv. 18, it is said, 'Their *sobhe* is sour.' As this wine was valued for its sweetness, it was of course spoilt by acquiring acidity. But inspissated wines are peculiarly liable to this degeneracy. '*Defrutum*,' says Columella, 'however carefully made, is liable to grow acid' (xii. 20).

Nahum i. 10, referring to the enemies of Jehovah, we should read as follows:—'Like thorns they are woven together, and like their boiled wine the drunkard shall be devoured, (even) as stubble fully dry,'—the first metaphor referring to thorns heaped up together for fuel, the second to the burning of the *sobhe* in the *syr* or caldron from neglect, and the third to the combustion of stubble (comp. Ezek. xxiv. 6-14).

4. חֶמֶר *chemer*, occurs twice as a descriptive; but in Isa. xxvii. 2, where it is applied to the vineyard, some copies read חמד, 'fruitful.' *Chemer* and *chamar* are derived from the verb חמר *chamar*, 'to foam,' 'boil up,' 'froth,' or 'ferment' (the latter term signifying no more originally than the former), and are used in reference to waters and to the waves, as well as to leaven, wine, &c. In Deut. xxxii. 14, *chemer* is applied to 'the blood of the grape,'—as expressive of the juice fresh and foaming from the vat, in its *pure* but *turbid* state; and we perceive no reason for resorting to the very secondary sense of 'red wine.'

חָמַר *chamar*, the verb, in Ps. lxxv. 8 (9), is applied to *pure* wine, unmixed wine filled with

* '*Nebeedh*, prepared from raisins,' says E. W. Lane, 'is commonly sold in Arab towns, under the name *zebeeb*, which signifies raisins. This I have often drunk in Cairo, but never could perceive that it was in the slightest degree fermented. Other beverages, to which the name of *nebeedh has been* applied—though, like *zebeeb*, no longer called by that name—are also sold in Arab towns' (*Notes to Arabian Nights*, vol. i. ch. iii. p. 215, 1841).

mixture, which exactly answers to the phrase of St. John, 'the mixed unmixed' (Rev. xiv. 10).

5. חַמְרָא *chamra*, used by Daniel (v. 1, 2, 4, 23), and חמר *chemar*, by Ezra (vi. 9; vii. 22), are Chaldee terms. *Chemar* we regard as used for *pure* wine, in its fresh, foaming condition; but *chamra* may have denoted some rich and royal drink, made strong by the addition of drugs. Tavernier refers to a drink of this sort, used by the luxurious Grand Seignior on visiting the seraglio, which seems to illustrate Daniel v. 23. He says it is 'a sort purposely prepared for the Grand Seignior himself, called *Muscavy*,' but that 'the principal persons about the court send for it secretly to the halvagi-bachi (*Rel. of the G. S. Seraglio*, vol. iii. p. 26, Lond. 1684). Such, probably, was the wine which Belshazzar, with his lords, wives, and concubines, drank in the holy vessels, and which Daniel would not touch. —The compilers of the Talmud considered *khamra* as a 'sweet wine.' It is a question, 'What is *Caræna*m?' Rabbi Abhoo explains that *khamroa* (vinum dulce) is so called, which is brought hither from Asia.'

6. מֶסֶךְ *mesech*, once translated 'mixture' (Ps. lxxv. 8 (9)), once 'mixed wine' (Prov. xxiii. 30), and once 'the drink-offering' (Isa. lxv. 11), is derived from *masach*, 'to mingle;' whence *miscere* and *mix*. In the first text four terms occur which are elsewhere all rendered 'wine'—viz. *yayin*, *khamar*, *mesech*, *shemârim*. It should be read—'There is a cup in the hand of Jehovah, and the unmixed (or *pure*) *wine* is full of *mixture;* and he poureth out this, but all the wicked of the earth shall wring and suck out *the dregs* of it.' An inebriating and disgusting mixture seems to be denoted here.

The second text refers to drugged wine; either pure wine made inebriating, or fermented wine made stronger by the addition of spices and drugs. This custom has prevailed from the earliest ages, and is still extant in the East. Bishop Southgate states 'the reason why the Persians adulterate their wines; because, in their natural state they are too weak to produce the desired effect' (*Narrative of a Tour*, &c. vol. ii. p. 326, Lond. 1840). 'Hence,' says he, 'it has been the custom in Persia to fortify the wines by an infusion of *nux vomica* and lime, in order to increase that inebriating power which a hard-drinking Persian is apt to esteem' (p. 325).

In the third text the idol-worshippers are really said to 'fill out *a mixture* to Meni;' the heathenish custom of pouring out *mixed wine* to their gods being contrasted with the worshippers of Jehovah on his 'holy mountain,' who were enjoined not to delay the presentation of their first-fruits and liquors, but to pour out 'the *pure* blood of the grape' as their drink-offering. When designed for the use of the priests, however, boiled wine, as we have seen, was *sometimes* presented.

Though, in the three texts we have examined, *mesech* refers to some reprobated or offensive mixture, we must not therefore conclude that all mixed wine was pernicious or improper. We have already seen that there were two very opposite purposes sought by the mixture of drinks; one mixture was for the purpose of sensuality, the other for that of sobriety or use. While the wicked sought out a drugged mixture (Prov. xxiii. 30), and was 'mighty to mingle sweet drink' (Isa. v. 22), Wisdom, on the contrary, 'mingled her wine' with water, or with milk (Prov. ix. 2, 5), merely to dilute it and make it properly drinkable. Of the latter mixture Wisdom invites the people to drink freely; but on the use of the former an emphatic woe is pronounced.

7. שֵׁכָר *shechar*, 'sweet drink,' once translated 'strong wine' (Num. xxviii. 7). It seems to have formed an independent subject of offering. *Shechar* is a generic term, including palm-wine and other *saccharine* beverages, except those prepared from the vine. That *shechar* was made inebriating by being mingled with potent drugs we have just seen: but, it may be asked, how shall we explain Prov. xxxi. 6, 7?—'Give *shechar* unto him who is ready to perish.' The Rabbins have generally referred this apparent command to the stupefying cup administered to criminals with the merciful intent of allaying their pains and fears. But can we associate so barbarous a custom with Divine inspiration? The example of the Redeemer is at least opposed to such a notion, and the Spirit of Christ was the Spirit of Prophecy also, and they ought therefore to harmonize. Nevertheless, when 'they gave *him* to drink wine mingled with myrrh' (Mark xv. 23), 'he received it not.' Besides, this supposition does not account for the language of the seventh verse. The writer of a series of elaborate articles on 'the Wines of Scripture,' in an English periodical, contends that the advice is given *ironically*. Lemuel's mother warns her royal son against the deceitful influences of inebriating beverages, and represents them as being especially injurious in their operation on the personal and official character of kings; and then, in a strain of evident irony, points to the wretch who vainly dreams the Lethean draught will rid him of the burden of anxiety and sorrow which his own profligacy and intemperance have imposed (*Truth-Seeker*, 1845-6). A third view of this difficult passage is given in the present work, in the article Drink, Strong, to which the reader is referred for a full discussion of the whole subject.

8. תִּירוֹשׁ *tirosh*, 'vintage fruit.' The usual definition of this term is absurd, viz. that because it is derived from יָרַשׁ *yarash*, 'to possess,' 'to inherit,' it signifies 'a strong wine which is able to get possession of a man, and drive him out of himself!' With Bythner, in his *Lyra Prophetica*, we would adopt the simple derivation of *tirosh* from its passive quality of being possessed, but apply it rather to 'vintage-fruit,' than to any liquid whatever. Consult article Fruit.

9. שְׁמָרִים *shemarim*, 'preserves,' or 'jellies,' derived from the verb *shamar*, 'to preserve.' It is translated 'wines on the lees,' in Isa. xxv. 6; but in the three other passages in which it occurs, by 'dregs' or 'lees' alone. Dregs of wine, however, can form no part of a delicious feast; while in the East various species of 'preserves' are highly esteemed. Mr. Buckingham records that at Adjeloon he was treated with *wine-cakes* (*Trav. among the Arab Tribes*, p. 137). Our older translators so understood the word. Coverdale renders the passage 'sweet and most pure things;' the Bishops' Bible (1568), 'delicate things,' and 'most pleasant dishes' [Shemarim].

A passage from Tavernier's curious *Relation*

of the Grand Seignior's Seraglio serves to show what an important place in Eastern entertainments preserves and confections occupy: 'The offices where the conserves and sweetmeats are made (there being six or seven of them) are above the kitchens, and served by four hundred Helvagis. They are perpetually at work in those seven offices, and there they prepare all sorts of conserves, *dry* and *liquid*, and several sorts of *syrups*.' 'In the same offices they also prepare the ordinary drink of the Turks, which they call *sherbet*, and it is made several ways.' 'They make also another sort of drink which they call *magion* [*el-majoon*], composed of several drugs, whereby it is made hot' (Lond. 1684, chap. iii. p. 26).

10. אֲשִׁישָׁה *eshishah*, once translated 'flagon' only; in three passages 'flagon of *wine*;' and once 'flagon' with grapes joined to it in the original, as noticed in the margin (Hosea iii. 1). The Sept. renders it in four different ways, viz. λάγανον ἀπὸ τηγάνου, 'a cake from the frying-pan' (2 Sam. vi. 19); in another part, which narrates the same fact, ἀμορίτην ἄρτον, 'a sweet cake of fine flour and honey' (1 Chron. xvi. 3); πέμματα μετὰ σταφίδος, 'a cake made with raisins' (Hos. iii. 1), 'raisins' here corresponding to 'grapes' in the Hebrew; and by one copy ἀμύροις, 'sweet cakes' (Cant. ii. 5); but in others μύροις, 'unguents.' In the Targum to the Hebrew צְפִיחִית *tzappikhith*, in Exod. xvi. 31, the Chaldee term is אֶשִׁישִׁין *eshishan*, 'a cake,' rendered in our version by 'wafers.' *Eshishah* has been supposed to be connected with אֵשׁ *ash*, 'fire,' and to denote some sort of 'sweet cake' prepared with fire; but the second part of the word has not been hitherto explained.

Perhaps the following extract from Olearius (1637) may throw light on the kind of preparations denoted by *shemarim* and *eshishah*: 'The Persians are permitted to make a sirrup of sweet wine, which they boyl till it be reduc'd to a sixth part, and be grown as thick as oyl. They call this drug *duschab* [*debhash*], and when they would take of it, they dissolve it with water.' 'Sometimes they boyl the *duschab* so long that they reduce it into a paste, for the convenience of travellers, who cut it with a knife, and dissolve it in water. At Tabris they make a certain conserve of it, which they call *helwa* [*el-magin*], mixing therewith beaten almonds, flour, &c. They put this mixture into a long and narrow bag, and having set it under the press, they make of it a paste, which grows so hard that a man must have a hatchet to cut it. They make also a kind of conserve of it, much like a pudding, which they call *zutzuch*, thrusting through the middle of it a small cotton thread to keep the paste together' (*Ambassador's Travels*, b. vi. p. 311). The Tartars consumed a similar preparation: 'They have certain cakes made of meal, rice, and millet, fry'd in oil or honey' (b. iv. p. 173). Amongst the presents received by the ambassadors there is enumerated 'a bottle of *scherab* [syrup] or Persian wine' (p. 175). This *zutzuch* is but a harsh corruption of the Hebrew *eshishah*, and is by others called *hashish* and *achicha*. Even this substance, in course of time, was converted into a medium of intoxication by means of drugs. 'Hemp is cultivated and used as a narcotic over all Arabia. The flowers, when mixed with tobacco, are called *hashish*. The higher classes eat it (hemp) in a jelly or paste called *maajoun* [*el-magin*], mixed with honey, or other sweet drugs' (Crichton's *Arabia*, vol. ii. p. 413). Lempriere says—'Instead of the indulgence of opium by the Moors, they substitute the *achicha*, a species of flax' (*Tour to Morocco*, 1794, p. 300). The leaves of the garden hemp (*shahdánaj*), says El-Kazweenee, are the benj (bange), which, when eaten, disorders the reason. De Sacy and Lane derive the name of the Eastern sect of 'Assassins' (*Hashsháseen*), 'hemp-eaters,' from their practice of using shahdánaj to fit them for their dreadful work. El-Idreesee, indeed, applies the term *Hasheesheeyeh* to the 'Assassins.'

11. חֹמֶץ *chometz*, ὄξος [Leaven], rendered 'vinegar' (*i. e.* sick or sour wine) in the common version. The modern Jews still employ this phrase to denote wine spoiled by acidity. It seems, however, in its general use, to have signified anciently a thin acidulated beverage, as well as to comprehend 'vinegar,' in the modern sense of the word. In Ruth ii. 14, it is named as the drink of the reapers of Boaz, and probably corresponded to the *posca* (from *post-escam*) given to the Roman legions. A very small wine, called *pesca* and *sera* (from *seor*, 'sour'), is still used by the harvesters in Italy and the Peninsula. This term is employed by the Psalmist in lxix. 21, 'They gave me also gall for my meat; and in my thirst they gave me vinegar to drink,'—a prediction actually fulfilled at the Crucifixion of the Messiah. Thus the ὄξος mingled with gall (Matt. xxvii. 34) is the same as the οἶνος mingled with myrrh (Mark xv. 23), a bitter substance [Rosh].

12. Οἶνος, the Greek generic term for *wine*, from the Hebrew *yayin*. It comprehended new wine (οἶνος νέος), luscious wine (γλεῦκος), pure or unmingled wine (ἄκρατον), and a thin sour wine (ὄξος). The adjective νέος distinguished οἶνος from παλαιός, old wine (Matt. ix. 17; Mark ii. 22; Luke v. 37). Florentinus, in the *Geoponica*, counsels the husbandman often to taste both his new and his old wine, so that the slightest sign of acidity might be detected at its commencement (lib. vii. cap. 7). In Luke v. 37-8, 'No man putteth νέος οἶνος into old bottles, else the νέος οἶνος will burst the bottles and be spilled, and the bottles shall perish: but νέος οἶνος must be put into new bottles, and both are preserved,'—the allusion is to the large *skin bottles* of the East, into which the fresh grape-juice (*mustum* or γλεῦκος) was frequently put for preservation. Job affectingly refers to this custom, when he says, 'I am as wine which hath no vent—*ready to burst*, like new bottles:' his heart was full to bursting, so that the bodily frame could hardly resist the internal workings of the afflicted spirit. If, however, the bottle happened to be old, the wine would commence fermentation, and the bottle would actually burst, and both would perish. 'The force of fermenting wine is very great; being able, if closely stopped up, to burst through the strongest cask' (Chambers' *Cyclopædia*, vol. ii. art. 'Wine,' 1750). The phenomena referred to have been fully explained by the chemical researches of Liebig. Fermentation depends upon the access of air

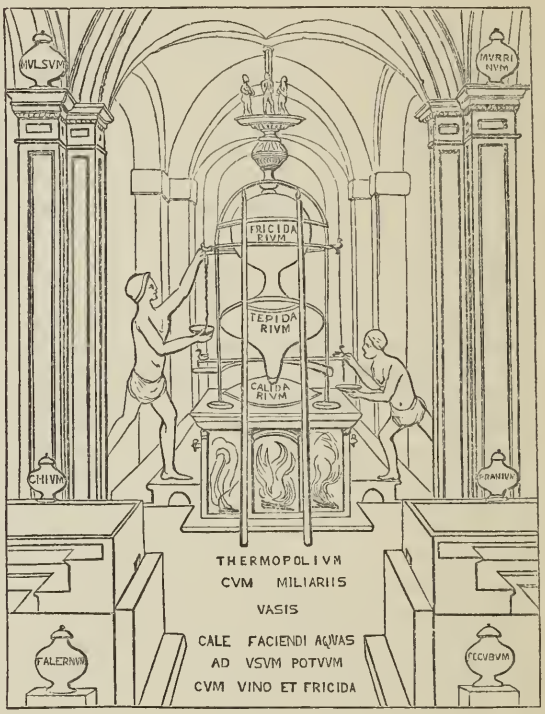
to the grape-juice, the gluten of which absorbs oxygen and becomes *ferment* or yeast, communicating its own decomposition to the saccharine matter of the grape, which becomes transformed into alcohol and carbonic acid gas. It is the expansion of the gas thus liberated which bursts the bottles, when the fermentation has once fairly started. Old bottles would have portions of the sediment of former wine adhering to their sides, which must have absorbed oxygen, and thus have become converted into fermenting matter. From age and exposure to the heat, old bottles would become dry and full of cracks and minute crevices, which would give admission to the air. Thus, as Burckhardt informs us, speaking of the Beyrouk honey of the Syrians, 'They use it in rubbing their water-skins, in order to exclude the air' (*Travels in Syria*, p. 129). Hence our Lord, adverting to the difficulty of young disciples bearing all at once his new doctrines and commandments, intimates that the earthly or fleshly vessel was not yet fitted for their full reception; that their minds must be first cleansed from the remnants and leaven of the old doctrine, and gradually renewed by the power of the truth.

13. Γλεῦκος, *must*, in common usage, 'sweet' or 'new wine.' It only occurs once in the New Testament (Acts ii. 13). Josephus applies the term to the wine represented as being pressed out of the bunch of grapes, by the Archi-oino-choos, into the cup of the royal Pharaoh. It seems to have been applied to wine in its *sweetest state*. Its derivation, indeed, denotes 'lusciousness:' hence Homer (*Odyss.* xx. 68) applies a word of kindred origin, γλυκερός, 'luscious,' to honey, but, in the same line, ἡδύς, 'sweet,' to wine. The writers of the *Geoponica* constantly use γλεῦκος in the sense of *must*. Diophanes, who was a good Latinist, puts *mustum* into a Grecian dress, in order the better to express his meaning. See *Geoponica* (ix. 20), where he says, γλεύκους, τουτεστὶ τοῦ καλουμένου μούστου,—'of *gleukos*, that is, what is called *mouston*.' In the same way the Romans distinguished *must* as *dulce*, 'luscious,' but the wine made from it only as *suave*, 'sweet.' Pliny says, 'Medium inter *dulcia* vinum est, quod Græci *aigleucos* vocant, hoc est, *semper mustum*. Id evenit cura, quoniam fervere prohibetur: sic enim appellant musti in vina transitum' (*Hist. Nat.* xiv. 9):—'That which holds the middle place among the sweet wines is what the Greeks call *aigleucos*, that is, *always must*. That comes out with care [being the first pressure of the ripe grapes], by which it is forbidden to ferment: for so they call the passing of *must* into [intoxicating] wine.' Γλεῦκος was often preserved by being put into jars closely stopped up, which were placed in cool cellars, and sometimes it was buried in vessels beneath the earth, a custom still followed in the East. Formerly in France a similar plan of keeping sweet wine obtained. The *Nouveaux Secrets concernans les Arts et Métiers* gives this receipt: 'To preserve the wine in the *must* one year. Take the first wine which runs from the grapes, before they have been pressed; put it in the barrel, and having stopt the mouth well and pitched it over, so that the water cannot penetrate, then put the barrel in a cistern sufficiently full of water to cover it entirely; at the end of forty days withdraw it, and the wine will preserve its liquor all the year' (vol. ii. p. 371, Nancy, 1721). This would resemble the celebrated Hungarian wine called *Tokay Essenz*, and be little liable to the alcoholic fermentation, since, from the gentle pressure of the grapes themselves, the albumen of the grape, contained in the central division of the fruit, would not be pressed out, and upon this the fermentation partly depends. The ancients preserved some of their wines by depurating them. 'The *must* or new wine,' says Mr. T. S. Carr, 'was refined with the yolks of pigeons' eggs' (*Rom. Antiq.* p. 323), which occasioned the subsidence of the albumen or ferment. But on the new wine being allowed to stand, this principle would subside by natural gravity: hence the ancients poured off the upper and luscious portion of the wine into another vessel, repeating the process as often as necessary, until they procured a clear sweet wine which would keep.* If the precautions we have referred to were neglected, as was probably the case sometimes with γλεῦκος, intended for speedy consumption, the wine would of course ferment. Perhaps such a species might be referred to in Acts ii. 13.

The Latin translator of *Galen*, with others, has confounded γλεῦκος with γλυκῦ, or γλύκος, a very different sort of wine, corresponding to the Roman *passum*. It was a sort of natural *sapa* concocted with the heat of the sun. Didymus, one of the Geoponic authors, thus describes the mode of making it in Bithynia: 'Thirty days before the vintage they twist the twigs which bear the clusters, and strip off the foliage, so that the sun, striking down, may dry up the moisture, and make the wine sweet, just as we do by boiling.' 'Some persons, after they have bared the bunches from the leaves, and the grapes begin to wrinkle, gather them together in the clusters, and expose them to the sun until they have all become *uvæ passæ*. Lastly, they take them up when the sun is at the hottest point, carry them to the upper press, and leave them there the rest of the day and the following night, and about daylight they tread them' (*Geop.* lib. vii. c. 18, p. 503, Leipsic ed. 1781). Hesychius identifies the γλυκύ with *hepsema* and *siraion*:—ἕψημα, ὅπερ ἔνιοι Σίραιον καλοῦσιν, ἄλλοι Γλυκύ.

Besides the various kinds we have considered, two other wines are mentioned in Scripture, which derive their name from the locality of their growth.

The Wine of Helbon.—We have no intimation of the character of this wine; but as the pleasant smell of the grapes is noticed in Cant. ii. 13, we may infer that the wine also had a fragrant scent. It has been generally regarded



* Chardin observes that 'they frequently pour wine from vessel to vessel in the East; for when they begin one, they are obliged immediately to empty it into smaller vessels, or into bottles, or it would grow *sour*' (Harmer's *Observ.* vol. ii. p. 155). Reference is made to this custom in Jer. xlviii. 11—'Moab hath not been emptied from vessel to vessel; his taste remaineth in him, and his scent is not changed.' Fermentation, excited by the lees, completely changes the character of the wine; the luscious saccharine fruit of the vine becomes transformed into other substances (alcohol, œnanthic ether, essential oils, &c.), of a pungent taste and powerful odour.

as the *Chalybonium vinum* of the ancients, and was sold at the marts of Tyre (Ezek. xxvii. 18). As Judah and Israel supplied this celebrated mart with 'wheat of Minnith and Pannag, and *debhash*, and oil, and balm,' so the Syrian wine of Helbon, as the choicest of the country, being carried to Damascus, would find its way hence to Tyre, and, through the Tyrians, become known to the Greeks and Romans. As the land carriage to Damascus, and thence over the shoulder of Mount Lebanon, to Tyre, must have considerably enhanced the price, it seems natural to suppose that this wine was of the concentrated or inspissated sort. Such the *Chalybonium vinum* was in fact. In truth, as Mr. Carr observes, 'the application of the *fumarium* * to the mellowing of wines, was borrowed from the Asiatics; and thus exhalation would go on until the wine was reduced to the state of a syrup' (*Rom. Antiq.* p. 323). 'Such preparations,' says Sir Edward Barry, 'are made by the modern Turks, which they frequently carry with them on long journeys, and occasionally take as a strengthening and reviving cordial' (*Obs. on Ancient Wines*, ch. v. Lond. 1775). Dr. Bowring, in his *Report on the Commerce of Syria*, says that 'the habit of boiling wine is almost universal, and destroys its character' (p. 17). Dr. A. Russell, in his *Natural History of Aleppo* (the ancient *Helbon*), considers its wine to have been a species of *sapa*. 'The inspissated juice of the grape, *sapa vini*, called here *dibbs*, is brought to the city in skins, and sold in the public markets; it has much the appearance of coarse honey, is of a sweet taste, and in great use among the people of all sorts' (p. 20).

The Wine of Lebanon is remarked as famous for its fragrant scent (Hos. xiv. 7). We understand 'grapes' to be meant here, but some of the wine made from them might also be odoriferous. The 20,000 bottles of wine which Solomon supplied to Hiram for the labourers in Lebanon (2 Chron. ii. 10), was probably a thin weak drink, a species of ὄξος or *khomets*, a common drink in Syria and Southern Europe at this day. Rauwolf, D'Arvieux, La Roque, Le Bruyn, Buckingham, and Bowring, all speak of the modern wines of Lebanon as excellent. There are two species of the sweet fermented wines: one red, and so unctous that it adheres to the glass; the other of the colour of muscadine, called *vino d'oro*. Cyrus Redding states that 'on Mount Libanus, at Kesroan, good wines are made, but they are for the most part *vins cuits*. The wine is preserved in jars' (*Hist. of Modern Wines*, p. 282). Paxton, who witnessed the vintage in Libanon, says, 'The juice that was extracted when I visited the press, was not made into [what is now called] wine, but into what is called *dibs*' (p. 215).

Much light may be obtained concerning ancient wines, by consulting the Greek and Roman writers on this subject; and a most able summary of the information they contain will be found in Dr. Smith's *Dictionary of Greek and Roman Antiquities*, under the article 'Vinum,' by Professor Ramsay; *vide* also *Tirosh lo Yayin*, Lond. 1841; *Athenæum* for 1836; and a series of elaborate articles in the *Truth-Seeker*, 1845.

The annexed engraving of the Thermapolium is copied from the scarce work of Andreas Baccius (*De Nat. Vinorum Hist.* Romæ, 1597, lib. iv. p. 178). The plan was obtained by himself, assisted by two antiquaries, from the ruins of the Diocletian Baths. Nothing can more clearly exhibit the contrast between the ancient wines and those of modern Europe, than the widely different modes of treating them. 'The hot water,' observes Sir Edward Barry, 'was often *necessary* to dissolve their more inspissated and old wines.'

542.

Oil and Wine (ἔλαιον καὶ οἶνον, Luke x. 33, 34). Ἐπιχέων, in this passage, signifies 'pouring upon.' Galen mentions an article called οἰνέλαιον, 'oil-wine,' or wine compounded with oil; and Africanus, in the *Geoponica*, directs the young branches of the fig-trees, after pruning, to be anointed with it. In the Latin translation appended, the single compound word of the original is translated *vino et oleo*. Pliny, in the chapter relating to medicated oils, gives to one the title of *oleum gleucinum*, made by incorporating 'must' and 'oil' (*Hist. Nat.* xv. 7; Columella, xii. 51).

WINNOWING. [Agriculture.]

WINTER. [Palestine.]

WISDOM OF SOLOMON (Σοφία Σολομόντος [Apocrypha], is the name of one of the deuterocanonical books, and one of those to which, with Proverbs, Ecclesiastes, and the Wisdom of Jesus son of Sirach, the term *libri sapientiales* has been generally applied. As in the book of Ecclesiastes, of which this is an imitation, the anonymous author personates King Solomon, whom he introduces as speaking. From the citations (according to the Septuagint) of the pro-

* When the Mishna forbids *smoked wines* from being used in offerings (*Menachoth*, viii. 6, et comment.), it has chiefly reference to the Roman practice of fumigating them with sulphur, the vapour of which absorbed the oxygen, and thus arrested the fermentation. The Jews carefully eschewed the wines and vinegar of the Gentiles.

phets Isaiah and Jeremiah, it may be inferred that the writer had no intention of giving it to be understood that it was written by Solomon; but that he only followed a common custom of Greek and other writers, in employing the name of this distinguished royal penman. Athanasius, or the author of the *Synopsis*, and Epiphanius (*De Ponder.*) give it the name of *Panaretos*, or 'the treasure of virtue.' It is divided into two, or, according to some, into three parts. The first six chapters contain encomiums on Wisdom, which all, and especially kings, are admonished to acquire, as the true security against present evils, and as leading to future glory and immortality, while a contrary course tends to misery here, and still greater misery hereafter. This, observes Jahn (*Introd.*), is the first express mention of a future state of rewards and punishments. In chaps. vii. and viii. Solomon is introduced, teaching how wisdom is to be acquired; and in chap. x. is given his prayer for this inestimable gift. Chaps. x.-xix. contain historical examples, drawn from the Old Testament, showing the happiness which had resulted from the pursuit of wisdom, and the fatal consequences of sin, especially the sin of idolatry. The book concludes with divers pious and philosophical observations. De Wette (*Einleitung*, § 312) observes that this book embodies the ethico-religious notions of the Alexandrian Jews, in which the philosophy of the Greeks and further Asiatics was engrafted on Mosaism. From the author's invectives against unbelieving and oppressive rulers, as well as his strongly-marked nationality, it has been inferred that some special object may have given occasion to the work. Jahn (*l. c.*) and De Wette (*l. c.*) both defend the unity of the book against some who have endeavoured to show, from the variety in the style and subjects, that it was the composition of more than one author.

The *Book of Wisdom* has been always 'admired for the sublime ideas which it contains of the perfections of God, and for the excellent moral tendency of its precepts' (Horne's *Introd.*). Its style, observes Bishop Lowth, after Calmet, 'is unequal, often pompous and turgid, as well as tedious and diffuse, and abounds in epithets directly contrary to the practice of the Hebrews: it is, however, sometimes temperate, poetical, and sublime.' Calmet supposes that the author had read the works of the Greek poets and philosophers.

Language of Wisdom.—Although there have not been wanting individuals who have contended for a Hebrew, Syriac, or Chaldee original, at least of some parts of the book, these hypotheses are now considered to be entirely without foundation. The Hebraisms admit of an easy explanation. The assonances and verbal allusions, and the Greek colouring throughout, bespeak a Greek original (De Wette, *l. c.*). That the book never existed in Hebrew we have also the testimony of Jerome, who observes that 'the style savours of the Greek eloquence' (*Præf. in Lib. Salom.*).

Author and Age.—The book was ascribed to Jesus Sirach by Augustine (*De Doct. Christ.*), who afterwards withdrew this opinion (*Retract.*); to Zerubbabel by J. Faber, and to Solomon himself by Clemens Alexandrinus, Tertullian, Lactantius, and others of the fathers; but their conjectures were without a shadow of foundation. Jerome (*Præf. in Lib. Salom.*) calls it a pseudepigraphal book, commonly ascribed to Solomon. He adds that some of the ancients assigned it to Philo, an opinion favoured by Augustine (*De Civit. Dei*) and adopted by Nicholas de Lyra and Luther (*Pref. to Wisdom*). But both the style and the philosophical views are altogether repugnant to this hypothesis (De Wette, *ut sup.*). Others have ascribed it to an elder Philo, mentioned by Josephus, who flourished under the second temple, and wrote a book *De Animâ*; but this Philo was a heathen. All that can be concluded with any degree of probability is, that the author was an Alexandrian Jew, who lived after the transplanting of the Greek philosophy into Egypt, and who seems to refer to the oppressions of the later Ptolemies. Jahn (*Introd.*) conceives that the book was written at the close of the first, or beginning of the second, century before the Christian era, and that the persecution of the 'son of God' points to the time of Antiochus Epiphanes. From the striking resemblance to the history of the persecution of Jesus, it has been erroneously supposed to have been written, or, at least, interpolated, after the Christian era.

Church Authority of Wisdom.—It is cited with the highest degree of respect by Clement of Alexandria (*Strom.*), Tertullian (*De Præscript.*), Rufinus, and others. It is declared canonical by the third council of Carthage, and included among the five books of Solomon. Jerome (*ut sup.*), however, says that he refrained from correcting the old Latin version of it, as he only desired to amend the canonical Scriptures. Augustine observes that, from long prescription, it had deserved to be heard with veneration in the church of Christ (*De Prædest. Sanct.* i. 14), and that it was therefore read from the step of the readers, &c. Bishop Cosin (*Scholast. Hist. of the Canon*) deduces from this an implied inferiority to the universally received books, inasmuch as the reader was an inferior officer; and supposes that the Scriptures of the higher class were read by the priests and bishops from the *ambo*. But we conceive that Augustine only meant to show that this, with the other books of the same class, was honoured by being read in the church at the same place and by the same functionary as the canonical Scriptures. Some have supposed that Wisdom is cited in the New Testament. Comp. iii. 7, with Matt. xiii. 43; ii. 18, Matt. xxvii. 43; xiii. 1, Rom. i. 20; ix. 13, v. 18, 19, vii. 26, Rom. xi. 34, Eph. vi. 13, 14, 17, Heb. i. 3.

Versions.—There are three ancient versions extant—the Syriac, Arabic, and Latin. Jerome did not revise the Latin [VULGATE].—W. W.

WISDOM OF JESUS, SON OF SIRACH (Gr. Σοφία Ἰησοῦ υἱοῦ Σιράχ, Lat. *Ecclesiasticus*) [APOCRYPHA], one of the books of the second canon [DEUTEROCANONICAL], consists of a collection of moral sentences after the manner of the Proverbs of Solomon (i.—ix. xxiv. comp. with Prov. i.—ix.) The work is arranged upon no systematic plan, but abounds in directions relating to religion and human conduct. Wisdom is represented here, as in Proverbs, as the source of human happiness, and the same views of human life, founded on the belief of a recompense, pervade the instructions of this book also, wherein, however, a more matured reflection is perceptible (De Wette's *Einleitung*). It is in fact the com-

position of a philosopher who had deeply studied the fortunes and manners of mankind, and did not hesitate to avail himself of the philosophy of older moralists; xii. 8—xiii. 23; xv. 11—20; xvi. 26—xvii. 20; xix. 6—17; xxiii. 16—27; xxvi. 1—18; xxx. 1—13; xxxvii. 27; xxxviii. 15, 24—xxxix. 11, &c. (*Ib.*). It abounds in grace, wisdom, and spirit, although sometimes more particular in inculcating principles of politeness than those of virtue (Cellerier, *Introd. à la Lecture des Liv. Saints*). It is not unfrequently marked by considerable beauty and elegance of expression, occasionally rising to the sublimest heights of human eloquence (*Christ. Remembrancer*, vol. ix.). It has been observed of it by Addison (see Horne's *Introd.*, vol. iv.) that 'it would be regarded by our modern wits as one of the most shining tracts of morality that are extant, if it appeared under the name of a Confucius or of any celebrated Grecian philosopher.'

Language.—The original of the book was Hebrew. This is attested by the Greek translator in his preface, as well as by the idiomatic character of the version, the author of which (as has been shown by Drusius and Eichhorn) has sometimes even misunderstood his original. Jerome (*Præf. in Lib. Salom.*) asserts that he had seen it in Hebrew: 'There is also carried about the *Panaretos* of Jesus, son of Sirach, and another pseudepigraphal book, which is inscribed *The Wisdom of Solomon*. The first of these I have seen in Hebrew, styled, not Ecclesiasticus, as in Latin, but the Parables (משלים *mishlim*); to which were united Ecclesiastes and Canticles, that it might resemble Solomon not only in the number, but the character of the subjects.' It has been, however, questioned whether the work which Jerome saw was not an Aramaic version.

Author and Age.—The author calls himself Jesus, son of Sirach, of Jerusalem, but we know nothing further of him. George Syncellus (*Chronogr.*) calls him high priest of the Jews; but there appears to be no sufficient authority for this and other conjectures respecting him.

The age of the book is not easily determined. The author eulogizes the high priest Simon, son of Onias, in terms which seem to indicate a contemporary; and the author's grandson, who translated it, states in his preface that he had arrived in Egypt in the *thirty-eighth year*, in the reign of King Euergetes. But there were two high priests of the same name, Simon the Just, who lived in the reign of Ptolemy Lagus (about B.C. 290), and another, the contemporary of Ptolemy Philopator (B.C. 221). There were also two sovereigns called *Euergetes*, the first of whom was the son and successor of Ptolemy Philadelphus (B.C. 247), and Euergetes II. or Ptolemy Physcon (B.C. 169). Prideaux (*Connection*) and Eichhorn maintain that Simon the Second is the priest referred to, that the oppressions presupposed by the prayer in chap. l. correspond with the reign of Ptolemy Philopator, and that the translator came to Egypt in the thirty-eighth year of the reign of Euergetes II. (Physcon). Jahn, on the other hand, observes, that the first Euergetes reigned only twenty-four, and the second twenty-nine years, and that the thirty-eighth year refers to the age of the translator. Jahn further observes, that the eulogies on Simon do not correspond with the character of Simon II., but that they are in every respect applicable to Simon the Just. He therefore infers that the author composed this work about the year B.C. 300, and that his grandson translated it about B.C. 280. Winer (*De utr. Sirac. ætate*, and *Real-Wörterbuch*) maintains that Simon the Just is the person referred to, but that it is not necessary to conclude that the author was his contemporary. He still thinks that, although the grammatical construction rather requires ἔτει τῷ ἐπὶ τοῦ Εὐεργέτου to refer to the age of the monarch's reign, Euergetes the Second was the king in whose reign the translation was made, as the canon could not have been yet closed under the reign of the first Euergetes, as implied in the preface,—'the law, the prophets, and the other books.' The 'thirty-eighth year of his reign,' although not applicable to the first Euergetes, may refer to the second, if his regency be included. According to this, which De Wette conceives the most probable hypothesis, the translator lived B.C. 130, and the author B.C. 180.

Church Authority of Ecclesiasticus.—Rufinus (*in Symb.*) observes that 'The Wisdom of the Son of Sirach is called in Latin *Ecclesiasticus*, which signifies not the name of the author, but the quality of the writing,' and that it, with the other ecclesiastical books, including the Shepherd of Hermas, was read in the Church, but not employed to confirm the authority of the faith.' Calmet (*Preface*) concludes that it was called Ecclesiasticus from its supposed resemblance to Ecclesiastes, as well as to denote its inferior authority before it was finally received into the canon. Jerome, although rejecting it from the canon, cites it as divine Scripture: 'Divina Scriptura loquitur: musica in luctu in tempestiva narratio' (Ecclus. xxii. 6). It is cited in the Epistle of Barnabas: 'Let not thine hand be stretched out to receive,' &c. (Ecclus. iv. 31), in the first Epistle of Clement, and by Clemens Alexandrinus, Origen, Tertullian, and most of the fathers. Augustine (*De Doct. Christ.* c. 8) says that several of the fathers cite it under the name of Solomon, not because it was his, but from a certain resemblance to his writings. Allusions to this book have been supposed to be not unfrequently discernible in the New Testament. Compare, especially, Ecclus. xxxiii. 13; Rom. ix. 21; xi. 19; Luke xii. 19, 20; v. 11; James i. 19, &c.; xxiv. 17, 18; Matt. xi. 28-9; John iv. 13, 14; vi. 35, &c.

We may observe, in conclusion, that all which applies to the authority of this book is equally applicable to the other books of the second canon. In the early ages of the Church, the protocanonical books, or those received by the Jews, and preserved in Hebrew, were alone considered as canonical, at least until the time of Augustine, when the term 'canonical' seems to have acquired a new meaning. But some of the most distinguished teachers of the same period considered all the books in the Alexandrian version, if not canonical, as inspired, and cite them as authorities. At the period of the Reformation the Protestants reverted to the Jewish canon. Learned Roman Catholics, even since the decision of the Council of Trent, have considered themselves at liberty to make a distinction between the books of the first and second canon, and to

hold the latter as of inferior authority; whilst in recent times there have not been wanting voices raised in the Reformed Church in favour even of their inspiration (Cellerier, *ut sup.*). Mr. Robinson, the translator of Moehler's *Symbolik*, is mistaken in his statement (§ xlii., note) that the Anglican Church agrees in the canon of Scripture with the French Protestants. The Church of England, as has been already seen [DEUTERO-CANONICAL], has adhered, in respect to the Old Testament, to the only canon which was known to the Church before the Council of Hippo; and while she excludes the Greek books from the canon, has passed no definitive judgment respecting their authority or inspiration.

In the *Libri Symboliei Ecclesiæ Orientalis*, Jena, 1843, there are two canons given, one in the Confession of Faith of Cyril Lucaris, patriarch of Constantinople, 1631, comprehending only the twenty-two books of the Old Testament from the canon of Laodicea, and rejecting the 'Apocryphal,' so called, because they have not received the same authority and approbation from the Holy Spirit with those properly and beyond controversy accounted canonical;' the other, that of Dositheus, patriarch of Jerusalem, who presided at the synod held in that city in 1672, which charges Cyril with applying the term apocryphal foolishly and ignorantly, or rather maliciously, to the Wisdom of Solomon, Judith, Tobit, the history of the Dragon, and of Susanna, the Maccabees, and the Wisdom of Sirach, which, although they do not perhaps seem to be included by all, the Council of Jerusalem holds, notwithstanding, to be genuine and integral parts of the same Scriptures.

Versions of Ecclesiasticus.—We have already seen that Jerome did not translate this book. The old Latin version frequently differs from the Greek, and has several additions, besides sometimes reversing the order of the text. Athanasius, or the author of the *Synopsis Scripturæ*, considers, but without sufficient grounds, the fifty-first chapter to have proceeded from the Greek translator. The Greek MSS. differ considerably from each other. The Authorized English version is taken from the same text with that in the London Polyglott, which is not so pure as the Vatican text. The Syriac version, contained in the same Polyglott, differs also in many places from the Greek; and Bendsen (*Exercit. Crit.*) maintains that it is derived immediately from the Hebrew. The Arabic in the same work seems to be a descendant from the Syriac. The *Sentences of Ben Sirach*, cited in the Talmud (*Sanhed. Gem.* xi. 42; *Bereschith Rabba*, viii. f. 10; *Baba Kama*, f. 92, c. 2), and published in Latin by Paul Fagius (1542), and in Hebrew, Chaldee, and Latin, by Drusius (1597), though sometimes similar to those in Ecclesiasticus, are upon the whole a different work (Eichhorn's and Bertholdt's *Introductions*).—W. W.

WITCH. The fem. מְכַשֵּׁפָה (a sorceress), is found in Exod. xxii. 18; Sept. *φαρμακός*; Vulg. *maleficа*; the mas. מכשף (a sorcerer or magician), in Exod. vii. 11; Deut. xviii. 10; Dan. ii. 2; Mal. iii. 5; Sept. *φαρμακός*; Vulg. *maleficus*; and כִּשֵּׁף in Jer. xxvii. 9. In the New Testament 'sorcerer;' *φαρμακός*; Vulg. *maleficus*, occurs in Rev. xxi. 8; xxii. 15.

WITCHCRAFTS (כְּשָׁפִים) occurs in 2 Kings ix. 22; Isa. xlvii. 9, 12; Mic. v. 12; Nah. iii. 4; Sept. *φαρμακεία*, *φάρμακα*; Vulg. *veneficium*, *maleficium*. In the Apocrypha 'witchcraft,' 'sorcery;' *φαρμακεία*; *venefieium*, Wisd. xii. 4; xviii. 13; and in the New Testament, Gal. v. 20; Rev. ix. 21; xviii. 23. As a verb כִּשֵּׁף, 'he used witchcraft,' occurs in 2 Chron. xxxiii. 6; *ἐφαρμακεύετο*, *maleficis artibus inserviebat.* This verb, in Arabic, signifies 'to reveal' or 'discover;' in Syriac *ethpaal*, according to Gesenius, 'to pray;' but this word, he observes, like many other sacred terms of the Syrians, as בעל כמרים, &c., is restricted by the Hebrews to idolatrous services: hence כשף means 'to practise magic,' literally 'to pronounce or mutter spells.' The word *φαρμακός* is derived from *φαρμακεύω*, to administer or apply medicines as remedies or poisons; to use magical herbs, drugs, or substances, supposed to derive their efficacy from magical spells; and thence to use spells, conjurations, or enchantments; hence *φαρμακός* means, in the classical writers, a preparer of drugs, but generally of poisons, or drugs that operate by the force of magical charms; and thence a magician, an enchanter *of either sex.* It occurs in the latter sense in Josephus (*Antiq.* xvii. 4. 1), and is applied by him to a *female*, *τὴν μητέρα αὐτοῦ φαρμακὸν καὶ πόρνην ἀποκαλέσαι.* (*Antiq.* ix. 6. 3). This word also answers in the Sept. to חרטמים, 'magicians' (Exod. ix. 11), *φαρμακοὶ*, *malefici.* The received text of Rev. xxi. 8, reads *φαρμακεύς*; but the Alexandrian, and sixteen later MSS., with several printed editions, have *φαρμακός*, a reading embraced by Wetstein, and by Griesbach received into the text. *Φαρμακεύς* occurs in the same sense as *φαρμακός*, in Lucian (*Dial. Deor.* xiii. 1; Joseph. *Vita*, § 31). The word *φαρμακεία* is used of *Circe* by Aristophanes (*Plut.* 302), and in the same sense of enchantment, &c., by Polybius (vi. 13. 4; xl. 3. 7). It corresponds in the Sept. to להטים, לטים. 'enchantments' (Exod. vii. 11, 22). The verb *φαρμακεύω* is employed in the sense of using enchantments by Herodotus (vii. 114), where, after saying that when Xerxes came to the river Strymon, the magi sacrificed white horses to it, he adds, *φαρμακεύσαντες δὲ ταῦτα ἐς τὸν ποταμὸν, καὶ ἄλλα πολλὰ πρὸς τούτοισι,*—'and having used these enchantments and many others to the river,' &c. The precise idea, if any, now associated with the word 'witch,' but, however, devoutly entertained by nearly the whole nation in the time of our translators, is that of a female, who, by the agency of Satan, or rather, of a familiar spirit or gnome appointed by Satan to attend on her, performs operations beyond the powers of humanity, in consequence of her compact with Satan, written in her own blood, by which she resigns herself to him for ever. Among other advantages resulting to her from this engagement, is the power of transforming herself into any shape she pleases; which was, however, generally that of a hare; transporting herself through the air on a broomstick, sailing 'on the sea in a sieve,' gliding through a keyhole, inflicting diseases, &c., upon mankind or cattle. The belief in the existence of such persons cannot be traced higher than the middle ages, and was probably derived from the wild and gloomy mythology of the northern na-

tions, amongst whom the Fatal Sisters, and other impersonations of destructive agency in a female form, were prominent articles of the popular creed. This comparatively modern delusion was strengthened and confirmed by the translators of the Bible into the Western languages; a *popular* version of the original text having led people to suppose that there was positive evidence for the existence of such beings in Scripture. Bishop Hutchinson declares that our translators accommodated their version to the terminology of King James's *Treatise on Demonologie* (*Encyclopædia Metropolitana*, art. 'Witch,' &c.). For an account of the appalling atrocities perpetrated against supposed witches in Germany, England, and Scotland, see *Quarterly Review* (vol. xi.), or Combe's *Constitution of Man* (2nd ed., Edin. 1835, p. 390). A very different idea was conveyed by the Hebrew word, which probably denotes a sorceress or magician, who pretended to discover, and even to direct the effects ascribed to the operation of the elements, conjunctions of the stars, the influence of lucky and unlucky days, the power of invisible spirits, and of the inferior deities (Graves's *Lectures on the Pentateuch*, pp. 109, 110, Dublin, 1829). Sir Walter Scott well observes, that 'the sorcery or witchcraft of the Old Testament resolves itself into a trafficking with idols and asking counsel of false deities, or, in other words, into idolatry' (*Letters on Demonology and Witchcraft*, London, 1830, Let. 2). Accordingly, sorcery is in Scripture uniformly associated with idolatry (Deut. xviii. 9-14; 2 Kings ix. 22; 2 Chron. xxxiii. 5, 6, &c.; Gal. v. 20; Rev. xxi. 8). The modern idea of witchcraft, as involving the assistance of Satan, is inconsistent with Scripture, where, as in the instance of Job, Satan is represented as powerless till God gave him a limited commission; and when 'Satan desired to sift Peter as wheat,' no reference is made to the intervention of a witch. Nor do the actual references to magic in Scripture involve its reality. The mischiefs resulting from the *pretension*, under the theocracy, to an art which involved idolatry, justified the statute which denounced it with death; though instead of the unexampled phrase לא תחיה, 'thou shalt not suffer to live,' Michaelis conjectures לא תהיה, 'shall not be' (Exod. xxii. 18), which also better suits the parallel, 'There shall not be found among you, &c., a witch' (Deut. xviii. 10). Indeed, as 'we know that an idol is nothing in the world, and that there is none other gods but one' (1 Cor. viii. 4), we must believe all pretensions to traffic with the one, or ask counsel of the other, to be equally vain. Upon the same principle of suppressing idolatry, however, the prophets of Baal also were destroyed, and not because Baal had any real existence, or because they could avail anything by their invocations. It is highly probable that the more intelligent portion of the Jewish community, especially in later times, understood the emptiness of pretensions to magic (see Isa. xliv. 25; xlvii. 11-15; Jer. xiv. 14; Jonah ii. 8). Plato evidently considered the mischief of magic to consist in the tendency of the pretension to it, and not in the reality (*De Leg.* lib. 11). Divination of all kinds had fallen into contempt in the time of Cicero: 'Dubium non est quin hæc disciplina et ars augurum evanuerit jam et vetustate et *negligentia*' (*De Legibus*, ii. 13). Josephus declares that he laughed at the very idea of witchcraft (*Vit.* § 31). For the very early writers who maintained that the wonders of the magicians were not supernatural, see *Universal Hist.* (vol. iii. p. 374, 8vo. ed.). It seems safe to conclude from the Septuagint renderings, and their identity with the terms used by classical writers, that the pretended exercise of this art in ancient times was accompanied with the use of drugs, or fumigations made of them. No doubt the skilful use of certain chemicals, if restricted to the knowledge of a few persons, might, in ages unenlightened by science, along with other resources of natural magic, be made the means of extensive imposture. The natural gases, exhalations, &c., would contribute their share, as appears from the ancient account of the origin of the oracle at Delphi. The real mischiefs ever effected by the professors of magic on mankind, &c., may be safely ascribed to the actual administration of poison. Josephus states a case of poisoning under the form of a philtre or love-potion, and says that the Arabian women were reported to be skilful in making such potions (*Antiq.* xvii. 4. 1). Such means doubtless constitute the real perniciousness of the African species of witchcraft called Obi, the similarity of which word to the Hebrew אוב, *inflation*, is remarkable. Among the Sandwich Islanders, some, who had professed witchcraft, confessed, after their conversion to Christianity, that they had poisoned their victims. The death of Sir Thomas Overbury is cited as an instance in this country, by Sir Walter Scott, (*ut supra*). There was, indeed, a wide scope for the production of very fantastic effects, short of death, by such means. The story of 'the witch of Endor,' as she is commonly but improperly called, is, under the article SAUL, referred to witchcraft. She indeed belongs to another class of pretenders to supernatural powers [DIVINATION]. She was a necromancer, or one of those persons who pretended to call up the spirits of the dead to converse with the living (see Isa. viii. 19; xxix. 4; lxv. 3). A full account is given of such persons by Lucan (vi. 591, &c.), and by Tibullus (i. 2. v. 45), where the pretensions of the sorceress are thus described—

> Hæc cantu finditque solum, Manesque sepulchris
> Elicit, et tepido devocat ossa rogo.

Of much the same character is the Sibyl in the 6th book of Virgil's *Æneid*. It is related as the last and crowning act of Saul's rebellion against God, that he consulted 'a woman who had a familiar spirit' (1 Sam. xxviii. 7), literally 'a mistress of the *Ob*,'—an act forbidden by the divine law (Lev. xx. 6), which sentenced the pretenders to such a power to death (ver. 27), and which law Saul himself had recently enforced (1 Sam. xxviii. 3, 9), because, it is supposed, they had freely predicted his approaching ruin; although after the well-known prophecies of Samuel to that effect, the disasters Saul had already encountered, and the growing influence of David, there 'needed no ghost to come from the grave to tell them this.' Various explanations of this story have been offered. It has been attempted to resolve the whole into *imposture and collusion*. Saul, who was naturally a weak and excitable

man, had become, through a long series of vexations and anxieties, absolutely 'delirious,' as Patrick observes: 'he was afraid and his heart greatly trembled,' says the sacred writer. In this state of mind, and upon the very eve of his last battle, he commissions his *own servants* to seek him a woman that had a familiar spirit, and, attended by two of them, he comes to her 'by night,' the most favourable time for imposition. He converses with her alone, his two attendants, whether his secret enemies or real friends, being absent, *somewhere*, yet, however, close at hand. Might not one of these, or some one else, have agreed with the woman to personate Samuel in another room?—for it appears that Saul, though he spoke with, did not *see* the ghost (ver. 13, 14): who, it should be observed, told him nothing but what his own attendants could have told him, with the exception of those words, 'to-morrow shalt thou and thy sons be with me' (ver. 19); to which, however, it is replied, that Saul's death did not occur upon the morrow, and that the word so translated is sufficiently ambiguous, for though מחר means 'to-morrow' in some passages, it means the future, indefinitely, in others (Exod. xiii. 14, and see the margin; Josh. iv. 6. 21; comp. Matt. vi. 34). It is further urged, that her 'crying with a loud voice,' and her telling Saul, at the same time, that she knew him, were the well-timed arts of the sorceress, intended to magnify her pretended skill. It is, however, objected against this, or any other hypothesis of collusion, that the sacred writer not only represents the Pythoness as affirming, but also himself affirms, that she saw Samuel, and that Samuel spoke to Saul, nor does he drop the least hint that it was not the real Samuel of whom he was speaking. The same objections apply equally to the theory of ventriloquism, which has been grounded upon the word used by the Sept., ἐγγαστρίμυθος. Others have given a *literal interpretation* of the story, and have maintained that Samuel actually appeared to Saul. Justin Martyr maintains this theory, and in his dialogue with Trypho the Jew, urges this incident in proof of the immortality of the soul (p. 333). The same view is taken in the additions to the Sept. in 1 Chron. x. 13, καὶ ἀπεκρίνατο αὐτῷ Σαμουὴλ ὁ προφήτης; and in Ecclus. xlvi. 9, 20, it is said, 'and after his death Samuel prophesied, and showed the king his end,' &c. Such also is the view Josephus takes (*Antiq.* vi. 14. 3. 4), where he bestows a laboured eulogium upon the woman. It is, however, objected, that the actual appearance of Samuel is inconsistent with all we are taught by revelation concerning the state of the dead; involves the possibility of a spirit or soul assuming a corporeal shape, conversing audibly, &c.; and further, that it is incredible that God would submit the departed souls of his servants to be summoned back to earth, by rites either utterly futile, or else deriving their efficacy from the co-operation of Satan. So Tertullian argues (*De Animâ*, cap. lvii.), and many other of the ancients. Others have supposed that the woman induced Satan or some evil spirit to personate Samuel. But this theory, beside other difficulties, attributes nothing less than miraculous power to the devil; for it supposes the apparition of a spiritual and incorporeal being, and that Satan can assume the appearance of any one he pleases. Again, the historian (ver. 14) calls this appearance to Saul, שמואל הוא, 'Samuel *himself*' (the latter word is entirely omitted by our translators); which he could not with truth have done if it was no other than the devil; who, besides, is here represented as the severe reprover of Saul's impiety and wickedness. The admission that Satan or an evil spirit could thus personate an individual at pleasure, would endanger the strongest evidences of Christianity. Others have maintained another interpretation, which appears to us at once tenable, and countenanced by similar narratives in Scripture; namely, that the whole account is the narrative of a miracle, *a divine representation or impression*, partly upon the senses of Saul, and partly upon those of the woman, and intended for the rebuke and punishment of Saul. It is urged, from the air of the narrative in ver. 11, 12, that Samuel appeared before the woman had any time for jugglery, fumigations, &c.; for although the word 'when' (ver. 12) is speciously printed in Roman characters, it has nothing to answer to it in the original, which reads simply thus, beginning at ver. 11: 'Then said the woman, Whom shall I bring up unto thee? And he said, Bring me up Samuel. And the woman saw Samuel, and cried with a loud voice.' No sooner then had Saul said, 'Bring me up Samuel,' than Samuel himself was presented to her mind—an event so contrary to her expectation, that she cried out with terror. At the same time, and by the same miraculous means, she was made aware of the royal dignity of her visitant. The vision then continues in the mind of Saul, who thereby receives his last reproof from heaven, and hears the sentence of his approaching doom. Thus God interposed with a miracle previously to the use of any magical formulæ, as he did when the king of Moab had recourse to sorceries to overrule the mind of Balaam, so that he was compelled to bless those whom Balak wanted him to curse (Num. xxiii.); and as God also interposed when Ahaziah sent to consult Baal-zebub his god, about his recovery, when by his prophet Elijah he stopt the messengers, reproved their master, and denounced his death (2 Kings i. 2, 16). It may also be observed that Saul was on this occasion simply sentenced to the death he had justly incurred by having recourse to those means which he knew to be unlawful. Of the same nature of divine representation or vision, we think, was the reproof administered to Elijah, at Mount Horeb, when 'a great and strong wind rent the mountains, and brake in pieces the rocks before the Lord,' and was succeeded by 'an earthquake,' &c. (1 Kings xix. 11, &c.). Of the same nature, also, was the Temptation of our Lord (see the article, and other instances of divine vision not expressly specified as such, in Bishop Law's *Theory of Religion*, pp. 85, 86, London, 1820). Farmer is of opinion that the suppression of the word 'himself' (ver. 14), and the introduction of the word 'when' (ver. 12), are to be ascribed to the prejudices of our translators. If they do not betray a bias on their minds, these instances support the general remark of Bishop Lowth, upon the English translation, 'that in respect of the sense, and accuracy of interpretation, the improvements of which it is capable are great and numberless' (*Preliminary*

Dissertation to Isaiah, ad finem). Some other *mis-translations* occur in reference to this subject. In 1 Sam. xv. 23, 'rebellion is as the sin of witchcraft,' should be of 'divination.' In Deut. xviii. 10, the word מכשף does not mean 'witch,' but, being masculine, 'a sorcerer.' In Acts viii. 9, the translation is exceedingly apt to mislead the mere English reader: 'Simon used sorcery, and bewitched the people of Samaria'—*Σίμων προϋπῆρχεν ἐν τῇ πόλει μαγεύων καὶ ἐξιστῶν τὸ ἔθνος τῆς Σαμαρείας—i. e.* 'Simon had been pursuing magic, and perplexing (or astonishing) the people,' &c. See also ver. 11, and comp. the use of the word *ἐξίστημι*, Matt. xii. 23. In Gal. iii. 1, 'Foolish Galatians,' *τίς ὑμᾶς ἐβάσκανε*, 'who hath *fascinated* you?' (For the use of the words *βασκανία* and *φαρμακεία* in magic, among the Greeks, see Potter's *Archæologia Græca*, vol. i. ch. xviii. p. 356, &c., Lond., 1775.) It is considered by some, that the word 'witchcraft' is used metaphorically, for the allurements of pleasure, Nah. iii. 4; Rev. xviii. 23, and that the 'sorcerers' mentioned in ch. xxi. 8, may mean sophisticators of the truth. The kindred word *φαρμάσσω* is used by metonymy, as signifying 'to charm,' 'to persuade by flattery,' &c. (Plato, *Sympos.* § 17), 'to give a temper to metals' (*Odyss.* ix. 393). The last named theory concerning the narrative of Samuel's appearance to Saul is maintained with much learning and ingenuity by Hugh Farmer (*Dissertation on Miracles*, p. 472, &c. Lond. 1771). It is adopted by Dr. Waterland (*Sermons*, vol. ii. p. 267), and Dr. Delaney in his *Life of David;* but is combated by Dr. Chandler with objections, which are, however, answered or obviated by Farmer. On the general subject see Michaelis's *Laws of Moses*, by Dr. A. Smith, London, 1814, vol. iv. pp. 83-93; Banier's *History of Mythology*, lib. iv.; Winer's *Biblisches Real-Wörterbuch*, art. 'Zauberei.'—J. F. D.

WITNESS. It is intended in the present article to notice some of the leading and peculiar senses of this voluminous word. It occurs, 1st, in the sense of *a person* who deposes to the occurrence of any fact, a witness of any event, עד, Sept. *μάρτυς* or *μάρτυρ*; Vulg. *testis*. The Hebrew word is derived from עוד, to repeat. The Greek is usually derived from *μείρω*, to 'divide,' 'decide,' &c., because a witness decides controversies (Heb. vi. 16); but Damm (*Lex. Hom.* col. 1495) derives it from the old word *μάρη*, 'the hand,' because witnesses anciently held up their hands in giving evidence. This custom among the ancient Hebrews, is referred to in Gen. xiv. 22; among the heathens, by Homer (*Il.* x. 321), and by Virgil (*Æn.* xii. 196). God himself is represented as swearing in this manner (Deut. xxxii. 40; Ezek. xx. 5, 6, 15; comp. Num. xiv. 30). So also the heathen gods (Pindar, *Olymp.* vii. 119, 120). These Hebrew and Greek words, with their various derivations, pervade the entire subject. They are applied to *a judicial witness* in Exod. xxiii. 1; Lev. v. 1; Num. v. 13; xxxv. 30 (comp. Deut. xvii. 6; xix. 15; Matt. xviii. 16; 2 Cor. xiii. 1); Prov. xiv. 5; xxiv. 28; Matt. xxvi. 65; Acts vi. 13; 1 Tim. v. 19; Heb. x. 28. They are applied, *generally*, to a person who certifies, or is able to certify, to any fact which has come under his cognizance (Josh. xxiv. 22; Isa. viii. 2; Luke xxiv. 48; Acts i. 8, 22; 1 Thess. ii. 10; 1 Tim. vi. 12; 2 Tim. ii. 2; 1 Pet. i. 5). So in allusion to those who witness the public games (Heb. xii. 1). They are also applied to any one who testifies to the world what God reveals through him (Rev. xi. 3). In the latter sense the Greek word is applied to our Lord (Rev. i. 5; iii. 14). It is further used in the ecclesiastical sense of *martyr* [MARTYR]. Both the Hebrew and Greek words are also applied to *God* (Gen. xxxi. 50; 1 Sam. xii. 5; Jer. xlii. 5; Rom. i. 9; Phil. i. 8; 1 Thess. ii. 5); to *inanimate things* (Gen. xxxi. 52; Ps. lxxxix. 37). The supernatural means whereby the deficiency of witnesses was compensated under the theocracy, have been already considered under the articles ADULTERY, TRIAL OF; URIM AND THUMMIM. For the punishment of false witness and the suppression of evidence, see PUNISHMENT. For the forms of adjuration (2 Chron. xviii. 15), see ADJURATION. Opinions differ as to what is meant by 'the faithful witness in heaven' (Ps. lxxxix. 37). Some suppose it to mean the moon (comp. Ps. lxxii. 5, 7; Jer. xxxi. 35, 36; xxxiii. 20, 21; Ecclus. xliii. 6); others, the rainbow (Gen. ix. 12-17).—2. The witness or *testimony itself* borne to any fact is expressed by עד; *μαρτυρία*; testimonium. They are used of *judicial* testimony (Prov. xxv. 18; Mark xiv. 56, 59). In ver. 55, Schleusner takes the word *μαρτυρία* for *μάρτυρ*, the abstract for the concrete (Luke xxii. 71; John viii. 17; Joseph. *Antiq.* iv. 8. 15). It denotes the testimony to the truth of anything *generally* (John i. 7, 19; xix. 35); that of a poet (Tit. i. 13). It occurs in Josephus (*Cont. Apion.* 1. 21). In John iii. 11, 32, Schleusner understands the *doctrine*, the thing professed; in v. 32, 36, the *proofs* given by God of our Saviour's mission; comp. v. 9. In viii. 13, 14, both he and Bretschneider assign to the word the sense of *praise*. In Acts xxii. 18, the former translates it *teaching* or *instruction*. In Rev. i. 9, it denotes *the constant profession* of Christianity, or testimony to the truth of the Gospel (comp. i. 2; vi. 9). In 1 Tim. iii. 7, *μαρτυρίαν καλὴν* means a *good character* (comp. 3 Ep. John 12; Ecclus. xxxi. 34; Joseph. *Antiq.* vi. 10. 1). In Ps. xix. 7, 'The testimony of the Lord is sure' probably signifies the *ordinances, institutions*, &c. (comp. cxix. 22, 24, &c.) Those ambiguous words, 'He that believeth in the Son of God hath the witness in himself' (1 John v. 10), which have given rise to a variety of fanatical meanings, are easily understood, by explaining the word *ἔχει*, 'receives,' 'retains,' &c., *i. e.* the foregoing testimony which God hath given of his Son, whereas the unbeliever rejects it. The whole passage is obscured in the English translation by neglecting the uniformity of the Greek, and introducing the word 'record,' contrary to the profession of our translators in their *Preface to the Reader* (ad finem). The Hebrew word, with *μαρτύριον*, occurs in the sense of *monument, evidence*, &c. (Gen. xxi. 30; xxxi. 44; Deut. iv. 45; xxxi. 26; Josh. xxii. 27; Ruth iv. 7; Matt. viii. 4; Mark vi. 11; Luke xxi. 13; James v. 3). In 2 Cor. i. 12, Schleusner explains *μαρτύριον*, *commendation*. In Prov. xxix. 14 and Amos i. 11, לעד is pointed to mean *perpetually, for ever*, but the Septuagint gives *εἰς μαρτύριον*; Aquila *εἰς ἔτι*; Symmachus *εἰς ἀεί*; Vulg. *in*

æternum. In Acts vii. 44 and Rev. xv. 5, we find *ἡ σκηνὴ τοῦ μαρτυρίου*, and this is the Sept. rendering for אהל מועד (which really means 'the tabernacle of the *congregation*') in Exod. xxix. 42, 44; xl. 22, 24—deriving מועד from עוד, 'to testify,' instead of from יעד, 'to assemble.' On 1 Tim. ii. 6, see Bowyer's *Conjectures*. In Heb. iii. 5, Schleusner interprets *εἰς μαρτύριον τῶν λαληθησομένων*, 'the *promulgation* of those things about to be delivered to the Jews.'—3. *To be* or *become a witness*, by testifying the truth of what one knows. Thus the Sept. translates העיד (Gen. xliii. 3), *μαρτυρέω*, *to bear witness*, and Amos iii. 13: see also 1 Kings xxi. 10, 13. In John i. 7; xv. 26; xviii. 23, Schleusner gives as its meaning, *to teach* or *explain;* in John iv. 44; vii. 7; 1 Tim. vi. 13, *to declare;* in Acts x. 43; Rom. iii. 21, *to declare prophetically*. With a dative case following, the word sometimes means *to approve* (Luke iv. 22). So Schleusner understands Luke xi. 48, 'ye *approve* the deeds of your fathers,' and he gives this sense also to Rom. x. 2. In like manner the passive *μαρτυρέομαι*, 'to be approved,' 'beloved,' 'have a good character,' &c. (Acts vi. 3; 1 Tim. v. 10; comp. 3 John 6, 12.) 'The witness of the Spirit,' alluded to by St. Paul (Rom. viii. 16), is explained by Macknight and all the best commentators, as the extraordinary operations of the Holy Spirit concurring with the filial dispositions of converted Gentiles, to prove that they are 'the children of God,' as well as the Jews.—4. 'To call or take to witness,' 'to invoke as witness,' *μαρτύρομαι* (Acts xx. 26; Gal. v. 3; Joseph. *De Bell. Jud.* iii. 8. 3). A still stronger word is *διαμαρτύρομαι*, which corresponds to העיד (Deut. iv. 26). It means 'to admonish solemnly,' 'to charge earnestly,' 'to urge upon' (Ps. lxxxi. 8; Neh. ix. 26; Luke xvi. 28; Acts ii. 40). In other passages the same words mean to '*teach* earnestly.' In Job xxix. 11, a beautiful phrase occurs, 'When the eye saw me it gave witness to me.' The admiring expression of the eye upon beholding a man of eminent virtue and benevolence, is here admirably illustrated. The description of the mischief occasioned by a false witness, in Prov. xxv. 18, deserves notice; 'a man that beareth false witness against his neighbour, is a maul, and a sword, and a sharp arrow.' Few words afford more exercise to discrimination, in consequence of the various shades of meaning in which the context requires they should be understood. —J. F. D.

WIZARD. [Divination.]

WOLF (זְאֵב *zeeb;* Arab. *zeeb;* Coptic, *ounch;* Gen. xlix. 27; Isa. xi. 6; lxv. 25; Jer. v. 6, &c.; *λύκος*, Matt. vii. 15; x. 16; Luke x. 3; John x. 12; Acts xx. 29; Ecclus. viii. 17), a fierce carnivorous animal, very nearly allied to the dog, and so well known in Europe as to require no particular description, excepting as regards the identity of the species in Palestine, which although often asserted, is by no means established; for no professed zoologist has obtained the animal in Syria, while other travellers only pretend to have seen it. Unquestionably a true wolf, or a wild canine with very similar manners, was not infrequent in that country during the earlier ages of the world, and even down to the commencement of our era. The prophets, as well as the Messiah, allude to it in explicit language. At this day the true wolf is

543. [Egyptian Wolf.]

still abundant in Asia Minor, as well as in the gorges of Cilicia, and from the travelling disposition of the species, wolves may be expected to reside in the forests of Libanus; yet, except we rely on mere rumours, wild and contradictory assertions, or decided mistakes as to the species, none are at present found in the Holy Land. Hemprich and Ehrenberg, the most explicit of the naturalists who have visited that region, notice the *dib* or *zeb* ذيب, under the denomination of *canis lupaster*, and also, it seems, of *lupus Syriacus:* they describe it as resembling the wolf, but smaller, with a white tip on the tail, &c.; and give for its synonyme *canis anthus*, and the wolf of Egypt, that is, the *λύκος* of Aristotle, and *thoes anthus* of Ham. Smith. This species, found in the mummy state at Lycopolis, though high in proportion to its bulk, measures only eighteen inches at the shoulder, and in weight is scarcely more than one-third of that of a true wolf, whose stature rises to thirty and thirty-two inches. It is not gregarious, does not howl, cannot carry off a lamb or sheep, nor kill men, nor make the shepherd flee; in short, it is not the true wolf of Europe or Asia Minor, and is not possessed of the qualities ascribed to the species in the Bible. The next in Hemprich and Ehrenberg's description bears the same Arabic name; it is scientifically called *canis sacer*, and is the *pisconch* of the Copts. This species is, however, still smaller, and thus cannot be the wolf in question. It may be, as there are no forests to the south of Libanus, that these ravenous beasts, who never willingly range at a distance from cover, have forsaken the more open country; or else, that the *derbonn*, now only indistinctly known as a species of black wolf in Arabia and southern Syria, is the species or variety which anciently represented the wolf in Syria: an appellation fully deserved, if it be the same as the black species of the Pyrenees, which, though surnised to be a wild dog, is even more fierce than the common wolf, and is equally powerful. The Arabs are said to eat the *derbonn* as game, though it must be rare, since no European traveller has described a specimen from personal observation. Therefore, either the true wolf, or the *derbonn*, was anciently more abundant in Palestine, or the ravenous powers of those animals, equally belonging to the hyæna and to a great wild dog, caused several species to be included in the name [Dog].—C. H. S.

WOMAN, in Hebrew אִשָּׁה, which is the feminine form of אִישׁ, as among the ancient Romans *vira* (found still in *virago*) from *vir;* and in Greek *ἀνδρίς* from *ἀνήρ*: like our own term woman, the Hebrew is used of married and unmarried females. The derivation of the word thus shows that according to the conception of the ancient Israelites woman was man in a modified form—one of the same race, the same genus, as man; a kind of female man. How slightly modified that form is, how little in original structure woman differs from man, physiology has made abundantly clear. Different in make as man and woman are, they differ still more in character; and yet the great features of their hearts and minds so closely resemble each other, that it requires no depth of vision to see that these twain are one! This most important fact is characteristically set forth in the Bible in the account given of the formation of woman out of one of Adam's ribs: a representation to which currency may have the more easily been given, from the apparent space there is between the lowest rib and the bones on which the trunk is supported. 'And Adam said, This is now bone of my bones, and flesh of my flesh: she shall be called Woman, because she was taken out of man.' An immediate and natural inference is forthwith made touching the intimacy of the marriage-bond: 'Therefore shall a man leave his father and his mother, and shall cleave unto his wife, and they shall be one flesh' (Gen. ii. 21-24). Those who have been pleased to make free with this simple narrative, may well be required to show how a rude age could more effectually have been taught the essential unity of man and woman—a unity of nature which demands, and is perfected only in, a unity of soul. The conception of the Biblical writer goes beyond even this, but does not extend farther than science and experience unite to justify. There was solid reason why it was not good for Adam 'to be alone.' Without an help meet he would have been an imperfect being. The genus homo consists of man and woman. Both are necessary to the idea of man. The one supplements the qualities of the other. They are not two, but one flesh, and as one body so one soul.

The entire aim, then, of the narrative in Genesis was, by setting forth certain great physical facts, to show the essential unity of man and woman, yet the dependance of the latter on the former; and so to encourage and foster the tenderest and most considerate love between the two, founded on the peculiar qualities of each—pre-eminence, strength, intellectual power, and wisdom on the one side; reliance, softness, grace, and beauty on the other,—at the same time that the one set of excellences lose all their worth unless as existing in the possession of the other.

It will at once be seen that under the influence of a religion, at the bottom of which lay those ideas concerning the relations of the sexes one to another, slavery on the part of the woman was impossible. This fact is the more noticeable, and it speaks the more loudly in favour of the divine origin of the religion of the Bible, because the East has in all times, down to the present day, kept woman everywhere, save in those places in which Judaism and Christianity have prevailed, in a state of low, even if in some cases gilded, bondage, making her the mere toy, plaything, and instrument of man. Nothing can be more painful to contemplate than the humiliating condition in which Islamism still holds its so-called free women—a condition of perpetual childhood—childhood of mind, while the passions receive constant incense; leaving the fine endowments of woman's soul undeveloped and inert, or crushing them when in any case they may happen to germinate; and converting man into a self-willed haughty idol, for whose will and pleasure the other sex lives and suffers.

It will assist the reader in forming a just conception of Hebrew women in the Biblical periods, if we add a few details respecting the actual condition of women in Syria. Mr. Bartlett (*Walks about Jerusalem*, p. 291, sq.) visited the house of a rich Jew in the metropolis of the holy land. We give the substance of his observations: 'On entering his dwelling we found him seated on the low divan, fondling his youngest child; and on our expressing a wish to draw the costume of the female members of his family, he commanded their attendance, but it was some time before they would come forward; when however they did present themselves, it was with no sort of reserve whatever. Their costume is chastely elegant. The prominent figure in the room was the married daughter, whose little husband, a boy of fourteen or fifteen as he seemed, wanted nearly a head of the stature of his wife, but was already chargeable with the onerous duties of a father. An oval head dress of peculiar shape, from which was slung a long veil of embroidered muslin, admirably set off the brow and eyes; the neck was ornamented with bracelets, and the bosom with a profusion of gold coins, partly concealed by folds of muslin; a graceful robe of striped silk, with long open sleeves, half-laced under the bosom, invested the whole person, over which is worn a jacket of green silk with short sleeves, leaving the white arm and braceleted hand at liberty. An elderly person sat on the sofa, the mother, whose dress was more grave, her turban less oval, and of blue shawl, and the breast covered entirely to the neck, with a kind of ornamented gold tissue; and over all was seen a jacket of fur: she was engaged in knitting, while her younger daughter bent over her in conversation; her dress was similar to that of her sister, but with no gold coins, or light muslin folds, and instead of large ear-rings, the vermilion blossom of the pomegranate formed an exquisite pendant, reflecting its glow upon the dazzling whiteness of her skin. We were surprised at the fairness and delicacy of their complexion, and the vivacity of their manner. Unlike the wives of Oriental Christians, who respectfully attend at a distance till invited to approach, these pretty Jewesses seemed on a perfect footing of equality, and chatted and laughed away without intermission. Many of the daughters of Judah, here and at Hebron, are remarkable for their attractions. Mr. Wolff describes one of them with enthusiasm, and no small unconscious poetry—"the beautiful Sarah," whom his lady met at a "wedding-feast." 'She was scarcely seated when she felt a hand upon hers, and heard a kind greeting. She turned to the voice and saw a most beautiful Jewess, whom I also afterwards saw, and I never beheld a more beautiful and well behaved lady

in my life, except the beautiful girl in the valley of Cashmere; she looked like a queen in Israel. A lovely lady she was; tall, of a fair complexion and blue eyes, and around her forehead and cheeks she wore several roses. No queen had a finer deportment than that Jewess had.'

544. [Syro-Arabian costume. Indoor dress.]

Mr. Bartlett was also admitted into the abode of a Christian family in Jerusalem, of whom he thus speaks (pp. 205-6):—'The interior of their houses is similar to those of the Jews. In our intercourse with them we were received with more ceremony than among the former. The mistress of the family is in attendance with her children and servants, and besides pipes and coffee, the guest is presented with saucers of sweetmeats and small glasses of aniseed; which, when done with, are taken from him by his fair hostess or her servant, who kiss his hand as they receive them. They are more reserved, often standing during the visit. Their dress is more gorgeous than that of the Jewish women, but not so chastely elegant; it suits well with the langnor of their air, their dusky complexion, and large black eyes. The head-dress has a fantastic air,

545. [Garden dress.]

like that of a May-day queen in England, and the bust is a little in the style of

"Beauties by Sir Peter Lely,
Whose drapery hints we may admire freely."

A heavy shawl is gracefully wreathed round the figure, and the dress, when open, displays long loose trowsers of muslin and small slippers. The ensemble, it must be admitted, is very fascinating, when its wearer is young and lovely.'

We now pass to the peasantry, and take from Lamartine a sketch of the Syrian women as seen by him at the foot of Lebanon, on a Sunday, after having with their families attended divine service, when the families 'return to their houses to enjoy a repast somewhat more sumptuous than on ordinary days: the women and girls, adorned in their richest clothes, their hair plaited, and all strewed with orange-flowers, scarlet wall-flowers, and carnations, seat themselves on mats before the doors of their dwellings, with their friends and neighbours. It is impossible to describe with the pen the groups so redolent of the picturesque, from the richness of their costume and their beauty, which these females then compose in the landscape. I see amongst them daily such countenances as Raphael had not beheld, even in his dreams as an artist. It is more than the Italian or Greek beauty; there is the nicety of shape, the delicacy of outline, in a word, all that Greek and Roman art has left us as the most finished model; but it is rendered more bewitching still, by a primitive artlessness of expression, by a serene and voluptuous languor, by a heavenly clearness, which the glances from the blue eyes, fringed with black eyelids, cast over the features, and by a smiling archness, a harmony of proportions, a rich whiteness of skin, an indescribable transparency of tint, a metallic gloss upon the hair, a gracefulness of movement, a novelty in the attitudes, and a vibrating silvery tone of voice, which render the young Syrian girl the very houri of the visual paradise. Such admirable and varied beauty is also very common; I never go into the country for an hour without meeting several such females going to the fountains or returning, with their Etruscan urns upon their shoulders, and their naked legs clasped with rings of silver.'

The ordinary dress of the women of Palestine is not perhaps much fitted to enhance their natural charms, and yet it admits of ease and dignity in the carriage. Dr. Olin thus describes the customary appearance of both male and female: 'The people wear neither hats, bonnets, nor stockings; both sexes appear in loose flowing dresses, and red or yellow slippers; the men wear red caps with or without turbans, the women are concealed by white veils, with the exception of the eyes' (vol. ii. p. 437).

The singular beauty of the Hebrew women, and the natural warmth of their affections, have conspired to throw gems of domestic loveliness over the pages of the Bible. In no history can there be found an equal number of charming female portraits. From Hagar down to Mary and Martha, the Bible presents pictures of womanly beauty, that are unsurpassed and rarely paralleled. But we should very imperfectly represent in these general remarks the formative influence of the female character as seen in the Bible, did not we refer those amiable traits of character to the original conceptions of which we have spoken, and to the pure and lofty religious ideas which the Biblical books in general present. If woman there appears as the companion and friend of man, if she rises above the

condition of being a bearer of children to that noble position which is held by the mother of a family, she owes her elevation in the main to the religion of Moses and to that of Jesus. The first system—as a preparatory one—did not and could not complete the emancipation of woman.

546. [Young lady in full dress.]

The Oriental influence modified the religious so materially, as to keep women generally in some considerable subjection. Yet the placing of the fondest desires and the glowing hopes of the nation on some child that was to be born, some son that was to be given, as it made every matron's heart beat high with expectation, raised the tone of self-respect among the women of Israel, and caused them to be regarded by the other sex with lively interest, deep regard, and a sentiment which was akin to reverence. There was, however, needed the finishing touch which the Great Teacher put to the Mosaic view of the relations between the sexes. Recognising the fundamental truths which were as old as the creation of man, Jesus proceeded to restrain the much-abused facility of divorce, leaving only one cause why the marriage-bond should be broken, and at the same time teaching that as the origin of wedlock was divine, so its severance ought not to be the work of man. Still further—bringing to bear on the domestic ties his own doctrine of immortality, he made the bond co-existent with the undying soul, only teaching that the connection would be refined with the refinement of our affections and our liberation from these tenements of clay in which we now dwell (Matt. v. 32; xix. 3, sq.; xxii. 23, sq.). With views so elevated as these, and with affections of the tenderest benignity, the Saviour may well have won the warm and gentle hearts of Jewish women. Accordingly, the purest and richest human light that lies on the pages of the New Testament, comes from the band of high-minded, faithful, and affectionate women, who are found in connection with Christ from his cradle to his cross, his tomb, and his resurrection. These ennobling influences have operated on society with equal benefit and power. Woman, in the better portions of society, is now a new being. And yet her angelic career is only just begun. She sees what she may, and what under the Gospel she ought to be; and ere very long, we trust, a way will be found to employ in purposes of good, energies of the finest nature which now waste away from want of scope, in the ease and refinements of affluence, if not in the degradations of luxury—a most precious offering made to the Moloch of fashion, but which ought to be consecrated to the service of that God who gave these endowments, and of that Saviour who has brought to light the rich capabilities, and exhibited the high and holy vocation, of the female sex.—J. R. B.

Women appear to have enjoyed considerably more freedom among the Jews than is now allowed them in western Asia, although in other respects their condition and employments seem to have been not dissimilar. At present, women of all ranks are much confined to their own houses, and never see the men who visit their husbands or fathers; and in towns they never go abroad without their persons and faces being completely shrouded: they also take their meals apart from the males, even of their own family. But in the rural districts they enjoy more freedom, and often go about unveiled. Among the Jews, women were somewhat less restrained in their intercourse with men, and did not generally conceal their faces when they went abroad. Only one instance occurs in Scripture of women eating with men (Ruth ii. 14); but that was at a simple refection, and only illustrates the greater freedom of rural manners.

The employments of the women were very various, and sufficiently engrossing. In the earlier, or patriarchal state of society, the daughters of men of substance tended their fathers' flocks (Gen. xxix. 9; Exod. ii. 16). In ordinary circumstances, the first labour of the day was to grind corn and bake bread, as already noticed. The other cares of the family occupied the rest of the day. The women of the peasantry and of the poor consumed much time in collecting fuel, and in going to the wells for water. The wells were usually outside the towns, and the labour of drawing water from them was by no means confined to poor women. This was usually, but not always, the labour of the evening; and the water was carried in earthen vessels borne upon the shoulder (Gen. xxiv. 15-20; John iv. 7, 28). Working with the needle also occupied much of their time, as it would seem that not only their own clothes but those of the men were made by the women. Some of the needlework was very fine, and much valued (Exod. xxvi. 36; xxviii. 39; Judg. v. 30; Ps. xlv. 14). The women appear to have spun the yarn for all the cloth that was in use (Exod. xxxv. 25; Prov. xxxi. 19); and much of the weaving seems also to have been executed by them (Judg. xvi. 13, 14; Prov. xxxi. 22). The tapestries for bed-coverings, mentioned in the last-cited text, were probably produced in the loom, and appear to have been much valued (Prov. vii. 16).

We have no certain information regarding the dress of the women among the poorer classes; but it was probably coarse and simple, and not materially different from that which we now see among the Bedouin women, and the female peasantry of Syria. This consists of drawers, and a long and loose gown of coarse blue linen, with some ornamental bordering wrought with the

needle, in another colour, about the neck and bosom. The head is covered with a kind of

547. [Matron in full dress.]

turban, connected with which, behind, is a veil, which covers the neck, back, and bosom [Veil]. We may presume, with still greater certainty, that women of superior condition wore over their inner dress a frock or tunic like that of the men, but more closely fitting the person, with a girdle formed by an unfolded kerchief. Their head-dress was a kind of turban, with different sorts of veils and wrappers used under various circumstances. The hair was worn long, and, as now, was braided into numerous tresses, with trinkets and ribands (1 Cor. xi. 15; 1 Tim. ii. 9; 1 Pet. iii. 3). With the head-dress the principal ornaments appear to have been connected, such as a jewel for the forehead, and rows of pearls (Sol. Song i. 10; Ezek. xvi. 12). Ear-rings were also

548. [Nose-jewel.]

worn (Isa. iii. 20; Ezek. xvi. 12), as well as a nose-jewel, consisting, no doubt, as now, either of a ring inserted in the cartilage of the nose, or an ornament like a button attached to it. The nose-jewel was of gold or silver, and sometimes set with jewels (Gen. xxiv. 47; Isa. iii. 21). Bracelets were also generally worn (Isa. iii. 19; Ezek. xvi. 11), and anklets, which, as now, were probably more like fetters than ornaments (Isa. iii. 16, 20). The Jewish women possessed the art of staining their eye-lids black, for effect and expression (2 Kings ix. 30; Jer. iv. 30; Ezek. xxiii. 40); and it is more than probable that they had the present practice of staining the nails, and the palms of their hands and soles of their feet, of an iron-rust colour, by means of a paste made from the plant called *henna* (*Lawsonia inermis*). This plant appears to be mentioned in Sol. Song i. 14, and its present use is probably referred to in Deut. xxi. 12; 2 Sam. xix. 24.

The customs concerning marriage, and the circumstances which the relation of wife and mother involved, have been described in the article Marriage.

The Israelites eagerly desired children, and especially sons. Hence the messenger who first brought to the father the news that a son was born, was well rewarded (Job iii. 3; Jer. xx. 15). The event was celebrated with music; and the father, when the child was presented to him, pressed it to his bosom, by which act he was understood to acknowledge it as his own (Gen. l. 23; Job iii. 12; Ps. xxii. 10). On the eighth day from the birth the child was circumcised (Gen. xvii. 10); at which time also a name was given to it (Luke i. 59). The first-born son was highly esteemed, and had many distinguishing privileges. He had a double portion of the estate (Deut. xxi. 17); he exercised a sort of parental authority over his younger brothers (Gen. xxv. 23, &c.; xxvii. 29; Exod. xii. 29; 2 Chron. xxi. 3); and before the institution of the Levitical priesthood he acted as the priest of the family (Num. iii. 12, 13; viii. 18). The patriarchs exercised the power of taking these privileges from the first-born, and giving them to any other son, or of distributing them among different sons; but this practice was overruled by the Mosaical law (Deut. xxi. 15-17).

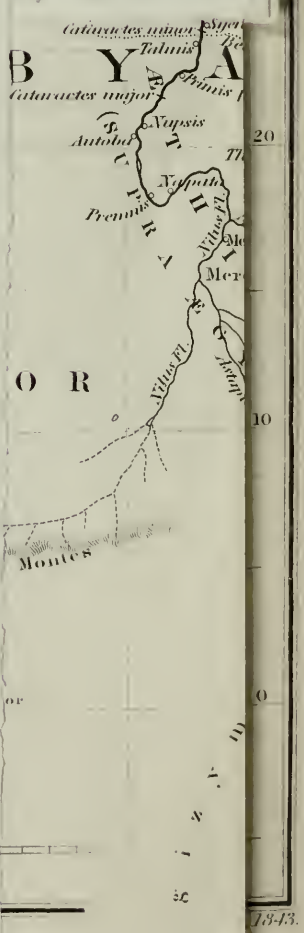
The child continued about three years at the breast of the mother, and a great festival was given at the weaning (Gen. xxi. 8; 1 Sam. i. 22-24; 2 Chron. xxxi. 6; Matt. xxi. 16). He remained two years longer in charge of the women; after which he was taken under the especial care of the father, with a view to his proper training (Deut. vi. 20-25; xi. 19). It appears that those who wished for their sons' better instruction than they were themselves able or willing to give, employed a private teacher, or else sent them to a priest or Levite, who had perhaps several others under his care. The principal object was, that they should be well acquainted with the law of Moses; and reading and writing were taught in subservience to this leading object.

The authority of a father was very great among the Israelites, and extended not only to his sons, but to his grandsons—indeed to all who were descended from him. His power had no recognised limit, and even if he put his son or grandson to death, there was, at first, no law by which he could be brought to account (Gen. xxi. 14; xxxviii. 24). But Moses circumscribed this

power, by ordering that when a father judged his son worthy of death, he should bring him before the public tribunals. If, however, he had struck or cursed his father or mother, or was refractory or disobedient, he was still liable to capital punishment (Exod. xxi. 15, 17; Lev. xx. 9; Deut. xxi. 18-21).—Ed.

WOOL. [Sheep.]

WORD OF GOD. The mystical dogma of emanations is at once the most universal and most venerable of traditions; so ancient that its source is hidden in the grey mists of extreme antiquity; so universal that traces of it may be found throughout the whole world. Under every form, Persian or Egyptian, Greek or Roman, whether half hidden in the mythological folds of ancient fables, or more clearly expressed in the speculations of philosophers, whether blended with the law of Moses in the *Cabbala* and by Philo, or with the Gospel of Christ by the Gnostics and the Manichæans, in all forms and languages the mystic dogma of emanations intimates the same great truth—that the many proceeded from the one, or, in plainer language, that everything good and fair, the universal frame of things and all that it contains, material and corporal, intellectual, moral, and spiritual, *all* proceed from One Divine Mind, and are a manifestation of His power, wisdom, and goodness. This venerable dogma teaches us further, that of the Divine Essence we can know nothing (for how can the finite comprehend the infinite?); but that of the power, wisdom, and goodness, and also of the will of God, sufficiently plain indications are made to us in the works and plan of creation. Such is the meaning of the dogma of emanation in every form. But this venerable tradition has unhappily been blended with contradictory attempts to account for the origin of evil. Our extracts from Professor Burton's *Lectures on the Heresies of the Apostolic Age* (in our articles on Gnosticism and Logos) have exhibited but a small part of the mass of presumption, superstition, and error, which have arisen from this source, pouring a muddy and unwholesome stream, not only into mythology and mysticism, but into the language of philosophy. Let us add, that Professor Burton has treated the mystical dogma of emanations (its meaning, origin, progress, and developments, together with its bearings on the more mysterious doctrines of Christianity) with a learning, moderation, and fairness, which must make his work a storehouse both of valuable information and judicious criticism, equally deserving the attention of the scholar, philosopher, and divine.



From this whole body of evidence it appears that a constant tradition had come down from the most remote antiquity; that long before the time of the Gnostics, of Plato, or even of the Egyptians, this venerable tradition had its origin, and that a term expressive of this tradition was applied to Christ by the earliest converts to Christianity, and was afterwards adopted by St. John. In what sense and for what object the term logos was admitted by the apostle into Christianity, may be made matter of inquiry; but the fact of its having been so derived and so applied is established by the text, the notes, and the scriptural quotations in Professor Burton's work, beyond the possibility of doubt.

Both the fact itself and the object of the apostle are briefly stated by Professor Burton in the following words:—'St. John was as far as possible from being the first to apply the term logos to Christ. I suppose him to have found it so universally applied (that is, both by Gnostics and Christians) that he did not attempt to stop the current of popular language, but only kept it in its proper channel, and guarded it from extraneous corruptions' (see *Inquiries*, p. 220).

What those corruptions were may be seen in our article on Gnosticism, and in the works of Cudworth, Mosheim, Brucker, Beausobre, Matter, and Professor Burton, and in the remarks of Michaelis on the Gospel of St. John. Professor Burton's facts and inferences respecting the logos in St. John's Gospel are summed up in his seventh lecture, and in a series of valuable notes, and, we may add, that the conclusion at which the learned author arrives respecting the logos of St. John is borne out by the following passage in Bishop Burnet's work upon the articles of our church.

'There are indeed points of a very ancient tradition in the world, of three in the Deity, called the Word or the *Wisdom*, and the Spirit or the *Love*, besides the fountain of both these, God: this was believed by those from whom the most ancient philosophers had their doctrines. The author of the Book of Wisdom, Philo, and the Chaldee Paraphrasts, have many things that show that they had received these traditions from the former ages; but it is not easy to determine what gave the first rise to them' (see Burnet, *On the Articles*, p. 47).

If these views are correct, the term logos, as applied to Christ, represents one of the most ancient, universal, and venerable of traditions. Professor Burton argues that if St. Paul, when he saw at Athens 'altars to the unknown God,' might fairly take occasion to reprove the Athenians as too much given to superstition, and immediately added, 'Him whom ye ignorantly worship declare I unto you,' there seems no reason why a similar course might not be taken by St. John with the Gnostic, as if he had in effect said, that Word or Wisdom of God whom you ignorantly seek declare I unto you. Thus also the Christian missionary in India might take as his text the opening verses of St. John's Gospel, and might preach to them 'Christ the power of God and the wisdom of God.' Now can there be a doubt, were the word of God preached thus to the Indian, with a zeal according to knowledge, that he would in deed and in truth find the words of the Apostle verified, 'As many as receive him, to them gave he power to become the sons of God, even to them that believe in his name.' And if it is thus with the Indian convert to Christianity in our own day, so also was it in the case of converts from the 'endless genealogies' of Gnostic mysticism to 'the only begotten Son of God.' And when we ourselves view the more mysterious articles of our faith in relation to the primary objects, the primary means, and the primary effects of Christianity, many doubts and difficulties which have been raised respecting the character, history, and doctrines of Christ, will be obviated or removed, so that having obtained a more perfect understanding of the meaning and spirit of the Scriptures, we shall be less

Cataractes majores

Autobat
Premnis
Montes

likely to find objections to the expression and the letter, when we read, 'And the Word was made flesh, and dwelt amongst us (and we beheld his glory the glory as of the only begotten of the Father) full of grace and truth.'

The conclusion to which we are brought by the series of remarks which are embodied in our articles GNOSTICISM, LOGOS, and GREEK PHILOSOPHY, is, that an inquiry into the primary objects and effects of Christianity not only establishes a large body of evidence respecting the benefits wrought out by Christianity, to wit, the removal of the three great evils, heathen sensualism, Gnostic mysticism, and Jewish ceremonialism, throwing much light on the means by which this was effected, that is, upon the character, history, and doctrines of Christ, but that such knowledge tends to draw attention to the yet only in part accomplished objects of Christianity, and to the means by which they are still to be carried out. Such inquiries tend also to prevent our mistaking means for ends, and warn us against that greatest of errors, which would introduce the very evils Christianity was intended to cure (sensualism, mysticism, and ceremonialism) under the disguise of remedies. Lastly, an inquiry into the primary objects, primary means, and primary effects of Christianity, draws our attention to whatever was in its nature peculiar to those times, and which requires to be so treated whenever its application to our own times is considered. It is, we repeat, by inquiring, in the first place, what *were* the evils for which Christianity was primarily and immediately intended to be the cure, that we shall best discover what *are* the evils for which Christianity is still the remedy; and it is by inquiring what *were* the means by which Christianity overcame those evils, that we may hope to understand more clearly what *are* the means which Christianity possesses for resisting and overcoming like evils in the present times; and it will be found that by adopting this mode of treatment, division, and order, we are most likely to remove from our own minds, and from the minds of others, difficulties and doubts respecting the character, the history, and the doctrines of Christ.

To refer once more to the work of the learned theologian to whose labours we have been so much indebted. Assuredly there is nothing in Dr. Burton's theory respecting the application of the term logos to Christ to astonish the scholar, or to perplex the divine, or to alarm the Christian. Doubtless, to repeat a remark which cannot be too often insisted on, there is an *absolute* meaning in each of the texts of Scripture quoted by Dr. Burton, which is as true now as it was true then; but in order to get at this absolute meaning we must attend to the *relative* meaning of each text, as it applied to the opinions, practices, and persons to whom and to which it primarily related. If this is confessedly true respecting the texts of Scripture which are connected with Judaism, why should it not be true in the case of texts which relate to Gnosticism? And why should not a knowledge of the history, philosophy, and language of the gentile converts to Christianity be useful to the scholar, divine, and Christian, in explaining all the texts of Scripture which Dr. Burton has illustrated with equal learning, moderation, and respect for the articles of our creed? It is thus that we may hope to obtain a better understanding of the meaning, and a fuller conviction of the truth, of the text which has so often been misunderstood and misapplied: 'After that in the wisdom of God, the world by wisdom knew not God; it pleased God by the foolishness of preaching to save them that believe.'—J. P. P.

WORLD is the English term by which our translators have rendered four Hebrew words: 1. חדל, which is erroneously supposed by some to have arisen by transposition of letters from חלד, comes from a root which signifies 'to rest,' to 'discontinue,' and hence 'to cease from life,' 'to be at rest;' and as a noun, 'the place of rest,' 'the grave.' The word occurs in the complaint uttered by Hezekiah when in prospect of dissolution, and when he contemplates his state among the inhabitants, not of the upper, but the lower world (Isa. xxxviii. 11); thus combining with many other passages to show that the Hebrews, probably borrowing the idea from the Egyptian tombs, had a vague conception of some shadowy state where the manes of their departed friends lay at rest in their ashes, retaining only an indefinable personality in a land of darkness and 'the shadow of death' (Job x. 21, 22). 2. חלד means 'to conceal,' and derivatively 'any hidden thing,' hence 'age,' 'antiquity,' 'remote and hidden ages;' also 'the world,' as the hidden or unknown thing (Ps. xlix. 1); in a similar manner, 3. עולם (in the New Testament, *αἰών*), the root-signification of which is 'to hide,' denotes a very remote, indefinite, and therefore unknown period in time past or time to come, which metaphysicians call eternity à parte ante, and eternity à parte post. In Ps. lxxiii. 12, it is rendered 'world;' but in this and in the previous instance, it may be questioned whether the natural creation is really meant, and not rather 'the world' in our metaphorical use of the term, as denoting the intelligent world, the rational inhabitants of the earth, and still more specifically that portion of them with which we are immediately concerned. 4. תבל comes from a radix that signifies 'to flow,' and as water is the unfailing cause of fertility in the East, it denotes 'to be productive,' 'to bear fruit;' and as a noun, 'the fruit-bearer,' that is, the earth. This word is frequently rendered 'world' in the common version, but if more was intended than the earth on which we dwell, it may be doubted if the passages in which it occurs will justify the translators.

In truth, the Hebrews had no word which comprised the entire visible universe. When they wanted to speak comprehensively of God's creation, they joined two words together and used the phrase 'heaven and earth' (Gen. i. 1). We have already seen that they had an idea of an under world; the meaning of their ordinary term for earth, ארץ, which signifies the 'lower,' shows that they also regarded the earth as beneath the sun; while the term for heaven, שמים, denoting 'what is elevated,' indicates that their view was that the heavens, or the heights, were above. Above, below, and under—these three relations of space comprehend their conception of the world.

WORM (רִמָּה, תּוֹלָע; Sept. σκώληξ, σαπρία, σῆψις; Vulg. *vermis, putredo, tinea.* No distinction is observed in the use of the Hebrew words. For instance, רמה is applied to the creature bred in the manna (Exod. xvi. 24); to that which preys on human flesh (Job vii. 5; xvii. 14; xxi. 26; xxiv. 20; Isa. xiv. 11); and תולע, to the creature bred in the manna (Exod. xvi. 20); to that which preys on human flesh (Isa. xiv. 11; lxvi. 24); on vegetables, as on the gourd of Jonah (iv. 7); and on vines (Deut. xxviii. 39). The ancient Hebrews applied these words as indeterminately as the common people now do the words 'worm,' 'fly,' &c. The only distinction occurring in the Bible is שני תולעת, the insect which furnished the crimson dye [Purple]. Similar indeterminateness attends the Septuagint and Vulgate renderings. Aristotle also applies the word σκώληξ to the larva of any insect—τίκτει δὲ πάντα σκώληκα, 'all insects produce a worm' (*Hist. Nat.* v. 19). The insect which the manna is said to have 'bred, when kept till the morning;' רמה, תולע, σκώληξ, *vermis* (Exod. xvi. 20, 24), whatever it was, must be considered as miraculously produced as a punishment for disobedience, since the substance now understood to be the same, keeps good for weeks and months, nor did the specimen laid up in the ark breed worms [Manna]. An insect is alluded to as injuring vines and grapes (Deut. xxviii. 39); תולע, σκώληξ, *vermis.* The Greeks had a distinct name for this insect, and probably as early as the Septuagint translation of Exodus was made, ver. ἴψ and ἶξ (Theophrastus, *De Causis*, iii. 27). It was called by the Latins involvolus, convolvulus, and volvox (Plautus, *Cistell.* Act iv. Sc. 2; Pliny, *Hist. Nat.* xvii. 28). Rosenmüller thinks it to have been the *scarabæus hirtellus*, or the *scarabæus muticus hirtus testaceo-nigricans* of Linnæus (*Syst. Nat.* tom. i., pt. iv. p. 1577). Forskal calls it the *pyralis vitana*, or *pyralis fasciana.* A species of beetle, *lethrus cephalotes*, is injurious to the vines of Hungary; other species of beetles do similar mischief (*rynchites, bacchus, cumolpus*). Vine-leaves in France are frequently destroyed by the larva of a moth, *tortrix vitana.* In Germany another species does great injury to the young branches, preventing their expansion by the webs in which it involves them; and a third species, *tortrix fasciana*, makes the grapes themselves its food (Kirby and Spence, *Introduction to Entomology*, vol. i. p. 205, London, 1828). It may serve as an illustration of the looseness of popular diction respecting insects, to remark, that what the farmers call 'the fly' in the turnip, is in reality a small species of jumping beetle, for which *turnip-flea* would be a more appropriate name. In Job vii. 5, the patriarch complains that his 'flesh is clothed with worms and clods of dust,' רמה, σαπρίᾳ σκώληκων; and in 2 Macc. ix. 9, it is stated to be the fate of Antiochus, that while he lived 'worms' (σκώληκας) 'rose up out of his body;' and St. Luke records this disorder to have been inflicted on Herod (Acts xii. 23, σκωληκόβρωτος: comp. Joseph. *Antiq.* xix. 8. 2; xvii. 6. 5; *De Bell. Jud.* i. 33. 5). It has been attempted to explain all these instances as cases of phthiriasis, or the *lousy* disease: but the conjecture is inconsistent with the words employed in the several narratives; and since they are instances of persons being devoured by *worms* while *alive*, contrary to the order of nature, we are compelled to ascribe the phenomenon to divine agency. For the account of insects infesting the human frame, from disease, see Kirby and Spence (*Introduction to Entomology*, vol. i. p. 84). Allusion is made in various passages to 'worms' preying upon the dead. Thus Job, in the anticipation of death, says, 'I have said to the worm, Thou art my mother, and my sister' (Job xvii. 14; comp. xxi. 26; xxiv. 20; Isa. xiv. 11; lxvi. 24; Ecclus. x. 11; xix. 3; 1 Mac. ii. 62). In one apparent instance of this nature (Job xix. 26), 'though after my skin worms destroy this body,' the word 'worms' is supplied by our translators. These passages, and especially the latter, have contributed to the popular impression in this country, that the human body, when buried in the grave, is consumed by worms. The Oriental method of burial in wrappers, and of depositing the corpse in caves, &c., would no doubt often afford the spectacle of the human body devoured by the larvæ of different insects; but the allusions in Scripture to such sights do not apply to burial in this country, except where the body, as was the case in London till lately, is buried in a wooden coffin only, in vaults which have communications with the external air, when even in the centre of the metropolis, the writer has found swarms of a species of fly, of a cimex aspect, which insinuates itself between the lid and lower part of the coffin, and whose larvæ battened in the corpse within, while the adult insect sported in the lurid atmosphere of the vault. The 'gourd' of Jonah is said to have been destroyed by 'a worm' (Jon. iv. 7); תולעת, σκώληξ, *vermis.* The identity of the gourd with the *ricinus communis* seems to be well established [Kikayon]; and Rumphius (*Herbar. Amboinens.*, tom. iv. p. 95) testifies to the ravages of a species of black caterpillar upon it. These are produced, he says, in great quantities in the summer time, during a gentle rain, and eat up the leaves of the Palma Christi, and gnaw its branches to the pith in a single night (Michaelis, *Suppl. ad Lexic. Hebraic.*, p. 2187). Allusions to the *worm in wood* occur in the Septuagint of Prov. xii. 4, and xxv. 20; ἐν ξύλῳ σκώληξ; Vulg. *vermis ligno;* which words have nothing corresponding to them in the present Hebrew text (see Vulgate of 2 Kings xxiii. 8). The word 'worm' occurs metaphorically (Job xxv. 6), 'how much less man that is a worm' (רמה, σαπρία, *putredo*), 'and the son of man which is a worm;' תולעה, σκώληξ, *vermis* (Ps. xxii. 6; Isa. xli. 14). Homer also compares a man of inferior consequence to a worm, ὥστε σκώληξ ἐπὶ γαίῃ κεῖτο ταθείς (*Il.* xiii. 654). It is possible that the word תולע was also given as a proper name; thus 'Tola' occurs among the descendants of Issachar (Gen. xlvi. 13), and was also the name of a person of the same tribe (Judg. x. 1). Bochart conjectures that the name was given to these children by their parents because the tribe of Issachar was one of the meanest, and they were themselves in needy circumstances, or that these were very sickly children when born. He remarks, however, that the first Tola became a great man,

the head of the Tolaites (Num. xxvi. 23), who, in the days of David, amounted to 22,600 (1 Chron. vii. 2); and that the latter judged Israel twenty years (Judg. x. 1, 2). 'Worm' occurs in the New Testament in a figurative sense only (Mark ix. 44, 46, 48), 'Their worm dieth not, and the fire is not quenched;' words borrowed from Isa. lxvi. 24, which originally relate to a *temporal* state of things, but which had also become, in our Lord's time, the popular representation of future punishment (Judith xvi. 17; Ecclus. vii. 17) [Soul; Tophet]. Origen here understands 'worm' in a metaphorical sense, as denoting the accusation of conscience; but Austin, Chrysostom, Cyril of Alexandria, Theophylact, &c., contend that the word should be understood literally. Several mistranslations occur. In Isa. li. 8, 'and the worm shall eat them like wool,' the word סס, means a species of moth [Moth]. In Mic. vii. 17, the words, 'like worms of the earth, כזחלי ארץ, literally, 'creepers in the dust,' 'serpents;' Vulg. reptilia terræ (comp. Deut. xxxii. 24). In 1 Macc. ii. 62, 'Fear not the words of a sinful man, for his glory shall be dung and worms;' instead of *κοπρία*, 'dung,' should be read *σαπρία*, 'rottenness,' as in the Sept. of Job vii. 5; xxv. 6. So also in Ecclus. xix. 3, 'Moths and worms shall have him that cleaveth to harlots,' instead of *σῆτες*, 'moths,' read *σήπη*, 'rottenness.' Bochart (*Hierozoicon*, ed. Rosenmuller, Lips. 1793-1796, vol. iii.; *De Vermibus*).—J. F. D.

WORMWOOD, STAR OF (Rev. viii. 10, 11), the Apocalyptic appellation for the national demon of Egypt, set forth in the vision of Patmos as a luminous *idol* presiding over 'the third part of the waters.' The vocation of this star was to destroy by *poison*, not by fire, sword, or famine; hence the Talmudic phrase 'poison in Egypt' is put in opposition to food or 'corn in Ephraim' as the symbol of blasphemy and idolatry (*Bab. Talmud in Menacoth*, fol. 85. 1). Philo also, speaking of Helicon, 'the scorpion-like slave,' represents him as having cast up *τὸν Αἰγυπτιακὸν ἰὸν*, 'the Egyptian venom,' against the dwellers in Palestine (*De Legat.* p. 102, ed. Turneb.). Daniel gives a clear intimation of his acquaintance with the prevalent belief that, like Persia, Greece, and Judæa, every nation had a celestial prince or patron, שר *sar*, or *sere* (Dan. x. 21). This *sar lamé-ala*, 'prince on high,' of the Rabbins had also a representative image in the material firmament (Rabbi Salomon on Dan. xi. 1), some (הילל *hêlel*) glittering son of the morning (Isa. xiv. 12), or 'light of lights' (*morè reo*) among the splendid stars or intercessors above (*Mlitzim*; Ezek. xxxii. 7, 8), who were 'darkened' when Pharaoh was extinguished. Eusebius (*Demonstr. Evangelic.* iv. 8. 10) and Iamblichus (*De Ægyptiorum Mysteriis*, § v. c. 25) both mention 'the angels who preside over the nations;' and Rabbi Solomon, the chief of the Gallican synagogue in his day, affirms that 'before God wreaks his vengeance on a people he punishes their *prince*, because it is written, "The Lord shall punish *the host of the high ones* on high," and then follows "*and* the kings of the earth upon the earth;" and, moreover, it is written, "How art thou fallen, O Lucifer, son of the morning!" ' (*Comment. on Isa.* xiii. 13). Hence, as the literal fulfilment of Isa xxiv. 21, the Jews yet anticipate 'the extirpation of all the Gentiles, with their princes on high and their [pretended] Gods' (*Nizzchon*, p. 255, in Wagenseil's *Tela Ignea*).

St. John seems to employ this symbol of Egyptian poison and bitterness, as the prototype of a great Anti-Christian Power, which would poison and embitter the pure waters of Christian life and doctrine, converting them into 'wormwood,' *mitzraim* being a figure of apostasy and rebellion.—F. R. L.

WRESTLING. [Games.]

WRITING is an art by which facts or ideas are communicated from one person to another by means of given signs, such as symbols or letters. It has been a generally received and popular opinion that writing was first used and imparted to mankind when God wrote the Ten Commandments on the tables of stone; but the silence of Scripture upon the subject would rather suggest that so necessary an art had been known long before that time, or otherwise the sacred historian would probably have added this extraordinary and divine revelation to the other parts of his information respecting the transactions on Mount Sinai.

After the gift of language (which was indispensable to rational creatures), it would seem that *writing* was the most highly beneficial and important boon which could be conferred on men possessed of intellect and understanding, who from their circumstances must divide and spread over the whole earth, and yet be forced from various necessities to maintain intercourse with each other.

In the earliest times families must have separated: the pastoral life required much room for flocks and herds; and as the wealth of each household increased, the space between them must have become greater, and every year would compel more distant migrations from these unfailing causes (Gen. xiii.).

But even in the first ages of the world it would be requisite not only to preserve unimpaired the knowledge of God, but it would be desirable to have some method of transmitting and receiving intelligence from the scattered communities, of a more certain nature than verbal messages ever can be; nor is it probable that events which were destined to act upon all time should be left to float upon the uncertain stream of tradition, when by the art of writing they might be accurately conveyed without addition or diminution to the latest posterity. It is scarcely possible that the wondrous gift of writing was withheld until the world had been twice repeopled, and 2513 years had rolled by.

The working in iron and the construction of musical instruments are recorded in Gen. iv. 21, 22; whilst neither before nor after that period is the origin or discovery of *writing* any more alluded to than is the origin of language itself. Is it then too much to believe that God by revelation immediately imparted to mankind the power of writing? For it does not appear that any person ever invented an alphabet who had not previously heard of or seen one; and every nation which possessed the art always professed to have derived its knowledge from a God. Without writing, no information could have been conveyed to remote nations with accuracy. Few persons repeat a thing in the precise words in which a detail was given to them,

and the most trifling change in an expression may throw the whole into error and confusion, or entirely destroy the sense. But such cannot be the case if writing be the means of communication, for whatever is thus definitely stated may be equally well understood by those to whom it is addressed as by those who write it. God never works unnecessary miracles; but that must have been the case if, for upwards of two thousand years, the memory and speech of various men were *alone* the depositaries of His dealings with mankind.

It was a matter of the utmost consequence that the most exact accounts should have been preserved of the creation, the fall of man, and many prophecies of deepest interest to unborn generations. The ages and genealogies of the patriarchs; the measures of the ark; the first kingly government in Assyria; the history of Abraham and his descendants for 430 years, including minute circumstances, changes, and conversations, in many different countries; could scarcely have been perfectly preserved by *oral* descent for twenty centuries, unless the antediluvians and their immediate posterity did not partake of the failings of Christians in the defects of forgetfulness and exaggeration; but allowing the art of *writing* to have been *given with language*, there is no difficulty, and it becomes obvious that each transaction would be recorded and kept exactly as it was either revealed or happened.

It is not a vain thing to suppose that the history of creation, and all following events, as briefly related by Moses, were taken from ancient documents in the possession of the Israelites: this opinion is maintained by Calmet (*Commentaire Littéral*, vol. i. part i. p. 13). The gifts of inspiration, like those of nature, are never superfluous. When God had once revealed to the Patriarchs what was 'in the beginning,' there was no further need for a new revelation; and the Hebrew historian might compile from previous records, what was sufficient for mankind to know respecting the origin of 'things which are seen.'

In the fifth chapter of Genesis it is said, 'This is the *book* of the generations.' If there had been merely a traditionary recollection of 'the generations of Adam,' preserved only by transmission from one memory to another for more than a thousand years, the term *book* would have been most inapplicable, and could not have been used; and to suppose that a written document had been referred to, cannot be deemed as forcing the construction of the word in this instance, more than when it is also believed that 'the *book* of the generation of Jesus Christ' (Matt. i. 1) was likewise copied from a national register, and not given by a new revelation or old tradition, for the genealogies in the New Testament were not of less importance than those of the sons of Shem (Gen. xi.), and yet the former were taken from public records. Why, then, should a miracle have been wrought to preserve the latter?

The book of Job is considered to be the most ancient written document extant, and is deemed an authentic narrative and not an imaginative poem (James v. 11). By some persons it is thought to be the work of Moses (see Mason Good's *Diss. to Translation of Job*); but this is denied by Bishop Lowth (*Lectures on Hebrew Poetry*). Lightfoot and others think Elihu was the author. This is the more credible opinion; for it is scarcely possible to believe that long conversations between several persons in the land of Uz should have been orally preserved for perhaps several centuries, and then recorded with minute accuracy by an individual who spoke a different language, and who received it from the lips of strangers and foreigners.

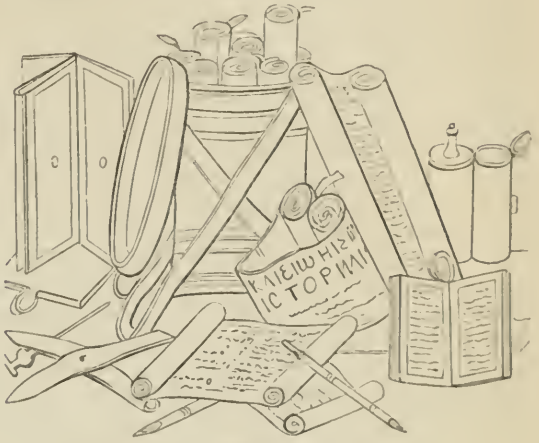
Hales asserts that Job lived at most two hundred years before the Exode. Our version of the Scriptures fixes the time of Job at B.C. 1520, which allows but twenty-nine years between his era and that of the departure of the Israelites from Egypt. Be that as it may, the declarations of Job prove that *letters* and books were known to him and his countrymen, who were a people quite distinct from the Hebrews.

In the nineteenth chapter of Job (ver. 23, 24) it is said, 'Oh, that my words were now written! Oh, that they were printed in a *book!* that they were graven with an iron *pen!*' Also Job xxxi. 35, 'mine adversary had *written* a book.' Such expressions could not have been used, and would have had no meaning, if the art of writing had been unknown; nor could there have been such terms as *book* and *pen*, if the things themselves had not existed.

If, then, it be granted that the Book of Job was *written*, and such expressions were current before the Exode, it becomes evident from sacred history, that writing was not only in use before the law was given on Mount Sinai, but that it was also known amongst other patriarchal tribes than the children of Israel. The supposed writer, Elihu, the son of Barachel the Buzite (Job xxxii. 2), was a descendant of Nahor, the brother of Abraham (Gen. xxii. 20, 21), and might thus be possessed of whatever arts the family of Terah had inherited from Noah. Another singular phrase is found in Job: 'My days are swifter than a post' (ix. 25). This would imply the regular transmission of intelligence by appointed messengers from place to place; and although it does not follow as a necessary consequence that such a person on all occasions carried *letters*, it is more than probable that such a mode of conveying important communications was established in civilized countries, where *books*, *pens*, and *writing* were known.

Before the law was given by God to Moses, he had been commanded to write the important transactions which occurred during the progress of the Israelites from Egypt to Canaan; for in Exod. xvii. 14, it is recorded, 'And the Lord said unto Moses, write this for a memorial in a book.' An account of the discomfiture of the Amalekites is the first thing said to have been written by Moses. This battle was fought ere the people left Rephidim (Exod. xvii. 13), from whence they departed into the wilderness of Sinai (Exod. xix. 2); and, therefore, that writing was drawn up before the events on the mount took place. The law was 'written by the finger of God' (Exod. xxxi. 18), B.C. 1491, and since that time there is no question as to the existence of the art of writing. The commandments were written on two tables of stone (Exod. xxxiv. 1); but immediately afterwards, when Moses was interceding with God for the sinning idolaters, he says, 'Blot me out of thy book which thou has written' (Exod. xxxii. 32). If writing in alphabetical characters had been

seen by Moses for the first time on the 'tables of stone,' he could not from these have had the faintest conception of a *book*, which is a thing composed of leaves or rolls, and of which the stones or slates could have given him no idea.



Forty years after the law was written, the Israelites took possession of the land of Canaan, where the 'cities were walled and very great' (Num. xiii. 28). Amongst other places which were conquered was one called by them Debir, but whose original name was Kirjath-sepher, or the City of Books, or Kirjath-sannah, the City of Letters (Jos. xv. 49; Judges i. 11). The Canaanites could not have gained their knowledge of letters or of books from the Hebrews, with whom they were entirely unacquainted or at war, and must, therefore, have derived them from other sources. The Canaanites being the descendants of Canaan, a son of Ham, had probably preserved and cultivated the same arts and sciences which Misraim, another son of Ham, carried into Egypt (Gen. x. 6).

'The Book of Jasher' (Josh. x. 13), is mentioned by Joshua, but whether as a chronicle of the past or present is uncertain.

Books and writing must have been familiar to Moses, 'who was learned in all the wisdom of the Egyptians' (Acts vii. 22), for at the time of his birth that people had arrived at a high pitch of civilization. Since the penetration of Dr. Young discovered the key by which the hitherto mysterious hieroglyphics can be deciphered, it has been found that from the earliest era Egypt possessed a knowledge of writing. Without crediting the very distant period given by some chronologists, which fixes the beginning of the first regal dynasty there 5867 years B.C., or as M. Prisse, the learned hieroglyphist, says, in his private accounts, 'unnumbered ages before the erection of the pyramids,' it is not presuming too much to think that the chronology adopted by Usher is too short to include many Scriptural transactions. Chronology is a matter of *opinion*, founded on data supplied by various sources of information, and not an article of *faith*: it may therefore be altered and improved in conformity with well-ascertained facts and legitimate evidence.

Hales, agreeing with Josephus, says that Menes, the first king of the first Egyptian dynasty, began his reign B.C. 2412 years (*Chronology*); but previous to his assuming the royal dignity, Egypt had been long ruled by a succession of priests, and in their theocracy Thoth or Hermes, *a god*, was considered by them to be the inventor of letters (the Egyptians never acknowledged *demi*-gods); and in no instance is the discovery of the art of writing ever attributed to men (Wilkinson, *Anc. Egypt.* v. 2).

There were three kinds of writing practised in Egypt:—1st. The hieroglyphical, or sacred sculptured characters; 2d. The hieratic, or sacerdotal, which was abbreviated; 3rd. The demotic, or enchorial, which became the hand in general use. Leipsius, in *The Annals of Archæological Correspondence*, Rome, 1837, maintains that the Egyptians had two colloquial dialects in use, which were very distinct; the classical or sacerdotal, and the popular. The sacred, or hieroglyphic writing, as well as the hieratic of all ages, presents the former, whilst the demotic presents the common dialect. Wilkinson thinks the hieroglyphical was the sole mode of writing in the more ancient times, yet allows the hieratic to have been employed in remote ages; but if M. Prisse's discovery be true, of a papyrus said to be written in the reign of an hitherto unknown king in the first Memphite dynasty, and in the hieratic character, its extreme antiquity will be found coeval with the hieroglyphical.

549. [Ancient Writing materials.]

If there be no enchorial writing found (for monuments or tombs which were sacred could not have common characters upon them) until about B.C. 600, that circumstance does not prove that such a mode of writing was unknown in the earliest times; for from the account of the burial of Jacob (Gen. l. 9), and from the *Song of Moses* (Exod. xv. 1, and xiv. 26), it is clear that horsemen were a part of the Egyptian army, and yet there is but one solitary specimen of a man on horseback amongst the infinite variety of sculptured representations of their manners and customs (Wilkinson, vol. i. p. 289). The priestly rulers of Egypt had continued, like the framers of caste in India, to bind down by certain definite and established laws (even to the meagre delineation of the human body in painting) every mode of action, and from that circumstance it may be inferred that the manner in which trials before the judges were carried on, was not an innovation of later times. There were royal and priestly scribes, but there must have been a different grade, employed by other classes, as in their law-courts the complainant always stated his case in writing, and the defendant also replied in writing; from which circumstance (were there none other) it may be inferred that there was some common popular writing for such purposes, besides that of the sacred hieroglyphics, or sacerdotal mode. In the paintings which represent the judgment after death, Thoth, who is called the 'Secretary of Justice,' is always portrayed with his tablet and style, just beginning to write.

The Memnonium is said to have been built about the time of Moses (B.C. 1571); over the entrance gateway to the library was inscribed, 'Remedy, or Balsam for Souls.' Over the mouldering door which led to the bibliothetical repository, Champollion read, written over the heads of Thoth and Safkh (who were the male and female deities of arts, sciences, and literature), the remarkably appropriate titles of 'President of the Library,' and 'Lady of Letters.' In the Sanctuary at Luxor, erected 200 years before the birth

of Moses, there is an inscription over Thoth, which begins, 'Discourse of the Lord of the Divine Writings.' The number of works ascribed to Thoth is stated to have been 36,525.

The great Pyramid is supposed to have been erected at least 2123 years. B.C.; in A.D. 1837, Col. Howard Vyse found in the low chamber the name of Suphis (Cheops) scored in red ochre on the rough stones behind the front facing of the room (see *Ancient Egypt*, by G. R. Gliddon, Vice-consul at Cairo; Boston, U. S. 1844).

'In Egypt nothing was done without writing. Scribes were employed on all occasions, whether to settle public or private questions, and no bargain of any consequence was made without the voucher of a written document' (Wilkinson, vol. i. p. 183). On a tomb said to have been built about the time the Pyramids were erected, is seen the representation of a steward giving an account of the number of his master's flocks and herds (vol. iv. p. 131). The scribes and stewards, who were employed in domestic suits, conveyancing, and farming, could not have used the *sacred* characters for their affairs, nor could they have been understood by the people generally if they had; it may therefore be concluded that the enchorial writing was that in popular practice.

Pliny is in error in saying that papyrus was not used for paper before the time of Alexander the Great, for papyri of the most remote Pharaonic period are found with the same mode of writing as that of the age of Cheops (Wilkinson, vol. iii. p. 150). A papyrus now in Europe, of the date of Cheops, establishes the early use of written documents, and the antiquity of paper made of the byblus, long before the time of Abraham (*Ancient Egypt*, p. 13). As papyrus was expensive, few documents of that material are found, and these are generally rituals, sales of estates, and official papers (papyrus was used until about the seventh century of our era). A soldier's leave of absence has been discovered written upon a piece of broken earthenware.

No one can dispute the extreme antiquity of Egypt as a nation, nor that, at the time of Moses, its inhabitants were in a state of advanced civilization. From the researches of travellers and hieroglyphists in late years, it is proved beyond doubt that many of the hieroglyphical inscriptions were written before the Exodus of the Hebrews, and that writing must therefore have been in use at or before that period; but it yet remains to be said from whence the art was derived.

'The earliest and surest data' (respecting alphabetical language) 'are found in the genuine palæographical monuments of the Phœnicians.' 'Amongst the most ancient coins yet known is one supposed to be B.C. 394' [ALPHABET]; but these ancient specimens of engraving or writing prove nothing as to the *origin* of the thing itself. It is possible that written characters can be traced no higher than from a Phœnician stock, for they were the immediate posterity of Noah's family. The argument here stated, as to the credible supposition that writing was given with language, is not at all invalidated by gems or coins which exhibit the oldest or most primitive form of written characters known.

The Hindoos and Chinese profess to have had amongst them the art of writing from time immemorial; but although they cannot establish the truth of their endless chronologies, yet it is highly probable that they have been acquainted with that mode of communicating and transmitting ideas from remote ages. Eight Chinese bottles have been found in different tombs at Thebes; on five of them is written the same inscription, 'The flower opens, and lo! another year.' In China writing is still symbolical, there being 80,000 characters, to which there are 214 radical keys.

Letters are generally allowed to have been introduced into Europe from Phœnicia, and to have been brought from thence by Cadmus into Greece, about fifteen centuries before Christ, which time coincides with the eighteenth Egyptian dynasty; but whilst none may deny such to have been the origin of European alphabetical characters, it does not prove the Phœnicians to have been the inventors of writing. That people occupied Phœnicia in very early times after the Deluge, and if the patriarch and his sons possessed the knowledge of letters, their posterity would doubtless preserve the remembrance and practice of such an invaluable bequest, which would be conveyed by their colonists into Greece and Africa. In the New World it was found that the Peruvians had no system of writing, whilst the Mexicans had made great advances in hieroglyphical paintings.

The Aztecs, who preceded the Mexicans, had attained much proficiency in the art, such as was adequate to the wants of a people in an imperfect state of civilization. 'By means of it were recorded all their laws, and even their regulations for domestic economy; their tribute rolls, specifying the imposts of the various towns; their mythology, rituals, and calendars, and their political annals carried back to a period long before the foundation of the city. They digested a complete system of chronology, and could specify with accuracy the dates of the most important events in their history, the year being inscribed on the margin against the particular circumstances recorded' (Prescott's *Conquest of Mexico*, i. 88).

A Mexican MS. usually looks like a collection of pictures, each forming a separate study. Their materials for writing were various. Cotton cloth, or prepared skins, were used, but generally a fine fabric made from the leaves of the aloe (*Agave Americana*), from which a sort of paper was prepared, somewhat resembling Egyptian papyrus, which could be made more soft and beautiful than parchment. When written, the documents were either made up into rolls or else into volumes, in which the paper was shut up like a folding screen, which gave the appearance of a book. When the Spaniards arrived in Mexico, great quantities of these MSS. were in the country; but the first Christian archbishop, Zurmarraga, caused them to be collected from every part of the country, and had the whole burnt! (Prescott).

In later times there have been two instances in which persons in semi-barbarous countries have constructed an alphabet, from having heard that by such means ideas were communicated in many lands. A man of the Greybo tribe, on the African coast, and a Cherokee, are said to have formed a series of letters adapted to their respective languages; but in neither case was it the result of *intuitive* genius (Gliddon, p. 17).

Various have been the materials and implements used for writing. As was before observed, paper made from the papyrus is now in existence which was fabricated 2000 years B.C. Moses hewed out of the rock two tables of *stone* on which the Commandments were written (Exod. xxxiv. 1). After that time the Jews used rolls of *skins* for their sacred writings. They also engraved writing upon gems or gold plates (Exod. xxxix. 30).

Before the discovery of paper the Chinese wrote upon thin boards with a sharp tool. Reeds and canes are still used as writing implements amongst the Tartars; and the Persians and other Orientals write for temporary purposes on leaves, or smooth sand, or the bark of trees. The Arabs in ancient times wrote their poetry upon the shoulder-blades of sheep.

The Greeks occasionally engraved their laws on tables of brass. Even before the days of Homer table-books were used, made of wood, cut in thin slices, which were painted and polished, and the pen was an iron instrument called a style. In later times these surfaces were waxed over, that the writing might be obliterated for further use. Table-books were not discontinued till the fourteenth century of the Christian era.

At length the superior preparations of paper, parchment, and vellum, became general, and superseded other materials in many, and all entirely civilized, nations.

The European mode of writing, with its perfect and complete apparatus of pen, ink, and paper, is too well known to need description in these pages, and would be irrelevant in an article like the present.—S. P.

Y.

YANSHUPH (יַנְשׁוּף; Lev. ii. 17; Deut. xiv. 16; Isa. xxxiv. 11). In the Septuagint and Vulgate it is translated 'Ibis,' but in our version 'Owl;' which last Bochart supports, deriving the name from נֵשֶׁף *nesheph*, 'twilight' [Owl.]. It may be remarked that 'Ibis' in Europe, and even in mediæval and modern Egypt, was a very indefinite name, until Bruce first pointed out, and Cuvier afterwards proved, what we are to understand by that denomination. All reasoning therefore upon the question by interpreters of the Hebrew anterior to the establishment of this fact must of necessity be inconclusive; and though Parkhurst asserts that in Coptic Yansuph was rendered by ⲙⲓⲣ and ⲓⲣ, his inference remains without force so long as he and the Copts are ignorant what bird these names really indicate. It is not, as the older commentators believed, a great bird of the heron or stork tribes (*Ardea* of Linn. and Hasselquist); nor, as was subsequently the opinion, a *Tantalus*, though correct in its former definition. The real bird is not the *Tantalus Ibis* of Linnæus, or Abu-ba-Rara, but one of smaller dimensions, probably the Abou-hannes of Bruce, and certainly the *Ibis religiosa* of Cuvier, who discovered specimens in the mummy state, such as are now not uncommon in museums, and, by comparison, proved them to be identical with his sacred ibis. This species is in size somewhat less than a fowl, has the head and neck bare, and a curved bill resembling that of a curlew, all black; the feet and quill-feathers the same; and from the rump there are projected over the tail a number of black, delicate, unbarbed feathers, giving a marked character to the bird, which in all the rest of its plumage is white. The species is nowhere abundant; it occurs, in the season, on the Upper Nile, a few in company, seldom coming down into Lower Egypt, but extending over central Africa to the Senegal. A bird so rare about Memphis, and totally unknown in Palestine, could not be the Yanshuph of the Pentateuch, nor could the black ibis which appears about Damietta, nor any species, strictly tenants of hot and watery regions, be well taken for it. Bochart and others, who refer the name to a species of owl, appear to disregard two other names ascribed to owls in the 16th verse of the same chapter of Leviticus. If, therefore, an owl was here again intended, it would have been placed in the former verse, or near to it. In this difficulty, considering that the Seventy were not entirely without some grounds for referring the Hebrew Yanshuph to a wader; that the older commentators took it for a species of ardea; and that the root of the name may refer to twilight, indicating a crepuscular bird; we are inclined to select the night heron, as the only one that unites these several qualities. It is a bird smaller than the common heron, distinguished by two or three white plumes hanging out of the black-capped nape of the male. In habit it is partially nocturnal. The Arabian Abou-onk ?, if not the identical, is a close congener of the species, found in every portion of the temperate and warmer climates of the earth: it is an inhabitant of Syria, and altogether is free from the principal objections made to the ibis and the owl. The Linnæan single *Ardea nycticorax* is now typical of a genus of that name, and includes several species of night herons. They fly abroad at dusk, frequent the sea shore, marshes, and rivers, feeding on mollusca, crustacea, and worms, and have a cry of a most disagreeable nature. This bird has been confounded with the night hawk, which is a goat-sucker (caprimulgus), not a hawk.—C. H. S.

550. [Night Heron of Arabia.]

YEAR (שָׁנָה). The Hebrew year consisted of twelve unequal months, which, previously to the exile, were lunar, as may be seen from the names of the moon, חדשׁ and ירח, which signify respectively a month (so with us moon from month, German *mond*); though Credner, relying too much on hypothesis, especially on the assumption of the late origin of the Pentateuch, has endeavoured to show that, until the eighth century before Christ, the Israelites reckoned by solar years. The twelve solar months made up only 354 days, constituting a year too short by no fewer than eleven days. This deficiency would have soon inverted the year, and could not have existed even for a short period of time without occasioning derangements and serious inconvenience to the Hebrews, whose year was so full of festivals. At an early day then we may well believe a remedy was provided for this evil. The course which the ancients pursued is unknown, but Ideler (*Chronol.* i. 490) may be consulted for an ingenious conjecture on the subject. The later Jews intercalated a month every two, or every three years, taking care, however, to avoid making the seventh an intercalated year. The supplementary month was added at the termination of the sacred year, the twelfth month (February and March), and as this month bore the name of Adar, so the interposed month was called Veadar (ואדר), or Adar the Second. The year, as appears from the ordinary reckoning of the months (Lev. xxiii. 34; xxv. 9; Num. ix. 11; 2 Kings xxv. 8; Jer. xxxix. 2; comp. 1 Macc. iv. 52; x. 21), began with the month Nisan (Esth. iii. 7), agreeably to an express direction given by Moses (Exod. xii. 2; Num. ix. 1). This commencement is generally thought to be that of merely the ecclesiastical year; and most Jewish, and many Christian authorities, hold that the civil year originally began, as now, with the month Tisri; the Rabbins conjecturally assigning as the reason that this was the month in which the creation took place. Josephus' statement is as follows: 'Moses appointed that Nisan should be the first month for their festivals, because he brought them (the Israelites) out of Egypt in that month; so that this month began the year, as to all the solemnities they observed to the honour of God, although he preserved the original order of the months as to selling and buying and other ordinary affairs (*Antiq.* i. 3. 3). Winer, however, is of opinion that the commencement of the year with Tisri, together with the beginning of the sacred year in Nisan, is probably a post-exilian arrangement, designed to commemorate the first step of the return to the native soil of Palestine (Esth. iii. 1; Neh. vii. 73; viii. 1, sq.); an idea, however, to which they only can give assent who hold that the changes introduced on the return from Babylon were of a constructive rather than a restoratory nature—a class of authorities with which the writer has few bonds of connection. The reader should consult Exod. xxiii. 16; xxxiv. 22. But the commencement of the civil year with Tisri, at whatever period it originated, had after the exile this advantage,—that it accorded with the era of the Seleucidæ, which began in October. The ancient Hebrews possessed no such thing as a formal and recognised era. Their year and their months were determined and regulated, not by any systematic rules of astronomy, but by the first view or appearance of the moon. In a similar manner they dated from great national events, as the departure from Egypt (Exod. xix. 1; Num. xxxiii. 38; 1 Kings vi. 1); from the ascension of monarchs, as in the books of Kings and Chronicles; or from the erection of Solomon's temple (1 Kings viii. 1; ix. 10); and at a later period, from the commencement of the Babylonish captivity (Ezek. xxxiii. 21; xl. 1). When they became subjects of the Græco-Syrian empire they adopted the Seleucid era, which began with the year B.C. 312, when Seleucus conquered Babylon.—J. R. B.

YSOP OR HYSSOP. Reference was from Hyssop to the German form of the name, as the author was engaged in a course of investigation, which he hoped would lead to some satisfactory information. The result he communicated in a paper read before the Royal Asiatic Society, and published in their Journal for November, 1844. From the passages in which *esobh* and *hyssop* are mentioned in the Old and New Testaments, and which are enumerated in the article Hyssop, the author inferred that any plant answering to all that was required should, in the first place, be found in every one of the places and situations where it is mentioned as existing in Scripture. Thus it should be found in Lower Egypt (Exod. xii. 22); in the desert of Sinai (Lev. xiv. 4, 6, and 52; Num. xix. 6, 18); in the neighbourhood of Jerusalem (John xix. 29); secondly, that it should be a plant growing on walls or rocky situations (1 Kings iv. 33); and, finally, that it should be possessed of some cleansing properties (Ps. li. 7); though it is probable that in this passage it is used in a figurative sense. It should also be large enough to yield a stick, and it ought, moreover, to have a name in the Arabic or cognate languages, similar to the Hebrew name. This, we have before seen, is written *Esob* and *Esobh*, also *Esof;* and in the Chaldee version it is *Esofa*. The author stated that his attention had been drawn to the subject when collating the list of drugs in his MS. catalogue, mentioned vol. i. p. 6, with that in the great work, entitled *Continns*, of Rhages, by finding that the Arab author described two kinds of hyssop, one of them growing on the mountain of the temple, that is, of Jerusalem. Celsius, indeed (*Hierobot.* i. 407), mentions the same plant—*Hyssopus in montibus Hierosolymorum*, or in Arabic *Zoofa bu jebal al kuds*. Jerusalem is now called by the Arabs *El Kuds*, 'the Holy,' and by Arabian writers *Beit-el-Mukdis*, or *Beit-al-Mukuddus*, 'the Sanctuary.' In connection with this the author observed, that Burckhardt had described a plant, called *alsef*, which he had met with in several wadeys about Mount Sinai, creeping up the mountain side like a parasitic plant, its branches covered with small thorns. From the name and description the author inferred that this must be the *caper plant* (*capparis spinosa* of botanists), or some closely allied species. For he found on investigation, that though *kabir* is the ordinary Arabic name of the *caper*, it is also called *asaf*, as may be seen in the *Alfag. Udwich*, translated by Mr. Gladwin. So in the *Kamus*, *asub* is *al kubbus;* in Freytag's *Lexicon Arabico-Latinum*, *asaf* is translated *capparis*, &c. The similarity in name being sufficiently great, the author pro-

ceeds to show that the caper bush corresponds in nearly every thing that is required.

Thus the caper plant is well known to be indigenous in Lower Egypt, as mentioned by De Lile, Forskal, and Prosper Alpinus, &c. Bové says, 'Le Mont Sainte Catherine est au sud-sud-ouest du Mont Sinai. Dans les déserts qui environnent ces montagnes j'ai trouvé *capparis spinosa*.' He also found it among the ruins near Jerusalem, as Belon and Rauwolf had done previously. That it grows upon walls is sufficiently well known. De Candolle says it is found 'in muris et rupestribus Europæ Australis et Orientis.' That it possessed, or was supposed to possess, cleansing or detergent properties, may be seen in the various accounts of it from the time of Hippocrates. Pliny remarks especially, that it is useful in a skin disease nearly allied to leprosy. It is not a little remarkable, that it was in the ceremonies of purification from this disease that *esof* was employed by the Israelites. It remains only to see whether the caper plant would yield a stick long enough for a man with his outstretched arm to be able to raise the sponge dipped in vinegar to the lips of our Saviour. The cross, to be sufficiently strong, could not have been very lofty, to admit being borne along; and therefore an ordinary sized stick would be long enough for the purpose. Such a stick a shrub like the caper plant, growing in a congenial climate, would supply. Pliny describes the *capparis* as a shrub of a hard and woody substance. The term calamus was, however, used in a much more general sense than is generally supposed [KANEH], and Pliny employs the phrase 'imprimere calamum,' to signify grafting; as 'kalm lngana' is used in the present day in India. Besides this, every part of the caper plant was preserved in vinegar in ancient times (Pliny); which may explain the presence of the vessel full of vinegar; and a reed may have been employed in collecting the flower buds, or fruit of the caper bush, growing on walls or the sides of rocks. If such a stick were employed, it would naturally be called the *caper*, or *hyssop* stick.

Hence the author concludes, that as the caper plant has an Arabic name, *asuf*, similar to the Hebrew *esob* or *esof*, as it is found in Lower Egypt, in the deserts of Sinai, and in New Jerusalem; as it grows upon rocks and walls, was always supposed to be possessed of cleansing qualities, is large enough to yield a stick; and as its different parts used to be preserved in vinegar, as its buds now are; he is warranted, from the union of all these properties in this plant, corresponding so closely to those of the original *esof*, in considering it as proved that the *caper plant* is the *hyssop* of Scripture.—J. F. R.

Z.

1. ZABAD (זָבָד, *God-given*; Sept. Ζαβέδ), a person of the tribe of Judah, mentioned in 1 Chron. ii. 36, among the descendants of Sheshan, by the marriage of his daughter with an Egyptian servant [JARHA; SHESHAN].

2. ZABAD, a grandson of Ephraim, who, with others of the family, was killed during the life-time of Ephraim, by the men of Gath, in an attempt which the Hebrews seem to have made to drive off their cattle (1 Chron. vii. 21). [See EPHRAIM.]

3. ZABAD, son of an Ammonitess named Shimeath, who, in conjunction with Jehozabad, the son of a Moabitess, slew King Joash, to whom they were both household officers, in his bed (2 Kings xii. 21; 2 Chron. xxiv. 25, 26). In the first of these texts he is called Jozachar. The sacred historian does not appear to record the mongrel parentage of these men as suggesting a reason for their being more easily led to this act, but as indicating the sense which was entertained of the enormity of Joash's conduct, that even they, though servants to the king, and though only half Jews by birth, were led to conspire against him 'for the blood of the sons of Jehoiada the priest.' It would seem that their murderous act was not abhorred by the people; for Amaziah, the son of Joash, did not venture to call them to account till he felt himself well established on the throne, when they were both put to death (2 Kings xiv. 5, 6; 2 Chron. xxv. 3, 4).

4. ZABAD, one of the persons who, at the instance of Ezra, put away the foreign wives they had taken after the return from captivity (Ezra x. 27).

ZABUD (זָבוּד, *bestowed*; Sept. Ζαβούθ), a son of Nathan the prophet, who held under Solomon the important place of 'king's friend,' or favourite (1 Kings iv. 5), which Hushai had held under David (1 Chron. xxvii. 33), and which a person named Elkanah held under Ahaz (2 Chron. xxviii. 7). Azariah, another son of Nathan, was 'over all the (household) officers' of king Solomon; and their advancement may doubtless be ascribed not only to the young king's respect for the venerable prophet, who had been his instructor, but to the friendship he had contracted with his sons during the course of education. The office, or rather honour, of 'friend of the king,' we find in all the despotic governments of the East. It gives high power, without the public responsibility which the holding of a regular office in the state necessarily imposes. It implies the possession of the utmost confidence of, and familiar intercourse with, the monarch, to whose person 'the friend' at all times has access, and whose influence is therefore often far greater, even in matters of state, than that of the recognised ministers of government.

ZABULUN. [ZEBULUN.]

ZACCHEUS (זַכַּאי; Ζακχαῖος, *justus?*), a superintendent of taxes at Jericho. Having heard of the Redeemer, he felt a great desire to see him as he drew near that place; for which purpose he climbed up into a sycamore-tree, because he was little of stature. Jesus, pleased with this manifestation of his eagerness, and knowing that it proceeded from a heart not far from the kingdom of God, saw fit to honour Zaccheus by becoming his guest. This offended the self-righteous Jews, who objected that 'he was gone to be a guest with a man that is a sinner.' This offensive imputation was met by Zaccheus in the spirit of the Mosaic conception of goodness—'The half of my goods I give to the poor; and if I have taken anything from any man by false accusation, I restore him fourfold.' He that knew the heart of

man knew, not only the truth of this statement, but that the good works of Zaccheus emanated from right motives, and therefore terminated the conversation with the words, 'This day is salvation come to this house, forsomuch as he also is a son of Abraham'—a declaration which, whether Zaccheus was by birth a Jew or not, signifies that he had the same principle of faith which was imputed to Abraham, the father of the faithful, for righteousness (Luke xix. 2, sq.).

Tradition represents Zaccheus as the first Christian bishop of Cæsarea.—J. R. B.

ZACHARIAH. [Zechariah.]

ZACHARIAS. [Zechariah.]

ZADOK, derived from the root צדק, corresponding with the Latin *justus*. There are several men of this name mentioned in the Old Testament.

1. In the reign of David, Zadok (the son of Ahitub and father of Ahimaaz (1 Chron. vi. 8) and Ahimelech were the priests (2 Sam. viii. 17). Zadok and the Levites were with David when, after the middle of the eleventh century B.C., he fled from Absalom; but the king ordered Zadok to carry back the ark of God into the city (2 Sam. xv. 24, 25, 27, 29, 35, 36; xviii. 19, 22, 27). The king, also, considering Zadok a seer, commanded him to return to the city, stating that he would wait in the plain of the wilderness until he should receive such information from him and his son Ahimaaz, and also from the son of Abiathar, as might induce him to remove farther away. On hearing that Ahithophel had joined Absalom, David requested Hushai, his friend, to feign himself to be also one of the conspirators, and to inform Zadok and Abiathar of the counsels adopted by Absalom and his rebellions confederates. The request of David was complied with, and the plans of the rebels made known to David by the instrumentality of Zadok and the others.

After Absalom was vanquished, David sent to Zadok and Abiathar, the priests, saying, 'Speak unto the elders of Judah, Why are ye the last to bring the king back to his house?' &c. (2 Sam. xix. 11; xx. 25). When Adonijah attempted to succeed to the throne, Abiathar countenanced him, but Zadok was not called to the feast at which the conspirators assembled. King David sent for Zadok and Nathan the prophet to anoint Solomon king (1 Kings i. 32-45).

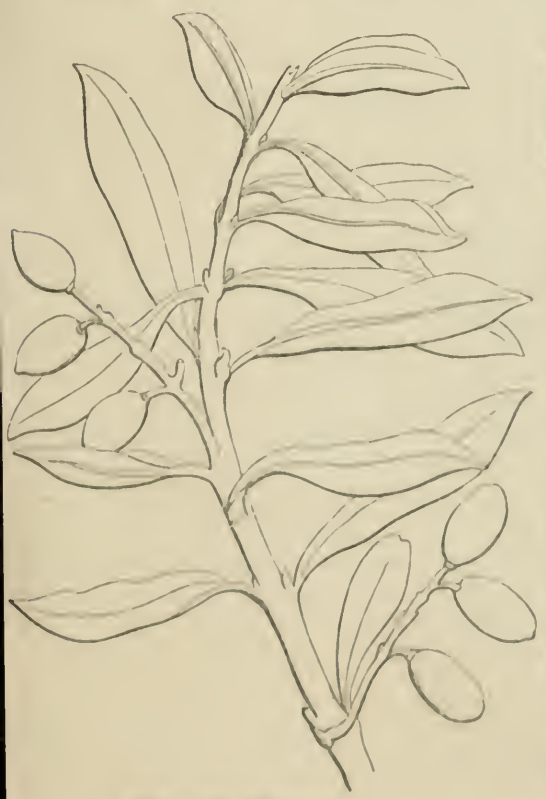
2. In 1 Chron. vi. 12, and Neh. xi. 11, another Zadok is mentioned, the father of whom was also called Ahitub, and who begat Shallum. This Zadok descended from Zadok the priest in the days of David and Solomon, and was the ancestor of Ezra the scribe (Ezra vii. 2). We learn from Ezek. xl. 46; xliii. 19; xliv. 15; xlviii. 11, that the sons of Zadok were a pre-eminent sacerdotal family.

3. Zadok was also the name of the father-in-law of Uzziah and the grandfather of king Jotham, who reigned about the middle of the eighth century before Christ (2 Kings xv. 33; 2 Chron. xxvii. 1).

4 and 5. Two priests of the name of Zadok are mentioned in Neh. iii. 4-29, as having assisted in rebuilding the wall of Jerusalem about B.C. 445.

The Zadok mentioned in Neh. x. 22 as having sealed the covenant, and Zadok the scribe named in Neh. xiii. 13, are probably the same who helped to build the wall.—C. H. F. B.

ZAIT, or SAIT (זַיִת), is universally acknowledged to be the Olive-tree. The Latin author Ammianus Marcellinus, as quoted by Celsius (vol. ii. p. 331), was acquainted with it, for he says of a place in Mesopotamia, '*Zaitam* venimus locum, qui *Olea* arbor interpretatur.' *Zaitoon* is the Arabic name by which the olive is known from Syria to Caubul, and described in the works of both Arabic and Persian authors. It is more than probable that it was introduced from Asia into Europe. The Greeks, indeed, had a tradition that the first branch of it was carried by a dove from Phœnicia to the temple of Jupiter in Epirus, where the priests received and planted it; and Pliny states that there were no olive-trees in Italy or Spain before the 173rd year from the foundation of the city of Rome. Though the olive continues to be much cultivated in Syria, it is yet much more extensively so in the south of Europe, whence the rest of the world is chiefly supplied with olive-oil.



No tree is more frequently mentioned by ancient authors, nor was any one more highly honoured by ancient nations. By the Greeks it was dedicated to Minerva, and even employed in crowning Jove, Apollo, and Hercules, as well as emperors, philosophers, and orators, and 'quivis alii, cæteros mortales virtute et industria supergressi, olea coronantur.' By the Romans also it was highly honoured. 'Oleæ,' says Pliny, 'honorem Romana majestas magnum præbuit;' and Columella describes it as 'prima omnium arborum.' It is not wonderful that almost all the ancient authors, from the time of Homer, so frequently mention it, and that, as Horace says (*Carm.* i. 7)—

'—— sunt quibus unum opus est ——
Undique decerptam fronti præponere olivam.'

The olive-tree is of slow growth, but remarkable for the great age it attains. It never, however, becomes a very large tree, though sometimes two or three stems rise from the same root, and reach from twenty to thirty feet high. The leaves are in pairs, lanceolate in shape, of a dull green on the upper, and hoary on the under surface. Hence in countries where the olive is extensively cultivated, the scenery is of a dull character from this colour of the foliage. The fruit is an elliptical drupe, with a hard stony kernel, and remarkable from the outer fleshy part being that in which much oil is lodged, and not, as is usual, in the almond of the seed. It ripens from August to September.

Of the olive-tree two varieties are particularly distinguished; the long-leafed, which is cultivated in the south of France and in Italy, and the broad-leafed in Spain, which has also its fruit much larger than that of the former kind. The wild olive-tree, as well as the practice of grafting, has been noticed in the article Agrileia. That the olive grows to a great age, has long been known. Pliny mentions one which the Athenians of his time considered to be coeval with their city, and therefore 1600 years old. Near Terni, in the vale of the cascade of Marmora, there is a plantation of very old trees, supposed to consist of the same plants that were growing there in the time of Pliny. Lady Calcott states that at Teri-

concio, on the mountain-road between Tivoli and Palestrina, there is an ancient olive-tree of large dimensions, which, unless the documents are purposely falsified, stood as a boundary between two possessions even before the Christian era, and in the second century was looked upon as very ancient. The difficulty on this point arises from a fresh tree springing up from the old stump. Chateaubriand says: 'Those in the garden of Olivet (or Gethsemane) are at least of the times of the Eastern empire, as is demonstrated by the following circumstance. In Turkey every olive-tree found standing by the Mussulmans, when they conquered Asia, pays one *medina* to the Treasury, while each of those planted since the conquest is taxed half its produce. The eight olives of which we are speaking are charged only eight *medinas*.' By some, especially by Dr. Martin, it is supposed that these olive-trees may have been in existence even in the time of our Saviour. Dr. Wilde describes the largest of them as being twenty-four feet in girth above the roots, though its topmost branch is not thirty feet from the ground; Bové, who travelled as a naturalist, asserts that the largest are at least six yards in circumference, and nine or ten yards high; so large, indeed, that he calculates their age at 2000 years.

551. [Olea Europea.]

The wood of the olive-tree, which is imported into this country from Leghorn, is described by M. Holtzapffel to be 'like that of the box, but softer, with darker grey coloured veins. The roots have a very pretty knotted and curly character; they are much esteemed on the continent for making embossed boxes, pressed into engraved metallic moulds.' Furniture is made of the olive-tree in Italy, and the closeness of the grain fits it even for painters' pallettes. A resin-like exudation is obtained from it, which was known to the ancients, and is now sometimes called olive-gum; but the fruit, with its oil, is that which renders the tree especially valuable. The green unripe fruit is preserved in a solution of salt, and is well known at our desserts. The fruit when ripe is bruised in mills, and the oil pressed out of the paste. Different qualities are known in commerce, owing partly to variations in the fruit, but more to the greater or less care bestowed in the collection of it, and in the subjecting of it to pressure.

The olive is one of the earliest of the plants specifically mentioned in the Bible, the fig being the first. Thus, in Gen. viii. 11, the dove is described as bringing the olive-branch to Noah. It is always enumerated among the valued trees of Palestine; which Moses describes (Deut. vi. 11; viii. 8) as 'a land of oil-olive and honey' (so in xxviii. 40, &c.); and (2 Chron. ii. 10) Solomon gave to the labourers sent him by Hiram, king of Tyre, 20,000 baths of oil. Besides this, immense quantities must have been required for home consumption, as it was extensively used as an article of diet, for burning in lamps, and for the ritual service. The olive still continues one of the most extensively cultivated of plants. Mr. Kitto mentions that in a list he had made of references to all the notices of plants by the different travellers in Palestine, those of the presence of the olive exceed one hundred and fifty, and are more numerous by far than to any other tree or plant. The references to vines, fig-trees, mulberries, and oaks, rank next in frequency. Something of this must, however, depend upon the knowledge of plants of the several travellers. Botanists, even from Europe, neglect forms with which they are unacquainted, as, for instance, some of the tropical forms they meet with. Not only the olive-oil, but the branches of the tree were employed at the Feast of Tabernacles. The wood also was used (1 Kings vi. 23) by Solomon for making the cherubim (vers. 31, 32), and for doors and posts 'for the entering of the oracle,' the former of which were carved with cherubim, and palm-trees, and open flowers. The olive being an evergreen was adduced as an emblem of prosperity (Ps. lii. 8), and it has continued, from the earliest ages, to be an emblem of peace among all civilized nations. The different passages of Scripture are elucidated by Celsius (*Hierobot.* ii. p. 330), to whom we have been much indebted in most of the botanical articles treated of in this work, from the care and learning which he has brought to bear on the subject.—J. F. R.

ZALMON (צַלְמוֹן; Sept. Σελμών), a mountain in Samaria near to Shechem (Judg. ix. 48). Many suppose this to be the same with the Zalmon of Ps. lxviii. 15: 'where the Almighty scattered kings in it (the land), there was snow as in Zalmon;' i. e. the fields were whitened with the bones of the slain. So Gesenius: but Robinson says 'The only high mountains around Shechem are Ebal and Gerizim, and these would be first covered with snow.' True: but may not Zalmon be another name for either Ebal or Gerizim?

ZALMUNNA. [Zebah and Zalmunna.]

ZAMZUMMIMS (זַמְזֻמִּים; Sept. Ζομμείν), a race of giants dwelling anciently in the territory

afterwards occupied by the Ammonites, but extinct before the time of Moses (Deut. ii. 20).

ZANOAH (זָנוֹחַ, *marsh*, *bog*), one of the towns of Judah 'in the valley' (Josh. xv. 34); which Jerome identifies with a village called in his time Zanua, on the borders of Eleutheropolis, on the road to Jerusalem (*Onomast.* s. v. 'Zanohua'). The name of Zanua is still connected with a site on the slope of a low hill not far east of Ain Shems (Beth-shemesh).

ZAPHNATH-PAANEAH (צָפְנַת פַּעְנֵחַ, Sept. Ψονθομφανήχ), an Egyptian name given by Pharaoh to Joseph in reference to his public office. The genuine Egyptian form of the word is supposed to have been more nearly preserved by the Sept. translator, as above; in which both Jablonsky (*Opusc.* c. 207-216) and Rosellini (*Mon. Storici*, i. 185) recognise the Egyptian PSOTMFENEH, 'the salvation,' or 'saviour of the age;' which corresponds nearly enough with Jerome's interpretation, 'Salvator mundi.' Gesenius and others incline, however, rather to regard its Egyptian form as PSONTMFENEH, 'sustainer of the age,' which certainly is a better meaning. This, in Hebrew letters, would probably be represented by פצנת פנעח, Paznath-Paaneah; but in the name as it now stands the letters פצ are transposed, in order to bring it nearer to the Hebrew analogy. Concerning the Egyptian root SNT, *sustentare*, *tueri*, see Champollion, *Gramm.* p. 380; Pezron, *Lex. Copt.* p. 207.

ZAREPHATH. [SAREPTA.]

ZEALOTS. The followers of Judas the Gaulonite or Galilean [JUDAS]. Josephus speaks of them as forming the 'fourth sect of Jewish philosophy,' and as distinguished from the Pharisees chiefly by a quenchless love of liberty and a contempt of death. Their leading tenet was the unlawfulness of paying tribute to the Romans, as being a violation of the theocratic constitution. This principle, which they maintained by force of arms against the Roman government, was soon converted into a pretext for deeds of violence against their own countrymen; and during the last days of the Jewish polity, the Zealots were lawless brigands or guerrillas, the pest and terror of the land. After the death of Judas, and of his two sons, Jacob and Simon (who suffered crucifixion), they were headed by Eleazar, one of his descendants, and were often denominated *Sicarii*, from the use of a weapon resembling the Roman Sica (Joseph. *Antiq.* xviii. 1; *De Bell. Jud.* iv. 1-6; vii. 8; Lardner's *Credibility*, pt. i. b. i. ch. 6, 9; Kitto's *Palestine*, pp. 741, 751).—J. E. R.

ZEBAH AND ZALMUNNA, chiefs of the Midianites, whom Gideon defeated and slew [GIDEON].

ZEBEDEE (Ζεβεδαῖος; in Hebrew, זַבְדִּי *Zabdi*, זַבְדָיָה, *Jehovah's gift*), husband of Salome, and father of the apostles James and John (Matt. x. 2; xx. 20; xxvi. 37; xxvii. 56; Mark iii. 17; x. 35; John xxi. 2). He was the owner of a fishing boat on the lake of Gennesaret, and, with his sons, followed the business of a fisherman. He was present, mending the nets with them, when Jesus called James and John to follow him (Matt. iv. 21; Mark i. 19; Luke v. 10); and as he offered no obstacle to their obedience, but remained alone without murmuring in the vessel, it is supposed that he had been previously a disciple of John the Baptist, and, as such, knew Jesus to be the Messiah. At any rate, he must have known this from his sons, who were certainly disciples of the Baptist. It is very doubtful whether Zebedee and his sons were of that very abject condition of life which is usually ascribed to them. They seem to have been in good circumstances, and were certainly not poor. Zebedee was the owner of a 'ship,' or fishing smack, as we should call it—and, perhaps, of more than one; he had labourers under him (Mark i. 20); his wife was one of those pious women whom the Lord allowed 'to minister unto him of their substance;' and the fact that Jesus recommended his mother to the care of John, implies that he had the means of providing for her; whilst a still further proof that Zebedee's family was not altogether mean, may be found, perhaps, in the fact, that John was personally known to the high-priest (John xviii. 16).

1. ZEBOIM (צְבֹעִים; Sept. Σαβίμ), a valley and town in the tribe of Benjamin (1 Sam. xiii. 18; Neh. xi. 34).

2. ZEBOIM (צְבֹאִים; Sept. Σεβωείμ), a city in the vale of Siddim, destroyed along with Sodom and Gomorrah (Gen. x. 19; xiv. 2; Hos. xi. 8). [SODOM.]

ZEBUL (זְבֻל, *a dwelling*; Sept. Ζεβούλ), an officer whom Abimelech left in command at Shechem in his own absence; and who discharged with fidelity and discretion the difficult trust confided to him (Judg. ix. 29-41). See the particulars in ABIMELECH.

ZEBULUN (זְבֻלוּן, *habitation*; Sept. Ζαβουλών), the sixth and last son of Jacob by Leah (Gen. xxx. 19, seq.; xxxv. 23), who, in the order of birth, followed his brother Issachar, with whom, in history, as in the promised land, he was closely connected (Deut. xxxiii. 18). Zebulun was the founder of the tribe which bore his name (Gen. xlvi. 14), and which, while yet in the wilderness, was respectable for numbers (Num. i. 30; xxvi. 26). Zebulun obtained its lot in north Palestine between Naphtali on the north and Issachar on the south, while Asher stretched along both it and Naphtali on the west (Josh. xix. 10, seq.). The country of the Zebulonites bordered towards the east on the south-western side of the lake of Tiberias, and was connected with the Mediterranean by means of Carmel (Gen. xlix. 13). Its inhabitants in consequence took part in seafaring concerns (Joseph. *Antiq.* v. 1. 22). They failed to expel all the native race, but made those of them that remained tributaries (Judg. i. 30). One of the judges of Israel, Elon, was a Zebulonite (Judg. xii. 11). A city lying on the borders of Asher also bore the name of Zebulun (Josh. xix. 27).—J. R. B.

ZECHARIAH (זְכַרְיָה, *whom Jehovah remembers*; Sept. and N. T. Ζαχαρίας), a very common name among the Jews, borne by the following persons mentioned in Scripture.

1. ZECHARIAH, son of Jeroboam II., and fourteenth king of Israel. He ascended the throne in B.C. 772, and reigned six months. It has been shown in the article ISRAEL, that from undue deference to a probably corrupted number, which

ascribes 41 years to the reign of Jeroboam II., chronologers have found it necessary to *suppose* anarchy or an interregnum of 11 years, during which his son Zechariah was kept from the throne. But there is no appearance of this in the sacred narrative, and it was not likely to follow a reign so prosperous as Jeroboam's. The few months of Zechariah's reign just sufficed to evince his inclination to follow the bad course of his predecessors; and he was then slain by Shallum, who usurped the crown. With his life ended the dynasty of Jehu (2 Kings xiv. 29; xv. 8-12).

2. Zechariah, high priest in the time of Joash, king of Judah. He was son, or perhaps grandson, of Jehoiada and Jehosheba; the latter was the aunt of the king, who owed to her his crown, as he did his education and throne to her husband [Joash]. Zechariah could not bear to see the evil courses into which the monarch eventually fell, and by which the return of the people to their old idolatries was facilitated, if not encouraged. Therefore, when the people were assembled at one of the solemn festivals, he took the opportunity of lifting up his voice against the growing corruptions. This was in the presence of the king, in the court of the temple. The people were enraged at his honest boldness, and with the connivance of the king, if not by a direct intimation from him, they seized the pontiff, and stoned him to death, even in that holy spot, 'between the temple and the altar.' His dying cry was not that of the first Christian martyr, 'Lord, lay not this sin to their charge' (Acts vii. 60), but 'The Lord look upon it, and require it' (2 Chron. xxiv. 20-22). It is to this dreadful affair that our Lord alludes in Matt. xxiii. 35; Luke xi. 51. At least, this is the opinion of the best interpreters, and that which has most probability in its favour. The only difficulty arises from his being called the son of Barachias, and not of Jehoiada: but this admits of two explanations—either that Zechariah, though called the 'son' of Jehoiada in the Old Testament, was really his grandson, and son of Barachias, who perhaps died before his father; or else that, as was not uncommon among the Jews, Jehoiada had two names, and Jesus called him by that by which he was usually distinguished in his time, when the Jews had acquired a reluctance to pronounce those names which, like that of Jehoiada, contained the sacred name of Jehovah. See Doddridge, Le Clerc, Kuinoel, Wetstein, and others, on Matt. xxiii. 35.

3. Zechariah, described as one 'who had understanding in the visions of God' (2 Chron. xxvi. 7). It is doubtful whether this eulogium indicates a prophet, or simply describes one eminent for his piety and faith. During his lifetime Uzziah, king of Judah, was guided by his counsels, and prospered: but went wrong when death had deprived him of his wise guidance. Nothing is known of this Zechariah's history. It is possible that he may be the same whose daughter became the wife of Ahaz, and mother of Hezekiah (2 Kings xvi. 1, 2; 2 Chron. xxix. 1).

4. Zechariah, son of Jeberechiah, a person whom, together with Urijah the high priest, Isaiah took as a legal witness of his marriage with 'the prophetess' (Isa. viii. 2). This was in the reign of Ahaz, and the choice of the prophet shows that Zechariah was a person of consequence. Some confound him with the preceding; but the distance of time will not admit their identity. He may, however, have been the descendant of Asaph, named in 2 Chron. xxix. 13.

5. Zechariah, the eleventh in order of the minor prophets, was 'the son of Berechiah, the son of Iddo, the prophet.' The meaning of the word בן־עדו has been disputed, some affirming that Iddo was not the *grandfather*, as the formula seems to indicate, but the *father* of Zechariah, and thus rendering the clause with Jerome, 'filium Barachiae, filium Addo,' or with some MSS. of the Septuagint, τὸν τοῦ Βαραχίου, υἱὸν Ἀδδώ. Jerome likewise refers to his peculiar rendering in his notes. Others of the fathers also adopted it, such as Cyril of Alexandria, who attempts to solve the difficulty created by it by maintaining that the one was the natural, the other the spiritual parent, of the prophet—Berechiah being his father κατὰ τὴν σάρκα, and Iddo the prophet, κατὰ πνεῦμα. Others have justified this translation by assigning both names to Zechariah's father, as if he had worn them successively at different periods of his life, or as if one of them had been a cognomen. But the version of Jerome and the Seventy is a false one. Analogy declares against it, and its origin is to be traced to Ezra v. 1, and vi. 14, where the prophet is named only 'Zechariah the son of Iddo.' The words בר־עדוא denote merely 'grandson of Iddo' (Gesenius, *Thesaur.* p. 216), and the paternal name may have been omitted, because of its comparative obscurity, while the grand-paternal name is inserted, because of its national popularity. It was a very foolish mistake of Jerome to confound the Iddo named in connection with this prophet as his ancestor with Iddo the seer, who flourished some centuries before under Jeroboam, first king of Israel (Hieronym. *Comment. ad Zach.*). The term נביא in the first verse belongs, not to Iddo, but to Zechariah, as the Septuagint and Vulgate properly render it, or as it appears in Henderson's version—'The word of Jehovah was communicated to Zechariah (the son of Berechiah, the son of Iddo) the prophet.' The probability is, that Iddo is the person mentioned in Nehemiah xii. 4, as one of the sacerdotal prophets, who had returned from Babylon with Joshua and Zerubbabel. Berechiah, son of Iddo, and father of Zechariah, seems to have died young, for in Nehemiah xii. 16, Zechariah is said to be Iddo's successor, under Joiakim, son of Joshua. Thus the prophet's descent is, in Ezra, traced at once from his grandfather. Compare Gen. xxix. 5, and xxxi. 28—55. Should this theory be correct, Zechariah exercised the priestly as well as the prophetical office. The name signifies *one whom Jehovah remembers*—a name very common among the Jews (three others bearing it seem also to have been prophets), and not therefore specially given to this inspired agent, as Jerome thought, because in his days μνημὴ Κυρίου, *remembrance of God* and of his kindness prevailed intensely among the returned exiles.

Zechariah seems to have entered upon his office in early youth (Zech. ii. 4). The period of his introduction to it is specified as the eighth month of the second year of Darius, a very short time later than the prophet Haggai. The mission of Zechariah had especial reference to the affairs

of the nation that had been restored to its territory. The second edict, granting permission to rebuild the temple, had been issued, and the office of Zechariah was to incite the flagging zeal of the people, in order that the auspicious period might be a season of religious revival, as well as of ecclesiastical re-organization; and that the theocratic spirit might resume its former tone and energy in the breasts of all who were engaged in the work of restoring the 'holy and beautiful house,' where their fathers had praised Jehovah. The prophet assures them of success in the work of re-erecting the sacred edifice, despite of every combination against them; for Zerubbabel 'should bring forth the head stone with shouting, Grace, grace unto it—comforts them with a solemn pledge that, amidst fearful revolutions and conquests by which other nations were to be swept away, they should remain uninjured; for, says Jehovah, 'He that toucheth you toucheth the apple of mine eye'—sketches in a few vivid touches the blessings and glory of the advent of Messiah—imparts consolation to those who were mourning over their unworthiness, and pronounces a heavy doom on the selfish and disobedient, and on such as in a remote age, imbibing their spirit, 'should fall after the same example of unbelief.' The pseudo-Epiphanius records some prodigies wrought by Zechariah in the land of Chaldæa, and some wondrous oracles which he delivered; and he and Dorotheus both agree in declaring that the prophet died in Judæa in a good old age, and was buried beside his colleague Haggai.

Book.—The book of Zechariah consists of four general divisions.

I. The introduction or inaugural discourse (ch. i. 1-16).

II. A series of nine visions, extending onwards to ch. vii., communicated to the prophet in the third month after his installation. These visions were,

1. A rider on a roan horse among the myrtle-trees, with his equestrian attendants, who report to him the peace of the world, symbolizing the fitness of the time for the fulfilment of the promises of God, his people's protector.

2. Four horns, symbols of the oppressive enemies by which Judah had been on all sides surrounded, and four carpenters, by whom these horns are broken, emblems of the destruction of these anti-theocratic powers.

3. A man with a measuring-line describing a wider circumference for the site of Jerusalem, as its population was to receive a vast increase, foreshowing that many more Jews would return from Babylon and join their countrymen, and indicating the conversion of heathen nations under the Messiah, when out of Zion should go forth the law and the word of the Lord from Jerusalem.

4. The high-priest Joshua before the angel of the Lord, with Satan at his right hand to oppose him. The sacerdotal representative of the people, clad in the filthy garments in which he had returned from captivity, seems to be a type of the guilt and degradation of his country; while forgiveness and restoration are the blessings which the pontiff symbolically receives from Jehovah, when he is reclad in holy apparel and crowned with a spotless turban, the vision at the same time stretching into far futurity, and including the advent of Jehovah's servant the Branch.

5. A golden lamp-stand fed from two olive-trees, one growing on each side, an image of the value and divine glory of the theocracy as now seen in the restored Jewish church, supported, not 'by might nor by power, but by the Spirit of Jehovah,' and of the spiritual development of the old theocracy in the Christian church, which enlightens the world through the continuous influence of the Holy Ghost. (Dr. Stouard, in his *Commentary on Zechariah*, without foundation supposes that this candelabrum had twice seven lamps, seven on each side, emblematizing the church of God in both dispensations, Jewish and Christian.)

6. A flying roll, the breadth of the temple-porch, containing on its one side curses against the ungodly, and on its other anathemas against the immoral, denoting that the head of the theocracy, the Lord of the temple, would from his place punish those who violated either the first or the second table of his law (Hengstenberg's *Christol.* ii. 45).

7. A woman in an ephah (at length pressed down into it by a sheet of lead laid over its mouth), borne along in the air by two female figures with storks' wings, representing the sin and punishment of the nation. The fury, whose name is Wickedness, is repressed, and transported to the land of Shinar; *i. e.* idolatry, in the persons of the captive Jews, was for ever removed at that period from the Holy Land, and, as it were, taken to Babylon, the home of image-worship (for another meaning, see Jahn's *Introduction*, Turner's translation, p. 428).

8. Four chariots issuing from two copper mountains and drawn respectively by red, black, white, and spotted horses, the vehicles of the four winds of heaven, a hieroglyph of the swiftness and extent of divine judgments against the former oppressors of the covenant people. Judgments seem issuing from God's holy habitation in the midst of the 'mountains which are round about Jerusalem,' or from between those two hills, the ravine dividing which forms the valley of Jehoshaphat, directly under the temple mountain, where dwelt the head of the theocracy.

9. The last scene is not properly a vision, but an oracle in connection with the preceding visions, and in reference to a future symbolical act to be performed by the prophet. In presence of a deportation of Jews from Babylon, the prophet was charged to place a crown on the head of Joshua the high-priest, a symbol which, whatever was its immediate signification, was designed to prefigure the royal and sacerdotal dignity of the man whose name is Branch, who should sit as 'a priest upon his throne.'

The meaning of all the preceding varied images and scenes is explained to the prophet by an attendant *angelus interpres.*

III. A collection of four oracles delivered at various times in the fourth year of Darius, and partly occasioned by a request of the nation to be divinely informed, whether, now on their happy return to their fatherland, the month of Jerusalem's overthrow should be registered in their sacred calendar as a season of fasting and humiliation. The prophet declares that these times should in future ages be observed as festive solemnities.

IV. The 8th, 9th, 10th, and 11th chapters contain a variety of prophecies unfolding the fortunes

of the people, their safety in the midst of Alexander's expedition, and their victories under the Maccabæan chieftains, including the fate of many of the surrounding nations, Hadrach (Persia), Damascus, Tyre, and Philistia.

V. The remaining three chapters graphically portray the future condition of the people, especially in Messianic times, and contain allusions to the siege of the city, the means of escape by the cleaving of the Mount of Olives, with a symbol of twilight breaking into day, and living water issuing from Jerusalem, concluding with a blissful vision of the enlarged prosperity and holiness of the theocratic metropolis, when upon the bells of the horses shall be inscribed 'holiness unto the Lord.'

Integrity.—The genuineness of the latter portion of Zechariah, from ch. ix. to xv., has been disputed. Among the first to suggest doubt on this subject was Joseph Mede, who referred chaps. ix., x., and xi. to an earlier date, and ascribed them to Jeremiah. Remarking on Matt. xxvii. 9, 10, he says: 'It may seem the Evangelist would inform us that those latter chapters ascribed to Zachary, namely, the ninth, tenth, eleventh, &c., are indeed the prophecies of Jeremy, and that the Jews had not rightly attributed them. Certainly, if a man weigh the contents of some of them, they should in likelihood be of an elder date than the time of Zachary, namely, before the captivity; for the subjects of some of them were scarce in being after that time. .... As for their being joined to the prophecies of Zachary, that proves no more they are his than the like adjoining of Agur's proverbs to Solomon's proves that they are therefore Solomon's, or that all the psalms are David's because joined in one volume with David's psalms' (*Epist.* xxxi.). His opinion was adopted in England by Hammond, Kidder, Newcome, Whiston, and Secker, and has been followed, with variations, on the continent by Flügge (*Die Weissagung, D. p. Zach. übersetzt*, &c., 1781); by Bertholdt (*Einleit.* p. 1701); by Rosenmüller in his *Scholia*, though in the first edition he defended the genuineness of these chapters; by Eichhorn (*Einleit.*); Corrodi (*Beleuchtung des Bibelcanons*, i. 107); and De Wette, in the earlier editions of his *Einleitung*, though in the last edition he says in the preface, 'I feel constrained to adhere to Koester's opinion of the second part of Zechariah;' Hitzig (*Stud. und Krit.*, 1830); Credner (*Joel*, 67); Knobel (*Der Prophetism*, &c. Th. ii. s. 281); Forberg (*Comment. in Zach. Vaticin.*, pars i.). Pye Smith (*Principles of Interpretation applied to the Prophecies*, p. 65), and Davidson (*Sacred Hermeneutics*), also deny these later chapters to be the production of Zechariah.

On the other hand, the integrity of this portion of Zechariah has been defended by Jahn (*Introduction*, pt. ii. § 161), Carpzov (*Critica Sacra*, p. 848), Beckhaus (*Integrität d. Proph. Schriften*, p. 337), Koester (*Meletemata Crit. et Exeget. in Zach. part. post.* p. 10), Hengstenberg (*d. Integrität d. Sacharjah*, in his *Beitrage*, i. 361), and Blayney (*Minor Proph.* p. 362). The theory of Mede was suggested by the difficulty arising from the quotation in Matthew, and, rejecting other hypotheses, he says:—'It is certain that Jeremiah's prophecies are digested in no order, but only as it seems they came to light in the scribes' hands. Hence sometimes all is ended with Zedekiah, then we are brought back to Jehoiakim, then to Zedekiah again, &c. Whereby it seems they came not to light to be enrolled *secundum ordinem temporis*, nor all together, but as it happened in so distracted a time. And why might not some not be found till the return from captivity, and be approved by Zechariah, and so put to his volume according to the time of their finding and approbation by him, and after that some other prophecies yet added to his?' (*Epist.* lxi.) The others who deny the genuineness of these chapters are by no means agreed as to the real authorship of them. Eichhorn ascribes one portion to the time of Alexander, and the other sections to a period before the exile; while Corrodi places the fourteenth chapter as low as the age of Antiochus Epiphanes. Bertholdt supposes the ninth, tenth, and eleventh chapters to be the production of Zechariah, the son of Jeberechiah, referred to in Isaiah viii. 2, and the remaining three to be the composition of an anonymous author who lived under Josiah, and of course before the captivity. Rosenmüller is of opinion that the whole second part is the work of one author who lived under Uzziah. Flügge arbitrarily divides it into no less than nine sections, referring them to different times and authors, but yet ascribing the ninth chapter to the Zechariah spoken of in 2 Chron. xxvi. 5. Newcome places the first three chapters, as to date of authorship, before the overthrow of Israel, and the last three before the captivity of Judah. Hitzig and Credner carry back the period of their authorship to the age of Ahaz, or before it. Knobel finds in them a diversity both of authors and times; and his opinion is partly adopted by Dr. Davidson. This great variety of opinion is proof that these conflicting views are the result of peculiar tastes and fancies.

Many of the arguments against the genuineness of this latter portion of Zechariah rest on peculiar interpretations of his language, making it refer to events that happened prior to the time when the prophet flourished. But this exegesis is not in all points correct. Ephraim is indeed spoken of, though that kingdom was overthrown 186 years before the return of the Jews from Babylon; and it is inferred that the author of such oracles must have lived when Ephraim was an independent sovereignty. It may be said, in reply, that vast numbers of the ten tribes returned with their brethren of Judah from captivity; and we find (ch. xii. 1) Israel used as a name for all the tribes. In Malachi, too, we find Israel used after the captivity in contrast to Jerusalem. Zechariah never characterizes Ephraim as a separate political confederation; nor, as Henderson remarks, 'is there any thing, but the contrary, to induce the conclusion that a king reigned in Judah in the days of the author.' The predictions in this latter part, supposed by some to refer to past events, are most correctly interpreted to refer to the Egyptian expedition of Alexander, the sufferings of the Messiah, and the final overthrow of Jerusalem. The prophets before the Babylonian captivity threatened a deportation to Babylon; Zechariah, living after that event, menaces a Roman invasion and slavery. Little force can be placed in any argument based on an imagined difference of style in the former and latter chapters of this

prophecy. The introductory notices to the separate oracles recorded in the early portion of the book, are either not found in the last section, or are very different in form (comp. i. 1-7; iv. 8; vi. 9, with ix. 1; xi. 4). But we are too ignorant of many circumstances in the prophet's history to speculate on the causes of such change; or if we are unable to discover any æsthetical or religious reasons for the alteration, it is surely rash to come on such grounds to a decision of diversity of authorship. Introductory formulæ as different as those in Zechariah occur in other books, whose sameness of style is admitted as proof of identity of authorship, as in Amos, where the application of the same principles of criticism would 'dismember it,' and assign its composition to three different authors. Nor is the difference of style of the former and latter portions of Zechariah greater than the different topics treated would lead us to expect. The difference of style is not very striking; and such difference is often a fallacious ground of judgment. Would the difference of style in such volumes as *Ancient Christianity* and the *Natural History of Enthusiasm* warrant us to declare them the works of different authors? It is also a presumption in favour of the genuineness of this portion of Zechariah, that the arranger and editor of the Hebrew canon gave it the place which it now occupies; for it is also found in the Septuagint, executed three centuries before the composition of Matthew's Gospel. The chief argument against the genuineness of these chapters, and that which seems to have suggested all the varied hypercritical judgments on the text, is that expressed by Mede: 'There is no Scripture saith they are Zechariah's, but there is Scripture saith they are Jeremiah's' (*Works*, p. 786). The question, then, resolves itself into the consideration of the passage in Matt. xxvii. 9, referred in our text to Jeremiah, but now found in Zechariah. We cannot accede to the supposition of Döpke (*Hermeneutik*, p. 212) and Kuinoel (*Comm.*, in loc.), that Matthew quoted some unpublished apocryphal Jeremiah, perhaps such a one as that to which Jerome refers, as having found it among the Nazarenes, and of which a portion containing analogous language is yet extant in a Sahidic lectionary in the *Codex Huntingtonianus*, 5, in the Bodleian Library, and in the Coptic language in a MS. in the library of St. Germain in Paris. This passage, as given by Dr. Henderson, at once betrays itself to be a clumsy imitation, designed to solve the very difficulty on which we are writing. We must also dismiss at once all the neological theories which rest on any supposed error of quotation made by the Evangelist, condemning utterly the remark of Fritzshe, that the discrepancy arose on the part of the Evangelist, 'per memoriæ errorem' (*Comment. in Matt.*, p. 801). Nor is there any extrication from the difficulty in supposing, with Elsner, that the reference of the Evangelist is to the transaction recorded in Jer. xxxii. 8, or in hinting, with Eusebius (*Hist. Eccles.* x. 4), that the oracle cited has been falsified by the Jews. Another conjecture without warrant is to affirm that the name Jeremiah was the technical appellation of the third great division of the Hebrew Scriptures, and that any quotation from the minor prophets may be referred to him, not as its author, but as the title of that collection, from one of the books of which it is taken (Lightfoot's *Works*, by Pitman, vol. xi. p. 344). Such hypotheses plainly lead us to look for some corruption in the text. That there is a difference of reading was a fact early known. It may be that the proper name was omitted altogether, or rather not inserted at all by the Evangelist, that he only wrote διὰ τοῦ προφήτου. Augustine testifies that MSS. were found in his days wanting the word Ἱερεμίου. It is not found either in the most ancient and faithful version, the Syriac, nor in the Verona and Vercelli Latin MSS. It is wanting also in MSS. 33, 157, and in the Polyglott Persic, in the modern Greek, and in a Latin MS. of Luc. Brug. Other codices and versions read Ζαχαρίου, such as MS. 22, and the Philoxenian Syriac in the margin—a reading which was approved of by Origen and Eusebius. Griesbach (*Nov. Test.*, in loc.), Dr. Henderson, and others, believing that Matthew wrote in Hebrew or Syro-Chaldaic, think the original was simply בִּיד הַנָּבִיא, 'by the prophet,' and that the Greek translator mistaking the ד for ר in the word בִּיד, read בִּיר, and thinking it a contraction for בִּירְמְהִיר, rendered it διὰ Ἱερεμίου τοῦ προφήτου; but this theory rests upon a foundation which we do not regard as tenable, viz., that the original of Matthew was composed in Aramaic, and that our present Gospel is only an anonymous translation. If the authority of MSS. be now in favour of the insertion of the name Ἱερεμίου, then the error may have arisen on the part of some early copyist meeting with the contracted form Ζριου, and mistaking it for Ιριου. The various opinions of the fathers and the different lections in MSS. and versions, seem to point to some such change and error in the course of early transcription. Or, lastly, we may refer to the theory of Hengstenberg (*Christologie*, ii. 189), who imagines that Matthew names Jeremiah, and not Zechariah, on purpose to turn the attention of his readers to the fact that Zechariah's prophecy was but a reiteration of a fearful oracle in Jer. xviii., xix., which was to be fulfilled in the utter destruction and abandonment of the Jewish people. It is not our province to enter into any exegesis of the passage, so as either to vindicate or refute the view of Hengstenberg; only, to make it intelligible, we add, that in his opinion Jeremiah had already, by the breaking of a potter's vessel, portrayed the fearful ruin of the people in Nebuchadnezzar's invasion; and as the oracle of Zechariah is a virtual repetition of this fearful commination to be inflicted again in Messianic times, and in consequence of the national rejection of the Son of God, so the evangelist wishes to remind his readers that the field of blood, now purchased by the 'reward of iniquity,' in the valley of Hinnom, had been long ago a scene of prophetic doom, in which awful disaster had been symbolically predicted; that the present purchase of that field with the traitor's price renewed the prophecy and revived the curse—a curse pronounced of old by Jeremiah, and once fulfilled in the Babylonian siege, a curse reiterated by Zechariah, and again to be verified in the Roman desolation. Such a theory is at least preferable to that of such critics as Glassius and Frischmuth, who believed that the quotation in Matthew is made up of a mixture of oracles from Jeremiah and Zechariah, while Jeremiah only is named as the earlier and more illustrious of the two.

Style.—The language of Zechariah has not the purity and freshness of a former age. Some of its solecisms are noticed by De Wette (*Einleit.* § 249). A slight tinge of Chaldaism pervades the composition. The symbols with which he abounds are obscure, and their prosaic structure is diffuse and unvaried. The rhythm of his poetry is unequal, and its parallelisms are inharmonious and disjointed. His language has in many phrases a close alliance with that of the other prophets, and occasional imitations of them, especially of Ezekiel, characterize his oracles. He is also peculiar in his introduction of spiritual beings into his prophetic scenes.

M'Caul, A.M., 1837; Henderson, *On the Minor Prophets*, 1845.—J. E.

6. Zechariah, the father of John the Baptist. See John the Baptist.

ZEDEKIAH, son of Josiah, the twentieth and last king of Judah, was, in place of his brother Jehoiakim, set on the throne by Nebuchadnezzar, who changed his name from Mattaniah to that by which he is ordinarily spoken of. As the vassal of the Babylonian monarch, he was compelled to take an oath of allegiance to him, which, however, he observed only till an opportunity offered for throwing off his yoke. Success in such an undertaking was not likely to attend his efforts. His heart was not right before God, and therefore was he left without divine succour. Corrupt and weak, he gave himself up into the hands of his nobles, and lent an ear to false prophets; while the faithful lessons of Jeremiah were unwelcome, and repaid by incarceration. Like all of his class, he was unable to follow good, and became the slave of wicked men, afraid alike of his own nobility and of his foreign enemies. By his folly and wickedness he brought the state to the brink of ruin. Yet the danger did not open his eyes. Instead of looking to Jehovah, he threw himself for support on Egypt, when the Chaldæan came into the land and laid siege to his capital. The siege was begun on the tenth day of the tenth month in the ninth year of his reign. For a year and a half did Jerusalem effectually withstand Nebuchadnezzar. At the end of that time, however, the city was stormed and taken (B.C. 588), when Zedekiah, who had fled, was captured on the road to Jericho. Judgment was speedily executed: his sons were slain before his eyes, and he himself was deprived of sight and sent in chains to Babylon, where he died in prison (2 Kings xxiv. 17, seq.; xxv. 1, seq.; 2 Chron. xxxvi. 10, sq.; Jer. xxviii.; xxxiv.; xxxvii.; xxxviii.; xxxix.; lii.; Ezek. xvii. 15).—J. R. B.

ZELOPHEHAD, son of Hepher, a descendant of Joseph, who had no sons, but five daughters. These came to Moses and Eleazar when now at the edge of the promised land, to lay their case before them for adjudication. Their father had died in the wilderness, leaving no male child. The daughters thought themselves entitled to take their father's share of the land. Moses on this brought their cause before Jehovah, who ordered that they should receive their father's inheritance, taking occasion to establish the general rule: 'If a man die, and have no son, then ye shall cause his inheritance to pass unto his daughter,' and failing daughters, to his next of kin (Num. xxvi. 33; xxvii. 1, sq. Compare Josh. xvii. 3, sq.)—J. R. B.

ZEMER. In our version of Deut. xiv. 5, זֶמֶר *zemer*, is rendered Chamois; Sept. Καμηλοπάρδαλις; Vulg. *Camelopardalus;* Luther, in his German translation, adopts *Elend*, or 'Elk;' and the old Spanish version, from the Hebrew, has 'Cabra montes.'* All, however, understand *zemer* to be a clean ruminant; but it is plain that the Mosaic enumeration of clean animals would not include such as were totally out of the reach of the Hebrew people, and at best only known to them from specimens seen in Egypt, consisting of presents sent from Nubia, or in pictures on the walls of temples. The Camelopardalis or Giraffe is exclusively an inhabitant of Southern Africa, and therefore could not come in the way of the people of Israel. The same objection applies to the Elk, because that species of deer never appears further to the south than Northern Germany and Poland; and with regard to the Chamois, which has been adopted in our version, though it did exist in the mountains of Greece, and is still found in Central Asia, there is no vestige of its having at any time frequented Libanus or any other part of Syria. We may, therefore, with more propriety refer to the ruminants indigenous in the regions which were in the contemplation of the sacred legislator, and we may commence by observing that זֶמֶר *zemer* is a term which, in the slightly altered form of *zammer*, is still used in Persia and India for any large species of ruminants, particularly those of the stag kind, which are commonly denominated Rusa, a subgenus of deer established in Griffith's translation of Cuvier's 'Animal Kingdom.' In the sacred text, however, the word *zemer* is not generical, but strictly specific. *Ail*, or 'stag,' is mentioned at the same time, and, as well as several Antilopidæ, in the same verse: we must, therefore, look for an animal not hitherto noticed, and withal sufficiently important to merit being named in so important an ordinance.

The only species that seems to answer to the conditions required is a wild sheep, still not uncommon in the Mokattam rocks near Cairo, found in Sinai, and eastward in the broken ridges

* Biblia en lengua Española traducida palabra por palabra da la verdad Hebrayca por muy excellentes letrados, fol. No date.

of Stony Arabia, where it is known under the name of Kebsch, a slight mutation of the old Hebrew כֶּשֶׂב *Cheseb*, or rather כֶּבֶשׂ *Chebes*, which is applied indeed to a domestic sheep, one that grazed; while *Zemer* appears to be derived from a root denoting 'to crop' or 'feed on shrubs.'

552. [Kebsch. Ovis Tragelaphus.]

This animal is frequently represented and hieroglyphically named on Egyptian monuments, but we question if the denomination itself be phonetically legible. The figures in colour leave no doubt that it is the same as the Kebsch of the modern Arabs, and a species or a variety of Ovis Tragelaphus, or bearded sheep, lately formed into a separate group by Mr. Blyth under the name of Ammotragus Barbatus. The Spanish version of the Hebrew text, before quoted, appears alone to be admissible, for although the species is not strictly a goat, it is intermediate between that genus and the sheep. It is a fearless climber, and secure on its feet, among the sharpest and most elevated ridges. In stature the animal exceeds a large domestic sheep, though it is not more bulky of body. Instead of wool, it is covered with close fine rufous hair: from the throat to the breast, and on the upper arms above the knees, there is abundance of long loose reddish hair, forming a compact protection to the knees and brisket, and indicating that the habits of the species require extraordinary defence while sporting among the most rugged cliffs; thus making the name *Zemer*, 'one that springeth,' if that interpretation be trustworthy, remarkably correct. The head and face are perfectly ovine, the eyes are bluish, and the horns, of a yellowish colour, are set on as in sheep; they rise obliquely, and are directed backwards and outwards, with the points bending downwards. The tail, about nine inches long, is heavy and round. It is the Mouflon d'Afrique and Mouflon à Manchettes of French writers, probably identical with the Tragelaphus of Caius, whose specimen came from Barbary. See bearded Argali in Griffith's 'Animal Kingdom' of Cuvier. We figure a specimen in the Paris Museum and one in Wilkinson's *Egypt*, vol. iii. p. 19.—C. H. S.

ZENAS (Ζηνᾶς), a disciple who visited Crete with Apollos, bearing seemingly the epistle to Titus, in which Paul recommends the two to his attentions (Tit. iii. 13). He is called 'the lawyer;' and as his name is Greek, it seems doubtful whether he is so called as being, or having been, a doctor of the Jewish law, or as being a pleader at the Roman tribunals. The most probable opinion is, perhaps, that which makes him an Hellenistic Jew, and a doctor of the Mosaical law.

ZEPHANIAH (צְפַנְיָה; Sept. Σοφονίας), the ninth in order of the minor prophets, both in the Hebrew and Greek copies of the Scriptures (Hieronym. *Prolog. ad Paul. et Eustoch.*).

Author.—The name of this prophet has been variously explained. Disputes upon it arose as early as the time of Jerome, for in his Commentary on this book he says, 'Nomen Sophoniæ, alii speculam, alii arcanum Dei, transtulerunt.' The word was thus derived either from צָפָה, *he saw beyond*, or צָפַן, *he hid*, with the common affix יָהּ. The old father made it a matter of indifference which etymon he adopted, as both, according to him, give virtually the same sense, —the commission of a prophet being virtually that of a watchman or seer, and the burden of his message, some secret revealed to him by God. Abarbanel (*Præf. in Ezek.*) adheres to the latter mode of derivation, and the pseudo-Dorotheus, following the former, translates the prophet's name by the Greek participle σκοπεύων. Hiller and Simonis differalso in a similar way—Hiller, taking the term from צָפַן, renders it 'abscondidit se, *i. e.* delituit Jehovah' (*Onomast.* sub voce), as if the name had contained a mystic reference to the character of the age in which the prophet lived, when God had withdrawn himself from his apostate people; but Simonis (*Onomast. V. T.*) gives the true signification, one sanctioned by Gesenius—'abscondidit, *i. e.* custodivit Jehovah,' *Jehovah hath guarded*, the verb צָפַן being used of divine protection in Ps. xxvii. 5; and lxxxiii. 4. The name seems to have been a common one among the Jews. Contrary to usual custom the pedigree of the prophet is traced back for four generations—'the son of Cushi, the son of Gedaliah, the son of Amariah, the son of Hizkiah.' This formal record of his lineage has led many to suppose that Zephaniah had sprung from a noble stock (Cyril, *Præf. ad Zeph.*), and the occurrence of the highest name in the list, which in the Hebrew text is spelled and pointed in the same way as that rendered Hezekiah in the books of Kings and Chronicles, has induced some to identify it with that of the good king Hezekiah, and to pronounce the prophet a cadet of the royal house of Judah. Kimchi is very cautious in his opinion, and leaves the point undecided; but Aben-Ezra, ever ready to magnify his nation, at once concludes that Zephaniah was descended from Hezekiah; and his opinion has been followed by Huet (*Demonstrat. Evangel.* Propos. iv. 303), and partially by Eichhorn (*Einleit.* § 593). The conjecture has little else to recommend it than the mere occurrence of the royal name. But it was not a name confined to royalty; and had it been the name of the pious monarch to which Zephaniah's genealogy is traced, certainly his official designation, 'king of Judah,' would have been subjoined, in order to prevent mistake. Such an addition is found in connection with his name in Prov. xxv. 1, and Isa. xxxviii. 9. It forms no objection to this

statement to affirm that the phrase 'king of Judah' is added to Josiah, and to avoid repetition may have been omitted after Hizkiah, for such regard to euphony, such finical delicacy, is no feature of Hebrew composition. The argument of Carpzov (*Introd.* p. 414), copied by Rosenmüller (*Proœmium in Zeph.*), against the supposed connection of the prophet with the blood royal, is of no great weight. These critics say that from Hezekiah to Josiah, in whose reign Zephaniah flourished, are only three generations, while from Hezekiah to Zephaniah four are reckoned in the first verse of the prophecy. But as Hezekiah reigned twenty-nine years, and his successor sat on the throne no less than fifty-five years, there is room enough in such a period for the four specified descents; and Amariah, though not heir to the crown, may have been much older than his youthful brother Manasseh, who was crowned at the age of twelve. As there was at least another Zephaniah, a conspicuous personage at the time of the captivity, the parentage of the prophet may have been recounted so minutely to prevent any reader from confounding the two individuals. The Jews absurdly reckon that here, as in other superscriptions, the persons recorded as a prophet's ancestors were themselves endowed with the prophetic spirit. The so-called Epiphanius (*De Vitis Prophet.* cap. xix.) asserts that Zephaniah was of the tribe of Simeon, of the hill Sarabatha, ἀπὸ ὄρους Σαραβαθά. The existence of the prophet is known only from his oracles, and these have no biographical sketches; so that our knowledge of this man of God comprises only the fact and the results of his inspiration. It may be safely inferred, however, that he laboured with Josiah in the pious work of re-establishing the worship of Jehovah in the land.

Age.—It is recorded (ch. i.) that the word of the Lord came to him 'in the days of Josiah, the son of Amon, king of Judah.' We have reason for supposing that he flourished during the earlier portion of Josiah's reign. In the second chapter (vers. 13-15) he foretells the doom of Nineveh, and the fall of that ancient city happened about the eighteenth year of Josiah. In the commencement of his oracles also, he denounces various forms of idolatry, and specially the remnant of Baal. The reformation of Josiah began in the twelfth, and was completed in the eighteenth year of his reign. So thorough was his extirpation of the idolatrous rites and hierarchy which defiled his kingdom, that he burnt down the groves, dismissed the priesthood, threw down the altars, and made dust of the images of Baalim. Zephaniah must have prophesied prior to this religious revolution, while some remains of Baal were yet secreted in the land, or between the twelfth and eighteenth years of the royal reformer. So Hitzig (*Die 12 Klein Prophet.*) and Movers (*Chronik.* p. 234) place him; while Eichhorn, Berthholdt, and Jaeger, incline to give him a somewhat later date. At all events, he flourished between the years B.C. 642 and B.C. 611; and the portion of his prophecy which refers to the destruction of the Assyrian empire, must have been delivered prior to the year B.C. 625, the year in which Nineveh fell (Henderson, *On the Minor Prophets*, p. 326). The publication of these oracles was, therefore, contemporary with a portion of those of Jeremiah, for the word of the Lord came to him in the thirteenth year of the reign of Josiah. Indeed, the Jewish tradition is, that Zephaniah had for his colleagues Jeremiah and the prophetess Huldah, the former fixing his sphere of labour in the thoroughfares and market-places, the latter exercising her honourable vocation in the college in Jerusalem (Carpzov, *Introd.* p. 415). Koester (*Die Propheten*, iii.) endeavours to prove that Zephaniah was posterior to Habakkuk. His arguments from similarity of diction are very trivial, and the more so when we reflect that all circumstances combine in inducing us to fix the period of Habakkuk in the reign of Jehoiakim [HABAKKUK], immediately before the Chaldæan invasion.

Contents.—The book consists of only three chapters. In the first, the sins of the nation are severely reprimanded, and a day of fearful retribution is menaced. The circuit of reference is wider in the second chapter, and the ungodly and persecuting states in the neighbourhood of Judæa are also doomed; but in the third section, while the prophet inveighs bitterly against Jerusalem and her magnates, he concludes with the cheering prospect of her ultimate settlement and blissful theocratic enjoyment. It has been disputed what the enemies are with whose desolating inroads he threatens Judah. The ordinary and most probable opinion is, that the foes whose period of invasion was 'a day of the trumpet and alarm against the fenced cities and against the high towers' (ch. i. 16), were the Chaldæans. Hitzig especially, Cramer too, and Eichhorn, supposed the prophet to refer to a Scythian invasion, the history of which they imagine has been preserved by Herodotus (i. 105). But the general style of the oracle, and the sweeping vengeance which it menaces against Assyria, Philistia, Ammon, and Cush, as well as against Judah, by some great and unnamed power, point to the Chaldæan expedition which, under Nebuchadnezzar, laid Jerusalem waste, and carried to Babylon its enslaved population. The contemporary prophecies of Jeremiah contemplate the musterings, onset, and devastations of the same victorious hosts. The former part of Zephaniah's prediction is 'a day of clouds and of thick darkness,' but in the closing section of it light is sown for the righteous: 'The King of Israel, the Lord, is in the midst of thee; He will rejoice over thee with joy; He will rest in his love.'

Style.—We cannot by any means award so low a character to Zephaniah's style as is done by De Wette (*Einleit.* § 245), who describes it as being often heavy and tedious. It has not the sustained majesty of Isaiah, or the sublime and original energy of Joel: it has no prominent feature of distinction; yet its delineations are graphic, and many of its touches are bold and striking. For example, in the first chapter the prophet groups together in his descriptions of the national idolatry several characteristic exhibitions of its forms and worship. The verses are not tame and prosaic portraiture, but form a series of vivid sketches. The poet seizes on the more strange peculiarities of the heathen worship—uttering denunciations on the remnant of Baal, the worshippers of Chemarim—the star-adorers, the devotees of Malcham, the fanatics who clad themselves in strange apparel, and those who in some superstitious mummery leapt upon the threshold (Bochart, *Hier.* cap. 36). Not a few

verses occur in the course of the prophecy which, in tone and dignity, are not unworthy to be associated with the more distinguished effusions of the Hebrew bards. A few paronomasiæ occur (i. 15 and ii. 1-4); and occasionally there is a peculiar repetition of a leading word in the formation of a climax (ii. 15). Jahn (*Introd.* § 132) and Eichhorn assert that Zephaniah has borrowed to a considerable extent from the earlier prophets, especially from Isaiah; yet the similarity of such passages as Isa. xxxiv. 11 to Zeph. ii. 14, or Isa. xlvii. 8 to Zeph. ii. 15, or Isa. xviii. 1 to Zeph. iii. 10, or Isa. xvi. 6 to Zeph. ii. 8, is not sufficient evidence that Zephaniah was Isaiah's imitator. The clauses of resemblance are idiomatic in nature, and seem to have been of proverbial force and currency, so that both prophets may have taken them from the national *usus loquendi*. Coincidences of expression have also been noted between Zephaniah and some of his contemporaries, particularly Jeremiah (Eich. *Einleit.* § 595; Rosen. *Proœm.* vi.) Between Zeph. i. 5 and Jer. viii. 2, we can perceive little similarity of language, though the same superstitious custom is referred to, and a comparison of Zeph. i. 12 with Jer. xlviii. 11, leads to such a conclusion as we have already stated, as the phrase common to both passages—'settled on the lees'—must have been one in wide circulation in a wine country like Judæa. It was altogether groundless, therefore, in some of the older critics, such as Isidore and Schmidius (*Prolegom. in Sophon.*), to style Zephaniah the abbreviator of Jeremiah. Resemblances have also been traced between Zephaniah and Amos, and between him and his successor Ezekiel; but to call these imitations, is rash indeed, if we reflect on the similarity of the topics discussed, the peculiar range of imagery and phraseology which is common to Hebrew prophetic poetry, and which was the stereotyped language of the inspired brotherhood. The language of Zephaniah is pure: it has not the classic ease and elegance of the earlier compositions, but it wants the degenerate feebleness and Aramaic corruption of the succeeding era. Zephaniah is not expressly quoted in the New Testament; but clauses and expressions occur which seem to have been formed from his prophecy (Zeph. iii. 9; Rom. xv. 6, &c.). He was, in fine, as Cyril of Alexandria terms him (*Præfat. in Soph.* tom. iii.), 'a true prophet, and filled with the Holy Ghost, and bringing his oracles from the mouth of God.'

Commentaries.—Martini Lutheri *Comment. in Sophon. Prophet.* Opera Latina, t. iv.; Mart. Buceri *Sophoniæ Explicatio*, 1528; Noltenii *Dissertatio Exeget. Prælim. in Proph. Zeph.* 1719; Cramer, *Scythische Denkmäler in Palæstina*, 1777, contains a Comment on Zephaniah; Don A. Cœllu, *Spicileg. Observat. Exeget. Critic. ad Zeph. Vaticinia*, 1818; Maurer, *Comment. Grammat. Hist. Crit. in Prophetas Minores*, p. 373, 1840; *Handbuch Exeget. z. A. T. die 12 kleinen Prophet. erklaert* von F. Hitzig, 1838; Rosenmülleri *Scholia in Proph. Min.* vol. iv.; Dr. E. Henderson, *On the Twelve Minor Prophets*, 1845.—J. E.

ZEPHATH (צְפַת; Sept. Σεφέθ), a Canaanitish city, afterwards called Hormah (Judg. i. 17). The ancient designation is perhaps retained in the modern Sufah, the name of a difficult pass leading up from the Arabah to the south of Judah (Robinson, *Bibl. Researches*, ii. 592-616).

ZEPHATHAH (צְפָתָה; Sept. Βοῤῥὰν Μαρησά), a valley at Mareshah, in the tribe of Judah (2 Chron. xiv. 10), where Asa defeated Zerah the Cushite. Mareshah was near Eleutheropolis (*Onomast.*, s. v. 'Masera'), and Robinson thinks the valley may have been the broad wady which comes down from Beit Jibrin (Eleutheropolis) towards Tell es-Saifeh; in which last name a trace of Zephathah may perhaps be recognised (Robinson, *Bibl. Researches*, ii. 361).

1. ZERAH (זֶרַח, *a rising*; Sept. Ζαρά), son of Judah and Tamar, and younger but twin brother of Pharez (Gen. xxxviii. 30; Matt. i. 3). Geddes, in his *Critical Remarks* (pp. 126, 127), has some interesting medical testimony in illustration of the remarkable circumstances attending the birth of the twins.

2. ZERAH, son of Reuel and grandson of Esau (Gen. xxxvi. 13, 17).

3. ZERAH, son of Simeon and founder of a family in Israel (Num. xxvi. 13). He is called Zohar in Gen. xlvi. 10: his descendants are called Zarhites in Num. xxvi. 13, 20.

4. ZERAH, the Cushite king or leader who invaded Judah in the tenth year of king Asa (B.C. 941), with an army of 'a thousand thousands' (*i. e.* very many thousands) of men, and three hundred chariots. Asa defeated them in the valley of Zephathah at Mareshah, utterly routed them, pursued them to Gerar, and carried back much plunder from that neighbourhood. We are left uncertain as to the country from which Zerah came. The term Cushite or Ethiopian may imply that he was of Arabian Cush; the principal objection to which is, that history affords no indication that Arabia had at that epoch, or from its system of government could well have, any king so powerful as Zerah. That he was of Abyssinia or African Ethiopia, is another conjecture, which is resisted by the difficulty of seeing how this 'huge host' could have obtained a passage through Egypt, as it must have done to reach Judæa. If we could suppose, with Champollion (*Précis*, p. 257), whom Coquerel follows (*Biog. Sacr.* s. v.), that Zerah the Cushite was the then king of Egypt, of an Ethiopian dynasty, this difficulty would be satisfactorily met. In fact it is now often stated that he was the same with Osorkon I. (of whom there is a statue in the British Museum, No. 8), the son and successor of the Shishak who invaded Judæa twenty-five years before, in the time of Rehoboam. This is a tempting explanation, but cannot be received without question, and it is not deemed satisfactory by Rosellini, Wilkinson, Sharpe, and others. Jahn hazards an ingenious conjecture, that Zerah was king of Cush on *both* sides of the Red Sea, that is, of both the Arabian and African Ethiopia; and thus provides him a sufficient power without subjecting him to the necessity of passing through Egypt. This also is not without serious difficulties. In fact no conclusion that can be relied upon has yet been exhibited.

ZERED, the name of a valley (Num. xxi. 12) and of the stream flowing through it, east of the Dead Sea [RIVER]

ZEREDA (צְרֵדָה; Sept. Σαρηδαθά), a city of Manasseh, near Beth-shan (1 Kings xi. 26; 2 Chron. iv. 17). This is, probably through an erroneous reading, the Zererath (צררתה) of Judg. vii. 22; and, perhaps, the Zaretan (צרתן) of Josh. iii. 16; 1 Kings iv. 12; vii. 46).

ZERESH (זֶרֶשׁ; Pers. *gold;* Sept. Ζωσάρα), the wife of Haman (Esth. v. 10; vi. 13), and well worthy of him, if we may judge from the advice she gave him to prepare a gibbet and ask the king's leave to hang Mordecai thereon [Haman; Mordecai].

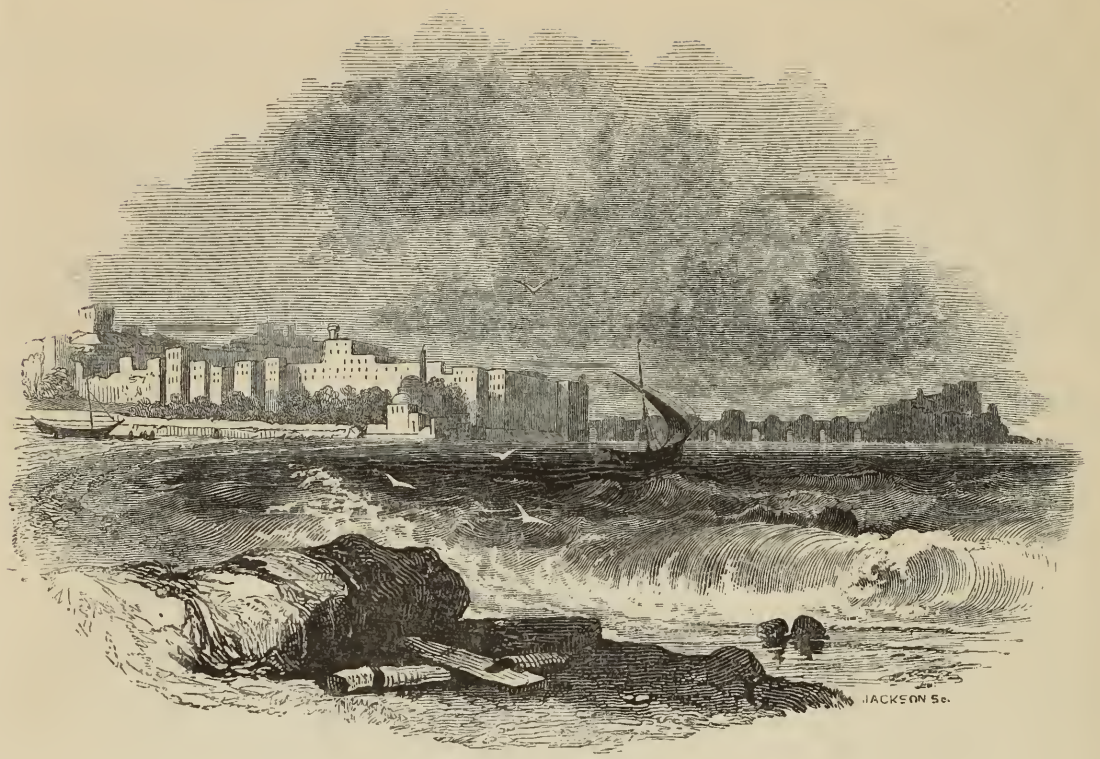
ZERUAH (צְרוּעָה, *leprous;* Sept. Σαριρά), the widowed mother of Jeroboam (1 Kings xi. 26).

ZERUBBABEL (זְרֻבָּבֶל, *sown in Babylon;* Sept. Ζοροβάβελ), called also 'Sheshbazzar, prince of Judah' (Ezra i. 8), son (comp. 1 Chron. iii. 17) of Shealtiel, of the royal house of David (1 Chron. iii.), was the leader of the first colony of Jews that returned from captivity to their native land under the permission of Cyrus, carrying with them the precious vessels belonging to the service of God. With the aid of Joshua and his body of priests, Zerubbabel proceeded, on his arrival in Palestine, to rebuild the fallen city, beginning with the altar of burnt-offerings, in order that the daily services might be restored. The Samaritans, however, having been offended at being expressly excluded from a share in the land, did all they could to hinder the work, and even procured from the Persian court an order that it should be stopped. Accordingly, everything remained suspended till the second year of Darius Hystaspis (A.C. 521), when the restoration was resumed and carried to completion, according to Josephus, owing to the influence of Zerubbabel with the Persian monarch (*Antiq.* xi. 3; Ezra; Haggai i. 1-14; ii. 1.) —J. R. B.

ZERUIAH (צְרוּיָה, *wounded;* Sept. Σαρουία), daughter of Jesse, sister of David (1 Chron. ii. 16), and mother of Joab, Abishai, and Asahel (2 Sam. ii. 18: iii. 39; viii. 16; xvi. 9).

ZIBA (צִיבָא, *statue;* Sept. Σιβά), a servant of the house of Saul, of whom David inquired if there was any one left of the house of Saul to whom the monarch might show favour. Mephibosheth was in consequence found, and having been certified of David's friendship, Ziba, who was at the head of a large family, having fifteen sons and twenty slaves, was appointed to till the land for the prince, and generally to constitute his household and do him service (2 Sam. ix. 2-10). This position Ziba employed for his master's harm. When David had to fly from Jerusalem in consequence of the rebellion of Absalom, Ziba met the king with a large and acceptable present:—'But where is Mephibosheth?' asked the fugitive monarch; 'in Jerusalem,' was the answer; 'for he said, To-day shall the house of Israel restore me the kingdom of my father.' Enraged at this, which looked like ingratitude as well as treachery, David thereupon gave to the faithless Ziba all the property of Mephibosheth (2 Sam. xvi. 1, sq.). On David's return to his metropolis an explanation took place, when Mephibosheth accused Ziba of having slandered him; and David, apparently not being perfectly satisfied with the defence, gave his final award, that the land should be divided between the master and his servant (2 Sam. xix. 24, sq.).—J. R. B.

ZIBEON (צִבְעוֹן, *dyed;* Sept. Σεβεγών), a son of Seir, phylarch or head of the Hivites (Gen. xxxvi. 2, 20, 24, 29).



ZICHRI (זִכְרִי, *renowned;* Sept. Ζεχρί), an Ephraimite, probably one of the chiefs of the tribe, and one of the generals of Pekah king of Israel. It has been supposed that he took advantage of the victory of this monarch over the army of Judah to penetrate into Jerusalem, where he slew one of the sons of Ahaz, the governor of the palace, and the king's chief minister or favourite. It is difficult without this supposition to explain 2 Chron. xxviii. 17. There is some probability in the conjecture, that he was the 'Tabael's son' whom Pekah and Rezin designed to set upon the throne of Judah [Tabael].

ZIDON (צִידוֹן; Σιδών). 1. The eldest son of Canaan (Gen. x. 15). 2. One of the most ancient cities in Phœnicia. Justin derives the name from the Phœnician word for *fish*, 'piscem Phœnices *sidon* vocant' (xviii. 3); but Josephus, from the son of Canaan (*Antiq.* vi. 2). It had a very commodious harbour, which is now nearly choked up with sand (Strabo, xvi. p. 756; Joseph. *Antiq.* xiv. 10. 6): it was distant one day's journey from the fountains of the Jordan (Joseph. *Antiq.* v. 3. 1), 400 stadia from Berytus, and 200 stadia from Tyre (Strabo, xvi. pp. 756, 757). It was situated in the allotment of the tribe of Asher, but never conquered (Judg. i. 31); on the contrary, it was sometimes a formidable enemy (Judg. x. 12). Even in Joshua's time it was called Tsidon-Rabba, or Great Zidon (Josh. xix. 28). It was noted in very early times for its extensive traffic (Isa. xxiii. 2; Ezek. xxvii. 8) and manufactures, particularly glass (Plin. v. 20; Strabo, xvi. 10). Frequent reference to it occurs in Homer (*Il.* vi. 290; xxiii. 743; *Odyss.* xiii. 285; xv. 425). The best vessels in the fleet of Xerxes were Sidonian (Herodotus, vii. 99. 128). Its modern name is Saide. In Hasselquist's time (1750) its exports to France were considerable (*Travels*, p. 166); but at present its traffic is chiefly confined to the neighbouring towns; the population is about 15,000 (Mannert's *Geographie*, vi. 1, p 291; *Pictorial Bible*, notes on Deut. xxxiii., Josh. xix.).—J. E. R.

ZIF (חֹדֶשׁ זִו, *bloom-month*), an ante-Exilian name of the second Hebrew month (1 Kings vi. 1-37), corresponding with our April and May. This, the second month of the sacred, was the eighth of the civil year. The second month bore also the name Iyar.—J. R. B.

ZIKLAG (צִיקְלַג; Sept. Σεκελάκ), a city belonging to the tribe of Simeon (Josh. xv. 31; xix. 5), but at times subject to the Philistines of Gath, whose king, Achish, bestowed it upon David for a residence; after which it pertained to Judah (1 Sam. xxvii. 6; xxx. 1, 14, 26; 2 Sam. i. 1; 1 Chron. iv. 30; Neh. xi. 28).

While David was absent with his men to join Achish, Ziklag was burned and plundered by the Amalekites; and on his return, after receiving the spoil from them, he remained here till called to assume the crown after the death of

553. [Zidon.]

Saul. It was during his stay in this place that he was joined by many considerable and valiant persons, whose adhesion to his cause was of much importance to him, and who were ever after held in high esteem in his court and army.

ZILLAH (צִלָּה, *shade;* Sept. Σελλά), one of the wives of Lamech, and mother of Tubal-cain (Gen. iv. 19) [LAMECH].

ZILPAH (זִלְפָּה, *a dropping;* Sept. Ζελφά), a female servant of Laban, whom he gave to Leah on her marriage with Jacob (Gen. xxix. 24), and whom Leah eventually induced him to take as a concubine-wife; in which capacity she became the mother of Gad and Asher (Gen. xxx. 9-13; xxxv. 26; xxxvii. 2; xlvi. 18).

ZIMRAN (זִמְרָן, *sung, i.e. celebrated in song;* Sept. Ζομβρᾶν), a son of Abraham by Keturah, and the name of an Arabian tribe descended from him (Gen. xxv. 2; 1 Chron. i. 32). This name may perhaps be connected with the Zabram mentioned by Ptolemy as a city with a king, situated between Mecca and Medina.

ZIMRI (זִמְרִי), a proper name in the Old Testament, which is derived from the root זמר, *carpere*, especially *carpere vites=putare vites*, 'to prune;' and also *carpere fides=pulsare, cantare*, 'to play,' 'sing.' It is very remarkable that the Greek ψάλλειν also occurs in both these acceptations, which appear at first sight to be so very heterogeneous — *to scrape, pull, pluck*, and *to sing*. Compare the Latin *carpere*, which is etymologically connected, as well with the Greek ἅρπη, *sickle*, as with the English *harp;* and the English colloquial and vulgar expressions, 'to scrape the violin,' 'to pull away at the piano,' and 'to pull out a note.' If we consider the striking coincidence of the Greek with the Hebrew, we are led to suppose that the link of the ideas is as we have stated, and cease to be surprised that Fürst translates the name זִמְרִי by the German *Winzer=vine-dresser*, but Gesenius by *carmine celebratus, i. e.* a man celebrated by song, or a man of celebrity in general.

The Septuagint imitates the Hebrew sound by Ζαμβρί, and Josephus (*Antiq.* viii. 12. 5) by Ζαμάρης.

Four men are called Zimri in the Old Testament:—

1. A son of Zerah, who was a son of Judah by Tamar (1 Chron. ii. 6).

2. The name of the Israelite slain, together with the Midianitish woman, in Shittim, by Phinehas, was ZIMRI, the son of Salu, a prince of a chief house among the Simeonites (Num. xxv. 14).

3. King Saul begat Jonathan, who begat Merib-baal, who begat Micah, who begat Ahaz, who begat Jehoadah, whose sons were Alemeth, Azmaveth, and ZIMRI. Zimri begat Moza, &c. (1 Chron. viii. 36; ix. 42).

4. In the twenty-sixth year of Asa, king of Judah, Elah, the son of Baasha, began to reign over Israel in Tirzah. After he had reigned two years, ZIMRI, the captain of half his chariots, conspired against him when he was in Tirzah, drunk, in the house of his steward. Zimri went in and smote and killed him, and reigned in his stead, about B.C. 928; and he slew all the house of Baasha, so that no male was left. Zimri reigned only seven days at Tirzah. The people who were encamped at Gibbethon, which belonged to the Philistines, heard that Zimri had slain the king. They made Omri, the captain of the host, king over Israel in the camp. Omri besieged Tirzah and took it. Zimri, seeing that the city was taken, went into the king's palace, set it on fire, and perished in it for his sins in walking in the way of Jeroboam, and for making Israel to sin (1 Kings xvi. 1-20; 2 Kings ix. 31).

5. The kings of Zimri, mentioned in Jer. xxv. 25, seem to have been the kings of the Zimranites, the descendants of Zimran, son of Abraham by Keturah (Gen. xxv. 2; 1 Chron. i. 32). It seems that in Jer. xxv. 25, זמרי is a contraction for זמרני. The town Zabram, mentioned by Ptolemy as situated between Mecca and Medina, perhaps had its name from the tribe of Zimran.—C. H. F. B.

ZIN (צִן; Sept. Σίν), a desert on the south of Palestine, and westward from Idumæa, in which was situated the city of Kadesh-barnea (Num. xiii. 22; xx. 1; xxvii. 14). Its locality is therefore fixed by the considerations which determine the site of Kadesh to the western part of the Arabah south of the Dead Sea.

ZION. [Jerusalem.]

ZIPH (זִיף; Sept. Ζίφ), the name of a city in the tribe of Judah (Josh. xv. 55; 2 Chron. xi. 8), and of a desert in its vicinity (1 Sam. xxiii. 14, 15). It is mentioned by Jerome (*Onomast.* s. v.), but had not been since noticed till Dr. Robinson found the name in the Tell Zif (Hill of Zif), which occurs about four miles and a half S. by E. from Hebron, and is a round eminence about a hundred feet high, situated in a plain. A site also called Zif, lies about ten minutes east of this, upon a low hill or ridge between two small wadys, which commence here and run towards the Dead Sea. There is now little to be seen besides broken walls and foundations, mostly of unhewn stones, but indicative of solidity.

ZIPPORAH (צִפֹּרָה, *little bird;* Sept. Σεπφώρα), one of the seven daughters of Reuel (comp. Exod. xviii.), priest of Midian, who, in consequence of aid rendered to the young women when, on their going to procure water for their father's flocks, they were set on by a party of Bedouins, was given to Moses in marriage (Exod. ii. 16, sq.). A son, the fruit of this union, remained for some time after his birth uncircumcised; but an illness into which Moses fell in a khan when on his way to Pharaoh, being accounted a token of the divine displeasure, led to the circumcision of the child, when Zipporah, having, it appears, reluctantly yielded to the ceremony, exclaimed, 'Surely a bloody husband thou art to me' (Exod. iv. 26). This event seems to have caused some alienation of feeling, for Moses sent his wife back to her father, by whom she is again brought to her husband while in the desert, when a reconciliation took place, which was ratified by religious rites (Gen. xviii. 1, sq.).—J. R. B.

ZIPPORIS, or Sepphoris, was, about the beginning of the Christian era, a principal and strongly fortified city of Galilee, under latitude 32° 44′. Rabbinical writers call it צִיפּוֹרִין, צִפְרִים, צִיפּוֹרָה, צִפּוֹרִי, or צִפּוֹר, SPaRrow, the radicals of which are transposed in the Latin PaSseR, from the root צָפַר, *to pipe like a bird*, the German ZiRPen. According to Bab. Megillah, fol. 6. 1, Zipporis had its name from being perched on a mountain like a bird, כִּצִפּוֹר. The name occurs also beginning with ז instead צ. Josephus and Suidas give Zipporis in the form of Σέπφωρις, and Ptolemy, according to the present reading, in that of Ἀπφουρεί. At a later period it was called Diocæsarea. Οἱ ἐν Διοκαισαρεία τῆς Παλαιστίνης Ἰουδαῖοι κατὰ Ρωμαίων ὅπλα ἀντήρουν. 'The Jews of Diocæsarea in Palestine took up arms against the Romans' (Socrates, *Hist.* xi. 31). Sozomen (*Hist.* iv. 7) adds that Gallus Cæsar, who was then at Antioch, destroyed Diocæsarea, ἀναστάτον ἐποίησε. Epiphanius uses both the names,—Diocæsarea and Sepphoris. The same city which (*Adversus Hæreses*, p. 128) he calls Διοκαισαρεία, he mentions (p. 136) under the name of Σέπφωρις. It is also called Sephorum, and described as contiguous to Mount Carmel and Cana, and six miles west of Nazareth. It is considered to be the birthplace of Joachim, the brother of the Virgin Mary. According to R. Benjamin, Zipporis was distant from Tiberias ה פרסאות, or twenty miles. The distance of Zipporis from Mount Tiberias is indicated in *Echa Rabbati*, fol. 75. 2:—'Adrian had a vineyard forming a square of eighteen miles, which is the distance from Tiberias to Sepphoris.' Ταρεισίμης was twenty stadia from Zipporis. Zipporis is celebrated in the works of Josephus as a military station, and in the Talmud on account of its famed rabbinical academy. Rabbi Judah Hakkadosh, or *the Saint*, resided seventeen years in Zipporis, and he used frequently to say that Jacob sojourned in Egypt seventeen years, and Judah in Zipporis seventeen years (*Hieros. Ketaim*, fol. 32, col. 2). He resided also in Beth-shaarim, but died in Zipporis (*Juchasin*, fol. 2, col. 2).

According to the Gloss. in *Tal. Babylon.* (*Sanhedrim*, fol. 47, col .1), Rabbi Judah died in Zipporis, but was buried in Beth-shaarim. When dying he commanded his sons,—'in carrying me to the grave, weep not in the small towns through which you pass, but in the great cities.' Nevertheless, Rabbi Benjamin, in his *Itinerarium*, supposed he saw the sepulchre of Rabbi Judah, and that of Rabbi Chaija, and of the prophet Jonas, on a mountain at Zipporis.

Eighteen synagogues lamented at the burial of Rabbi Judah, but it is doubtful whether all these belonged to Zipporis (*Hieros. Berac*, fol. 6, col. 1; fol. 9, col. 1. *Nazir*, fol. 56, col. 1; *Shabb.*, fol. 3, col. 1).

Among the celebrated rabbis of Zipporis, there occur in the Talmud Rabbi Homa Rabba, R. Abudma, R. Bar Kuphra, and R. Chaninah. It appears, however, that the number of Gentiles at Zipporis was so great that they could stir up persecutions against the Jews for affixing to the doors the prescribed sacred sentences (*Babylon-Joma*, fol. 11, col. 1).

It seems that R. Akibah also died in Zipporis, about forty years before the academy was transferred thither (*Abodah Zarah*, fol. 11, col. 2); but here the spelling is זִפּוֹרִין. To Zipporis also belonged Ben Elam, who, when the high-priest was not clean on the day of atonement, and therefore unable to perform his functions, went himself into the holy of holies and did duty for him. According to *Hieros. Biccurim*, fol. 64. 2, for sixteen miles round Zipporis the country everywhere flowed with milk and honey; an expression which denotes the greatest degree of fertility and prosperity. Among the numerous synagogues in Zipporis two were especially celebrated, viz., *Synagoga Gophnitica*, כנישתא דגופנא, and *Synagoga Babylonica*, כנישתא דבבל (*Hieros. Berachoth*, fol. 6. 1, and 9. 2).

Zipporis was celebrated for the investigation

and decision of legal niceties (*Hieros. Jevamoth*, fol. 15. 3). Josephus mentions Sepphoris frequently as the greatest town of Galilee, and built in a well fortified situation: Σέπφωρις μεγίστη τῆς Γαλιλαίας πόλις, ἐρυμοτάτῳ δὲ ἐπεκτισμένη χωρίῳ (*De Bell. Jud.* iii. 2; *Antiq.* xiii. 21; xvii. 12). Sepphoris, Jerusalem, Jericho, Gadara, and Amathus, were the five cities in which the assemblies of the Synedrium were held (*Antiq.* xiv. 10). In this passage the name has undergone some modification, as we read ἐν Σαμφορείς. After Sepphoris was taken by Varus, it was made the chief city of Galilee, and strongly fortified by Herod Antipas (*Antiq.* xviii. 3). Herod Agrippa junior obtained Zipporis as a present from the emperor Nero (Joseph. *Vita*).

Before this period Tiberias was considered to be the first city in Galilee. Sepphoris was surrounded by many villages, and situated near Mount Asamon, in the centre of Galilee (*De Bell. Jud.* ii. 23), in a very strong and secure situation (*De Bell. Jud.* iii. 1). One of the small towns near Zipporis was called יִשְׁנָה, Jeshenah (*Kidduschin*, cap. iv. 5); another was called קְצָרָה, K'zarah (*Gloss. in Erachim*, cap. ix. 6). Sepphoris was destroyed A.D. 339, in consequence of the rebellion of its citizens.

Theophanes relates (page 33, ed. Par.); Τούτῳ τῷ ἔτει οἱ κατὰ Παλαιστίνην Ἰουδαῖοι ἀντῆραν· καὶ πολλοῦς τῶν ἀλλοεθνῶν Ἑλλήνων τε καὶ Σαμαρειτῶν ἀνεῖλον· καὶ αὐτοὶ δὲ παγγενεὶ (παγγενῆ, *Cedrenus*) ὑπὸ τοῦ στρατοῦ Ῥωμαίων ἀνηρέθησαν, καὶ ἡ πόλις αὐτῶν Διοκαισάρεια ἠφανίσθη :—'In this year (the 25th of Constantine) the Jews in Palestine rebelled, and killed many of other nations, both Greeks and Samaritans; but they were themselves extirpated by the Roman army, and their town Diocæsarea entirely destroyed.'—Cedrenus has the same account (*Comp. Histor.* 299). It is remarkable that a similar fatality befel the town of Cæsarea in Cappadocia, for which Gregorius Nazianzenus interceded, in a letter to Olympius, which still exists in his works, (tom. i. p. 809).

In the acts of the *Concilium Constantinopolitanum*, among the bishops of Palestine is mentioned Μαρκελλῖνος Νεοκαισαρείας (*Concil.* tom. v. p. 192).

Reland, in his Palæstina, under Sepphoris, conjectures that Νεοκαισαρείας is an erratum for Διοκαισαρείας, which latter town is omitted in the above list of bishops, although we have clear proof that it was rebuilt, and had at a later period a bishop; as we learn from the list of bishops in the *Acta Concilii Hierosolymitani*, A.D. 536, where mention is made of Κυριακὸς Διοκαισαρείας, but not of any bishop of Neocæsarea; nor does there occur any ancient notice of such a town in Palestine. Hence we infer that Neocesarea is nothing but an editorial blunder, as well in the *Acts* quoted, as also in the *Itinerarium Antonini Martyris*, where we read: De Tholomaide maritima venimus in fines Galilææ in civitatem Neocesaream, in qua adoravimus præ veneratione molam et canistellum Sanctæ Mariæ, in quo loco est cathedra in qua sedebat, quando ad eam venit Gabriel Archangelus :—'From Ptolemais at the sea-coast we came into the borders of Galilee, to the town of Neocæsarea, where we adored with veneration the *mola*, and the little basket of St. Mary. In that place is also the chair in which she was seated when the Archangel Gabriel came to her.' We have retained here the word *mola*, since we would leave it uncertain whether Antoninus Martyr adored the hand-mill, molar tooth, or the jawbone, or even a more delicate part of the virgin. *Mola* dicitur in uteris mulierum massa cornea sine ossibus et visceribus, ex imperfecta conceptione concrescens (Plin. *Hist. Nat.* vii. 15. 13). Let it be decided by others which object of adoration at Zipporis should be preferred. The Greek μύλη occurs in the same acceptation with *mola*.

It is also remarkable that in the seventh century the place where Gabriel met St. Mary was shown at Nazareth; but it is clear from the progress of the journey that Antoninus, by the name Neocæsarea, meant Diocæsarea or Sepphoris, because this was the first city on the road from Ptolemais into Galilee. We therefore read in Johanns Phocas (*Descript. Palestinæ*, § 10): Πρώτος οὖν κατὰ τὴν Πτολεμαιδα ἐστὶν ἡ Σεμφωρὶ, πόλις τῆς Γαλιλαίας πάντῃ ἄοικος σχεδὸν μηδὲ λείψανον τῆς πρώην αὐτῆς εὐδαιμονίας ἐμφαίνουσα :—'After Ptolemais, one arrives first at Semphori, a town of Galilee, which is now entirely uninhabited, and shows no remains of its former prosperity.'

Some old coins are extant with the inscription ΣΕΠΦΩΡΗΝΩΝ. One of these, belonging to the reign of Domitian, is mentioned by Vaillant, (p. 23); and (p. 31) he produces another with a similar inscription, belonging to the reign of Trajan, of which Patinus furnishes an engraving (*Numm. ær. Imperatorum*, p. 146). Comp. Hadriani Relandi *Palæstina*, sub Sepphoris, and Othonis *Lexicon Rabbinicum*, sub Zipporis; Lightfoot, *Centuria Geographica*, cap. lxxxii., lxxxiii.; Nicol. Santon, *Index Geographicus*, sub Sephoris.—C. H. F. B.

ZIZ (צִיץ; Sept. Ἀσσεῖς), a cliff or pass leading up from the Dead Sea towards Jerusalem, by which the bands of the Moabites and Ammonites advanced against Jehoshaphat (2 Chron. xx. 16). They seem to have come round the south end of the Dead Sea, and along the western shore as far as Engedi, where there is a pass which leads out northward towards Tekoa (Robinson, *Bibl. Res.* ii. 215). This is the route which is taken by the Arabs in their marauding expeditions at the present day.

ZIZANION (Ζιζάνιον). This word occurs in Matt. xiii. 25, and several of the following verses, and is translated *weeds* by Luther, and *tares* in the Auth. Vers.; but it is not found in any Greek author. It is therefore supposed that, as the Gospel of Matthew was (as some think) first written in Syro-Chaldaic, the vernacular name of some particular plant was adopted, and thus introduced into the Greek version. This seems to be confirmed by the existence of a plant which is suitable to the above passage, and of which the Arabic name is very similar to *zizanion*. Thus, in the parable of the man who sowed good seed in his field, it is said, 'But while men slept, his enemy came and sowed *tares* among the wheat: when the blade sprung up and brought forth fruit, then appeared the tares also.' From this it is evident that the wheat and the *zizanion* must have had considerable resemblance to each other in the herbaceous parts,

which could hardly be the case, unless they were both of the family of the grasses. That such,

554. [Lolium temulentum.]

however, is the case, is evident from what Volney says, that the peasants of Palestine and Syria do not cleanse away the seeds of weeds from their corn, but even leave that called *Siwan* by the Arabs, which stuns people and makes them giddy, as he himself experienced. This no doubt is the زوان *Zawan*, or *Ziwan*, of Avicenna, and which Buxtorf, in his Rabbinical Lexicon, says was by the later Hebrews called זוֹנִין *Zonin*. Avicenna describes two kinds of *Ziwan;* one 'quidpiam tritico non absimile,' of which bread is made; the other, 'res ebrietatem inducens, pravæ naturæ, atque inter fruges provenit.' The *Ziwan* of the Arabs is concluded to be our Darnel, the *ivraie* of the French, the *Lolium temulentum* of botanists, and is well suited to the palate. It is a grass often found in corn-fields, resembling the wheat until both are in ear, and remarkable as one of the very few of the numerous family of grasses possessed of deleterious properties. These have long been known, and it is to this plant that Virgil alludes (*Georg.* i. 154):—

'Interque nitentia culta
Infelix *lolium* et steriles dominantur avenæ.'

ZOAN (צֹעַן; Sept. Τάνις), an ancient city of Lower Egypt, situated on the eastern side of the Tanitic branch of the Nile, called in Egyptian ϫⲁϥⲛⲏ or ϫⲁϥⲛⲓ, *Gané* or *Gani*, *i. e.* 'low region,' whence both the Hebrew name Zoan, and the Greek Tanis, are derived; as is also the Arabic San, by which name the site is still known. Zoan is of considerable Scriptural interest. It was one of the oldest cities in Egypt, having been built seven years after Hebron, which already existed in the time of Abraham (Num. xiii. 22; comp. Gen. xxii. 2). It seems also to have been one of the principal capitals, or royal abodes, of the Pharaohs (Isa. xix. 11, 13; xxx. 4); and accordingly, 'the field of Zoan,' or the fine alluvial plain around the city, is described as the scene of the marvellous works which God wrought in the time of Moses (Ps. lxxviii. 12, 33). The destruction predicted in Ezek. xxx. 14, has long since befallen Zoan. The 'field' is now a barren waste; a canal passes through it without being able to fertilize the soil; 'fire has been set in Zoan;' and the royal city is now the habitation of fishermen, the resort of wild beasts, and infested by reptiles and malignant fevers. The locality is covered with mounds of unusual height and extent, full of the fragments of pottery which such sites usually exhibit. These extend for about a mile from north to south, by about three quarters of a mile. The area in which the sacred enclosure of the temple stood, is about 1500 feet by 1250, surrounded by the mounds of fallen houses, as at Bubastis [Pi-beseth], whose increased elevation above the site of the temple is doubtless attributable to the same cause—the frequent change in the level of the houses to protect them from the inundation, and the unaltered position of the sacred buildings. There is a gateway of granite and fine grit stone to the enclosure of this temple, bearing the name of Rameses the Great. Though in a very ruinous condition, the fragments of walls, columns, and fallen obelisks, sufficiently attest the former splendour of the building to which they belonged. The obelisks are all of the time of Rameses the Great (B.C. 1355), and their number, evidently ten, if not twelve, is unparalleled in any Egyptian temple. The name of this king most frequently occurs; but the ovals of his successor Pthamen, of Osirtasen III., and of Tirhakah, have also been found. The time of Osirtasen III. ascends nearly to that of Joseph, and his name, therefore, corroborates the Scriptural account of the antiquity of the town. Two black statues, and a granite sphinx, with blocks of hewn and occasionally sculptured granite, are among the objects which engage the attention of the few travellers who visit this desolate place. The modern village of San consists of mere huts, with the exception of a ruined kasr of modern date (Wilkinson's *Modern Egypt*, i. 449-452; *Narrative of the Scottish Deputation*, pp. 72-76).

ZOAR (צֹעַר and צוֹעַר; Sept. Σηγώρ, Ζόγορα), a town originally called Bala, and one of the five cities of the plain of Siddim. It was doomed with the rest to destruction; but spared at the intercession of Lot as a place to which he might escape. He alleged the smallness of the city as a ground for asking this favour; and hence the place acquired the name of Zoar, or 'SMALLNESS' (Gen. xiii. 10; xiv. 2, 8; xix. 20, 22, 30). It is only again mentioned in Deut. xxxiv. 3; Isa. xv. 5; Jer. xlviii. 34; which passages indicate that it belonged to the Moabites, and was a place of some consequence. Eusebius and Jerome describe it as having in their day many inhabitants, and a Roman garrison (*Onomast.*, s. v. 'Bala'). Stephen of Byzantium calls it a large village and fortress (Reland, *Palæst.* p. 1065). In the Ecclesiastical Notitia it is mentioned as the seat of a bishop of the Third Palestine, down to the centuries preceding the Crusades (Reland, pp. 217, 223, 226, 230). The Crusaders seem to have found it under the name of Segor, as in the Sept., and they describe the place as pleasantly situated, with many palm

trees (*Will. Tyr.* x. 8). Abulfeda repeatedly speaks of Zoghar as a place adjacent to the Dead Sea and the Ghor (*Tab. Syr.* pp. 8, 9, 11, 148), and indeed calls the Dead Sea itself the Lake of Zoghar (pp. xii. 148, 156). This is the same name as צֹעַר; the apparent difference in Roman types arising from the fact, that the letter ע *ain* in the Hebrew word is treated as mute, but in Arabic is represented by *gh*. Dr. Robinson (*Bib. Researches,* ii. 480, 481; 648—651) has much argument to show that Zoar must have lain on the *east* of the Dead Sea; which seems clear enough from its having been in the territory of Moab: and he thinks that Irby and Mangles have rightly fixed its position at the mouth of the Wady Kerak, at the point where the latter opens upon the isthmus of the long peninsula which stands out from the eastern shore of the lake towards its southern end. At this point Irby and Mangles discovered the remains of an ancient town. Here 'stones that have been used in building, though for the most part unknown, are strewed over a great surface of uneven ground, and mixed with bricks and pottery. This appearance continues without interruption, during the space of at least half a mile, quite down to the plain, so that it would seem to have been a place of considerable extent. We noticed one column, and we found a pretty specimen of antique variegated glass. It may possibly be the site of the antient Zoar' (*Travels,* p. 448).

ZOBAH (צוֹבָה; Sept. Σουβά), a Syrian kingdom, whose king made war with Saul (1 Sam. xiv. 47), with David (2 Sam. viii. 3; x. 6), and with Solomon (2 Chron. viii. 3). Respecting its situation, see ARAM.

1. ZOHAR (צֹחַר, *whiteness;* Sept. Σαάρ), a son of Simeon [ZERAH].

2. ZOHAR, the father of Ephron the Hittite (Gen. xxiii. 8; xxv. 9).

3. ZOHAR (in Keri; in Chetib יצהר, Jezoar), a descendant of Judah (1 Chron. iv. 7).

ZOPHAR (צוֹפַר, *sparrow?* Sept. Σωφάρ), one of Job's three friends and opponents in argument (Job ii. 11; xi. 1; xx. 1; xlii. 9). He is called a Naamathite, or inhabitant of Naamah, a place whose situation is unknown, as it could not be the Naamah mentioned in Josh. xv. 41. Wemyss, in his *Job and his Times* (p. 111), well characterizes this interlocutor:—'Zophar exceeds the other two, if possible, in severity of censure; he is the most inveterate of the accusers, and speaks without feeling or pity. He does little more than repeat and exaggerate the arguments of Bildad. He unfeelingly alludes (ch. xi. 15) to the effects of Job's disease as appearing in his countenance. This is cruel and invidious. Yet in the same discourse how nobly does he treat of the divine attributes, showing that any inquiry into them is far beyond the grasp of the human mind! And though the hortatory part of the first discourse bears some resemblance to that of Eliphaz, yet it is diversified by the fine imagery which he employs. He seems to have had a full conviction of the providence of God, as regulating and controlling the actions of men; but he limits all his reasonings to a present life, and makes no reference to a future world. This circumstance alone accounts for the weakness and fallacy of these men's judgments. In his second discourse there is much poetical beauty in the selection of images, and the general doctrine is founded in truth; its fallacy lies in its application to Job's peculiar case. The whole indicates great warmth of temper, inflamed by misapprehension of its object and by mistaken zeal.'

It is to be observed that Zophar has but two speeches, whereas the others have three each. When Job had replied (ch. xxvi.-xxxi.) to the short address of Bildad (ch. xxv.), a rejoinder might have been expected from Zophar; but he said nothing, the three friends, by common consent, then giving up the contest in despair (ch. xxxii. 1) [JOB].

ZORAH (צָרְעָה, *hornets' town;* Sept. Σαραά), a town reckoned as in the plain of Judah (Josh. xv. 33), but inhabited by Danites (xix. 41), not far from Eshtaol, and chiefly celebrated as the birthplace of Samson (Judg. xiii. 2, 25; xviii. 2, 8, 11; comp. 2 Chron. xi. 12; Neh. xi. 29). The site may still be recognised under the name of Surah, situated upon a spur of the mountains running into the plain north of Beth-shemesh (Robinson, ii. 339; iii. 18).

ZURIEL (צוּרִיאֵל, *God is my rock;* Sept. Σουριήλ), son of Abihail, and family chief or genesarch of the Merarites at the organization of the Levitical establishment (Num. iii. 35). It does not appear to which of the two great divisions of the Merarites he belonged.

ZUZIMS (זוּזִים; Sept. ἔθνη ἰσχυρά), one of the ancient tribes or nations conquered by Chedorlaomer and his allies (Gen. xiv. 5). The Zuzims were settled beyond the Jordan, and are perhaps the same as the Zamzummims of Deut. ii. 20. The Syriac and Onkelos, like the Septuagint, take the word for an appellative, signifying 'strong' or 'valiant.'

NAHUM (נָחוּם, *consolation;* Sept. Ναούμ), the seventh of the minor prophets, according to the arrangement of both the Greek and Hebrew, but the sixth in point of date, was a native of Elkosh, a village of Galilee (Jerome's *Pref. to his Comment.*). He prophesied in Judah after the deportation of the ten tribes, and soon after the unsuccessful irruption of Sennacherib (ch. i. 11-13; ii. 1, 14), consequently towards the close of the reign of Hezekiah. Attempts have been made to fix the date with precision, from the allusion to the destruction of No-Ammon or Thebes in Egypt (ch. iii. 8); but as it is uncertain when this event took place, Eichhorn and others have conjectured that it was near the beginning of the reign of Hezekiah, or about B.C. 720, as about this time Sargon, king of Assyria, waged an unsuccessful war for three years against Egypt (Isa. xx.).

The contents of the prophecy of Nahum are as follows:—Chap. i. 2-7. The destruction of Nineveh and of the Assyrian monarchy is depicted in the liveliest colours, together with the relief of Judah from oppression. The destruction of Nineveh is detailed with still greater particularity in the third chapter; which has induced some to suppose that the prophet refers to two

different events—the sack of Nineveh by the Medes, B.C. 867, in the reign of Sardanapalus, and its second and final destruction, under Chyniladan, by Cyaxares the First and Nabopolassar, B.C. 625. Those who suppose that two events are here alluded to, conclude that Nahum must have prophesied before the first destruction of Nineveh, or about B.C. 877. It is, however, observed by Jahn (*Introd.*) that it is evident from ch. i. 9-11, 14; ii. 1, 14, where the Hebrews are represented as oppressed by the Assyrians, and the irruption of Sennacherib is mentioned as having already taken place, that there is but one event referred to, namely, the last destruction of Nineveh. De Wette remarks that Nahum could not have alluded to the historical circumstances under which Nineveh was taken by Cyaxares and Nabopolassar (B.C. 625, 603, or 600), as at that time Babylon, not Assyria, was formidable to the Jews; but that perhaps he was led to prophesy by the liberation of the Medes (from the Assyrians), and their election of a king, in the person of Dejoces.

The beauty of the style of Nahum has been universally felt. It is classic, observes De Wette, in all respects. It is marked by clearness, by its finished elegance, as well as by fire, richness, and originality. The rhythm is regular and lively. The whole book remarkably coherent, and the author only holds his breath, as it were, in the last chapter. Jahn observes that the language is pure, with a single exception (טפסרים, ch. iii. 17), that the style is ornate, and the tropes bold and elegant (rendering it, however, necessary for the reader to supply some omissions; see ii. 8; ix. 3, 16); and that the descriptions of the divine omnipotence, and of the destruction of Nineveh, are resplendent with all the perfection of oratory. No one, however, has entered more fully into the beauties of the prophet Nahum than the accomplished Eichhorn, who conceives that the most striking characteristic of his style is the power of representing several phases of an idea in the briefest sentences, as in his description of God, the conquest of Nineveh, and the destruction of No-Ammon. 'The variety in his manner of presenting ideas discovers much poetic talent in the prophet. The reader of taste and sensibility will be affected by the entire structure of the poem, by the agreeable manner in which the ideas are brought forward, by the flexibility of the expressions, the roundness of his turns, the delicate outline of his figures, by the strength and delicacy, and the expression of sympathy and greatness, which diffuse themselves over the whole subject. He does not come upon you roaring and violent, nor yet softly and lightly. Here there is something sonorous in his language, there something murmuring; and with both there alternates somewhat that is soft, delicate, and melting, as the subject demands. This is not possible for a poet of art, but only for the poet of nature' (De Wette's *Introd.*, English transl.). The following works on this prophet are enumerated by De Wette:—Bibliander, *Proph. Nahum*, 1534; Ursini *Hypomnemata in Obad. et Nahum*, 1652; Hattenrefferi *Comm. in Nah. et Habac.* 1663; Abarbanel, *Comment. Rabbinicus in Nahum*, a Sprechero, 1703; Von Höke, *On the Six last Minor Prophets*, 1709, 1710; Kalinsky, *Vaticc. Habac. et Nahum, &c.*, 1748; Agrell, *Vaticc. Nahum, Observ. Hist. Phil. Illustr.* 1788; Greve, *Nah. et Habac. Interp. ed. Metrica*, 1793; Svanborg, *Nahum, Latine Vers. &c.* 1806; Frähn, *Cur. Exeg. Crit.* 1806; Kreenen, *Nahum Vatic. Phil. et Crit. Expos.* 1808.—W. W.
